1 GENERAL NOTES

1.1 SAFETY PRECAUTIONS

1.1.1 General Warnings

1. Observe any cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.
2. An isolation transformer should be used between the television receiver and the AC power supply point before any test or servicing is performed on a LIVE chassis television receiver.
3. Operation of these receivers outside the cabinet or with the back cover removed involves a shock hazard from the receiver power supplies. Work on the receiver should not be attempted by anyone who is not familiar with the precautions necessary when working on high voltage equipment.
4. Do not install, remove or handle the picture tube unless shatter-proof goggles are worn. People not so equipped should be kept away while the picture tube is being handled. Keep the picture tube away from the body while handling.
5. When service is required, observe the original lead dressing. Extra precaution should be given to assure correct lead dressing in the high voltage area. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

1.1.2 X-RAY Warning

Under fault conditions the CRT can generate X-rays. The use of a lead apron is recommended if available.

When replacing the CRT only use the designated replacement part as it is a critical component with regard to X-rays. No high-voltage adjustments are provided.

1.1.3 Leakage Current Check

Before returning the receiver to the customer it is recommended that the leakage current be measured according to the following method:

With the AC plug removed from the AC source, place a jumper across the live and neutral pins. Turn the receiver AC switch on. Using an OHM-METER, connect one lead to the shorted AC plug and touch the other lead to each exposed metal part (antennas, screw heads, etc.) in turn, particularly any exposed metal part having a return path to the chassis. Any resistance below a value of 1 MEG OHM indicates an abnormality which requires corrective action.

1.3 REQUIRED EQUIPMENT

1.3.1 Measuring equipment

- Oscilloscope
- Signal generator
- DC milliammeter
- DC voltmeter
- Frequency counter (optional)

1.3.2 Test signals

- PAL Cross-hatch, Black raster and White raster
- PAL G-card
- PAL Colour-bar with the specification as in figure 1.3A below:

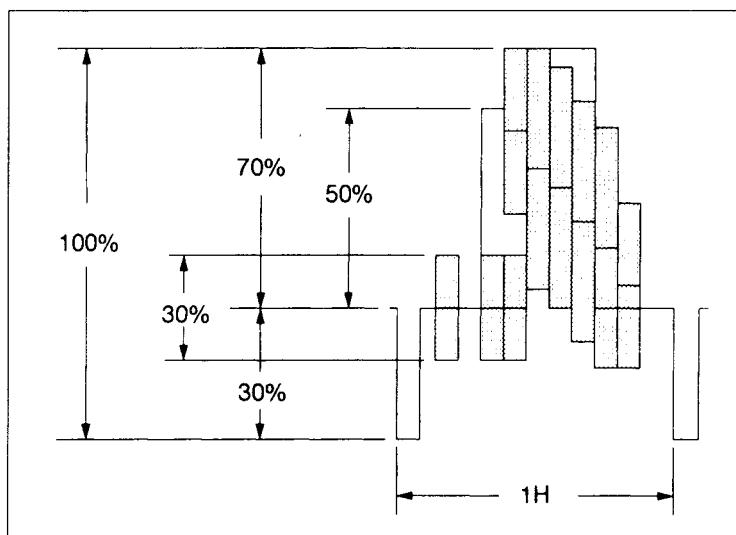

fig. 1.3A Split-field colour bars (with 100% window)

1.4 CONNECTING LEADS

1.4.1 Identification

Connecting leads are generally identified by the colours of their wires according to figure 1.4A below:

Colour	Code
BLACK	A
BROWN	B
RED	C
ORANGE	D
YELLOW	E
GREEN	not used
BLUE	G
VIOLET	H
GREY	J
WHITE	K
PINK	L

Example:

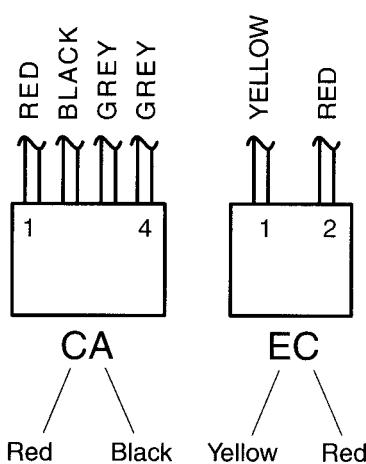

fig. 1.4A Connecting lead identification chart

1.4.2 Lead dressing

Leads must be dressed as shown in table 1.4B and the diagram (fig. 1.4C) below. The leads are routed or clamped so that they do not come close to any heat generating or high-tension parts.

The anode lead wire is routed such that no tension is applied to the anode cap. If the mounting angle of the anode cap and the route of the anode lead wires are changed, return them to the initial angle and route.

Lead	Clamp No		Lead	Clamp No	
	25"	28"		25"	28"
ANODE	1	1	DY	15**	15**
FOCUS	18*	18*	FA	9, 10	9, 10
SCREEN	18*	18*	FC	9, 10	9, 10
BA	17, 16**	17, 16**	GA	5, 14, 21	5, 14, 21
DA	9, 7, 8 and...	9, 7, 8 and...	KA	13, 12	13, 12
	3, 2* (SP391)	3, 2* (SP391)	KB	11	11
	or 4 (SP392)	or 3, 4 (SP392)	KK	11	11
DD	N/A	20, 19	LB	17, 16**, 6*	17, 16**, 6
DE	N/A	21, 14	SC	5*	5
DM	N/A	20, 21

PCB-SOUND

2 SERVICE ADJUSTMENT PROCEDURES

2.1 INTRODUCTION

Most service adjustments to these models are made using the remote control (figure 2.1A) with the TV in service mode. The adjustment data is stored in an EEPROM (IC702).

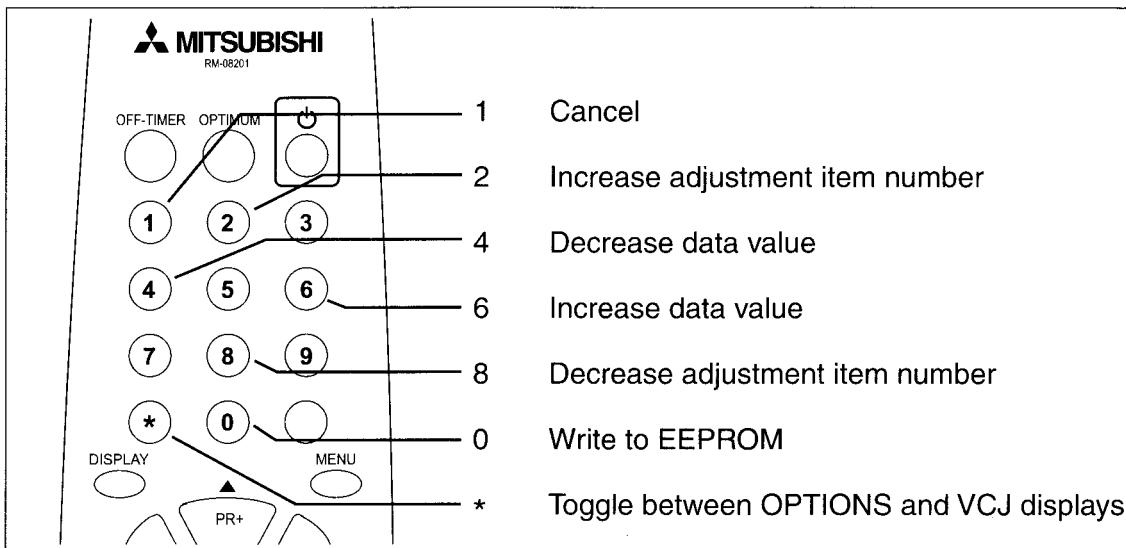

fig. 2.1A Remote Control Unit

2.1.1 Basic adjustment procedure

1. Turn the power on and enter service mode – press MENU to display the PICTURE menu then immediately key-in 2-3-5-7.
2. Press the * button to toggle between the OPTION and VCJ adjustment displays (figs. 2.1 B and 2.1C):

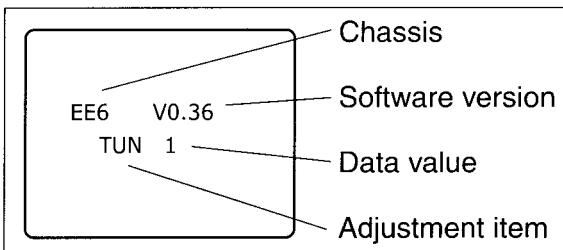

fig. 2.1B Options adjustment display

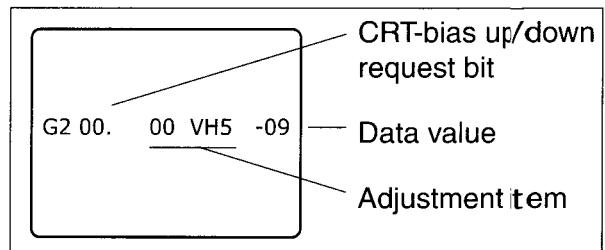

fig. 2.1C VCJ adjustment display

3. Press buttons 2 or 8 to increase or decrease the adjustment item number.
4. Press buttons 6 or 4 to increase or decrease the data value.
5. After completing your adjustments, press button “0” to write the data to the EEPROM.
To cancel a change, press button “1” before writing the data to the EEPROM. All adjustments since the last EEPROM write will be lost.

2.1.2 Software diagnostics system

The microcontroller software contains basic diagnostic tools to help with fault-finding. Two microcontroller pins are used to indicate problems with the EEPROM (IC702) and the VCJ (IC201).

EPPROM – IC702

Should the eeprom fail to respond in some way to the system or if the data transfer to IC701 is continually incorrect then pin 25 of the microcontroller (IC701) will be pulsed continuously to indicate such a problem exists.

The system will continue to try and establish proper I^C communications with the eeprom for up to 30 seconds. The system will then carry out a hardware 'reset' and continue trying for a further 30 seconds. This cycle will repeat indefinitely. This allows the system to operate in a limited way giving the service engineer time to trace the problem.

VCJ – IC201

Should I^C communication with the VCJ fail for some reason then pin 24 of IC701 will be pulsed continuously.

The system will try to establish I^C communication with the VCJ for up to 30 seconds. The system will carry-out a hardware 'reset' and continue again for a further 30 seconds. This cycle will repeat indefinitely. This allows the system to operate in a limited way giving the service engineer time to trace the problem.

H-Timebase

Should the H-Timebase not start then the green power-on LED will flash.

This provides an indicator that the VCJ is functioning but some problem exists in the H-Drive output section of the chassis. The system will keep trying to start the H-Timebase for up to 30 seconds. The system will then carry-out a hardware 'reset' and continue again for a further 30 seconds. This cycle will be repeated a maximum of 10 times. After 10 attempts the system will stop.

2.2 EEPROM DATA

If you have replaced the EEPROM (IC702) or if for any reason the adjustment data has become corrupted it will be necessary to initialise the EEPROM.

2.2.1 Initialising the EEPROM

1. If necessary, switch off by the Main switch.
2. Connect pin 54 of IC701 or pin 1 of connector HE on PCB-SOUND or DOLBY to ground via a 100 ohm resistor.
3. Turn the mains switch on and wait 5 seconds.
4. Remove the resistor and the TV will then automatically power up after about 4 seconds. A blank picture will be displayed.
5. Press the MENU button until the MAIN menu appears and then immediately key-in 2-3-5-7.
6. If necessary, press the * button to select the OPTIONS adjustment display.
7. Press buttons 2 or 8 to select the adjustment code.
8. Adjust the data value for each code as shown in the table below using buttons 4 or 6.

NOTE: start the adjustments at **DBY**.

Code	DBY	WID	ODT	TUN	AUD	STD	SYS	SPK	MNP	VOL	HYP	SCP	FMP
"B" models	0	0	08	0	0	1	2	1	70	X	X	1B	23
"L" models	0	0	08	1	0	1	2	1	70	X	X	1B	23

table 2.2A Data values for the OPTIONS adjustments.

9. Press the 0 button to write the changes to the EEPROM.
10. Press the * button to select the VCJ adjustment display.
11. Press buttons 2 or 8 to select the adjustment code.
12. Adjust the data value of each code using buttons 4 or 6 according to the table below:

Code	MTX	SHA	TNT	BGD	NTD	SCD	PCD	HPT	HPS	HPX	VBC
Value	-07	001	00	010	001	011	011	03	05	-07	-31

table 2.2B Data values for the VCJ adjustments.

	21	BP6	H-BLANKING-PHASE-60	

Table 2.2C OPTIONS and VCJ code descriptions

2.3 VIF CIRCUITS

2.3.1 RF-AGC

VR101 (near the tuner)

1. Supply an RF G-card signal (or use an off-air broadcast).
2. Check the AFT is **on** for the current channel.
3. Adjust **VR101** so that the picture and sound exhibit no noise, beat or intermodulation distortion.

2.4 POWER CIRCUIT

2.4.1 B+ VOLTAGE

VR951 (on main PCB next to the SMT)

1. Supply a G-Card signal.
2. Push the OPTIMUM button on the remote control.
3. Connect a DC voltmeter's "+" lead to TP91 on the MAIN PCB and the "-" lead to GROUND.
4. Adjust **VR951** so that the voltage is $145 \pm 2V$.

2.5 DEFLECTION CIRCUITS

Make the following adjustments 2.5.1 to 2.5.7 using 50Hz signals as described then repeat steps 2.5.3 to 2.5.7 using 60Hz signals. Replace all the adjustment codes mentioned with the 60Hz equivalent, for example, use HP6 (for Horizontal Phase 60) in place of HP5 (for Horizontal Phase 50).

2.5.1 CRT BIAS

IMPORTANT NOTE

Before making any adjustments, if you have changed the CRT, FLYBACK TRANSFORMER or made any changes in the deflection circuits; adjust the CRT bias:

1. Supply a black raster signal to the RF or AV input.
2. Select 4:3 screen mode.
3. Connect an oscilloscope to the junction of R673 and W603.
4. Adjust the **SCREEN** control on the Flyback Transformer to give a voltage of 175V as shown in figure 2.5A.

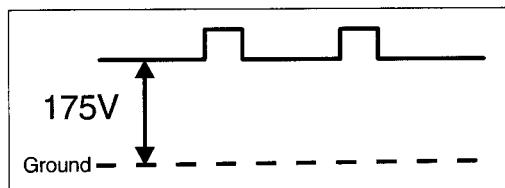

figure 2.5A

2.5.2 VERTICAL BREATHING CORRECTION

Code: 1 VBC (V-B-CORRECTION)

1. Select the VCJ adjustment display.
2. Set the adjustment code to **VBC** with buttons 2 or 8 on the remote control.
3. If necessary, adjust the data value to "-31" using buttons 4 or 6 on the remote control.

2.5.3 HORIZONTAL CENTRE

Code: HP5 (H-Phase-50)

1. Supply a G-Card or cross-hatch signal.
2. Select the VCJ adjustment display.
3. Set the adjustment code to **HP5** with buttons 2 or 8 on the remote control.
4. Adjust the horizontal position with buttons 4 or 6 on the remote control.

2.5.4 HORIZONTAL WIDTH

Code: HW5 (Horizontal Width)

1. Supply a G-Card or cross-hatch signal.
2. Set the VCJ adjustment code to **HW5**.
3. Adjust the horizontal width with the 4 or 6 buttons for approximately 7% overscan.

2.5.5 EAST-WEST PCC

Code: CC5 (Corner Correction)

Code: PT5 (Parabola Tilt)

Code: PA5 (Parabola Amp)

1. Supply a cross-hatch signal.
2. Set the VCJ adjustment codes to CC5, PT5 and PA5 in turn and adjust as follows:
3. Adjust the value of corner correction **CC5** to give the best picture.
4. Adjust the parabola tilt control **PT5** so that the upper and lower distortions of the left and right vertical lines are symmetrical (fig 2.5B).
5. Adjust the parabola amp control **PA5** so that the left and right vertical lines are straight (fig 2.5C).
6. Check the horizontal centre and horizontal width adjustments and readjust if necessary.

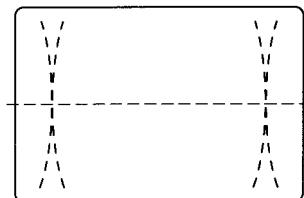

fig 2.5B

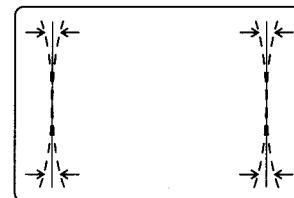

fig 2.5C

2.5.6 HEIGHT AND LINEARITY

Code: VH5 (V-Amp-50)

Code: LIN (V-Lin)

1. Supply a G-Card or (cross-hatch plus circle) signal.
2. Set the VCJ adjustment code to **VH5**.
3. Adjust the circle to a true circle with buttons 4 or 6 on the remote control.
4. Set the VCJ adjustment code to **LIN**.
5. Adjust the linearity to be the same for the top and bottom halves of the circle using buttons 4 or 6 on the remote control.
6. Repeat the steps above as required to give the best result for both adjustments.

NB The Linearity need not be adjusted again for the 60Hz deflection adjustments.

2.5.7 VERTICAL CENTRE

Code: VS5 (V-SHIFT-50)

1. Supply a G-Card or cross-hatch signal.
2. Set the VCJ adjustment code to **VS5**.
3. Adjust the centre line of picture to be within 3mm from the vertical centre on the screen using buttons 4 or 6 on the remote control.

*Now repeat steps 2.5.3 to 2.5.7 using 60Hz signals. Replace all the adjustment codes mentioned with the 60Hz equivalent, for example, use **HP6** (for Horizontal Phase **60**) in place of **HP5** (for Horizontal Phase **50**).*

2.6 CRT CIRCUITS

2.6.1 WHITE BALANCE

Code: **BDR** (B-Drive)
Code: **GDR** (G-Drive)
Code: **RDR** (R-Drive)

1. Supply a white raster signal.
2. Select the VCJ adjustment display.
3. Set the adjustment codes to **BDR**, **GDR** and **RDR** in turn and pre-adjust each to "+05".
4. Adjust codes **BDR** and **RDR** to give a good white balance.

2.6.2 FOCUS

FOCUS control on the Flyback Transformer

1. Supply an RF G-card signal (or use an off-air broadcast).
2. Adjust the **FOCUS** control for the best overall focus.

2.7 VIDEO CIRCUITS

Perform the following adjustments after adjusting the Deflection circuits. Allow the TV to warm up for 20 minutes before proceeding

2.7.1 BRIGHTNESS AND CONTRAST

CRT Bias (Screen) control on the Flyback Transformer

Code: **BRI** (Brightness)
Code: **CON** (Contrast)

BEAM CURRENT (using connector TP adjacent to the Flyback Transformer)

1. Connect a black raster signal.
2. Connect an oscilloscope to the junction of R673 and wire link W603.
3. Adjust the **SCREEN** control on the Flyback Transformer to give a voltage of 175V as shown in figure 2.7A.

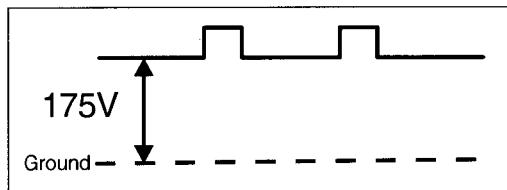

fig 2.7A

4. Change the external signal to a G-Card.
5. Set the VCJ adjustment code to **COL** with buttons 2 or 8 on the remote control.
6. Adjust the data value to "-31" with buttons 4 or 6 on the remote control.
7. Set the VCJ adjustment code to **BRI**.
8. Adjust using buttons 4 or 6 so that a slight difference in brightness can be seen between blue and black areas.
9. Connect a DC ammeter set to a 3mA range: "+" lead to connector TP pin 1 on the MAIN-PCB and the "-" lead to connector TP pin 3.
10. Set the VCJ adjustment code to **CON** with buttons 2 or 8 on the remote control.
11. Adjust the beam current using buttons 4 or 6 on the remote control to give a reading of $1200 \pm 20 \mu\text{A}$.
12. Check, and if necessary, readjust Brightness (code **BRI**).
13. Repeat steps 1 to 3 above to check bias voltage is still 175V and that the CRT Bias Up/Down Request bit is 00 (see fig 2.1C on page 7).

2.7.2 COLOUR OUTPUT

Make this adjustment only after adjusting the White Balance, Brightness and Contrast.

Code: COL (Colour Saturation)

Code: TNT (NTSC Tint)

1. Supply a PAL RF Colour-bar signal.
2. Set the VCJ adjustment code to **TNT** and check the value is “00”
3. Set the VCJ adjustment code to **COL**.
4. Connect an oscilloscope to the junction of R673 and IC660 Pin 9 (BLUE-OUT) on PCB-CRT.
5. Adjust the colour using buttons 4 or 6 until the waveform is as shown in figure 2.7B.
6. Increase the colour value by 5 steps.
7. Set the VCJ adjustment code to **TNT**.
8. Adjust the tint value to “04”.

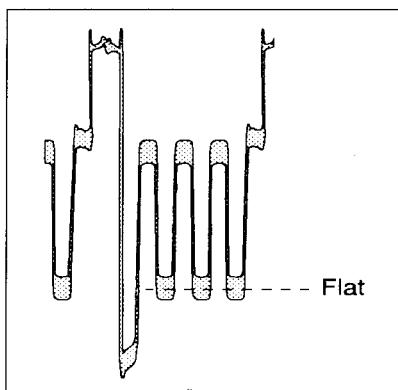

fig 2.7B

3 OPERATION GUIDE

MENU SYSTEM

Press the **MENU** button display either the **Picture**, **Sound**, **Special** or **Setup** menu. If necessary, press a colour button to select the desired menu.

Use **▲** or **▼** to select the control and **◀+** or **◀-** to adjust the control.

PICTURE AND SOUND MENUS

With the **Picture** or **Sound** Menu on the screen, press the **OPTIMUM** button to return the *selected* control to the factory pre-set level.

During normal TV viewing, pressing the **OPTIMUM** button will return *all* the picture and sound settings except VOLUME, LOUDNESS and EFFECT (wide-sound) to the factory pre-set levels.

Press the **DISPLAY** button to exit.

SPECIAL MENU

Auto-Subtitle: set to ON this displays Teletext subtitles constantly.

Set to OFF to remove subtitles.

Set to Mute to display only when sound is muted.

Format: set to 4:3, AUTO or 16:9

Speakers: set to ON or OFF to switch on or off the internal speakers if an external sound system is being used.

Standard TV: set to ON to have the TV reset to Optimum its Picture and Sound settings automatically on switch-off.

Set to OFF to memorise these settings permanently.

SET-UP MENU

System: toggle the colour system between AUTO, PAL, 60PAL, Secam, NTSC358 or NTSC443. This temporarily overrides the colour system set in the Install (tuning) Menu. Any change is lost when you change channel or select AV. The NTSC settings only apply to AV modes and Secam has no use on this model.

AV2 Output: select the output on AV2 to be either the TV signal or the input to AV1.

AV2 Dubbing: switch ON or OFF to enable the AV1 to AV2 dubbing function to operate in standby mode.

TUNING SYSTEM

AUTO-TUNING

The Auto-tuning system will tune in, store, name and correctly position all available stations within your reception area.

If you have a VCR connected to the TV (by the aerial socket) you should insert a *commercially recorded* videotape and set the VCR to PLAY.

1. Press the **INSTALL** button.
2. If desired, press the **RED** button to select either English or Gaeilge (Irish Gaelic) as an OSD language.
3. Press the **GREEN** button twice to start Auto-Tuning.

It will take a few minutes for the TV to find, name and store all the available stations. When Automatic Tuning is completed the TV will switch to programme position 1.

If the VCR was "found" during Automatic Tuning it will have been stored in position 6 or 7.

Moving and Deleting stations

1. Press the **INSTALL** button.
2. Press the **YELLOW** button. The Shuffle Menu appears.
3. Use the number buttons to select the station you want to move or delete.
4. To **move** a station:
Press the **YELLOW** colour button to highlight this programme position in red. Use the number buttons to select the new programme position, the station moves automatically.
5. To **delete** a station:
Press the **GREEN** button **twice**.
6. Repeat steps 3 to 7 for other stations.
7. Press the **INSTALL** button to exit to the **INSTALL** menu.

Programme Skip

This TV has a "skip" feature which allows you to preset a programme number so that it is not selected when changing channels using **▲** or **▼**.

1. Press the **INSTALL** button.
2. Press the **YELLOW** button. The Shuffle Menu appears.
3. Use the number buttons to select the programme position you wish to "skip".
4. Press the **BLUE** button to toggle Skip ON or OFF.
5. Repeat steps 3 and 4 as required.
6. Press the **INSTALL** button to exit to the **INSTALL** menu.

Renaming Programmes

1. Press the **INSTALL** button.
2. Press the **YELLOW** button. The Shuffle Menu appears.
3. Use the number buttons to select the programme position you wish to rename.
4. Press the **RED** button. A pointer appears under the first character in the name.
5. Use **◀+** or **◀-** to change the character above the pointer. A *blank space* = "-".
6. Press the **RED** button to move the pointer to the next character.

7. Repeat steps 5 and 6 to complete the name.
8. Repeat steps 3 to 7 for other programmes.
9. Press the **INSTALL** button to exit to the INSTALL menu.

MANUAL AND FINE TUNING

1. Press the **INSTALL** button.
2. Press the **BLUE** button for Manual Tuning.
3. Use the number buttons to select a station.
4. If necessary, use **▲** or **▼** to highlight the band control and select UHF, VB1 or VB2 (Irish models only).
5. Use **▲** or **▼** to select the tuning bar.
6. Start manual tuning by pressing **△+** or **△-**. The tuning bar turns **RED** while searching then **YELLOW** after a station is found. Press **△+** or **△-** again if this is not the right station.
*If the tuning bar does not turn red, press **▲** or **▼** to highlight AFT and switch it ON by pressing **△+**. Then go back to step 4.*
7. To Fine Tune: press **▲** or **▼** to select AFT and switch it OFF by pressing **△+** or **△-**.
8. Press **▼** to select the tuning bar and adjust the fine tuning by holding **△+** or **△-**.
9. When you have finished, press the **STORE** button to memorise the new settings.
9. Press the **INSTALL** button to exit to the INSTALL menu.

AV SYSTEM

This TV has two Scart sockets, AV1 is full spec. with RGB input, AV2 has Y-C inputs instead of RGB.

The TV also has 2 RCA sockets for controlled audio output.

Selecting AV mode from TV mode

TV-AV button: cycles around AV1, AV2 and TV modes.

The AV input is either composite or RGB/Y-C depending on what was previously selected.

RED button: selects AV1 then toggles between composite and RGB input.

GREEN button: selects AV2 then toggles between composite and Y-C input.

Returning to TV mode

Pressing the **TV-AV** button or any number button or the **▲** or **▼** buttons will return the set to TV mode even when *Scart pin 8 is high*. See "Set-Up Menu" for setting the output of AV2 and switching on standby dubbing.

NICAM STEREO

The **I/II** button operates all functions: press to display the current Nicam mode, press again while the OSD is on-screen to force Nicam Off, press to select language during a dual-sound broadcast.

OFF TIMER

SETTING THE TIMER

1. Press the **OFF-TIMER** button, the screen shows **00**.
2. Press the button again to start the clock at 90 then make it count down in ten minute steps until you see the time you want.
3. When the display disappears, the timer is set.

TO CANCEL THE TIMER

Press the **OFF-TIMER** button until the display shows zero, or press Standby.

TO CHECK THE REMAINING TIME

Press the **OFF-TIMER** button once.

For the last 10 minutes the display will appear in **red** every minute then continuously for the last minute.

4 PARTS LIST

4.1 NOTES

4.1.1 Model-specific parts

As this service manual covers more than one model, the Service Parts List indicates where certain parts are model-specific. If there is no such indication then the parts are common to all models covered by this manual.

25" = C25S7B, C25C7B, C25S7L; **28"** = C28S7B, C28C7B, C28S7L

B = C25S7B & C28S7B; **L** = C25S7L, C28S7L; **C** = C25C7B, C28C7B

Other indications are combinations of the above.

4.1.2 Ordering

In order to expedite delivery of replacement parts, please specify:

Model number, Serial number

Part Number, Description, Quantity

Unless full information is provided a delay in execution of the order may result.

4.1.3 Safety

Safety Critical components are shown thus: \triangle and must be replaced with original Mitsubishi parts.

4.1.4 Component tolerances

Component value tolerances are coded as shown the table below:

B	C	D	F	G	J	K	M	N	V	X	Z	P	Q
± 0.1	± 0.25	± 0.5	± 1	± 2	± 5	± 10	± 20	± 30	+10 -10	+40 -20	+80 -20	+100 -0	+30 -10

7 SCHEMATIC DIAGRAMS

7.1 NOTES

7.1.1 General

- DC voltages are measured from the points indicated to circuit ground.
- Waveforms are for a PAL colour bar signal.
- Test Points are shown as: "TP6A", etc.
- This is a basic circuit diagram – receivers are subject to modification due to continuous engineering improvement.

7.1.2 Servicing Precautions

The Δ symbol indicates components with characteristics critical to safety and performance.

These parts **must** only be replaced with parts having identical values and characteristics – refer to the Service Parts List for the correct Mitsubishi part numbers.

Do not compromise the safety of the receiver by improper servicing.

7.1.3 Component Information

SPECIFIC SYMBOLS

	Zener diode
	Varicap
	Posistor
	Thermistor
	Fusible resistor
	Crystal
	Air gap
	Part (e.g. resistor) on copper side of PCB
	Ceramic filter

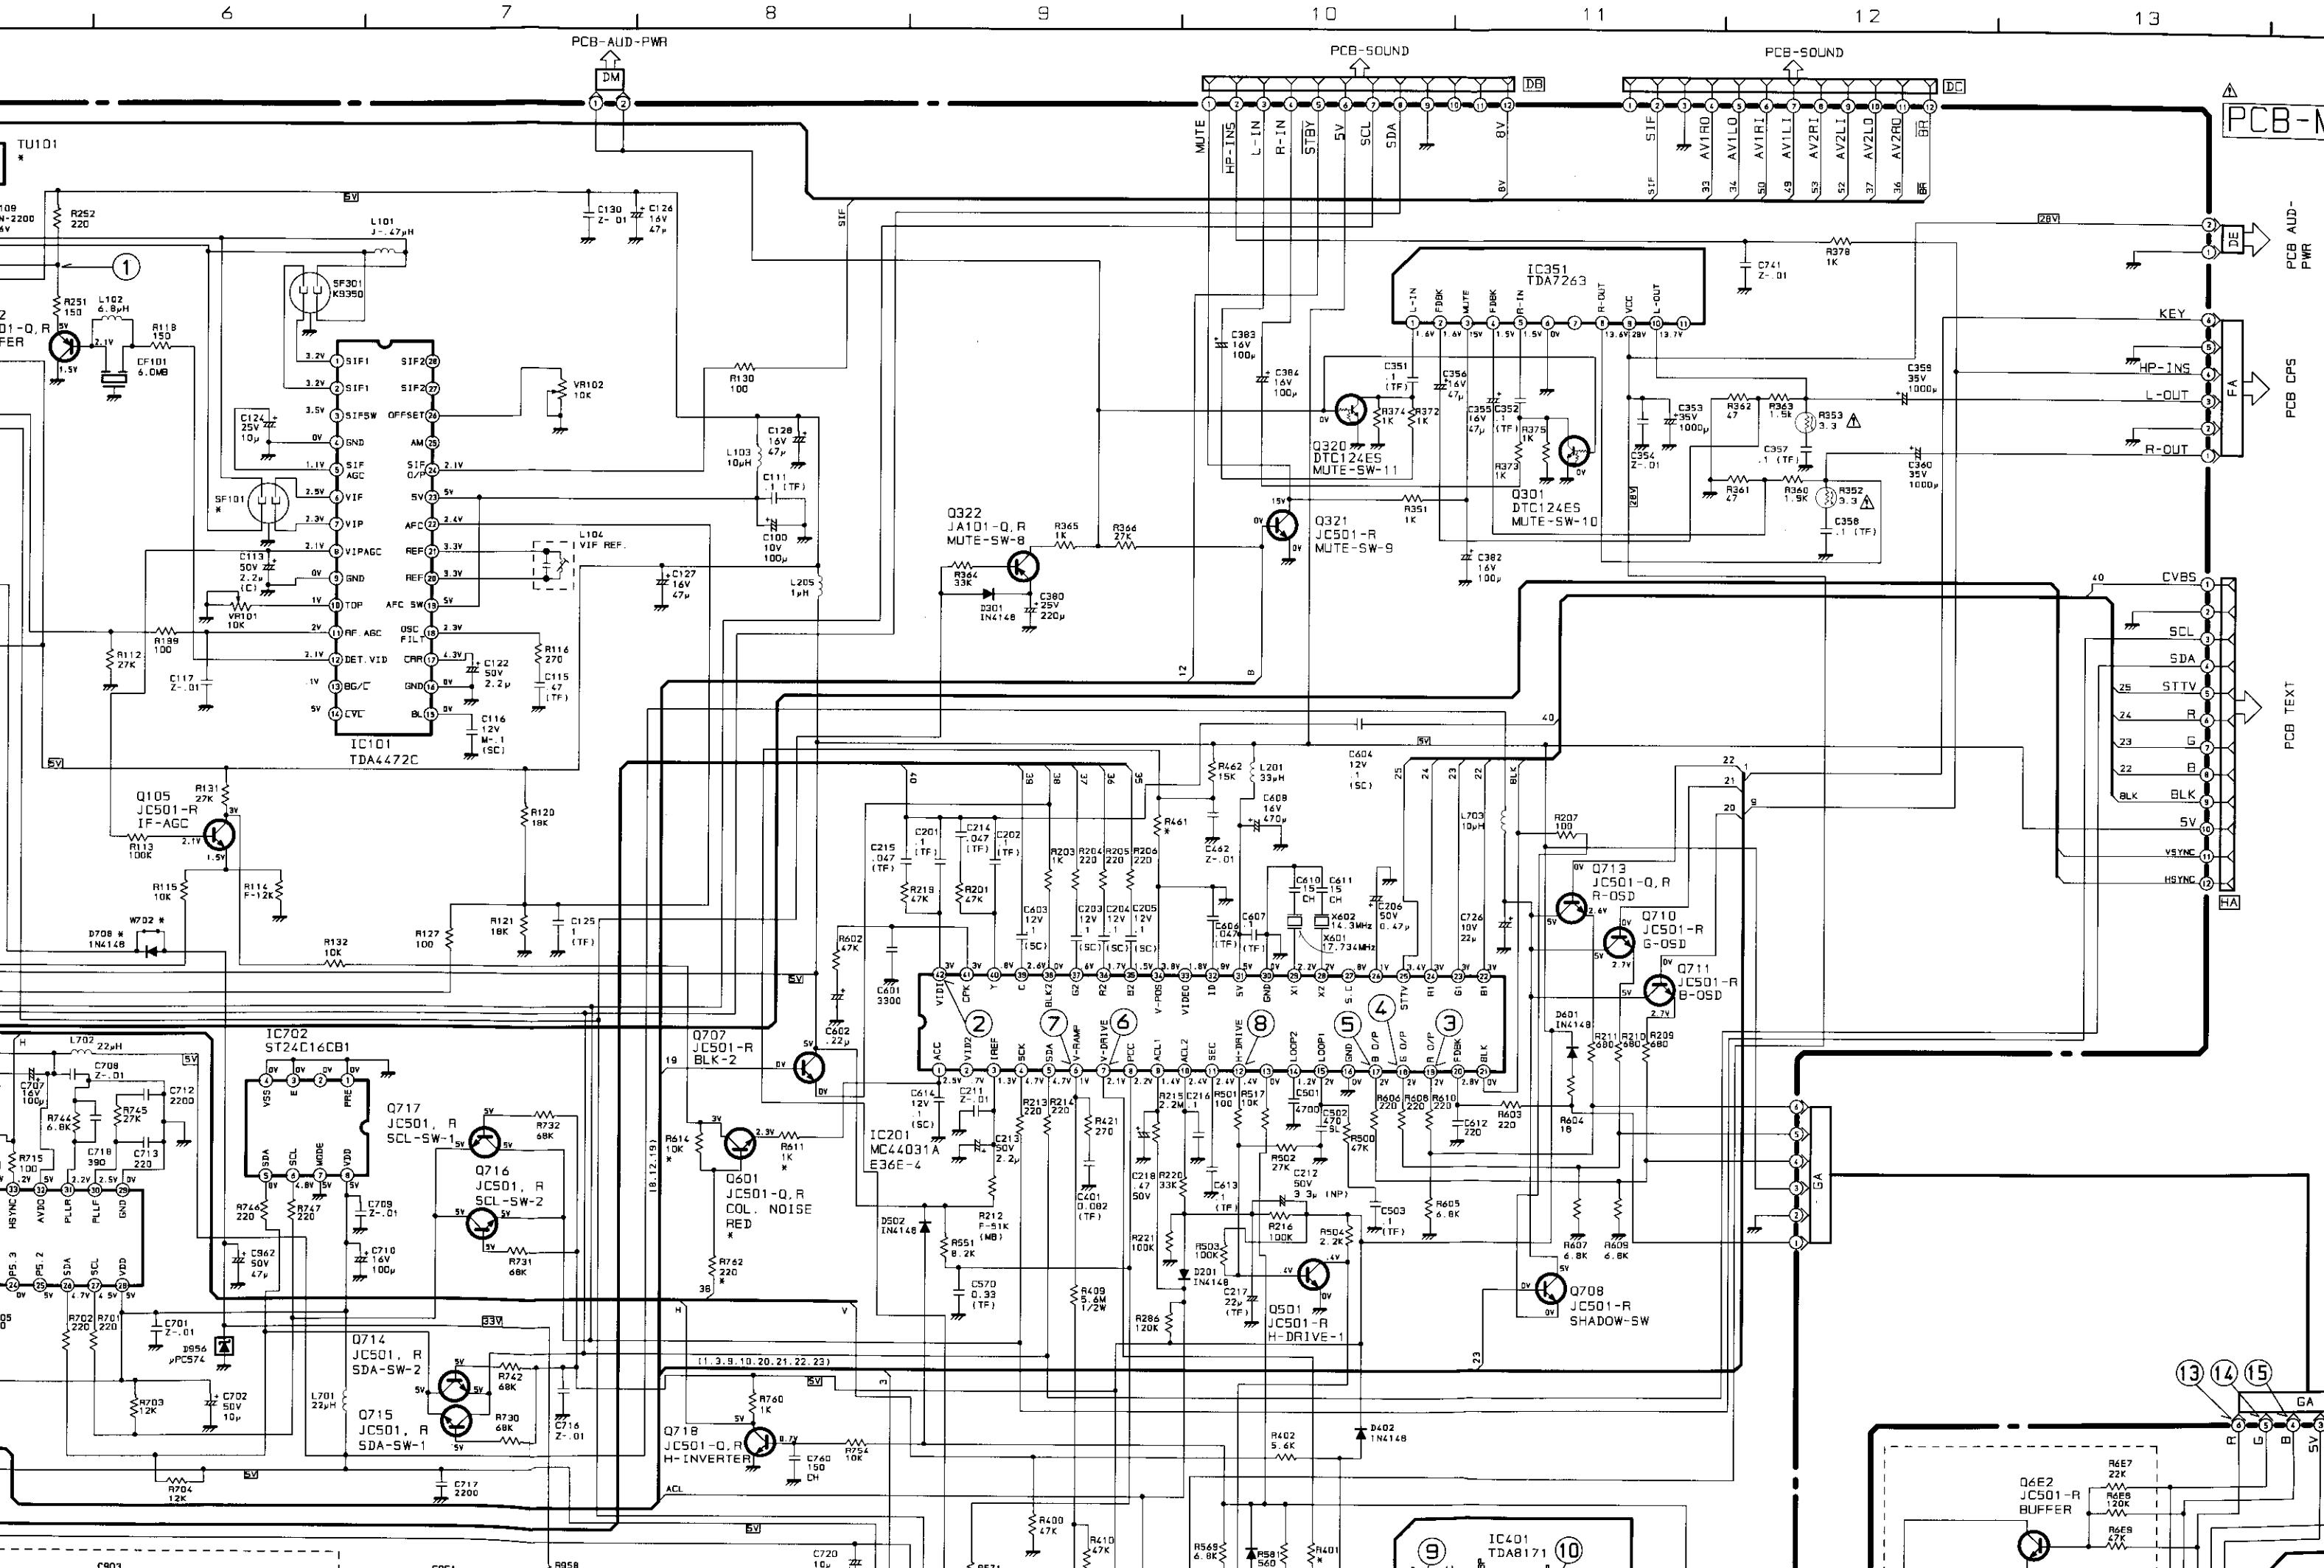

RESISTORS

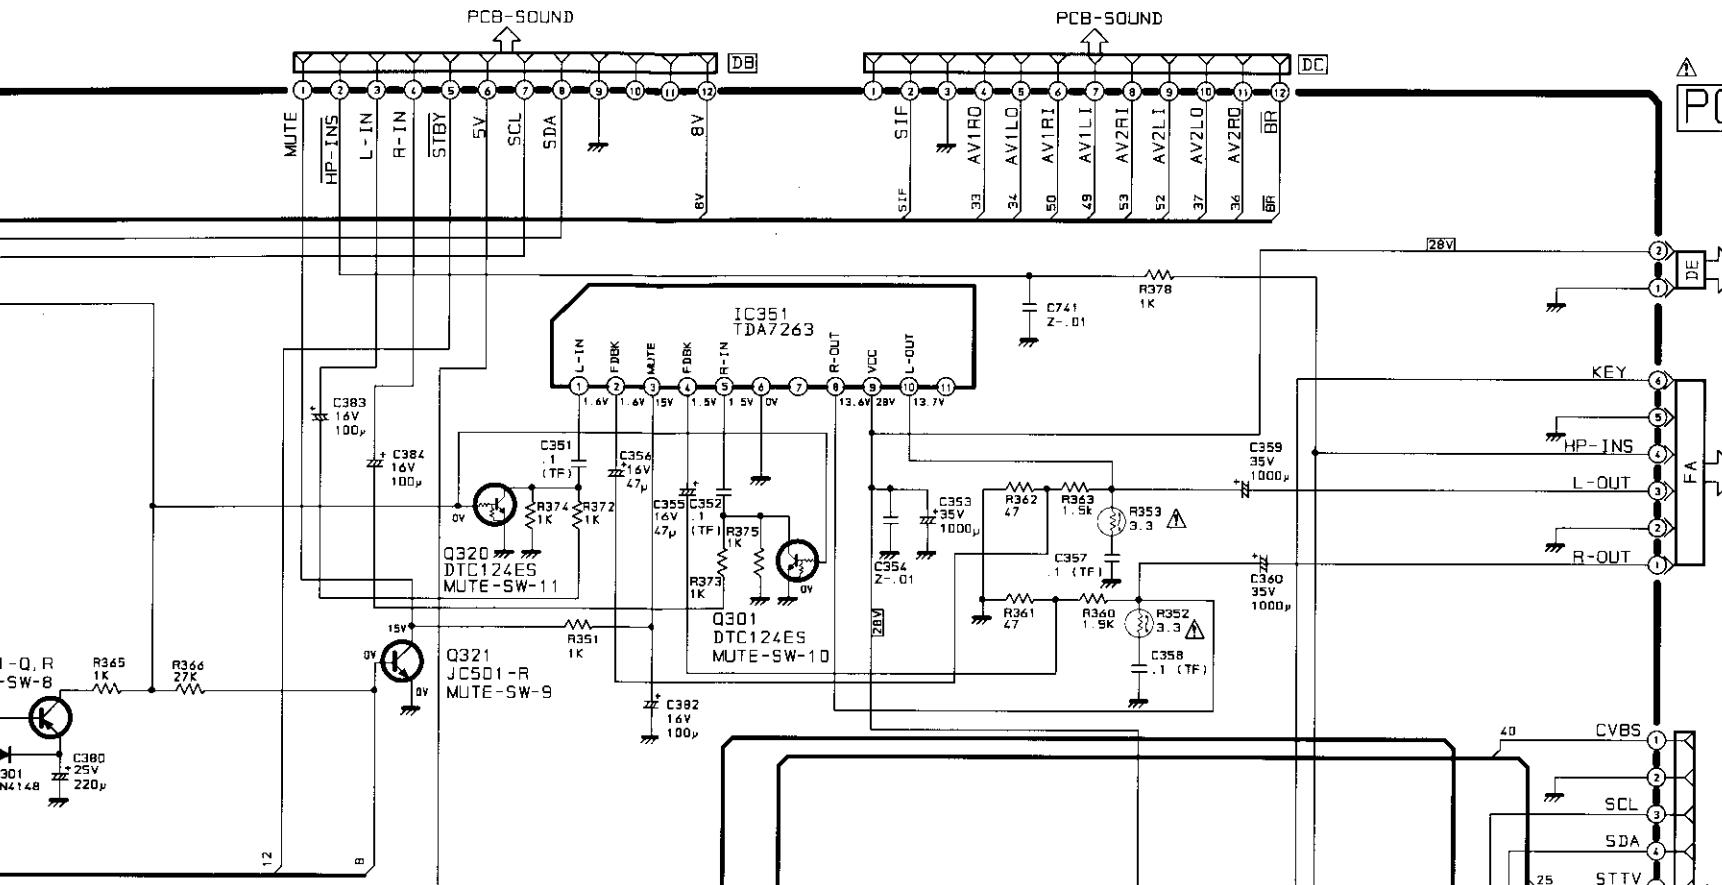

Value	without spec.	Ω , $K = K\Omega$, $M = M\Omega$
Wattage	without spec.	1/4W or 1/8W (chips: 1/10W)
Tolerance	without spec.	$\pm 5\%$ $D = \pm 0.5\%$, $F = \pm 1\%$, $G = \pm 2\%$, $J = \pm 5\%$, $K = \pm 10\%$
Type	without spec.	Carbon film (S) Composition (MB) Metal oxide film (CE) Cemented (W) Wire wound (M) Metal film (MPC) Metal plate cement (ML) Metal linear

CAPACITORS

Value	without spec.	pF for values > 1 , μF for values < 1
Voltage	without spec.	50V
Tolerance	without spec.	electrolytic: $\pm 20\%$, others $\pm 10\%$ $C = \pm 0.25pF$, $D = \pm 0.5pF$, $F = \pm 1pF$, $G = \pm 2pF$ or 2%, $J = \pm 5\%$, $K = \pm 10\%$, $M = \pm 20\%$, $P = +100 -0\%$, $Z = +80 -20\%$, $Q = +30 -10\%$, $T = +200 -0\%$
Type	without spec.	Ceramic (MF) Polyester (PP) Polypropylene film (ALM) Aluminous electrolytic (TF) Twin film (SC) Semiconductor ceramic (MP) Metallised paper (MPP) Metallised plastic film (MMF) Metallised polyester (MF.PP) Polyester/polypropylene film (PS) Polystyrene (styro) (TAN) or (TANT) Tantalum —N— Electrolytic (BP) or (NP) Non-polarised electrolytic
Characteristic	(only ceramic capacitors)	without spec. B or F (high dielectric) CH, SL, etc. Temperature compensating types
