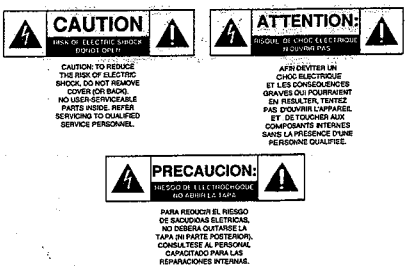
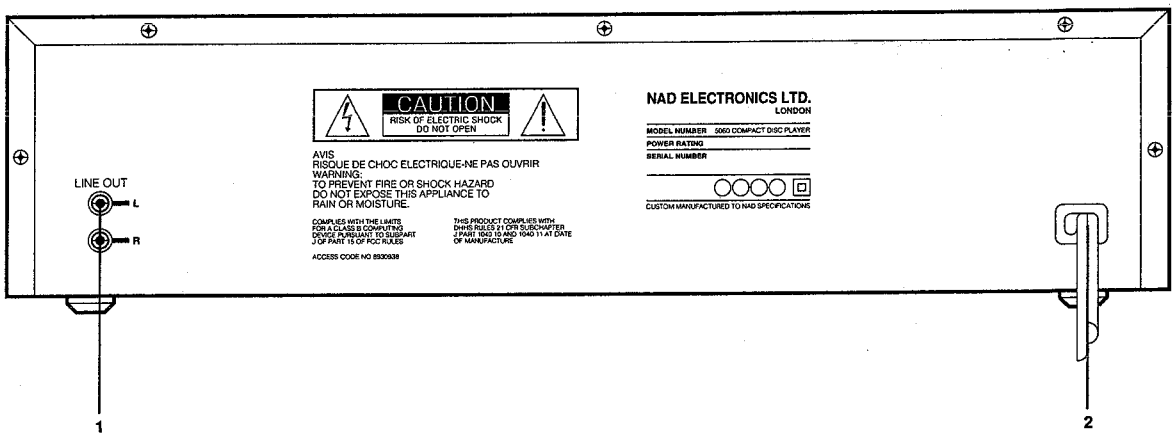
MULTIPLE PLAY COMPACT DISC PLAYER

REAR PANEL CONNECTIONS

NAD 5060





The lightning flash with arrowhead, within an equilateral triangle, is intended to alert the user of the presence of uninsulated "dangerous voltage" within the product's enclosure; that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user of the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

SPECIFICATIONS–NAD MONITOR SERIES 5060
MULTIPLE PLAY COMPACT DISC PLAYER

Disc capacity	120 mm (80 mm with adaptor)	
Programming capacity	32 tracks	
Digital-to-Analogue conversion	16-bit linear dual DAC	
Digital filter	104-point linear-phase	2-stage
Analogue filter	3-pole active	
Frequency response	5 Hz - 20 kHz	+0/–0.5 dB
De-emphasis error	< ± 0.5 dB	
THD (at 0 dB, 1 kHz)	0.035%	
Dynamic range	94 dB	
Linearity	±1 dB at –90 dB	
S/N ratio A weighted	de-emphasis off	109 dB
	de-emphasis on	112 dB
Channel separation	1 kHz	–95 dB
	10 kHz	–75 dB
Wow and flutter	Unmeasurable (quartz crystal accuracy)	
Output level at 0 dB	2.0 V rms	
Output impedance	470 ohms	
Digital error correction	CIRC with double error correction in C1 and C2.	

PHYSICAL SPECIFICATIONS

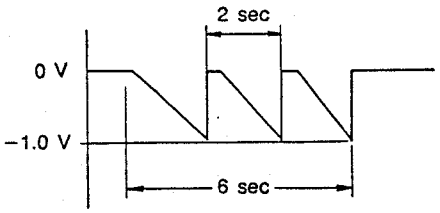
Width x Height x Depth	435 x 115 x 377 mm
Net weight	7.1 kg
Shipping weight	8.4 kg

Test Equipment
- Oscilloscope with 50MHz Bandwidth or greater
- AC Voltmeter
- Frequency Counter
- Test Disc A: SONY YEDS 7
- Test Disc B: SONY YEDS18

1. Confirmation of Focus Actuator Operation

Oscilloscope Settings
- DC coupling
- 0.1/div when 10 :1 probe is used.
- 0.5 sec/div

1) Connect the Oscilloscope to C20 [–] and Ground.
2) Press the Power on switch and load test disc A.
3) Press PLAY.
4) During the first 6 seconds of operation confirm the waveform is similar to that shown in Fig. 1.



0.5 sec div/time

Fig. 1

2. Adjustment of VCO

1) Connect TEST to GROUND and push the Power switch ON. **—Do not load a disc.—**
2) Disconnect TEST from GROUND and connect ASY test point to GROUND.
3) Connect the frequency counter to the PLCK test point and GROUND.
4) Adjust VR1 until the counter reads 4.3218MHz ±10KHz.

3. Adjustment of FE Bias

A. Oscilloscope Setting
- AC Coupling
- 50mV/div when 10 :1 probe is used.
- 0.50μs time base

1) Connect the Oscilloscope to the RF test point and ground, push the Power switch ON.
2) Load test disc A and press PLAY.
3) Adjust VR3 until the eye pattern is at maximum and is as shown in Fig. 2.

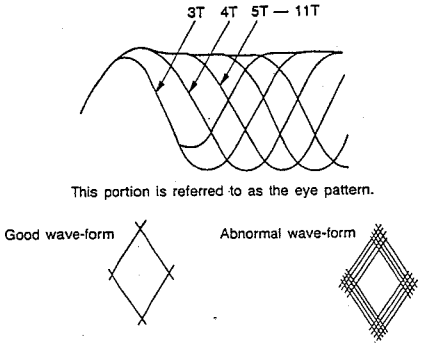


Fig. 2

B. Oscilloscope Setting
- DC Coupling
- 10mV/div when 10 :1 probe is used.
- 2 to 20mS/div time base

1) Connect the Oscilloscope to TE test poiint and Ground, push the Power switch ON.
2) Load test disc B
3) Press the PAUSE key.
4) Press the SKIP key and hold down.
5) Confirm the waveform is as shown in Fig. 3.
6) The amplitude of the waveform should be greater than 200mV pk to pk.

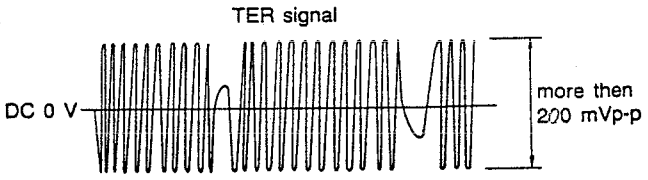

Fig. 3

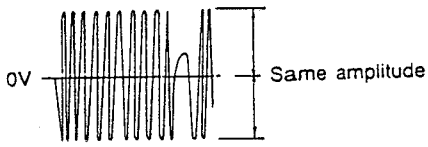
4. EF Balance Adjustment

Oscilloscope Setting
- DC Coupling
- 10mV/div when 10 :1 probe is connected.
- 20mS/div time base

1) Connect the Oscilloscope to TE and Ground.
2) Load test disc B.
3) Press the PAUSE key.
* 4) Press the SCAN key and hold down.
* 5) Adjust VR2 until the waveform is symmetrical around 0V DC, as shown in Fig. 4.



Rating DC offset — Less than ±15 mV

Fig. 4

5. Operating Test

A. Display Test
1) Push the Power switch ON whilst also pressing both the SCAN and PLAY keys together for about 3 seconds.
2) All characters of the display should now be activated as shown in Fig. 5.

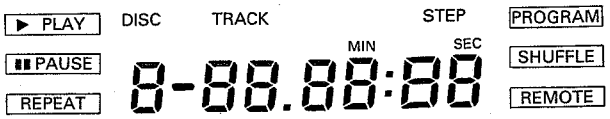


Fig. 5

B. Switch Test
1) Press the Power switch ON whilst also pressing both the SCAN and PAUSE keys together for about 3 seconds.
2) The Player is now in the Switch Test Mode.
3) PLAY should be displayed when any key is pressed (except Power ON/OFF).
4) Repeat for all keys.

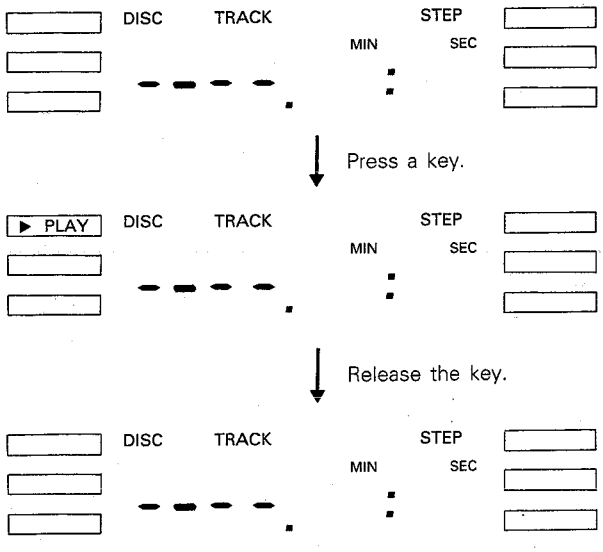

Fig. 6

C. Operation Test (Mechanism)

Before Commencing This Test:

1) Press the Power switch ON whilst also pressing both the SCAN and the STOP keys together for about 3 seconds.
2) The Player is now in the Operation Test Mode.
3) Load six discs into the magazine, then load the magazine into the player.

Note: Disc 2 must have more than 2 tracks total.
Disc 3 must have more than 10 tracks total.
All slots in the magazine must have discs loaded.

4) Program more than 3 tracks from the discs.
5) Press and hold the Reverse (<) SCAN key then press the EJECT key, the player will then start playing the following sequence automatically.

Step	disc	track	disc	track
1	1	1	6	1
2	2	1	2	2
3	3	10	3	2
4	Programmed tracks from (4) above			
5	Two tracks selected at random (shuffle mode)			
6	Eject			

- Each track will be played for ten seconds.
  If there is any malfunction of the mechanism during the tests the above procedure will stop and the display will show at which step and track the problem occurred.

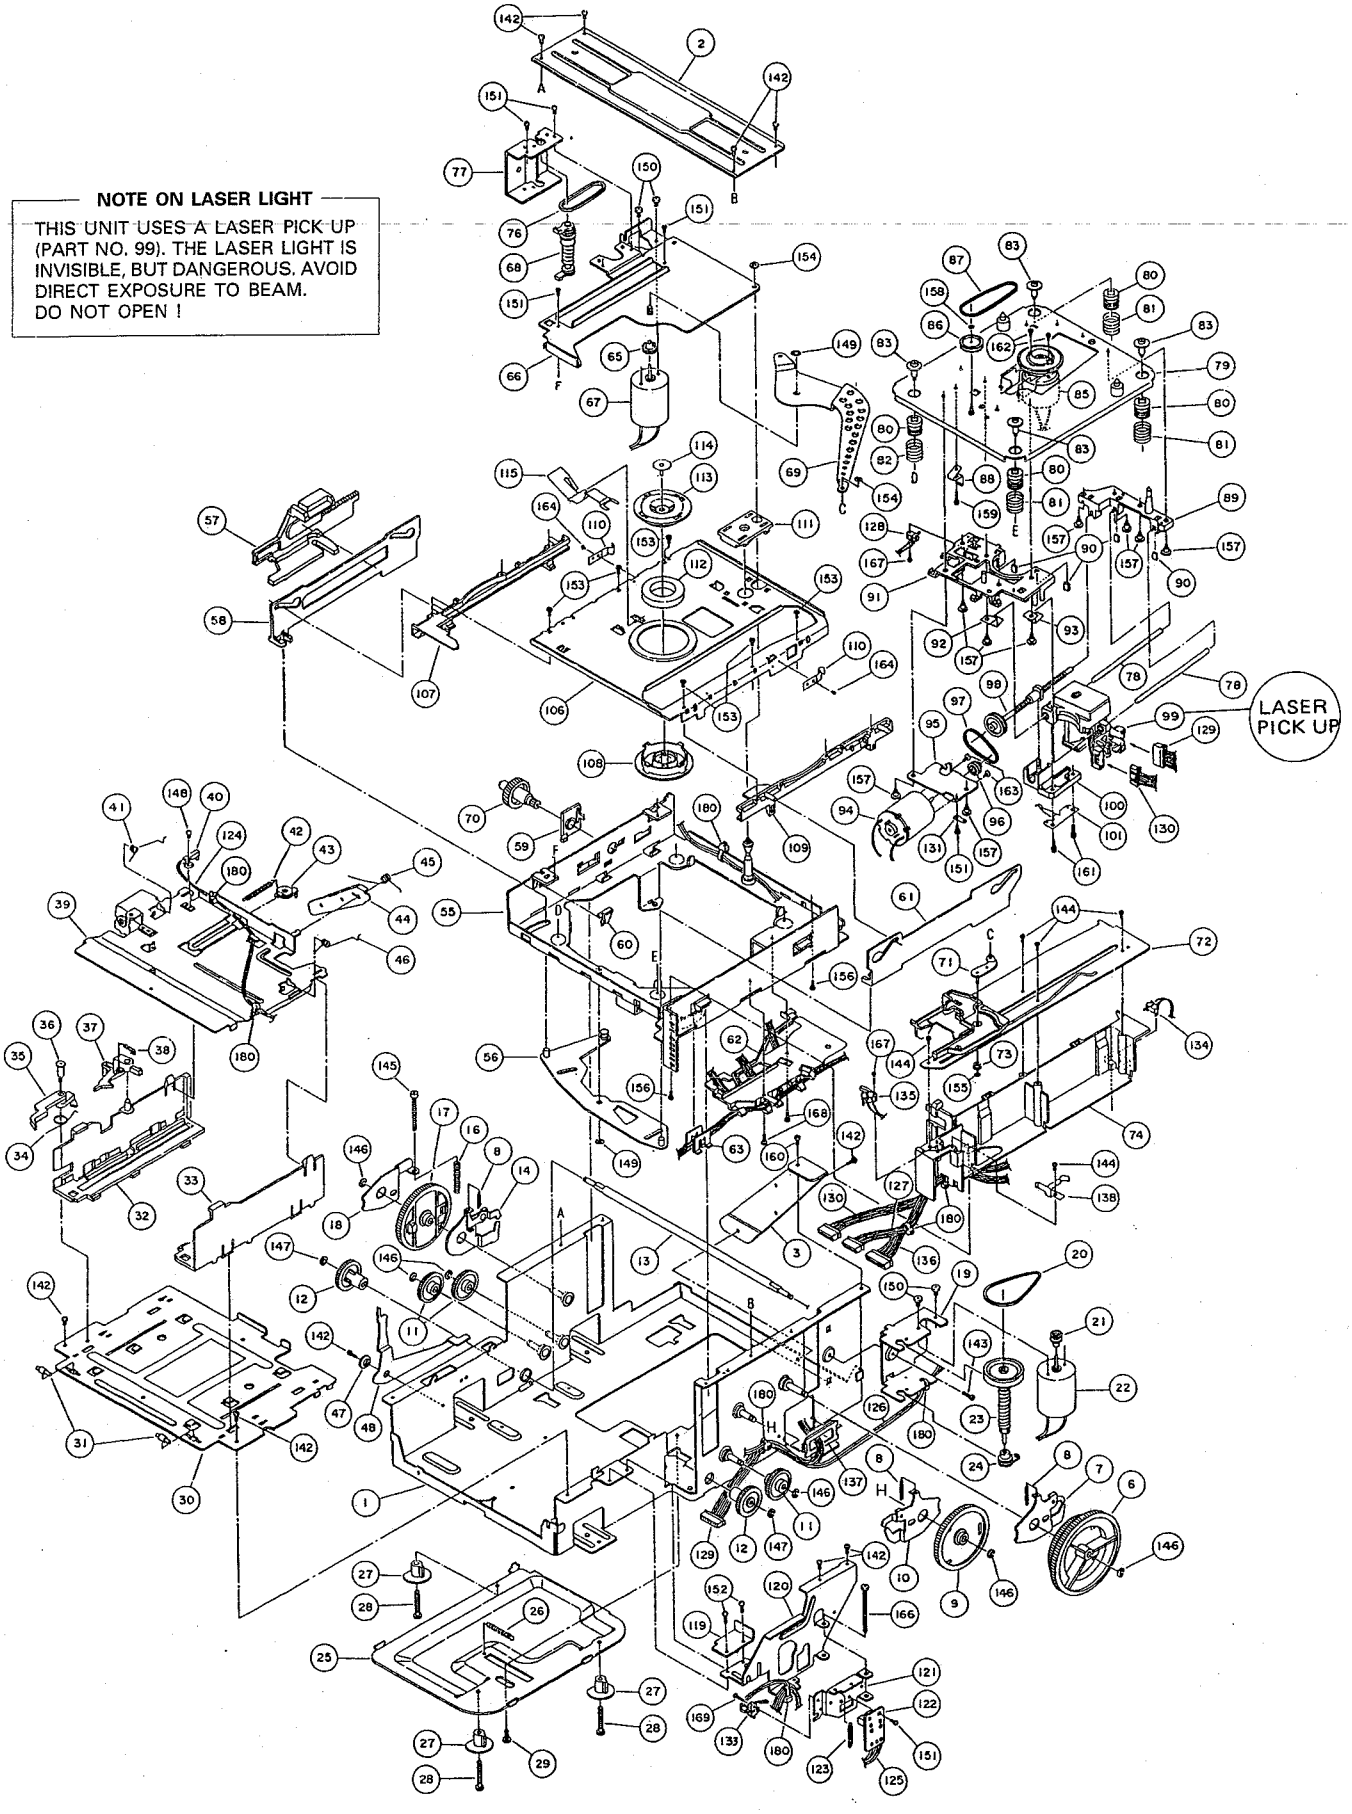
MECHANISM ASS'Y
EXPLODED VIEW

NOTE ON LASER LIGHT

THIS UNIT USES A LASER PICK UP (PART NO. 99). THE LASER LIGHT IS INVISIBLE, BUT DANGEROUS. AVOID DIRECT EXPOSURE TO BEAM. DO NOT OPEN !



MECHANISM PARTS LIST

PART NO.	ITEM
1	Chassis (Calk)
2	Reinforcement Board
3	Reinforcement BKT

Disassembly Procedure

1. Removing the Lifter Unit Assembly

1) Turn ON the power, and take out the magazine.
2) Turn OFF the power, disconnect from the mains supply.
3) Remove, the metal cover.
4) Turn screw C about 10 times, counterclockwise.
5) Remove the reinformcing plate (secured by four screws).
6) Turn the upper/lower drive unit pulley in the arrow direction to move up the lifter unit assembly to the STOP position.

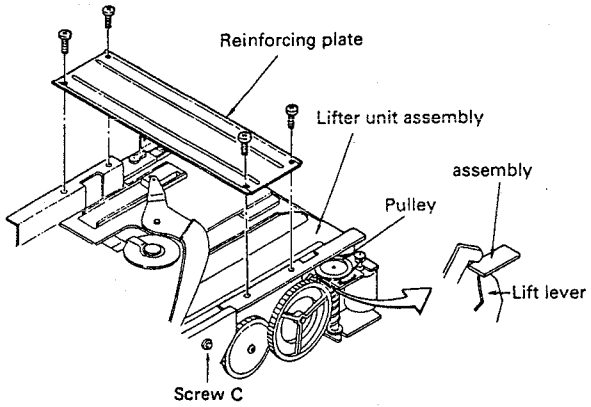

Fig. 7a Fig. 7b

Note: For the lifter unit assembly moving UP position, see Fig. 7b.

7) Remove the tie band.
8) Remove the connectors P202, P202, P501, P503 and P506 from the main PC board.

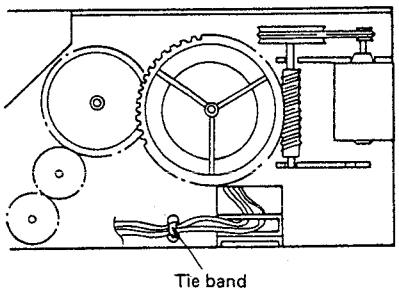

Fig. 8

9) Move the tray stopper.
(To facilitate removing the lifter unit assembly.)

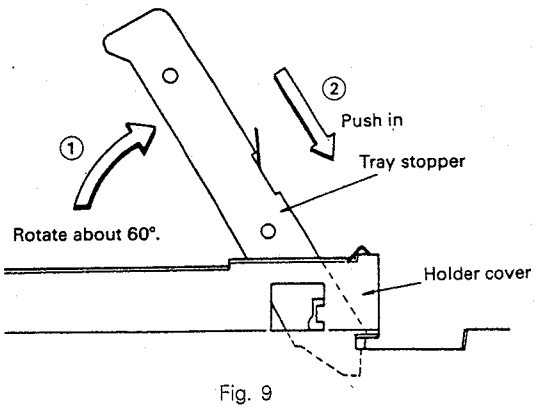

Fig. 9

10) Remove the lifter unit assembly by pulling it up.
11) The view with the lifter unit assembly removed is as shown in Fig. 10.

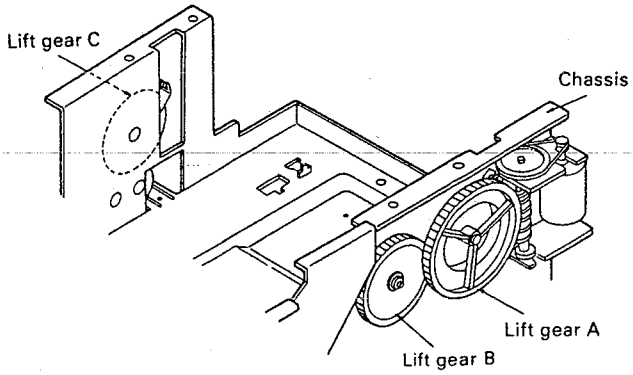

Fig. 10

12) At this time, avoid removing the lift gears A, B and C as far as possible.

Note: If it is necessary to remove these lift gears, reassemble the unit by referring to step 6 on p. 21.

2. Removing the Pickup

1) Turn the set upside down, i.e. bottom uppermost.
2) Remove the screw and foot indicated in Fig. 11.
3) Slide the bottom cover in the arrow direction and hold it up.

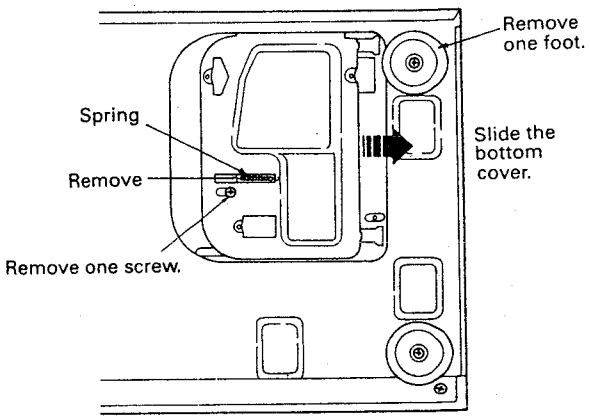

Fig. 11

4) Remove two screws ① and ②, and take off the nut block. (Fig. 12)
5) At this time, the pickup is freely to slide.
6) Remove the screws ③ and ④ fastening two shafts supporting the pickup.
7) Remove two shafts from the pickup.
8) Remove the connector wires (6P, 8P).

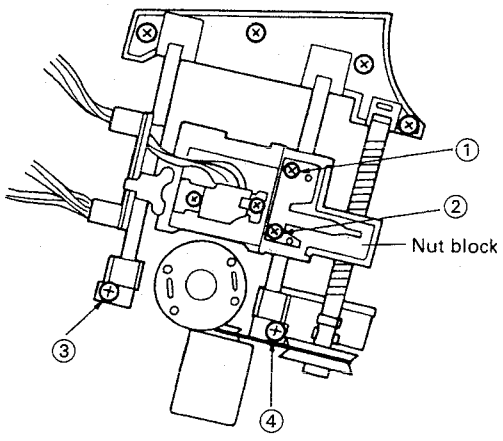

Fig. 12

3. Mounting the Pickup

Basically reverse the removal procedure. Pay attention to the following point.

1) Before mounting the nut block, be sure to slide the pickup up and down the full extent of its travel checking the leads are free, the leads should not be too tight or too loose.

4. Removing the Spindle Motor

1) Remove two slit washers ①.
2) Remove two screws fastening the slide motor bracket ②.
3) Remove four screws fastening the slide base ③.
4) Take off the leaf spring ④.
5) Hold up the slide base and slie it backwards ⑤.

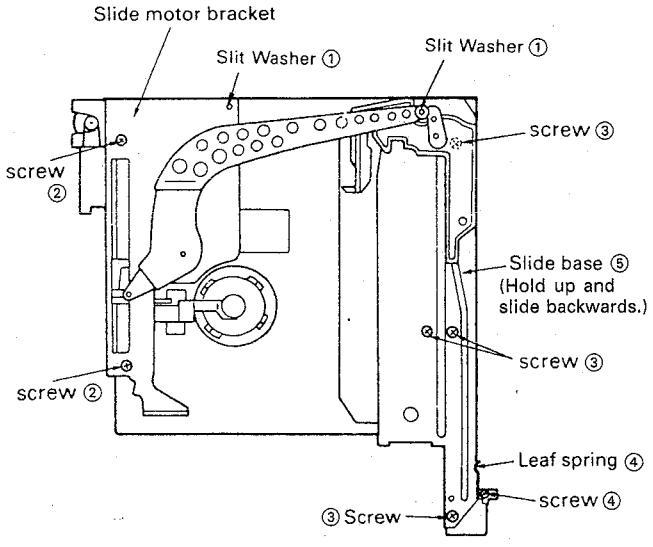

Fig. 13

6) Turn over the unit, and cut the tie band and remove two screws.
Pull the elevator to this side and raise it to remove it.

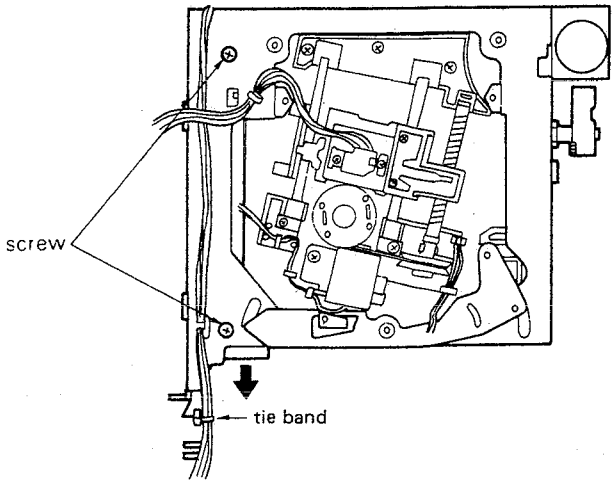

Fig. 14

7) Move the pickup away from the spindle (more than 30mm).
8) Remove the turntable belt, align the screw with two holes, and remove two screws.

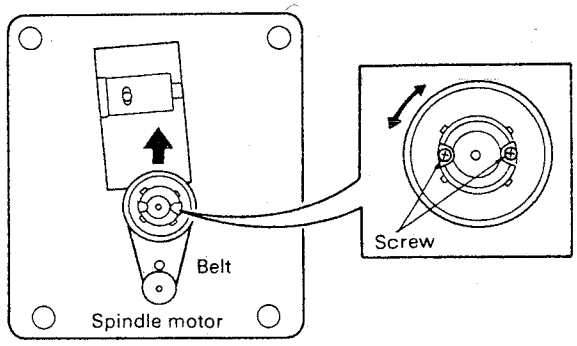

Fig. 15

9) Removable as a spindle motor unit assembly by sliding in the direction of the arrow.
10) Replace as a spindle motor unit assembly.
Fasten with two screws.

5. Removing the Stabilizer

1) Follow the procedure for removing the spindle motor and remove the elevator.

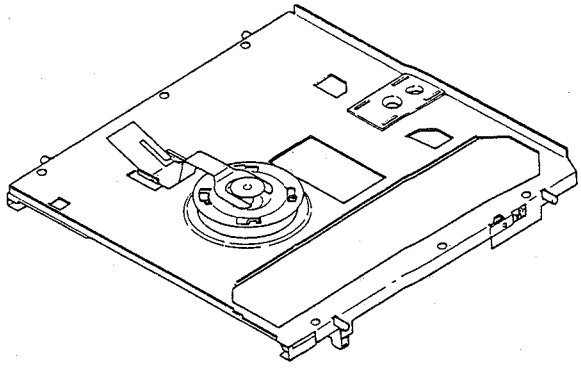

Fig. 16

2) Removing the lift up spring
   (1) Lift part A shown in the diagram and move it all in direction B .
   (2) Now lift part C and remove.

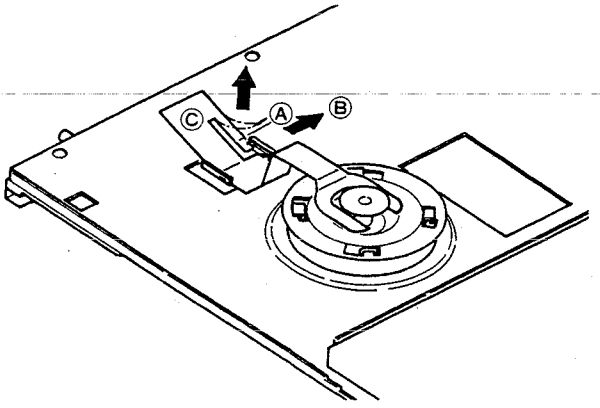

Fig. 17

3) Remove the pin which is pressed down from the top.

Note: Be careful that no forces such as twisting are exerted on the pin and it is removed directly from above.

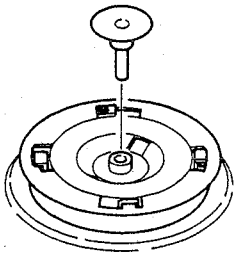

Fig. 18

4) Hold down the stabilizer, turn the yoke, and remove.

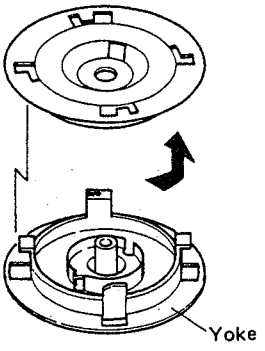

Fig. 19

6. Adjusting the Height of the Lifter Unit Assembly

1) Mout the lift gear (B) assembly ② and lift gar (A) assembly ① on the right side facing to the set.
   At this time, align the markings of two gears as shown in Fig. 20.

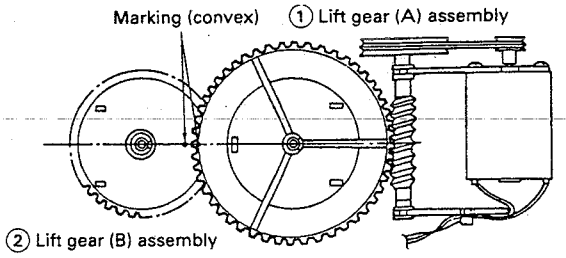

Fig. 20

2) Mount the lift gear (C) assembly ③ on the left side facing to the set. Align the markings of the gear and chassis as shown in Fig. 15.

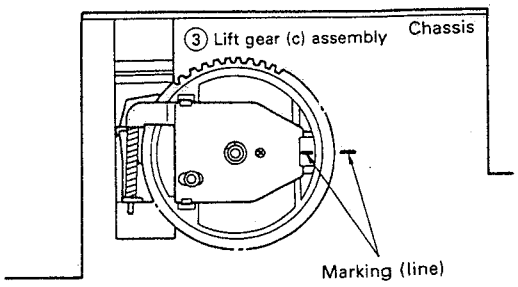

Fig. 21

Note: Align the liftgear assemblies ①, ② and ③ simultaneously.

3) Turn the upper/lower drive unit pulley (clockwise seen from the top). (Set it to the state as shown in Fig. 7a and 7b in "How to remove the lifter unit assembly".)
4) Verify the tray stopper position.
   (Set it to the state as shown in Fig. 9 of "How to remove the lifter unit assembly".
5) Insert the lifter unit assembly.
   (1) Pass the wires through the chassis hole.
   (2) Mount the lifter unit assembly on the lift lever (3 locations).
   (3) Turn the upper/lower drive unit pulley (counterclockwise seen from the top). (The mechanism moves down.)
   If the left side of the lifter unit assembly is difficult to move down at this time, push down the lifter unit assembly and verify the state shown in Fig. 22.

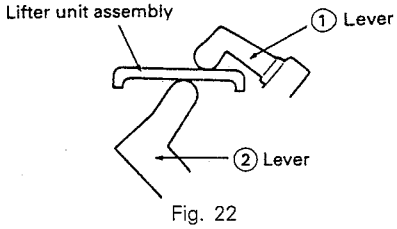

Fig. 22

(The lifter unit assembly should be inserted between the levers ① and ②. (3 locations))

(4) Move the tray stopper.
(Do the procedure of Fig. 3 of "How to remove the lifter unit assembly" in the reverse order.)
(5) Tighten screw A in the Clockwise direction.

6) Turn on the power. Insert the magazine with no trays loaded. Select disc 3 and turn off the power immediately after the lifter unit reaches the height of disc 3 in the magazine.
7) Look in through the window on the front side of the magazine and confirm that the rail of the lifter unit and the guides in the third slot are at the same level.

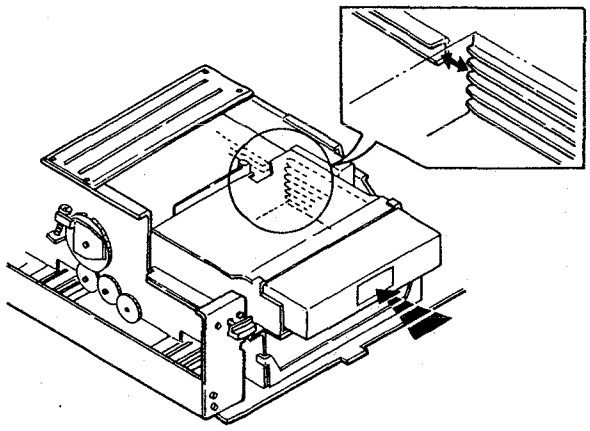

Fig. 23

Check if the left and right rails are horizontal.
- When the left rail is inclined downward.
  Turn the screw A clockwise.
- When the left rail is inclined upward.
  Turn the screw A counter-clockwise.
- When the lifter mechanism is displaced downward.
  Turn the screw B clockwise.
- When the lifter mechanism is displaced upward.
  Turn the screw B counter-clockwise.

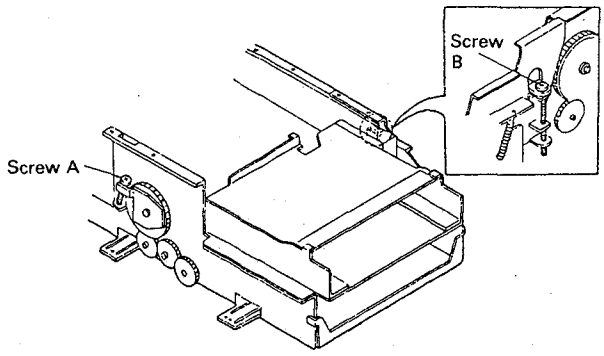

Fig. 24

Turn adjust screw provides electrical adjustment, and the height is not changed. Repeat the above items for adjusting the height.
