DENON

Hi-Fi AV Surround Receiver

SERVICE MANUAL

MODEL AVR-810/810G

AV SURROUND RECEIVER

CONTENTS

NIPPON COLUMBIA CO., LTD.

CAUTION

RISK OF ELECTRIC SHOCK

DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING: TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION

TO PREVENT ELECTRIC SHOCK DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION

POUR PREVENIR LES CHOCS ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

IMPORTANT SAFEGUARDS

1. Read Instructions – All the safety and operating instructions should be read before the appliance is operated.

2. Retain Instructions – The safety and operating instructions should be retained for future reference.

3. Heed Warnings – All warnings on the appliance and in the operating instructions should be adhered to.

4. Follow Instructions – All operating and use instructions should be followed.

5. Cleaning – Unplug this video product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

6. Attachments – Do not use attachments not recommended by the video product manufacturer as they may cause hazards.

7. Water and Moisture – Do not use this video product near water – for example, near a bath tub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool, and the like.

8. Accessories – Do not place this video product on an unstable cart, stand, tripod, bracket, or table. The video product may fall, causing serious injury to a child or adult, and serious damage to the appliance. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the video product. Any mounting of the appliance should follow the manufacturer's instructions, and should use a mounting accessory recommended by the manufacturer.

8A. An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.

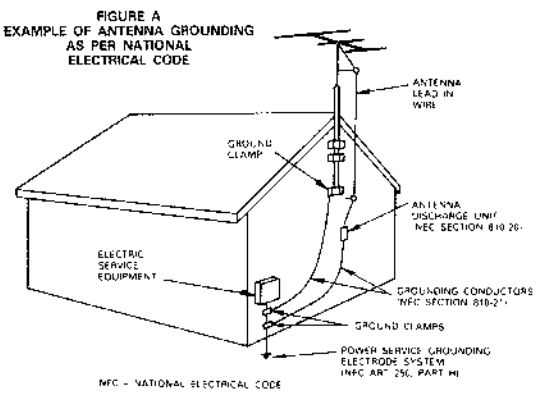
9. Ventilation – Slots and openings in the cabinet are provided for ventilation and to ensure reliable operation of the video product and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the video product on a bed, sofa, rug or other similar surface. This video product should never be placed near or over a radiator or heat register. This video product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided or the manufacturer's instructions have been adhere to.

10. Power Sources – This video product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your appliance dealer or local power company. For video products intended to operate from battery power, or other sources, refer to the operating instructions.

11. Grounding or Polarization – This video product is equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.

12. Power-Cord Protection – Power-Supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.

FIGURE A
EXAMPLE OF ANTENNA GROUNDING AS PER NATIONAL ELECTRICAL CODE



13. Protective Attachment Plug – The appliance is equipped with an attachment plug having overload protection. This is a safety feature. See Instruction Manual for replacement or resetting of protective device. If replacement of the plug is required, be sure the service technician has used a replacement plug specified by the manufacturer that has the same overload protection as the original plug.

14. Outdoor Antenna Grounding – If an outside antenna or cable system is connectedto the video product, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and built-up static charges. Section 810 of the National Electrical Code, ANSI/NFPA No. 70–1984, provides information with respect to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See Figure A.

15. Lightning – For added protection for this video product receiver during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the video product due to lightning and power-line surges.

16. Power Lines – An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal.

17. Overloading – Do not overload wall outlets and extension cords as this can result in a risk of fire or electric shock.

18. Object and Liquid Entry – Never push objects of any kind into this video product through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind of the video product.

19. Servicing – Do not attempt to service this video product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

20. Damage Requiring Service – Unplug this video product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

    a. When the power-supply cord or plug is damaged.

    b. If liquid has been spilled, or objects have fallen into the video product.

    c. If the video product has been exposed to rain or water.

    d. If the video product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the video product to its normal operation.

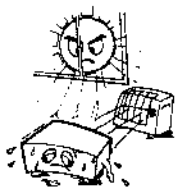
    e. If the video product has been dropped or the cabinet has been damaged.

    f. When the video product exhibits a distinct change in performance – this indicates a need for service.

21. Replacement Parts – When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

22. Safety Check – Upon completion of any service or repairs to this video product, ask the service technician to perform safety checks to determine that the video product is in proper operating condition.

NOTE ON USE

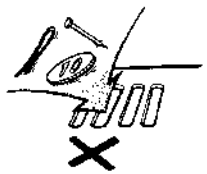


Be careful of high temperatures

- Do not place the set in a location where it will be exposed to direct sunlight or near a heating appliance.

Caution on rack/cabinet installation

- Avoid installing the set in a closed-type rack.
- When installing in a rack or cabinet, provide a sufficiently large ventilation opening to promote heat radiation.



Do not allow foreign matter into the equipment

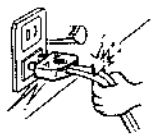
- Be especially careful of needles, hair pins, and coins getting into the set.

Caution on humidity, water, and dust

- Do not place the set in a location where there is high humidity or a lot of dust.
  Flower vases or other items containing water should not be placed on top of the set.

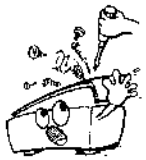
Care of the case

- Avoid the use of pesticides near the set as well as wiping the case with benzine, thinner or other solvents since they may cause a change in quality or color. Use a soft cloth when wiping away dirt and follow the instructions carefully when using chemically treated cloths.



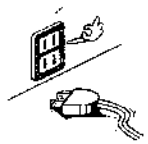
Care with the power cord

- When removing the plug from the receptacle, do not pull the power cord; be sure to hold the plug when removing it.



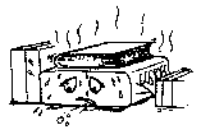
Do not open the case

- Opening the top cover or the bottom plate of the case and inserting your hand is dangerous. Do not open the case.
  If some trouble arises with the performance of the set, remove the power plug soon and contact the store where the set was purchased or a nearby dealer.



During your absence

- When not using the set for an extended period such as when taking a trip, be sure to disconnect the plug from the receptacle.



For sets with ventilation holes

Do not block the ventilation holes of the set

- Blocking of the ventilation holes will lead to damage of the set.
- The ventilation holes are very important for heat radiation from within the set. Care must be taken since placing an object against the holes will result in an extreme rise of temperature within the set.

- **Read this manual carefully to ensure that you take full advantage of all the features of this receiver. Keep the manual in a safe place for future reference.**
- **Be sure to check that the date of purchase and the store's name of purchase have been filled in properly on the warranty issued at your store of purchase.**

– CONTENTS –

Check that the following parts are included in the package aside from the main unit:

①Operating Instructions 1
②Remote control unit (RC-139) 1
③Batteries (R6P/AA) 2
④AM loop antenna 1
⑤FM antenna adapter 1
⑥FM indoor antenna 1

1 BEFORE USING

Read the following cautions carefully before using the receiver:

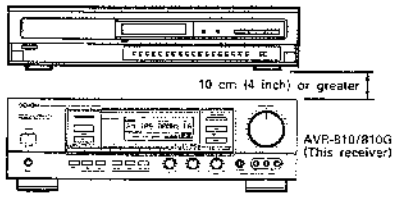
- Moving the set
  Be sure to unplug the power cord and disconnect other cords connecting the receiver to other audio units before moving the receiver to prevent damaging or short-circuiting the cords.
- Before turning on the power switch
  Check again to make sure that all connections are correct and that there are no problems with the connection cords. Be sure to turn the power OFF before disconnecting or connecting cords.
- Retain the operating instructions
  After reading this manual, store it in a safe place.
- The illustrations used in this manual may differ somewhat from the actual receiver.

2 INSTALLATION PRECAUTIONS

Using this receiver or other electronic equipment containing microprocessors simultaneously with a TV may result in noise in the sound or picture. If this should happen, take the following steps:

- Install the receiver as far as possible from the TV set.
- Keep the antenna lines of the TV as far as possible from the receiver's power cord and connection cables.
- This problem is especially frequent when using indoor antennas or 300 ohm feeder lines. We recommend using outdoor antennas and 75 ohm coaxial cables.

A note on stacking



For cooling purposes, do not place another AV component directly on top of the receiver. Be sure to leave a space of at least 10 cm (4 inch).

3 HANDLING PRECAUTIONS

- **Switching the input function when the input jacks are unconnected**
  Switching the input function when a component is not connected to the input jacks may result in the generation of click noise. If this should happen, turn down the MASTER VOLUME or connect a component to the input jacks.

- **Playback with Dolby Pro Logic**
  The Dolby Pro Logic position provides optimum effectiveness for sources recorded with Dolby Surround. A different surround mode should be selected when playing back sources other than this type. Note in particular that when playing back monaural recording sources, the bypass mode or the simulated mode should be used. Other modes will not provide a suitable effect.

- **Muting of the PRE OUT jacks**
  An electronic muting circuit has been connected to the PRE OUT jacks. This circuit greatly attenuates the output signal for approximately 7 seconds after the power has been switched on. Raising the volume during this operation will result in an extremely large output once the muting has ended, so volume adjustments should be made only after the completion of muting.

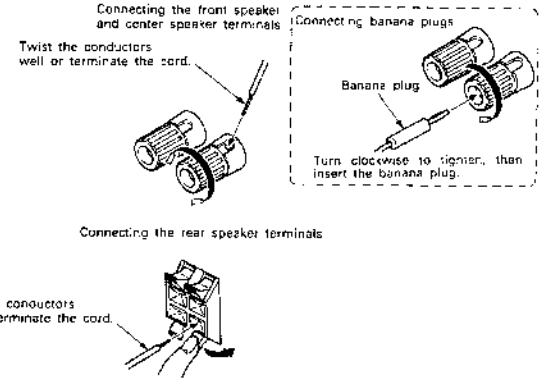
- **Rear output level while in the surround mode**
  The rear level will seem small for sources other than Dolby Surround sources. The reason for this is that a rear playback signal is not contained in the software. When playing back such software with a surround function, the mode should be set to something other than Dolby Pro Logic surround. The rear output level may seem small for software having a small rear signal, even Dolby Surround sources.

4 CONNECTIONS

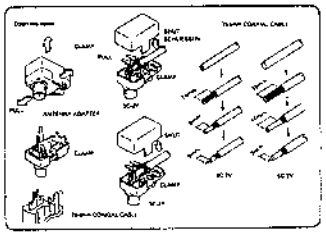
Speaker System Connections

- This receiver can accommodate connections of a total of five speakers including one set of front speakers, one set of rear speakers, and one center speaker.
- Connect the speaker terminals with the speakers making sure that like polarities are matched (⊖ with ⊕ ⊖ with ⊖). Mismatching of polarities will result in weak central sound, unclear orientation of the various instruments, and the sense of direction of the stereo being impaired.
- When making connections, take care that none of the individual conductors of the speaker cord come in contact with adjacent terminals, with other speaker cord conductors, or with the rear panel.
- **Speaker Impedance**
  - Speakers with an impedance of 6 to 12 ohms can be connected for use as front, center and rear speakers.
  - The protection circuit may operate or damage may occur when speakers with an impedance outside of the above range are used.

①Peel off the insulation from the tip of the cord
②Twist the conductors.
③Turn the speaker terminal counterclockwise to loosen it.
④Insert the exposed portion of wire completely and turn the terminal clockwise to tighten it.



Audio Section



Note to CATV system installer:
This reminder is provided to call the CATV system installer's attention to Article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

- Do not plug in the power cord until all connections have been completed.
- Be sure to connect the left and right channels properly (left with left, right with right).
- Insert the plugs securely. Incomplete connections will result in the generation of noise.
- **Use the AC OUTLETS for audio equipment only. Do not use them for hair driers, etc.**
- Note that binding pin plug cords together with power cords or placing them near a power transformer will result in the introduction of hum or other noise.
- **Precautions when connecting speakers**
  If a speaker is placed near a TV or video monitor, the colors on the screen may be disturbed by the speaker's magnetism. If this should happen, move the speaker away to a position where it does not have this effect.

FM INDOOR ANTENNA (An Accessory)

300 ohm ANTENNA

75 ohm ANTENNA

300 ohm

FEEDER

COAXIAL CABLE

AM OUTDOOR ANTENNA

Attach to the holder

AM LOOP ANTENNA

75 ohm COAXIAL CABLE

20 mm

7mm

NOTE:
When installing the AM loop antenna, be sure no metal parts are touching the top cover, as shown in the diagram.

Ground wire

Turntable (MM cartridge)

Connecting a turntable

Connect the turntable's output cord to the AVR-810/810G's PHONO jacks, the left plug in the L jack, the right plug in the R jack.
* If humming is produced when the ground wire is connected, disconnect it.

NOTE:
Turntables with MC cartridges cannot be played on this receiver. Use a separately sold head amplifier or a step-up transformer.

CD player

Connecting a CD player

Connect the CD player's analog output jacks to the AVR-810/810G's CD jacks, using pin-plug cords.

DAT (for recording and playback)

Connecting a DAT (Digital Audio Tape) recorder

Connections for recording: Connect the DAT's analog recording input jacks (LINE IN or REC) to the AVR-810/810G's tape recording jacks (OUTPUT) using pin-plug cords.
Connections for playback: Connect the DAT's analog playback output jacks (LINE OUT or PB) to the AVR-810/810G's tape playback jacks (INPUT) using pin-plug cords.

ANALOG OUTPUT

OUTPUT INPUTS

Tape deck 2

OUTPUT INPUTS

Connecting tape decks

Connections for recording: Connect the tape deck's recording input jacks (LINE IN or REC) to the AVR-810/810G's tape recording jacks (OUTPUT) using pin-plug cords.
Connections for playback: Connect the tape deck's playback output jacks (LINE OUT or PB) to the AVR-810/810G's tape playback jacks (INPUT) using pin-plug cords.

Center speaker

Power outlet
AC 120V, 60Hz
AC 110/220, 120/220V, 50/60Hz (Multiple)

AC OUTLETS

AC Outlets
These outlets are convenient for plugging in a TV tuner, turntable, tape deck, or some other component connected to the receiver.
- SWITCHED outlets (120W total capacity)
  The power of these outlets is switched on and off by the receiver's POWER switch.
  These outlets will also be switched on when the power is set to ON-STANDBY with the remote control. When the receiver is in the standby mode, the outlets will be switched off.

The polarities are indicated on the AVR-810/810G's power plug.
(Refer to the diagram at the right.)
When the polarities are indicated on the receiver or other audio component used with the AVR-810/810G, we recommend connecting the plug in such a way that the polarities are matched, or connecting the side on which the polarity is indicated (the white side of the AC cord) to the ground side (the larger hole) of the power outlet.

PRE OUT jacks

Use these jacks when using another pre-main amplifier or a separate amplifier.

Rear L

Rear R

Rear speaker system (surround)

Speaker system A

Front L

Front R

Connecting the speaker systems

Connect the speaker system from the left channel (as seen from the front) to the L terminals, the speaker system for the right channel to the R terminals.

- **MONO**
  There are two mono jacks. For connecting a super woofer with built-in amplifier (super woofer), etc.

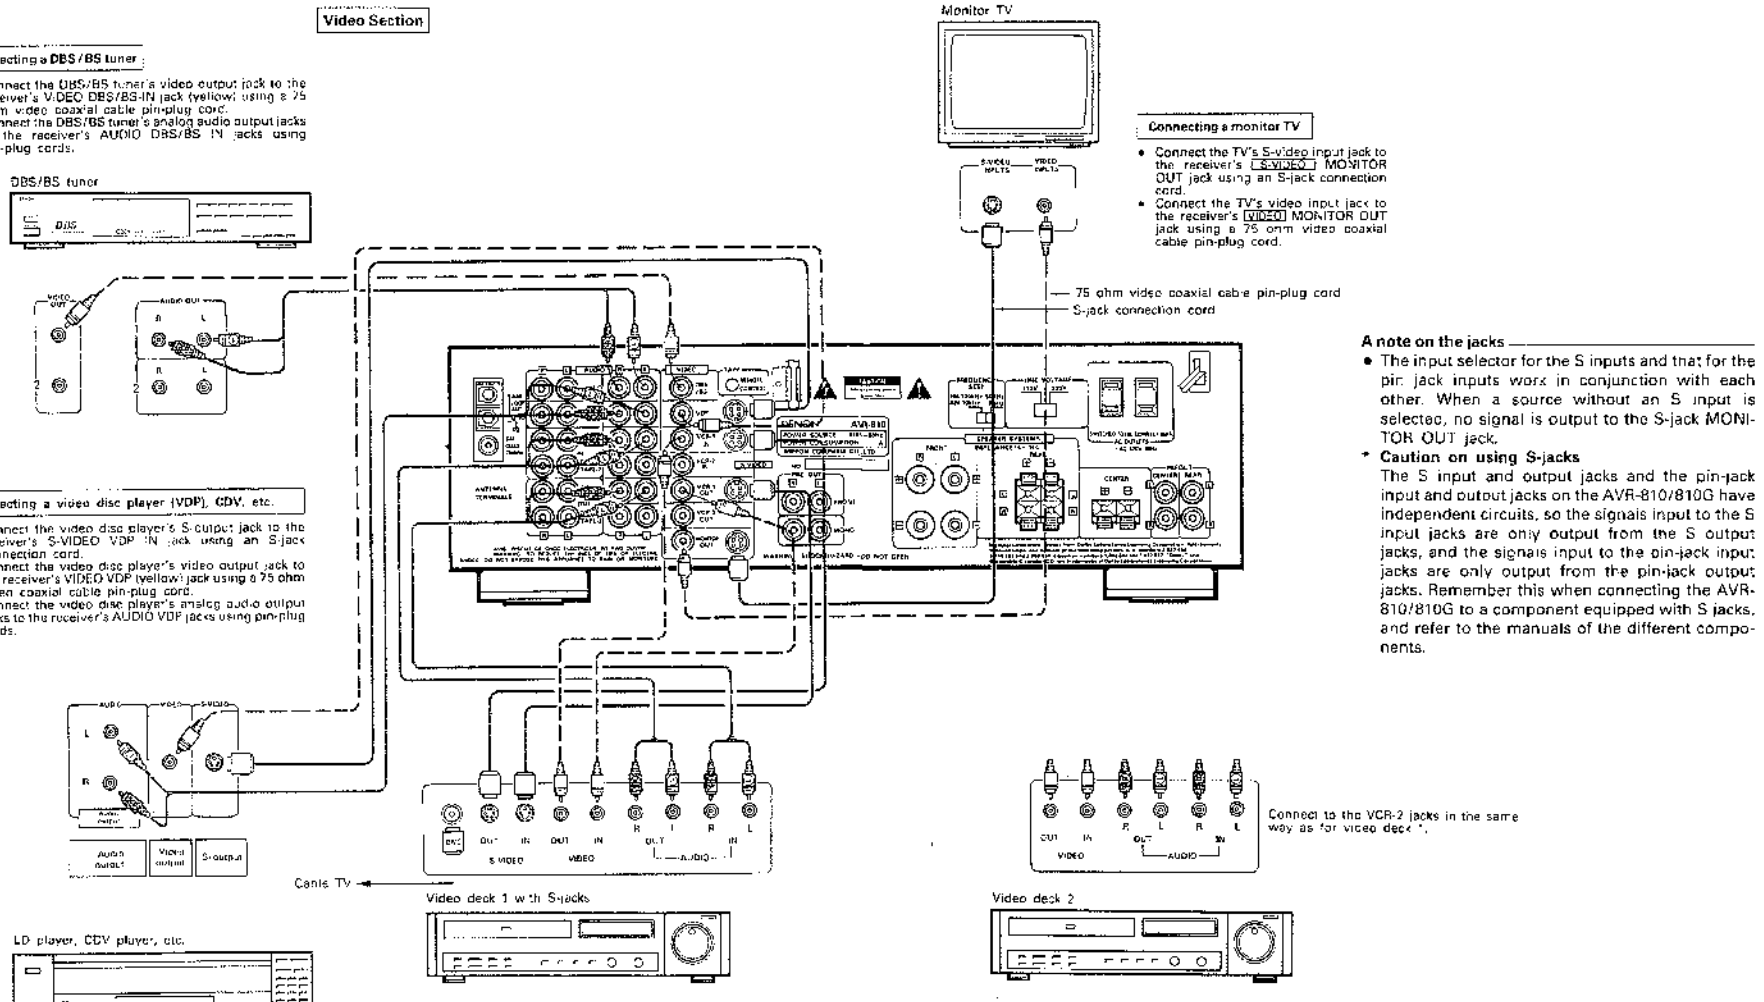
Front left speaker

Front right speaker

Pre-main (power) amplifier

Refer to Pages 10 and 11.

Video Section



Connecting a DBS / BS tuner

- Connect the DBS/BS tuner's video output jack to the receiver's VIDEO DBS/BS-IN jack (yellow) using a 75 ohm video coaxial cable pin-plug cord.
- Connect the DBS/BS tuner's analog audio output jacks to the receiver's AUDIO DBS/BS IN jacks using pin-plug cords.

Connecting a monitor TV

- Connect the TV's S-video input jack to the receiver's S-VIDEO MONITOR OUT jack using an S-jack connection cord.
- Connect the TV's video input jack to the receiver's VIDEO MONITOR OUT jack using a 75 ohm video coaxial cable pin-plug cord.

Connecting a video disc player (VDP), CDV, etc.

- Connect the video disc player's S-output jack to the receiver's S-VIDEO VDP IN jack using an S-jack connection cord.
- Connect the video disc player's video output jack to the receiver's VIDEO VDP (yellow) jack using a 75 ohm video coaxial cable pin-plug cord.
- Connect the video disc player's analog audio output jacks to the receiver's AUDIO VDP jacks using pin-plug cords.

The AVR-810/810G is equipped with VIDEO AUX jacks on the front panel for playback of video equipment. This makes it possible to connect video camcorders with playback functions as well as other equipment. The connections are the same as for a VDP.

Connecting video decks (VCR)

- There are two sets of VCR jacks, allowing connection of two video decks for simultaneous recording and video copying.

Connections for video input and output:
Connect the video deck's video output jack to the receiver's VCR-1 IN jack (yellow) and the video deck's video input jack to the receiver's VCR-1 OUT jack (yellow) using 75 ohm video coaxial cable pin-plug cords.

Connecting the S-jacks (VCR-1)
Connect the video deck's S-output jack to the receiver's S-VIDEO IN jack and the video deck's S-input jack to the receiver's S-VIDEO OUT jack using S-jack connection cords.

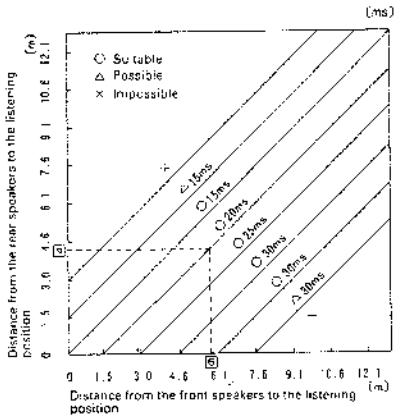
Connecting the audio input and output jacks
- Connect the video deck's audio output jacks to the receiver's AUDIO VCR-1 IN jacks and the video deck's audio input jacks to the receiver's AUDIO VCR-1 OUT jacks using pin-plug cords.
- A second video deck may be connected to the VCR-2 jacks in the same way.

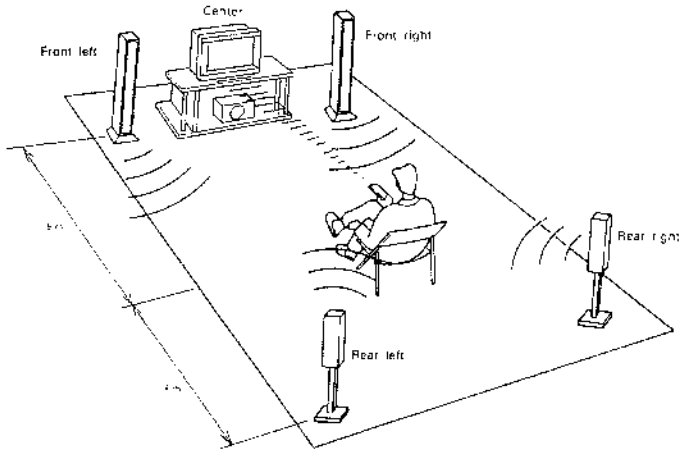
A note on the jacks
- The input selector for the S inputs and that for the pin jack inputs work in conjunction with each other. When a source without an S input is selected, no signal is output to the S-jack MONITOR OUT jack.
- **Caution on using S-jacks**
  The S input and output jacks and the pin-jack input and output jacks on the AVR-810/810G have independent circuits, so the signals input to the S input jacks are only output from the S output jacks, and the signals input to the pin-jack input jacks are only output from the pin-jack output jacks. Remember this when connecting the AVR-810/810G to a component equipped with S jacks, and refer to the manuals of the different components.

5 DOLBY PRO LOGIC SURROUND

- **Setting the delay time**
  The optimum delay time will differ depending on the listening position. Referring to the right chart, set the optimum delay time for your room's space and setting position. For example, when the distance from the front speakers to the listening position is 6 m and that from the rear speakers to the listening position is 4 m, the optimum delay time will be 20 ms.

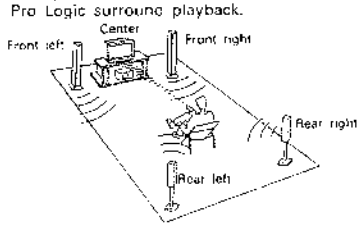
Listening position and optimum delay time for playback with Dolby Pro Logic surround





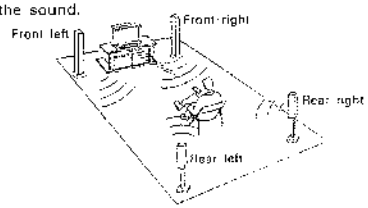
- **Adjustment of the Input Balance**
  This unit is equipped with an auto input balance circuit which makes the need for adjustment of input balance unnecessary.
  The AUTO BALANCE indicator in the display will light up when the auto input balance operation is active.

- **Speaker arrangement**
  Ideally, center speakers should be used for Dolby Pro Logic surround playback.



NORMAL mode

Normal mode: This mode is suited for an arrangement in which the center channel speakers are smaller than the left and right speakers. Signals below 100 Hz which have almost no effect on directional orientation are distributed to the left and right channels, whereas the center channel outputs signals greater than 100 Hz. The bass of the left and right channels increases the apparent deepness of the sound.



PHANTOM mode

Phantom mode: Use this mode when center channel speakers are not used. A directional emphasis circuit provides signal reproduction which is electrically oriented to the center and this achieves an effect which is extremely close to that of five-channel reproduction although there are four channels.

- **Test tone**
  The test tone function is used to generate a test signal for adjusting the level of each channel in the Dolby Pro Logic surround mode.
  Before using Dolby Pro Logic surround, arrange the speakers as illustrated above and follow the procedure given here. Using the test tone, set the optimum volume balance for each speaker and set the volume and other controls so that each speaker can be heard at the same level.
  In the normal and wide modes the test tone is provided as the speakers are switched in the following order:

Front left → Center → Front right → Rear

Use this signal to adjust the volume balance and set an optimum balance.
In the phantom mode the test tone is provided as the speakers are switched in the following order

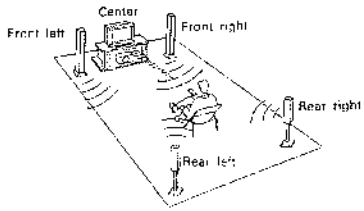
Front left → Front left and right → Front right → Rear

In the 3-channel logic mode the test tone is provided as the speakers are switched in the following order:

Front left → Center → Front right

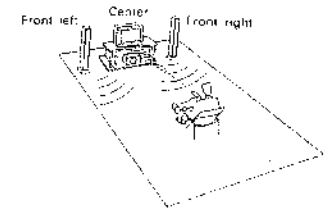
Note that this receiver provides the test tone at 4-second intervals for the first two cycles and for 2-second intervals thereafter.

Adjustment of the test tone should be made with the remote control unit (RC-1391.



WIDE mode

Wide mode: This mode is suited for an arrangement in which the center channel speakers are of the same grade as the left and right speakers. The entire sound band from low to high frequencies is output to the center channel to provide an exciting sound field for your enjoyment.

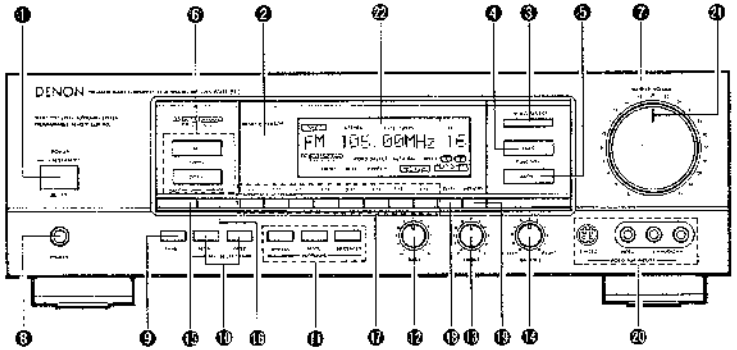


3-CH LOGIC

3-channel logic mode: Use this mode when rear channel speakers are not used. The rear channel information is fed to the front speakers to provide the surround effect.

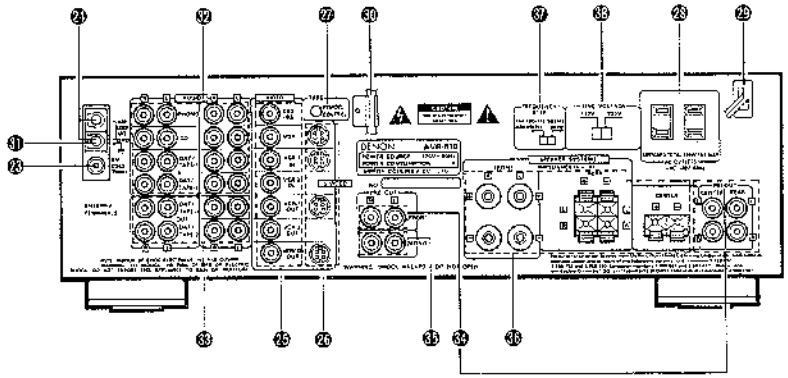
6 PART NAMES AND FUNCTIONS

Front panel



㉒ MULTI FUNCTION DISPLAY

Rear panel



❶ **POWER switch**

⏻ ON/STANDBY

In this position, the power is on and the MASTER VOLUME LED is flashing.

Several seconds are required after the power is turned on before the set will operate (the LED stops flashing and remains lit). This is because a built-in muting circuit is activated to prevent noise when the power switch is turned on and off.

Set the switch to this position when using the included remote control unit (RC-139) to turn the power on and off.

OFF

In this position, the power and the LED are off. The power cannot be turned on and off with the remote control unit when the switch is in this position.

❷ **REMOTE SENSOR**

This is the sensor of the wireless remote control unit.

Point the wireless remote control unit (RC-139) at this sensor when operating it.

❸ **VIDEO SELECT**

(Independent switching button for the video signal)

This button is used to switch the video signals independently of the audio signals.

Holding this button down will cause the video input signals to be switched in the order shown below. When the desired video input signal is displayed on the (FLD) multi-function display, remove your finger from the button. Now, even if the AUDIO FUNCTION selector ❺ is switched, the video signal will not change.

To cancel this condition, press the VIDEO SELECT button again or press the VIDEO FUNCTION selector ❹.

DBS/BS → VCR-1 → VCR-2 → V. AUX

❹ **VIDEO FUNCTION Selector**

(Video input signal switching button)

This button is used for the input positions which have video input signals.

Pressing this button repeatedly or holding it down steadily will switch the input positions in the following sequence.

DBS/BS → VCR-1 → VCR-2 → V. AUX

❺ **AUDIO FUNCTION Selector**

(Audio input signal switching button)

This button is used for switching the audio input positions.

Pressing this button repeatedly or holding it down steadily will switch the input positions in the following sequence.

PHONO → CD → TUNER → DAT/TAPE-1 → DAT/TAPE-2

❻ **TUNING (Tuning Buttons)**

Press these buttons to tune in a station. In the MANUAL TUNING mode, each press of the buttons will change the frequency in 100 kHz (or 50 kHz, Asia Model only) steps on FM and 10 kHz (or 9 kHz, Asia Model only) steps on AM. Keeping one of these buttons pressed, the frequency will change until the button is released.

During the AUTO TUNING mode, pressing one of these buttons will affect station search up or down the band.

❼ **MASTER VOLUME control**

Turn the knob clockwise (↷) to raise the volume and turn it counterclockwise (↶) to lower it.

❽ **PHONES jack**

This jack is used for headphone connections.

NOTE:

When using headphones only, switch off the speakers with OUTPUT button on the remote control unit. See page 16.

❾ **PANEL button**

Pressing this button provides a display of the current operating condition on the display. Pressing this button will switch the display. For details, see Page 11 to 12

⑩ **REC SELECT**
(Independent switching buttons for audio and video recording outputs)
These buttons provide a selection of the audio recording and video recording modes which is independent of the selection of the FUNCTION SELECTOR.

- **AUDIO button:**
  This button selects a signal output to the recording output jacks of DAT/TAPE 1 and 2, as well as VCR-1 and 2.
  With regard to the recording output, the signal input normally selected by the FUNCTION SELECTOR is output to the recording output side. Use of this button, however, permits selection of a signal from input jacks other than the FUNCTION SELECTOR jacks.
- **VIDEO button:**
  This button selects the signal output to the video (and audio) recording output jacks of VCR-1 and 2.
  With regard to the video recording (audio recording) output, normally the video signal (audio signal) selected by the VIDEO FUNCTION selector button ❹ is output. Use of this button, however, permits selection of an input signal from input jacks other than the VIDEO FUNCTION SELECTOR jacks.

⑪ **SURROUND buttons**
Pressing this button selects the surround mode.

- **BYPASS button**
  Pressing this button will bypass the surround mode to provide regular stereo playback.
  Rear output will not be provided.
- **MODE button**
  Pressing this button switches the surround mode in the following order:
  Priority order

①DOLBY PRO-LOGIC
↓
②SPECTAREA
↓
③HALL
↓
④SIMULATED
↓
⑤STUDIO

①DOLBY PRO-LOGIC (surround)
Use this setting when playing back video software recorded in Dolby Surround.
Switch the CENTER MODE to suit the speaker system in use.
The delay time may be switched in the range of 15 ms to 30 ms to suit the size of the room and the position of the speakers.

②SPECTAREA
Use this function when playing back video software other than that recorded in Dolby Surround.
The delay time can be switched in the range of 5 ms to 40 ms.

③HALL
Use this setting to create the atmosphere of a concert hall.
The delay time may be switched in the range of 5 ms to 40 ms.
There will be no output from the center speaker position.

④SIMULATED
Use this setting to play back monaurally recorded sources with surround.
There will be no output from the center speaker position.
The delay time may be switched in the range of 5 ms to 40 ms.

⑤STUDIO
Use this setting to create the atmosphere of watching a live program in a studio.
There will be no output from the center speaker position.
The delay time is fixed at 0 ms.

- **CENTER button**
  Press this button when DOLBY PRO-LOGIC has been selected.
  When Dolby Pro Logic surround is used during playback, pressing this button will switch the center mode settings in the following order:

→① NORMAL → ② PHANTOM → ③ WIDE→

①NORMAL: Select this setting for playback with Dolby Pro Logic surround. This setting is effective when the center channel speakers are smaller than the left and right speakers.

②PHANTOM: Select this setting for playback with Dolby Pro Logic surround without using the center speakers.

③WIDE: Select this setting when the center channel speakers are of the same grade as the left and right speakers.

⑫ **BASS control**
This control is used to adjust the bass level of the front speaker output or the PRE OUT FRONT jacks.
The bass is increased when the control is turned clockwise (↷) and decreased when turned counterclockwise (↶) from the center position.

⑬ **TREBLE control**
This control is used to adjust the treble level of the front speaker output or the PRE OUT FRONT jacks.
The treble is increased when the control is turned clockwise (↷) and decreased when turned counterclockwise (↶) from the center position.

⑭ **BALANCE (Balance Control)**
Use this control to balance the volume levels between front left and front right channels. The volume levels in both channels are equal when the control is set to the center position.

⑮ **TUNING BAND (Tuning Band Selector Switch)**
Press this switch to select FM or AM band.

⑯ **TUNING MODE (Tuning Mode Switch)**
This switch allows selection between Auto Tuning and Manual Tuning.
AUTO TUNING: Pressing the UP button, the tuner will begin tuning to a higher frequency and pressing the DOWN button, it will begin tuning to a lower frequency until a broadcasting station is found.
MANUAL TUNING: Stations are tuned in manually by use of the UP and DOWN buttons. FM output is monaural during MANUAL TUNING.

⑰ **PRESET CHANNEL 1 ~ 16**
(Preset Station Buttons)
These buttons are used for storing stations or recalling stations which have been preset. Using the SHIFT button you can preset a total of 16 FM or AM stations into preset channels 1 ~ 8 and 9 ~ 16.
Once a radio has been memorized on a PRESET CHANNEL button, the same station can later be tuned in instantly simply by pressing the corresponding PRESET CHANNEL button.

⑱ **SHIFT (Shift Button)**
Each time this button is pressed, the preset station range will be shifted between "1 ~ 8" and "9 ~ 16". (A: 1 ~ 8, B: 9 ~ 16)

⑲ **MEMORY (Memory Button)**
This switch is used to store the desired radio station on a PRESET CHANNEL button. When pressing this button, the CH indicator flashing for approximately 6 seconds. During this interval, the desired station can be stored in the memory.

⑳ **VIDEO AUX INPUTS (external video input jacks)**
Connect the component's S-output jack to the receiver's S-VIDEO jack with an connection cord designed for S-jacks.
Connect the component's video output jack to the VIDEO jack with a 75-ohm coaxial cable pin-plug cord.
Connect the component's audio output jacks to the AUDIO jacks with pin-plug cords.

㉑ **MASTER VOLUME LED**

㉒ **MULTI FUNCTION DISPLAY**
The display indicates the tuner's reception frequency, the surround mode, the input and output data, etc., in up to 16 characters.
Normally the reception frequency is displayed when the function is set to tuner, and the surround mode is displayed when the function is set to other positions.
The display also indicates various other information as necessary.
Refer to page 12 for details.

㉓ **FM ANT. (FM Antenna Terminals)**
Both 75-ohm coaxial cable and 300-ohm feeder can be connected to this terminal. For antenna connecting procedure, see the ANTENNA INSTALLATION.

㉔ **AM ANT. (AM Aatenna Terminals)**
Connect the attached AM loop antenna. (Refer to page 8 for connections).
Connect to this terminal when a medium wave outdoor antenna is used.

㉕ **VIDEO input/output jacks**

㉖ **S-VIDEO input/output jacks**

㉗ **TAPE/REMOTE CONTROL**
This terminal is exclusively used for sending the remote control signals to the tape deck. Connect it with a 3.5mm mini-jack cord.

NOTE:
Do not hook up a headphones or microphone jack cord. Use this jack to connect a DENON cassette deck with a remote control jack (wired).
If the cassette deck does not have this jack, wired remote control is not possible.

㉘ **AC OUTLET (AC Power Outlets)**
This AC outlet is controlled by the power switch. Maximum capacity is 120 W.

㉙ **AC CORD (Power Cord)**
Connect this cord into the wall outlet.

㉚ **AM LOOP ANT (AM Loop Antenna)**
Correctly connect the AM loop antenna to the antenna terminal. Broadcasting cannot be received when the connection is incomplete. Adjust the antenna for optimum reception while receiving AM. Do not place a pin cord, SP cord or electric cord near the antenna. This may cause noise generation.

㉛ **GND (ground connection terminal)**
Connect the turntable's ground wire here.

㉜ **INPUTS (audio input jacks)**

㉝ **OUTPUTS (audio output jacks)**

㉞ **PRE OUT (FRONT, CENTER, REAR jacks)**

㉟ **MONO OUT (monaural output jacks)**
Connect a separately sold subwoofer, etc.

㊱ **SPEAKERS (speaker terminals)**

NOTE:
For connections, see page 5.

㊲ **FREQUENCY STEP (Frequency Step) Switch**
Multi Voltage model only.

㊳ **LINE VOLTAGE (Line Voltage) Switch**
Multi Voltage model only.

ANTENNA INSTALLATION

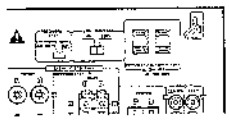
- **FM ANTENNA**
The supplied T-type indoor FM antenna (300 ohms) can be used inside wooden houses for receiving local FM stations and other strong FM signals. Stretch out the ends of the antenna and mount the antenna on the wall or ceiling where optimum reception is achieved. FM T-type antennas may not consistently ensure stable reception, due to environment changes. In such cases, the FM T-type antenna should only be used temporarily until an outdoor FM antenna has been installed.
When connecting an outdoor FM antenna, the use of 75-ohm coaxial cable (5C-2V, 5C-2V) is strongly recommended. Using a 300-ohm feeder cable will cause noise and you will not be able to achieve the high sound quality the built-in tuner is capable of delivering.
- **AM ANTENNA**
Attach the supplied AM loop antenna to the antenna holder on the back panel.
Connect the leads to the AM and GND terminals.
Also use the AM terminals for connecting an outdoor AM antenna (when making such a connection do not disconnect the AM loop antenna.)
Adjust the loop antenna to obtain optimum reception. Where broadcast stations are distant and only weak signals are received, or where signals are blocked, it is best to install an outdoor AM antenna.

NOTES
- This receiver has a full back-up system. When the power is turned on, the INPUT SELECTOR buttons are set to the last mode set before the power was turned off.
- When using this receiver in close proximity to video equipment (TV, VCR, VDP, etc.), noise may be generated in AM broadcasts. To avoid this, keep the receiver as far away from other video components as possible, or detach the AM loop antenna from the antenna holder and place it where noise is reduced. If the noise is not reduced, turn off the power of the video components when listening to AM broadcasts.

MULTI VOLTAGE MODEL ONLY

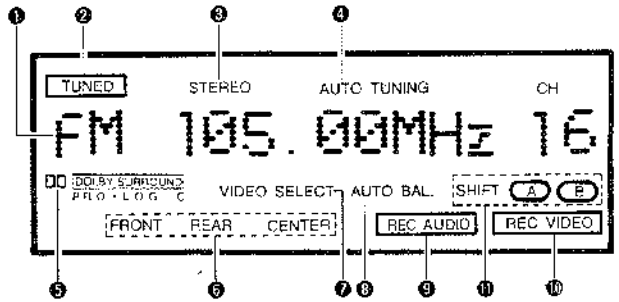
1. **Setting the frequency step.**
Set the FREQUENCY STEP switch as described below.
- In the U.S.A. and Canada – set the switch to 100 kHz/10 kHz side.
With this setting, the frequency varies in 100 kHz steps in the range of 87.5 to 108.0 MHz (FM) and in 10 kHz steps in 520 to 1710 kHz (AM).
- Elsewhere – set the switch to 50 kHz/9 kHz side.
With this setting, the frequency varies in 50 kHz steps in the range of 87.50 to 108.00 MHz (FM) and in 9 kHz steps in 522 to 1611 kHz (AM).

2. **Setting the line voltage (Power Supply: AC 110/220 V, 50/60 Hz)**



- The customer can set the VOLTAGE SELECTOR KNOB on the back panel for appropriate line voltage by using a screwdriver.
- Do not use excessive force in setting the VOLTAGE SELECTOR KNOB – you may damage it.
- If the VOLTAGE SELECTOR KNOB does not turn smoothly, call qualified service personnel.
- Be sure to set both voltage selectors to same position.

Display



❶ **MULTI FUNCTION DISPLAY**
This displays a maximum of 16 characters. Normally the reception frequency is displayed when the function is set to tuner, and the surround mode is displayed when the function is set to other positions. The display also indicates various other information according to the buttons pressed, as shown in the examples on the following pages 12.

❷ **TUNED (TUNED indicator)**
This indicator lights when broadcast signals are received.

❸ **STEREO (Stereo Indicator)**
The STEREO indicator will automatically light up when a stereo broadcast is received.

❹ **AUTO TUNING (AUTO TUNING Indicator)**
This indicator lights when the auto tuning mode is selected by pressing the TUNING MODE button ⑯.

❺ **DOLBY SURROUND Indicator**
This indicator lights when DOLBY PRO LOGIC is selected by pressing the SURROUND MODE button ⑰.

❻ **OUTPUT CHANNEL Indicator**
This indicates the currently output speaker channel.

❼ **VIDEO SELECT (VIDEO INPUT SELECT Indicator)**
This indicator lights when the video monitor output is fixed in the video input select mode.

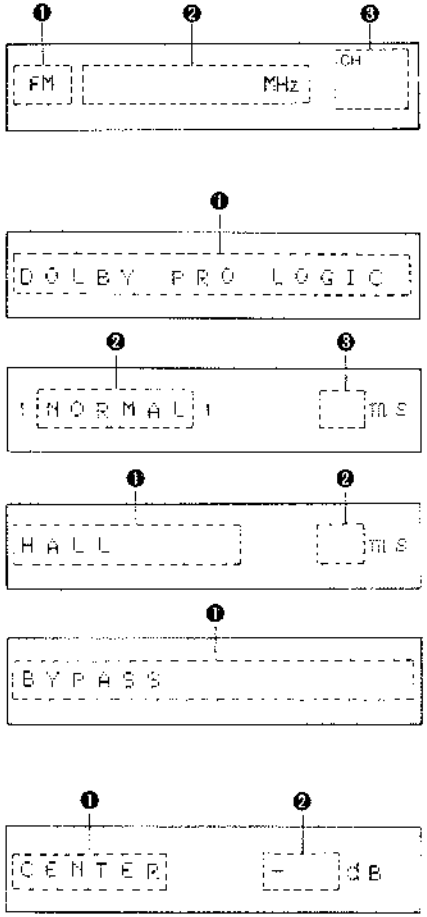
❽ **AUTO BALANCE Indicator**
This indicator shows that the auto input balance operation is active. It lights up when the surround mode is Dolby Pro-logic or Spectarea.

❾ **REC AUDIO (REC SELECT AUDIO Indicator)**
This indicator lights when the recording audio output is fixed in the REC SELECT AUDIO mode.

❿ **REC VIDEO (REC SELECT VIDEO Indicator)**
This indicator lights when the recording video output is fixed in the REC SELECT VIDEO mode.

⓫ **SHIFT (Shift Indicator)**
The preset channel which is selected with the Shift Button ⑱ is displayed by the SHIFT Ⓐ or Ⓑ.

• **MULTI FUNCTION DISPLAY Display Pattern Examples**
The set modes appear one after another each time the panel button on the AVR-810/810G or the remote control unit is pressed.



1. TUNER MODE display
❶ FM or AM.
❷ **FREQUENCY**
The frequency is displayed in numerals. It is displayed in MHz for FM and in kHz for AM.
❸ **CHANNEL**
When using the channel preset button ⓯, the channel and the memorized frequency are displayed.

2. SURROUND MODE display
(1) DOLBY PRO LOGIC
❶ DOLBY PRO LOGIC, DOLBY 3-CH. LOGIC
❷ NORMAL, PHANTOM, WIDE
❸ DELAY TIME
Dolby Pro Logic settings between 15 ms and 30 ms will be displayed in 5 ms steps. They will not be displayed in Dolby 3-CH Logic mode.

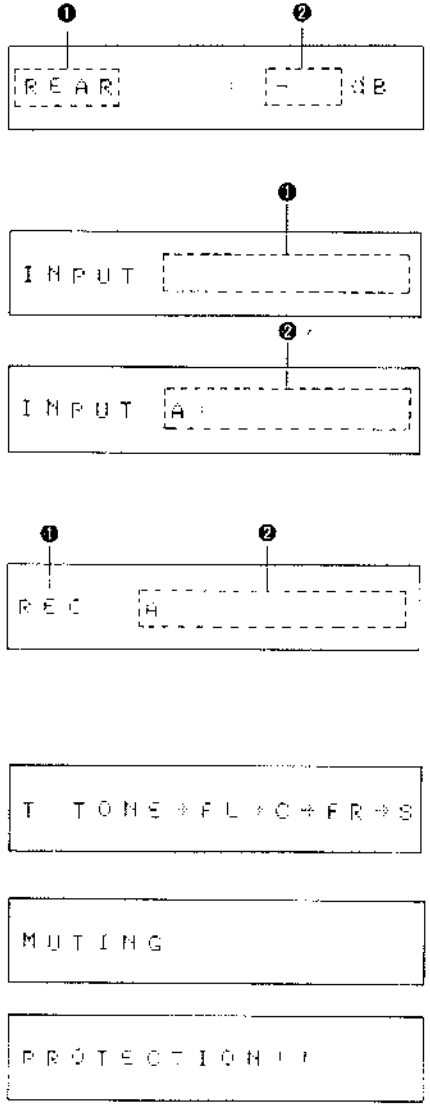
(2) Other SURROUND MODE displays
These displays will be shown during surround modes such as those listed below.

❶	❷
SPECTAREA	5 ms to 40 ms settings are displayed in 5 ms steps
HALL	5 ms to 40 ms settings are displayed in 5 ms steps
SIMULATED	5 ms to 40 ms settings are displayed in 5 ms steps
STUDIO	0 ms

(3) BYPASS display
❶ This display is shown in the bypass mode.

3. CENTER LEVEL display
❶ This display is shown when the CENTER LEVEL button is pressed (Remote Control Unit Only).
❷ The display is in 2 dB steps from –48 dB (minimum) to 0 dB (maximum).

NOTE:
This is not displayed in modes not using the center speakers.



4. REAR LEVEL display
❶ The display will be shown when the REAR LEVEL button is pressed (Remote Control Unit Only).
❷ The display is in 2 dB steps from –48 dB (minimum) to 0 dB (maximum).

NOTE:
This is not displayed in modes not using the rear speakers.

5. INPUT display
❶ The display will be shown when one of the input selectors is pressed, after which the function name will appear.
❷ If a video signal has already been selected using the video select buttons, the audio and video inputs will be displayed for 3 seconds after the button is pressed.

6. REC OUT display
❶ REC SELECT
The display will be shown when AUDIO or VIDEO is pressed.
❷ Audio outputs
The display shows which audio component was selected, PHONO, CD, TUNER, DAT/TAPE-1, DAT/TAPE-2, DBS/BS, VDP, VCR-1, VCR-2, or V-AUX.
Normally the source is displayed.
Video outputs
The display shows which video component was selected, DBS/BS, VDP, VCR-1, VCR 2, or V-AUX.
Normally the source is displayed.

7. TEST TONE display
• This appears when the TEST TONE button on the remote control unit is pressed. The arrow moves according to the output.
The display remains on until the test tone is turned off.

8. MUTING display
• This appears when the MUTING button on the included remote control unit is switched on. The display remains on until muting is canceled.

9. PROTECTION display
• This appears when the protection circuit is activated.
If this display should appear, set the power switch to standby and check the speaker connections, then switch the power back on.

7 OPERATION

PREPARATIONS FOR PLAYBACK

1. Checking connections

- Referring to the connection diagrams (Page 5 to 7) check to make sure that the connections are made properly.
- Check that the left and right speakers are connected properly and also that the polarities (⊕, ⊖) are correct.
- Check that the left and right sides of the pin-plug cords are connected properly.
- Check that each cord is securely connected.
- Check that each cord is of the proper type.

2. Checking the positions of the controls

(See Pages 9 to 11 for a reference to the circled numbers.)

- Turn the MASTER VOLUME control ❼ fully counterclockwise to the "0" position.
- Set the BALANCE ⓯, BASS ⓰, and TREBLE ⓱ controls to their center positions.

After making the above checks, press the POWER switch ❶ to switch on the power.
The receiver will be operable when the LED of the MASTER VOLUME control ❼ stops flashing after several seconds of muting.

Note on Playback

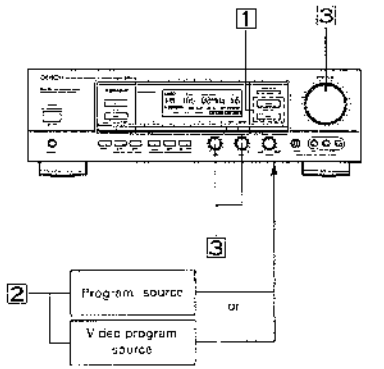
The sound will be interrupted if one of the input selector buttons (❹ and ❺) is pressed during playback. This is due to the operation of the muting circuit which prevents noise from being amplified at the time of switching, and is not a malfunction.
Note that the activation of the muting circuit mentioned above will not have an effect on the sound being recorded.

- When using the accompanying remote control unit, press the corresponding button. For details, see section 8, REMOTE CONTROL UNIT, on page 15.

Protection Circuit

This receiver is provided with a high-speed protection circuit. This circuit protects the internal circuitry from large currents which may be created by the output signals when the speaker terminals are not completely connected or are short-circuited.
The operation of this protection circuit automatically cuts off the output to the speakers and displays "PROTECTION!" on the multi function display.
If this should happen be sure to set the POWER switch on the receiver to the OFF mode, check the speaker connections, then switch the power back on. After several seconds of muting, the set will operate normally.

- **Playback of program sources – 1**
  (When the video and audio are from the same source)



1 Select the desired program source by pressing an audio input selection button or a video input selection button.

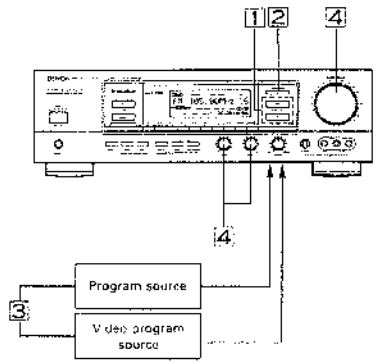
Program source	AUDIO INPUT SELECTOR
To listen to a record	PHONO
To listen to a CD	CD
To listen to FM or AM broadcasts	TUNER
To listen to the DAT or tape deck connected to the DAT/TAPE-1 jacks	DAT/ TAPE-1
To listen to the DAT or tape deck connected to the DAT/TAPE-2 jacks	DAT/ TAPE 2

Video program source	VIDEO INPUT SELECTOR
To watch a satellite broadcast	DBS/BS
To watch the video disc player connected to the VDP jacks	VDP
To watch the video deck connected to the VCR-1 jacks	VCR-1
To watch the video deck connected to the VCR-2 jacks	VCR-2
To watch the video camcorder equipped with playback function or another component connected to the VIDEO-AUX jacks (front panel)	V-AUX

2 Begin playback of the program source.
For operating details, see the manual of the respective component.
For the tuner, use the TUNING buttons ❻ and PRESET CHANNEL buttons ❼ to set the desired frequency.

3 Adjust the volume and tone.

- **Playback of program sources – 2**
  (Picture and sound from different sources – "Simulcast" playback)



1 Select the program source you wish to listen to with the AUDIO FUNCTION selector or the VIDEO FUNCTION selector.

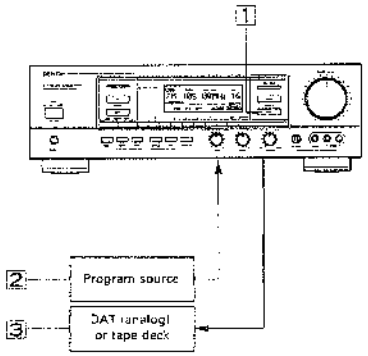
2 Press VIDEO SELECT to select the video program source you wish to watch.

3 Begin playback of the program sources.
For operating details, see the manual of the respective component.
For the tuner, use the TUNING buttons ❻ and PRESET CHANNEL buttons ❼ to set the desired frequency.

4 Adjust the volume and tone.

- When the video program source is again selected with the VIDEO FUNCTION button, even during Simulcast playback, the Simulcast playback will be cancelled automatically.

• Recording program sources and copying tapes (Recording the audio source currently being monitored)



1 Press one of the audio input selection buttons to select the program source you wish to record.

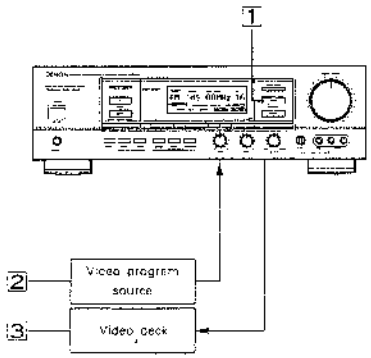
Program source	AUDIO INPUT SELECTOR
To record from a record	PHONO
To record from a CD	CD
To record from FM or AM broadcasts	TUNER
To record from the DAT or tape deck connected to the DAT/TAPE-1 jacks	DAT/ TAPE-1
To record from the DAT or tape deck connected to the DAT/TAPE-2 jacks	DAT/ TAPE-2

2 Begin playback of the program source you wish to record.

3 Begin recording on the tape deck or DAT (analog).
For operating details, see the manual of the respective component.

• Simultaneous recording
The signals from the sources selected by the input selection buttons are output simultaneously from the OUTPUT jacks of the audio and video systems. If two tape decks and two Hi-Fi video decks are connected and all four components are set to the recording mode, the four components will record the same source simultaneously.

• Recording video program sources and copying videos (Recording the sound and picture of the video source currently being monitored)



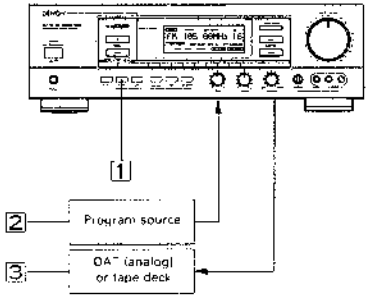
1 Press one of the video input selection buttons to select the program source you wish to record.

Video program source	VIDEO INPUT SELECTOR
To record from the DBS/BS tuner connected to the DBS/BS jacks	DBS/BS
To record from the video disc player connected to the VDP jacks	VDP
To record from the video tape deck connected to the VCR-1 jacks	VCR-1
To record from the video tape deck connected to the VCR-2 jacks	VCR-2
To record from the video camcorder equipped with playback function or another component connected to the VIDEO-AUX jacks (front panel)	V-AUX

2 Begin playback of the video program source you wish to record.

3 Begin recording on the video deck.
For operating details, see the manual of the respective component.

• Independent recording of program sources and independent tape copying (Recording the sound of a source other than the one currently being monitored)



1 Hold down the REC SELECT AUDIO button (an independent audio recording output selection button) and when the program source you wish to independently record is displayed, release your finger from the button.
The display will be switched in the following sequence.

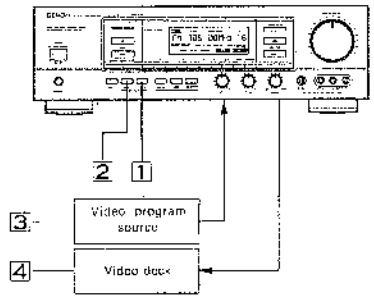
PHONO → CD → TUNER → DAT/TAPE-1 → DAT/TAPE-2 → V. AUX → VCR-2 → VCR-1 → VDP → DBS/BS

2 Start playing the program source you wish to record.

3 Start the recording with the tape deck or DAT (analog).
Refer to the instruction manuals accompanying your equipment for details on their operation.
• Pressing the REC SELECT AUDIO button again will cancel this mode.

• Monitoring the recording
When making a recording using a 3-head tape deck, the sound that has actually been recorded on the tape can be checked.
To monitor the tape recording, after completing the aforementioned settings, use the AUDIO FUNCTION selector to select the position which connects the 3-head tape deck, either DAT/TAPE-1 or 2.

• Independent recording of video program sources and independent video tape copying – 1 (Recording the picture of a source other than the one currently being monitored)



1 Hold down the REC SELECT VIDEO button (an independent video recording output selection button) and when the program source you wish to independently video record is displayed, release your finger from the button.
The display will be switched in the following sequence.

DBS/BS → VDP → VCR-1 → VCR-2 → V. AUX

3 Start playing the video program source you wish to video record.

4 Start the recording with the video deck.
Refer to the instruction manuals accompanying your equipment for details on their operation.
• Pressing the REC SELECT VIDEO button again will cancel this mode.

• Independent recording of video program sources and independent video tape copying – 2 (Simulcast recording)

Combining the above procedures, the video and audio programs of different sources can be recorded (Simulcast recording).

1 Hold down the REC SELECT VIDEO button and release your finger when the video program source you wish to record is displayed.

2 Hold down the REC SELECT AUDIO button and release your finger when the program source you wish to record is displayed.

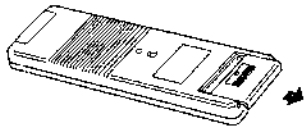
3 Begin playback of the program sources.

4 Begin recording on the video deck.
• Pressing the REC SELECT VIDEO button again will cancel this mode.

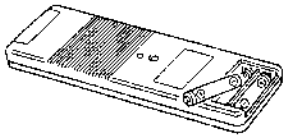
8 REMOTE CONTROL UNIT

Following the procedure outlined below, insert the batteries before using the remote control unit.

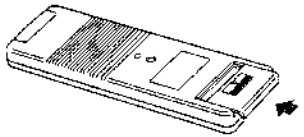
1. Open the bottom cover of the remote control unit and remove the battery cover.



2. Insert the two R6P (AA) batteries, matching the ⊕ and ⊖ marks on the batteries with those in the case.



3. Close the bottom cover until it clicks shut.



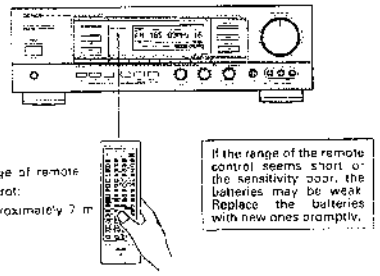
■ Using the remote control unit

The remote control unit uses highly linear infrared rays. Point it at the receiver's remote sensor when operating it. The receiver will not operate if the remote sensor is covered or if there is an obstacle between the remote control unit and the sensor. Also note that strong light shining on the remote sensor may result in mistaken operations. In addition, using the receiver near neon signs which generate pulse type noise may result in mistaken operations, so keep the receiver as far as possible from such neon signs.

■ Cautions for batteries

- Be sure that the ⊕ and ⊖ ends of the batteries match the marks on the battery case of the remote control unit.
- Replace weak batteries as soon as possible.
- Do not mix new batteries with used ones.
- Do not use batteries of different types together. Note that some batteries of the same shape and size may provide different performance.
- Some batteries are rechargeable, others are not. Read the battery instructions carefully.
- Do not connect the ⊕ and ⊖ ends of the batteries directly with metal objects. (Do not short-circuit the batteries.)
- Do not disassemble, heat, or dispose of batteries in a fire. If the batteries should leak, carefully wipe off any fluid from the battery case, then insert new batteries.

■ Range of operation of the remote control unit



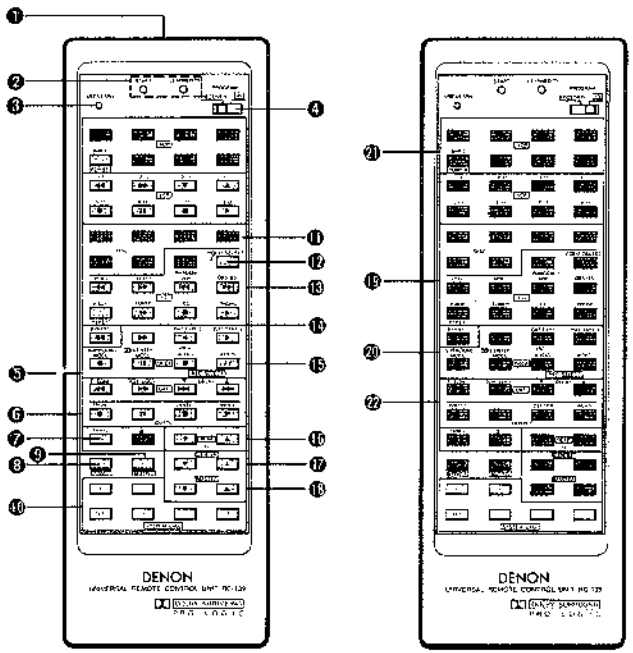
■ A note on battery replacement

Have replacement batteries on hand so that they can be inserted as quickly as possible after the old batteries are taken out.

The codes that have been learned may be lost if new batteries are not inserted within about 5 minutes.

Part Names and Functions of the Remote Control Unit

Learning Function Button



[PROGRAM RECEIVER]
16 Buttons

[PROGRAM AV]
58 Buttons

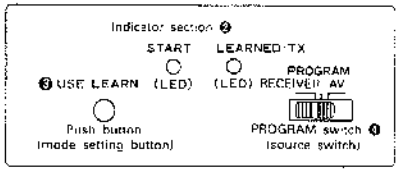
❶ **Transmitting window** The remote control signals (infrared rays) are sent from this window.

buttons contain a special receiver code and cannot learn.

buttons can learn. In the initial condition they contain the codes of DENON CD, VDP, cassette deck, and DAT products.

Note that there are a maximum of 37 programs wher DENON codes have been used.

Follow the procedure described below to use the learning function of the remote control unit.



Operation

1. USE/LEARN select button ❸
   Press this button with the tip of a pen, etc. to set the learn mode.
   The START and LEARNED/TX LEDs in the indicator section ❷ will start flashing to indicate that learning is possible.

2. Set the PROGRAM switch ❹ to the desired side, PROGRAM RECEIVER or AV.

3. Hold the transmitting windows of both your remote control unit and the RC-139 facing each other about 5 cm apart.

4. Press the button of the RC-139 to which you wish to store the code for 1 to 2 seconds, then release it. The LEDs will stop flashing and the START LED will remain lit.

5. Check that the START LED ❷ is lit, then hold down the corresponding button on the other remote control unit.

6. Release the button when the START LED ❷ goes off and the LEARNED LED lights up. The code has now been stored. The two LEDs will once again start flashing.
   Use this procedure to store other codes at other buttons.

   NOTE:
   - If the code cannot be stored, the LEARNED LED will not light after the START LED has gone off. This may occur for a very limited number of models.
   - If the memory is overloaded, both LEDs will start flashing rapidly after the START LED lights up. If this happens, no more codes can be stored.
     Use the reset operation to re-learn codes.

7. Repeat steps 4 through 6 above to store codes at other buttons.

8. After the learning operations are completed, press the USE/LEARN switch again. The two LEDs will stop flashing and the unit will be in the transmit mode. Check that the stored codes function properly.
   The buttons for which learning is possible are; Up to a maximum of 37 buttons, among the 15 buttons with the PROGRAM switch ❹ set to RECEIVER, and the 58 buttons with the PROGRAM switch set to AV.

   NOTE:
   Depending on the type and length of the codes to be learned, it may not be possible to use all 37 buttons for learning.

Clearing operation

For individual sources

1. Press the USE/LEARN switch ❸ with the tip of a pen, etc., to set the learn mode.
2. Set PROGRAM switch ❹ to the side of the source you wish to clear (either RECEIVER or AV).
3. Hold down the VCR-2 and D3S/BS ⓮ buttons at the same time for at least 4 seconds.
4. The START and LEARNED LEDs will light for 2 seconds, then go off when all learned codes for that source are cleared.
   If the source is PROGRAM RECEIVER or AV, the remote control unit will be set to the initial codes (DENON system codes).

For all sources

1. Press the USE/LEARN switch ❸ with the tip of a pen, etc., to set the learn mode.
2. The PROGRAM switch ❹ may be set to either RECEIVER or AV.
3. Press the TUNE and the DELAY button ▲ ❺ at the same time for at least 4 seconds.
4. When the START and LEARNED LEDs alternately light up 6 times, all learning codes will have been cleared.
   Note that the initial codes (DENON system codes) will be set.

Remote control operation

1. Check that both LEDs are off.
   If both LEDs are flashing or if the START LED is lit, press the USE/LEARN button to switch them off.
2. When a remote control operation button is pressed, the LEARNED/TX LED will light and the remote control code will be transmitted.

Description of AVR-810/810G code buttons

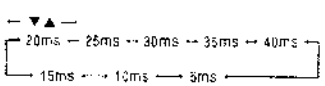
- For buttons also on the AVR-810/810G, refer to pages 14 to 18.

❺ SURROUND buttons
(Same function as on receiver)
- BYPASS button
- SURROUND MODE button
- CENTER MODE button ⊡
- TEST TONE button
  This button produces a test signal for adjusting the level of each channel in the Dolby Pro Logic surround mode.
  The test tone is switched as follows:

  This signal is used for adjusting the volume balance.
  For details, see Page 12.

- 3-CH LOGIC button
  This button is used for playing back a video source recorded using Dolby Surround without using the rear speakers.
  Switching this button on combines the rear speaker audio with that of the front speakers.
  Pressing the button once more switches this function off and returns the set to normal operation.
- DELAY TIME button
  This button sets the delay time.
  This button is only effective when the surround mode is on.
  Pressing the ▲ side increases the delay time.
  Pressing the ▼ side decreases the delay time.
  The following sequence is provided in the Dolby Pro Logic mode:

  The following sequence is provided in other surround modes (not including STUDIO):



❻ OUTPUT buttons
These buttons switch the speaker outputs on and off.
The settings are displayed on the display ❷.
- FRONT: Operates the speaker systems connected to the front speaker output terminals.
- CENTER: Operates the speaker systems connected to the center speaker output terminals.
- REAR: Operates the speaker systems connected to the rear speaker output terminals.

❼ PANEL button
(Same function as on receiver)

❽ POWER button

CAUTION:
- If the power is turned off with the remote control unit, the receiver is switched to the power stand-by state. If you are to be absent for a long period of time, be sure to turn the power off using the POWER switch on the receiver.
- The LED indicator in the VOLUME control knob lights while the receiver is in the power stand-by state.

❾ MUTING button
Pressing this button cuts off the outputs from the PRE OUT jacks and the speakers.
The MASTER VOLUME LED will be flashing during the muting condition. Pressing this button once will set the muting, another press will cancel the muting, the next press sets the muting, and so on.

❿ SYSTEM CALL buttons
See Page 31.

⓫ TUNER PRESET CALL buttons
(Same function as on receiver)
- PRESET CHANNEL 1–16
- SHIFT Button

⓬ VIDEO SELECT buttons
(Same function as on receiver.)

⓭ Video input selection buttons
(Same function as on receiver.)

⑭ **Audio input selection buttons**
(Same function as on receiver.)

⑮ **REC SELECT buttons**
(Same function as on receiver.)

⑯ **REAR LEVEL button**
These buttons are used to adjust the level of the rear output.
Pressing the ▲ side button increases the rear level volume.
Pressing the ▼ side button decreases the rear level volume.

⑰ **CENTER level control**
These buttons are used to adjust the level of the center output.
Pressing the ▲ side button increases the center level volume. Pressing the ▼ side button decreases the center level volume.

⑱ **MASTER volume control**
These buttons are used to adjust the master volume level.
The ▲ side button turns the master volume control of the receiver clockwise, increasing the overall volume level.
Pressing the ▼ side button turns the master volume control of the receiver counterclock wise, decreasing the overall volume level.

DENON System Code Buttons

When the PROGRAM switch ❹ is set to AV, the DENON component system code buttons are set to buttons ⑲ and ⑳.

⑲ **CD player system buttons**
These buttons directly control the DENON DCD-3560, 970, and other remote-controlled CD players.
The buttons have the same functions as the buttons on the CD player.
▶ PLAY button
Press this button to begin playback.
■ STOP button
Press this button to stop playback.
II PAUSE button
Press this button to pause.
◀◀ (Manual search reverse button)
▶▶ (Manual search forward button)
Press these buttons for manual search in the forward or reverse directions.
I◀◀ (Auto search reverse button)
▶▶I (Auto search forward button)
Press these buttons for auto search in the forward or reverse directions. Use them to find the beginnings of tracks.
REPEAT button
Press this button when you want to play the disc repeatedly.
DISC NUMBER buttons (1 ~ 6)
These buttons can be used with CD changers equipped with a disc number button.
For details, refer to the CD changer's manual.
RANDOM button
Press this button to random playback.
For details, refer to the CD player manual.

⑳ **DECK system buttons**
These buttons directly control DENON cassette decks equipped for remote control.
The buttons have the same functions as the buttons on the cassette deck.
▶ PLAY button (forward direction)
Press this button to begin playback in the forward direction.
◀ PLAY button (reverse direction)
Press this button to begin playback in the reverse direction.
■ STOP button
Press this button to stop the deck.
II PAUSE button
Refer to the operating instructions of your DENON tape deck.
● REC button
Refer to the operating instructions of your DENON tape deck.
SELECT-A/B button
Use this button for selection of the deck when using a double deck.
◀◀ REW button
Press this button to rewind the tape.
▶▶ FF button
Press this button to fast-forward the tape.

㉑ **VDP system buttons**
These buttons directly control the DENON LA-2000, 3000, and other remote-controlled VIDEO DISC players.
The buttons have the same functions as the buttons on the VIDEO DISC player.
▶ PLAY button
Press this button to begin playback and pause.
■ STOP button
Press this button to stop playback.
◀◀ (Manual search reverse button)
▶▶ (Manual search forward button)
Press these buttons for manual search in the forward or reverse directions.
I◀◀ (Auto search reverse button)
▶▶I (Auto search forward button)
Press these buttons for auto search in the forward or reverse directions. Use them to find the beginnings of tracks.
POWER
Press this button to power ON/OFF.

㉒ **DAT system buttons**
These buttons directly control the DENON DTR-2000, and other remote-controlled DAT.
The buttons have the same functions as the buttons on the DAT.
▶ PLAY button
Press this button to begin playback.
■ STOP button
Press this button to stop playback.
II PAUSE button
Press this button to pause.
◀◀ (Manual search reverse button)
▶▶ (Manual search forward button)
Press these buttons for manual search in the forward or reverse directions.
I◀◀ (Auto search reverse button)
▶▶I (Auto search forward button)
Press these buttons for auto search in the forward or reverse directions. Use them to find the beginnings of tracks.
● REC button
Use this button when recording.

SYSTEM CALL buttons

The SYSTEM CALL ⑩ function permits continuous remote control operation of the operations stored on up to 5 previously learned buttons using one button.

SYSTEM CALL registration
1. Press the [SET] button. The START LED of the indicator section will start flashing.
2. Set the PROGRAM switch ❹ and then press up to 5 buttons that you would like to set to system call operation in the order that you wish to send them. Each time a button is pressed the LEARNED/TX LED will light. (The maximum number of buttons that can be stored is 5.)
3. Press one button among buttons [1] through [5] to register the operation.
4. The START LED will go out and the buttons will have been registered.
5. Up to three buttons ([1] through [5]) can be registered. To continue the procedure and register another button, repeat the operations of steps [1] through [5].

NOTE:
The contents of the pressed buttons will also be sent during system call registration and so the transmitting window should be covered or some other precaution taken to avoid unwanted operation of the receiver, video deck, cassette deck etc.

SYSTEM CALL cancellation
1. Press the [SET] button and the START LED will begin flashing.
2. Press the button you wish to cancel from among buttons [1] through [5].
3. The START LED will go out and the button will be reset.
4. To continue the procedure and reset another button, repeat the operations of steps [1] through [5].

Using the SYSTEM CALL function
1. Press once one of the [1] through [5] buttons that have been registered for system call use.
2. The LEARNED/TX LED will light. The remote control codes will be sent in the registered order approximately every about 1.0 seconds.
3. The LEARNED/TX LED will go out and the transmission will be completed.

NOTE:
When one of the buttons on the main unit is pressed while a remote control operation is in progress, or when the remote control is operated while a main unit operation is in progress, priority will be given to the button last pressed and the operation of the button first pressed is stopped. To resume the operation of the button first pressed, press that button again.

9 TROUBLESHOOTING

If a problem should arise, first check the following:
1. Are the connections correct?
2. Have you operated the receiver according to the Operating Instructions?
3. Are the speakers, turntable, and other components operating properly?
If the receiver is not operating properly, check the items listed in the table below. Should the problem persist, there may be a malfunction. Disconnect the power immediately and contact your store of purchase.

	Symptom	Cause	Measures	Page
Common problems arising when listening to the CD, records, tapes.	LED not lit and sound not produced when power switch set to on.	• Power cord not plugged in securely. • At the time of the POWER ON function from the remote control unit, the POWER BUTTON of the main unit is not set to ON/STANDBY.	• Check the insertion of the power cord plug. • Switch ON with the POWER BUTTON of the main unit.	5-7 9
	LED lit but sound not produced.	• Speaker cords not securely connected. • Speaker output switch is off. • Improper position of the audio input selection button. • Improper position of the video input selection button. • Volume control set to minimum. • MUTING is on	• Connect securely. • Turn the speaker output switch on. • Set to a suitable position. • Set to a suitable position • Turn volume up to suitable level. • Switch off MUTING.	5 10 13,14 13,14 9 16
	LED continues flashing.	• Speaker terminals are short-circuited.	• Switch power off, connect speakers properly, then switch power back on.	5
	Sound produced only from one channel.	• Improper connection of speaker cords. • Improper connection of input/output cords. • Left/right balance is off.	• Connect securely. • Connect securely. • Adjust balance knob properly.	5 5-7 13
	Positions of instruments reversed during stereo playback.	• Reverse connections of left and right speakers or left and right input/output cords.	• Check left and right connections.	5-7
When playing records	Humming noise produced when record is playing.	• Ground wire of turntable not connected properly. • Incomplete PHONO jack connection. • TV or radio transmission antenna nearby.	• Connect securely. • Connect securely. • Contact your store of purchase.	5-7 6 –
	Howling noise produced when volume is high.	• Turntable and speaker systems too close together. • Floor is unstable and vibrates easily.	• Separate as much as possible. • Use cushions to absorb speaker vibrations transmitted by floor. If turntable is not equipped with insulators, use audio insulators (commonly available).	– –
	Sound is distorted.	• Stylus force too weak. • Dust or dirt on stylus. • Cartridge defective.	• Apply proper stylus force. • Check stylus. • Replace cartridge	– – –
	Volume is weak.	• MC cartridge being used.	• Replace with MM cartridge or use a head amplifier or step-up transformer.	6

	Symptom	Cause	Measures	Page
When Playing AM or FM Broadcasts	Radio program can not be received.	• Antenna connection is wrong. • A signal strength is weak.	• Check the connection • Check the antenna installation.	6 10,11
	Noise is reproduced.	• A signal strength is weak. • Automobile ignition noise interferes with reception. • Other electrical equipment interferes with reception.	• Install an outdoor antenna. • Keep the antenna away from the street. • Keep the equipment away from this set, or turn off the power of the other equipment	10,11 10,11 11
	In automatic tuning, the frequency doesn't stop at the radio station.	• A signal strength is weak.	• Use manual tuning	10,11
	In automatic tuning, it stops at the one step lower or higher frequency than the radio station.	• Noise or strong signal strength is received.	• Use manual tuning for optimum reception.	10,11
Remote control unit	Receiver does not operate properly when remote control unit is used. (When LEARNED/TX LED is lit)	• Batteries dead. • Remote control unit too far from receiver. • Obstacle between receiver and remote control unit. • Learning process to the button improper. • Different button is being pressed.	• Replace with new batteries • Move closer. • Remove obstacle. • Set learning again. • Press the proper button.	16 15 15 16 15-17
	Receiver does not operate properly when remote control unit is used. (When LEARNED/TX LED is not lit)	• Learning process to the button improper. • Learning process has not been applied to the button. • Batteries dead • ⊕ and ⊖ ends of battery inserted in reverse • Improper position of PROGRAM switch.	• Set learning again. • Apply learning process. • Replace with new batteries. • Insert batteries properly. • Set to desired position (RECEIVER, AV1	16 16 15 15 16
	"PROTECTION" display appears on the multi function display.	• Improper speaker cord connection •	• Connect speaker cord properly. • Connect the speaker cords properly then turn the POWER switch back on.	5,13 5,6

10 LAST FUNCTION MEMORY

- This receiver is equipped with a last function memory which stores the input and output setting conditions as they were immediately before the power is switched off.
  This function eliminates the need to perform complicated resettings when the power is switched on.
- This receiver is also equipped with a back-up memory. This function provides approximately one month of memory storage with the power switch "OFF".

Manufactured under license from Dolby Laboratories Licensing Corporation. Additionally licensed under one or more of the following patents: U.S. numbers 3,632,886, 3,746,792 and 3,959,590; Canadian numbers 1,004,603 and 1,037,877. "Dolby" and the double-D symbol ⧏⧐ are trademarks of Dolby Laboratories Licensing Corporation.

11 SPECIFICATIONS

AMPLIFIER SECTION

- **Power Amplifier**

Rated Output:

FRONT:	80 W × 2
(both channel driven at 2ch stereo):	(8 ohms 20 Hz ~ 20 kHz with 0.1% T.H.D.)
CENTER:	30 W × 1
(center 1ch driven at Bypass Mode)	(8 ohms 1 kHz with 0.4% T.H.D.)
REAR:	30 W × 2
(at Dolby Pro Logic Normal Mode)	(8 ohms 1 kHz with 2.0% T.H.D.)

Multi voltage models only

- Power Amplifier

Rated Output:

FRONT:	135 W + 135 W
(both channel driven at 2ch stereo)	(6 ohms/EIAJ)
CENTER:	40 W
(center 1ch driven at Bypass Mode)	(6 ohms/EIAJ)
REAR:	40 W + 40 W
(at Dolby Pro Logic Normal Mode)	(6 ohms/EIAJ)

- **Preamplifier and Main amplifier**

Input sensitivity / impedance: PHONO (MM): 2.5mV/47k ohms
CD, TAPE-1 and 2, DBS/BS, V-AUX, VDP, VCR-1 and 2: 150 mV/47k ohms

Output load impedance: FRONT, MONO, CENTER, REAR 10k ohms load
VCR-1 and 2 OUT, TAPE-1 and 2 OUT: 47k ohm load

Frequency response: 20Hz ~ 40kHz ±3dB (CD input: – FRONT PRE OUT)

RIAA deviation: 20Hz ~ 20kHz ±1dB

S / N ratio: 74dB (with 5mV input) (PHONO)

Tone control range:

BASS	100Hz ±10dB
TREBLE	10kHz ±10dB

- **Video**

Rated input / impedance: DBS/BS, VDP, V, AUX
VCR-1 and 2: 1 Vp-p/75 ohms
S-terminal/VCR-1, V, AUX, color signal: 0.286 Vp-p/75 ohms;
Brightness signal: 1 Vp-p/75 ohms

Rated output / impedance: VCR-1 and 2, MONITOR: 1 Vp-p/75 ohms
S-terminal/VCR-1, MONITOR, color signal: 0.286 Vp-p/75 ohms;
Brightness signal: 1 Vp-p/75 ohms

Video frequency response: VIDEO INPUT 5 Hz ~ 6 MHz +0, –3 dB;
S INPUT 5 Hz ~ 10 MHz +0, –3 dB

- **Surround**

Delay circuit: Digital delay 0 ~ 40 ms

Surround modes: Dolby Pro Logic – Wide
– Normal
– Phantom
– 3-ch logic
Spectacle
Hall
Simulated
Studio

TUNER SECTION

[FM] (note: μV at 75 ohms, 0 dBf = 1 × 10^{-15} W)

Receiving Range:	87.5 MHz ~ 108 MHz	
Usable Sensitivity:	0.9 μV (10.3 dBf)	
50 dB Quieting Sensitivity:	MONO	1.6 μV (15.3 dBf)
	STEREO	23 μV (38.5 dBf)
Signal to Noise Ratio (IHF-A):	MONO	80 dB
	STEREO	75 dB
Total Harmonic Distortion (at 1 kHz):	MONO	0.1%
	STEREO	0.2%

[AM]

Receiving Range:	520 kHz ~ 1710 kHz (for U.S.A. and Canada models); 522 kHz ~ 1611 kHz (for multi voltage model).
Usable Sensitivity:	18 μV
Signal to Noise Ratio:	50 dB

GENERAL

Power supply:	120 V AC, 60 Hz (for U.S.A. and Canada models); 110/220 V, 120/220 V AC, 50/60 Hz (for multi-voltage model)
Power consumption:	4.4 A (for U.S.A. and Canada models)
Maximum external dimensions:	434 (W) × 140 (H) × 421 (D) mm (17-3/32" × 5-33/64" × 16-37/64") AVR-810 470 (W) × 140 (H) × 421 (D) mm (18-1/2" × 5-33/64" × 16-37/64") AVR-810G
Weight:	12.5 kg (27 lbs 10 oz) AVR-810 14 kg (30 lbs 14 oz) AVR-810G

- **Remote control unit (RC-139)**

System remote control with Learning function:
Total buttons: 64
DENON system code CD player: 15 buttons Cassette deck: 8 buttons
DAT: 8 buttons VDP: 8 buttons
AVR-810/810G fixed codes: 41 buttons
System call buttons: 5 (maximum of 5 codes per button)
Programmable remote control
Maximum total: 37 program
Batteries: R6P/AA (two batteries)
External dimensions: 70 (W) × 215 (H) × 18 (D) mm
(2-3/4" × 8-15/32" × 45/64")
Weight: 170 g (Approx. 6 oz) including batteries

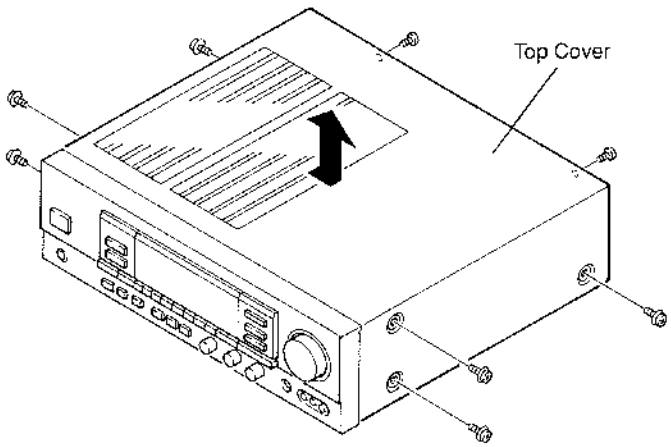
For purposes of improvement, specifications and design are subject to change without notice.

DISASSEMBLY

(To reassemble reverse disassembly)

1. Top Cover

Remove 8 screws, and pull up the top cover to arrow direction.

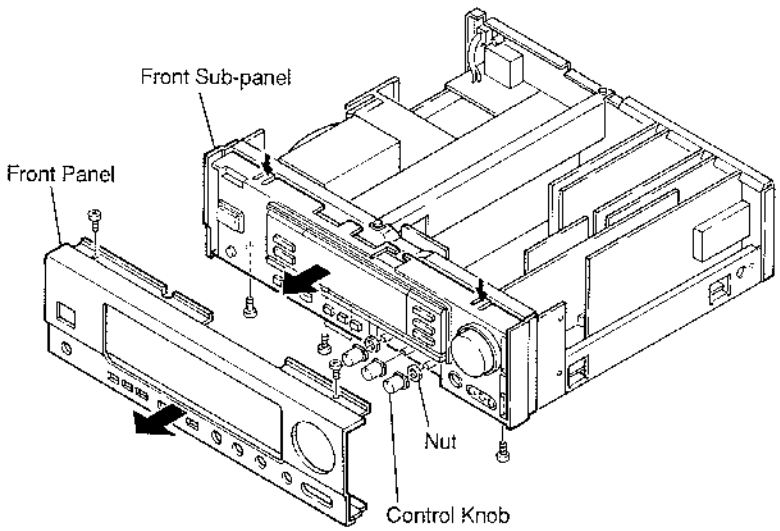


2. Front Panel

(1) Remove 2 upper screws and pull the front panel to arrow direction.

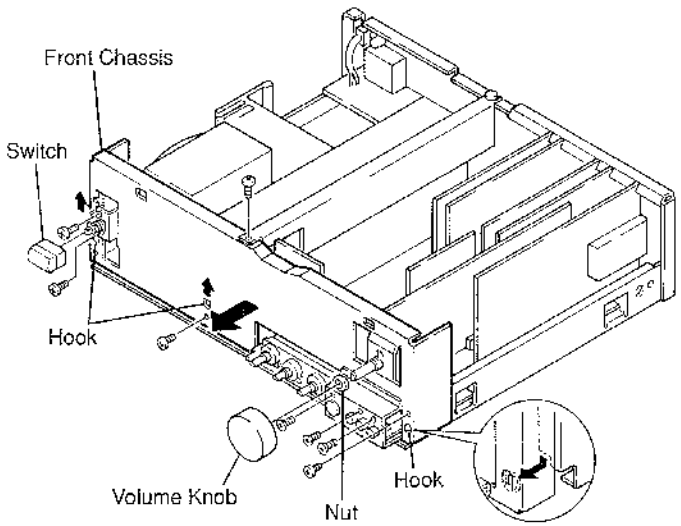
(2) Remove control knobs and nuts.

(3) Remove 4 lower screws and pull the front sub-panel to arrow direction.



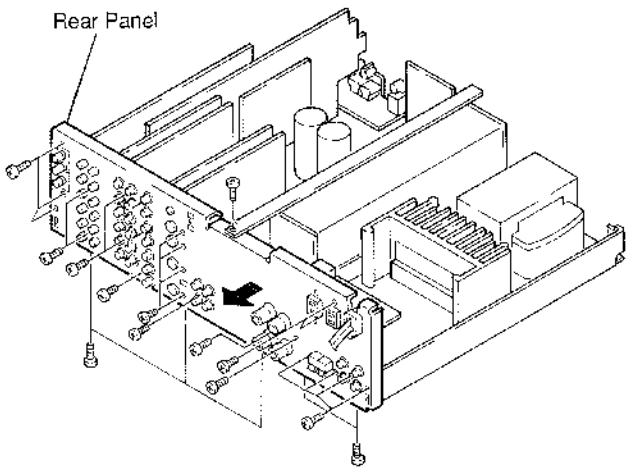
3. Front Chassis

(1) Remove switch, volume knob and nut.
(2) Remove 1 upper screw and 7 front screws.
(3) Remove 3 hooks to arrow direction and pull the front panel.



4. Rear Panel

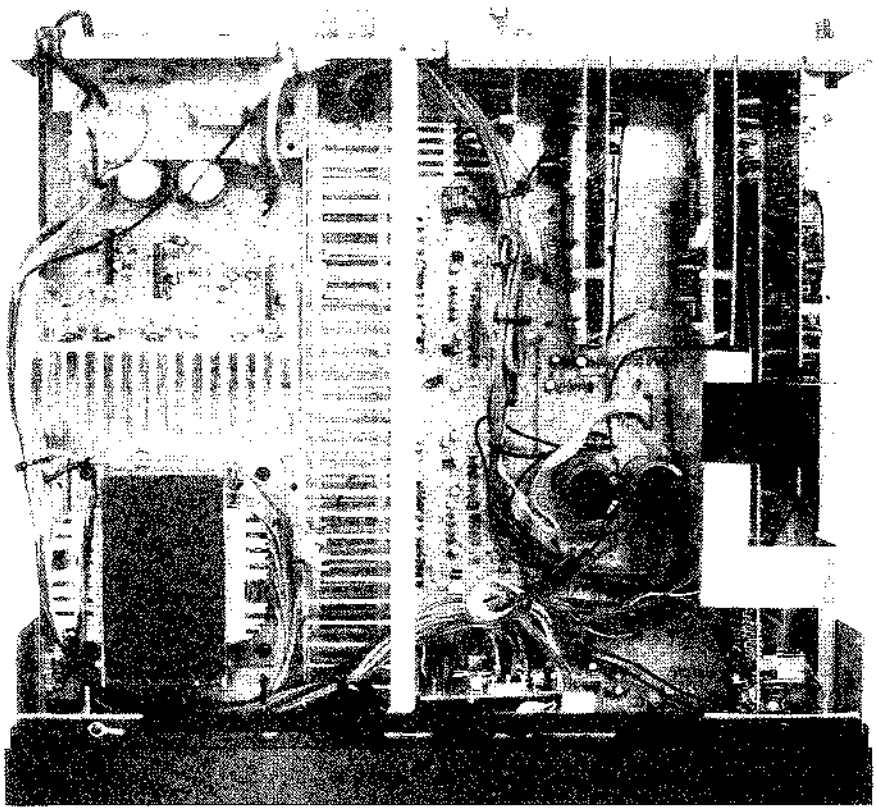
Remove 24 rear screws, 5 bottom screws and 1 upper screw, then pull the rear panel to arrow direction.



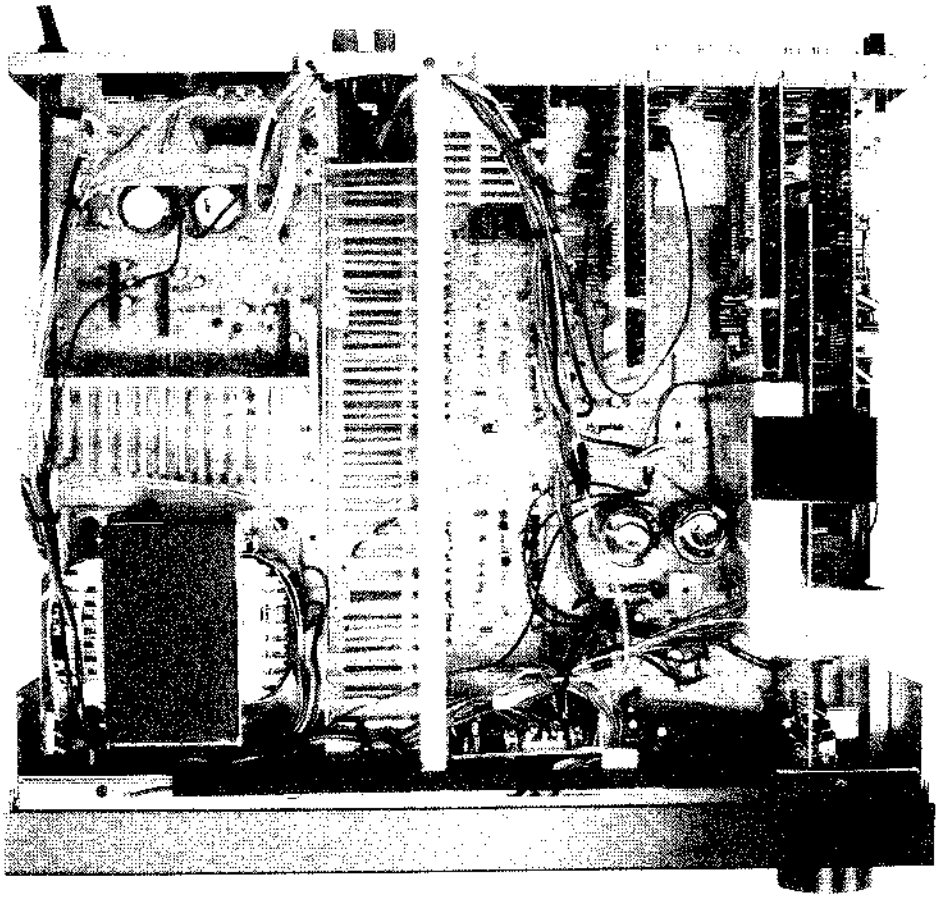
WIRE ARRANGEMENT

In case wires require unclamping or loosening to move the location to perform adjustment or part replacement, be sure to arrange them neatly to restore properly in the same location as they were originally placed. Or, it may occasionally cause to occur a noise.

For U.S.A. Model



For Multi-Voltage Model



ADJUSTMENT

FM/MPX ALIGNMENT

Step	Alignment Item	Tuning Frequency Setting	Input					Output		Adjust		Remarks
			Type	Frequency	Input Level	Modulation	Coupling	Type	Connect to	Points	Adjust to	
1	Tuning Center	98 MHz	FM SSG Mono	98 MHz	60 dBμ	None	Antenna Terminal	Digital Voltmeter	T.P.8, 9	T804	±50 mV	Function: FM Mode: Auto
2	Distortion (Mono)	98MHz	FM SSG Mono	98 MHz	60 dBμ	1 kHz 100%	Antenna Terminal	Distortion Meter	TAPE REC (L)	T803	Minimum Distortion	Function: FM Mode: Auto
3	Distortion (Stereo)	98 MHz	FM SSG Stereo (L)	98 MHz	60 dBμ	1 kHz Main: 90% Pilot: 10%	Antenna Terminal	Distortion Meter	TAPE REC (L)	IFT on Front End	Minimum Distortion	Function: FM Mode: Auto
4	Noise Center & Distortion	Repeat 1, 2 and 3 to obtain minimum distortion and same time indicating ±50 mV on Digital Voltmeter.										

AM ALIGNMENT

Step	Alignmet Item	Tuning Frequency Setting	Input					Output		Adjust		Remarks
			Type	Frequency	Input Level	Modulation	Coupling	Type	Connect to	Points	Adjust to	
1	Receving Banc Alignment	520 KHz	AM SSG	520 KHz	Input Level is not over to work A.G.C.	400 Hz 30%	Loop Antenna	Electric DC Voltmeter	R812 GND	T802	1.0 V ±20 mV	Function : AM
2	Tracking Alignment	600 KHz	AM SSG	600 KHz	Input Level is not over to work A.G.C.	400 Hz 30%	Loop Antenna	Audio V.M.	TAPE REC (L)	T801	Maximum Output	Function: AM
		1400 KHz	AM SSG	1400 KHz	Input Level is not over to work A.G.C.	400 Hz 30%	Loop Antenna	Audio V.M.	TAPE REC (L)	TC801	Maximum Output	Function: AM
3	Repeat 600 KHz and 1400 KHz to obtain maximum reading on Voltmeter.											

ADJUSTMENT

Idling Current (1U-2250-1) of Front channels

Arrangement

(1) Avoid direct blow from an air conditioner or an electric fan, and adjust the unit at normal room temperature 15°C ~ 30°C. (59°F ~ 86°F).

(2) Presetting

- POWER (Power source switch) → OFF
- VOLUME (Volume control) → 0: fully counterclockwise (↶ min.)
- TONE, BASS, TREBLE and BALANCE controls to center.
- SPEAKERS (Speaker terminal) → No load (Do not connect speaker, dummy resistor, etc.)

Adjustment

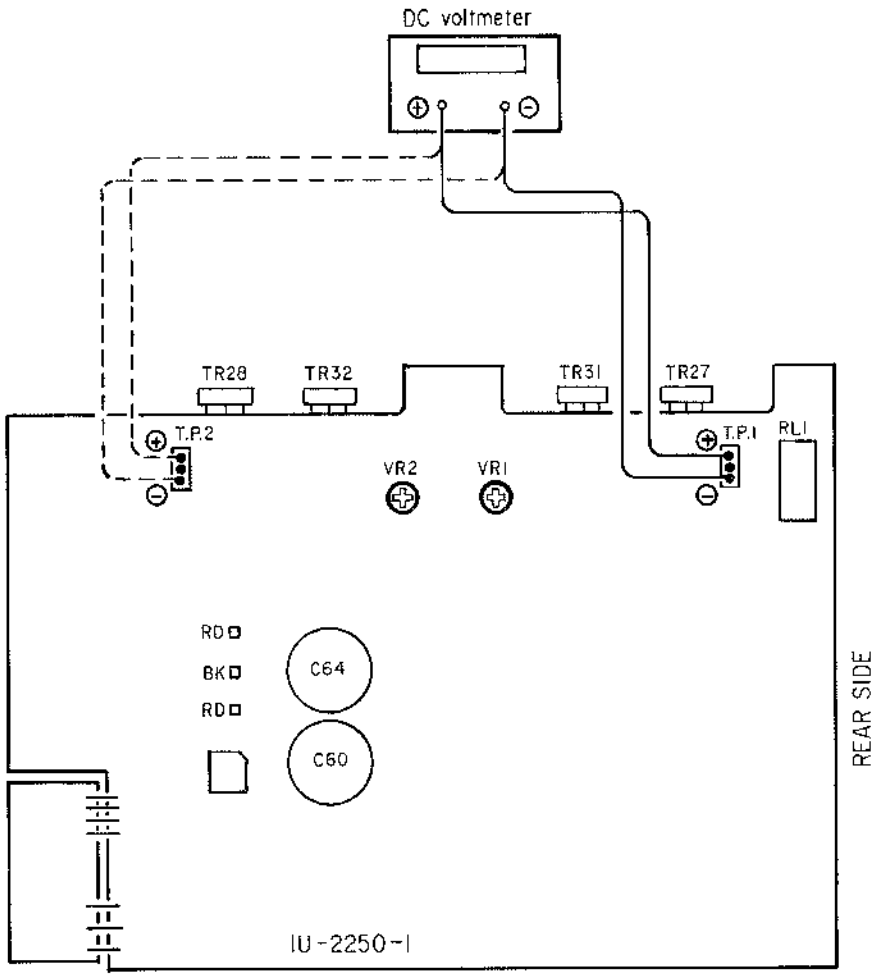
(1) Remove top cover and set VR1 (Lch), VR2 (Rch) of 1U-2250-1, to counterclockwise end position. (↶)

(2) Connect DC Voltmeter across Lch T.P.1 and Rch T.P.2, which are the test points.

(3) Connect power cord to AC line, and turn power switch "ON". Allow a minute, and turn VR1 and VR2 clockwise (↷) and adjust the TEST POINT voltage to 2 ± 1 mV DC.

(4) Allow 2 minutes, and adjust the VR1 and VR2 so that the meter reads 3 ± 1 mV DC.

(5) Allow 10 minutes, and adjust the VR1 and VR2 so that the meter reads 3 ± 1 mV DC.



CIRCUIT DESCRIPTIONS

SURROUND CIRCUIT

(1) Table below shows output in each surround mode.

MODE		Output Signal: FRONT Lch	FRONT Rch	FRONT CENTER	REAR Lch	REAR Rch	Delay Time	Output Control: FRONT	CENTER	REAR
BYPASS		Lin	Rin	Lin+Rin	—	—	—			×
DOLBY PRO. LOGIC	NORMAL	PRO. F_L	PRO. F_R	PRO. C	PRO. S		15 ~ 30			
	PHANTOM	↓	↓	—	↓		↓		×	
	WIDE	↓	↓	PRO. C	↓		↓		↓	
	3CH.	3CH. F_L	3CH. F_R	3CH. C	—		—		PHAN. ×	×
SPECTAREA		PRO. F_L	PRO. F_R	PRO. C	PRO. S		5 ~ 40			
HALL		Lin	Rin	↓	(Lin+Rin) delay		↓		×	
SIMULATED		↓	↓	↓	(Lin+Rin)d	−(Lin+Rin)d	↓		×	
STUDIO		↓	↓	↓	(Lin−Rin)	(Lin−Rin)	0		×	

In output control: ( )d means delay signal. × means OFF output.

		○ : ON Position, OFF for all others											

Table 2

(2) Dolby Pro-logic surround circuit

AVR-810/AVR-810G provides **Dolby pro-logic surround circuit** surround decoder which functions same as Dolby surround decoder for professional use. The circuit is also called **active decoder**, and it comprises a different circuit from **passive decoder**, conventionally employed for home use labelled as "Dolby surround." (Figure 4)

Directional enhancer to produce crisp sound image travel.

Main feature is **Directional enhancement circuit**. The conventional Dolby surround circuit is designed to control 3 channels (L.R.S), but this circuit provides a new center channel and 4 channels (L.R.C.S.) control, and employs speaker system same as that of a theater to produce the sound effect.

A merit of directional enhancement circuit greatly improves the front and rear sound separation to provide a sharp and dynamic front and rear sound image traveling. Conventionally the front and rear separation is around 3 dB, but the pro-logic provides approximately 26 ~ 40 dB. (Figure 5, 6). The directional enhancement circuit controls left, right, center and surround signals independently, and the sound image is very crisp and clear. With the conventional Dolby surround, the center sound image is nothing but compound of L and R channels, but the pro-logic has an independent center channel to produce the sound image, and achieved approximately 26 ~ 40 dB L and R channels separation. When the sound image is at center, both L and R channel output are cut down and as the sound image travels to L channel, center and R channel output are cut to enhance the travel of the sound.

Feature of Pro-Logic mode

- NORMAL: Signals which below 100Hz is cut are applied to center channel, and the signals below 100Hz are applied to L and R front speakers. Employ L and R speakers of a certain grade (as a pointer, use ones better than book-shelf), and use a smaller speaker for the center channel.

- WIDE: Normal signal is applied to center channel as it is. Employ speakers of the same grade (better than book-shelf) for center channel as well as L and R speakers.

- PHANTOM: Center channel signals are evenly applied to L and R channels. When a center speaker is not available, this mode is employed. Even without the center channel, the directional enhancement circuit functions as it is.

- 3CH LOGIC: "3CH LOGIC" mode built in remote control is to enjoy the surround mode without the surround speaker. In normal pro-logic mode, rear (Sch) outputs reversed phase of Lch, Rch input, but in this mode the output is mixed with the front direction Lch and Rch outputs.

- TEST TONE (Remote control): Used to adjust output level of each channel.

Confirm Pro-logic circuit function

Confirm correct pro-logic circuit function with input signal shown table below.

- Measurement : Apply the correct input signal, and adjust level VR of master, center and rear, so that the level falls approximately within * level, respectively.

	Input	Output	Mode		
			Normal	Phantom	Wide
Pro-logic	L ch only	L	* 0 dB (1 kHz)	→	→
		C	(a) Below –20 dB (Normally approximately -26 - - -42 dB)		
		R			
		S			
	R ch only	L	Same as (a)		
		C			
		R	* 0 dB (1 kHz)	→	→
		S	Same as (a)		
	L = R Same Phase signal	L	Below –20 dB/approx. –6 dB	0 dB	Same as (a)
		C	* 0 dB/approx. –3 dB	Same as (a)	0 dB/0 dB
		R	Below –20 dB/approx. –6 dB	0 dB	Same as (a)
		S	Same as (a)		
	L = –R Both CHs Reversed Phase signal	L	Same as (a)		
		C			
		R			
		S	* +3 dB	→	→
3 ch logic	L = –R Both CHs Reversed Phase signal	L	* –3 dB	→	→
		C	Same as (a)		
		R	* –3 dB	→	→
		S	Same as (a)

TABLE OF TERMINAL FUNCTION for LC7821, 7822

Name of Terminal	I/O	Equivalent Internal Circuit	Function of Terminal
V_{DD}, V_{SS}, V_{EE}			Power terminal.
L1 – L8, R1 – R8, LCOM1 ~ LCOM4, BCOM1 ~ BCOM4		Refer to block diagram	In/Out terminal of analog switch.
CL, DI, CE	I		Serial data input terminal (Schmidt buffer). CL = Clock input terminal. DI = Data input terminal. CE = Chip enable terminal.
S	I		Selection terminal for using of two. Address will be shifted as per below table when switching S terminal to L or H.
$\overline{RES}$	I		Reset terminal. Condition of analog switch is not fixed at the time turn on the power. When shift this terminal to L, all analog switches become OFF.

Name of Item	S Terminal	Address			
		A0	A1	A2	A3
LC7821	L	0	1	0	1
	H	1	1	0	1
LC7822	L	0	0	1	1
	H	1	0	1	1

NOTE FOR PARTS LIST

- Part indicated with the mark " ⊙ " are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:
Parts marked with this symbol ⚠ ▒ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

- **Resistors**

Ex.: RN (Type) 14K (Shape and performance) 2E (Power) 182 (Resistance) G (Allowable error) FR (Others)

Type	Power	Allowable error	Others
RD Carbon	2B 1/8W	F ±1%	P Pulse-resistant type
RC Fixed	2E 1/4W	G ±2%	NL Low noise type
RS Metallic film	2H 1/2W	J ±5%	NB Non-burning type
RW Winding	3A 1W	K ±10%	FR Fuse resistor
RN Metal film	3D 2W	M ±20%	F Lead wire forming
RK Metal mixture	3F 3W		
	3H 5W		

★ **Resistance**
1 8 2 ⇨ 1800Ω = 1.8kΩ
2 ...... Indicates number of zeros after effective number
1 8 ...... 2-digit effective number, decimal point indicated by R
• Units: Ω

- **Capacitors**

Ex.: CE (Type) 04W (Shape and performance) 1H (Dielectric strength) 2R2 (Capacity) M (Allowable error) BP (Others)

Type	Dielectric strength	Allowable error	Others
CE Aluminum foil electrolyte	0J 6.3V	F ±1%	HS High stability type
CA Aluminum solid electrolyte	1A 10V	G ±2%	BP Non-polar type
CS Tantalum electrolyte	1C 16V	J ±5%	HR Ripple-resistant type
CQ Film	1E 25V	K ±10%	DL For charge and discharge
CK Ceramic	1V 35V	M ±20%	HF For assuring high frequency
CC Ceramic	1H 50V	Z +80% −20%	U UL part
CP Oil	2A 100V		C CSA part
CM Mica	2B 125V	P +100% −0%	W UL-CSA type
CF Metallized	2C 160V		F Lead wire forming
CH Metallized	2D 200V	C ±0.25pF	
	2E 250V	D ±0.5pF	
	2H 500V	− Others	
	2J 630V		

★ **Capacity**
2 R 2 ⇨ 2.2µF
2 ...... 1-digit effective number, decimal point indicated by R.
2 R ...... 2-digit effective number, decimal point indicated by R.
• Units: µF, (for P, pF (µµF))
• When the dielectric strength is indicated in AC, "AC" is included after the dielectric strength value.

NOTE FOR PARTS LIST

- Part indicated with the mark " ⊙ " are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "l" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4W Type in the P.W.Board parts list. (Refer to the Schematic Diagram for those parts.)

WARNING:

Parts marked with this symbol ⚠ ▨ have critical characteristics.

Use ONLY replacement parts recommended by the manufacturer.

NOTES
ALL RESISTANCE VALUES IN OHM. k=1,000 OHM, M=1,000,000 OHM
ALL CAPACITANCE VALUES IN MICRO FARAD. P=MICRO-MICRO FARAD
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

WARNING:
Parts marked with this symbol ⚠ have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CAUTION:
Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 milliamps, or if the resistance from chassis to either side of the power cord is less than 240 kohms, the unit is defective.

WARNING:
DO NOT return the unit to the customer until the problem is located and corrected.
