## 1 SPECIFICATIONS AND SERVICE DATA

### SPECIFICATIONS

**Track System** ¼-track, 2-channel stereo

**Head System**

**X-7R:** 6 heads: forward erase, forward record, reverse playback, forward playback, reverse record, reverse erase.

**X-7:** 3 heads: erase, record, playback

**Reel Size** 7"

**Tape Speed** 19 cm/s (7-½ ips) and 9.5 cm/s (3-¾ ips)

**Inputs (level and impedance)**

**MIC:** Specified input level: -60dB (0.775mV)/10kohms  
Min. input level: -70dB (245µV)

**LINE IN:** Specified input level: -12dB (195mV)/50kohms  
Min. input level: -22dB (61.5mV)

**Outputs (level and impedance)**

**OUTPUT:** Specified output level: -5dB (436mV)/10kohms  
Max. output level: +1dB (0.869V)

**PHONES:** Specified output level: -24dB (48.9mV)/8ohms

**Playback Equalization**

19cm/s: 3,180µs + 50µs (NAB)

9.5cm/s: 3,180µs + 90µs (NAB)

**Motors**

**Capstan motor:** DC brush motor with FG servo

**Reel motor:** 2 DC slotless motors

**Bias Frequency** 100kHz

**Operating Position** Vertical, horizontal, angled

**Power Requirements**

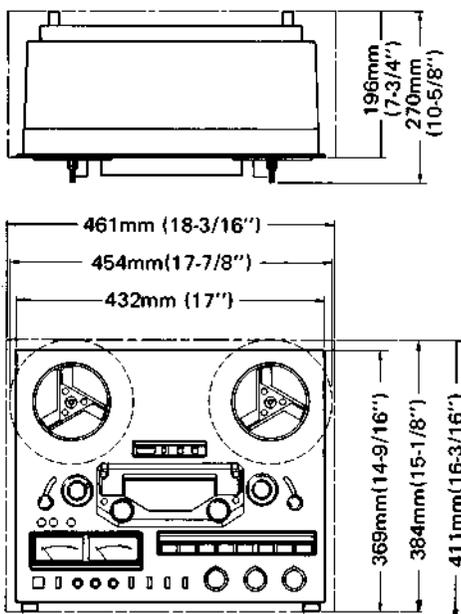

100/117/220/240V, AC 50/60Hz, 77W, 72W for X-7  
(General export model)

220V AC 50Hz, 77W, 72W for X-7 (Europe model)

240V AC 50Hz, 77W, 72W for X-7 (U.K./Australia model)

117V AC 60Hz, 77W, 72W for X-7 (U.S.A./Canada model)

**Weight** 18kg (39-11/16 lbs.) net

Dashed line indicates General Export Models for Limited Areas.

Fig. 1-1 Dimensions

### SERVICE DATA

#### MECHANICAL

**Tape Speed Deviation** 3,000Hz ± 30Hz

**Tape Speed Drift** 15Hz

**FWD/RED Tape Speed Differential (X-7R only)** 30Hz

**Wow and Flutter**

**Playback:** 0.05% (WRMS), 0.10% (RMS) at 19cm/s  
0.07% (WRMS), 0.12% (RMS) at 9.5cm/s

**Record/Playback:** 0.12% (RMS) at 19cm/s  
0.15% (RMS) at 9.5cm/s

**Pinch Roller Pressure** 1.35kg ~ 1.9kg (3.0 lbs ~ 4.2 lbs)

**Reel Torque**

**Play mode:**  
**Take-up** 260 ± 40 g-cm (3.1 ~ 4.2 oz-inch)

**Back tension** 180 ± 40 g-cm (1.9 ~ 3.1 oz-inch)

**Fast winding mode:**

**Take-up:** 1100 g-cm (15.3 oz-inch)

**Back tension:** 50 g-cm (0.7 oz-inch)

**Brake Torque**

**Forward direction:** 800 ~ 1400g-cm (11 ~ 19oz-inch)

**Reverse direction:** 500g-cm (6.9oz-inch) or less

**Left/right deviation:** 200g-cm (2.8 oz-inch) or less

**Fast Winding Time** 150 seconds or less for 550m (1800 feet)

**Pitch Control** Standard tape speed ±6% or more

**FWD/REV Change Time (X-7R only)** 3.5 sec. ±0.5 sec.

**TIMER Activate Time** 4 sec. ±2 sec.

#### ELECTRICAL

**Frequency Response Playback:** 40Hz ~ 22kHz ±3dB at 19cm/s  
40Hz ~ 14kHz ±3dB at 9.5cm/s

**Overall:** 40Hz ~ 20kHz ±3dB at 19cm/s  
40Hz ~ 16kHz ±3dB at 9.5cm/s

**Signal to Noise Ratio Playback:** 50dB min. at 19cm/s  
49dB min. at 9.5cm/s

**Overall:** 48dB min. at 19cm/s  
46dB min. at 9.5 cm/s

**Erase Efficiency** 68dB min. at 1kHz (measured with input  
10dB higher than the specified input level)

**Channel Separation** 50dB min. at 1kHz

**Adjacent Track Crosstalk** 40dB min. at 125Hz

**Total Harmonic Distortion** 0.8% or less at 1kHz

- Improvements may result in SPECIFICATIONS AND SERVICE DATA changes.
- Value of "dB" in the data refers to 0dB (0.775V), except where specified.

⚠ Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC Parts List and ensure exact replacement.

• dbx noise reduction system made under license from dbx, Incorporated. The word dbx and the dbx Symbol are trademarks of dbx, Incorporated.

## 2 MECHANICAL ADJUSTMENTS AND CHECKS

**NOTE:** All the explanations are for the X-7R. But unless specified they can also be applied to the X-7 except for those in relation to the REVERSE direction.

### 2-1 CONTROL PCB ASSY CHECK

Hooking CONTROL PCB ass'y as shown facilitates this check.

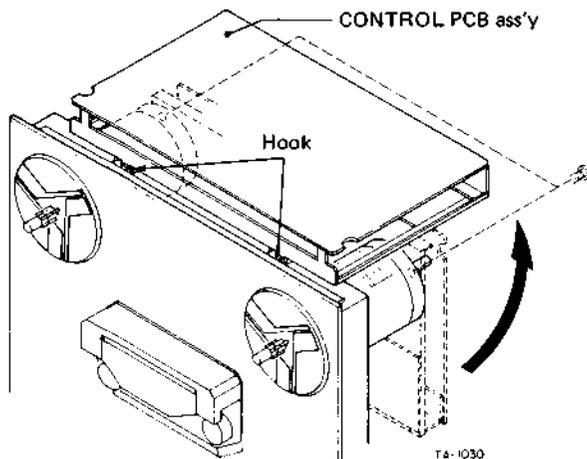

Fig. 2-1

### 2-2 BRAKE ADJUSTMENT

**NOTE:** The explanation and figure in this paragraph are for the left side brake, similar checks and adjustments are applicable for the right side one.

1. Adjust by moving the brake band bracket in either direction (arrow (A)) so that the reel motor chassis is in parallel with the brake arm, and so that the brake band makes proper clearance equally all around the reel table base.
2. Adjust by moving the brake solenoid in either direction (arrow (D)) so that the stroke of the solenoid plunger is about 2 mm.
3. Adjust by moving the band ass'y retaining plate as shown in (B, C, E) so that, when the plunger is pushed in the direction of the solenoid housing, the reel table base is not rubbed by the brake band and is properly spaced.

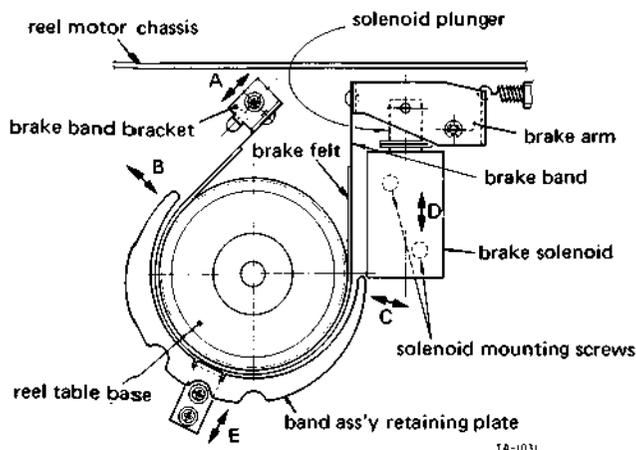

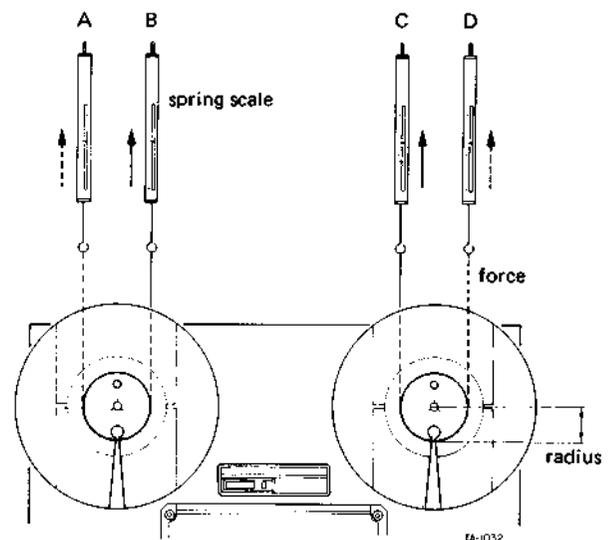

Fig. 2-2

### 2-3 BRAKE TORQUE MEASUREMENT

1. Place an empty 7" reel, connected to a spring scale by a string, on the reel table.
2. Pull the scale away from the reel and read the scale indication only when the reel table is steady motion.
3. Do steps 1 and 2 for each measuring condition, (A) through (D) in Fig. 2-3.
4. The values are as chart in Fig. 2-3.

↑ Forward direction (B) (C)	800 to 1400g-cm (11 to 19oz-inch)
↓ Reverse direction (A) (D)	500g-cm (6.9oz-inch) or less
Left/right deviation	200g-cm (2.8oz-inch) or less

- NOTES:**
1. The reverse direction values are reference.
  2. The specification of left/right deviation only applies for forward direction torques.

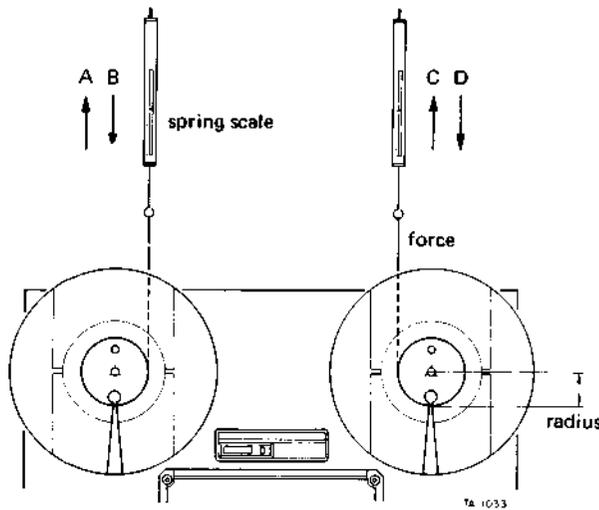

Torque calculating formulas:

- (1) Torque (in g-cm or oz-inch)  
= Force or Weight (in g or oz) x Radius (in cm or inch)
- (2) Conversion of g-cm to oz-inch:  
g-cm x 0.0139 = oz-inch

Fig. 2-3

## 2-4 REEL MOTOR TORQUE MEASUREMENT

1. Hold both left and right tension arms in the upper position using rubber bands.
2. See Fig. 2-4. Measure torques for each operating mode with the conditions specified in the chart.
3. Since all the torque values are reference values, it is allowable that the take-up torque during the fast forward or rewind mode is 1 kg-cm or more, and that the back tension torque during these mode is good unless the left or right tension arms are shut-off.
4. There is no specially provided adjustment, so if any torque correction are needed, repair or replace defective part(s) and/or circuit(s).

Reel torque reference value

Play mode

Mode	Torque
Take-up: (B) in REV (D) in FWD	$260 \pm 40$ g-cm (3.1~4.2 oz-inch)
Back tension: (A) in FWD (C) in REV	$180 \pm 40$ g-cm (1.9~3.1 oz-inch)

Fast winding mode

Mode	Torque
Take-up: (B) in REW, (D) in F.F.	1100 g-cm (15.3 oz-inch)
Back tension: (A) in F.F., (C) in REW	50 g-cm (0.7 oz-inch)

NOTE : For torque calculation, refer Fig. 2-3.

Fig. 2-4

## 2-5 PINCH ROLLER PRESSURE STROKE ADJUSTMENT

1. Set the deck in the forward or reverse play mode.
2. Adjust by turning the pressure stroke adj. nut (Fig. 2-5) so that the clearance between the pin and the stopper cushion is about 1.0 mm.
3. Since the clearance is produced at one side (left or right), adjustment for this side only is permissible.

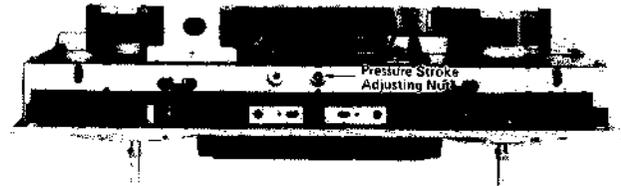

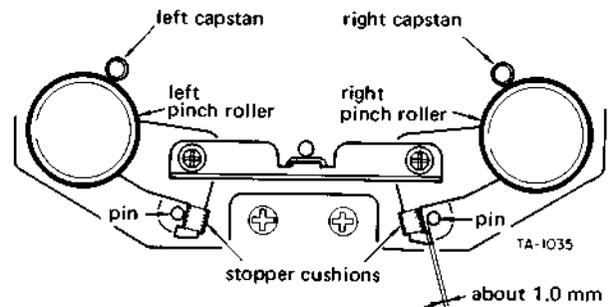

Fig. 2-5 Pinch roller pressure stroke adjustments

Either the left or right should have a clearance of about 1.0 mm.

Fig. 2-6

## 2-6 PINCH ROLLER PRESSURE MEASUREMENT

NOTES: 1. The explanation below applies to both the left and right pinch rollers.

2. Both pinch roller pressures are automatically set with equal value.

1. Hold both the left and right tension arms in the upper positions using rubber bands, string etc.
2. Set the deck in either play mode with no tape loaded.
3. Attach the spring scale to the pinch roller as shown in the figure.
4. Draw the pinch roller away from the capstan shaft (in the direction of a line intersecting the centers of the capstan shaft and the pinch roller) until the capstan shaft and the pinch roller are separated.
5. Return the scale back until the pinch roller just begins to turn. The scale should then be reading as follow.  
Reference value: 1.35 kg to 1.9 kg. (3.0 lbs to 4.2 lbs)
6. If the reading is out of specification, replace defective part(s). There are no adjustable parts.

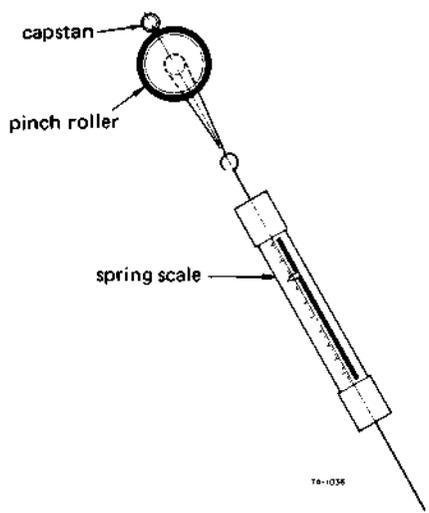

Fig. 2-7

## 2-7 TENSION ARM HEIGHT ADJUSTMENT

1. Thread any standard tape on the deck using a standard empty reels such as TEAC RE-702.
2. Set the deck in the forward or reverse play mode.
3. Stop left (right) guide roller's rotation by hand. Adjust by turning the left (right) tension arm adjusting nut (refer Fig. 2-8) so that the tape moves in the center of the guide roller.

4. Release the guide roller. Fine-adjust the adjusting nut again until there is no tape curling at the tape guide pin between the erase head and the left (right) guide roller.
5. After adjusting the height of both left and right tension arms, check that the tape running condition is good by repetition of fast forward and rewind modes.
6. If the tape running position is different when the guide roller stops and when it turns, the condition when the guide roller is rotating has priority.

## 2-8 TENSION ARM FORCE ADJUSTMENT

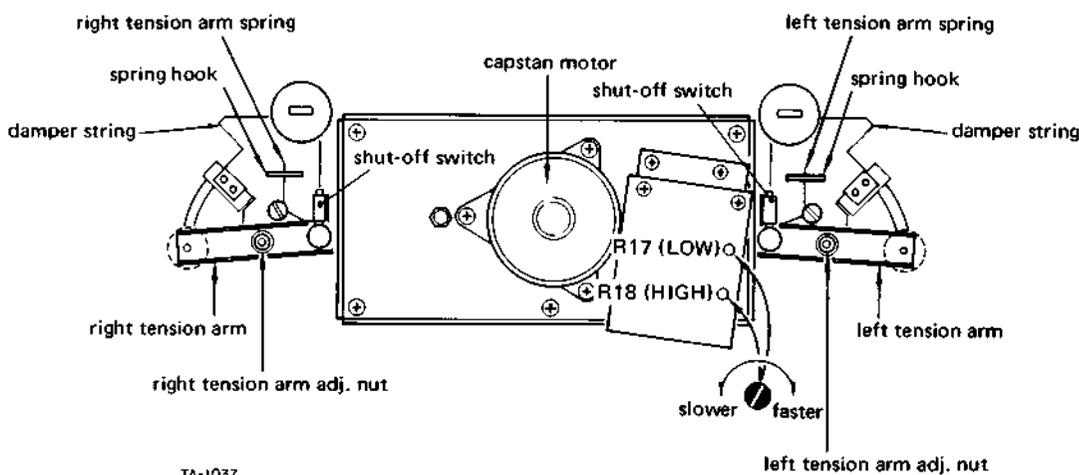

**NOTE:** The description below applies to both left and right sides.

1. Check the shut-off switch operates correctly with the deck in the horizontal and vertical positions.
2. Adjustment can be done by changing the hooking position of the tension arm spring against the spring hook.

## 2-9 DAMPER FUNCTION CHECK

**NOTE:** The explanation below applies to both left and right sides.

1. Check that the damper string begins to function after the tension arm has moved 10 to 15 mm from the lowest position, while the damping function is working, there is a feeling of resistance.
2. Check that the tension arm returns freely from the above position to the lowest position.

TA-1037

Fig. 2-8 Tension arm height, tension arm force, damper function, and tape speed

## 2-10 REEL TABLE HEIGHT ADJUSTMENT

1. Adjust the tension arm height beforehand. (See 2-7)
2. Check each reel table height using a TEAC RE-702 empty reel and letting the tape run in each tape operating mode.
3. If the tape rubs against the reel flanges, adjust the reel table height by means of the two reel table mounting screws.

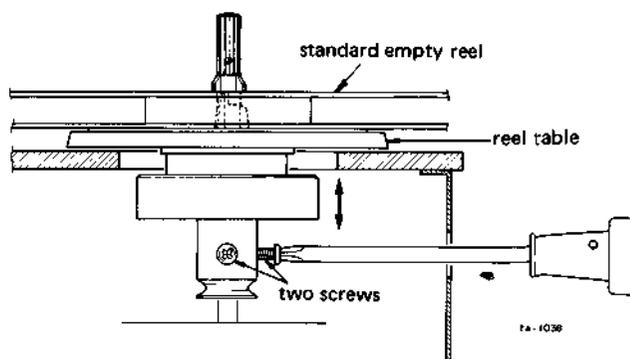

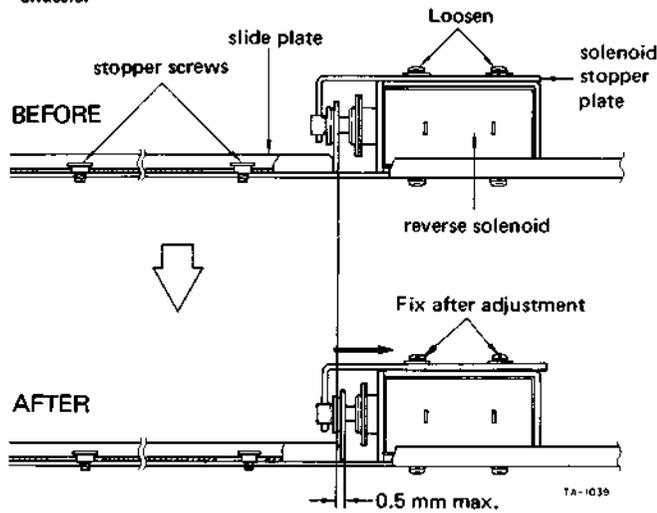

Fig. 2-9

## 2-11 REVERSE SOLENOID ADJUSTMENT (X-7R ONLY)

1. When the reverse solenoid releases, if the slide plate hits the stopper screw/s noisily, the solenoid stopper plate may be adjusted in the direction of the solenoid housing. See illustration.

Parts below are accessible from the rear of the amplifier chassis.

Adjustment range is 0.5 mm max. in solenoid-off condition.

Fig. 2-10

## 2-12 ROTATING PART THRUST CLEARANCE CHECKS

### Reference values

Capstan shaft:	0.1 mm to 0.25 mm (magnefloat type)
Guide roller:	0.05 mm to 0.3 mm
Tension arm guide roller:	0.05 mm to 0.3 mm
Reel motor:	0 (spring type)
Tension arm:	0 (spring type)

**NOTE:** Since the capstan shaft is a magnefloat type, check that it is forced towards the rear of the deck while rotating.

## 2-13 CAPSTAN MOTOR REPLACEMENT

1. When the capstan motor is replaced, install it with its lead wires and washers as shown.
2. Check that, when the deck is operated by repeating the forward and reverse play modes, the capstan drive belt changes position on the flywheels smoothly.

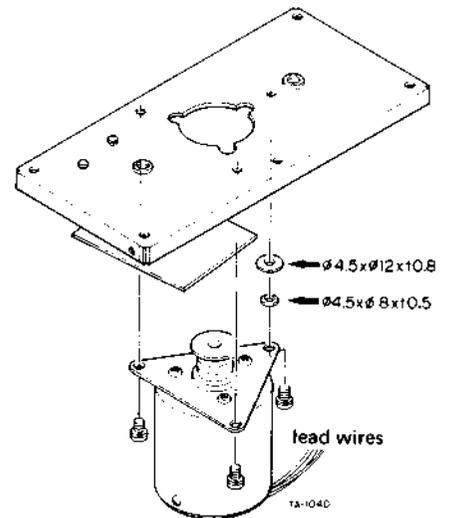

Fig. 2-11

## 2-14 TAPE SPEED ADJUSTMENT

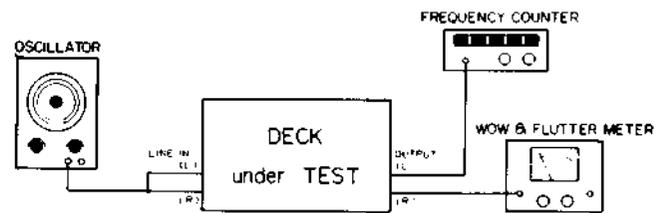

Fig. 2-12

- NOTES:**
1. Conduct all the following in both forward and reverse play modes.
  2. When ordering test tapes, allow for the longer delivery time that is required for them.

1. Connect a frequency counter to either OUTPUT terminal.
  2. Load a TEAC YTT-2003 test tape. Set the SPEED switch—HIGH, and PITCH CONT knob—OFF.
  3. Play the tape. Adjust R18 (see Fig. 2-8) for a reading of 3,000 Hz  $\pm 5$  Hz.
  4. Check the following at the beginning and the end of the tape.
- Specifications:
- Tape Speed deviation. . . . . 3,000 Hz  $\pm 30$  Hz  
 Tape speed drift. . . . . 15 Hz  
 FWD/REV tape speed differential . . . 30 Hz (X-7R only)

5. Change the test tape to a TEAC YTT-2002, and SPEED switch setting to LOW.
6. Repeat steps 3 through 4. Adjust R17 if necessary.
7. Pull the PITCH CONT knob out. Set SPEED switch HIGH. Play a YTT-2003 tape.
8. Check if the speed variation of at least 3,000 Hz  $\pm$ 180 Hz is obtained when the PITCH CONT knob is rotated fully in both directions.
9. Change the test tape to YTT-2002, SPEED switch setting to LOW. Repeat step 8.

## 2-15 WOW AND FLUTTER CHECKS

- NOTES:**
1. All the following apply to both forward and reverse play modes.
  2. The following measurements should be made at the beginning and the end of the tape.
  3. When ordering test tapes, allow for the longer delivery time that is required for them.

### Playback

1. Connect the test equipment to the deck as shown in Fig. 2-12.
2. Load and play a TEAC YTT-2003 test tape for HIGH speed (19 cm/s or 7-1/2 ips), or a TEAC YTT-2002 test tape for LOW speed (9.5 cm/s or 3-3/4 ips).
3. Read the indication on the wow and flutter meter.

#### Specifications:

HIGH speed:	0.05% WRMS
	0.10% RMS
LOW speed:	0.07% WRMS
	0.12% RMS

### Overall

4. Load a TEAC YTT-8013 test tape (blank). Apply and record a 3,000 Hz signal.
5. During simultaneous tape monitoring (playing) the recorded signal, read the wow and flutter meter display.

#### Specifications:

HIGH speed:	0.12% RMS
LOW speed:	0.15% RMS

## 2-16 VOLTAGE CONVERSION (FOR GENERAL EXPORT MODELS)

Always disconnect the power line cord before making these adjustments.

### Frequency Conversion

Since the X series uses DC motors, frequency conversion is not necessary.

### Voltage Conversion

1. First remove the two feet by removing the screws in each one.
2. Unscrew the left and right sides of the cabinet.
3. Locate the voltage selector to the right of the power transformer as seen from the rear of the deck.
4. Turn the slotted center post of the selector with a screw-driver until the desired voltage numerals appear in the cut-out section of the selector.
5. Replace the cabinet and feet.

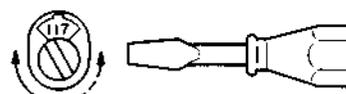

Fig. 2-13

## 2-17 LUBRICATION

Oiling is needed after every 1,000 hours of operation or once a year if the deck is infrequently used. For this purpose, TEAC spindle oil (from TEAC TZ-255 oil kit), Mobil D.T.E. Oil Light, etc are recommended. Lubrication is normally not necessary except at the points shown.

1. Place the deck in the horizontal position.
2. Apply a few drops of oil to the respective spindles shown, excluding capstans, then spread the oil evenly on the spindle surfaces using a cotton cloth, etc.
3. For capstans, apply a few drops to the indicated position.
4. After oiling all the points, leave the deck for 1 to 2 hours until the oil is thoroughly absorbed.

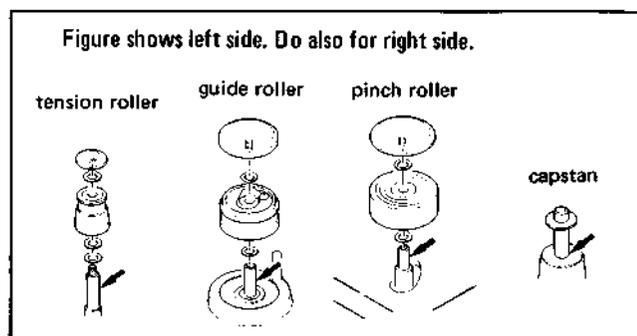

Fig. 2-14

## 2-18 HEAD AND TAPE PATH ALIGNMENTS

- NOTES:** 1. The head and tape path alignments for the X-7R and X-7 are the same. The procedure for the X-7R is given below.
2. For detailed alignment principles, refer to the book "Audio Fundamental -TAPE DECK-, 8. Mechanical Adjustments" published by TEAC CORPORATION.

Head adjusting screws

Erase	Record and playback
⊙ Tilt	⊕ Azimuth
⊕ Height and azimuth	⊕ Height and tilt
⊕ Tangency	⊕ Tangency

### 2-18-1 HEAD ARRANGEMENT (for X-7R)

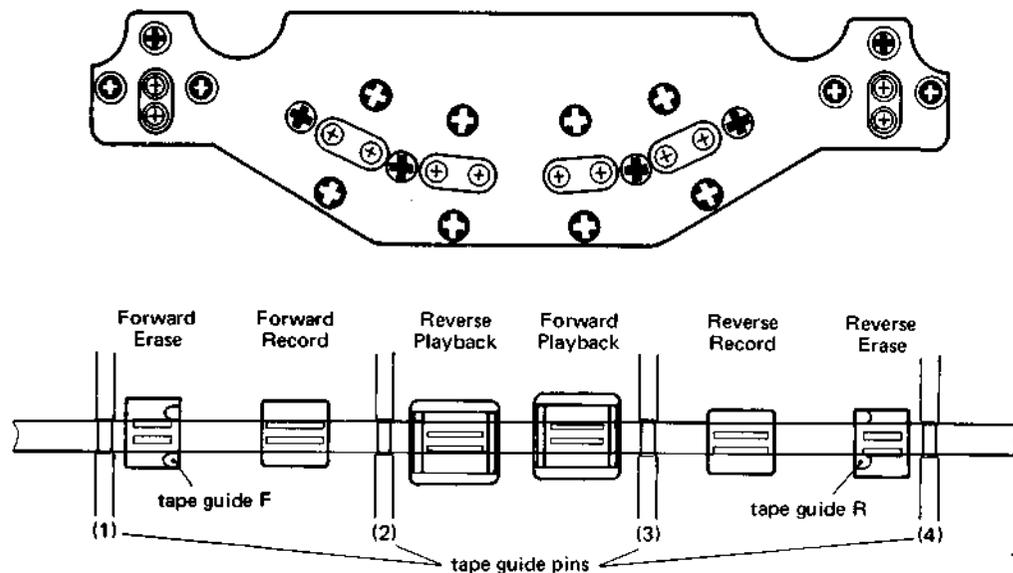

Fig. 2-15 Head arrangement

### 2-18-2 HEAD REGULATION ELEMENTS

Adjust each head to satisfy each of the following:

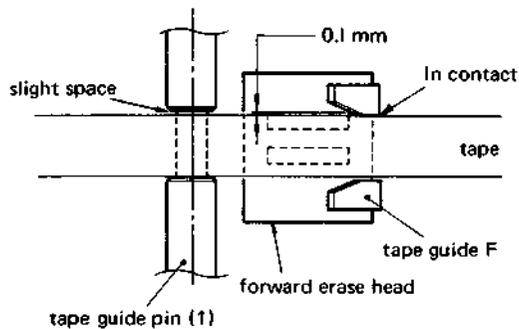

<p><b>TILT</b></p> <p>The head surface should be parallel to the tape guide pin surface.</p>	
<p><b>AZIMUTH</b></p> <p>The gap of the head core should be perpendicular to the tape travel.</p>	
<p><b>HEIGHT</b></p> <p>The upper (lower) core of the head should be level with the upper (lower) edge of the tape.</p>	
<p><b>TANGENCY</b></p> <p>The dotted line should be perpendicular to the surface of the tape.</p>	

Fig. 2-16 Head regulation elements

### 2-18-3 ALIGNMENT PROCEDURE (for X-7R)

1. Visually make the tilt adjustment of each record and playback head based on nearest tape guide pin.
2. Make coarse azimuth adjustments of the record and playback heads by viewing each head from in front (without tape).
3. Adjust the erase head's azimuth as seen from the front of the head. Then adjust its tilt using an adjacent tape guide pin for reference. Do this for both forward and reverse heads.
4. Temporarily adjust the height of both erase heads visually (with no tape loaded) so that the tape guide on the erase head matches the neighboring tape guide pin. Note that unless the three adjusting screws are turned equally, the tilt and azimuth adjustments (step 3) are likely to be disturbed.
5. Thread a TEAC YTT-8013 test tape (thickness = 35 μm). With the tape running in the forward direction, fine-adjust the height of the forward erase head so that the upper edge of the tape is just in contact with the upper edge of the tape guide, F, on the head. The lower edge of the tape should just touch the lower edge of the tape guide pin (1). See Fig. 2-17.
6. Check that the forward erase head core protrudes 0.1 mm above the moving tape. If not, adjust its azimuth, and recheck its tilt and height, then correct tilt and height if necessary.
7. Do exactly the same adjustment (steps 5 and 6) for the reverse erase head. Substitute reverse play mode for forward play mode.
8. Check that, by pulling the tape away from the head assembly then setting in either play mode, the tape guide on the erase head has about 1 mm clearance against the pinch roller. Do this for both the left and right sides.

Fig. shows forward erase head.

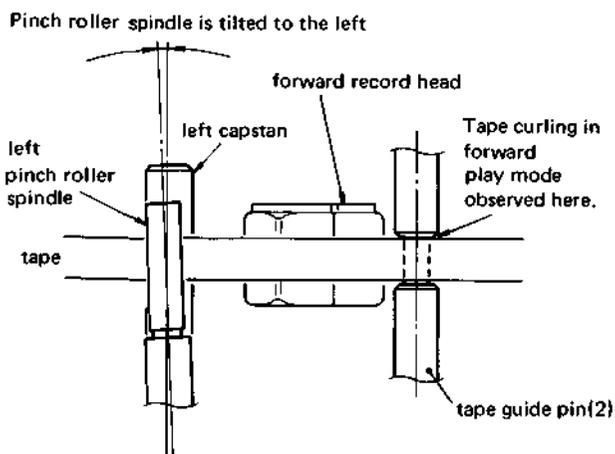

**NOTE:** In the case of the reverse erase head the tape should contact the upper tape guide plate and the tape guide pin lower surface in the same way.

TA-1043

Fig. 2-17 Erase head height fine-adjustment

9. If there is a narrower space, correct the erase head position by loosening the erase heads' tangency adjusting screws and moving the head away from pinch roller.
10. Check to see if there is any tape curling at either tape guide pin in the closed loop portion of the tape (i.e. between the capstans).
11. If, during forward play, there is any tape curling at tape guide pin (2), conduct the following: Unthread the tape from the head assembly front. Remove both pinch rollers. Set the deck in the play mode. Visually line-up the capstan and pinch roller spindles.

Fig. shows left side.

If the pinch roller spindle is tilted to the left (right) side from the capstan shaft, tape curling may occur at the upper (lower) edge of the tape guide pin (2).

TA-1044

Fig. 2-18 Example of non-parallel pinch roller/capstan.

12. If not parallel, loosen the two screws mounting the reinforcement plate then adjust using the correction jig (TEAC P/N 5736000100) as shown in Fig. 2-19.

Note that:

- (1) Use the jig as near as possible to the pinch roller spindle.
- (2) Do not touch the surface of spindle.
- (3) Use no other tool for this adjustment!

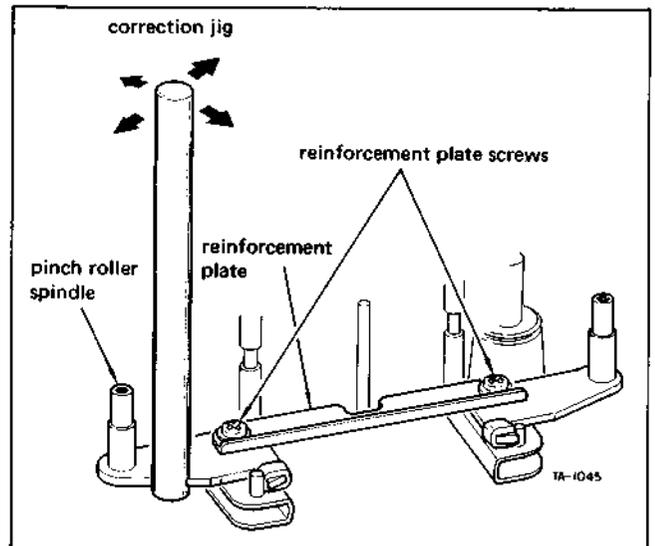

Fig. 2-19 Correction of pinch roller/capstan non-parallelism.

Fig. 2-20 Correction jig (TEAC P/N 5736000100)

13. If the tape curls at tape guide pin (3) in reverse play, correct in the same way (steps 11 and 12).
14. After it is entirely corrected that there is no tape curling condition in the head assembly, fine-adjust each record and playback height so that the brass-colored spacer of forward (reverse) direction purpose head will show above (below) the moving tape. (About as thick as a thin pencil line). Adjustment should be done by equally turning three screws required correction not to disturb tilt and azimuth regulation conducted before.
15. Finally, if necessary, make rough tangency adjustment of respective head with tape running. After doing for erase head/s recheck steps 8 and 9 (erase head/pinch roller space).

## 3 ELECTRICAL ADJUSTMENTS AND CHECKS

### NOTES

- The following data in both the charts and the illustrations are for the X-7R. All the procedures, however, are applicable to the X-7 except for those relating to the REVERSE direction.
- Before performing adjustments and checks, clean and demagnetize the entire tape path.
- Check that the deck is properly set for the voltage in your locality.
- In general, adjustments and checks are done in the order of L-ch then R-ch. Double REF. Nos. indicate L-ch/R-ch. (Example: R405/R406)
- The value of "dB" refers to 0 dB (0.775 V). If an AC voltmeter calibrated to 0 dB (1 V) is to be used, appropriate compensation should be made.
- The AC voltmeter used in the procedures must have an input impedance of 1 M-ohms or more.
- When ordering test tapes, allow for the longer delivery time that is required for them.

### 3-1 MONITOR PERFORMANCE

## EXPLODED VIEW - 3

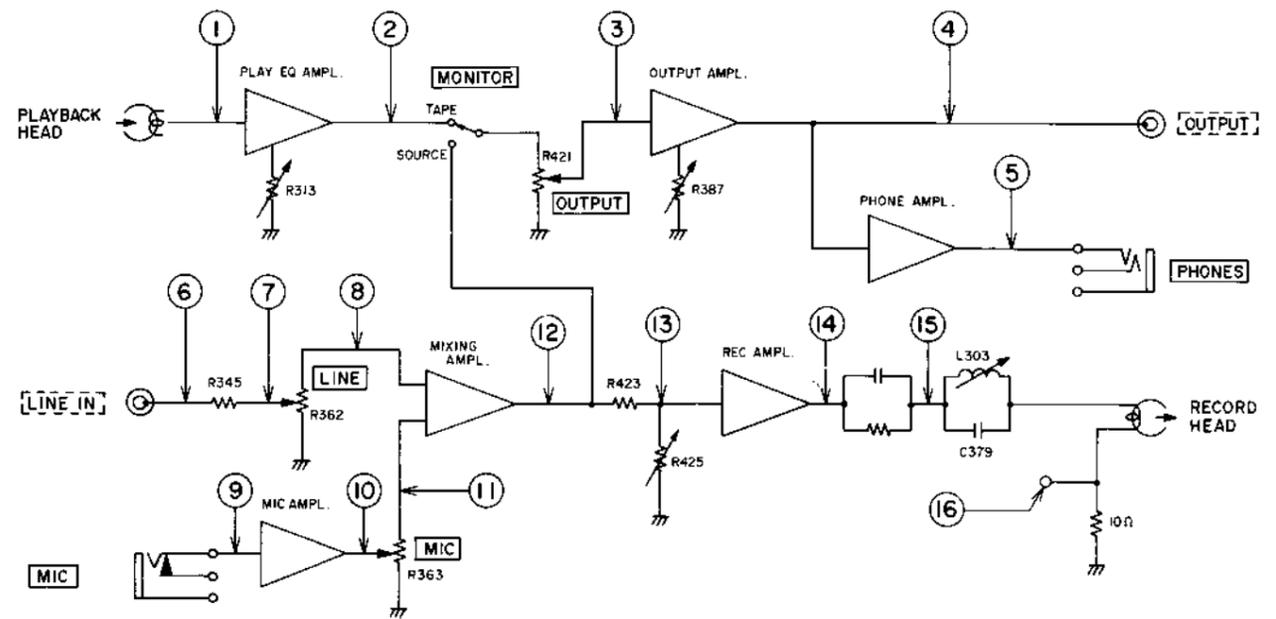

E-1012

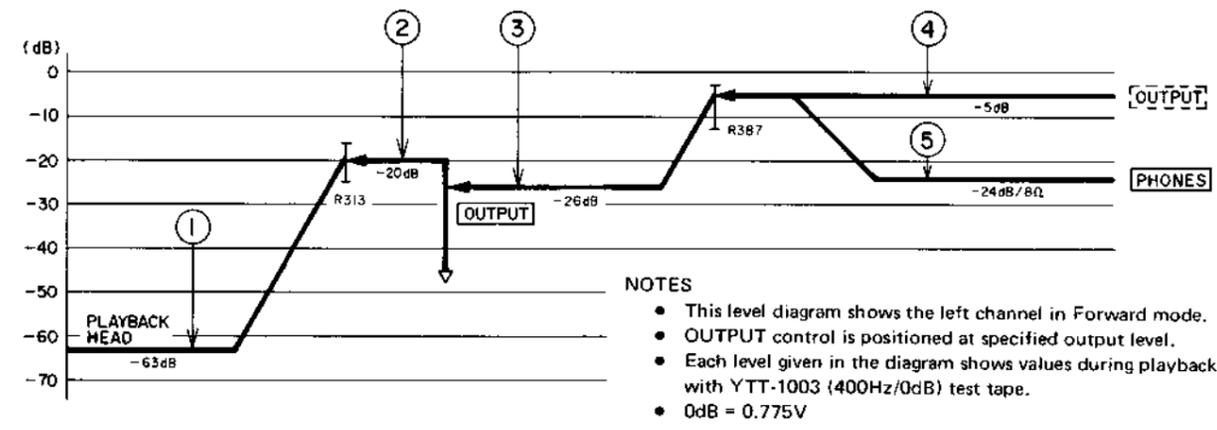

- NOTES**
1. ALL RESISTORS ARE IN OHMS UNLESS OTHERWISE SPECIFIED.
  2. ALL CAPACITOR VALUES ARE IN MICROFARADS UNLESS OTHERWISE SPECIFIED.
  3. SCHEMATIC DIAGRAM SHOWS THE CONNECTIONS OF SOME OF THE COMPONENTS OF THE CONTROL SECTION.
  4. DC VOLTAGES WERE MEASURED AT THE POINTS MARKED WITH A TRIANGLE UNLESS OTHERWISE SPECIFIED.
  5. PARTS MARKED WITH A TRIANGLE ARE NOT STANDARD COMPONENTS. THEY MUST BE REPLACED WITH EXACT REPLACEMENTS.

LEVEL DIAGRAM

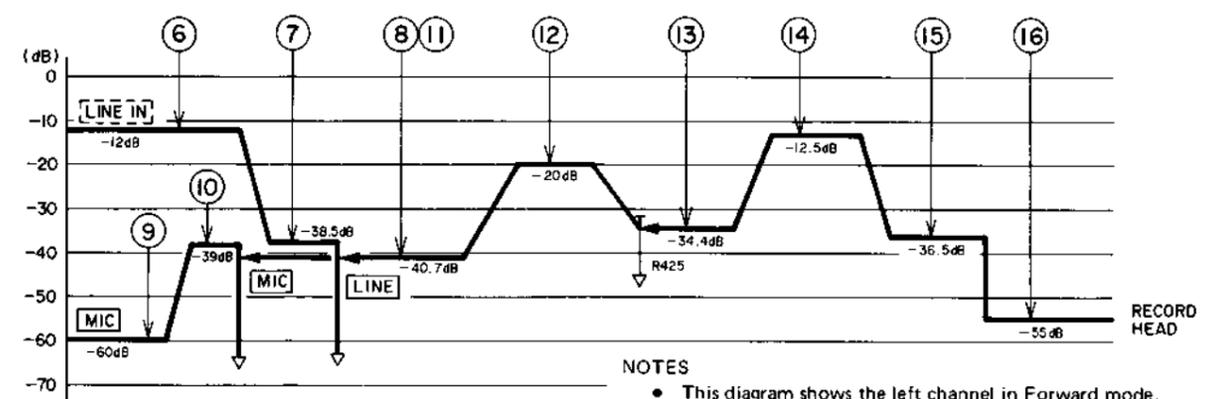

PLAYBACK SYSTEM

- NOTES
- This level diagram shows the left channel in Forward mode.
  - OUTPUT control is positioned at specified output level.
  - Each level given in the diagram shows values during playback with YTT-1003 (400Hz/0dB) test tape.
  - 0dB = 0.775V

RECORDING SYSTEM

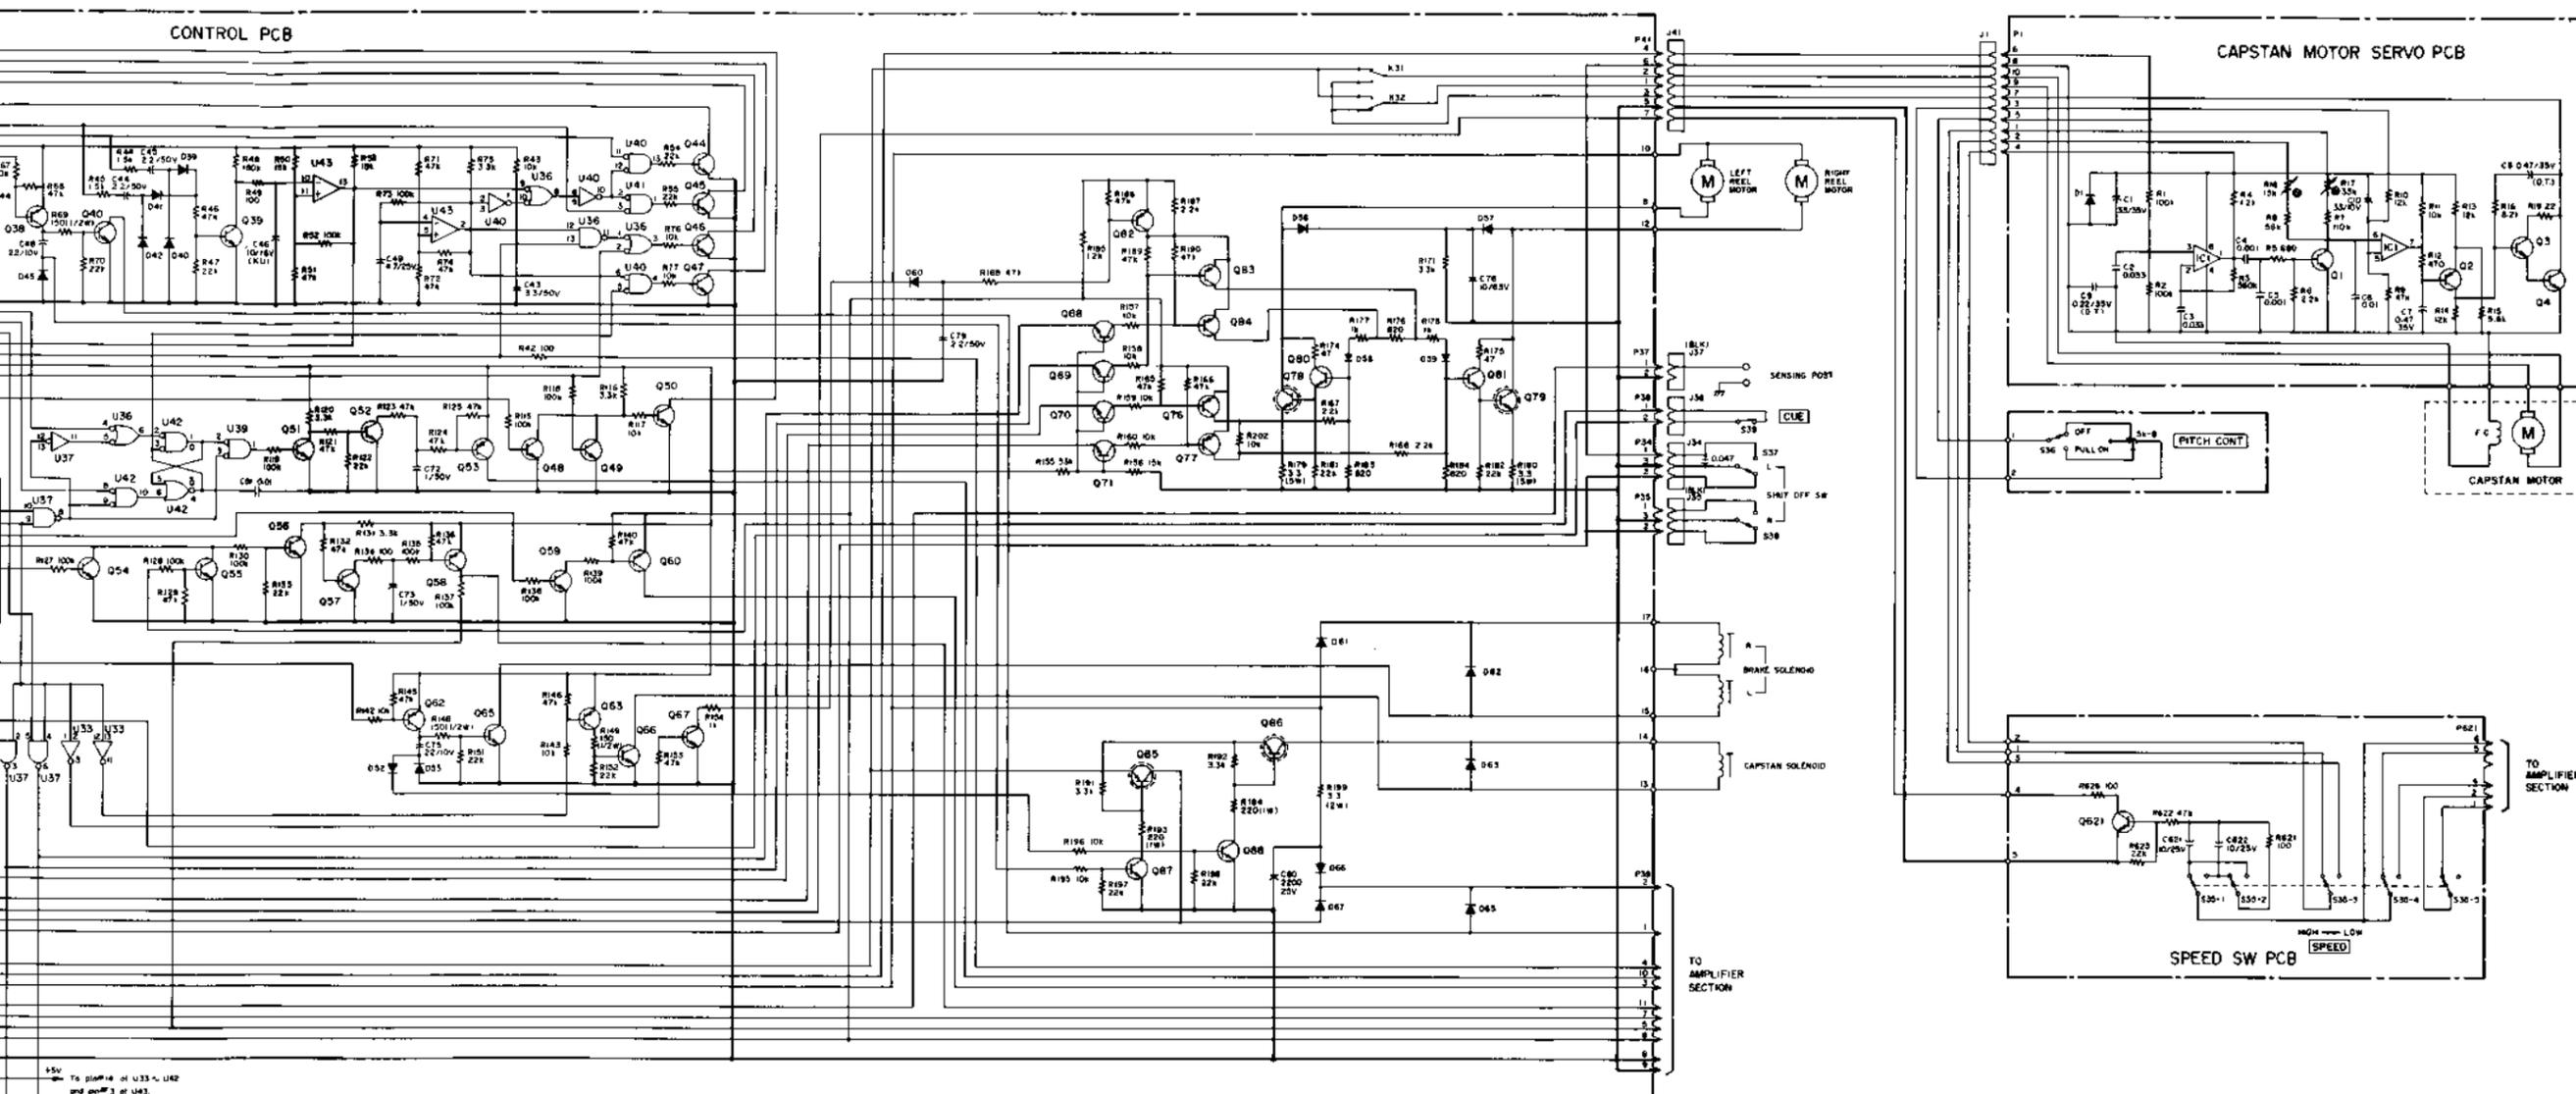

- NOTES
- This diagram shows the left channel in Forward mode.
  - Each level given in the diagram shows values when a 400Hz specified input level is applied.
  - MIC and LINE control is positioned at specified input level.
  - OUTPUT control is positioned at specified output level.
  - 0dB = 0.775V

- NOTES
1. ALL RESISTORS ARE 1/4 WATT, 5%, UNLESS MARKED OTHERWISE. RESISTOR VALUES ARE IN OHMS (k = 1,000 OHMS, M = 1,000,000 OHMS).
  2. ALL CAPACITOR VALUES ARE IN MICROFARADS (μ = PICO FARADS).
  3. SCHEMATIC DIAGRAM SHOWN FOR LEFT CHANNEL EXCEPT FOR SOME OF THE COMPONENTS.
  4. DC VOLTAGES WERE MEASURED DURING RECORD PAUSE MODE UNLESS OTHERWISE NOTED.
  5. ΔPARTS MARKED WITH THIS SIGN ARE SAFETY CRITICAL COMPONENTS. THEY MUST ALWAYS BE REPLACED WITH IDENTICAL COMPONENTS. REFER TO THE TEAC PARTS LIST AND ENSURE EXACT REPLACEMENT.
