MITSUBISHI ELECTRIC CORPORATION

SPECIFICATIONS

Type	4 track, 2 channel Stereo Cassette Decks
Motor type	
Capstan motor	DC servo motor
Reel motor	DC motor
Head material	
REC/PB head	Hard permalloy
Erase head	Ferrite
Tape speed	4.75 cm/s (1-7/8 ips)
Tape speed accuracy	±1%
Wow and flutter	0.045% Wrms
Fast forward/rewind times	85 sec. (C-60 type)
SN ratio	
(400Hz, 3% THD, Weighted, Metal tape)	
Dolby NR out	58 dB
Dolby NR in	66 dB
Frequency response	
(±3dB, record level 160 pwb/mm -30dB)	
Normal tape	40 - 14,000 Hz
Special tape	40 - 16,000 Hz
Metal tape	40 - 17,000 Hz
Fe-Cr tape	40 - 16,000 Hz
Erasure ratio (1kHz)	60 dB
Sensitivity/impedance	
Mic input	0.3 mV (2.2k ohms)
Line input	70 mV (47k ohms)
Output level	
Line output	440 mV (22k ohms load)
Headphone	0.8 mW (8 ohms load)
Power consumption	18W
Dimensions (W x H x D)	424 x 106 x 292 mm (16-11/16 x 4-11/64 x 11-1/2")

"DOLBY" nad Double D symbol " " are trademarks of Dolby Laboratories.

Noise reduction system manufactured under license from Dolby Laboratories.

Specifications of this unit are subject to change without notice for improvement.

DISASSEMBLY INSTRUCTIONS

Notes:

- 1) Refer to the Exploded View on Page 22, 23.
- 2) When disassembling the set, be careful not to let any lubricant deposit on the rotary transmission sections. If any lubricant has deposited by mistake, thoroughly clean the deposited section with alcohol.
- 3) Use caution not to let any foreign matter deposit on the disassembled parts, especially those mechanical parts lubricated with oil, or grease.
- 4) In assembly, do not use screws other than those specified as it will cause cracking of molded parts, failure of fixing, or damaging of screw thread. So be sure to use only specified screws.
- 5) Take care not to scratch or mark the front panel or meter surfaces.
- 6) All small parts such as screws and controls should be kept together in a small container so that they won't get lost.
- 7) Some set screws of the mechanical section are locked with screw lock paint to prevent them from loosening. When removing such screws, apply 1 or 2 drops of thinner-type solvent to the screw lock section. Wait several minutes, and after confirming that the screw lock paint has softened, unscrew the screw using a screwdriver that matches the screw head. (Since the solvent will affect the plastic sections, use caution not to let any adhere.)
- 9) For assembly, reverse the order of the disassembly procedures and assemble the set properly.

Removal of Case

1. Removal of Top Cover

To remove the top cover, undo 4 screws shown in Fig. 1, and lift the top cover by shifting it slightly backward.

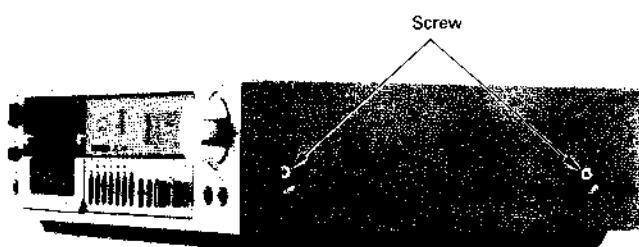

Fig. 1

2. Removal of Bottom Cover

To remove the bottom cover, undo 7 screws shown in Fig. 2.

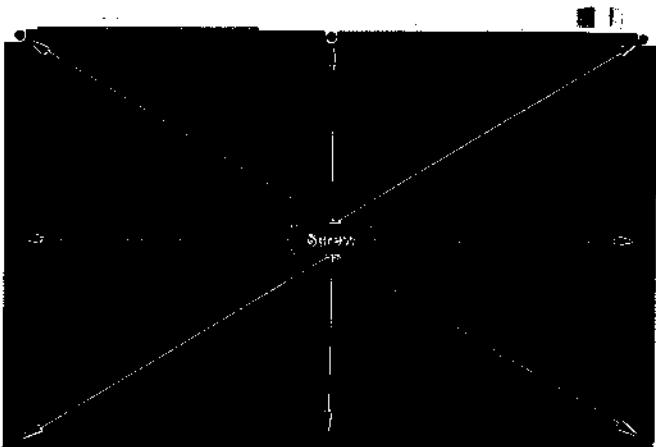

Fig. 2

3. Removal of Front Panel

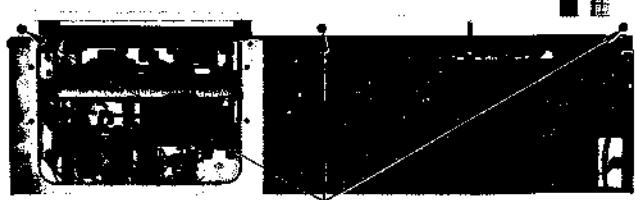

- 1) Remove the top and bottom covers as described in procedures in 1, 2, above.
- 2) Pull off the control knobs of Rec Level, Dolby NR, and Tape Select switch.
- 3) Undo 3 screws ① shown in Fig. 3.
- 4) To remove the front panel, undo 3 screws ② shown in Fig. 3.
- 5) In this condition, the Main P.C. Board and Switch/Meter P.C. Board can be checked, and circuit components replaced if necessary.

Top View

Screw

Bottom View

Screw

Fig. 3

Removal of Mechanism Section

1. Removal of Mechanism Assembly

- 1) Remove front panel as described in "Removal of Case" 1 to 3.
- 2) Pull off the power switch button.
- 3) Pull off the connectors (J105, J205, J106, J108) of the Main P.C. Board.
- 4) Take off the nut and also the headphone jack shown in Fig. 4.
- 5) Undo 5 screws shown in Fig. 4.
- 6) To remove the mechanism assembly, shift the mechanism backward by lifting its backside.

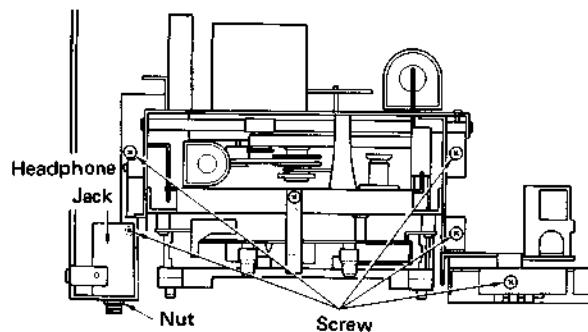

Fig. 4

2. Removal of Inter Connect P.C. Board

- 1) Remove the mechanism assembly as described in procedure in 1 above. Undo screws ① shown in Fig. 5, and then remove the Inter connect P.C. Board.
- 2) To remove the play solenoid, undo 2 screws ② shown in Fig. 5.
- 3) When mounting is required, refer to the "Mounting of Play Solenoid" on Page 6.

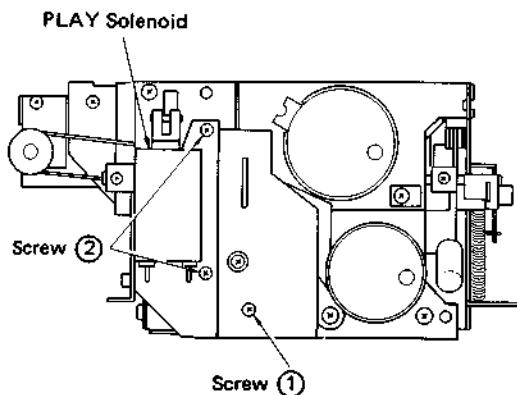

Fig. 5

3. Removal of Flywheel Holder and Flywheel

- 1) Remove the Inter connect P.C. Board and play solenoid as described in procedure 2 above, and then take off 2 springs at points Ⓐ and Ⓑ shown in Fig. 6.
- 2) To remove the flywheel, undo 2 screws ① shown in Fig. 6.
- 3) Take off the flywheel after disconnecting the main belt from the flywheel.

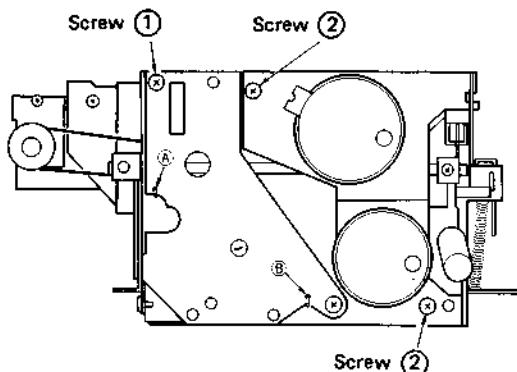

Fig. 6

4. Removal of Motor Holder

- 1) Remove the Inter connect P.C. Board as described in Procedure 2 above, and then take off the belt of capstan motor and reel motor.
- 2) To remove the motor holder, undo 2 screws ② shown in Fig. 6.
- 3) In this condition, FF/REW belt can be replaced.
- 4) When taking off the belts of capstan motor and reel motor, undo each 2 screws securing the motors.

5. Removal of Make-up Plate and Counter Belt

- 1) Remove the mechanism assembly as described in procedure 1 above. To remove the cassette spring, undo screw ① shown in Fig. 7.
- 2) To remove the make-up plate, undo 2 screws ② shown in Fig. 7.
- 3) In this condition, counter belt can be replaced.

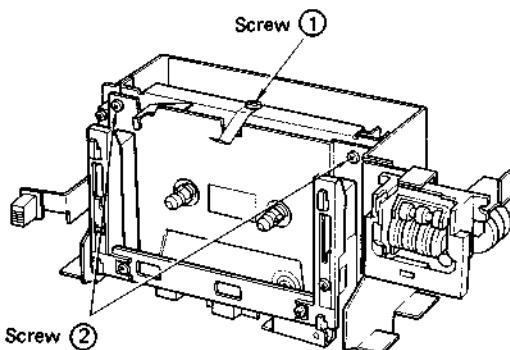

Fig. 7

6. Removal of Cassette Holder and FF/REW Solenoid

- 1) Following the procedures 1 to 5, remove the Inter connect P.C. Board, play solenoid, flywheel holder, motor holder, make-up plate and counter belt.
- 2) To remove the cassette holder lever, undo screw ① shown in Fig. 8.
- 3) To remove the plate (R) for the maintenance of the mechanism base, undo 2 screws ② shown in Fig. 8.

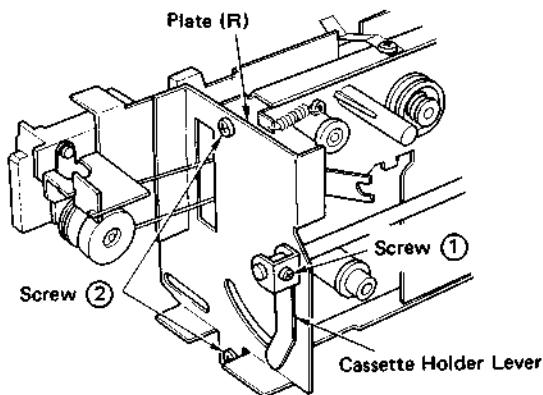

Fig. 8

- 4) Disconnect the spring from point A shown in Fig. 9.
- 5) To remove the cassette holder, undo E-ring shown in Fig. 10.

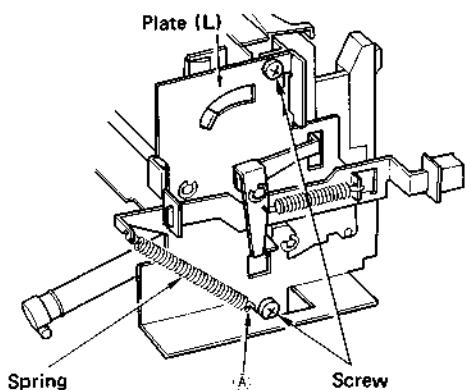

Fig. 9

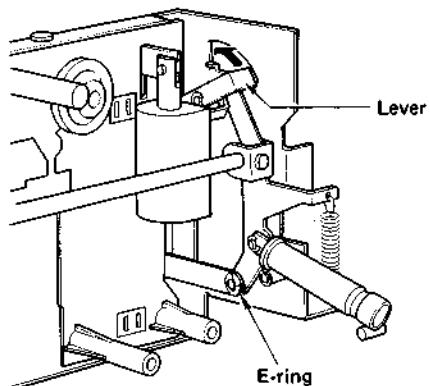

Fig. 10

6) Undo 2 screws shown in Fig. 9 and turn the lever toward the arrow, and the plate (L) for the maintenance of the mechanism base can then be taken out.

- 7) To remove the FF/REW Solenoid, undo 2 screws shown in Fig. 11.
- 8) When mounting is required, refer to the "Mounting of Play Solenoid" on Page 6.

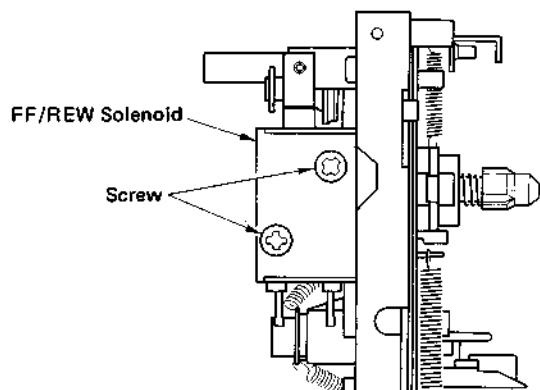

Fig. 11

MECHANICAL ADJUSTMENTS

1. Tape Speed Adjustment

- 1) Setting Connect a frequency counter to the output terminals.
- 2) Test tape MTT-111 (3kHz)
- 3) Adjustment Play the test tape, and use a minus-head screwdriver to adjust the capstan motor adjustment screw. The frequency counter should read 3000 ± 10 Hz.

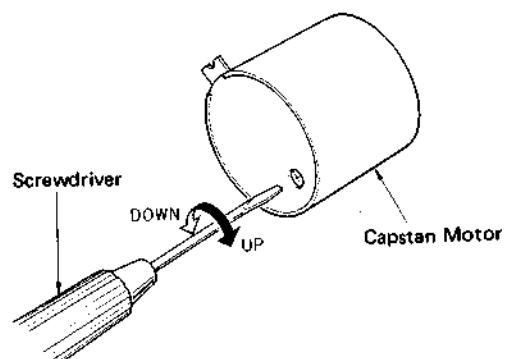

Fig. 12

2. Head Azimuth Adjustment

- 1) Setting Turn the playback output level adjustment semi-fixed resistors VR102 (L) and VR202 (R) up to maximum.
- 2) Test tape MTT-215C (10kHz/315Hz, -10dB, normal)
- 3) Adjusting point . Head azimuth adjustment screw.
- 4) Adjustment Play the test tape and adjust the azimuth adjustment screw to obtain maximum output level in both the left and right output channels.

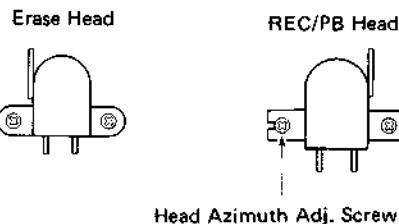

Fig. 13

4. PLAY Solenoid (SOL-1) Mounting

- 1) After securing the solenoid temporarily, insert the plunger into the solenoid by hand and leave it in the pulled-in position.
- 2) After forcing the solenoid as far as it will go in the direction of the arrow in Fig. 15, secure the solenoid tightly, and check that the head base is in contact with the stopper (pinch roller shaft).

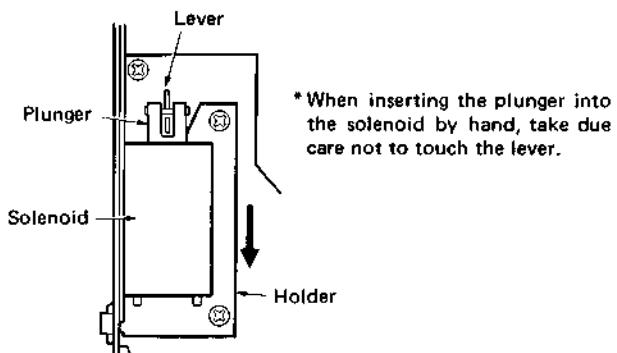

Fig. 15

3. FF/REW Solenoid (SOL-2) Mounting

- 1) After securing the solenoid temporarily, insert the plunger into the solenoid by hand and leave it in the pulled-in position.
- 2) Then secure the solenoid tightly in a position which gives a gap of 0.8 ~ 1.2mm between the brake link and the Φ3.5 boss of the intermediate pulley.

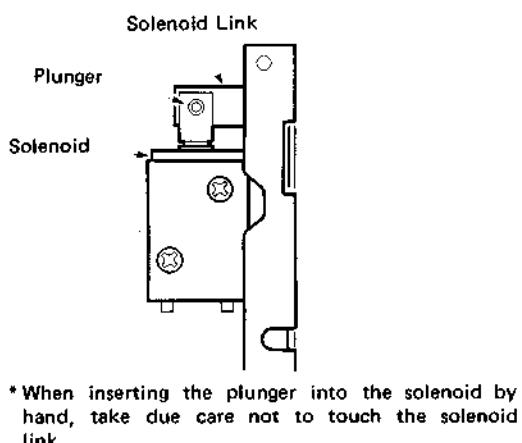

Fig. 14

5. Flywheel Thrust Play Adjustment

- 1) After mounting the holder in the mechanical section, adjust the flywheel thrust play to 0.1 ~ 0.3mm by the thrust play adjustment screw.
- 2) Since the pitch of this screw is 0.5mm, it will be displaced by 0.5mm in a single full turn.

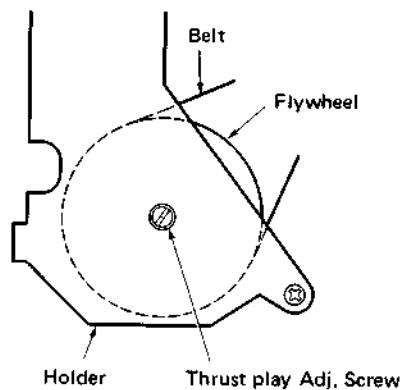

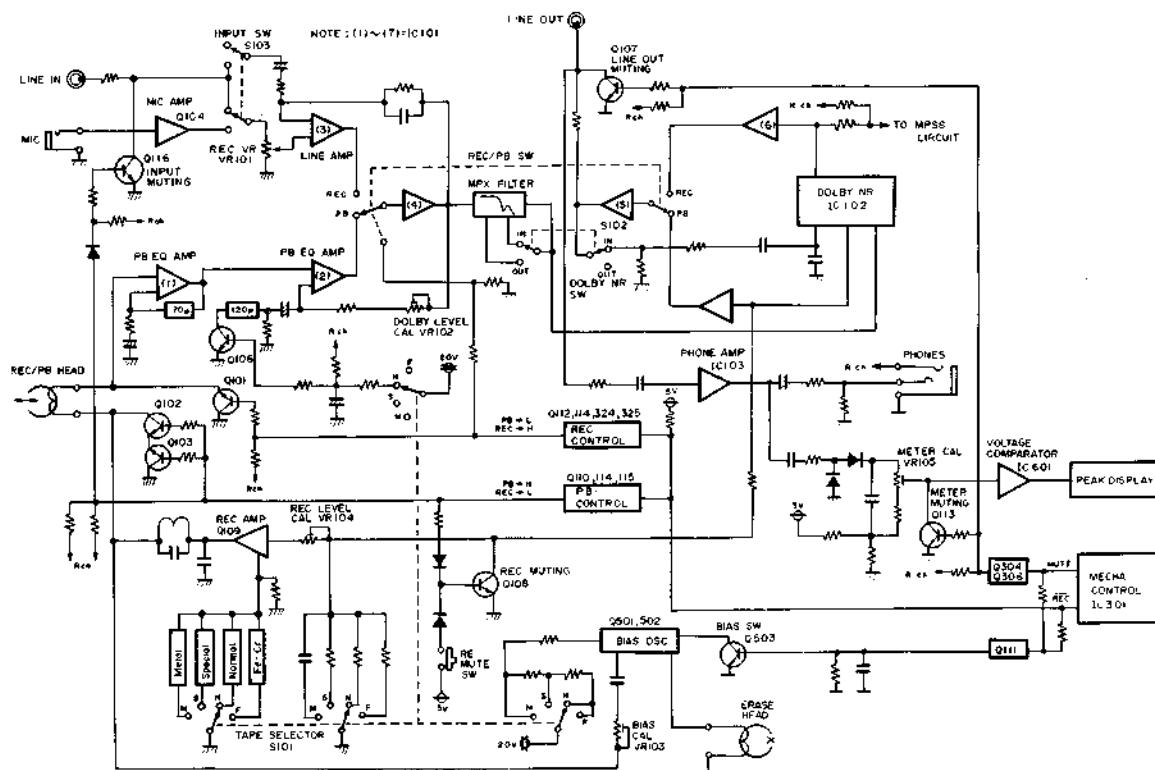

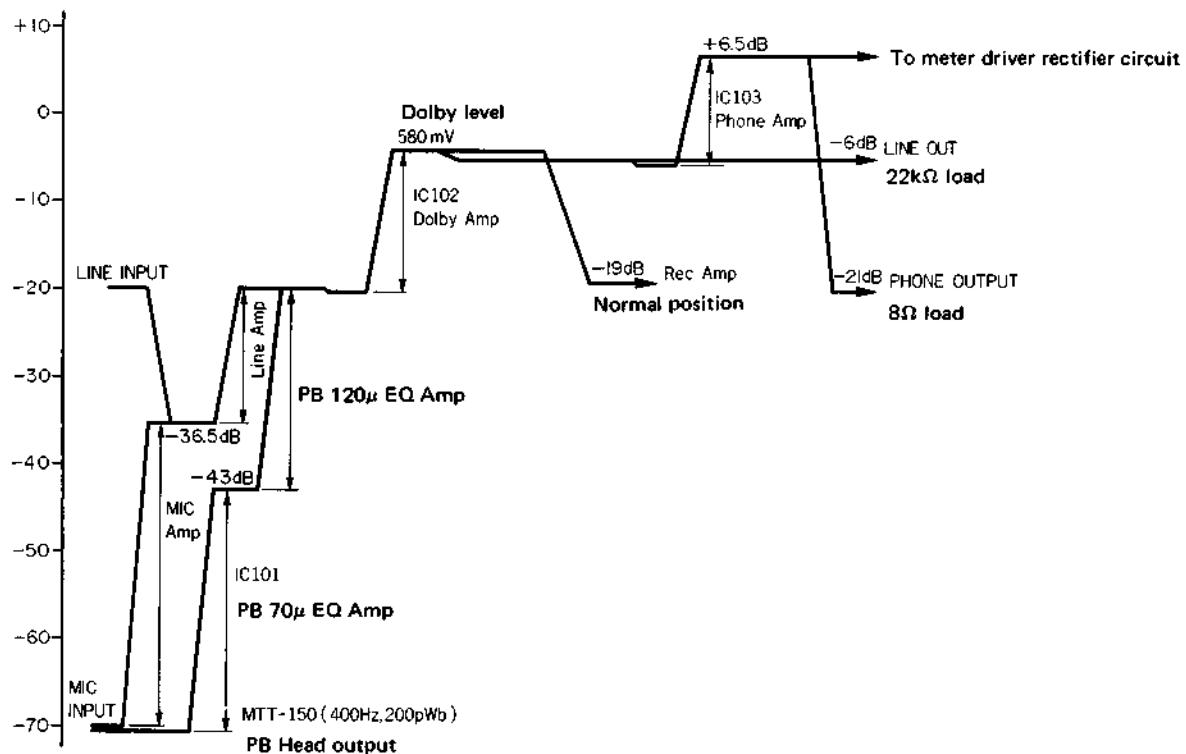

Fig. 16

BLOCK DIAGRAM

REC/PB LEVEL DIAGRAM

ELECTRICAL ADJUSTMENTS

■ Measuring Equipment and Test Tapes

1. Audio generator : 20Hz ~ 20kHz
 2. Attenuator : 0 ~ 90dB in 0.1 or 0.5 steps
 3. AC voltmeter (VTVM) : 20Hz ~ 200kHz (min.), input impedance 100kΩ min. with measuring capacity below -60dB.
 4. Frequency counter
 5. Oscilloscope
 6. Test tapes
 - MTT-111 (3kHz)
 - MTT-215C (10kHz/314Hz, -10dB, normal)
 - MCT-400L (400Hz Dolby level)
 - MCT-606SA (blank)
 7. Measuring equipment connections
- * Unless otherwise specified, connect the measuring equipment to the tape deck as shown in Fig. 17.

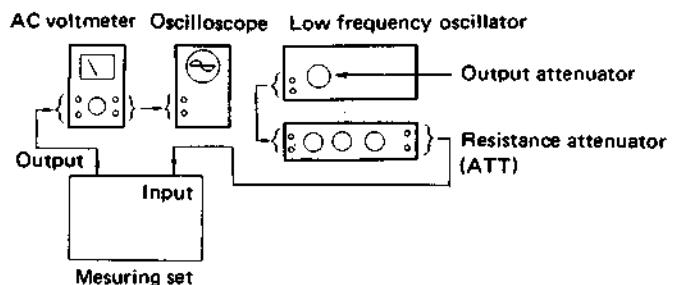

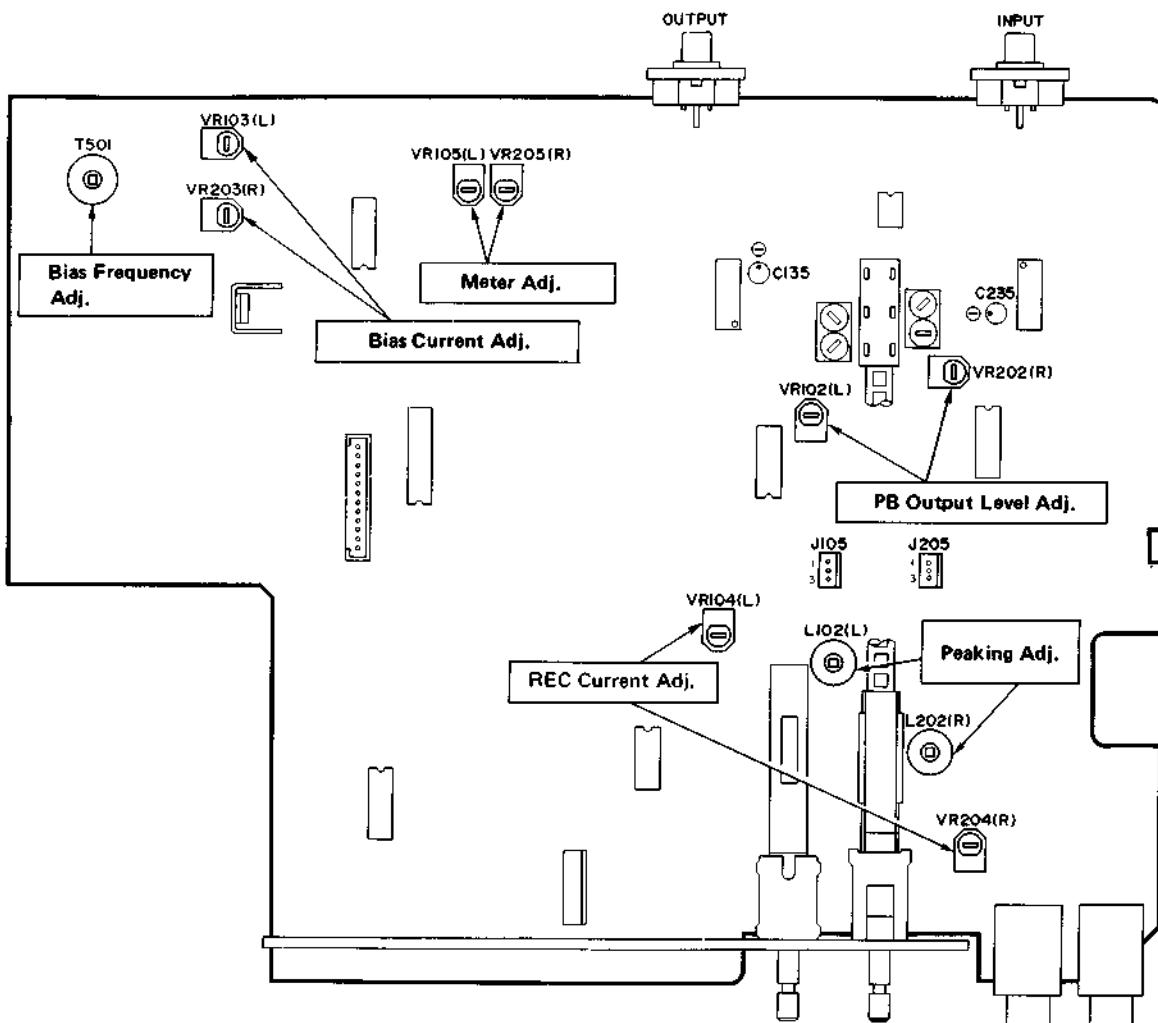

Fig. 17

- 1) Connect a 22kΩ load resistor, an AC voltmeter, and an oscilloscope to the output terminals of the tape deck.
- 2) During recording adjustments, also connect an audio generator and an attenuator to the tape deck input terminals.

ADJUSTING POINTS

Playback Adjustments

1. Playback Output Level Adjustment

- 1) Test tape MCT-400L (Dolby level)
- 2) Adjusting point .. VR102 (L) and VR202 (R) semi-fixed resistors
- 3) Check point Minus side of the C135 (L) and C235 (R) electrolytic capacitors
- 4) Adjustment Play the test tape and adjust the semi-fixed resistors to obtain a reading of 580mV ± 0.25 dB on the minus side of C135 and C235.

2. Meter Level Adjustment

- 1) Test tape MCT-400L (Dolby level)
- 2) Adjusting point .. VR105(L) and VR205(R) semi-fixed resistors
- 3) Adjustment Play the test tape and adjust the semi-fixed resistors so that the +3dB LED light up.

Recording Adjustments

For adjustments 1 to 4, connect a 100Ω resistor between the head terminal and the white lead leading to the REC/PB head.

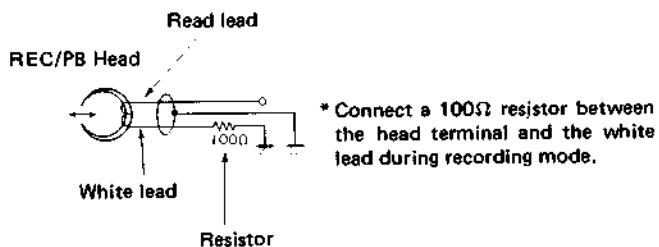

Fig. 18

1. Bias Frequency Adjustment

- 1) Setting Connect the frequency counter across both ends of the 100Ω resistor.
- 2) Adjusting point .. T501
- 3) Adjustment Adjust T501 until the frequency counter reads 85kHz.

- * For the subsequent adjustments, switch the tape selector to the Special position.
- * Performing the presetting operations 2 to 4 prior to the adjustment procedures will make the respective adjustments easier.

2. Bias Current Presetting

- 1) Setting Connect the AC voltmeter across both ends of the 100Ω resistor, and set the tape deck to "no-signal" recording mode.
- 2) Adjusting point .. VR103(L) and VR203(R) semi-fixed resistors.
- 3) Adjustment Adjust the semi-fixed resistors to obtain a reading of 43mV (430μ A) in the AC voltmeter.

3. Recording Current Presetting

- 1) Setting Set the deck to recording mode and apply a -10 dB 400Hz input signal. After setting the front panel REC LEVEL controls to obtain a -7 dB output at the output terminals. Then stop the bias oscillator circuit. Connect the AC voltmeter across both ends of the 100Ω resistor.
- 2) Adjusting point .. VR104(L) and VR204(R) semi-fixed resistors.
- 3) Adjustment Adjust the semi-fixed resistors to obtain a reading of 4.5mV (45μ A) in the AC voltmeter.

4. Peaking Presetting

- 1) Setting Set the deck to recording mode and apply a -10 dB 400Hz input signal. After setting the front panel REC LEVEL controls to obtain a -7 dB output at the output terminals. Then stop the bias oscillator circuit, and drop the input level by 10 dB. Connect the AC voltmeter across both ends of the 100Ω resistor.
- 2) Adjusting point .. L102(L) and L202(R) coils
- 3) Adjustment Adjust the coils so as to obtain an increase of $+14$ dB at 14kHz in respect to 400Hz.

5. Recording Current Adjustment

- 1) Setting Set the tape deck to recording mode and apply a -10 dB 400Hz input signal. After adjusting the REC LEVEL controls to obtain a -7 dB output, drop the input level by 30 dB.
- 2) Test tape MCT-606SA (blank)
- 3) Adjusting point .. VR104(L) and VR204(R) semi-fixed resistors.
- 4) Adjustment Record the 400Hz signal, and adjust the semi-fixed resistors so

EQUIVALENT CIRCUITS WITHIN THE IC

that the output level obtained during playback is the same as the recording monitoring output level.

6. Bias Current Adjustment

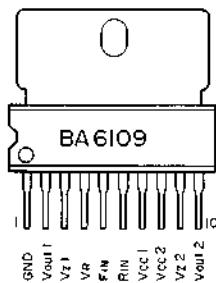

- 1) Setting Same as the setting for recording current adjustment above.
- 2) Test tape MCT-606SA
- 3) Adjusting point ... VR103(L) and VR203(R) semi-fixed resistors.
- 4) Adjustment Record the 400Hz and 6.3kHz signals, and adjust the semi-fixed resistors to obtain a level difference of ± 0.5 dB at 6.3kHz in respect to 400Hz during playback.

7. Peaking Adjustment

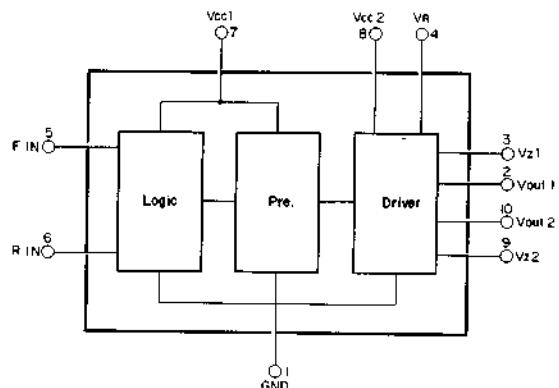

- 1) Setting Same as the setting for recording current adjustment above.
- 2) Test tape MCT-606SA
- 3) Adjusting point ... L102(L) and L202(R) coils
- 4) Adjustment Record the 400Hz and 15kHz signals, and adjust the coils to obtain a level difference of ± 0.5 dB at 15kHz in respect to 400Hz during playback.

Circuit Construction

Input and Output Circuit Diagrams**Terminal Description**

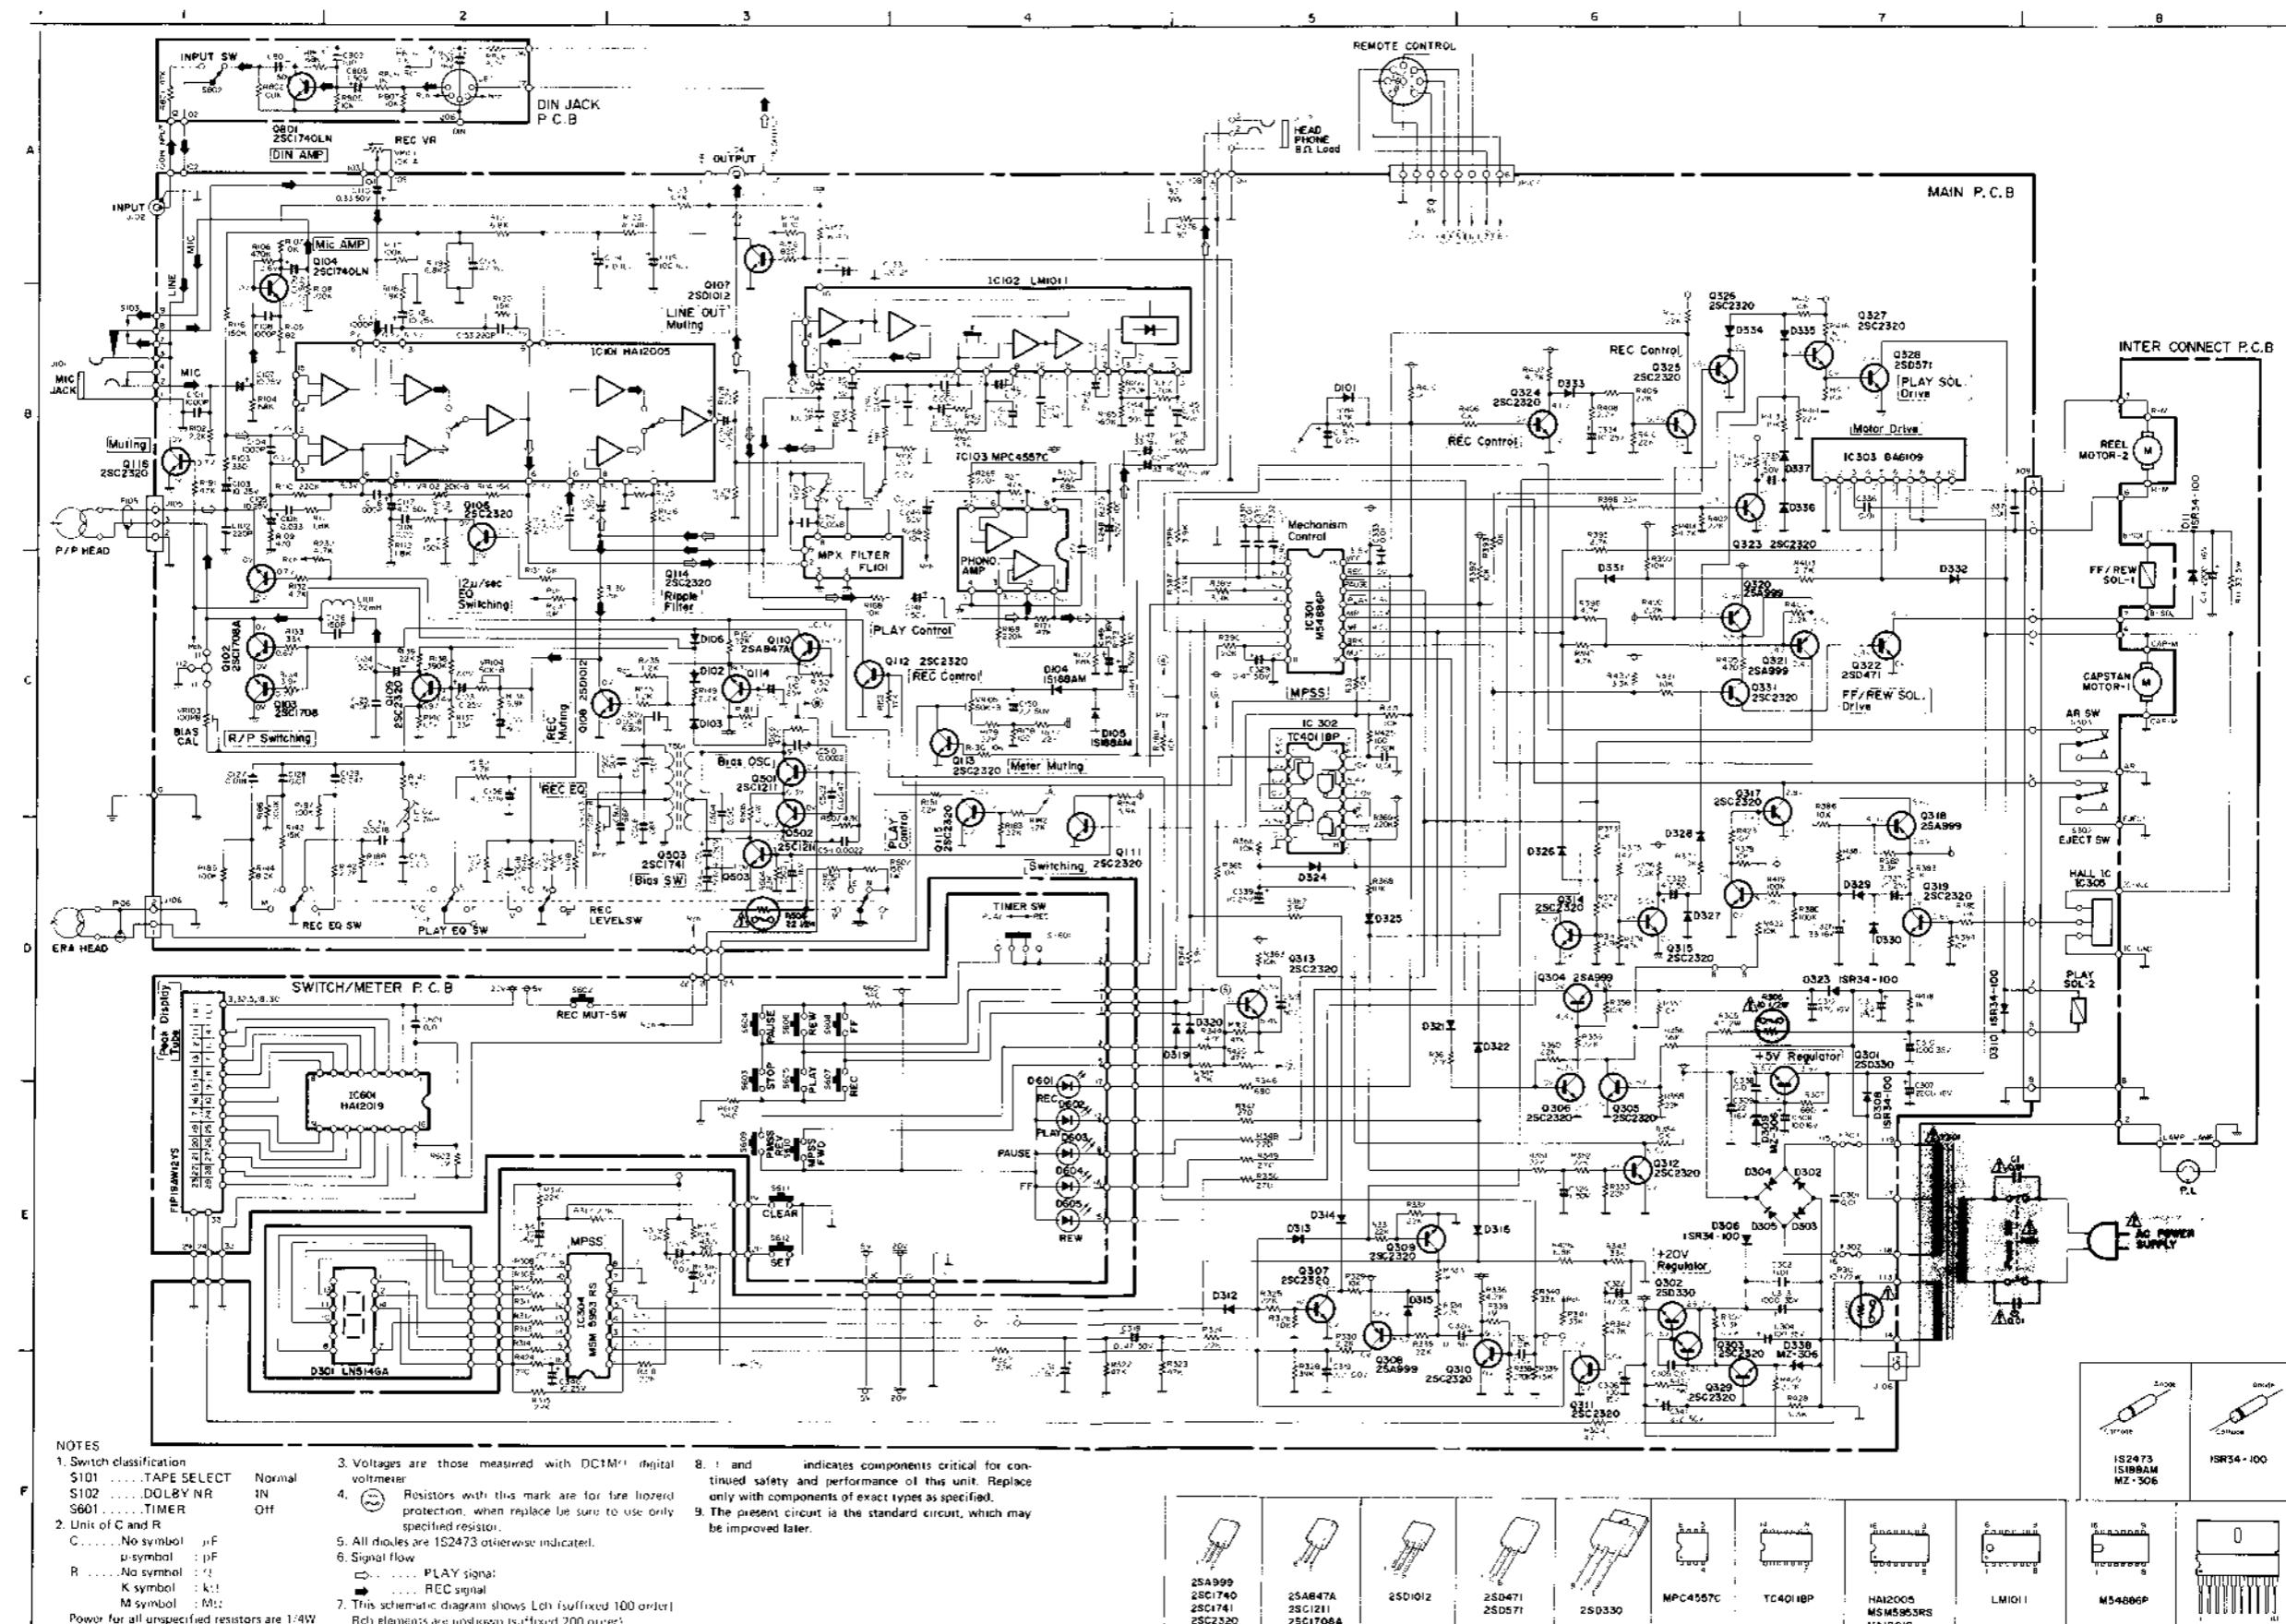

Terminal No.	Name	Function	
1	PAUSE/STOP	Operation input	Pause mode selected at "H" level, and stop mode selected at "L" level.
2	FF/PLAY		Fast forward mode selected at "H" level, and play mode selected at "L" level.
3	RE/REC		Rewind mode selected at "H" level, and recording mode selected at "L" level. The REC input is valid only when applied together with the PAUSE or STOP input.
4	TIMER START		Selection of the operation mode when the power is switched on. Play mode is selected if left at "H" level, recording mode if left at "L" level, and stop mode if left open.
5	AUTO	Control input	PLAY → REW, REW → PLAY or FF → STOP mode change instruction is generated by the application of an "L" level pulse () to this input terminal.
6	ANTI REC		Recording inhibit input terminal. Recording is inhibited when an "L" level signal is applied.
7	T		External resistors and capacitors are connected to this terminal from the oscillator circuit.
8	GND		Earth

Terminal No.	Name	Function	
9	MUTE OUT	Output	Muting signal output.
10	BRK OUT		Reel disk brake signal output.
11	MOTOR(F) OUT		Reel motor forward drive signal output.
12	MOTOR(R) OUT		Reel motor reverse drive signal output.
13	PLAY OUT		PLAY signal output.
14	PAUSE OUT		PAUSE signal output.
15	REC OUT		Recording signal output.
16	Vcc		Power supply.
