DENON

Hi-Fi Component

SERVICE MANUAL

STEREO CD PLAYER

MODEL DCD-1100

NIPPON COLUMBIA CO., LTD.

TABLE OF CONTENTS

FEATURES

The DCD-1100 compact laser disc player utilizes a unique DENON Super Linear Converter which prevents deterioration of sound quality in the PCM playback system, assuring accurate reproduction in the studio or live sound production areas of sound recorded on compact discs. This high quality disc player, whose parts have been selected after careful discrimination, produces realistic playback of the full musical scene.

SPECIFICATIONS

AUDIO

No. of channels:	2 channels
Frequency response:	5 ~ 20,000 Hz +0.3/–0.5 dB
Dynamic range:	95 dB
Signal-to-noise ratio:	95 dB
Harmonic distortion:	0.004% (1 kHz)
Channel separation:	90 dB (1 kHz)
Wow and flutter:	Less than the measuring limit (±0.001% W. peak)
Output voltage:	2.0 V

DISCS

	Compact discs are used.
Playing time:	60 min/single side (79.8 min/single side)
Diameter:	120 mm

SIGNAL FORMAT

Sampling frequency:	44.1 kHz
Quantization:	16 bit linear channel
Transmission bit rate:	4.3218 M bits/sec

PICKUP

System:	Objective lens drive system, laser pickup
Lens drive system:	Two-dimensional parallel drive
Light source:	Semiconductor laser
Wavelength:	780 nm

GENERAL CHARACTERISTICS

Power supply:	50/60 Hz, Voltage is shown on rating label.
Power consumption:	12 W
Dimensions:	434 (17.1 in) W x 89 (3.5 in) H x 350 (13.8 in) D mm
Weight:	5.0 kg

FUNCTIONS AND DISPLAY

Functions:	Direct selection, quick selection, programmed selection, repeat playback pause, skip monitor, and index search
Display:	Track number, index number, time, and program
Other functions:	Headphone jack, variable level (headphone control)

REMOTE CONTROL UNIT	RC-1100
Remote control system:	Infrared pulse system
Power supply:	3 V DC Two SUM-4 (standard size four) dry cell batteries
External dimensions:	60 (2.4 in) W x 150 (5.9 in) H x 17 (0.7 in) D mm
Weight:	98 g (Includes batteries)
ACCESSORIES	Connecting pin cord

* For product improvement purposes, the above specifications are subject to change without notice.

VAROITUS: **SUOJAKOTELOA EI SAA AVATA. LAITE SISÄLTÄÄ LASER-DIODIN, JOKA LÄHETTÄÄ SILMÄLLE VAARALLISTA LASER-SATEILYÄ.**

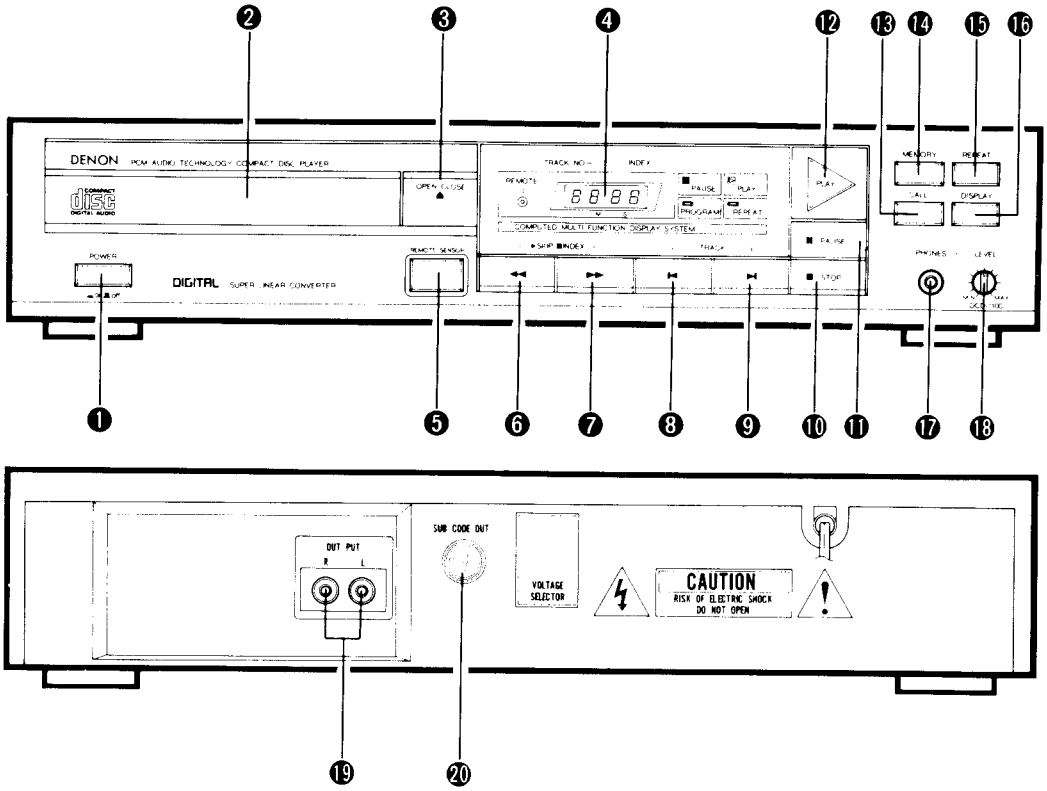
" CLASS I LASER PRODUCT "

NAMES AND FUNCTIONS OF PARTS



❶ Power Switch (POWER)

- Press this switch to turn the power source ON.
- When the power is turned ON, (00) will light up in the numeric portion of the display ❹. If no disc is loaded at this time, (– – – –) will be displayed after several seconds.
- If a disc is loaded, the machine automatically enters playback state (Timer start) when the power switch is turned ON. The first recorded piece will then begin to play.

❷ Disc Holder

- The disc is loaded into the disc holder for play.
- The disc holder is opened and closed by pressing the disc holder open/close button (▲ OPEN/CLOSE) ❸.
- It can also be closed by pressing the play button ⓬ (▶ PLAY).

❸ Disc Holder Open/Close Button (▲ OPEN/CLOSE)

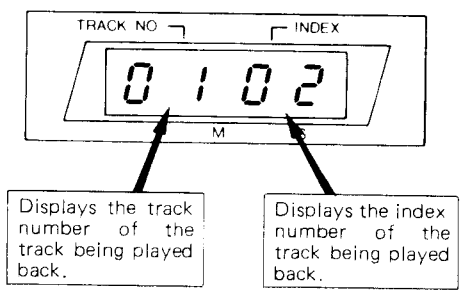
- The disc holder ❷ is opened and closed by pressing this button.
- Press the button once to eject the disc holder ❷. Press it again to close the holder.
- If a disc is inserted when the disc holder is closed, the disc is rotated for several seconds, and then the machine enters STOP state. The first track number (number of piece) on this disc is then displayed on the digital display ❹.

❹ Display

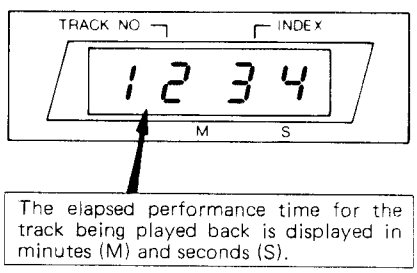
- The numeric portion of the display consists of three sections: 1) the number and index of the piece to be played, 2) the lapsed time of the playback, and 3) the display of the contents in memory.

Use the DISPLAY bubton ⓰ to switch the display to 1) or 2), and the CALL button ⓭ to switch the display to 3). Once a track has started to play, the memory contents cannot be displayed.

(1) Display of track number and index for the track being played back

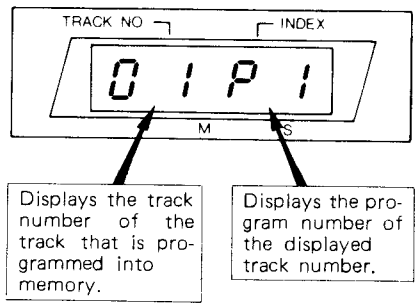


(2) Display of time elapsed during playback (Press the display button.)



- If a disc is loaded, the total playback time for the disc is displayed.

(3) Display of the contents in memory
(Press the call button.)



❺ Remote Control Photosensitive Window

- The wireless remote control function utilizes a photosensitive window to receive the transmission.
- The wireless remote control unit should be operated while it is pointed in the direction of the photosensitive window.

❻ Fast Reverse Skip Button (◀◀)

- Press this button to move playback in fast reverse.
- When the machine is in play, sound will be produced as the pickup moves back, during the time that the button is being pressed.

❼ Fast Forward Skip Button (▶▶)

- Press this button to move playback in forward.
- When the machine is in play, sound will be produced as the pickup moves forward, during the time that the button is being pressed.

❽ Track Button (⏮)

- Press this button to move the pickup backward, to advance to the beginning of the desired track.
- If the TRACK button is pressed once during playback or pause, the player returns to the beginning of the current track. Each subsequent time the button is pressed, the player moves backward to the beginning of the track that corresponds to the number of times the button was pressed.

❾ Track Button (⏭)

- Press this button to move the pick up forward, to return to the beginning of the desired track.
- If the TRACK button is pressed during playback or pause, the player moves forward to the beginning of the track that corresponds to the number of times the button was pressed.

❿ Stop Button (■ STOP)

- Press this switch to stop the playback.
- The rotation of the disc stops, and the first track number on the disc is read out on the display.

⓫ Pause Button (⏸ PAUSE)

- Press this button to stop the playback temporarily.
- If the PAUSE button is pressed during playback, the play is stopped temporarily, the PLAY lamp goes out, and the PAUSE lamp lights.
- The end the pause, push the PLAY button ⓬

⓬ Play Button (▶ PLAY)

- Press this button to play a disc.
- When the PLAY button is pressed, the PLAY lamp on the display lights, and the number of the track being played and the index number are displayed.
- When playback of the last track has finished, the PLAY lamp goes out, and the machine enters stop state.
- It is also possible to use the PLAY button to close the disc holder after a disc has been inserted. The first track then begins to play.

⓭ Call Button (CALL)

- Press this button to verify the track numbers that have been programmed into memory.
  When the machine is in play, the button does not function.

⓮ Memory Button (MEMORY)

- Press this key to program the memory to contain selected tracks.

⓯ Repeat Button (REPEAT)

- Press this button to repeat playback.

⓰ Display Button (DISPLAY)

- Press this button to switch the display to a different read out.
  The display can be switched between a read out of the track number and index number and a read out of the elapsed playback time, in minutes and seconds.
- To display the total playback time for the tracks recorded on the disc, this key must be pressed after the user has inserted the disc, pressed the disc holder open/close button (⏏ OPEN/CLOSE), and the first track number has been displayed. Once playback has begun, the total playback time cannot be displayed, even if playback is stopped with the stop button (■ STOP).

⓱ Headphone Jack (PHONES)

- Always use the headphones at an appropriate volume. (Headphones are sold separately.)

⓲ Volume Adjustment Knob (LEVEL)

- Use to adjust the output level (volume) of the headphone jack.

⓳ Output Terminal (OUTPUT)

- Connect the output terminal to the input terminal of the amp.

⓴ Sub Code Output Terminal (SUB CODE OUT)

- This output terminal is for a signal that will enable the effective use of the laser disc player in the future.

HANDLING, CONNECTION AND SAFETY INFORMATION FOR THE KSS-121A OPTICAL PICK-UP

1. Handling Instructions

Please read the following instructions carefully before handling pick-ups.

1) Handle with care

The pick-up KSS-121A is assembled and precisely adjusted using a sophisticated manufacturing process in our plant. Keep the pick-up protected from vibration and impact. Do not disassemble or attempt to re-adjust it. Hold the optical base (aluminum diecast) when handling it. Do not touch the PD and LD PWB (Printed Wiring Board).

2) Storage

Do not store the pick-up in dusty, high-temperature or high-humidity environments.

3) Laser Diode

Protect Your Eyes

Do not look at the laser light beam through the objective lens directly nor another lens or a mirror. The laser beam may damage the human eye, since the intensity of the focusd spot may reach 1.3×10^4 W/cm^2 even if the intensity at the objective lens is 400 μW maximum.

Poison

The LD chip contains As (arsenic), a poison. Although the poison is relatively weak and the amount is small, avoid putting the chip in acid or an alkali solution, heating it over 200°C or putting it into your mouth.

Avoid surge current or electrostatic discharge

The LD may be damaged if a large current is applied to it, even if only a short pulse. For safe handling of an LD, grounding the human body and measuring equipment is strongly recommended. Make sure that there is no surge current in the LD driving circuit. The PINs of the LD are short-circuited for protection during shipment. To open the short circuit, remove the soldering quickly with a soldering iron whose insulation resistance is larger than 10 MΩ after connection to a suitable *APC circuit. The temperature of the sildering iron should be less than 320°C.

Note: *APC (Auto Power Control)

4) Actuator

The performance of the actuator may be effected if magnetic material is located nearby, since the actuator has a strong magnetic circuit.

Do not permit dust to enter through the gap of the cover.

Cleaning the lens:

Lens-cleaning paper with 50 : 50 mixed solvent of IPA (Isopropyl alcohol) and Freon (freon 113 CC1 F-CC1F) is recommended.

2. Connections

1) How to mount the pick-up

Use the reference plane as shown in the assembly drawing when mounting the pick-up in the transportation mechanism. No special adjustment such as skew adjustment or grating angle adjustment is required. The metal bearing of Cu-compound sintered alloy is impregnated with oil. You do not normally need to lubricate the bushing. If you need to lubricate, use Hydrofluid EP-56 (Mitsubishi Oil).

2) Harness and connector

Use the specified connector housings for electrical connections. Care should be taken to see that the connector of the LD harness is clamped tightly, since a loose connection may cause a serious damage to the LD. There may be a deterioration in the eye pattern if a digital noise source such as a microcomputer is positioned near the PD harness.

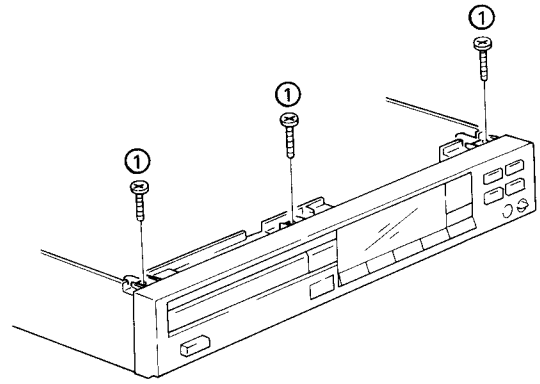
3) Safety regulations

This pick-up is designed to meet general safety regulations. For the pick-up as installed in a set to be certified as meeting the safety regulations of a particular country, however, application will have to be made to the proper authorities.

DISASSEMBLY

• Removal of Top Cover

Remove two screws on the front and tow screws on the rear of Top Cover (23) and detach the Top Cover by means of lifting it.

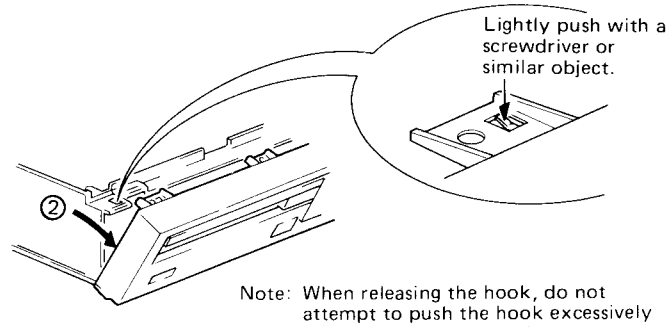


• Removal of Front Panel

① Remove three screws mounting the Front Panel (8).

② While pushing the hook on the upper left (or right) lightly, bring down the Front Panel in the direction arrow shows to release hook.

Note: When reassembling the Front Panel, confirm that the two hooks on the upper and two hooks on the lower side firmly catching the Front Panel by means of shaking the Panel back and forth.

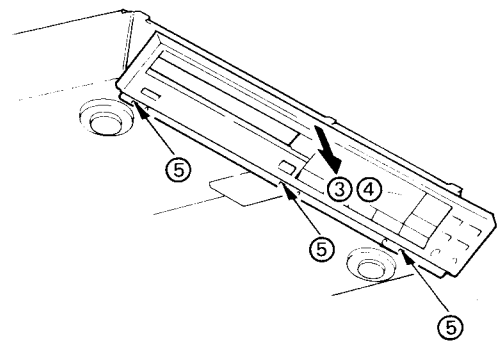


Note: When releasing the hook, do not attempt to push the hook excessively hard as this may invite damage to the hook.

③ The same manner as to step 2 , while lightly pushing the hook on the upper right (or left), bring down the Front Panel and release hook.

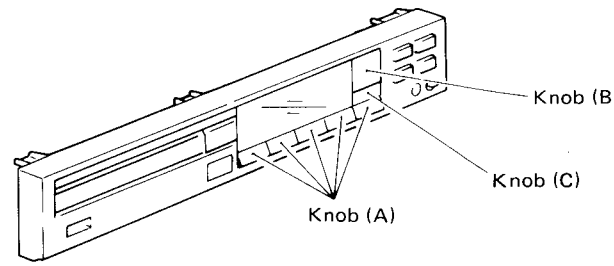
④ While pulling the released upper part of Front Panel in the direction arrow shows, place the rear of the unit downward to stand it.

⑤ Lightly push the hooks on the lower part of the Panel one by one from the side to release and detach the Front Panel.



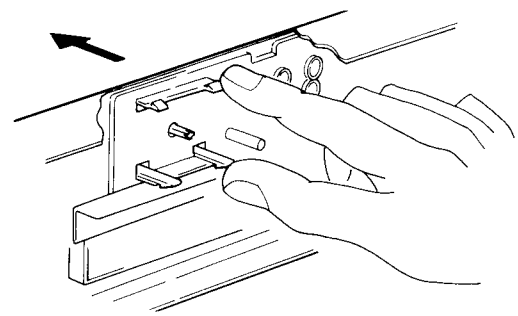
• Removal of Knobs

Remove the Front Panel.

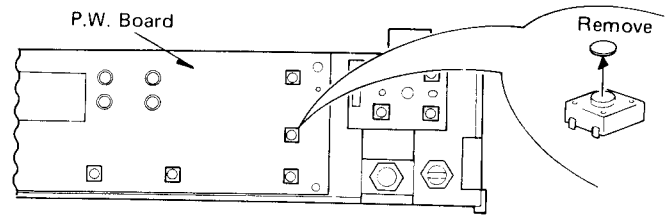


(1) Knob (B)

Place the rear side of Front Panel frontward, pinch the hooks of Knob (B) and push them lightly to the arrow direction as illustration shows to detach.

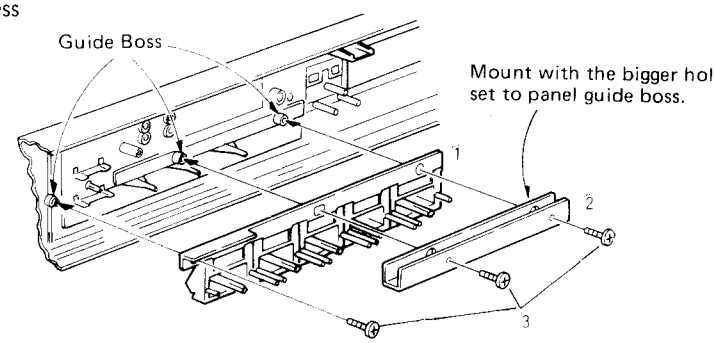


(2) Knob (C)
Follow the same procedure as to (1) to detach. If no switching tactual is felt and Knob (C) becomes pressed state after replacement, check to see that a transparent sheet (ϕ4, thickness: 0.1) using as the former knob (C) countermeasure is stuck on the switch or not. Remove it when pasted.



• Attaching of Knob (A)

① Place the rear side of Front Panel frontward, Insert three guide bosses of Front Panel into the guide holes of Knob (A).
② Insert the guide bosses of Front Panel into the press bar guide holes and tighten with two screws.
③ Fasten three screws (3 x 8 mm CBTS-P).



• Removal of Mechanism Unit (Refer to page 31)

The Mechanism Unit can be removed after removing the Front Panel.

(1) Remove screw (56) on the rear of loader and disassemble the loader stopper (41).
(2) Unfasten screw (64) securing the leaf switch (47) on the right hand side of Mechanism Unit to detach.
(3) Draw loader unit frontward to detach.
(4) Remove four screws (51) tightening Mechanism Unit. Hold the rear of the Unit and pull it out diagonally to rear to dismantle.

• Removal of Mechanism Unit Parts (Refer to page 31)

Refer to the exploded view of Mechanism Unit and the following instructions, replace pick-up, slide motor, and spindle motor.

(1) Remove 2 mounting screws (65) for the housing (8) a detach the housing from the mechanism plate (1).
(2) Unfasten two mounting screws (34), (63) for the servo P.W.B. and dismantle the P.W.B.
(3) To replace pick-up (10), remove four screws (54) on the both sides of slide shaft (12), and disassemble pick-up with the slide shaft from the housing (8). Do not over tighten the screws (54) when remounting.
(4) To replace slide motor (3), remove spring (7), 3-E ring (52), and helical gear (6).
(5) Next, remove 2 mounting screws (51) of the slide motor (3) and detach the slide motor with the worm gear (4).
(6) To replace spindle motor (9), unfasten a mounting screw (61) for the turntable (13).
(7) Next, remove 2 mounting screws (53) for the spindle motor and detach the spindle motor from the housing. In addition when remounting the turntable, refer to the "Turntable Height Adjustment" and adjust it properly.

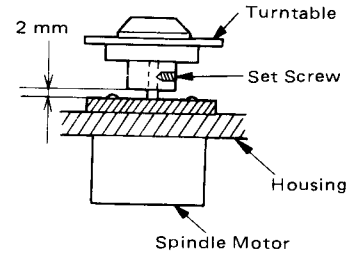
ADJUSTMENT OF MECHANISM UNIT

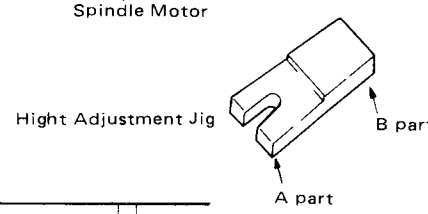
• Turntable Height Adjustment

① Attach the turntable to the spindle motor.
② To adjust the height in 2 mm, insert "A" part of the jig between the upper surface of the housing and the lower surface of the turntable.
③ When it is adjusted to 2 mm, tighten the set screw.

About the height adjustment jig

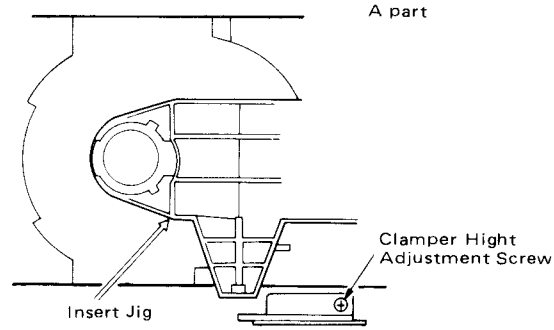
As illustration shows, the jig to be used for the height adjustment is prepared. The part indicated "A" for turntable height and "B" for clamper arm height adjustment. In order easier for the adjustment, place the laser pick-up away from the turntable and insert the jig between the housing and the turntable before attempting the adjustment.

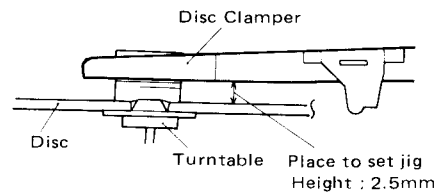




• Clamper Arm Height Adjustment

① Load a disc onto the turntable.
② To adjust the height between the disc and disc clamper in 2.5 mm, insert "B" part of the jig into the portion indicated in the illustration.
③ After adjusting it to 2.5 mm, fasten the clamper height adjustment screw.





MAINTENANCE AND ADJUSTMENT PROCEDURE

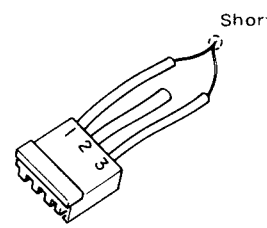
For necessary operations to perform part replacement, repairing, and adjustment, it is feasible by using of operation buttons normally used for playing to adjust tracking, focus, etc. of the laser pick-up. because of a service software (service mode) is programed to a microcomputer employed in this model.

Hereafter the adjustment procedures for each circuit checking and servo system adjustment are explained as the unit is set to service mode condition except for specified case.

1. Setting of Service Mode

- Turn off the power (do not load a disc).
- Remove top cover for confirming of inside.
- Short-circuit pins ① and ③, TP-204 of signal processing P.W.B. (KU-5740). It is convenient to use a connector like one the illustration shows.

  Note: Never short-circuit TP-204 after the power turned on.
- By turning on the power, " 00 " blinks on the indication window showing service mode.
- On this state, all buttons' functions for normal playing are inoperative and the disc tray can not be opened or closed.



Short-circuit Connector Jig

2. NOTES ON OPERATION BUTTONS IN SERVICE MODE

(1) Play Button (▶ PLAY)

Each push of the button to actuate the following servo circuit operation in consecutive order. Pushing it four times actuates all servo operations.

- Push it once : Actuate focus servo circuit
- Push it twice : Actuate spindle servo circuit
- Push it three times : Actuate tracking servo circuit
- Push it four times : Actuate slide servo circuit

When focus servo operation is defective, it will not go to the next step however the button is pressed.

(2) Stop Button (■ STOP)

Pushing the button to cancel all circuit operations. To check servo circuit again or recheck from the beginning, put it.

(3) Track Button (⏮ ⏭)

In service mode, this button has two functions.

① In stop state (include the condition after the power is turned on):
The pick-up slides.
While pushing " ⏮ " side, pick-up moves to disc center; while pushing " ⏭ " side, it moves to disc outer circle.

② In the state when play button (▶ PLAY) is pressed four times and all servo circuits are activated:
Performs track jump.
There are three types of track jump (1, 10, 100 tracks) and are switchable by pause button (❚❚ PAUSE).

- Except for the above two conditions, this button will not function even if it is pressed.
(An example: In such a case when the play button is pressed three times and the servos are activated up to tracking.)

- Pushing the track button (⏮ ⏭) while all servo circuits are activated makes the tracking servo gain lowered.
Note that the adjustment of tracking servo explained later must be performed under the tracking servo is in high gain. To put it in high gain condition, turn off the power once and turn on again, then activate all servo circuits.

(4) Pause Button (❚❚ PAUSE)

Switches track jump mode.
It is always reverted to 1 track jump mode whenever the power is turned on.
Each push of the button shifts the mode to 10-track, 100-track, 1-track . . . , but no mode indication is displayed.
Confirmation of track jump mode can be obtained by the time width of tracking error signal.

3. CHECKING OF FOCUS, SPINDLE, TRACKING, AND SLIDE SERVO OPERATIONS

- Be sure to observe the preceding "Turntable Height Adjustment" at the time removed the turntable or in case of disc hit the tray.
Also when replaced the parts, be sure to do the following servo system adjustments prior to these adjustments.

(1) Turn off the power and disconnect the jumper to pins ① and ③ of TP-204. Then turn on the power and operate disc holder open-close button (⏏ OPEN/CLOSE) to load the standard disc.
Note: When TP-204 is shorted, disc holder can not be opened or closed even though the disc holder open/close button is pressed. Displace the lock arm from the lock point enables loading of disc by drawing the disc holder frontward manually. In this case, turning on and off the power is not essential.

(2) Short-circuit pins ① and ③ of TP-204 and turn on the power. Check to see that " 00 " blinks on the indication window.

(3) Checking of Focus Servo Operation.
Pushing the play button (▶ PLAY) starts focus search. When the disc is loaded, by detecting of a focusing point of the laser beam on the disc surface to activate focus servo.
When the disc is not loaded, repeats focus search three times and the returns to the former state (the condition before pushing the button).
When the button is continuously pushed, repeats focus search with or without loading of the disc. When the button is released, starts detecting a focusing point within the three times of search operation.
In case of focus servo is properly worked, the position of object lens of laser pick-up becomes approximately the same height as actuator cover.
Confirmation of the proper focus servo operation can be checked by a "squeak" sound reproduced when turning the disc clockwise or counterclockwise with the hand lightly.
This sound derives from the movement of actuator for focus servo, so checking of this sound namely to confirm proper operation of focus servo.
Note: Confirming up and down movements of object lens enables checking of focus search operation. Remove the disc and detach the disc clamper so as to look object lens movement more easily, then push play button (▶ PLAY). The object lens repeats moving three times up and down then stops. Through this movement the operation of actuator for focus control can be checked.

(4) Checking of Spindle Servo
After checking the focus servo, push play button (▶ PLAY) again. The disc starts to run.
With this revolution of disc, the servo operation can be confirmed.

Note: If the disc does not run due to spindle servo malfunction or runs fast, the following "Checking of Tracking Servo" will be impossible.

(5) Checking of Tracking Servo
Push play button (▶ PLAY) again.
When tracking servo is properly operated, a "Sizzle" sound from the operation of tracking actuator of laser pick-up will be produced.

Note: Same as previous column, if it is not properly operated the following checking will be impossible.

(6) Checking of Slide Servo
Note: Before checking, prepare and insert a headphone into the headphone jack with a volume adjusted to adequate level.
Push play button (▶ PLAY) again.
When slide servo is properly operated, the sound will be heard through the headphone.
This sound not always be heard normally, for many instances it will be heard as if it is muted.

Note: If there is no sound, the laser pick-up may be set at disc's lead-in or lead-out position. For this case, move the laser pick-up to the program are referring to the column 4.(5) ②.

(7) Checking of Playback Sound
- Connect the line-out of this unit to an appropriate amplifier so that the playback sound can be checked.

Push either side of track button (⏮ ⏭).
In this state tracking servo becomes low gain and the unit becomes normal playing condition.

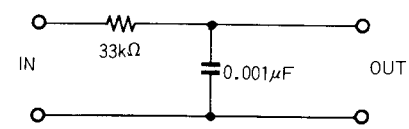
(8) Checking of General Functions
Turn off the power and disconnect the jumper to pins ① and ③ of TP-204.
Turn on the power and check all playing controls for proper functions.

Note: Because of a timing of the microcomputer employed in the unit, occasionally it does not accept a command from the button.
In this case do not judge it for defective, repeat the same check for several times.

4. ADJUSTMENT

(1) Before Adjustment.
Adjustment order is, first to adjust turntable height, etc. at the time complete assembling, secondly to adjust electrical adjustments for laser pick-up system and spindle motor system to complete.
The adjustment of the super-linear converter employed in this unit aiming to reduce a distortion at the time of D/A conversion is unnecessary except for special occasion.

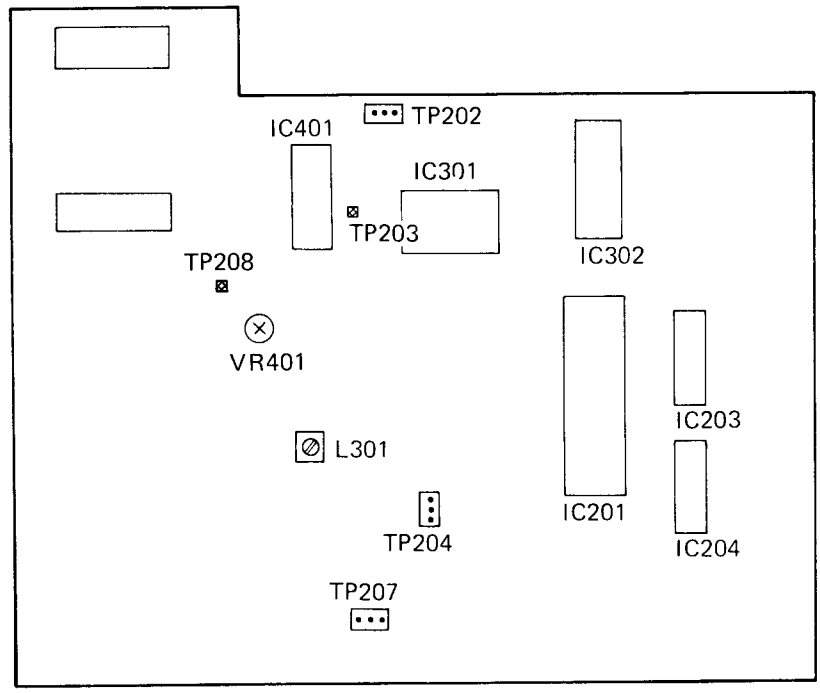
(2) Measuring Equipments and Implements for Adjustment
① Dual-mode oscilloscope
② Specified disc for adjustment
③ Measuring filter



④ Audio frequency oscillator
10 kHz, 3 Vp-p output maximum
⑤ Frequency counter
Count up to 5 MHz minimum
⑥ Connector with wires for signal pick-up
6p 1 each
3p 2 each
⑦ Headphones
Checking of playback sound

(3) Preparation

Signal Processing PWB Location of Terminal for Adjustment



① Be sure that the power is off state.
Short-circuit pins ① and ③, TP-204 of signal processing P.W.B. (KU-5740) and set the unit to service mode.

② Remove disc clamper by means of drawing the disc holder of mechanism unit frontward.
(Manually move the lock arm fitted with side of the disc holder, release the lock of tray, and draw the disc holder frontward.)

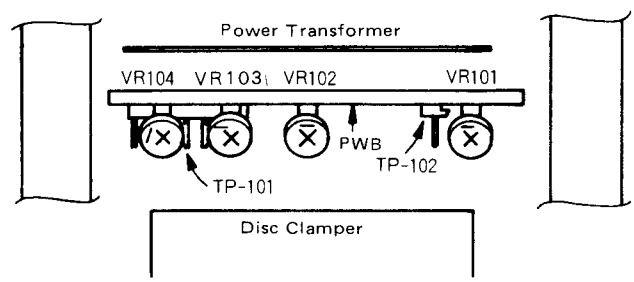
③ Connect the wires of signal pick-up connectors to TP-101 (6P) and TP-102 (3P).

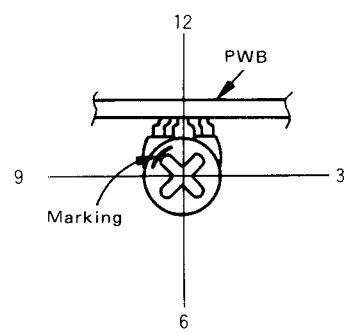
④ Mount the disc clamper removed in step 2. Leave the disc holder drawn frontward.

⑤ Set the adjustment VRs on the servo P.W.B. (KU-5720) of mechanism unit at the following positions. Observe the marking of VR and set them to preset positions.

VR101 (330 kΩ)	→	12 O'clock
VR102 (47 kΩ)	→	12 O'clock
VR103 (10 kΩ)	→	11 O'clock
VR104 (10 kΩ)	→	10 O'clock

⑥ That is all to complete preparations. Following is the adjustment order.
1. PLL
2. Tracking offset
3. Focus gain
4. Focus offset
5. Tracking gain
6. Tracking offset recheck



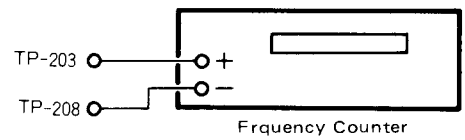


(4) Adjustment of PLL

① Preparation

- Turn the power off.
- Do not load the adjustment disc.
- Check to see that the lazer pick-up is set at inner circle of program area (To move pick-up, refer to (5)②).
- Check to see that the unit is in service mode (Short-circuit pins ① and ③, TP-204 of signal processing P.W.B.).
- Short-circuit pins ① and ②, or ② and ③, TP-202 (3P) of signal processing P.W.B. (KU-5740).
- Short-circuit pins ① and ②, or ② and ③, TP-207 (3P) of signal processing P.W.B.
- Turn the power on.
- Confirm that " 00 " blinks on the indication window.

② Connection of measuring equipment.



- Connect positive ⊕ side of the frequency counter to TP-203 and negative ⊖ side to TP-208.

③ Adjustment

- Rotate L-301 with a non-magnetic screwdriver and obtain 4.32 MHz ± 20 kHz PLL frequency on the frequency counter (4.30 MHz ~ 4.34 MHz).

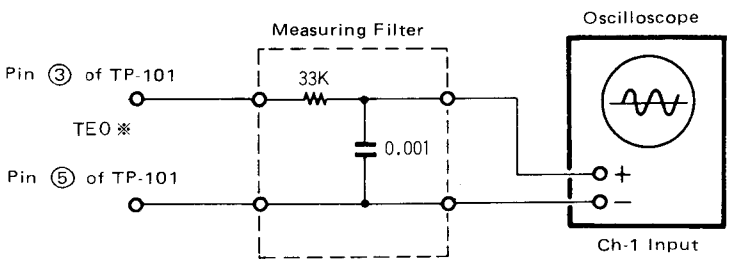
④ End of adjustment

- Turn off the power.
- Remove the short circuit at TP-207 (remove shorting connector).

Note: Do not remove the short circuit at TP-202 as this is required in next servo system adjustment.

(5) Adjustment of Tracking Offset

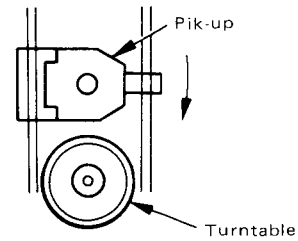
① Connection of measuring equipment



※ TEO: Track error out

② Use track button (⏮ ⏭) to move the laser pick-up close to turntable and place it to program area (recorded portion) near turntable side by the eye.

Note: All adjustments hereafter require the pick-up position set in the program area (recorded portion) however, recommend the pick-up be set at inner circle of disc to avoid increasing of effects due to warp and eccentricity in the outer circle of disc.



③ Load the adjustment disc and close the disc holder manually.

- Check to see that the power is turned on and the unit is in service mode.

④ Adjustment

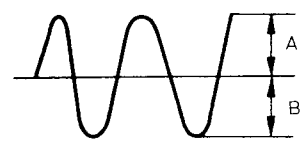
With a sufficient time interval in between, push play button (▶ PLAY) twice and make the focus servo and spindle servo activated. Disc starts to run (refer to 2.(1) and 3.(3) ~ (6)).

- Terminate the input terminal of oscilloscope to the ground and set the horizontal base line to the center of oscilloscope scale. When it is set, select the input of oscilloscope to DC range.
- Observe a waveform by setting the oscilloscope:—

  Input 0.1 V (use 10:1 probe)

  Sweep time 1 msec. or 2 msec.

Adjust VR101 so as to obtain the height of waveform A and B becomes even as shown in illustration.



(6) Adjustment of Focus Gain

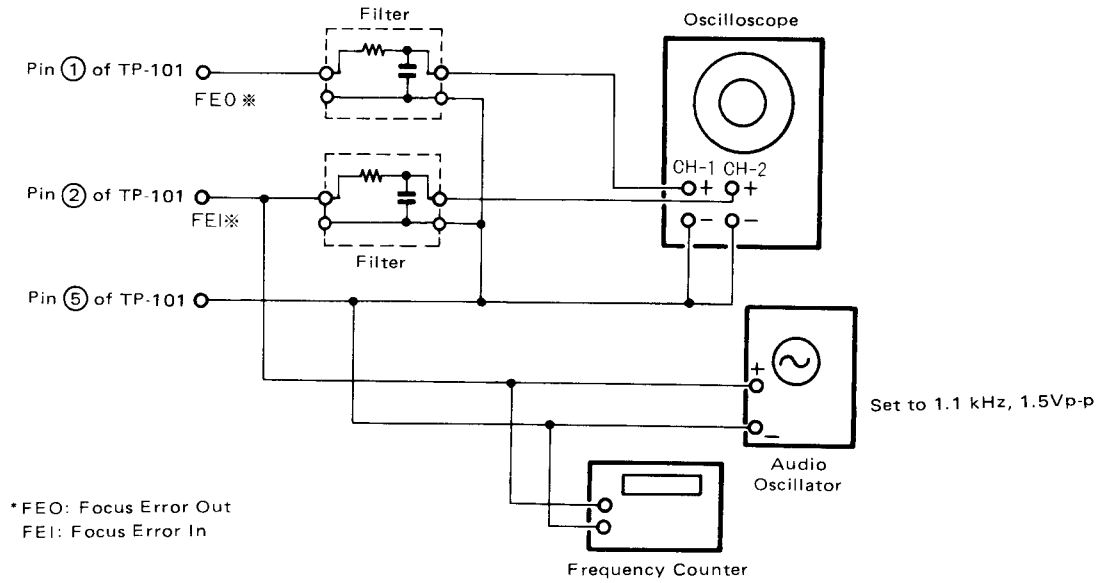
① With a sufficient interval of time in between, push play button (▶ PLAY) twice to activate tracking servo and spindle servo.

② Plug in the headphone and make sure the playback sound is heard prior to the adjustment.

③ Connect of measuring equipment

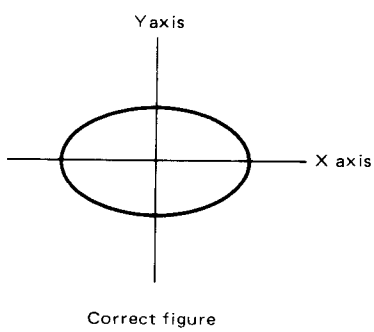
Connect the measuring equipments as per illustration.

Note: Before connecting the oscillator check the operation of servo (produce sound).

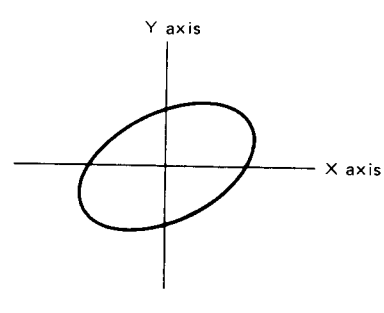


④ Adjustment

- Set the output of audio oscillator to 1.1 kHz, 1.5 Vp-p (±0.1 V).
- Prepare and connect two filters as per illustration.
- Select oscilloscope input so to observe Lissajous figure. (Select DC range both X and Y inputs.)
- Adjust VR-103 and obtain Lissajous figure symmetirc to X and Y axes. (Adjust the phase of two inputs to 90°.)



Correct figure



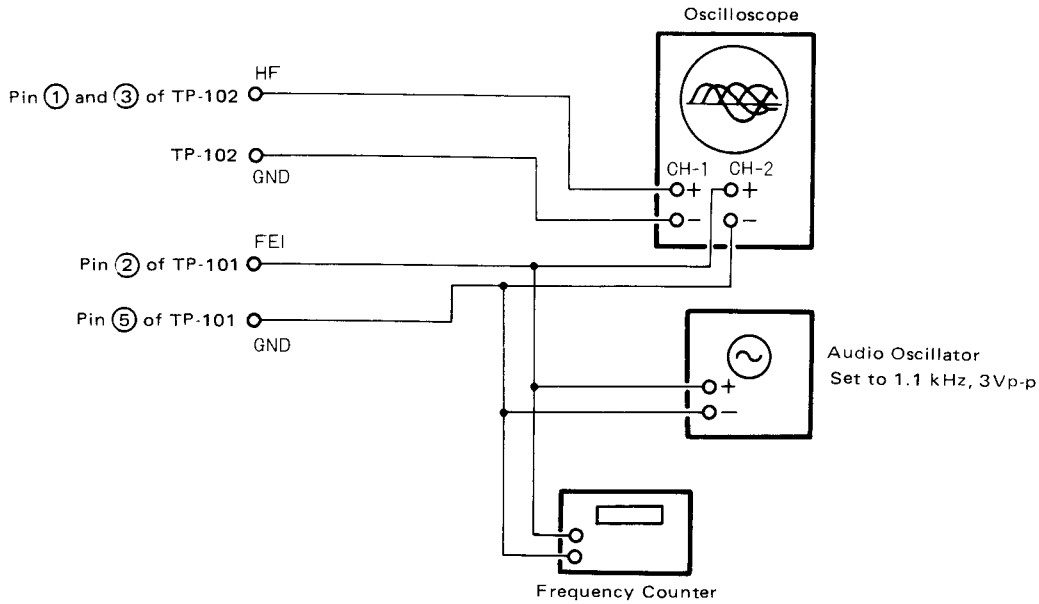
Incorrect figure

(7) Adjustment of Focus Offset

① Adjust it in the same condition as to focus gain except the measuring equipment connections.

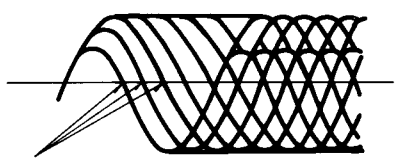
② Connection of measuring equipment

Note: Audio oscillator should be connected during the servo operation.

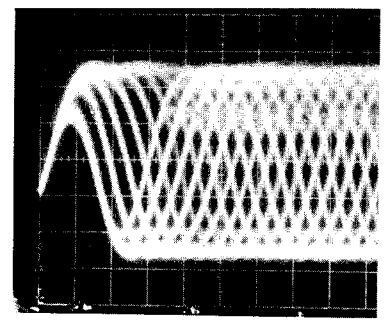


③ Adjustment

- Set the output of audio oscillator to 1.1 kHz, 3.0 Vp-p (±0.1 V).
- Select oscilloscope input mode at "ALTERNATE" or "CHOPPER" and set it to 50 mV/DIV or 20 mV/DIV (use 10:1 probe). Observe by setting the sweep time to 0.2 or 0.5 μs range.
- A waveform to observe in this time called "Eye Pattern".
- Adjust VR-102 for a minimum jitter amount.



Adjust A portion for most fine waveform.



(8) Adjustment of Tracking Gain

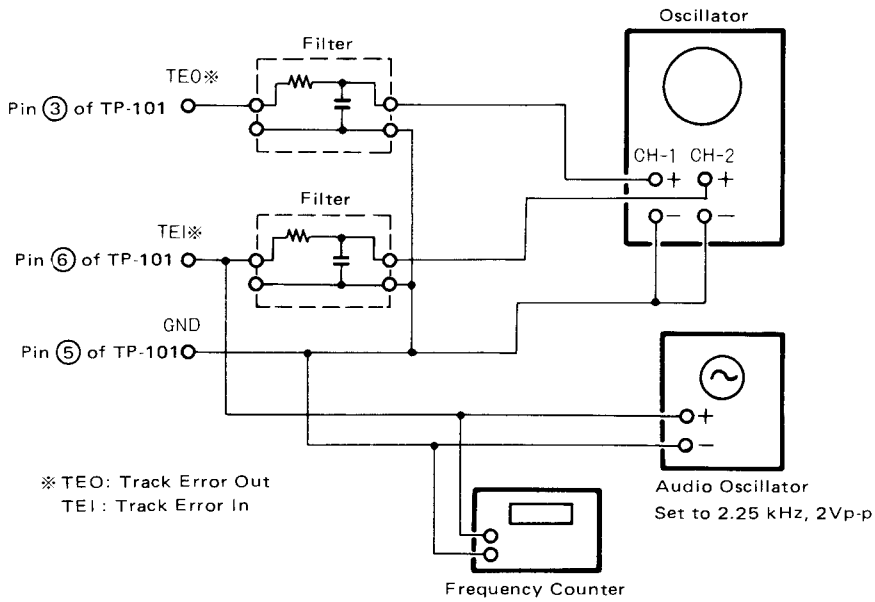
① Adjust it in the same condition as to focus gain except the measuring equipment connections.

② Aduio oscillator should be connected while the servo is in operation.
If the connection is made before servo operation, causing mis-operation.
If the connection is made in failure, disconnect oscillator, push stop button (■ STOP) to stop all operations, and follow the steps from the beginning.

③ Connection of measuring equipment.

④ Adjustment

- Set the output of audio oscillator to 2.25 kHz ± 120 Hz 2 Vp-p ±0.1 V.
- Connect two filters as per illustration.
- Select oscilloscope input so to observe Lissajous waveform. (Select DC range both X and Y inputs.)
- Adjust VR-104 and obtain Lissajous waveform symmetric to X and Y axes. The waveform is the same as focus gain adjustment.



(9) Checking of Tracking Offset

① Check the adjustment performed in the previous column (5).

- Push stop button (■ STOP) to stop disc revolution.
- With a sufficient interval of time in between, push play button (▶ PLAY) twice and check that the disc starts to run.

Note: The microcomputer employed in the unit sometimes does not accept button operation. If so, push the button again.

- Observe a waveform and check that the height of upper and lower waveform are even. (Reference value: Difference of height between two is 5% or less.)
- If the difference is beyond the value, adjust VR-101.

② That is all to complete adjustments.

- Remove the signal pick-up connector with wires from TP-101, 102 on the mechanism unit P.W.B. (KU-5720). (It is necessary to pull out the disc holder and remove the disc clamper. Refer to column (3).)

FUNCTION OF IC TERMINAL

• Remote Control IC LU59001

Terminal No.	Function	Terminal No.	Function
1	Data output.	11	Remote control code input. Receivers code from RM557.
2	Data output.		
3	Data output.	12	System address, ground.
4	Data output.	13	System address, ground.
5	Data output.	14	System address, ground.
6	455 kHz osc.	15	System address, ground.
7	455 kHz osc.	16	Data output.
8	Ground.	17	Data output.
9	ACL (Auto Clear). Receivers High (+5V) from IC201 for 15 msec. at the time of turning the power on, normally Low (0V).	18	System address, +5V.
		19	Break in signal to main microcomputer (HD6305X0A53) IC201.
10	Ground	20	V_{DD}, +5V

• Table of LU59001 Date output

Dateof LU59001 when "KEY IN" by remote control.

Note: 0 : 0V
1 : 5V

Terminal No. of LU59001

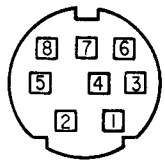
FUNCTION OF SUB CODE OUTPUT TERMINAL

- **Sub-code Output Terminals**



1 . EXCK
2 . SBSO
3 . SUBQ
4 . SCOR
5 . $\overline{\text{WFCK}}$
6 . CRCF
7 . NC
8 . MUTE

(5) $\overline{\text{WFCK}}$ Waveform

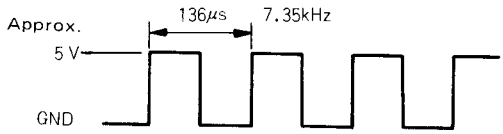


Fig. 1

(4) SCOR

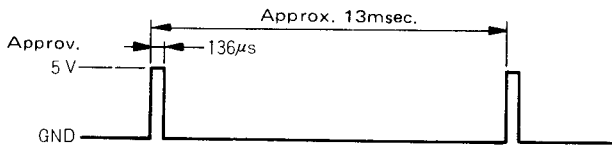

Fig. 2

(2) SBSO

Fig. 3 (No input to EXCK)

Waveform when applying $\overline{\text{WFCK}}$ signal to EXCK terminal.

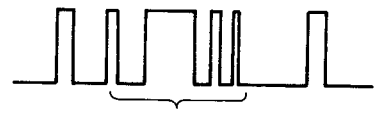

Fig. 4 Pulses (Input occurs to EXCK)

(1) EXCK

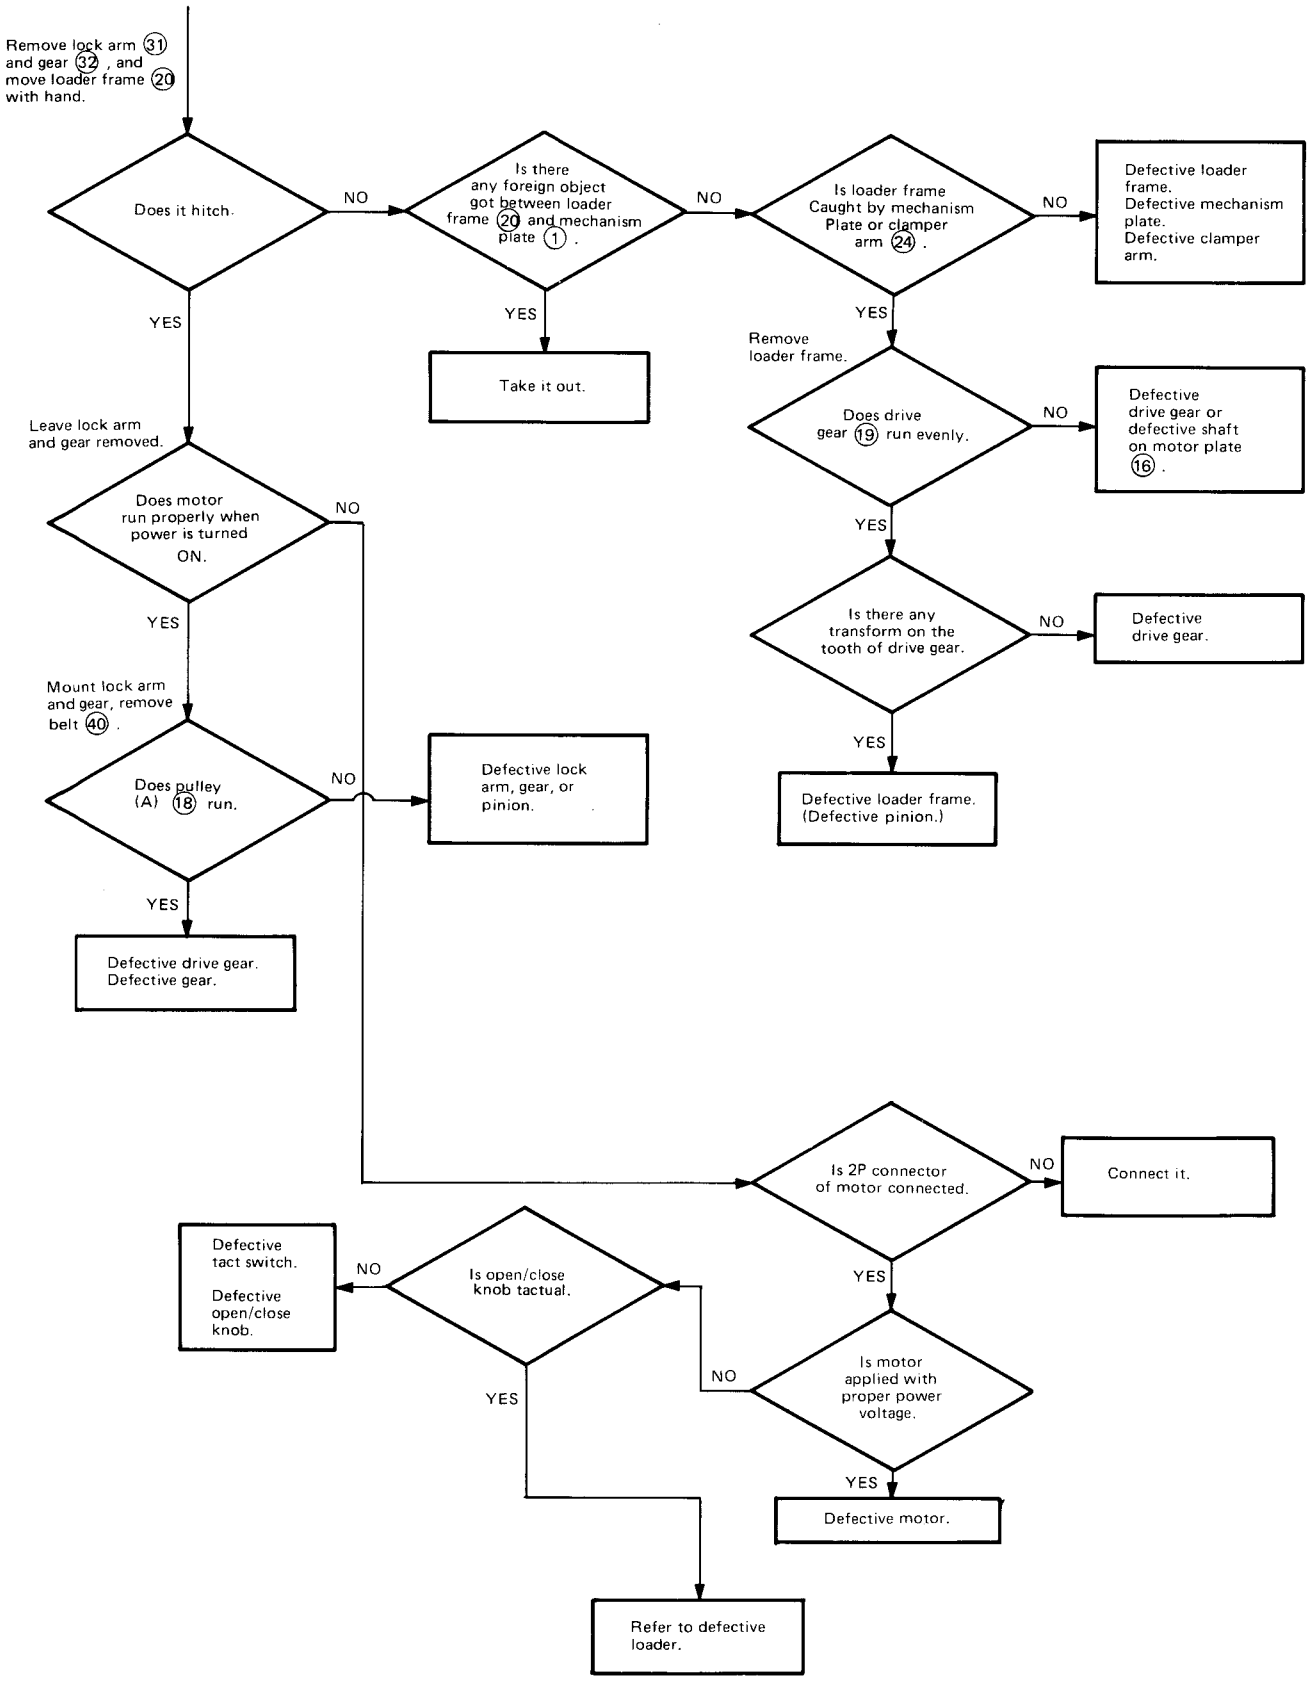
The waveform at SBSO terminal changes from Figure 3 to Figure 4 when applying $\overline{\text{WFCK}}$ signal to EXCK terminal.

(8) MUTE

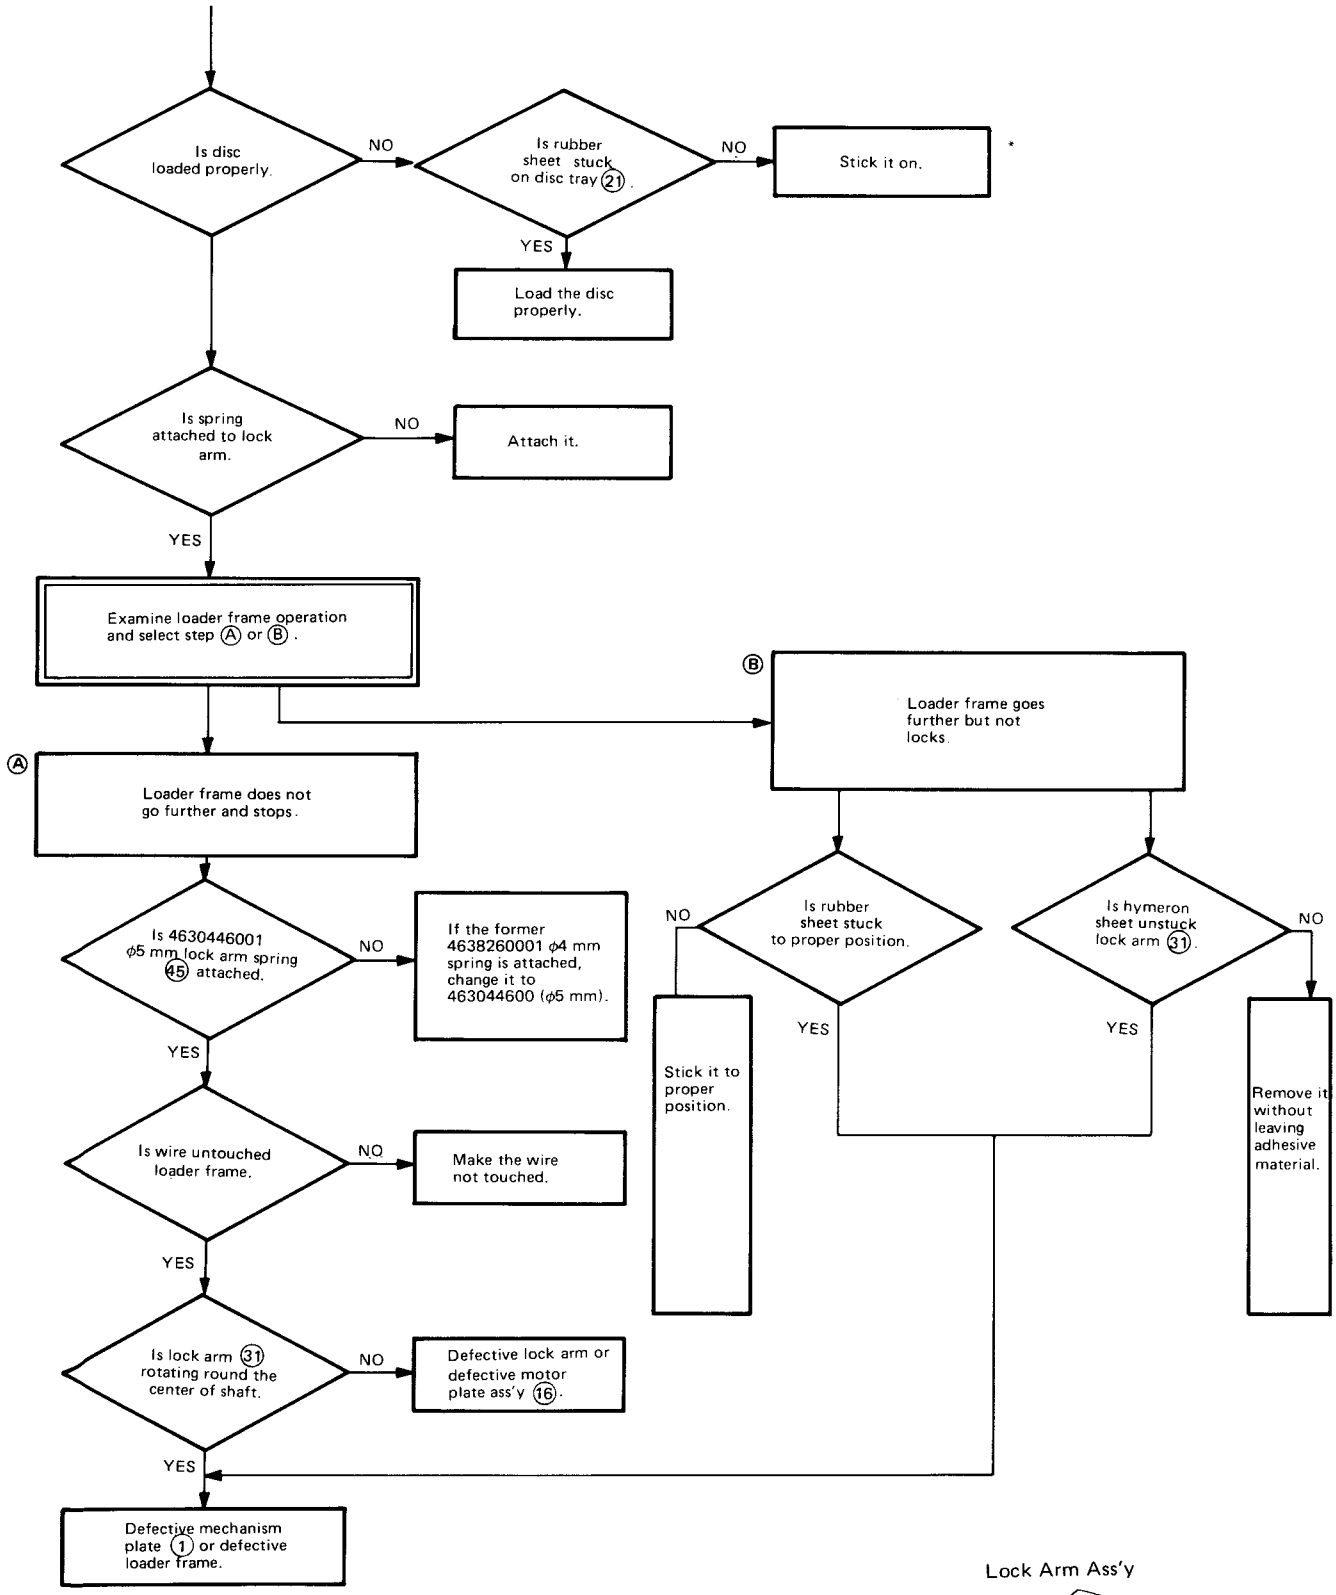
Low (0V) at PLAY, others High (5V).

TROUBLESHOOTING

1. LOADER FRAME DOES NOT OPEN OR CLOSE



2. LOADER FRAME NOT LOCKS WHEN IT CLOSED

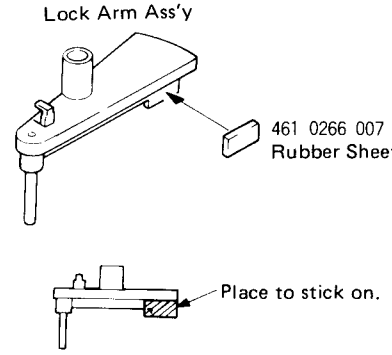


3. LOADER FRAME UNLOCKS WHEN TURNING ON THE POWER

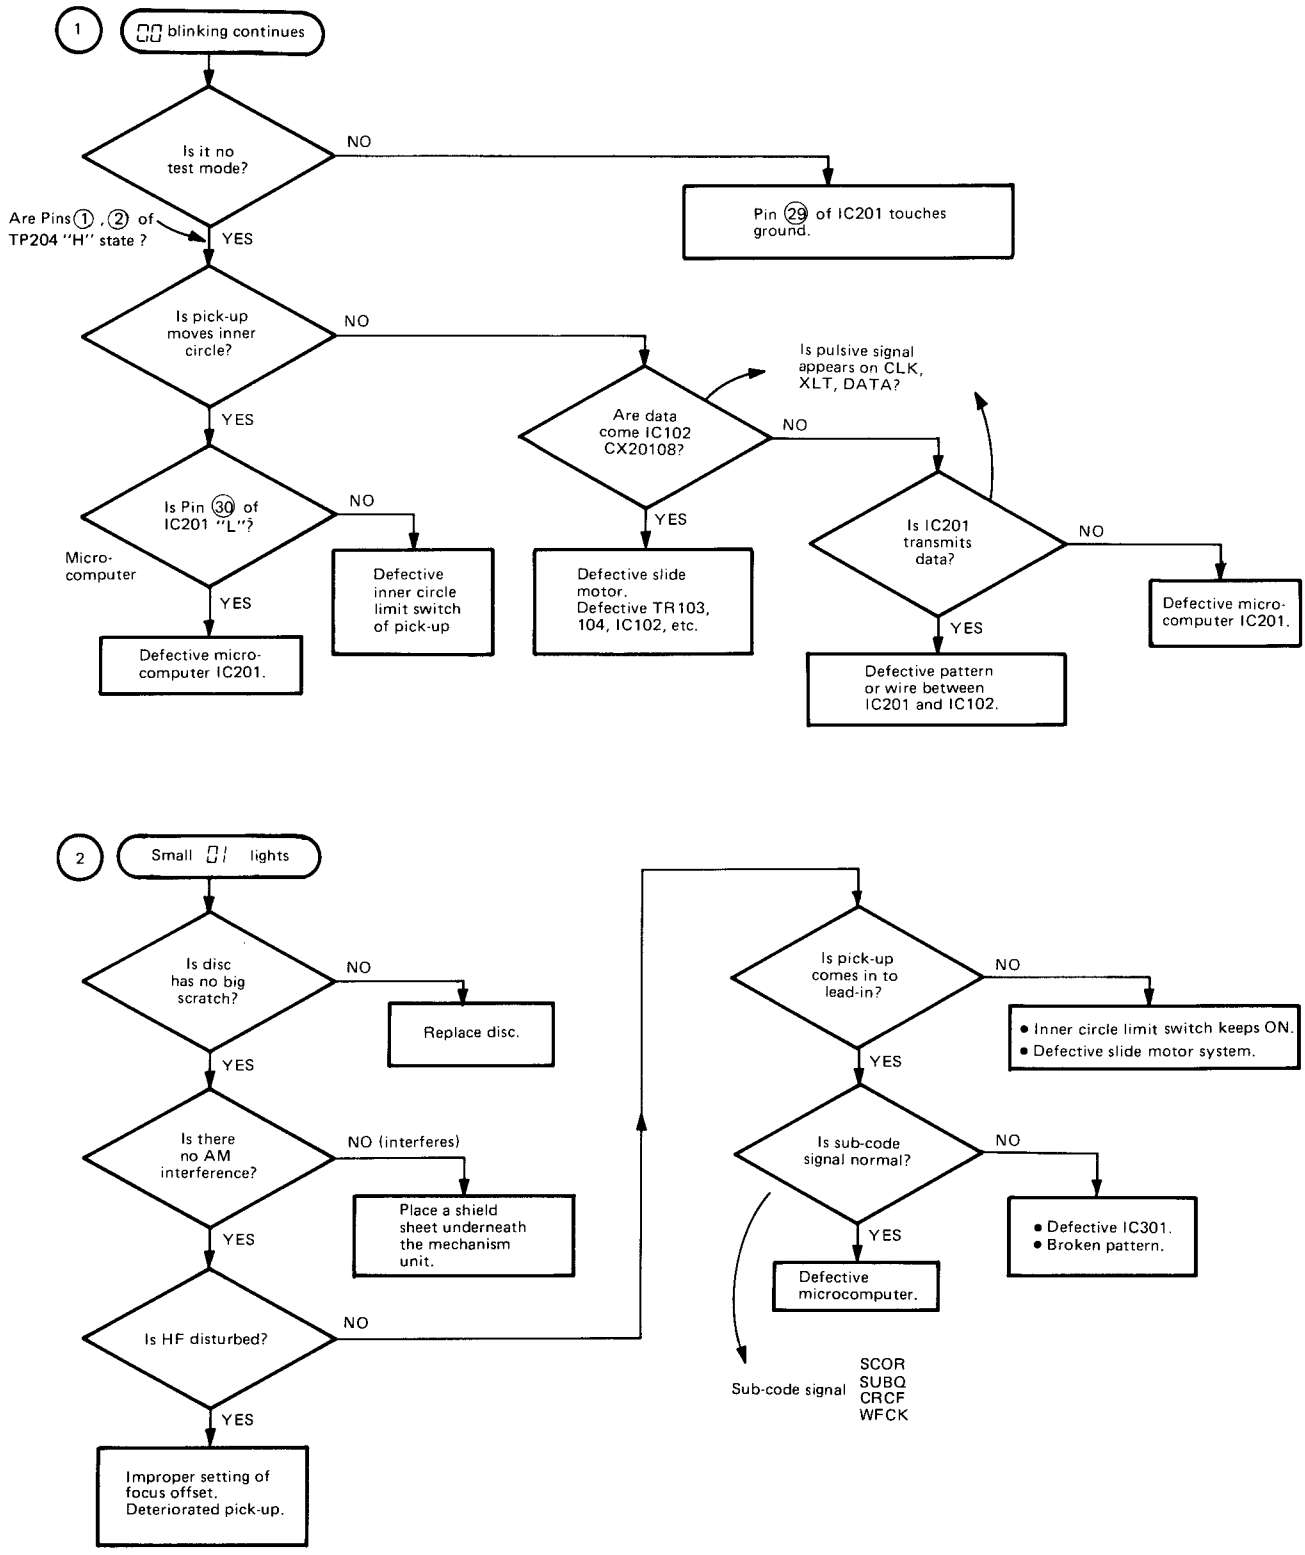
Follow the instruction 2. (B).

4. LOADER FRAME OPERATION MOMENTARILY RETARDS WHEN STARTING

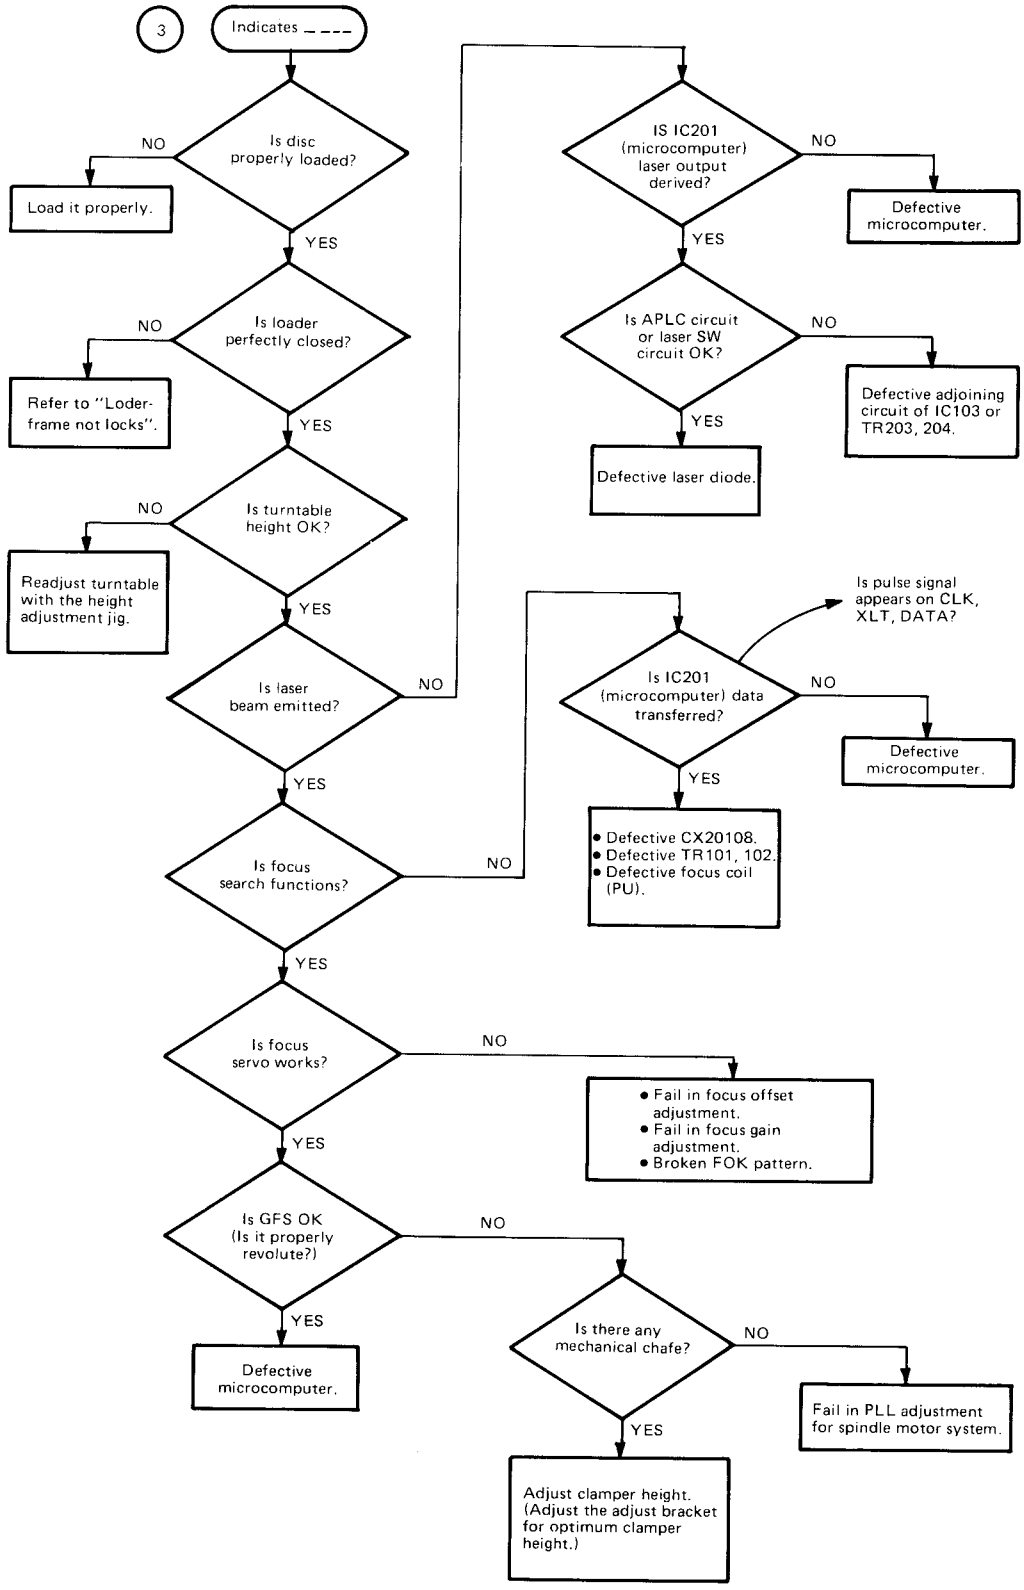
Stick 461026607 rubber sheet on the lock arm ass'y as per illustration.



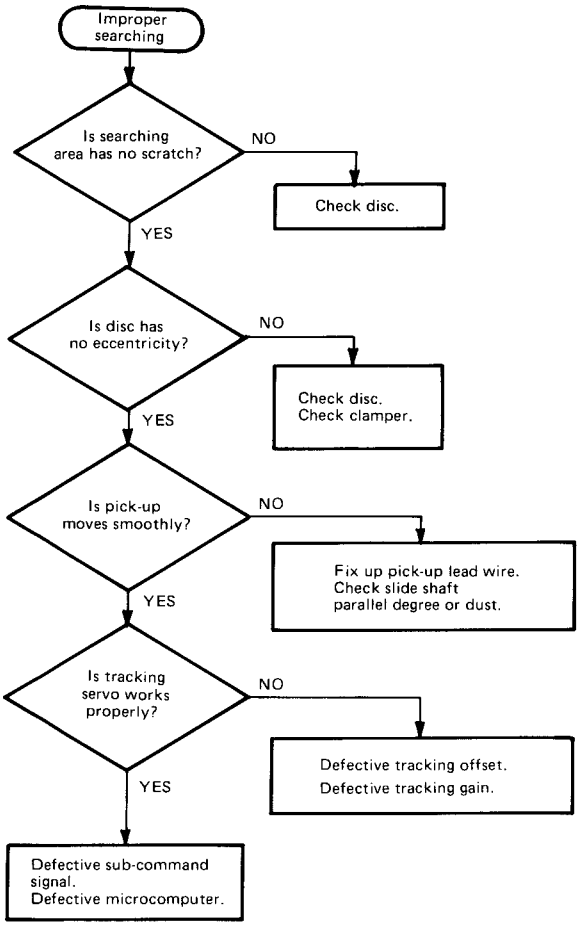
DEFECTIVE INITIAL OPERATION AT THE TIME OF DISC SETTING (1/2)

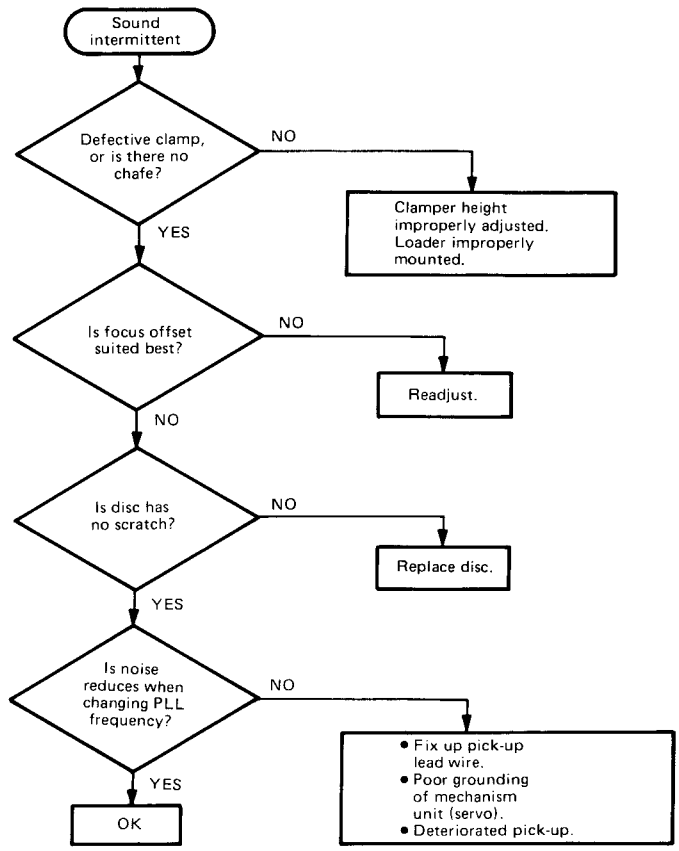


DEFECTIVE INITIAL OPERATION AT THE TIME OF DISC SETTING (2/2)



DOES NOT SEARCH (INCLUDING TAKES TIME TO SEARCH)





SOUND INTERMITTENT, LOADER IMPROPERLY WORKS
