FEATURES

• DCA-3500

- 3/5 Channel Power Amplifief with Built-in Subwoofer Drive.
  Maximum Power Output
  5 Channel 40 W x 4 + 80 W (Subwoofer)
  (1 kHz/4 ohms, T.H.D. 1%)
  3 Channel 80 W x 2 + 80 W (Subwoofer)
  (1 kHz/4 ohms, T.H.D. 1%)
- Non-Negative Feedback Amplification.
- Non-Switching Class-A Amplification.
- Subwoofer Amplifier with Crossover Network.
- "Compact Star"TM Convection Cooling Heatsinks
- DC Power Terminal Block connections are quick and secure.
- Pulse Regulated Power Supply
- Ground Isolation Amplifier
- Remote Power On/Off
- Variable Input Sensitivity
- Convenient Power Indicator
- Built-in Protector
- Gold-Plated RCA-type Inputs.

• DCA-3400

- 2/4 Channel Power Amplifier
  Maximum Power Output
  4 Channel 40 W x 4 (1 kHz/4 ohms, T.H.D. 1%)
  2 Channel 80 W x 2 (1 kHz/4 ohms, T.H.D. 1%)
- Non-Negative Feedback Amplification.
- Non-Switching Class-A Amplification.
- "Compact Star"TM Convection Cooling Heatsinks.
- DC Power Terminal Block connections are quick and secure.
- Pulse Regulated Power Supply.
- Ground Isolation Amplifier.
- Remote Power On/Off
- Variable Input Sensitivity.
- Convenient Power Indicator.
- Built-in Protector
- Gold-Plated RCA-type Inputs.

SPECIFICATIONS

Power Output	
5-Channel	40 W x 4 + 80 W in to 4 ohms, 1 kHz at 1% T.H.D.
3-Channel	80 W x 2 + 80 W in to 4 ohms, 1 kHz at 1% T.H.D.
Power Output	
5-Channel	28 W x 4 + 60 W from 20 Hz to 20 kHz with 0.05% T.H.D.
Frequency Response	5 Hz – 200 kHz (–3 dB)
Subwoofer Crossover	80 Hz/120 Hz Selectable High cut –18 dB/oct Low cut –12 dB/oct
Signal to Noise Ratio	90 dB (IHF A Weighted)
Input Sensitivity/Impedance	200 mV – 2 V (Variable)/10 k ohms
Speaker Impedance	4 ohms
Dimensions (W x H x D)	400 mm x 53 mm x 214 mm (15-3/4" x 2-3/32" x 8-27/64")
Weight	4.5 kg (9 lbs 15 oz)

Power Output	
4-Channel	40 W x 4 into 4 ohms, 1 kHz at 1% T.H.D.
2-Channel	80 W x 2 into 4 ohms, 1 kHz at 1% T.H.D.
Power Output	
4-Channel	28 W x 4 from 20 Hz to 20 kHz with 0.05% T.H.D.
Frequency Response	5 Hz – 200 kHz (–3 dB)
Signal to Noise Ratio	90 dB (IHF A Weighted)
Input Sensitivity/Impedance	200 mV – 2 V (Variable)/10 k ohms
Speaker Impedance	4 ohms
Dimensions (W x H x D)	365 mm x 53 mm x 214 mm (14-3/8" x 2-3/32" x 8-27/64")
Weight	3.9 kg (8 lbs 10 oz)

Design and Specifications are subject to change for improvement without prior notice.

After the DENON Power Amplifier DCA-3500 and 3400 is securely installed, make the connections as follows.

* Remove the ground cable (–) from the battery before installation to prevent damage to unit or the automobile's electrical system by miss-connection.

1) Connect the pre-out from your component to the input of DCA-3500 and 3400.
2) Connect the speaker wires to the speaker terminals of DCA-3500 and 3400.
   * Make sure the polarity of left and right speaker line is observed.
   * Never connect the negative (–) sides of each speaker together.
   * Never make the plus and minus wire short-circuit.
   * Never connect the negative (–) side to the car chassis.
3) Secure the ground wire to a clean bare metal spot on the car chassis. Make sure paint or coating is scraped away for best connection.
   (The wire gauge should be 10 ~ 12AWG.)
4) Connect the remote cord to the remote control terminal of your indash player.
   (The wire gauge should be 18AWG.)
5) Connect the ACC cord to the ignition terminal.
   (The wire gauge should be 18AWG.)
6) Connect the battery cord directly to the positive (+) terminal of battery.
   (The wire gauge should be 10 ~ 12AWG.)

* Connect both battery cords (BATT 1, BATT 2) and both ground cords (GND 1, GND 2).

* Make all connections securely to prevent noise. Bind up the cords by tape after connection.

* Confirm again that your connection follows this instruction manual, re-install the parts of your automobile as they were and re-connect the negative (–) cable to the negative (–) terminal of the battery.

* If your indash player does not have a remote terminal, consult your DENON Dealer for alternate hook up.

* Filter select switch (DCA-3500 only)
The FILTER select switch permits the cutoff frequency of the Crossover Network to be switched from 80 Hz to 120 Hz or OFF. Set the switch in the desired position.
If the system is used with the filter select switch set in the OFF position, then reverse the polarity of the subwoofer speaker connection.

Tighten the GROUND, BATTERY and REMOTE wires securely by inserting a supplied screwdriver in the round holes on the top of the panel. 5 mm is appropriate for the length of the inner, stripped wire.

CIRCUIT DESCRIPTION

• DCA-3500

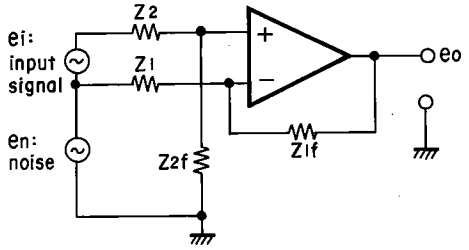
1. Ground Isolation Amplifier

DCA-3500 utilizes a ground isolation amplifier intended to eliminate ignition and alternator noises of vehicle that are coming in to the power amplifier with the input signal and the ground line.

This circuit is shown in the following figure.

Only the case when it becomes $Z_1 = Z_2$, $Z_1 f = Z_2 f$ in this circuit, the output will become $eo = Z_1 f / Z_1 e_i$, thus no noise "e_n" contained in the output.

Since DCA-3500 selecting the input sensitivity by the voltage amplifier, Z_1 and Z_2 values can be changed by the switch.



2. DC-DC Converter

When the REMOTE and ACCESSORY terminal of DCA-3500 is applied a voltage, a voltage will applied to pin 11 and 12 of IC402. The output of a square wave oscillated by C407 and R421 connected at pins 5 and 6 will conveyed to pin 9 and 10 to switch TR503, TR504, TR509 and TR510. This output will go through the primary of T502 and T504 to power stage (TR501, TR502, TR505, TR506, TR507 and TR508) in the secondary side of T502 and T504. After amplified, it will pass through the primary of T501 and T503 and applied to rectifying circuit in the secondary side to get DC power voltage. This power voltage is ±28V and ±30V.

3. Protector

DCA-3500 employs a built-in protector to protect amplifier and speaker against damaging in an abnormal condition. This protector works in the following three abnormal conditions.

1. Excessive current flow at speaker terminal due to terminal short.
2. Extraordinary voltage rise at speaker terminal.
3. Excessive temperature rise of heat sink.

For the protection, IC101 is used. A voltage applied to pin 1 or 2 of IC401 rises and exceed the detecting value, the relay drive stage in IC turns to OFF and breaks the relay of power amplifier output point, accordingly to cut the output power to speaker.

When the amplifier return to normal condition and a voltage at pin 1 and 2 of IC401 becomes lower than the detecting value, the relay driver stage in IC automatically turned ON and energize the relay of power amplifier output point, thus delivers the output power to speaker.

a) Overload Detector

When excessive current flows at speaker terminal, a voltage applied to emitter resistor of power transistor in last stage will go up and turns ON TR606 or TR11 or TR221 or TR12. Then TR212 will turn ON, and a voltage at pin 1 of IC401 rises and exceed the detecting value causing to cut the output power to speaker.

b) DC Detector

If there existing a DC voltage at + or — speaker terminal of either channel, a voltage divided by R418, R419 and R420 will apply to pin 2 of protecting IC. At the same time, the other channel speaker terminal is imaginary grounded. Meanwhile if a voltage at pin 2 exceeds detecting value the output power will not be delivered to speaker terminal.

c) Thermal Detector

A voltage divided by R415, positor TH401, TH402, TH403 and TH404 is applied to pin 1 of IC401 through D411. In normal temperature the resistance value of posistor is lesser, but when the temperature rises and exceeds to a certain extent, the value rapidly turns to great. For this reason, when the temperature goes up, the voltage at pin 1 will increase and at a certain temperature, the voltage exceeds the detecting value of pin 1 and the output to speaker will be cut.

4. ON/OFF Mute

DCA-3500 employs a function to detect a pop originating power on/off and cuts the output power to speaker terminal by the relay. This function is also performed by IC401.

At the time of turning on the power, the time constant of R405 and C401 causes to delay voltage rise at pin 7. When it rises to the detecting value, the relay will activate to prevent producing pop.

At the time of turning off the power, pin 4 detects a pop from REMO terminal through R404 and de-activate the relay to prevent producing pop prior to the discharge of big capacitors C507, C510, C524 and C527 in the power source.

• DCA-3400

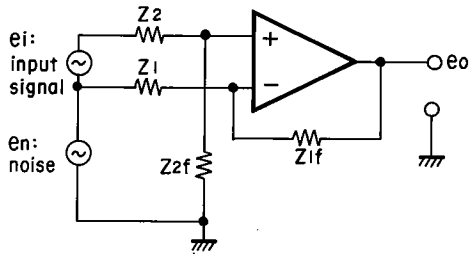
1. Ground Isolation Amplifier

DCA-3400 utilizes a ground isolation amplifier intended to eliminate ignition and alternator noises of vehicle that are coming in to the power amplifier with the input signal and the ground line.

This circuit is shown in the following figure.

Only the case when it becomes $Z_1 = Z_2$, $Z_1 f = Z_2 f$ in this circuit, the output will become $eo = Z_1 f / Z_1 e_i$, thus no noise "e_n" contained in the output.

Since DCA-3400 selecting the input sensitivity by the voltage amplifier, Z_1 and Z_2 values can be changed by the switch.



2. DC-DC Converter

When the REMOTE and ACCESSORY terminal of DCA-3400 is applied a voltage, a voltage will applied to pin 11 and 12 of IC301. The output of a square wave oscillated by C332 and R320 connected at pins 5 and 6 will conveyed to pin 9 and 10 to switch TR301, TR306, TR353 and TR354. This output will go through the primary of T301 and T351 to power stage (TR301, TR302, TR351 and TR352) in the secondary side of T301 and T351. After amplified, it will pass through the primary of T302 and T352 and applied to rectifying circuit in the secondary side to get DC power voltage. This power voltages is ±28V.

3. Protector

DCA-3400 employs a built-in protector to protect amplifier and speaker against damaging in an abnormal condition. This protector works in the following three abnormal conditions.

1. Excessive current flow at speaker terminal due to terminal short.
2. Extraordinary voltage rise at speaker terminal.
3. Excessive temperature rise of heat sink.

For the protection, IC201 is used. A voltage applied to pin 1 or 2 of IC201 rises and exceed the detecting value, the relay drive stage in IC turns to OFF and breaks the relay of power amplifier output point, accordingly to cut the output power to speaker.

When the amplifier return to normal condition and a voltage at pin 1 and 2 of IC201 becomes lower than the detecting value, the relay driver stage in IC automatically turned ON and energize the relay of power amplifier output point, thus delivers the output power to speaker.

a) Overload Detector

When excessive current flows at speaker terminal, a voltage applied to emitter resistor of power transistor in last stage will go up and turns ON TR11 or TR111 or TR12 or TR112. Then TR201 will turn ON, and a voltage at pin 1 of IC201 rises and exceed the detecting value causing to cut the output power to speaker.

b) DC Detector

If there existing a DC voltage at + or – speaker terminal of either channel, a voltage divided by R61, R161, R62, R162 and R209 will apply to pin 2 of protecting IC. At the same time, the other channel speaker terminal is imaginary grounded. Meanwhile if a voltage at pin 2 exceeds detecting value the output power will not be delivered to speaker terminal.

c) Thermal Detector

A voltage divided by R207, posistor TH201, TH202 and TH203 is applied to pin 1 of IC201 through D201. In normal temperature the resistance value of posistor is lesser, but when the temperature rises and exceeds to a certain extent, the value rapidly turns to great. For this reason, when the temperature goes up, the voltage at pin 1 will increase and at a certain temperature, the voltage exceeds the detecting value of pin 1 and the output to speaker will be cut.

4. ON/OFF Mute

DCA-3400 employs a function to detect a pop originating power on/off and cuts the output power to speaker terminal by the relay. This function is also performed by IC201.

At the time of turning on the power, the time constant of R210 and C205 causes to delay voltage rise at pin 7. When it rises to the detecting value, the relay will activate to prevent producing pop.

At the time of turning off the power, pin 4 detects a pop from REMO terminal through R211 and de-activate the relay to prevent producing pop prior to the discharge of big capacitors C311, C315, C363 and C366 in the power source.

METHOD OF ADJUSTMENTS

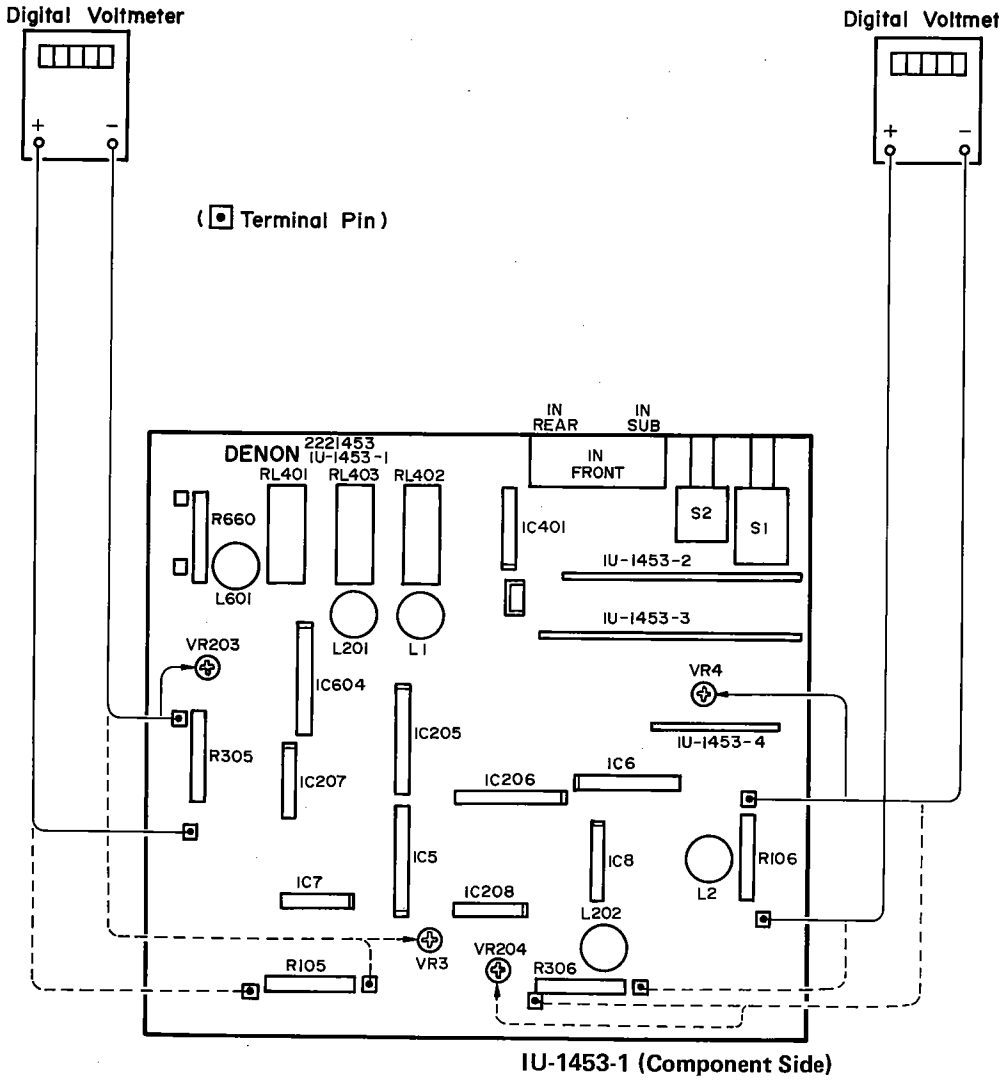
When making adjustments, be sure the power supply is at the rated voltage and the room air is in normal condition with respect to temperature and humidity.

• DCA-3500

Idle Current Adjustment

Turn on the power and warm up more than five minutes. Obtain 22 mV DC across the emitter resistor (R105, R106, R305 and R306) of last stage power transistors by means of adjusting VR003, VR004, VR203 and VR204. The idle current at this time is 50 mV DC.

The top panel acts as cooling body. Therefore, when turn the power supply on without equipment of the top panel in adjusting idle current case, take care not to supply current more than 3 minutes to avoid the transistor being broken by the overheated. And you could supply power current after the inner cooling body came down as much as normal temperature.



IU-1453-1 (Component Side)

• DCA-3400

Idle Current Adjustment

Turn on the power and warm up more than five minutes. Obtain 22 mV DC across the emitter resistor (R65, R66, R165 and R166) of last stage power transistors by means of adjusting VR1, VR2, VR101 and VR102. The idle current at this time is 50 mV DC.

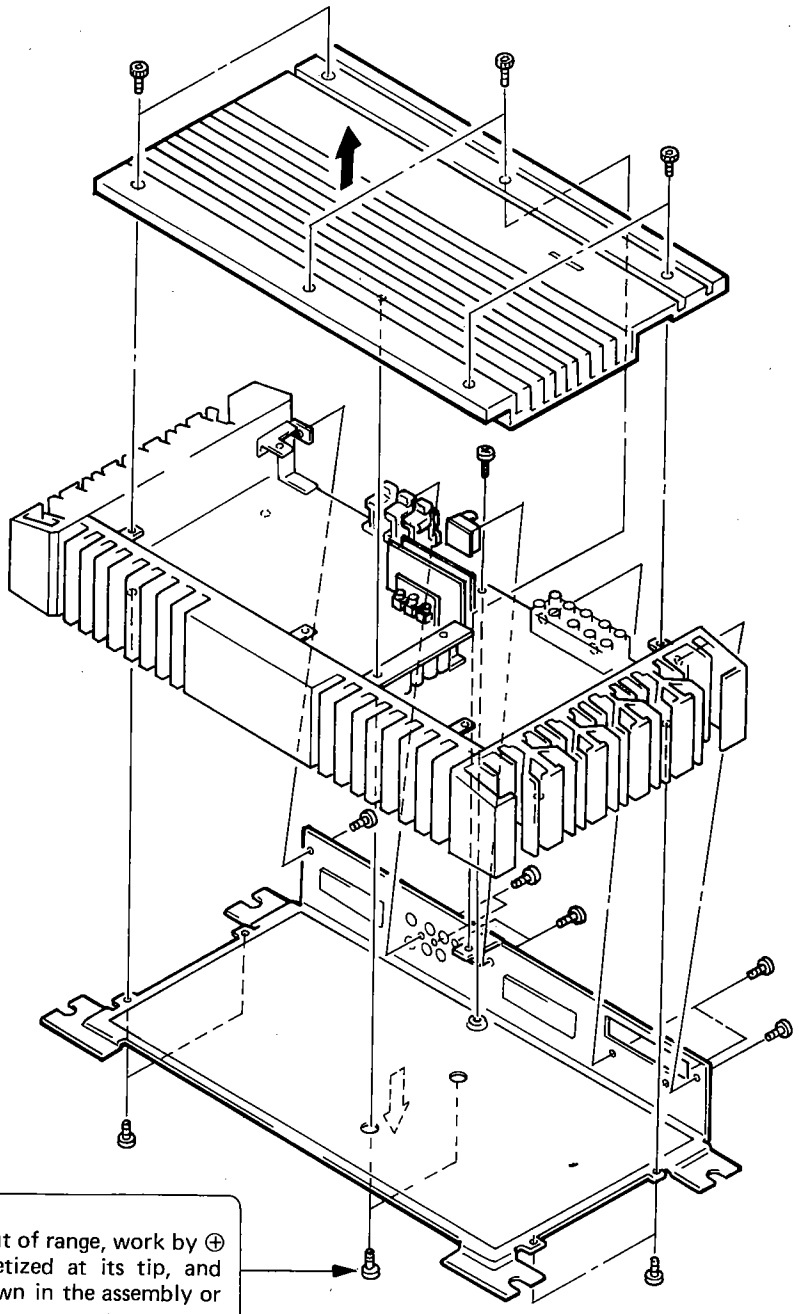
REMOVAL OF EACH SECTIONS

- **DCA-3500**



NOTICE
As these 2 screws are out of range, work by ⊕ screwdriver with magnetized at its tip, and take care not to fall down in the assembly or detaching operation.

PRECAUTIONS

1. DENON Power Amplifier DCA-3500 and 3400 is only available for use in negative (–) ground automobiles. It cannot be used positive (+) ground automobiles.
2. DENON Power Amplifier DCA-3500 and 3400 will operate properly with 14.4 V (11 V–16 V) car batteries. You cannot use it for 24 V or other types of car batteries.
3. For fuse replacement, replace only with same amperage as old one. Improper fuses can lead to serious damage to the unit. (Accessible by removing the top panel.)
4. Do not allow any liquid or small objects to get inside the unit.
