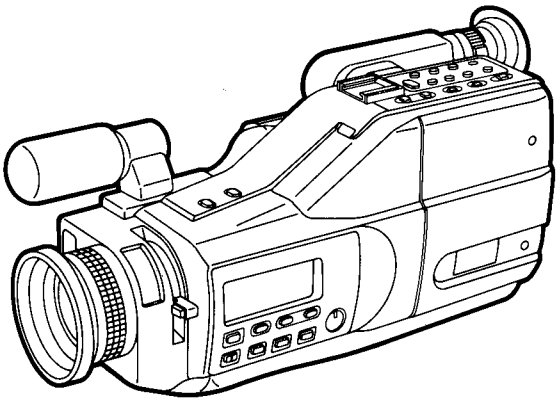
DEC. 1989

MITSUBISHI Service Manual

VIDEO CAMERA/RECORDER



S-VHS-C
VHS-C

MODEL

HS-C40E

Only cassettes marked S-VHS-C or VHS-C can be used with this video cassette recorder.

SPECIFICATIONS

Format	: S-VHS-C and VHS-C standard
Power source	: DC 9.6 V⎓
Power consumption	: Approx. 12 Watts
Signal system	: PAL System
Recording system	: Luminance: FM recording Color: Converted sub-carrier direct recording Conforms to S-VHS/VHS standard
Cassette	: VHS-C cassette, S-VHS-C cassette
Tape speed (SP)	: 23.39mm/sec (1-5/16 ips)
(LP)	: 11.70mm/sec (7/16 ips)
Recording time	
Max. (SP)	: 30 minutes (with SE-C30 cassette)
(LP)	: 60 minutes (with SE-C30 cassette)
VIDEO	
Output	: 1Vp-p, 75 ohms, unbalanced (via AV OUT connector)
AUDIO	
Output	: −6dBs, 1k-ohm (via AV OUT connector)
Microphone input	: −68dBs, high impedance, unbalanced
Pick up	: 12.7mm-format CCD
Minimum required illumination	: 9 lux
Lens	: f/1.4, f = 8.5 — 68mm, 8:1 power zoom lens with auto iris control Filter diameter 49mm
Viewfinder	: Electronic viewfinder with 17mm black/white CRT
White balance adjustment	: Full-auto/switchable INDOOR or OUTDOOR
Operating temperature	: 0°C to +40°C
Operating humidity	: 35% to 80%
Weight	: 1.6kg (with EVF)
Dimensions	: 130(W) × 145(H) × 345(D)mm

AC POWER ADAPTER DA-C40E

Power source	: AC 110 ~ 240V (50/60Hz)
Power consumption	: 30 watts
Rated output voltage	: DC 10.4V (VCR), DC 9.6V (BATT)
Rated output current	: 1.4A (VCR), 1.2A (BATT)
Charging system	: Constant current, voltage controlled
Dimensions	: 68.4(W) × 40.5(H) × 150(D)mm
Weight	: Approx. 400g (0.8 lbs)

MITSUBISHI ELECTRIC CORPORATION
Head Office: Mitsubishi Denki Building. Marunouchi Tokyo, Japan

DISASSEMBLY

*In removing the FPC cable, be careful not to touch the exposed terminal of the connector directly as it can cause malfunction.
To remove the terminal, open the connector for FPC cable in the order shown by the arrows in Fig. 1, keep the part with exposed terminal for FPC cable connection downward, then connect in reverse order show by the arrows in Fig. 1.

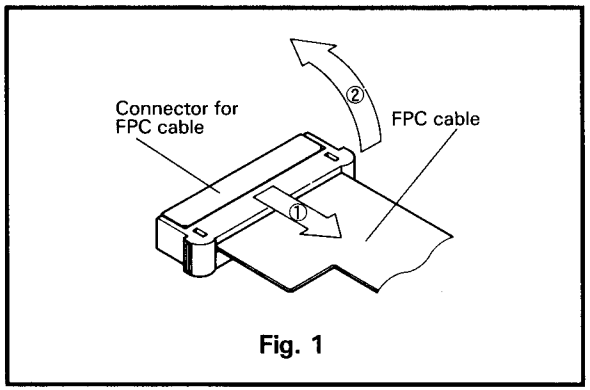

Fig. 1

1. How to Remove Electron View Finder

①Pull out the plug for view finder shown in Fig. 2.
②Turn the view finder shown in Fig. 2 to the direction shown by the arrow.
③Take off the view finder by sliding backward.

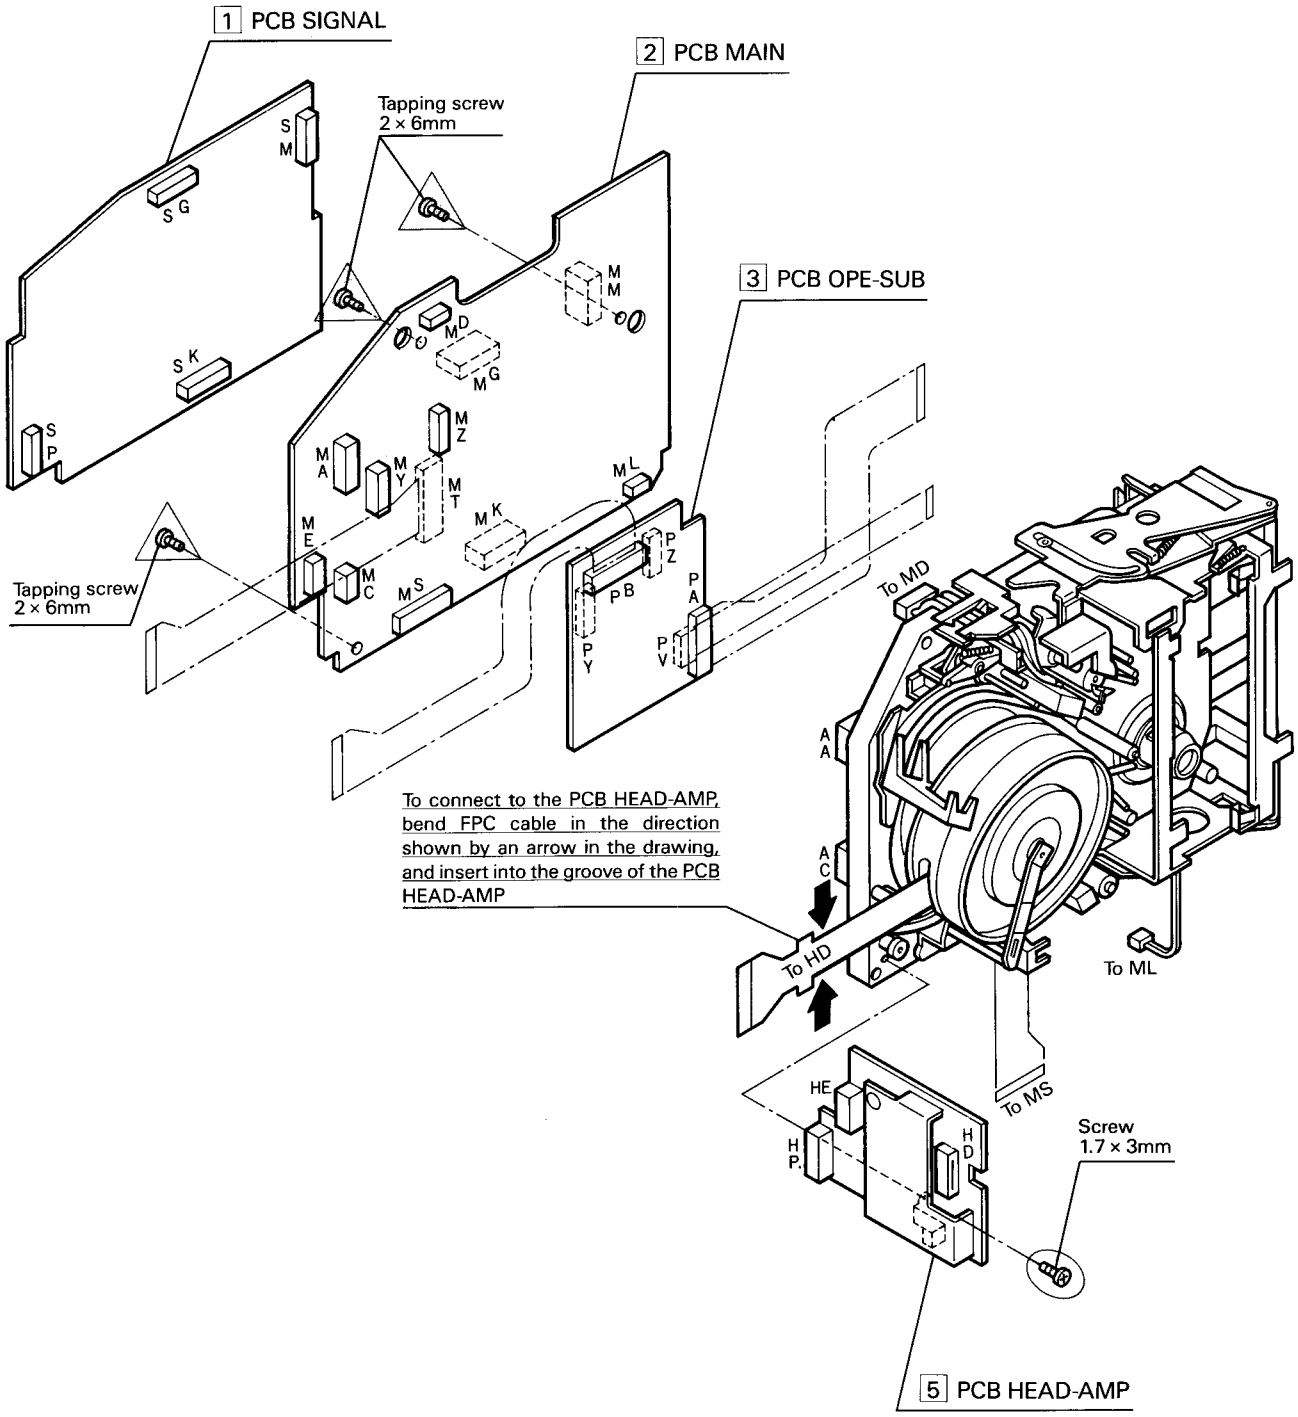
HOW TO EXECUTE CIRCUIT BOARD SERVICE

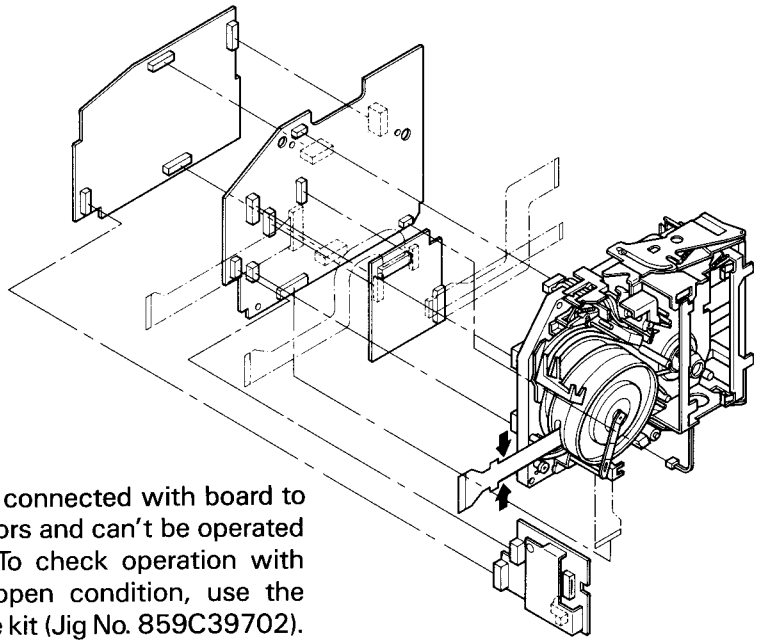
1. Chassis Assembly

Order	1	2	3	4	5
Article name	PCB SIGNAL	PCB MAIN	PCB OPE-SUB	DECK Assembly	PCB HEAD-AMP
Symbol of removed part		△			○
Screw and terminal to be removed	Terminals-SG, SK, SM, SP	Screws-3 pcs. Terminals-MA, MC, MD, ME, ML, MS	Terminals-PY, PZ		Screw-1 pc. Terminal-HD



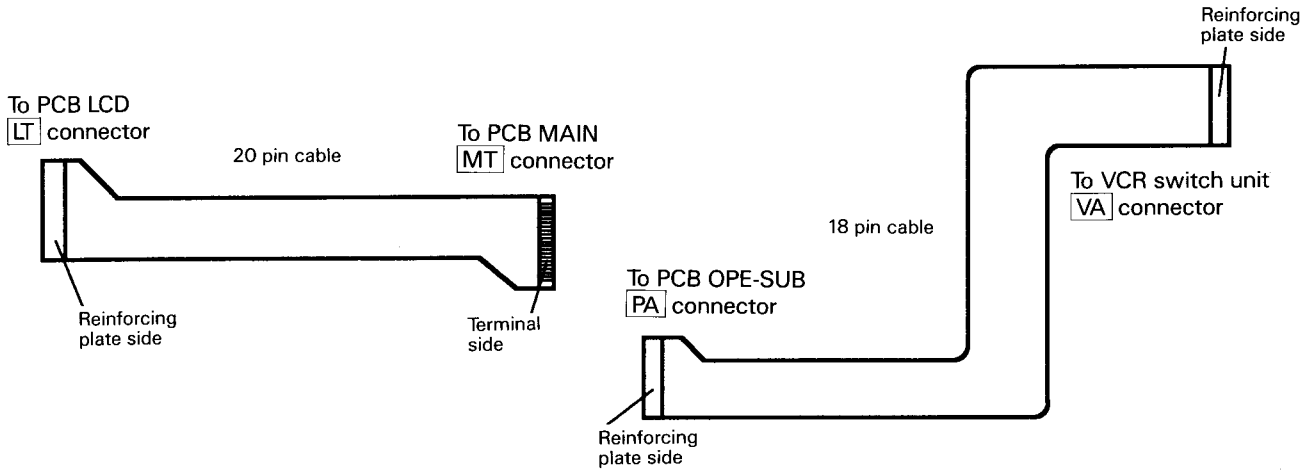
Cautionary Instructions for Chassis Assembly Replacement

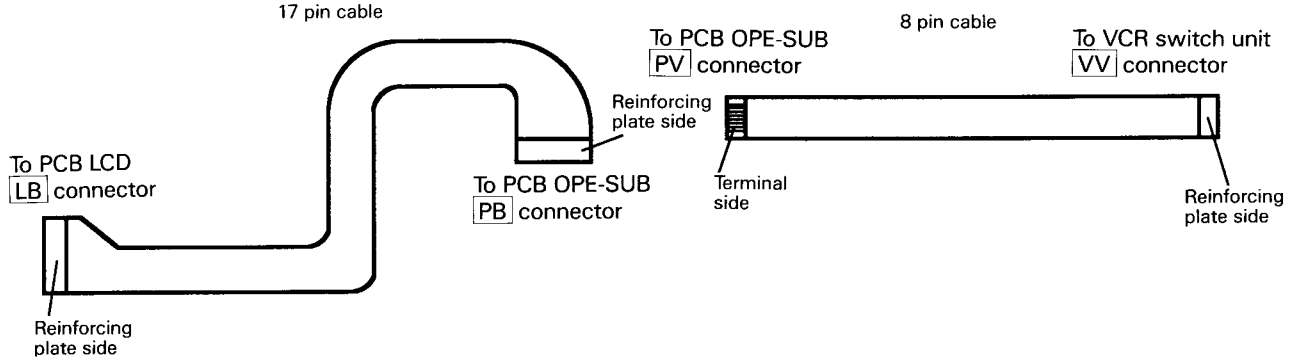
① To replace the chassis assembly disassemble the chassis assembly into individual parts according to the disassembling procedure of the casing (outer), then change the chassis.
② The PCB is connected as illustrate below. At assembly, be sure to connect to the original condition.



*The PCB's are connected with board to board connectors and can't be operated if kept open. To check operation with PCB's under open condition, use the extension cable kit (Jig No. 859C39702).

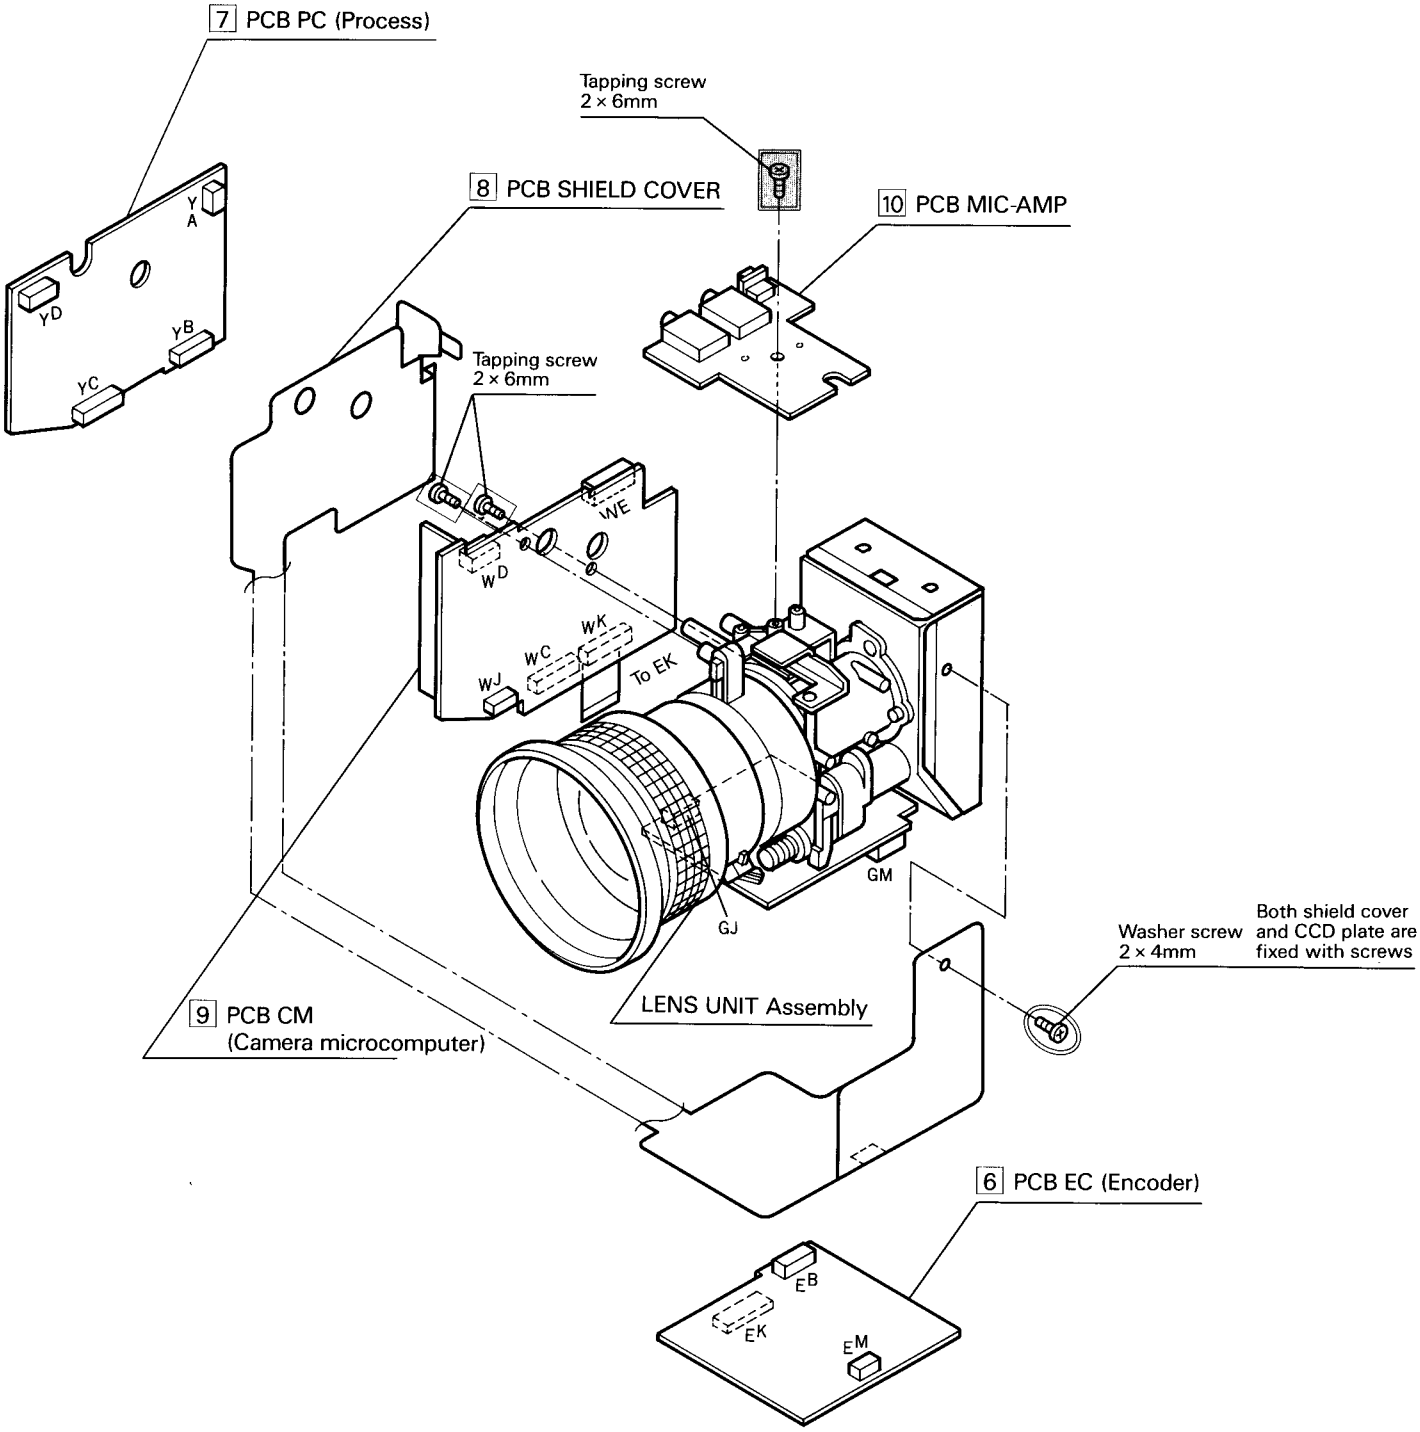
③ Connect the FPC cables as illustrated below. In connecting the cables, be sure not to mistake the direction.





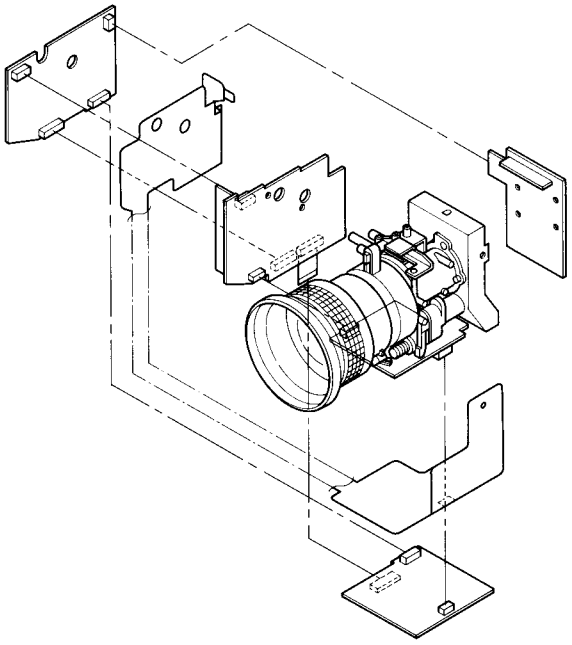
2. Camera Assembly

Order	6	7	8	9	10
Article name	PCB EC	PCB PC	PCB shield	PCB CM	PCB MIC-AMP
Symbol of removed part					
Screw and terminal to be removed	Terminals-EB, EK, EM	Terminals-YA, YB, YC, YD	Screw-1 pc.	Screws-2 pcs. Terminal-WJ	Screw-1 pc.



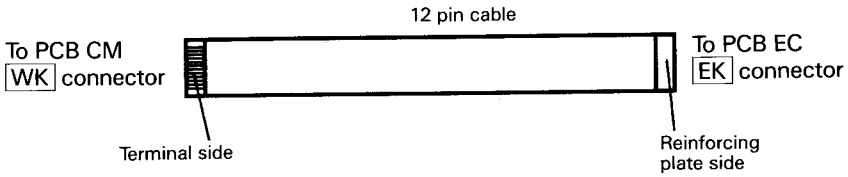
Cautionary Instructions at Camera Assembly Replacement

①When the camera assembly is replaced, disassemble the chassis assembly into individual parts according to the disassembling procedure of the case (outer), then proceed to replacement.
②The PCB are connected as illustrated below. Be sure to connect to the original condition.



*The PCB's are connected with board to board connectors and can't be operated if kept open. To check operation with PCB's under open condition, use the extension cable kit (Jig No. 859C39702).

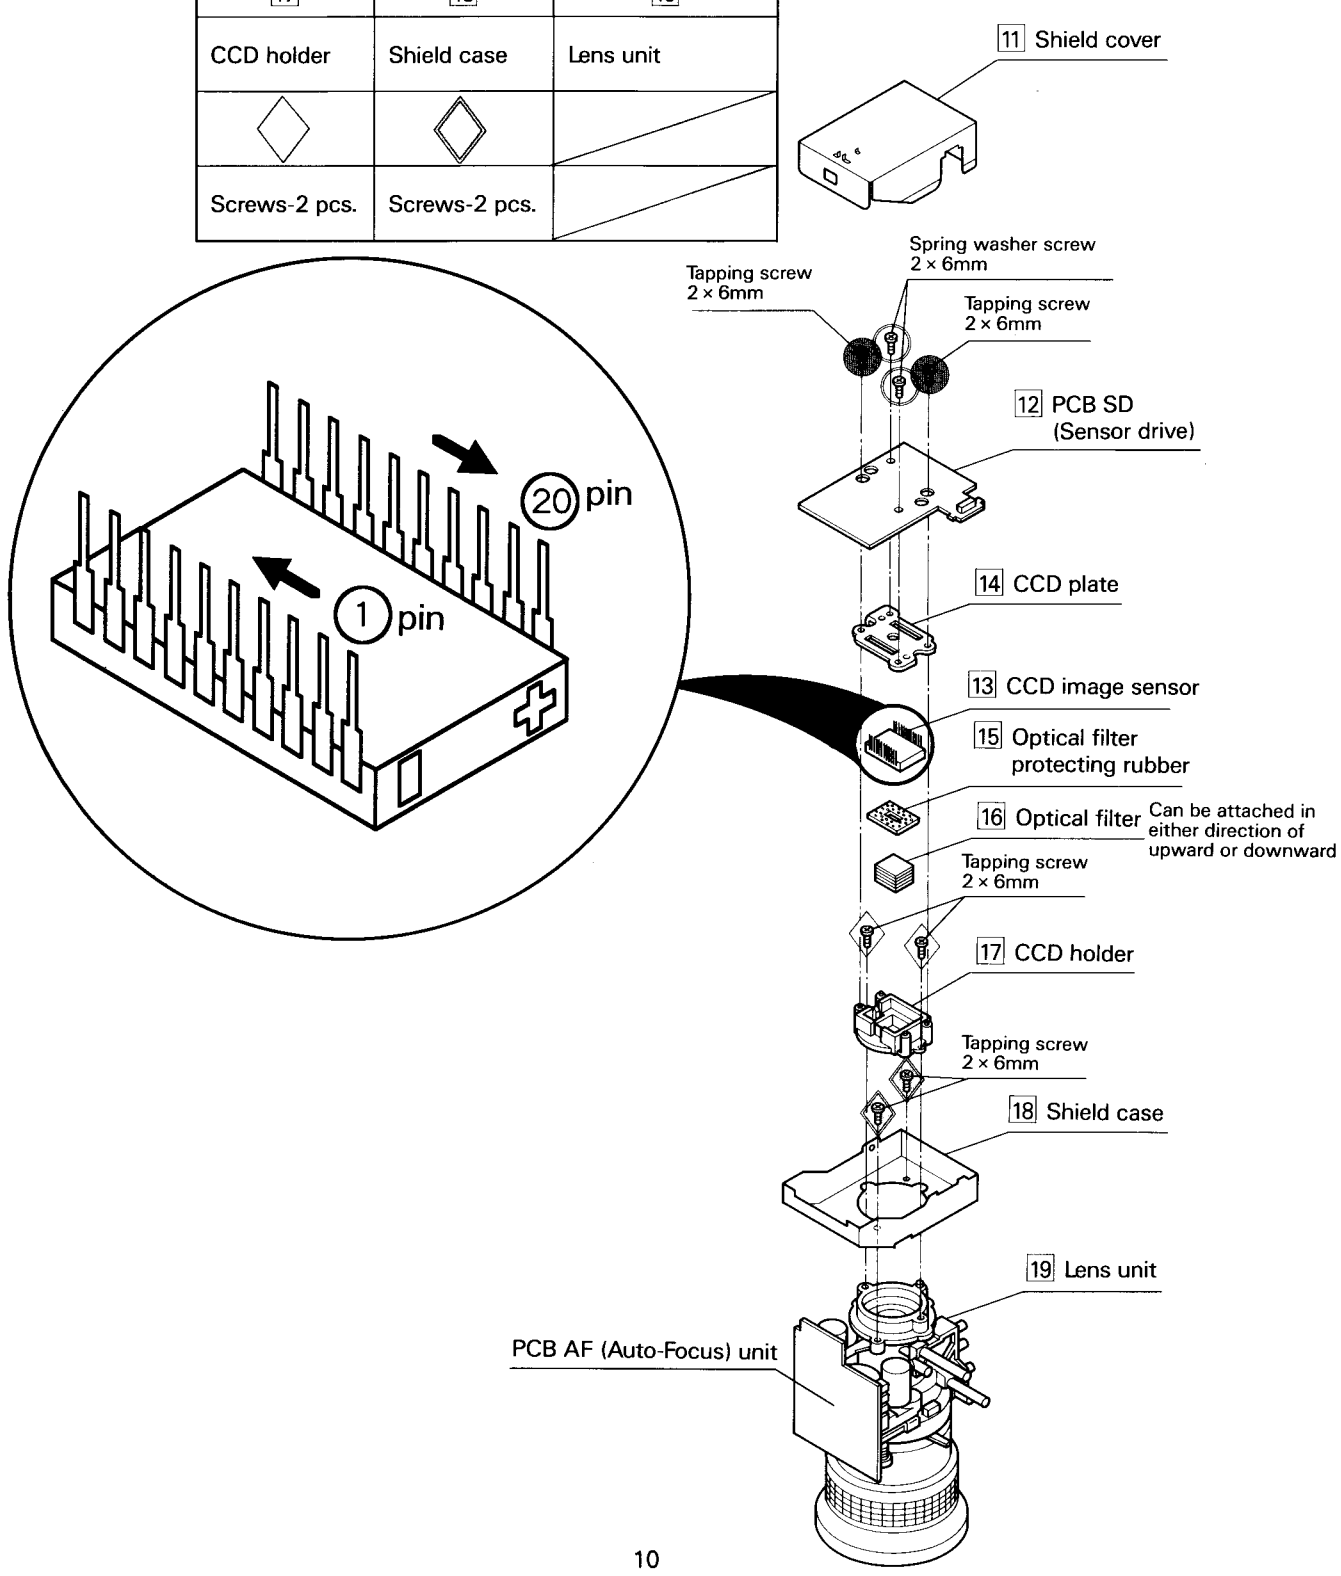
③The FPC cable is connected as illustrated below. In connecting the cable, be sure not to mistake the direction.



3. Lens Unit Assembly

Order	11	12	13	14	15	16
Article name	Shield cover	PCB SD	CCD image sensor	CCD plate	Optical filter protecting rubber	Optical filter
Symbol of removed part		●		○		
Screw and terminal to be removed		Screws-2 pcs.		Screws-2 pcs.		

17	18	19
CCD holder	Shield case	Lens unit
◇	◇	
Screws-2 pcs.	Screws-2 pcs.	



Cautionary Instructions for Lens Unit Replacement

*To replace the Lens unit, disassemble the unit into individual parts according to the disassembling procedure of camera assembly stated in Section 2 of Repairing, then proceed to replacement.

1. How to Replace CCD Image Sensor

Note: •Being a C-MOS type semi-conductor, the CCD image sensor requires close attention in particular. For replacement, be sure to earth the soldering iron and others.
•Be careful not to stain or injure the transmission glass and optical filter of the CCD image sensor. Should they be stained by finger print for instance, wipe it off with silicone paper or clean shammy.
•The transmission glass of the CCD image sensor is shipped with lens protecting seal attached. Refrain from peeling off the seal to the point immediately before assembling into the lens unit at the time of replacement.
•When the CCD image sensor is soldered onto the PCB, be careful not to apply excessive heat for a long time as the filter may be discoloured by heat in some cases.

How to Remove

① Take off the PCB SD in the order shown in the table at left.
② Remove 20 terminals of the CCD image sensor solder to the PCB SD, and take off the CCD image sensor.

How to Attach

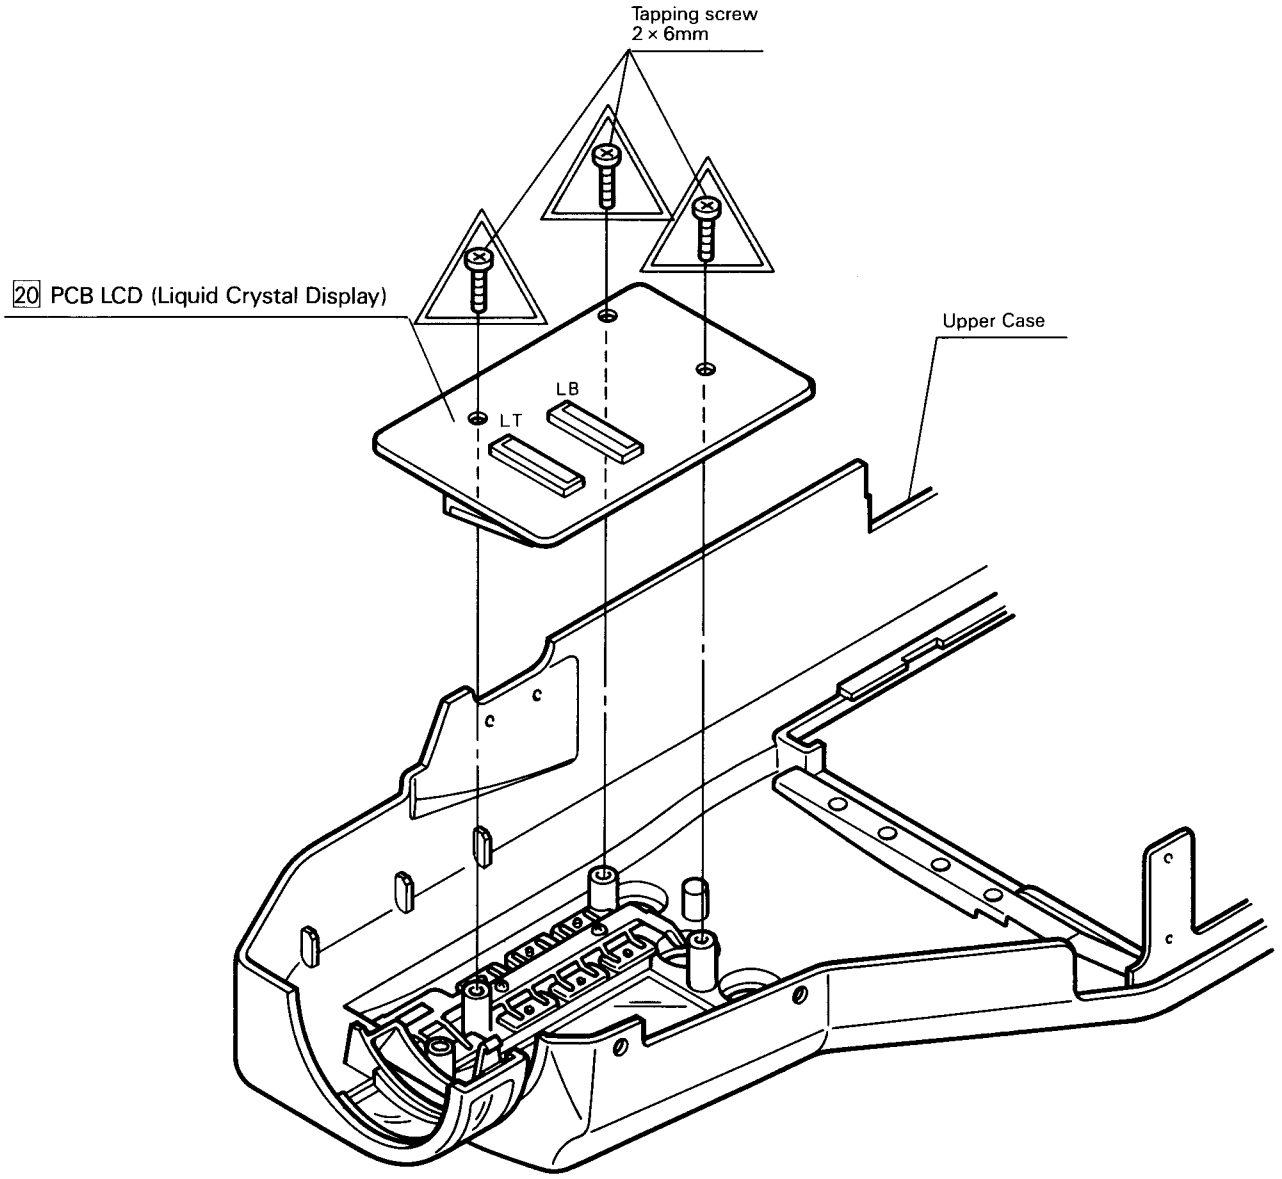
① Solder the CCD image sensor (20 soldering points) with the protecting seal onto the PCB SD. Be careful so as not to mistake direction of the PCB at this time.
② Peel off the protecting seal and mount the PCB SD onto the Lens Unit.

4. PCB LCD Assembly

Order	20
Article name	PCB LCD
Symbol of removed part	△
Screw and terminal to be removed	Screws-3 pcs.

Cautionary Instructions for PCB LCD Replacement

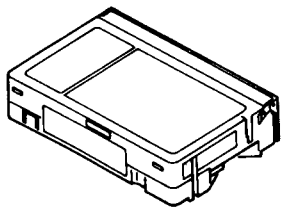
- To replace the PCB LCD, disassemble the upper case into individual parts according to the disassembling procedure of the case (outer), then proceed to disassembling.

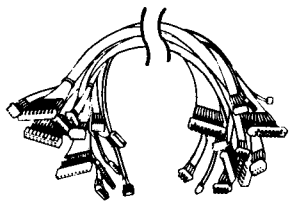


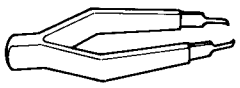
VCR UNIT CIRCUIT ADJUSTMENT

1. Jigs and Measuring Instruments Required for Adjustment of VCR

1-1. Jigs for Adjustment

Alignment tape	Extension cable kit	Pincers for mini-connectors
	859C39702	859C39503
		






1-2. Specifications of Alignment Tape

	Video signal	Audio signal	Detail of use
PM6KE2C (859C39706)	Stair step	6kHz	• Compatibility checking and adjustment • Checking drum servo circuit • Audio head azimuth adjustment (Note) Used under short-circuit condition between test point TP5B and GND.
PC1KC (859C39707)	Colour bar	1kHz	• Adjustment of video signal playback circuit • Adjustment of audio signal playback circuit (Note) Under manual condition of digital tracking • Used at the maximum level of FM output of TP2A (P.B. FM OUT) of the PCB SIGNAL.
PC (S) (859C39708)	Colour bar		• Adjustment of playback demodulation sensitivity & playback level

1-3. Others Tools and Measuring Instruments Required

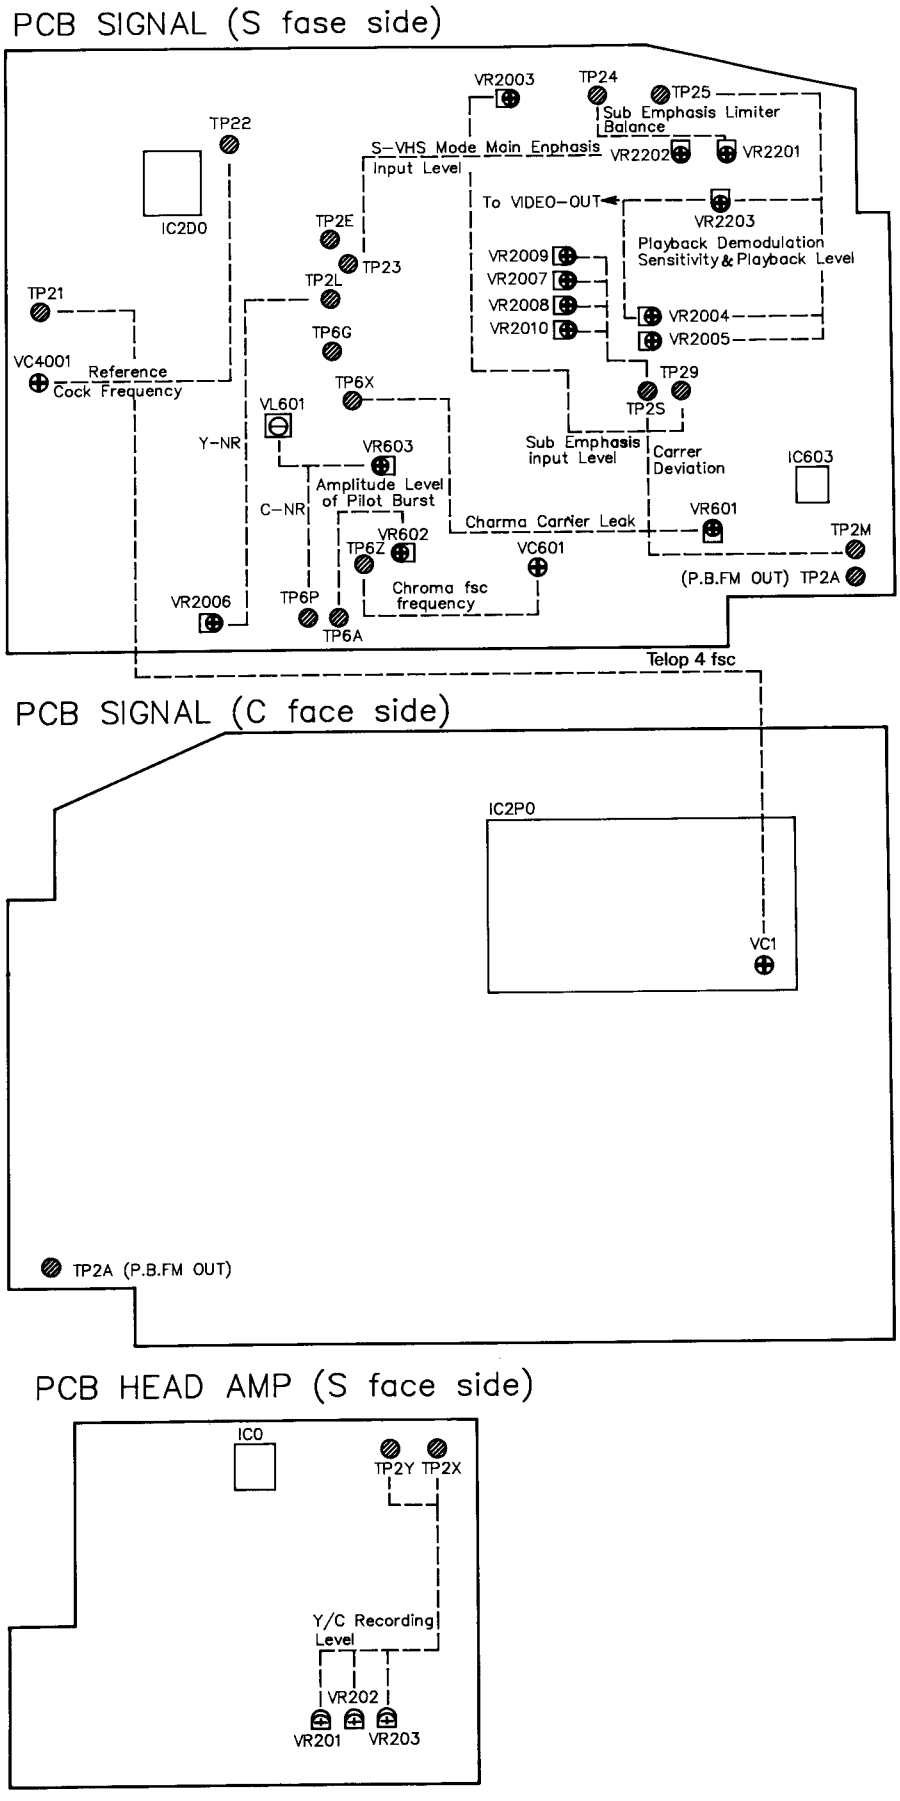
① Colour monitor (Colour TV)
② Oscilloscope
③ Colour bar generator
④ Frequency counter
⑤ Full set of general tools
⑥ Audio generator
⑦ D.C. Voltmeter
⑧ Carrier checker
⑨ Screwdriver for camera adjustment
⑩ Camera dummy connector (859C397090)

2. Prior to Adjustment

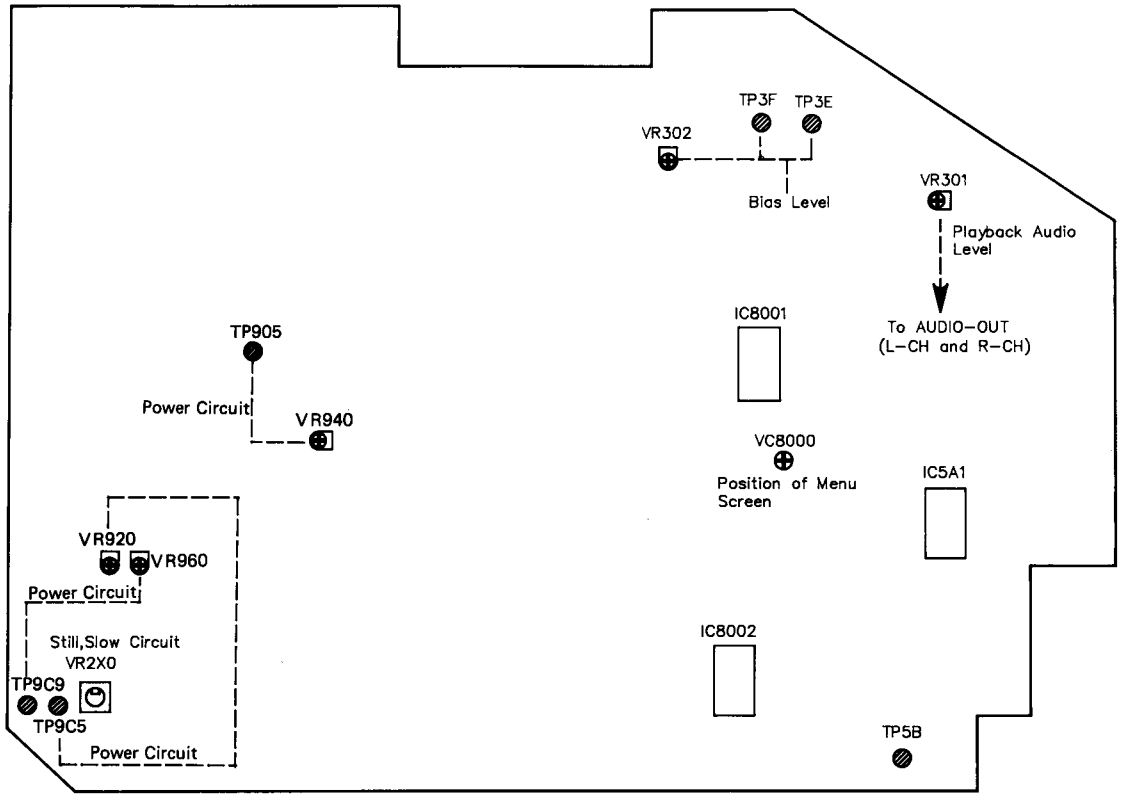
① Adjustment of VCR circuit becomes necessary, in almost all cases, at replacement of parts or the video head. Should the electrical circuit go out of order, the defective point is first found by measuring instruments, then repair and replacement are practiced before proceeding to adjustment.
Refrain from making adjustments indiscretely without detecting the point of trouble.
There are some items which require no adjustment according to trouble. In actual servicing, adjust only the items required.

② In case of VCR section adjustment, supply RF signal into C40 from a video cassette recorder equipped with S out terminal (HS-E70/B70 etc.) via Camera Dummy Connector.

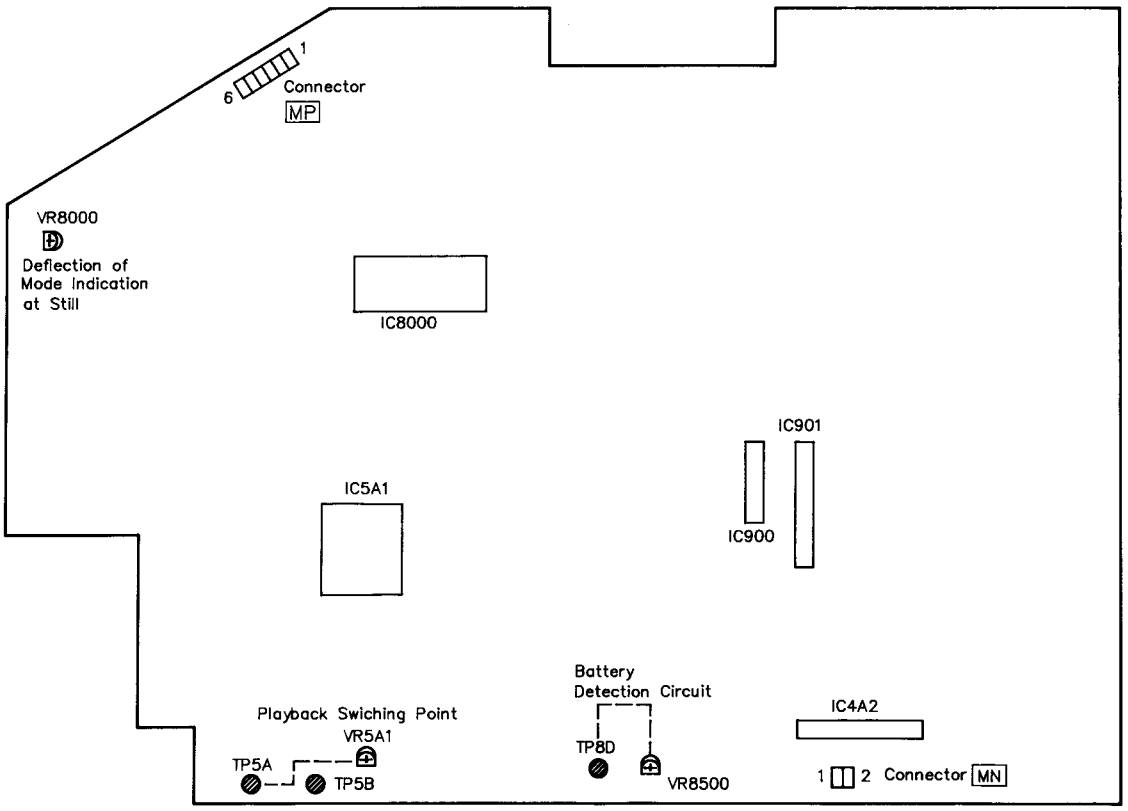
3. Location of Adjustment Points (VCR Section)



PCB MAIN (S face side)



PCB MAIN (C face side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Power Circuit				
Power circuit	EE	Digital voltmeter	TP9C5 TP905 TP9C9	Adjust VR920 to 5.00±0.02V. Adjust VR940 to 5.00±0.05V. Adjust VR960 to 9.00±0.02V.
Servo Ciruit				
Playback switching point	Playback alignment tape Stair step	Oscilloscope Synchronizing slope (-) Synchronizing slope (+) DIV 0.2V TIM 50μsec.	VIDEO-OUT	External synchronizing with TP5A Adjust VR5A1 to 6.5H±1.0H. It is checked that image output is 6.5H±1.0H. Still, slow circuit	SP REC and PB mode still			Adjust VR2X0 (still adjust VR) so that the horizontal line is interlaced.
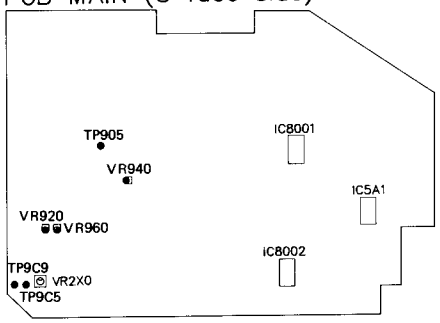
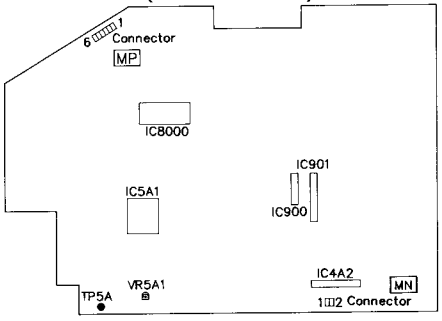
Y/C Signal Ciruit				
Chroma fsc frequency	Playback alignment tape (Colour bar)	Frequency counter	TP6Z	Adjust VC601 so that frequency becomes 13.300857MHz±90Hz.

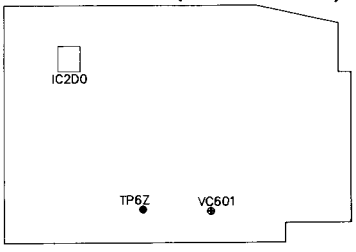
PCB MAIN (S face side)



PCB MAIN (C face side)



PCB SIGNAL (S fase side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Chroma carrier leak	Playback alignment tape (Colour bar)	Oscilloscope DIV 10mV TIM 10μsec	TP6X	Adjust VR601 to minimum carrier leak component. 
C-NR	Playback alignment tape (Colour bar)	Oscilloscope DIV 10mV TIM 2msec	TP6P	Adjust VR603 and VL601 to minimum leak signal. Amplitude level of pilot burst	LP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR S-VHS mode	Oscilloscope * GND the probe to TP6G DIV 5mV TIM 10μsec	TP6A	External synchronizing by TP2S. After making sure that pilot burst is applied under S-VHS mode, adjust VR602 so that amplitude of pilot burst becomes 1.1 times of burst signal. Sub emphasis input level	LP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR S-VHS mode	Oscilloscope DIV 10mV TIM 10μsec	TP29	Adjust VR2003 to 400mVp-p. 
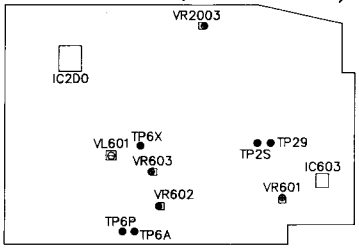
PCB SIGNAL (S fase side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Sub emphasis limiter balance	EE No input of VIDEO signal S-VHS mode	DC voltmeter	TP24	Adjust VR2201 to 3.48±0.03V.
S-VHS mode main emphasis input level	LP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR S-VHS mode	Oscilloscope DIV 10mV TIM 10μsec	TP23	Adjust VR2202 to 320mVp-p. Y-NR	LP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR Normal VHS mode	Oscilloscope DIV 20mV TIM 2msec	TP2L	Adjust VR2006 so that video signal disappears. Carrier deviation	SP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR S-VHS mode Normal VHS mode	Oscilloscope DIV 0.2V TIM 10μsec	TP2M	External synchronizing withTP2S. Connect carrier checker to TP2M. Adjust VR2009 (FM. DEV. SET) and VR2010 (FM. CAR. SET) respectively so that frequency of Sync-tip and that of peak white respectively become 5.4MHz and 7.0MHz. Adjust VR2007 (FM. DEV. SET) and VR2008 (FM. CAR. SET) alternatively so that frequency of Sync-tip and of peak white respectively become 3.8MHz and 4.8MHz.

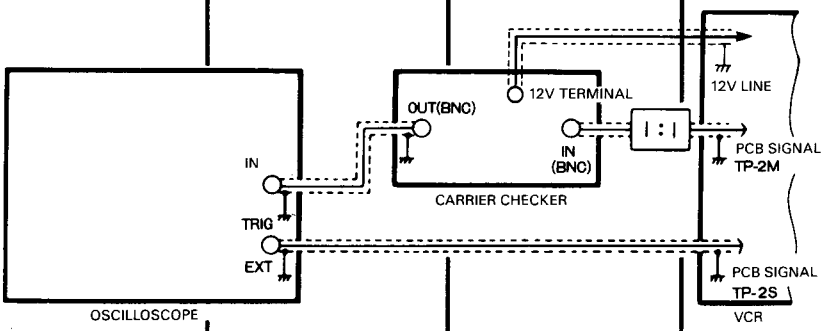
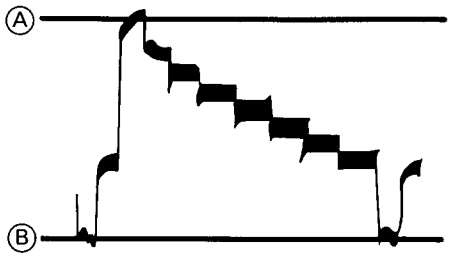
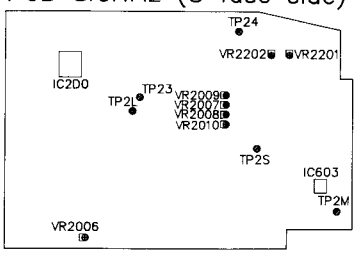
	S-VHS mode	VHS mode
Deviation line Ⓐ	7.0MHz	4.4MHz
Sync-tip line Ⓑ	5.4MHz	3.4MHz





PCB SIGNAL (S fase side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Y/C recording level	LP REC mode Give input of Colour bar into MQ connector by using S-VHS VCR S-VHS mode	Oscilloscope * GND the oscilloscope to TP2X. DIV 10mV TIM 10μsec	TP2Y	Minimize FM recording signal by turning VR201 to the left. Adjust VR203 so that chroma recording level becomes 30mVp-p at the red part. 		DIV 50mV TIM 10μsec		Adjust VR201 turning to the right so that FM recording signal become 120 mVp-p at the Sync-tip. 	Normal VHS mode			Adjust VR202 so that FM recording signal becomes 140mVp-p at the SYNC TIP .  (Note) As the adjusting point, take the point where recording signal at VR201 and VR202 adjustment reach the specified level while gradually increasing from 0mVp-p.

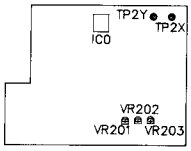
PCB HEAD AMP (S face side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Playback demodulation sensitivity & playback level	Playback normal VHS alignment tape (Colour bar)	Oscilloscope DIV 20mV TIM 10μsec	VIDEO-OUT terminal (75 ohm termination)	Adjust VR2004 to 1.0Vp-p. 	Playback S-VHS alignment tape (Colour bar)		TP25	Adjust VR2005 so that demodulation signal becomes 1.2Vp-p. 			VIDEO- OUT terminal (75 ohm termination)	Adjust VR2203 to 1.0Vp-p. Telop 4fsc	VIDEO signal no input	Frequency counter	TP21	Adjust VC1 on IC2P0 so that frequency becomes 17.73448MHz±100Hz.

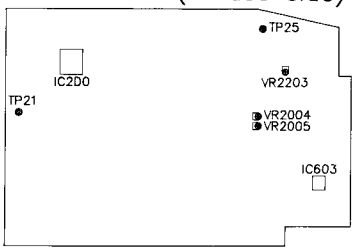
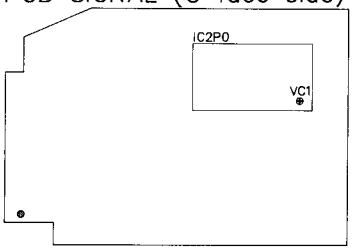
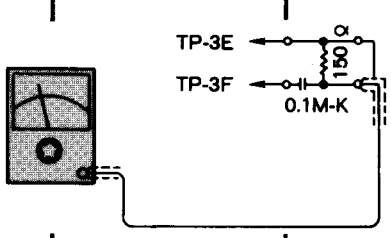
PCB SIGNAL (S fase side)

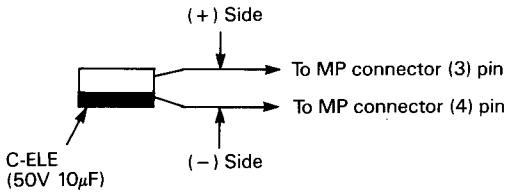


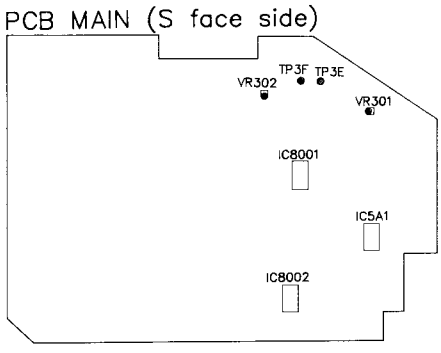
PCB SIGNAL (C face side)



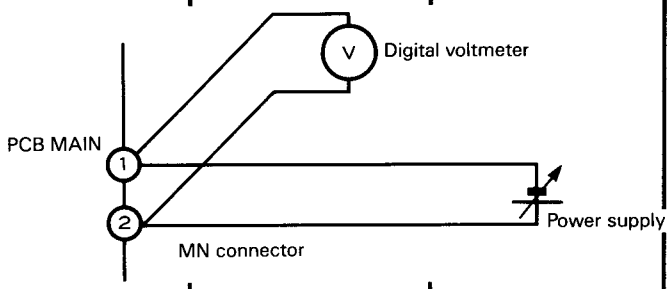
Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Normal Audio Circuit				
Playback Audio level	Playback alignment tape (Colour bar)	AC voltmeter	AUDIO-OUT terminals, (L-CH and R- CH)	Adjust VR301 so that playback level is kept at -6dBs. ((380mVr.m.s.) 0dB=0.755Vr.m.s.) (Note) Check mechanical adjustment if deviationis over 1dB.
Bias level	SP REC mode	AC voltmeter Add probe (High pass filter)	TP3E TP3F	short between (3) pin and (4) pin of MP connector on the PCB MAIN using an electrolytic capacitor (50V 10μ) and using (3) pin as positive (+) side. After making sure that indicated value on the AC voltmeter isn't affected by the monitor TV, adjust VR302 to 2.4mVr.m.s. (Note) Be careful so that the AC voltmeter may not come in contact with VCR chassis. (Note) Refrain from turning to playback mode with the AC voltmeter connected. (Excessive input is applied to the playback amplifier.)

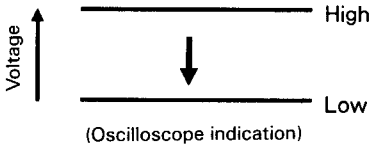




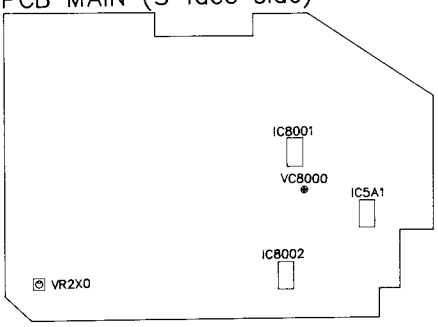


Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Operation Circuit				
Position of menu screen	Menu display button: ON			While watching view finder, adjust VC8000 so that menuscreen comes to the center.
Battery detection circuit		Oscilloscope DIV 0.2mV TIM DC	TP8D	Connect variable constantvoltage power supply (over 3A) to MN connector on the main board. (Pin (1) at GND and pin (2) at plus side). Set the power supply at 8.8±0.05V. Turn VR8500 fully to the left end. Adjust VR8500 to the oscillation condition immediately before changing from high level to low level.
Jittering of mode indication at still	SP REC and PB mode			While watching view finder, turn to still mode and perform still adjustment by VR2X0(still adjust VR). Also adjust VR8000 (VR800) to eliminate jittering of the letters.

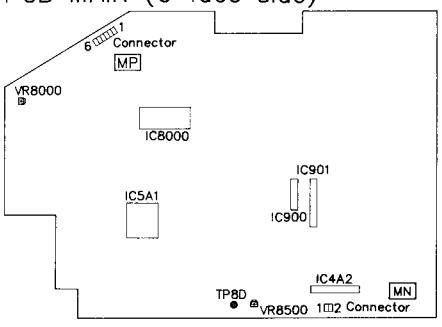




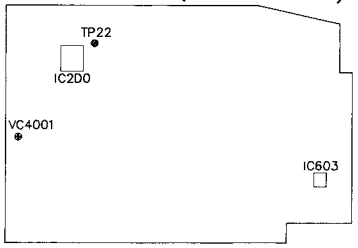
PCB MAIN (S face side)



PCB MAIN (C face side)



Name of adjustment	Mode	Measuring instrument	Test point	Adjustment method
Title (Superimpose)				
* Proceed to this adjustment after checking circuits of the signal system.				
Reference clock frequency	EE telop indication	Oscilloscope Video signal generator or Y/C separator	CH1:VIDEO-OUT CH2:TP22	External synchronizing with TP22 Mount camera ass'y onto chassis ass'y. Adjust VC4001 so that waveform of CH1 and CH2 are adjusted to 2.0±0.1μsec. 
PCB SIGNAL (S fase side)



CAMERA UNIT CIRCUIT ADJUSTMENT

1. Jigs and Measuring Instruments Required for Camera Unit Adjustment

1-1. Jigs for Adjustment

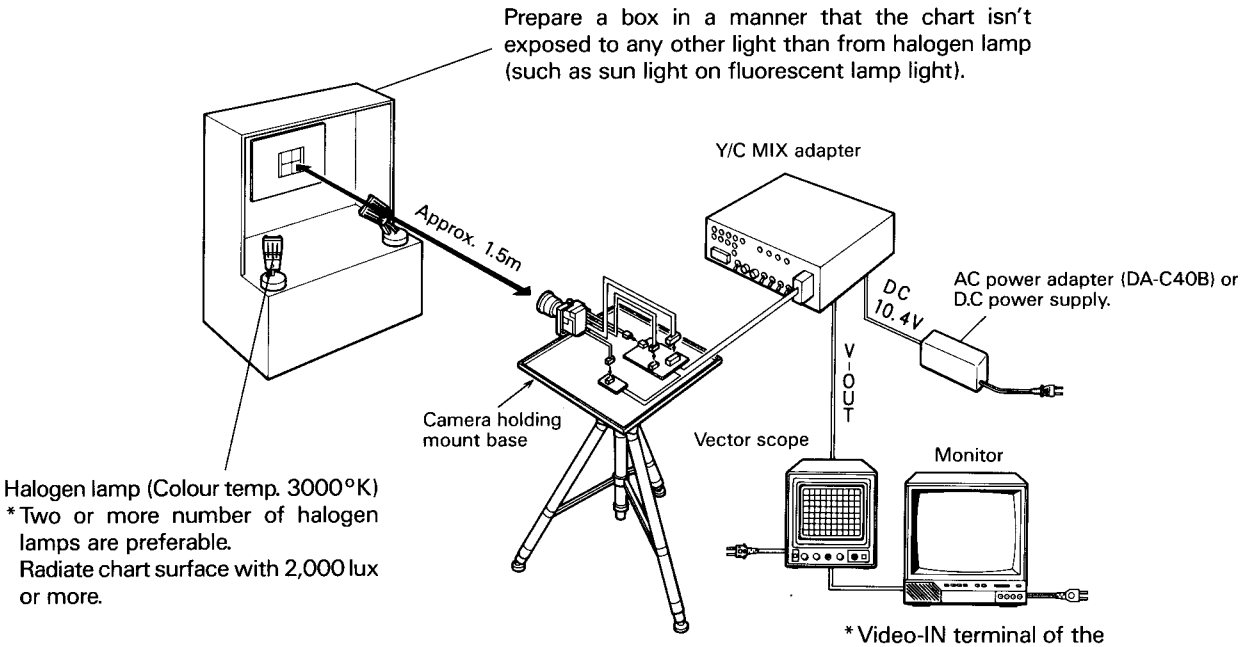
1-2. Other Measuring Instruments Required

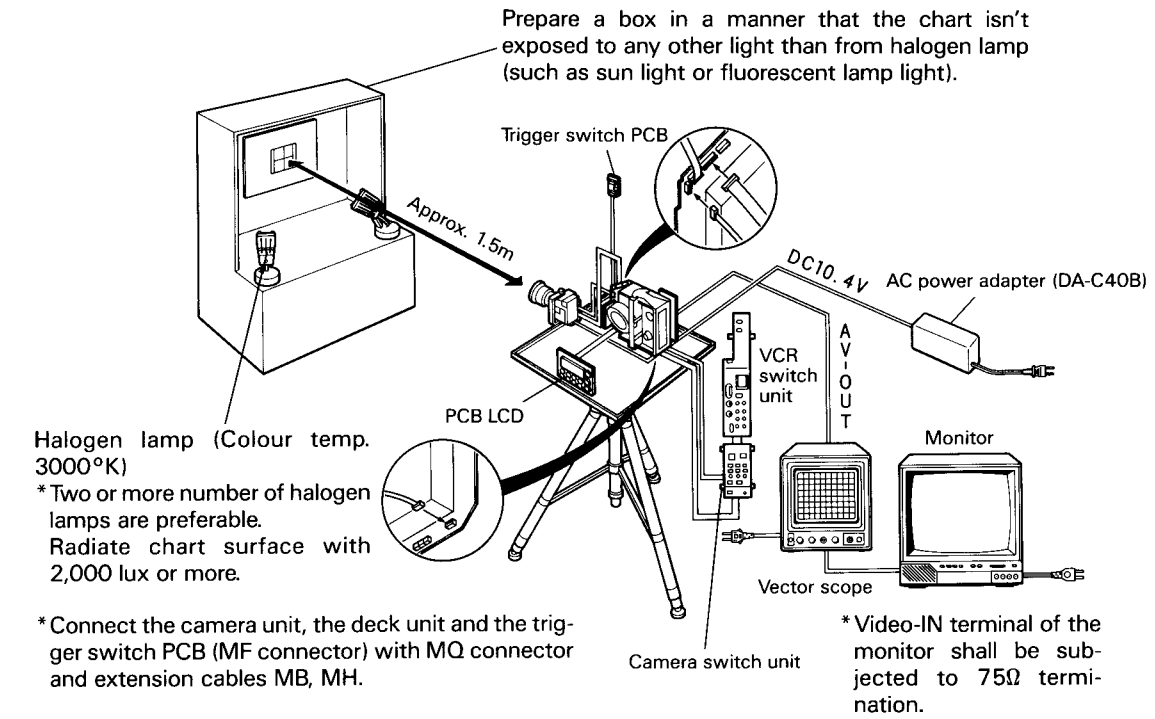
- ○ Oscilloscope
- ○ Vector scope
- ○ Colour monitor (Colour TV)
- ○ Illuminance meter
- ○ Digital voltmeter

2. Standard Connection of Camera Unit at Adjustment

2-1. When Y/C MIX Adapter is Used



2-2. When No Y/C MIX Adapter is Used



3. Preparation before Adjustment and Check Items

3-1. Prior to Adjustment

In almost all cases, it becomes necessary to adjust the electrical circuit when any electrical part is replaced.
At any trouble of the electrical circuit, be sure to detect the point of trouble using measuring instruments, perform repair or replacement, then proceed to adjustment.
Refrain from making any adjustment, indiscretely without locating the point of trouble.
There are some items which do not requires adjustment depending on kind of trouble. In actual servicing, adjust the required items only.

3-2. Preparation and Check Items

1. Unless otherwise indicated in particular, set the camera unit at the following mode at the time of adjustment.

Shutter	Standard (1/50 sec.)
Focus	Manual (Just in focus)
Iris (ALC Switching)	Manual (Click position) * Set at AUTO when Y/C MIX adapter is used
White balance	 3,000°K

2. As the illumination devices for the chart, be sure to use the type of 3,000°K colour temperature, and set the device so that illuminance of about 2,000 lux is kept on the chart face. Uneven illuminance on the chart face inversely affects adjustment. Install the illumination device so that the chart face is illuminated evenly. (Light source of two or more lamps is preferable.)
3. Adjustment related to white balance is affected by the light falling onto the white balance sensor. Be sure to attach the diffusion plate (take off the lower case and attach with adhesive tape) to the front side of the white balance sensor. Also be careful so that any other light than those from the halogen lamp, sun light or fluorescent lamp light for example, is not allowed into the sensor.
4. Unless otherwise specified, use oscilloscope of 10:1 probe and PCB EC TP-2JC (Y-OUT) as the external trigger.
5. For adjusting the camera unit, refrain from using any extension cable (opening the PCB) as far as possible.

3-3. Camera Unit Adjusting Procedure

The following adjustment procedure is in the order required for adjusting all the potentiometers of the camera unit. Some items, therefore, need not be adjusted depending on kind of repair. Perform adjustment of the required items only according to kind of servicing.

Optical Focus Adjustment

1. Back focus adjustment
2. Horizontal & zoom tracking adjustment

Electrical Adjustment

Sensor drive
1. Adjustment of 25MHz

Y/C system
2. Sub-straight voltage adjustment

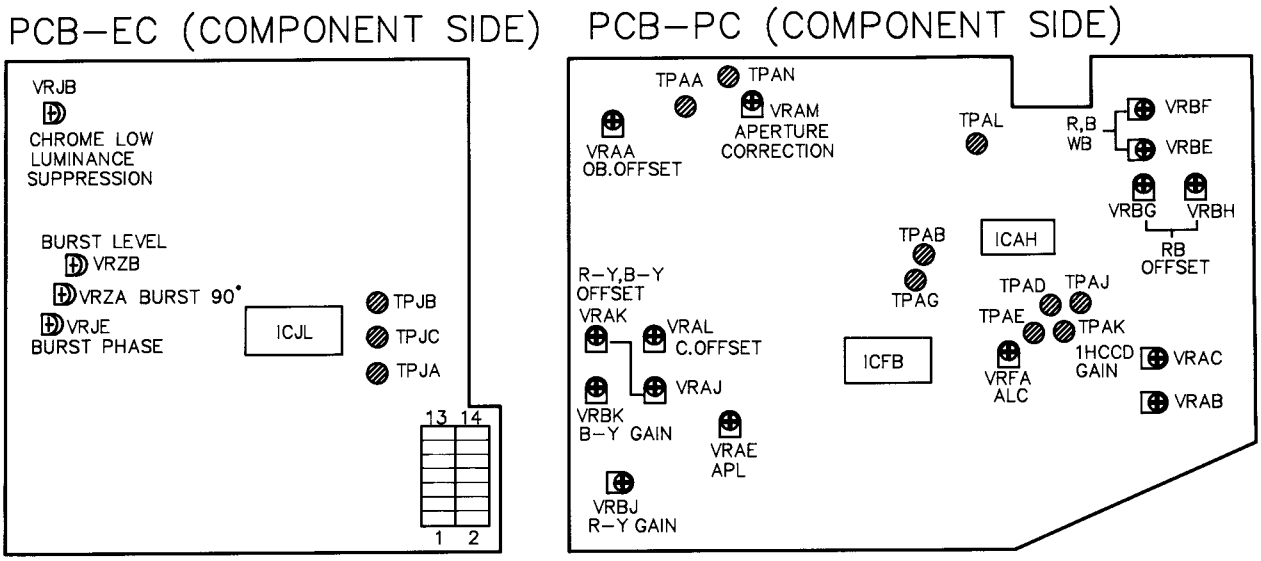
Y system
3. OB offset adjustment
4. ALC (Iris) adjustment
5. APC adjustment
6. 1H CCD gain adjustment
7. AP (Aperture) correction adjustment

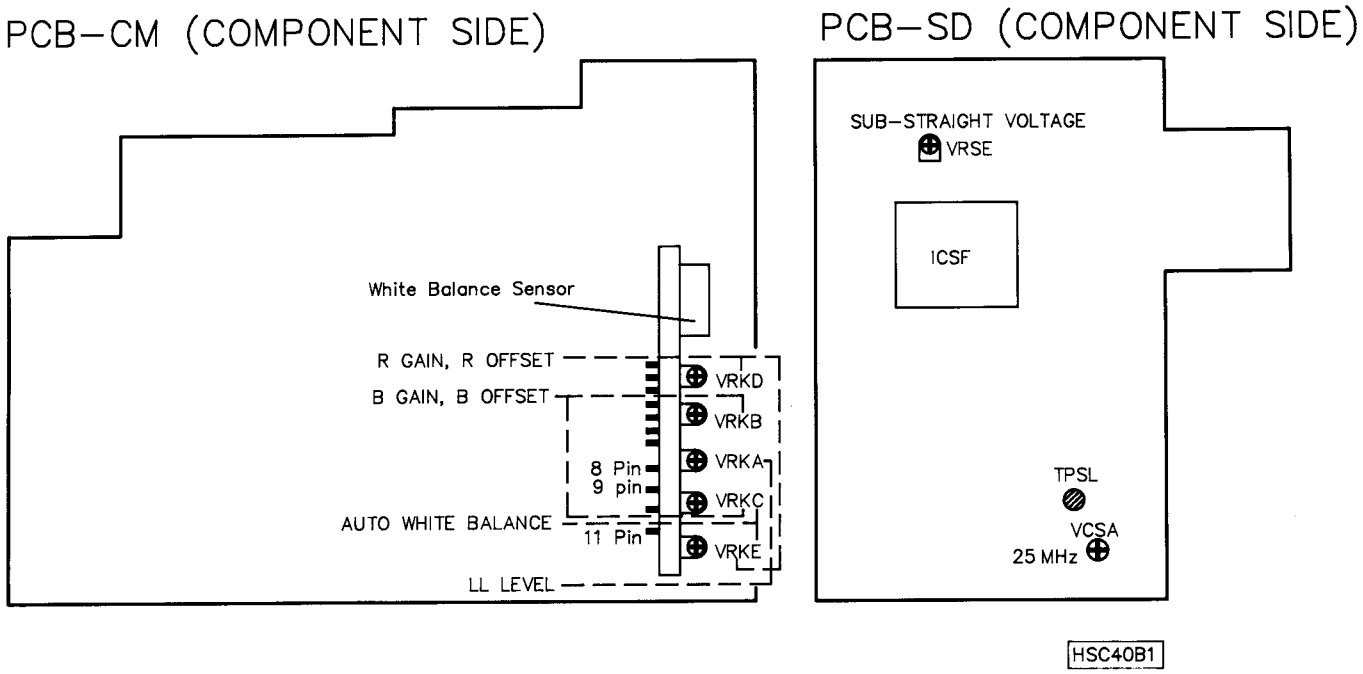
C system
8. R-Y, B-Y offset adjustment
9. C (Carrier) offset adjustment
10. Chroma low luminance suppress adjustment
11. R, B offset adjustment
12. R, B WB adjustment

Auto WB system
13. LL level adjustment
14. R gain, R offset adjustment
15. B gain, B offset adjustment
16. Auto white balance check & adjustment

C system
17. Burst level adjustment
18. B-Y gain adjustment
19. R-Y gain adjustment
20. Check and adjustment of chroma angle and gain

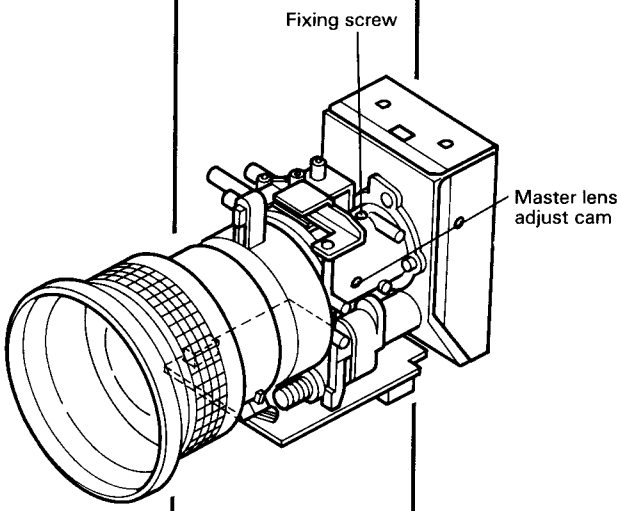
4. Location of Adjustment Points (Camera Section)





OPTICAL FOCUS ADJUSTMENT

Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Back focus	Lens ND2 (Iris open)	Back focus adjusting screwdriver		(1) Shoot an object at a sufficient distance (a object such as a calendar at a distance of more than 10m and of which focus can be checked.) (2) Keep zoom at TELE end and fit the focus ring of the lens manually. (Judge the focus while seeing the monitor screen.) (3) Check the image by driving zoom to WIDE end. (4) If out of focus, loosen the fixing screw and adjust the master lens adjust cam with the back focus adjusting screwdriver to sharp focus. (5) Tighten the fixing screw. (6) Drive zoom from WIDE end to TELE end and check if the object is in focus. (7) At TELE end, adjust the focus ring again manually, then drive zoom to WIDE as it is, and make sure that the object is in focus in both case. (8) Lock the fixing screw.



Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Horizontality and zoom tracking (Optical axis)	colour chart * Check and adjust horizontality of the tripod attached to the camera with a level vial. Lens ND2 (Iris open)	 $\frac{A}{H} \times 100 \leqq 25\%$ $\frac{B}{V} \times 100 \leqq 35\%$		(1) At WIDE end, fit the chart centre to the monitor centre. (2) Make sure that the horizontal line of the colour bar chart is parallel to that of the monitor. (Angle difference shall be 4.5 max.) (3) Drive zoom from WIDE to TELE end, and make sure that off set of the chart centre is not more than 25% horizontally and 35% vertically on the monitor screen and that there is no skipping of image in the middle of zooming. (4) If the specifications can't be met, perform assembly adjustment of the CCD plate and the PCB SD, then repeat adjustment of above (1) to (3) again. * Slacken the four screws shown below, move the PCB SD with respect to CCD image sensor then tighten the four screws again. *Draw horizontal and vertical centre lines on the moni tor screen in advance as illustrated above.				

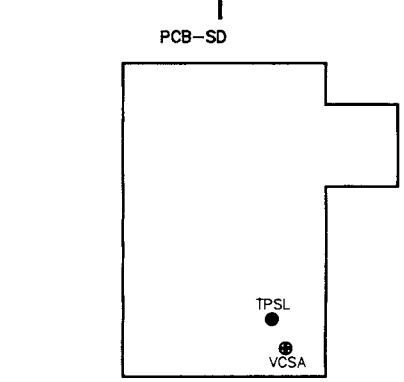
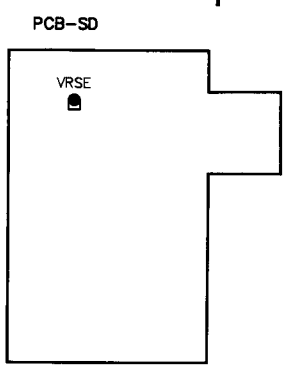
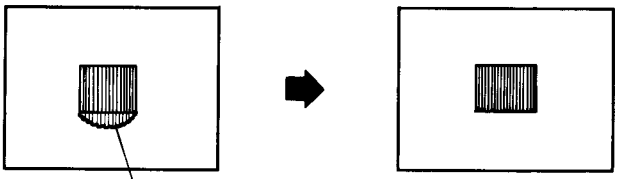
Electorical Adjustment

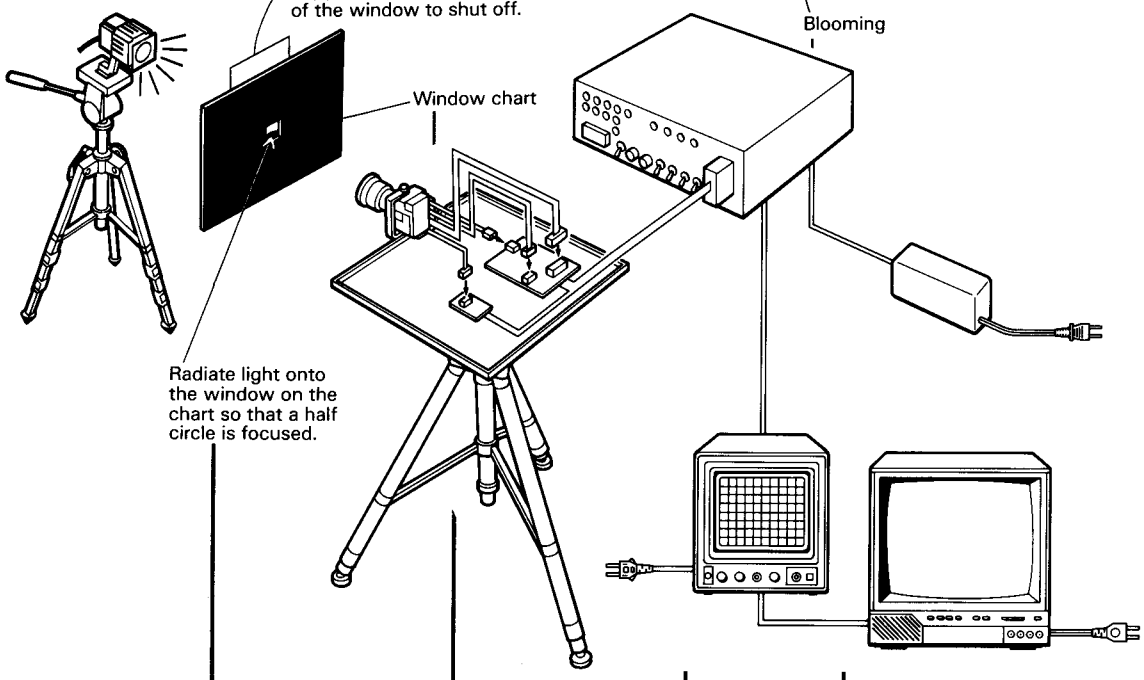
(Note) The numbers attached to each test point and adjusting point are not printed on the PCB. (Example TP2AE→TPAE (print on PCB)

Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
25MHz		Frequency counter	TPOSL (PCB SD	(1) Connect the frequency counter to TPOSL (PCB SD). (2) Adjust VCOSA (PCB SD) so that frequency falls within 25.750000 MHz ± 60Hz.
Sub-straight voltage (Decrease of blooming)	Iris open *Open by iris (APL changeover) manual.			(1) Set up as illustrated below and project the whole window chart on the whole monitor screen. (2) While observing the monitor, adjust VROSE (PCB SD) to the point where blooming disappears. * Stop adjusting immediately when blooming disappears. Be careful not to over turn the VR.

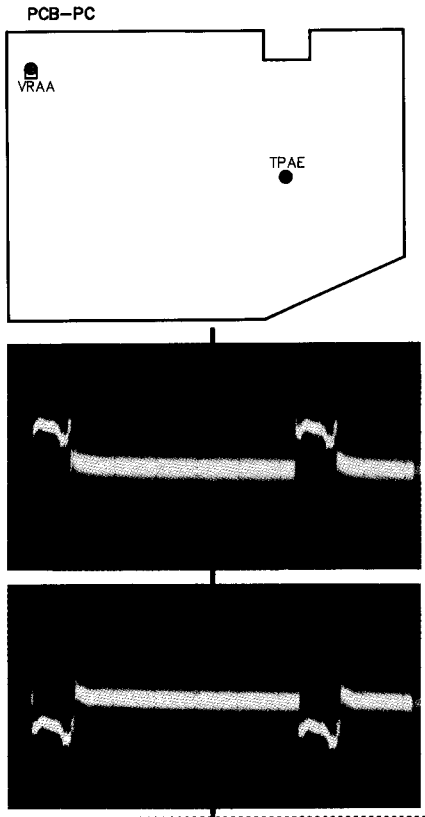


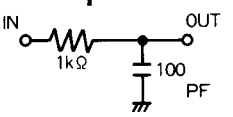


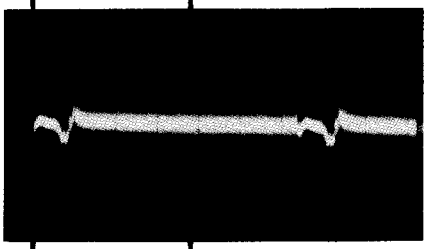


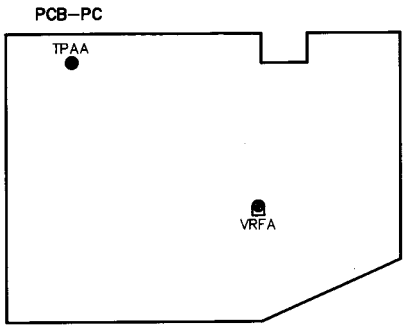


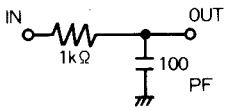
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
OB. OFFSET	Lens shut-off	Oscilloscope DIV 5mV TIM 10 μ sec.	TP2AE (PCB PC) LPF is used	(1) Cap the lens. (2) Observe TP2AE (PCB PC) with an oscilloscope through LPF jig. (3) Adjust VR2AA (PCB PC) to the minimum offset.
ALC	colour chart	Oscilloscope DIV 10mV TIM 10 μ sec.	TP2AA (PCB PC) LPF is used	(1) Make sure that iris (APL switch) is turned to AUTO. (If Y/C MIX adapter isn't used, turn ON the full auto switch on the PCB LCD.) (2) Take the colour chart at the standard picture angle. (3) Observe TP2AA (PCB PC) with an oscilloscope through LPF jig. (4) Adjust VR5FA (PCB PC) so that the level of peak white comes to 400 ± 20mVp-p. * After adjustment, apply a light shock to the camera to make sure that the adjustment isn't disturbed, and perform adjustment again if disturbed.

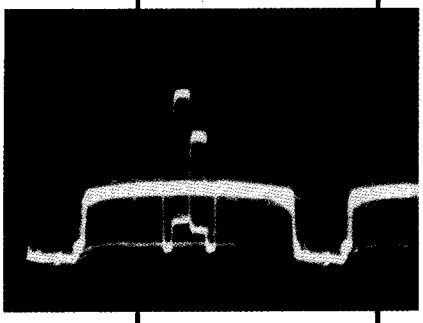




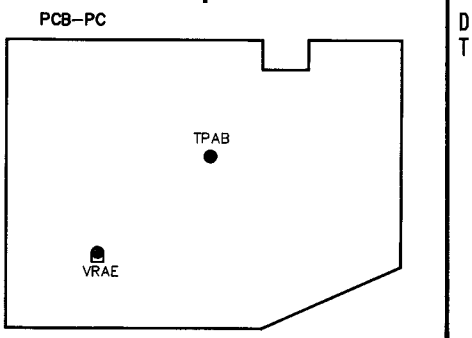


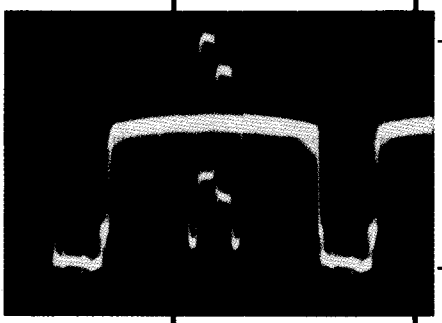


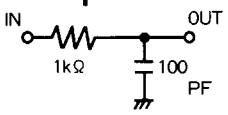


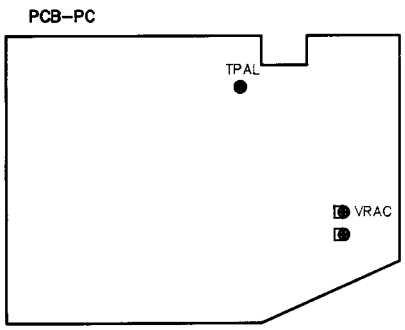


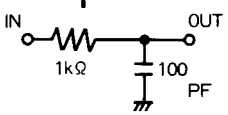
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
APL	colour chart	Oscilloscope DIV 5mV TIM 10μsec.	TP2AB (PCB PC) LPF is used	(1) Keep iris (APL switch) at auto, and take the colour chart with the standard picture angle. (2) Observe TP2AB (PC board) with an oscilloscope through LPF jig. (3) Adjust VR2AE (PC board) so that the level of peak white comes to 270±50mVp-p. * When Y/C mixing adapter isn't used, i.e. this adjustment is carried out while keeping the full auto switch on PCB LCD turned to ON, turn OFF the full auto switch after completing the adjustment to return to the initial setting mode.
1HCCD gain	colour chart	Oscilloscope DIV 5mV TIM 10μsec.	TP2AL (PCB PC) LPF is used	(1) Observe TP2AL (PCB PC) on an oscilloscope. (2) Adjust VR2AC (PCB PC) so that waveform amplitude is minimized. * Make sure that volume adjust position is near the centre. If it is at an end, perform adjustment again so that the adjust position comes near to the centre. jig.

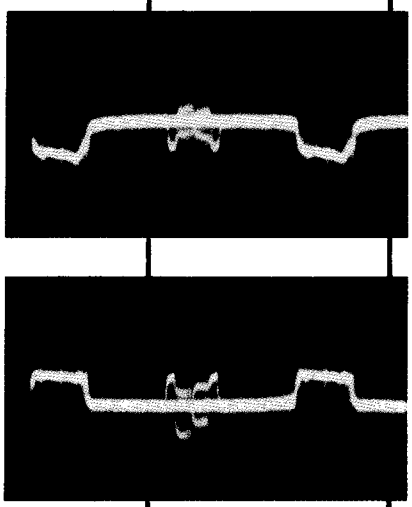


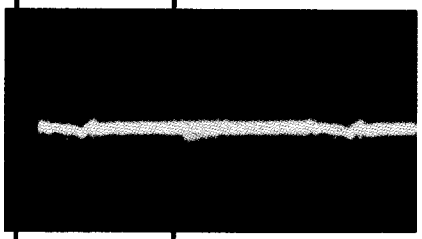




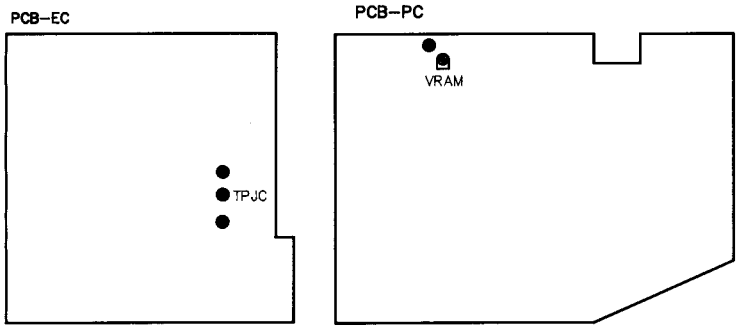


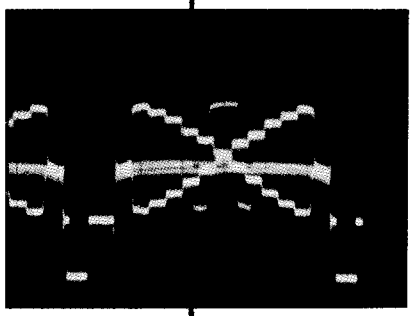




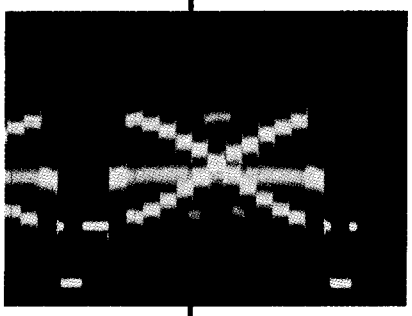


Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Aperture correction	Grey scale	Oscilloscope	TP2JC (PCB EC)	(1) Observe TP2JC (PCB EC) on an oscilloscope. (2) Adjust VR2AM (PCB PC) so that pre-shoot and a over-shoot of waveform are slightly seen and the focus becomes the optimum on the monitor screen.

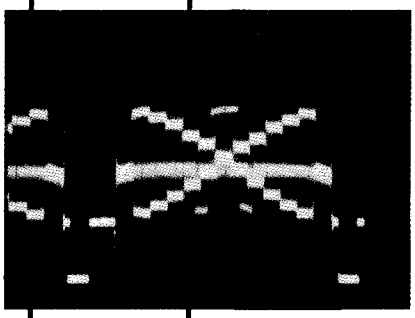




Loose focus



Sharp focus



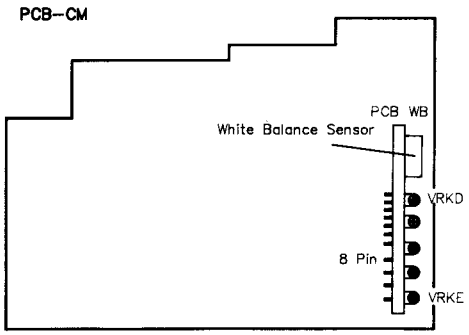
Adequate focus

Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
R-Y, B-Y OFFSET 	Lens shut-off	Vector scope SATURATION: 75% GAIN: MAX 	Video out (Y/C MIX adapter)	(1) Ground TP2AG (PCB PC) using 100μF capacitor. (2) Observe with the vector scope at the maximum sensitivity. (3) Adjust VR2AK (PCB PC) and VR2AJ (PCB PC) so that the bright point comes to the centre.
C, OFFSET 	Lens shut-off	Vector scope 	Video out (Y/C MIX adapter)	(1) Take off 100 F capacitor from the above condition. (2) Adjust VR2AL (PCB PC) while observingthe vector scope so that the bright point comes closest to the centre.

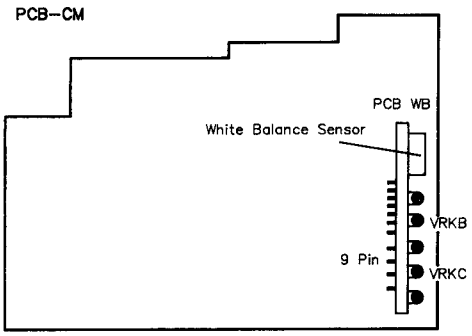
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Chroma low luminance suppression	Lens shut-off 	Vector scope SATURATION: 75% GAIN: MAX	Video out (Y/C MIX adapter) 	(1) Observe with the vector scope at the maximum sensitivity. (2) Adjust VR2JB (PCB EC) to the maximum bright point and take it as A. (3) Adjust VR2JB (PCB EC) againso that the amplitude becomes 1/2 of A.
R, B OFFSET	White chart * Use a sheet of white paper of high reflection.  	Vector scope SATURATION: 75% GAIN: MAX	Video out (Y/C MIX adapter)	(1) Make sure that white balance setting of Y/C MIX adapter is at IN1 (incandescent lamp) mode. (2) Take the white chart onto the full screen. (3) Observe with the vector scope at the maximum sensitivity. (4) Adjust VR2BG and VR2BH (PCB PC) so that the bright point comes to the centre.

Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
R, B WB PCB-PC  	White chart White balance "OUT" (☀) Lens←C2+C12	Vector scope SATURATION: 75% GAIN: Adjust for easy checking	Video out (Y/C MIX adapter)	(1) Set white balance of Y/C mixing adapter at OUT (daylight) mode. (2) Take white chart on the whole screen through C2+C12. (3) Observe with the vector scope at the appropriate sensitivity. (4) Adjust VR2BE and VR2BF (PCB PC) so that the bright point comes to lower left of the centre as illustrated below. (5) Take the filter off the lens. (6) Return white balance setting to IN1 (incandescent lamp) mode.
LL level PCB-CM  	Shut off the white balance sensor * Stick a black tape, etc.	Oscilloscope DIV 0.1V/DC	IC7WB (11) pin (PCB WB on PCB CM)	(1) Connect the oscilloscope to IC7WB (PCB WB) (11) pin. (2) Adjust VR7KA (PCB WB) slowly and fix it at the moment when indication on oscilloscope changes from "L") (lower than 1V) to sensor "H" (Over 4V). (3) Open the tape a little and make sure that indication on the oscilloscope changes to "L".

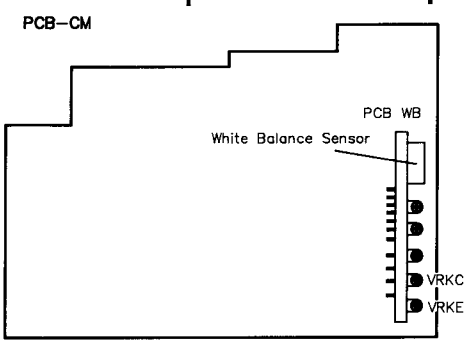
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
R gain, R offset	Attach the diffusing plate (taken off the lower case) to the white balance sensor, and illuminate to 5,000±1,000 lux. * Face the halogen lamp toward the sensor so that the light falls directly onto the sensor. (Approx. 1m) * Note that decorated part of the lens may be affected by heat if the lamp is placed too close. Sensor←C16	Digital voltmeter	IC7WB (8) pin (PCB WB on PCB CM)	(1) Radiate the white balance sensor with 5,000±1,000 lux, 3,000±50° K. (2) Connect the digital voltmeter to IC7WB(8) pin. (3) Adjust VR7KD (PCB WB) so that indication of the digital voltmeter differs by 1,000±0.05V between the sensor with C16 filter installed onto the front and the sensor without C16 filter. (4) Then adjust VR7KE (PCB WB) so that reading of the digital voltmeter becomes 2.200±0.02V when C16 filter isn't installed. (5) Make sure that reading of the digital voltmeter is 3.120±0.02V when C16 filter is installed again. If reading differs, repeat the above adjustments (3) (4) and (5).



Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
B gain, B offset	Adjust to the same mode as R gain, R offset. Sensor←Diffusing plate , C16	Digital voltmeter	IC7WB (9) pin (PCB WB on PCB CM)	(1) Radiate the white balance sensor with 5,000±1,000 lux, 3,000 ±50° K. (2) Connect the digital voltmeter to IC7WB(9) pin. (3) Adjust VR7KB (PCB WB) so that indication on the digital voltmeter differs 1,000±0.05V between the sensor with C16 filter installed onto the front and the sensor without C16 filter. (4) Then adjust VR7KC (PCB WB) so that reading on the digital voltmeter is 2.100±0.02V when C16 filter isn't installed. (5) Make sure that reading on the digital voltmeter is 3.220± 0.02V when C16 filter is installed. If not, repeat the above adjustments (3) (4) and (5).



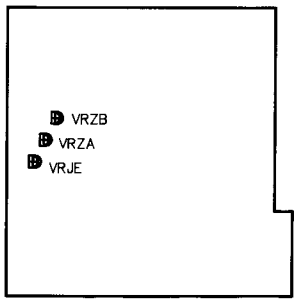
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Auto white balance	White chart (from the middle) Lens C8 Sensor←Diffusing plate C8	Vector scope SATURATION: 75% GAIN: MAX Oscilloscope DIV 10mV TIM 10 sec.	Video out (Y/C MIX adapter)	(1) Set white balance of Y/C MIX adapter at AUTO. (2) Take white chart on the whole screen. (3) Observe with the vector scope at the maximum sensitivity. (4) Make sure that the bright point is at the centre. If the point is off-positioned, adjust VR7KC and VR7KE (PCB WB) so that the bright point comes to the centre. * It may happen in some cases that motion of the bright point is slow and the point is hard to move to the centre. Repeat adjusting VR7KC and VR7KE alternatively until the point comes to the centre. (5) Attach C8 filter before the lens and the sensor respectively. * Practically, the filter can't be attached to the sensor. Hold the filter in front of the sensor. (6) Observe video OUT with the oscilloscope and make sure that carrier leak of chrome is below 70mVp-p. (7) Take the filter off the lens.

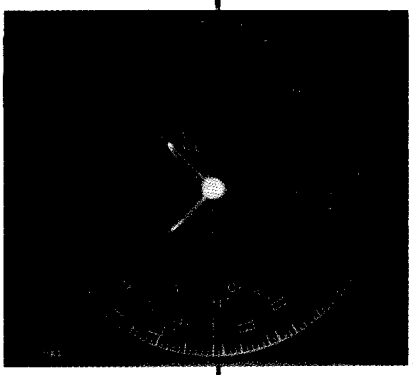


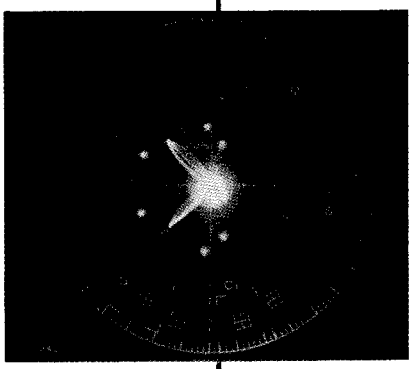
70mVp-p max.

Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Burst level	Lens shut-off colour chart	Vector scope SATURATION: 75% GAIN:Standard	Video out (Y/C MIX adapter)	(1) Observe with the vector scope at the standard sensitivity. (2) Adjust VR2ZA so that the angle between burst (N) and burst (N+1) is 90° . (3) Adjust VR2ZB so that the burst level is in 75% burst position. * If the burst have a level difference in between , Adjust it at centre. (4) Take the colour chart at the standard picture angle. (5) Set the vector scope at NTSC vector mode. (6) Adjust VR2JE so that the R bright points become only one. * The video IN terminal of the monitor connected to the vector scope shall be subjected to 75Ω termination.

PCB-EC



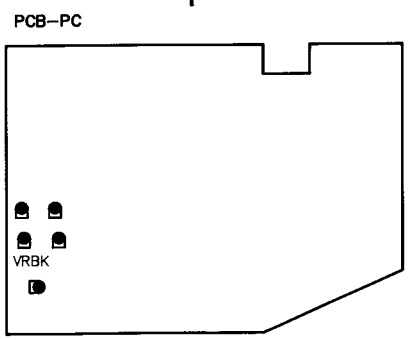


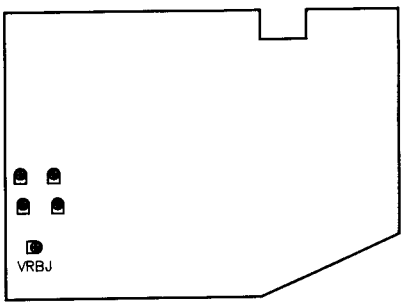


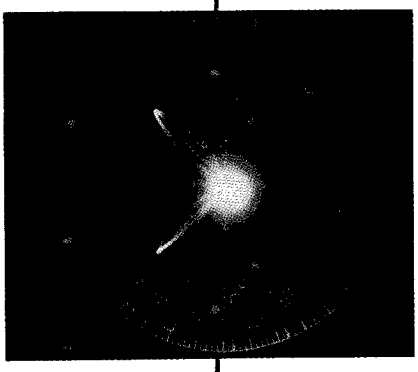
PAL mode

NTSC mode

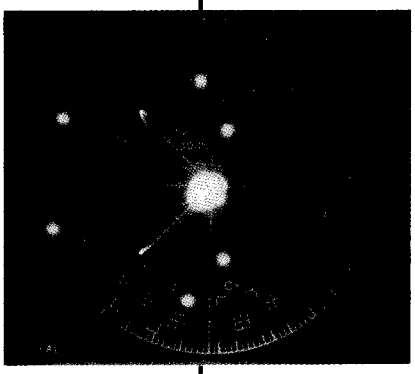
Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
B-Y gain	colour chart Sensor←Diffusing plate	Vector scope SATURATION: 75% GAIN:Adjust to easy checking	Video out (Y/C MIX adapter)	(1) Set white balance of Y/C mixing adapter at IN1(incandescent lamp) mode. (2) Take the colour chart at the standard picture angle. (3) Adjust VR2BK (PCB PC) so that the distance of Ye bright point from the centre is 1.5 times of the burst signal A.  $\frac{B}{A} = \frac{1.4}{1}$
R-Y gain	colour chart Sensor←Diffusing plate	Vector scope SATURATION: 75% GAIN:Adjust to easy checking	Video out (Y/C MIX adapter)	(1) Adjust VR2BJ (PCB PC) following B-Y gain adjustment so that the distanceof R bright point from the centre is 1.05 times of the burst signal A. (2) Perform the above B-Y and R-Y gain adjustments again to the specified value respectively.  $\frac{B}{A} = \frac{1.05}{1}$

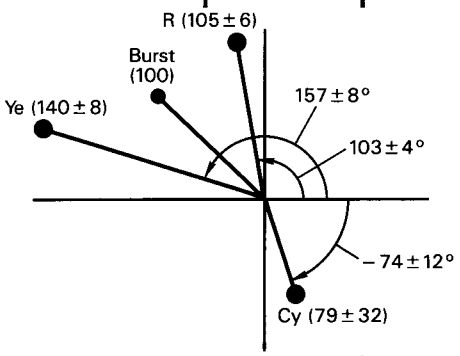






Name of adjustment	Mode (Shooting condition)	Measuring instrument	Test point	Adjustment method
Check and adjustment of chroma angle and gain	colour chart Sensor←Diffusing plate	Vector scope SATURATION: 75% GAIN:Adjust to easy checking	Video out (Y/C MIX adaptor	(1) Check the video out signal with the vector scope. (2) Be certain that the angle and gain of R, Ye and Cy are shown in left figure. If it deviates, excute the following adjustments again. ① Burst level ② B-Y gain ③ R-Y gain

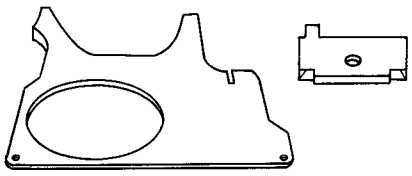


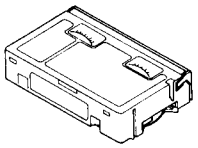


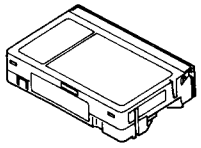
MECHANICAL ADJUSTMENTS

1. Jigs and Measuring Instruments Required for Mechanism Adjustment

1-1. Jigs for Adjustment

Master plane	Cassette torque meter	Alignment tape (PM6KE2C)
859C397030	859C360010	859C397060
		






1-2. Other Tools and Measuring Instruments Required

① Colour monitor (Colour TV)
② Oscilloscope
③ Hex key (1.5mm)
④ Box driver (4.5mm)

2. CLEANING

Cleaning of the following items is essential at servicing to maintain satisfactory performance at all times.

2-1 Cleaning the head

(1) If normal reproduction of image fails due to deposition of any foreign matter such as dust onto the head, immerse alcohol into a cloth for video head cleaning, put the cloth softly against the drum, and move the drum slowly counter-clockwise while fixing the cleaning cloth.

NOTE : Be careful not to touch directly the head tip attached to the upper drum. The head tip is of highly hard type and is brittle to impact (particularly in lateral direction) and is easily broken. Never move the head tip in lateral direction.

(2) When cleaned with alcohol, be sure to run a tape after drying fully. If drying is insufficient and alcohol is deposited onto a tape, the part of the tape may possibly be damaged.

2-2 Cleaning the tape path system (Refer to Fig. 1)

The points to be cleaned of the tape run system are ;

1. Tension arm
2. Supply impedance roller
3. FE head
4. Impedance roller A
5. Supply guide roller
6. Supply slant pole
7. Upper & lower drums
8. Takeup guide roller
9. Takeup slant pole
10. Movable slant pole
11. A/C head guide shaft
12. AE, A/C head
13. Takeup guide pole
14. Pinch roller
15. Takeup guide arm
16. Capstan shaft
17. Pinch roller guide shaft

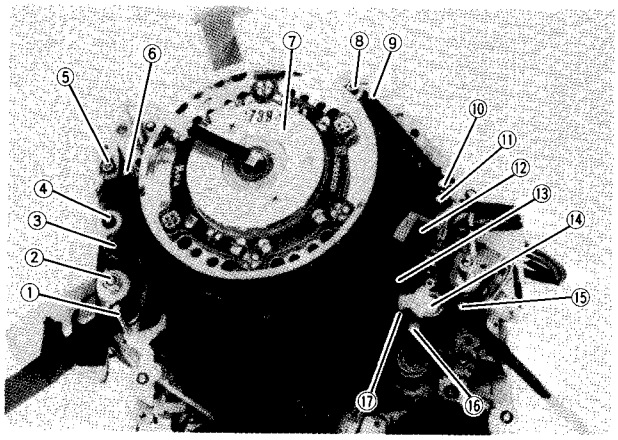


Fig.1

(1) Clean the tape run system with gauze wet with alcohol.

(2) When cleaned with alcohol, be sure to dry fully before running a tape. If drying is insufficient and alcohol is deposited onto a tape, the part of the tape may possibly be damaged.

2-3 Cleaning the reel disk driving system

(1) To the reel disk driving system, clean the brake face of the reel disk.

(2) Clean the brake face with gauge wet with alcohol.

(3) When cleaned with alcohol, start operating the system after drying fully.

3. HOW TO ATTACH THE MASTER PLANE (Refer to Fig. 2.)

(1) Take off the cassette housing. (See 4-1.)

(2) Take off the gear LA3. (See 4-2.)

(3) Turn the supply '& Takeup guide assembly to loaded mode (by turning the main cam gear counter-clockwise).

(4) Attach the master plane (Pats No. : 859C397030) while fitting the positioning hole to the positioning pin of the main plate.

Note : When the master plane is used, keep it fixed firmly by pressing part A (See Fig. 2.)

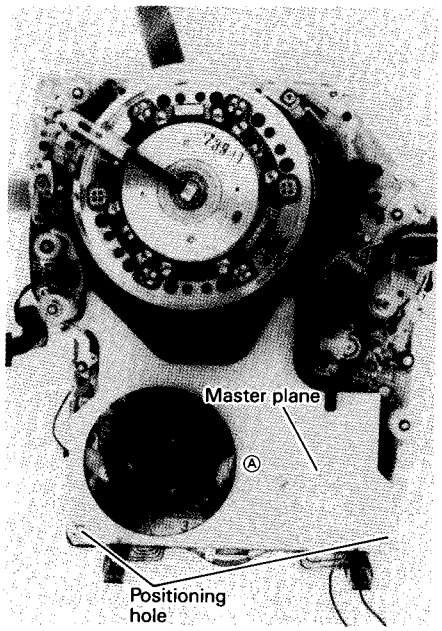

Fig.2

4. HOW TO REPLACE THE PRINCIPAL PARTS

4-1 Cassette housing replacement

4-1-1 Dismounting

(1) Keep the cassette housing closed.
(2) Remove the fixing screw (ⓐ : Fig. 3-1-1), and take the dew sensor and the lead wire off the cassette housing.
(3) Take the lead wire of FE head off the lead wire clamper of the tape end sensor. (See Fig. 3-1-2.)
(4) Remove the tape end sensor fixing screw (ⓑ : Fig. 3-1-2), and remove the tape end sensor from the cassette housing carefully so that the FPC cable may not be damaged.
(5) Take off six screws (3 at the left side ⓒ, ⓓ, ⓔ Fig. 3-1-3, and 3 at the right side ⓕ, ⓖ, ⓗ Fig. 3-1-4) fixing the cassette housing.
(6) Move the eject lever in arrow direction to change to eject mode. (See Fig. 3-1-1.)
(7) Take off two positioning pins (ⓘ, ⓙ, Fig. 3-1-4) at the right side of the cassette housing from the main plate.
(8) Take them off from the main plate by pushing the mounting seat at the right side of the cassette housing outward a little and by pulling upward.
(9) Turn the cassette housing clockwise around the positioning pin ⓚ (Fig. 3-1-3), make sure that the fixing screw ⓓ (Fig. 3-1-3) mounting seat is removed from the main plate passing under the spring-S, then take off the main plate by pulling upward carefully so that the tape end sensor and the lead wire may not be damaged.

4-1-2 Mounting

(1) Turn the cassette housing to eject mode.
(2) Temporarily fit the positioning hole ⓚ of the cassette housing with the positioning pin of the main plate in reverse order of dismounting the cassette housing, turn the cassette housing counter-clockwise around the point, then attach the left side of the cassette housing so that the positioning hole ⓛ (Fig. 3-1-3) goes under the spring S and coincides with the positioning pin of the main plate.
(3) Push the right side mounting seat of the cassette housing outward a little to lower it to the attaching position of the main plate, then attach to the main plate by fitting two positioning holes of the cassette housing (ⓘ, ⓙ : Fig. 3-1-4) to the positioning pins of the main plate.
(4) Tighten the cassette housing and fixed with six fixing screws (ⓒ, ⓓ, ⓔ, ⓕ, ⓖ & ⓗ).
(5) Attach the tape end sensor to the cassette housing.
(6) Bundle the lead wires of FE head with the lead wire clamper of the tape end sensor.
(7) Attach the dew sensor to the cassette housing.

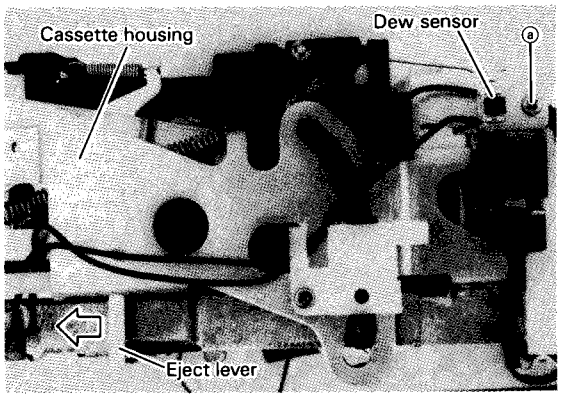

Fig.3 − 1 − 1

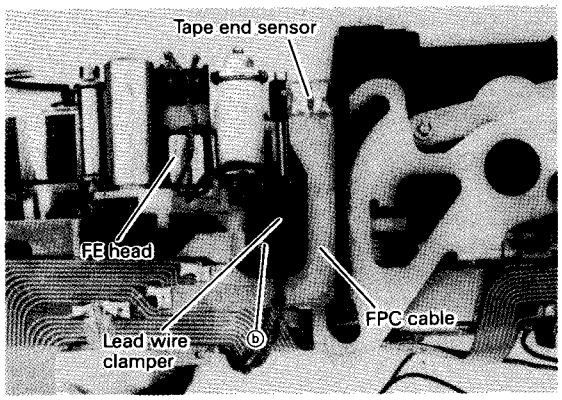

Fig.3 − 1 − 2

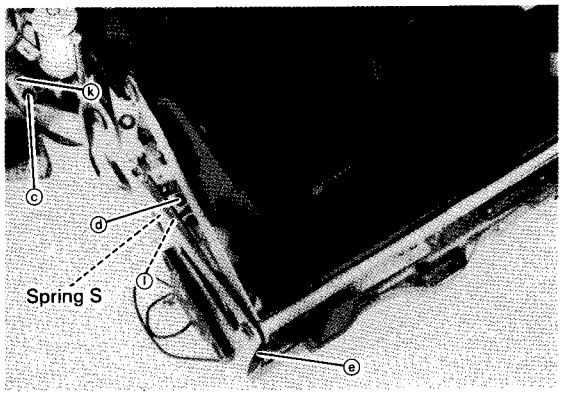

Fig.3 − 1 − 3

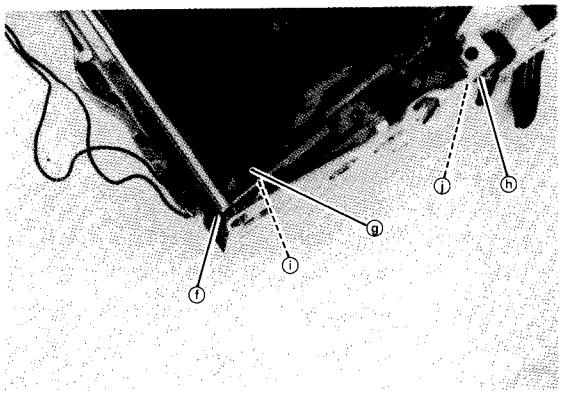

Fig.3 − 1 − 4

4-2 Gear LA3 replacement

Replacement of individual gear LA3 is seldom required but the supply & Takeup tape guide is turned to loading and unloading mode in some cases when other parts are adjusted or replaced.
The gear LA3 is taken off in such a case to turn the main cam gear.

4-2-1 Dismounting

(1) Take off the cut washer which is fixing the gear LA3 and take off the gear.

4-2-2 Mounting

(1) Attach the gear LA3 to the main plate and fix with the cut washer.

Note : The gear LA3 can be attached more easily by turning the main cam gear a little.

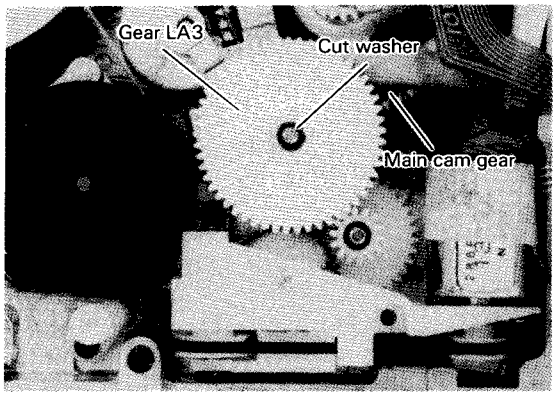

Fig.3 – 2 – 1

4-3 PCB MAD replacement

4-3-1 Dismounting

(1) Release the board holder on the main plate.
(2) Take off the connectors [AE] and [AF] on the PCB MDA.
(3) Take off the PCB MDA fixing screws and turn the board.
(4) Take off the FPC cables from the connectors [AB] and [AD] on the PCB MDA.
(5) Take the PCB MDA off the main plate.

4-3-2 Mounting

(1) Connect the FPC cable of the drum motor and the FPC cable of the capstan motor to the connectors [AD] and [AB] on the PCB MDA.
(2) Attach the PCB MDA onto the main plate and fix with the set screw and the board holder.
(3) Connect the [AE] connector from the AC head and the [AF] connector from the FE head to the connectors on the PCB MDA.

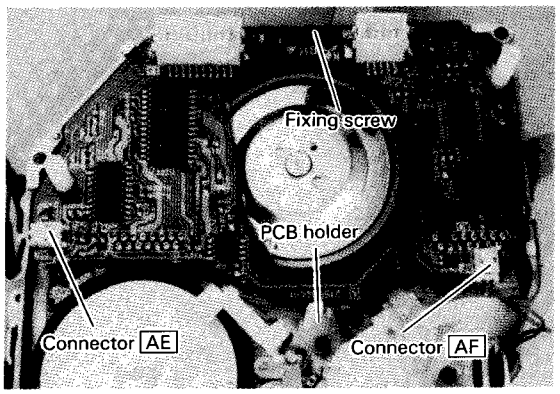

Fig.3 – 3 – 1

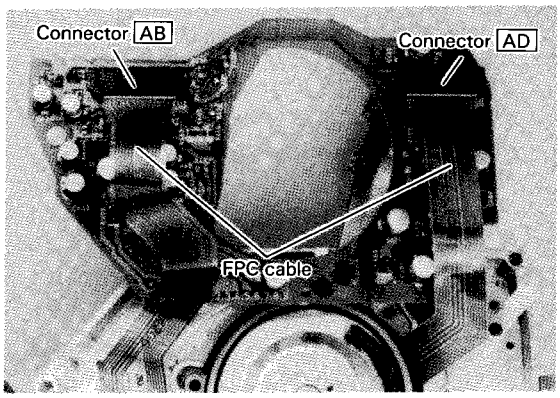

Fig.3 – 3 – 2

4-4 Drum assembly replacement

4-4-1 Dismounting

(1) Take off the fixing screw ⓐ (Fig. 3-4-1) and remove the brush.
(2) Take off the PCB MDA. (See 4-3.)
(3) While fixing the drum assembly firmly, remove three drum assembly fixing acrews (ⓑ, ⓒ, ⓓ Fig. 3-4-2).
(4) Hold up the drum assembly slowly so that the assembly may not touch any peripheral part then take off.

Note : The Takeup tape guide stopper is positioned close to the drum assembly. In detaching and attaching the drum assembly, be careful not to put the assembly in contact with the stopper.

4-4-2 Mounting

(1) Pass the FPC cable attached to the drum assembly from the front side to the pack side of the drum assembly mounting hole.
(2) Attach the drum assembly onto the main plate so that the positioning pins on the main plate (ⓖ, ⓗ : Fig. 3-4-4) go into the positioning holes (ⓔ, ⓕ: Fig. 3-4-3) of the assembly while carefully avoiding contact with any peripheral part of the drum assembly.
(3) Fix the drum assembly with three drum assembly fixing screws (ⓑ, ⓒ, ⓓ : Fig. 3-4-2).
(4) Attach the PCB MDA.
(5) Attach the brush.

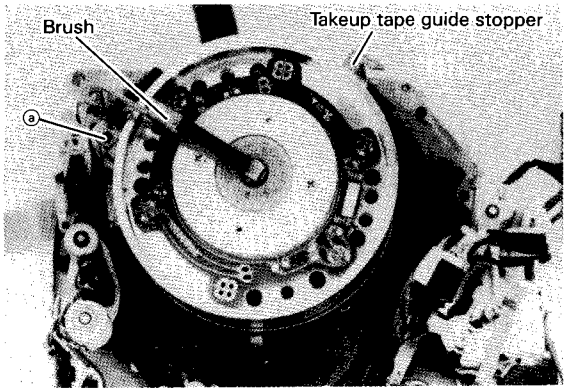

Fig.3 − 4 − 1

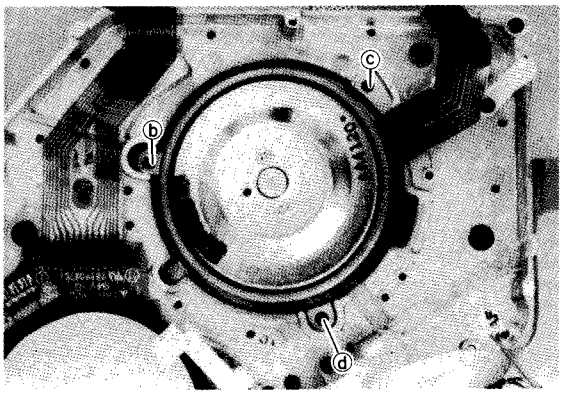

Fig.3 − 4 − 2

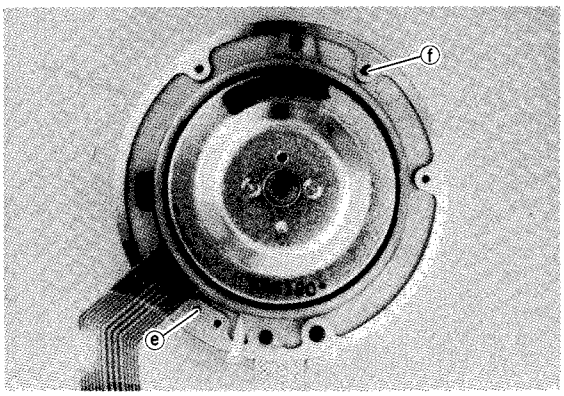

Fig.3 − 4 − 3

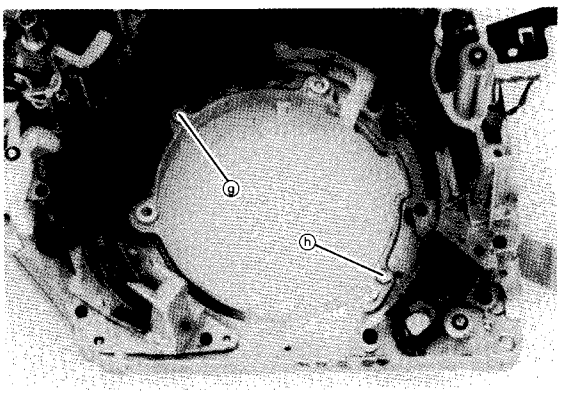

Fig.3 − 4 − 4

4-5 Upper drum replacement

4-5-1 Dismounting

(1) Remove the fixing screw ⓐ (Fig. 3-5-1) and take off the brush.

(2) Remove solder from the solder terminals of each head (4 terminals to each head) on the periphery of the upper drum. (See Fig. 3-5-2)

(3) Take off two upper drum fixing screws (ⓑ, ⓒ : Fig. 3-5-2) on the upper drum.

(4) Take the upper drum off the lower drum by holding upward.

Note : If the upper drum is hard to remove even when the two fixing screws and the solder terminals of each head are taken off, heat the root of the upper drum fixing screws with a solder iron for easier removing.

4-5-2 Mounting

(1) Face the head channel position check hole of the lower drum to this side.

(2) Face the head channel position check mark of the upper drum to the right side, and attach the upper drum to the lower drum so that each terminal of the lower drum goes into the hole of each solder terminal of the upper drum.

(3) Fix the upper drum to the lower drum with two fixing screws (ⓑ, ⓒ : Fig. 3-5-2)

(4) Solder the non-soldered terminals on the upper drum.

(5) Attach the brush.

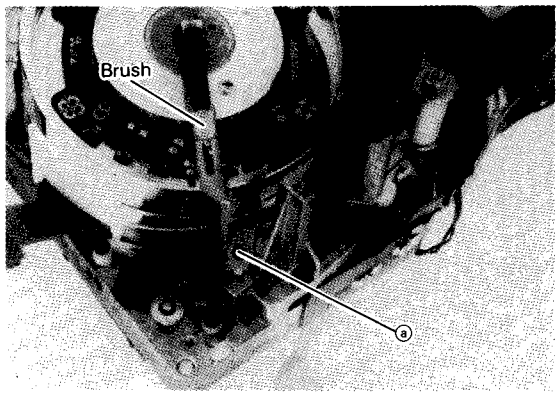

Fig.3 – 5 – 1

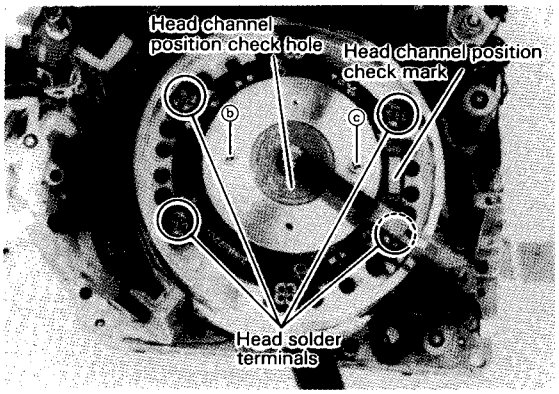

Fig.3 – 5 – 2

4-6 SYNC belt replacement

4-6-1 Dismounting

(1) Loosen two fixing screws (ⓐ, ⓑ Fig. 3-6-1) to the point where the reel idler can move.

(2) Slide the reel idler in arrow direction, and take off the SYNC belt from the capstan motor and the reel idler.

4-6-2 Mounting

(1) Slide the reel idler in arrow direction, and attach the SYNC belt to the capstan motor and the reel idler.

(2) Slide the reel idler in opposite direction of the arrow to stop, then fix with two fixing screws (ⓐ, ⓑ : Fig. 3-6-1).

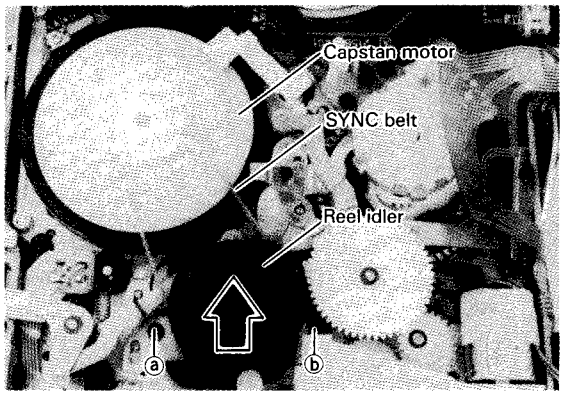

Fig.3 – 6 – 1

4-7 Capstan motor replacement

4-7-1 Dismounting

(1) Remove the cassette housing. (See 4-1.)
(2) Take off the PCB MDA. (See 4-3.)
(3) Take off the SYNC belt. (See 4-6.)
(4) Remove the fixing screw ⓐ (Fig. 3-7-1) and take off the capstan brake.
(5) Remove the fixing screw ⓑ (Fig. 3-7-1) and take off the cam gear hold plate.
(6) While fixing the capstan motor firmly, take off three fixing screws (ⓒ, ⓓ, ⓔ : Fig. 3-7-2) from the front side of the main plate, and take out the capstan motor slowly from the rear side of the main plate using care so that the motor may not come in contact with any peripheral part.

4-7-2 Mounting

(1) From the rear side of the main plate, attach the capstan motor carefully so that the motor may not come in any peripheral part, then fix from the front side of the main plate with three fixing screws (ⓒ, ⓓ, ⓔ : Fig. 3-7-2).
(2) Mount the cam gear hold plate onto the main plate so that the positioning pins coincide with the positioning holes on the main plate, then fix with the fixing screw ⓑ (Fig. 3-7-1).
(3) Mount the capstan brake so that the positioning pins coincide with the positioning holes on the main plate, then fix with the fixing screw ⓐ (Fig. 3-7-1).
(4) Attach the SYNC belt.
(5) Attach the PCB MDA.
(6) Attach the cassette housing.

4-8 Loading motor & loading belt replacement

4-8-1 Dismounting

(1) While keeping the cassette housing under eject mode, remove the loading motor assembly fixing cut washer (Fig. 3-8-1) from the front side.
(2) Take off the cut washer (Fig. 3-8-2) which is fixing the gear LA3, and remove the gear.
(3) Remove the fixing screw ⓐ (Fig. 3-8-2), and hold the loading motor assembly upward to take it off the main plate.
(4) Remove the loading belt from the worm LA and the loading motor. (Fig. 3-8-3)
(5) Remove two fixing screws (ⓑ, ⓒ : Fig. 3-8-3) and take the loading motor off the motor holder.

4-8-2 Mounting

(1) Attach the loading motor onto the motor holder, and fix with two fixing screws (ⓑ, ⓒ : Fig. 3-8-3).
(2) Attach the loading belt to the worm LA and the loading motor.
(3) Mount the loading motor assembly onto the main plate so that the gear LA1 mounting shaft attached to the loading motor assembly goes into the mounting hole on the main plate, then fix with the fixing screw ⓐ (Fig. 3-8-2).
(4) Mount the gear LA3.
(5) Attach the loading motor assembly fixing cut washer (Fig. 3-8-1) from the front side of the deck.

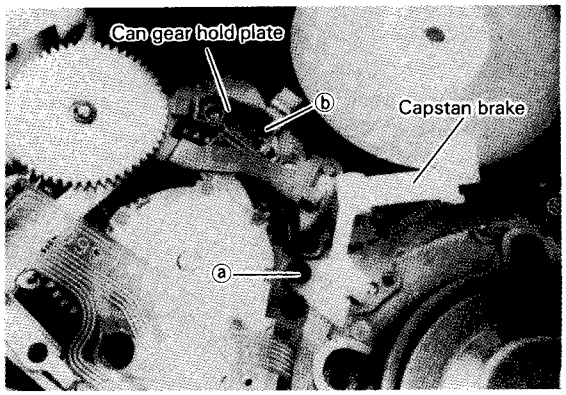

Fig.3 – 7 – 1

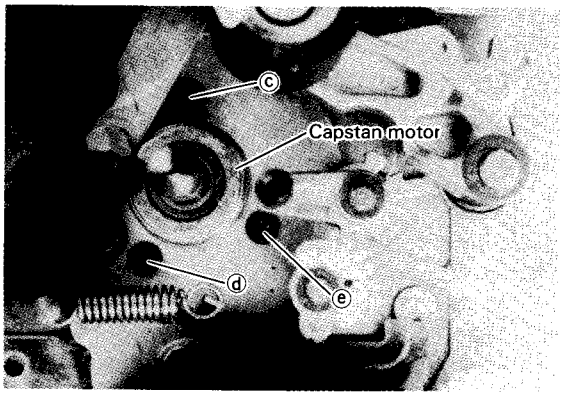

Fig.3 – 7 – 2

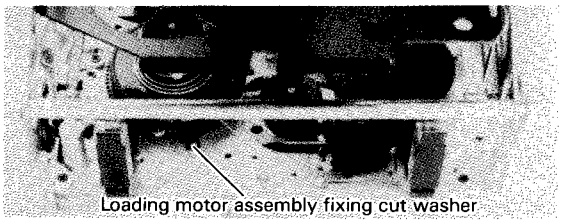

Fig.3 – 8 – 1

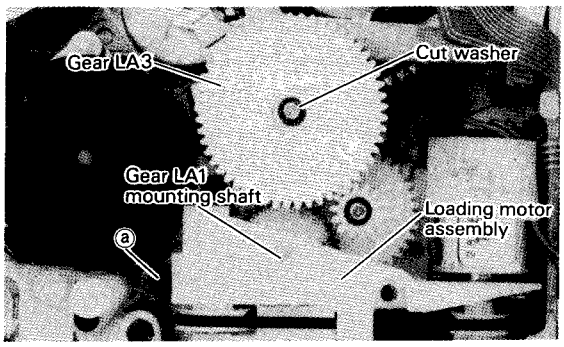

Fig.3 – 8 – 2

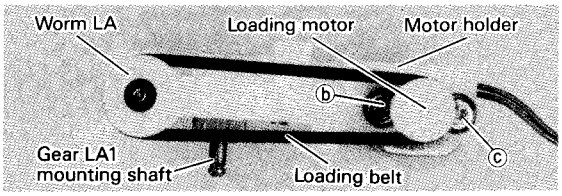

Fig.3 – 8 – 3

4-9 Pinch roller replacement

4-9-1 Dismounting

(1) Keep the cassette housing under eject mode.

(2) Remove the fixing screw ⓐ (Fig. 3-9-1) and take the door guide A off the cassette housing.

(3) Pull the pinch roller cap upward to take it off the pinch roller arm.

(4) Pull the pinch roller upward to take it off the pinch roller arm.

4-9-2 Mounting

(1) Attach the pinch roller to the pinch roller arm.

(2) Attach the pinch roller cap to the pinch roller arm so that the positioning shaft of the pinch roller arm goes into the positioning hole of the pinch roller cap.

(3) Attach the door guide A to the cassette housing so that the positioning pin of the door guide A goes into the positioning hole of the cassette housing, then fix with the fixing screw ⓐ (Fig. 3-9-1).

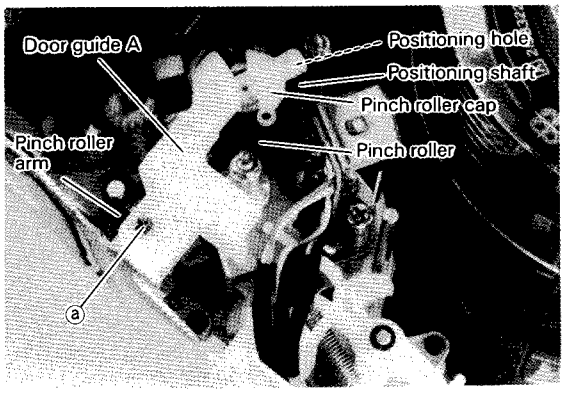

Fig.3 − 9 − 1

4-10 Mode switch replacement

4-10-1 Dismounting

(1) Remove the connector AF on the PCB MDA. (See Fig. 3-10-1.)

(2) Remove two mode switch fixing screws (ⓐ, ⓑ : Fig. 3-10-1) and take the mode switch off the main plate.

(3) Remove solder of 5 solder terminals of the FPC cable soldered to the mode switch , and take off the FPC cable from the mode switch. (See Fig. 3-10-2.)

4-10-2 Mounting

(1) Match the check-up marks on the mode switch.

(2) Practice fine adjustment by turning the gear of the mode switch while checking with a tester so that the circuits between the common terminal of the mode switch and each terminal are conducted in the following state ;

Note : Use a tester of ×1000 range.

P0 ..... Conducting

P1 ..... Conducting

P2 ..... Open

P3 ..... Conducting

(3) Attach the mode switch onto the main plate while carefully preventing the mode switch gear from turning and in the manner that the gear is meshed with the main cam gear (centre side), and fix the switch with two fixing screws. (ⓐ, ⓑ : See Fig. 3-10-1.)

(4) Connect the connector AF on the PCB MDA.

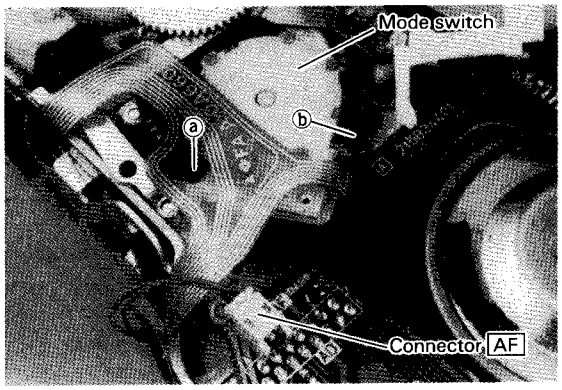

Fig.3 − 10 − 1

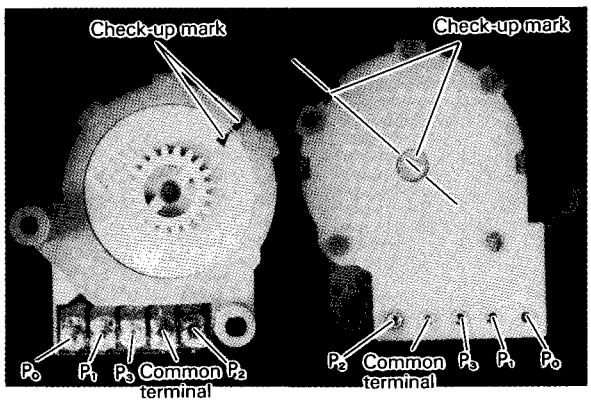

Fig.3 − 10 − 2

4-11 Supply reel disk replacement

4-11-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the cut washer (Fig. 3-11-1) which is fixing the supply reel disk.
(3) Take the reel disk off the main plate by moving the brake S in arrow direction.

4-11-2 Mounting

(1) Make sure that the thrust washer is attached to the reel disk mounting shaft.
(2) Move the brake S in arrow direction and attach the reel disk to the reel disk mounting shaft.
(3) Make sure that the supply reel disk turns smoothly while the brake S is kept at the moved position.
(4) Mount the master plane. (See Para. 3 on page 46.)
(5) Place a square for height adjustment (reel disk measuring side : REEL-M mark) on the master plane.
(6) Slide the height measuring part of the square to the edge of the reel disk, and make sure that the reel disk turns smoothly at A point of the square (higher one of measuring points) and doesn't turn at B point (lower one of measuring points).
Check this in two directions of X axis and Y axis.
(7) If the result of the above check isn't satisfactory, adjust by changing number of the thrust washers (material code : 552C001020) attached under the reel disk.
(8) Fix the reel disk by the cut washer.
(9) Mount the cassette housing.

4-12 Reel gear A replacement

4-12-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the cut washer ⓐ (Fig. 3-12-1) which is fixing the gear TU1-A, and remove the gear TU1-A from the main plate.
(3) Take off the cut washer ⓑ (Fig. 3-12-1) which is fixing the reel gear A.
(4) Take the reel gear A off the main plate while moving the lever (for attaching the right side of the spring) of the cam plate assembly shown in Fig. 3-12-1 a little to the right.

4-12-2 Mounting

(1) Make sure that the thrust washer is attached to the reel gear A mounting shaft.
(2) Move the lever (for attaching the right side of the spring) of the cam plate assembly shown in Fig. 3-12-1 slightly to the right.
(3) Attach the reel gear A to the main plate so that the lower gear of the reel gear A is meshed with the gear of the reel gear lock unit, then fix with the washer ⓑ (Fig. 3-12-1).
(4) Make sure that the thrust washer is attached to the gear TU1-A mounting shaft.
(5) Attach the gear TU1-A and fix with the cut washer ⓐ (Fig. 3-12-1)
(6) Attach the cassette housing.

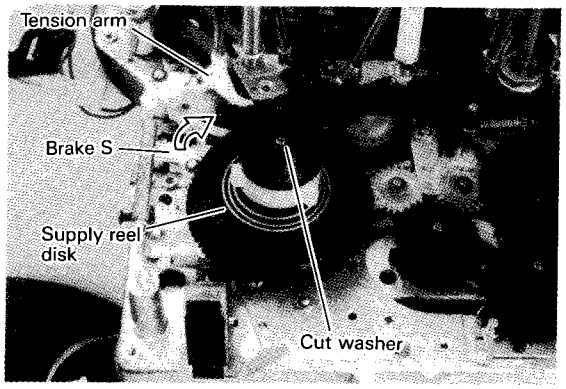

Fig.3 – 11 – 1

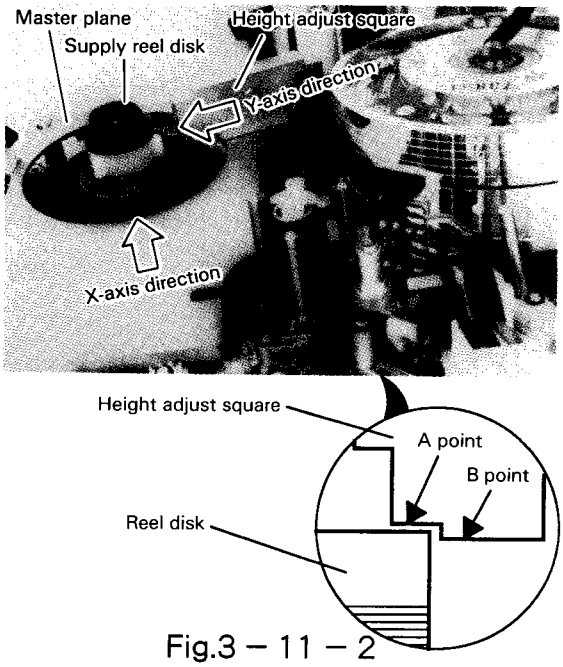

Fig.3 – 11 – 2

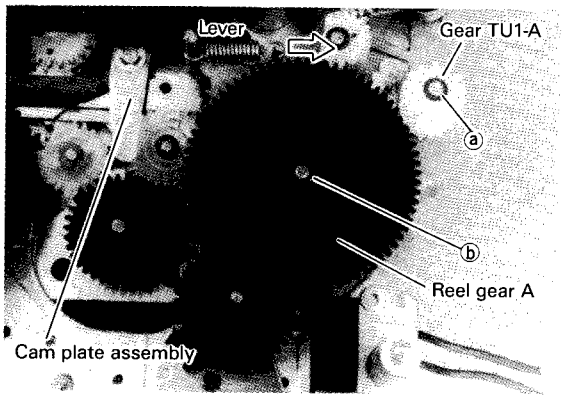

Fig.3 – 12 – 1

4-13 AC head replacement

4-13-1 Dismounting

(1) Keep the cassette housing under eject mode.
(2) Remove the fixing screw ⓐ (Fig. 3-13-1), and take the door guide A off the cassette housing.
(3) Remove the connector [AE] on the PCB MDA.
(4) Take off the lead wires connected to the AC head from the lead wire holder. (Fig. 3-13-1)
(5) Remove the fixing screw ⓑ (Fig. 3-13-1) and take off the lead wire holder.
(6) Remove the nut S which is fixing the AC head assembly while holding the head assembly so as not to come in contact with the peripheral parts. (See Fig. 3-13-2.)
(7) While pressing the AC arm spring, hold the AC head assembly upward to take if off the AC head base plate.
(8) Remove three screws (ⓒ, ⓓ, ⓔ: Fig. 3-13-3) which are fixing the AC head to the AC head arm and the AC spring, then take the AC head off the AC head arm.
(9) Remove the lead wires connected to the AC head.

4-13-2 Mounting

(1) Solder the lead wires to the AC head.
(2) With the flange screw ⓔ (Fig. 3-13-3) and the AC spring, attach the AC head to the AC arm.

Note : Edge of the flange screw ⓔ may tighten and fix the AC head in some cases. Move the AC head for trial to make sure that the head isn't fixed.

(3) Fix the AC head with two screws (ⓒ, ⓓ : Fig. 3-13-3) so that the mounting face of the AC head is kept parallel to the AC head arm.
(4) Attach the AC head assembly to the AC head base plate so that one end of the AC arm spring is hooked onto the AC head base plate and the other end onto the AC head arm. (See Fig. 3-13-2.)
(5) Attach the nut S (Fig. 3-13-2) to the AC head assembly mounting shaft, and tighten to the point where the front end of the AC head arm (part A in Fig. 3-13-4) comes down to the bottom.

Note : If the nut S is tightened over the point where the front end of the AC head arm comes to the bottom, the front end goes up in reverse.

(6) Turn the nut S 3/4 of a turn counter-clockwise.
(7) Attach the lead wire holder onto the AC head base plate, and bind the lead wires connected to the AC head with the lead wire holder.

Note : When binding the lead wires, give allowance to the lead wires so that no load is applied to the AC head.

(8) Attach the door guide A.
(9) Connect the connector [AE] to the connector on the PCB MDA.
(10) Practice adjustment of the AC head as described in Para. 5-4.

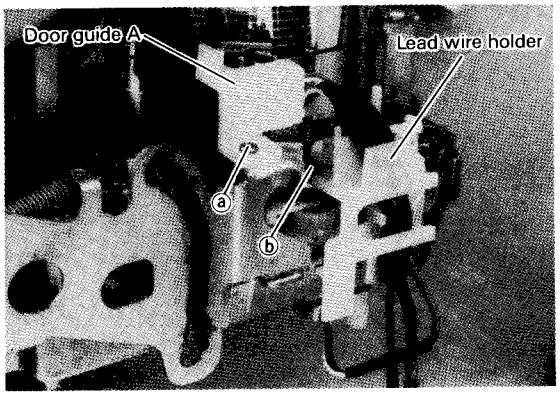

Fig.3 – 13 – 1

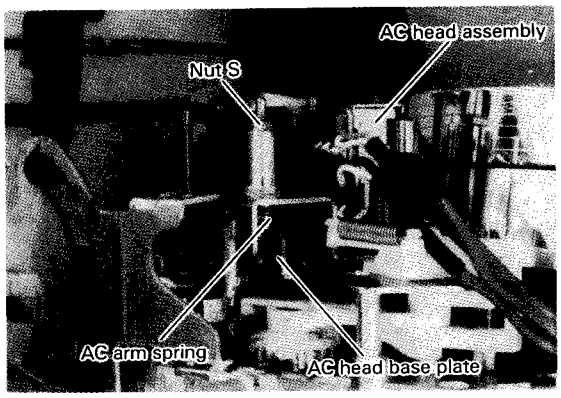

Fig.3 – 13 – 2

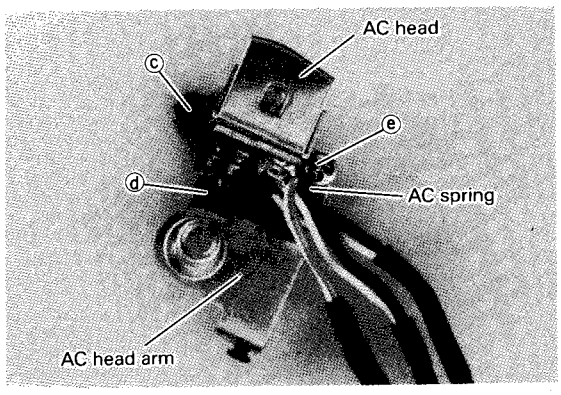

Fig.3 – 13 – 3

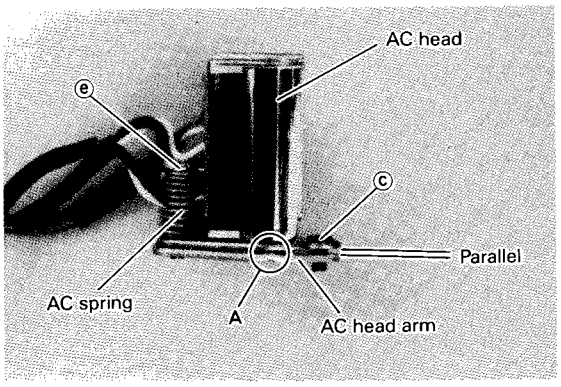

Fig.3 – 13 – 4

4-14 FE head & supply impedance roller replacement

4-14-1 Dismounting

(1) Remove the cassette housing. (See Para. 4-1.)
(2) Take off the gear LA3 from the rear side of the deck. (See Para. 4-2.)
(3) Turn the main cam gear counter-clockwise to keep the tape guide under loading mode.
(4) Disconnect the connector AF on the PCB MDA.
(5) While pressing the upper impedance flange, take off the nylon nut which is fixing the FE head assembly and the supply impedance roller. (See Fig. 3-14.1.)
(6) Take off the upper impedance flange, impedance roller, impedance sleeve and the lower impedance flange.
(7) Take off the FE spring, IMP washer, and the FE head arm assembly.
(8) Take off the lead wire of the FE head from the lead wire clamper.
(9) Remove the FE head fixing screw and take the FE head off the FE head arm.

4-14-2 Mounting

(1) Attach the FE head to the FE head arm and fix with the fixing screw. (See Fig. 3-14-2.)
(2) With the clamper of the FE head, bind the lead wires of the FE head.
(3) Attach the FE head arm assembly onto the main plate. (See Fig. 3-14-1.)
(4) Attach the IMP washer to the main plate so that the bottom of the IMP washer goes into the positioning hole on the main plate.
(5) Attach the FE spring, lower impedance flange, impedance sleeve, impedance roller and the upper impedance flange, then softly tighten the nylon nut.
(6) Hook one end of the FE spring onto the IMP washer, and the other end onto the FE head arm.
(7) Mount the master plane. (See Para.3 on Page 46.)
(8) Put a square for height adjustment (supply impedance roller measuring side : S mark) onto the master plane.
(9) Slide the height measuring part of the square to the edge of the lower impedance flange, and make sure that flange height is lower than A point of the square (higher one of measuring parts) and is higher than B point (lower one of measuring parts).
(10) If the result of the checking isn't satisfactory, adjust height by turning the nylon nut.
(11) Turn the main cam gear clockwise to switch the tape guide assembly to unloading mode.
(12) Attach the gear LA3 from the rear side of the deck.
(13) Attach the cassette housing.
(14) Connect the connector AF to the PCB MDA and bind the lead wires with the clamper.

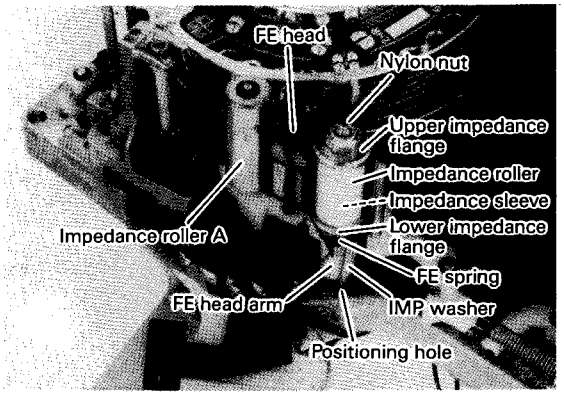

Fig.3 – 14 – 1

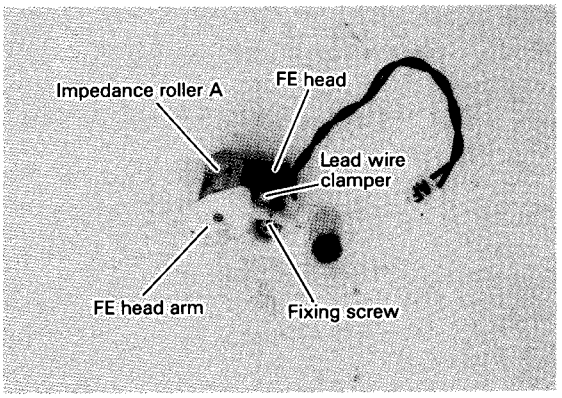

Fig.3 – 14 – 2

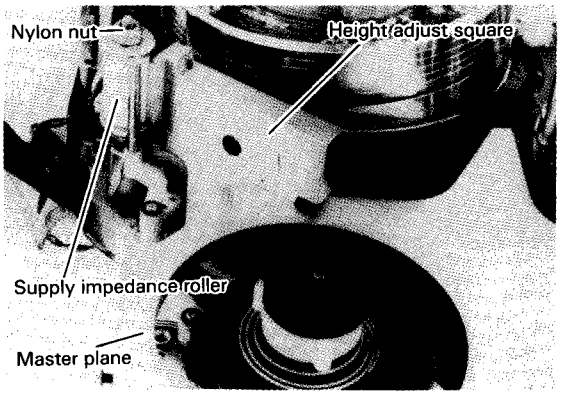

Fig.3 – 14 – 3

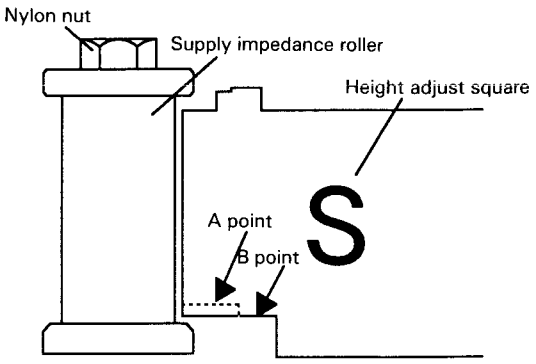

Fig.3 – 14 – 4

4-15 Slant arm replacement

4-15-1 Dismounting

(1) Remove the cassette housing. (See Para. 4-1.)
(2) Take off the pinch roller cap and the pinch roller. (See 4-9.)
(3) Take off the cut washer shown in Fig. 3-15-1, and remove the set arm LU, set arm SU and the spring AS.
(4) Disconnect the connector [AE] on the PCB MDA.
(5) Remove three fixing screws (ⓐ, ⓑ, ⓒ : Fig. 3-15-1), and take the AC plate assembly from the main plate .
(6) Take off the set arm SL and LL. (See Fig. 3-15-2.)
(7) Remove the cut washer for fixing the slant arm. (See Fig. 3-15-2.)
(8) Turn the cam gear SS counter-clockwise as shown in Fig. 3-15-3 and move the slant arm a little.
(9) Hold up the slant arm to take off the shaft.

4-15-2 Mounting

(1) Attach the slant arm to the shaft so that the slant arm gear and cam gear SS are positioned each other as illustrated in Fig. 3-15-3, then fix with the cut washer.
(2) Turn the cam gear SS clockwise to the point where the slant arm stops.
(3) Attach the set arm LL and SL to the shaft as shown in Fig. 3-15-2.
(4) Attach the AC plate assembly to the main plate, and fix with three fixing screws (ⓐ, ⓑ, ⓒ : Fig. 3-15-1).
(5) Attach the set arm SU and LU to the shaft, fix them with the cut washer, and attach the spring AS to the set arm SU and LU. (See Fig. 3-15-4.)
(6) Attach the pinch roller and the pinch roller cap.
(7) Connect the connector [AE] on the PCB MDA.
(8) Mount the cassette housing.

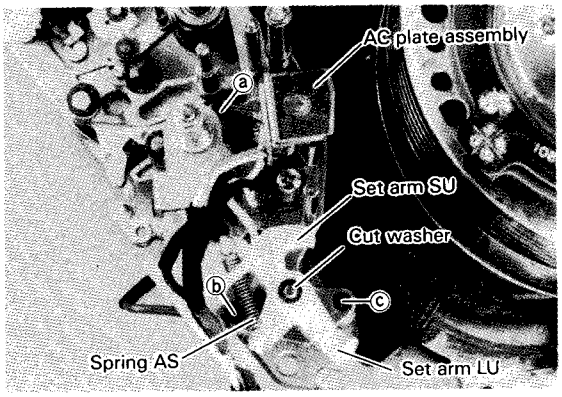

Fig.3 – 15 – 1

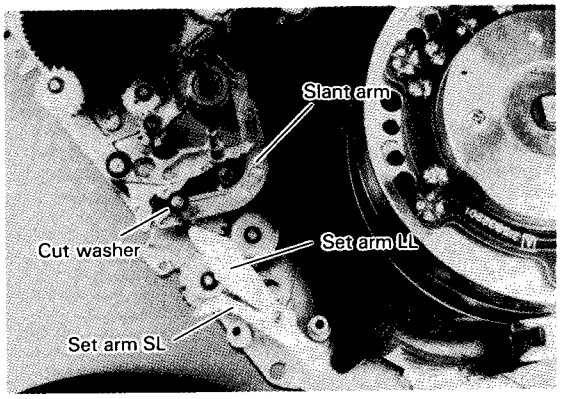

Fig.3 – 15 – 2

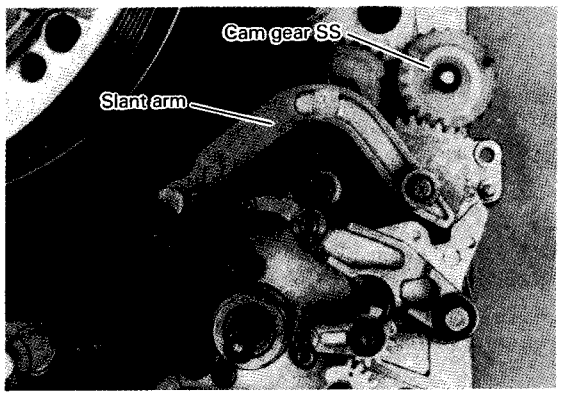

Fig.3 – 15 – 3

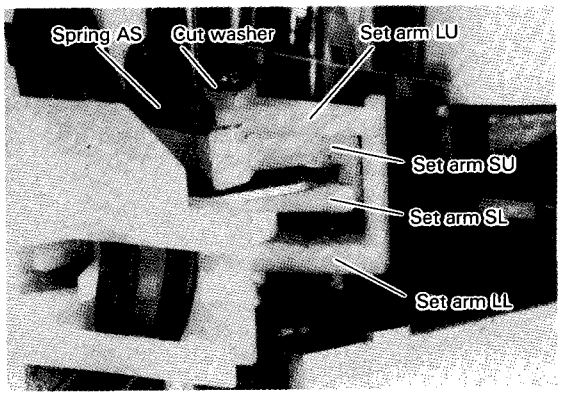

Fig.3 – 15 – 4

4-16 Takeup guide arm replacement

4-16-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the cut washer which is fixing the Takeup guide arm. (See Fig. 3-16-1.)
(3) While pressing the spring RP, hold the Takeup guide arm upward to take it off the main plate.

4-16-2 Mounting

(1) Attach the Takeup guide arm to the main plate so that the Takeup guide arm, Takeup guide gear, and spring RP are positioned relatively as shown in Fig. 3-16-2, then fix with the cut washer.
(2) Mount the cassette housing

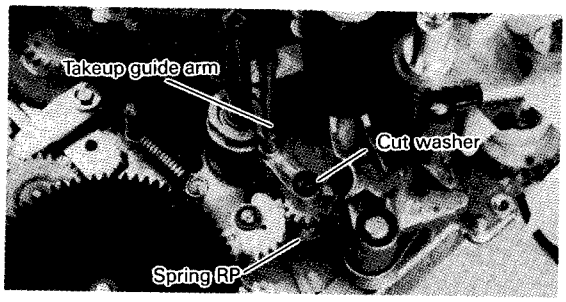

Fig.3 – 16 – 1

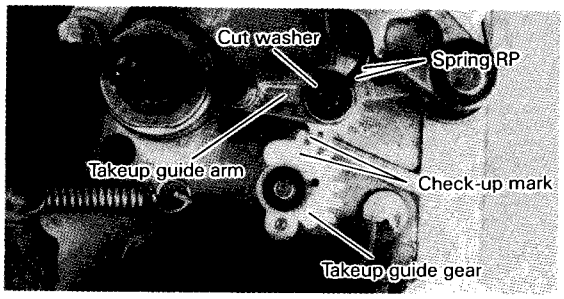

Fig.3 – 16 – 2

4-17 Takeup guide pole replacement

4-17-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the gear LA3 from the rear side of the deck.
(3) Turn the main cam gear counter-clockwise to switch the tape guide to loading mode.
(4) Take off the nut S which is fixing the Takeup guide pole.
(5) Take off the guide poll upper flange and the guide pole from the shaft.

4-17-2 Mounting

(1) Attach the guide pole and the guide pole upper flange to the shaft and fix with the nut S.
(2) Mount the master plane.
(3) Place the height adjusting square (Takeup guide pole measuring side: T mark) on the master plane.
(4) Slide the height measuring part of the square to the edge of the guide pole lower flange, and make sure that flange height is lower than A point of the square (higher one of measuring parts) and higher than B point (lower one of measuring parts).
(5) If result of the check isn't satisfacrory, adjust the height by turning the nut S.
(6) Apply thread-lock to the nut S.
(7) Turn the main cam gear clockwise to change the tape guide to unloading mode.
(8) Attach the gear LA3 from the rear side of the deck.
(9) Mount the cassette housing.

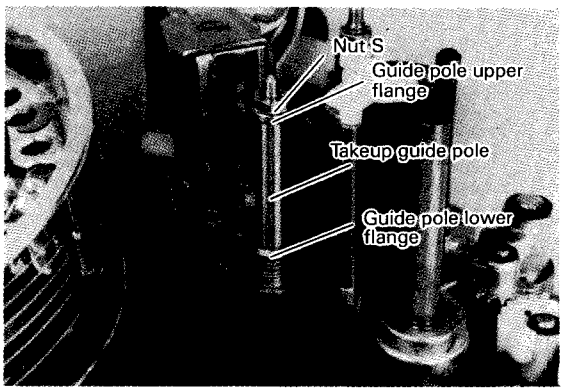

Fig.3 – 17 – 1

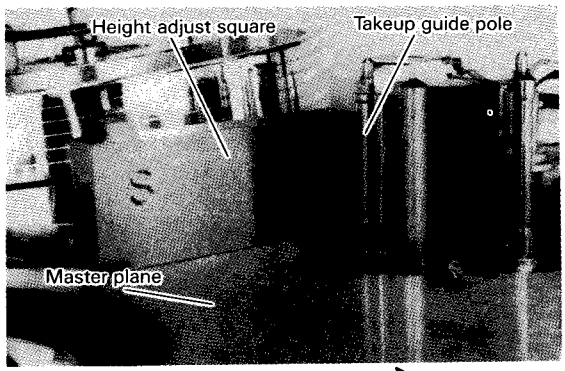

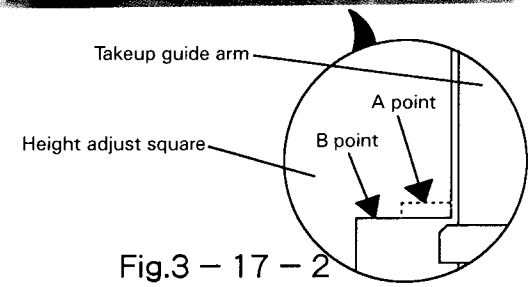

Fig.3 – 17 – 2

4-18 Supply guide roller replacement

4-18-1 Dismounting

(1) Take off the clamp of the lead wires connected to the FE head. (See Fig. 3-18-1.)
(2) Remove the tape end sensor fixing screw, and take the tape end sensor off the cassette housing carefully so that the FPC cable may not be damaged.
(3) Keep the cassette housing under eject mode.
(4) Turn the tension arm assembly clockwise a little, and slacken the set screw to the degree that the guide roller proper turns easily.
(5) Turn the guide roller counter-clockwise to tape it off the supply tape guide.

4-18-2 Mounting

(1) Attach the guide roller to the supply take guide, turn the roller clockwise to tighten a little, then turn 1-2/3 of a turn counter-clockwise.
(2) Turn the tension arm assembly clockwise a little and temporarily fix the guide roller lightly with the set screw.
(3) Attach the tape end sensor to the cassette housing and fix with the fixing screw.
(4) Bind the lead wires of the FE head with the clamper for the lead wires of the tape end sensor.
(5) Adjust height of the guide roller as described in Para. 5-3.

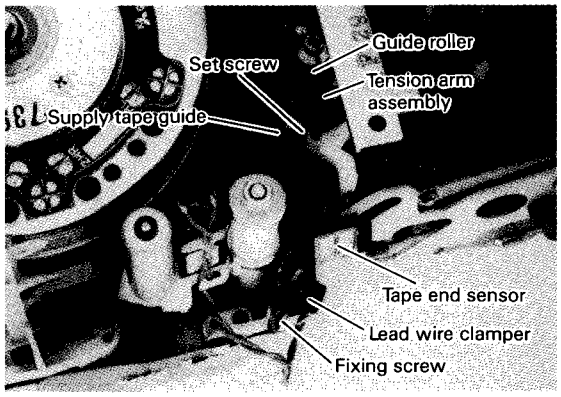

Fig.3 – 18 – 1

4-19 Takeup guide roller replacement

4-19-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the gear LA3 from the rear side of the deck.
(3) Move the takeup tape guide to loading direction by about 1cm by turning the main cam gear counter-clockwise.
(4) Slacken the set screw to the degree where the guide roller proper turns easily.
(5) Turn the guide roller counter-clockwise to take if off the Takeup tape guide.

4-19-2 Mounting

(1) Attach the guide roller to the Takeup tape guide, tighten a little by turning clockwise, then turn 1-2/3 of a turn counter-clockwise.
(2) Fix the guide roller lightly with the set screw.
(3) Turn the main cam gear clockwise to switch the tape guide to unloading mode.
(4) Attach the gear LA3 from the rear side of the deck.
(5) Mount the cassette housing.
(6) Adjust guide roller height as described in Para. 5-3.

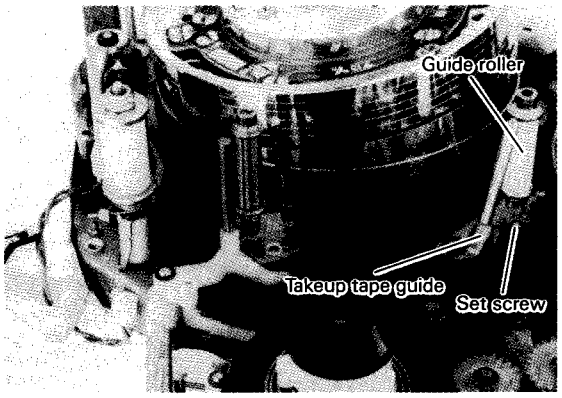

Fig.3 – 19 – 1

4-20 Supply & Takeup tape guide replacement

4-20-1 Dismounting

(1) Remove the cassette housing.
(2) Take off the drum assembly.
(3) Remove the gear LA3 from the rear side of the deck.
(4) Turn the main cam gear counter-clockwise to switch the supply & Takeup tape guide to loading mode.
(5) Take the LED holder from the guide slider. (See Fig. 3-20-1.)
(6) Remove six screws (ⓐ, ⓑ, ⓒ, ⓓ, ⓔ, ⓕ: Fig. 3-20-1) which are fixing the guide slider.
(7) Take off the cut washer which is connecting the Takeup tape guide with the ring unit TA.
(8) Remove the guide slider from the main plate while turning the FE head arm assembly counter-clockwise and the tension arm assembly clockwise.
(9) Turn the gear LA5 counter-clockwise to the degree that the supply & Takeup tape guide is disengaged from the tape guide stopper. (See Fig. 3-20-2.)
(10) Take off the supply & Takeup tape guide from the ring unit SA and TA.

4-20-2 Mounting

(1) Check and adjust outside dimensions of the supply & Takeup tape guide to the dimensions shown in Fig. 3-20-3.
(2) Attach the supply & Takeup tape guide to the ring unit SA and TA.
(3) Turn the gear LA5 clockwise and set the supply & Takeup tape guide at the loading position of the tape guide stopper.
(4) With a thin screw driver, hold up the ring unit TA and fix the takeup tape guide with the cut washer.
(5) Attach the guide slider to the main plate while turning the FE head arm assembly counter-clockwise and the tension arm assembly clockwise, and fix with 6 fixing screws (ⓐ, ⓑ, ⓒ, ⓓ, ⓔ, ⓕ: Fig. 3-20-1).
(6) Attach the LED holder to the guide slider.
(7) Turn the main cam gear clockwise to set the supply & Takeup tape guide to unloading mode.
(8) Attach the gear LA from the rear side of the deck.
(9) Attach the drum assembly.
(10) Attach the brush.
(11) Attach the PCB MDA.
(12) Mount the cassette housing.

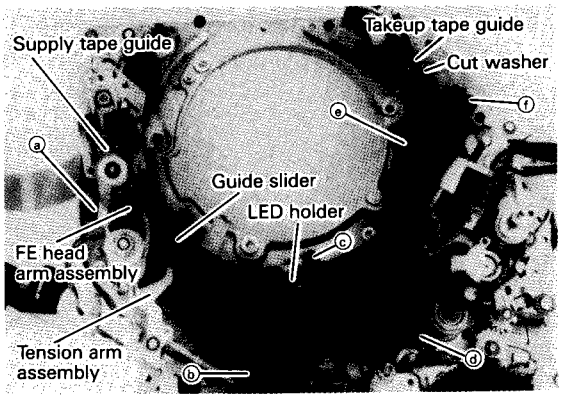

Fig.3 – 20 – 1

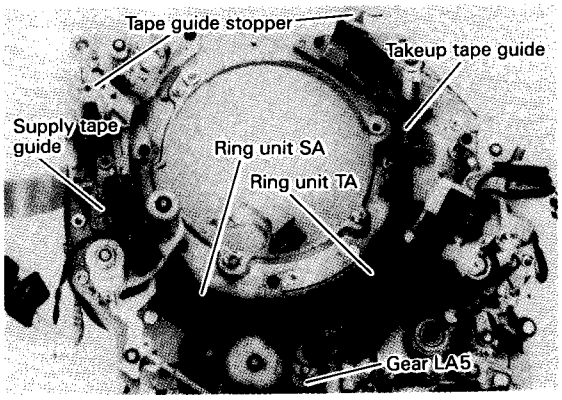

Fig.3 – 20 – 2

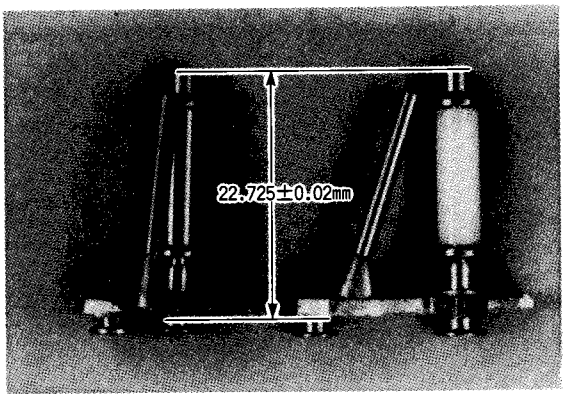

Fig.3 – 20 – 3

4-21 Positioning and mounting procedure of peripheral parts of main cam gear (Front side)

4-21-1 Attaching cam plate assembly and gear LA7

(1) Attach the cam plate assembly to the main plate and fix with five fixing screws (ⓐ, ⓑ, ⓒ, ⓓ, ⓔ: Fig. 3-21-1).

(2) Attach the gear LA7 to the main plate and fix with the cut washer.

4-21-2 Attaching the holder RB and ring unit TA

(1) Attach the ring unit TA to the holder RB, attach the holder RB to the main plate so that three positioning pins of the holder RB fit the positioning holes of the main plate, yet the check-up marks of the ring unit TA and the gear LA fit the check-up marks on the main plate, then fix with 4 fixing screws (ⓕ, ⓖ, ⓗ, ⓘ).

4-21-3 Attaching the holder RA

(1) Attach the holder RA to the main plate so that 3 positioning pins of the holder RA fit the positioning holes on the main plate, then fix with 3 fixing screws (ⓙ, ⓚ, ⓛ). (See Fig. 3-21-2.)

4-21-4 Attaching the gear LA5 and holder RC

(1) Fit the check-up marks of the gear LA4.

(2) While fixing the gear LA4, attach the gear LA5 to the main plate so that the check-up marks are fitted, then fix with the holder RC and the fixing screw.

4-21-5 Attaching the ring unit SA, ring roller and ring gear

(1) Slide the ring unit TA counter-clockwise to the extent that it doesn't go off the gear LA7. (See Fig. 3-21-3.)

(2) Attach the ring unit SA onto the holder RB, and fix with the ring roller, ring gear and two cut washers.

4-21-6 Attaching the gear LA6

(1) Slide the ring unit TA clockwise and the ring unit SA counter-clockwise respectively, and fit check-up mark of each to the check-up mark on the main plate. (See Fig. 3-21-4.)

(2) After making sure that the check-up marks of the gear LA5 and LA7 are matched, attach the gear LA6 to the main plate while fixing the ring unit TA, SA and the gear LA5, and fix with the cut washer.

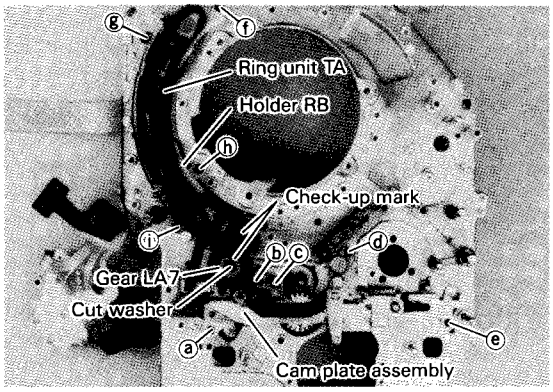

Fig.3 − 21 − 1

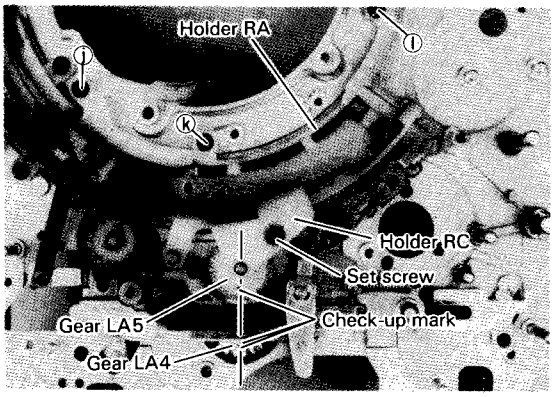

Fig.3 − 21 − 2

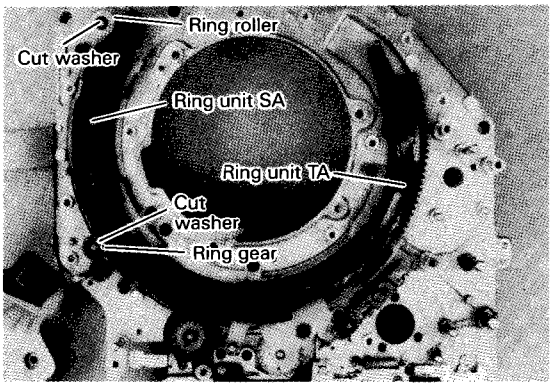

Fig.3 − 21 − 3

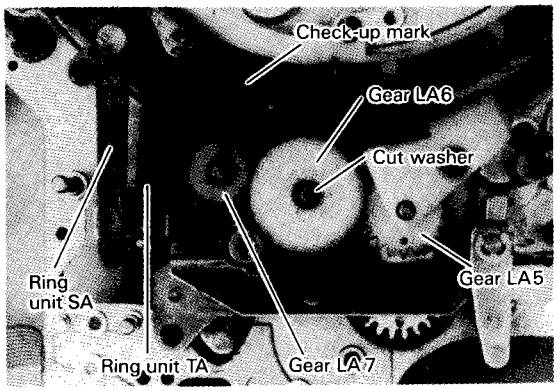

Fig.3 − 21 − 4

4-21-7 Attaching the cam gear SL and SS

(1) Attach the cam gear SL and SS to the main plate so that the check-up marks are fitted respectively, then fix with the cut washer. (See Fig. 3-21-5.)

4-21-8 Attaching slant arm

(1) While fixing the cam gear SL and SS so as not to turn, attach the slant arm to the main plate keeping in contact with the left side of the shaft A slightly, then fix with the cut washer.

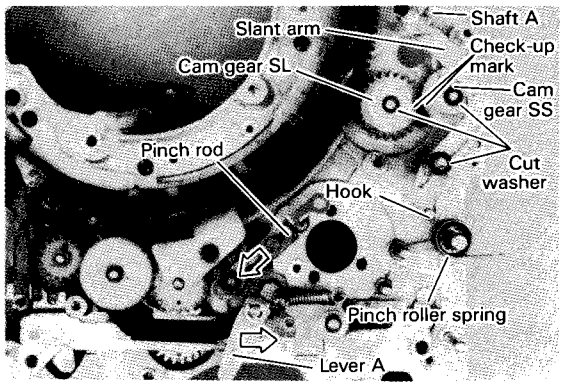

Fig.3 – 21 – 5

4-21-9 Attaching the pinch roller arm assembly

(1) Slide the lever A and the pinch roller in arrow direction. (See Fig. 3-21-5.)

(2) Attach the pinch roller spring so that one end (shorter one) is hooked onto the main plate.

(3) Attach the pinch roller arm assembly to the main plate so that the other end (longer one) of the pinch roller spring is hooked by the pinch roller arm assembly, then fix with the cut washer. (See Fig. 3-21-6.)

(4) Attach the pinch rod to the pinch roller arm assembly, and fix with the cut washer.

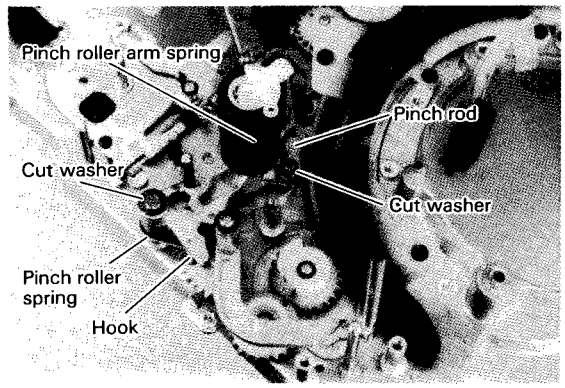

Fig.3 – 21 – 6

4-21-10 Attaching the Takeup guide arm and Takeup guide gear

(1) Turn the cam gear SS clockwise to the point where the slant arm comes to a stop. (See Fig. 3-21-7.)

(2) Match the check-up marks on the cam plate assembly.

(3) Attach the spring RP to the main plate so that one end (horizontal side) is set on the hook (commonly used for the pinch roller spring) on the main plate. (See Fig. 3-21-8.)

(4) Attach the Takeup guide arm and the Takeup guide gear onto the main plate so that their check-up marks are fitted and the other end of the spring RP (vertical side) is hooked by the notch of the Takeup guide arm, then fix with the cut washer.

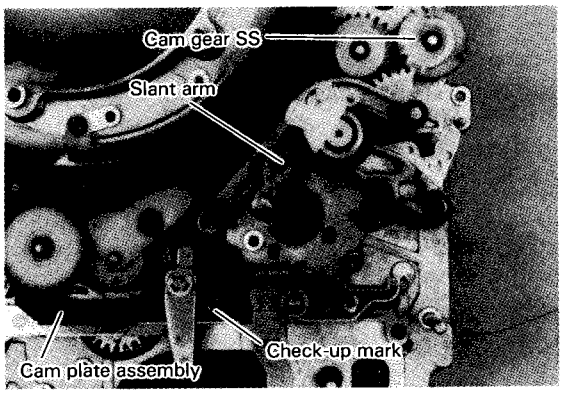

Fig.3 – 21 – 7

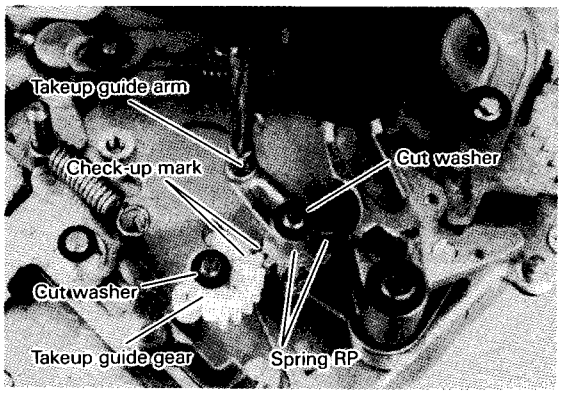

Fig.3 – 21 – 8

4-21-11 Attaching the supply & Takeup tape guide stopper

(1) Attach the supply tape guide stopper to the main plate so that the positioning hole matches the positioning pin, then fix with two fixing screws (ⓐ, ⓑ). (see Fig. 3-21-9.)

(2) Attach the Takeup tape guide stopper to the main plate so that the positioning hole matches the positioning pin, then fix with two fixing screws (ⓒ, ⓓ).

4-21-12 Attaching the supply & Takeup tape guide assembly

(1) By turning the gear LA5 clockwise, move the ring unit TA and SA to the position where the supply & Takeup tape guide assembly can be attached easily. (See Fig. 3-21-9.)

(2) Attach the supply & Takeup tape guide assembly to respective mounting pins.

(3) Slide the lever A to the right. (This is because the pinch rod connected to the pinch roller arm slides to the side of lever A when the tape guide assembly is set at the loading position.)

(4) Slide the lever B to the right to turn the Takeup guide arm clockwise. (This is because the pinch roller arm turns to the side of Takeup guide arm when the tape guide assembly is set at the loading position.)

(5) Turn the gear LA5 clockwise and set the supply & Takeup tape guide assembly onto respective tape guide stopper.

(6) Hold up the ring unit TA with a fine screw driver and fix the Takeup tape guide with the cut washer.

4-21-13 Attaching the guide slider assembly

(1) Attach the guide slider to the main plate, and fix with 6 fixing screws (ⓐ, ⓑ, ⓒ, ⓓ, ⓔ, ⓕ : Fig. 3-21-10).

(2) Attach the LED holder to the guide slider.

4-21-14 Attaching the set arm LL and SL

(1) Turn the gear LA5 counter-clockwise to change the supply & Takeup tape guide to unloading mode.

(2) Attach the set arm LL and SL to the main plate. (See Fig. 3-21-11.)

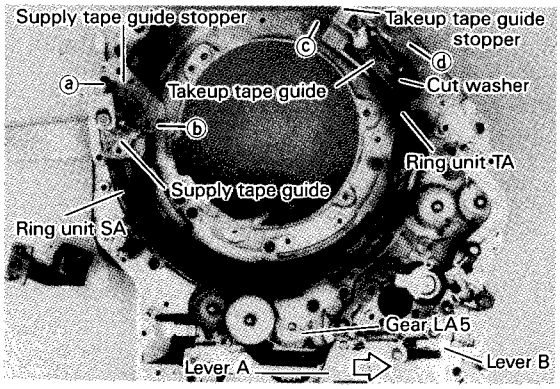

Fig.3 – 21 – 9

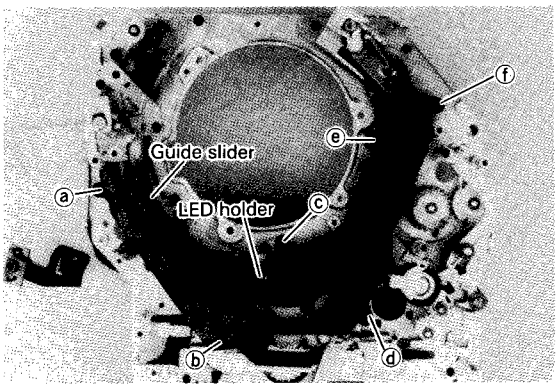

Fig.3 – 21 – 10

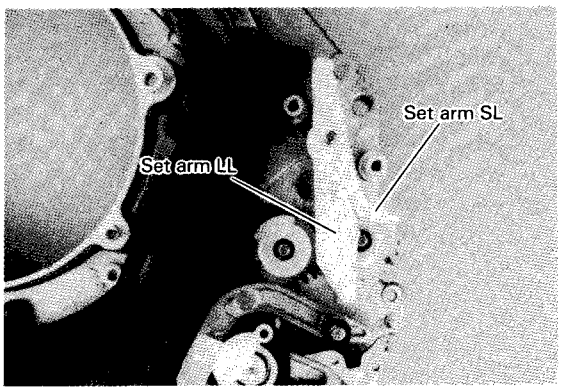

Fig.3 – 21 – 11

4-21-15 Attaching AC plate assembly

(1) Turn the gear LA5 clockwise to change the supply & Takeup tape guide to loading mode.

(2) Attach the AC plate assembly to the main plate and fix with 3 fixing screws (ⓐ, ⓑ, ⓒ : Fig. 3-21-12).

Note : Attach the fixing screws in the order of ⓒ, ⓐ, and ⓑ.

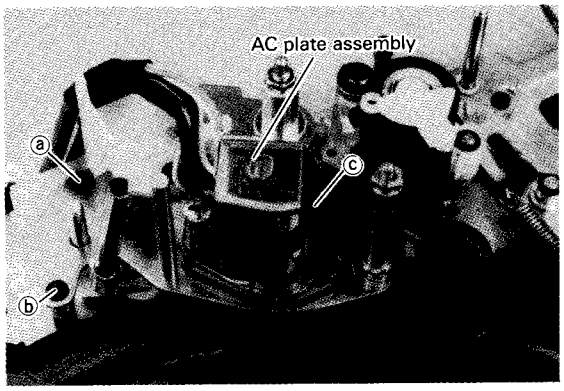

Fig.3 – 21 – 12

4-21-16 Attaching set arm SU LU, and spring AS

(1) Attach the set arm SU, LU and the spring AS, then fix with the cut washer. (See Fig. 3-21-13.)

Note : Attach them so that the top end of the set arm SU goes into the notch at the top of the set arm SL.

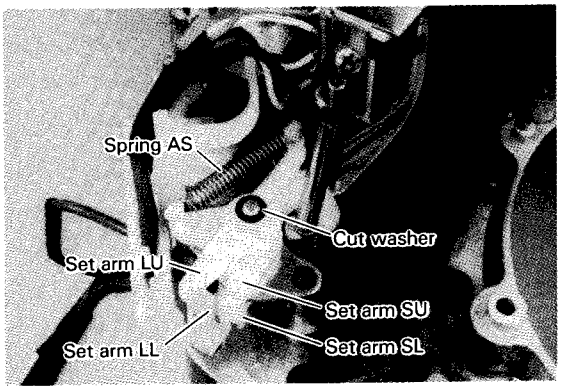

Fig.3 – 21 – 13

4-21-17 Attaching FE head and supply impedance roller

(1) Attach the FE head arm assembly to the main plate. (See Fig. 3-21-14.)

(2) Attach the IMP washer to the main pate in a manner that the bottom of the IMP washer goes into the positioning hole on the main plate.

(3) Attach the FE spring, lower impedance flange, impedance sleeve, impedance roller and the upper impedance flange, and tighten the nylon nut softly.

(4) Set one end of the FE spring onto the IMP washer and the other end onto the FE head arm.

(5) Mount the master plane.

(6) Put a square for height measurement (supply impedance roller measuring side : S mark) onto the master plane. (See Fig. 3-14-3, Page 55.)

(7) Slide the height measuring portion of the square to the edge of the lower impedance flange, and make sure that flange height is lower than A point of the square (higher one of the measuring parts) and higher than B point (lower one of the measuring parts) (See Fig. 3-21-15.)

(8) If the result of above check isn't favorable, adjust the height by turning the nylon nut.

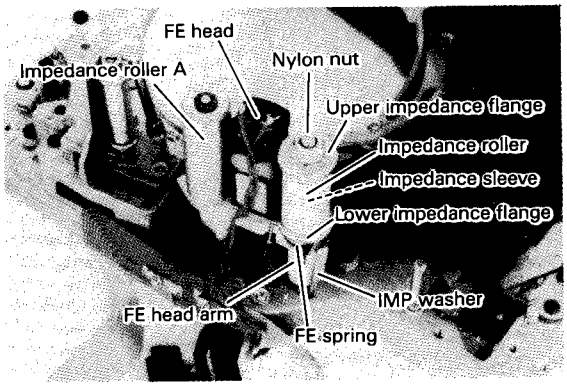

Fig.3 – 21 – 14

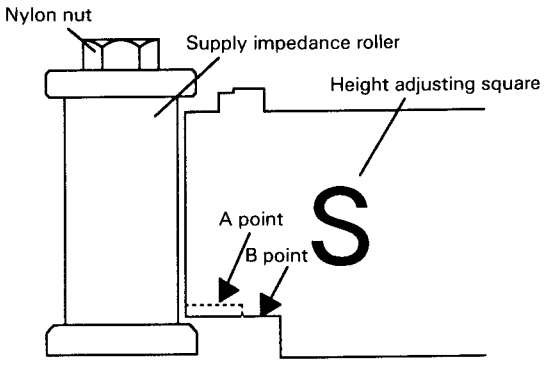

Fig.3 – 21 – 15

4-21-18 Attaching tension arm assembly

(1) Attach the thrust washer to the tension arm assembly (arm side) mounting shaft. (See Fig. 3-21-16.)

(2) Attach the tension arm assembly to the main plate so that the positioning hole of the tension arm assembly (adjusting side) matches the positioning pin of the main plate, then fix with the fixing screw.

4-21-19 Attaching brake S

(1) Make sure that braking performance isn't lowered by any oil deposited onto the face of the brake S which comes in contact with the reel disk.

(2) Attach the brake S onto the main plate and fix with the cut washer. (See Fig. 3-21-16.)

4-21-20 Attaching tension spring and spring S

(1) Attach the tension spring to both ends of the tension arm assembly (arm side and adjusting side). (See Fig. 3-21-16.)

(2) Attach the spring S to the brake S and the tension arm assembly (adjusting side).

4-21-21 Attaching supply reel disk

(1) Attach the thrust washer to the reel disk mounting shaft. (See Fig. 3-21-16.)

(2) Move the brake S in arrow direction and turn the tension arm clockwise by about 90°.

(3) Attach the reel disk to the reel disk mounting shaft.

(4) Make sure that the reel disk turns smoothly while the brake S and the tension arm are being moved.

(5) Mount the master plane.

(6) Place the square for height adjustment (reel disk measuring side : REEL-M mark) onto the master plane.

(7) Slide the height measuring part of the square to the edge of the reel disk, and make sure that the reel disk turns smoothly at A point of the square (higher one of the measuring parts) and doesn't turn at B point (lower one of the measuring parts). Check it in two directions of X-axis and Y-axis.

(8) If the result of the above check isn't favorable, adjust by changing number of the thrust washers (Parts No. 552C001020) attached under the reel disk.

(9) Fix the reel disk with the cut washer.

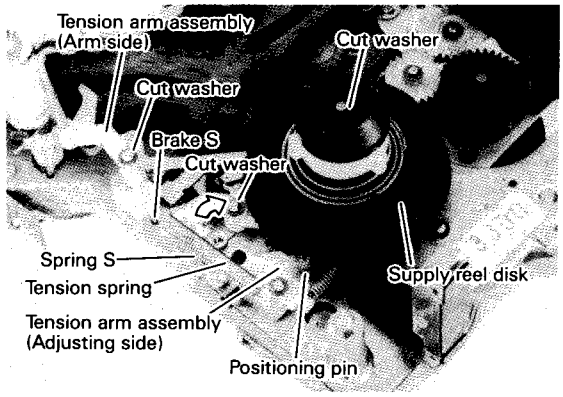

Fig.3 – 21 – 16

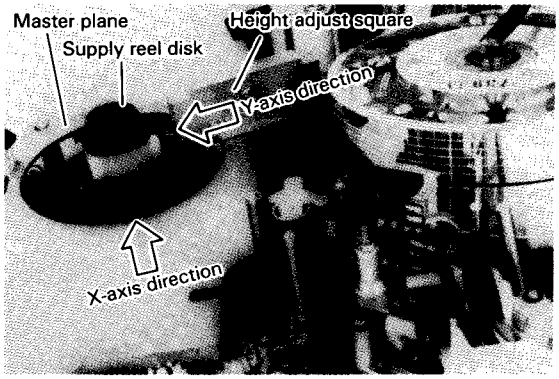

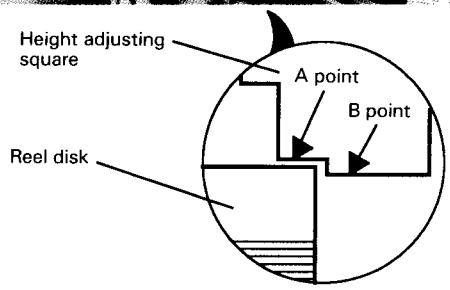

Fig.3 – 21 – 17

4-21-22 Attaching reel gear lock unit

(1) Move the arm in arrow direction a little. (See Fig. 3-21-8.) This is to prevent the small gear of the reel gear lock unit from coming in contact with the stopper when it is connected to the arm.

(2) Attach the reel gear lock unit to the main plate in a manner that the bottom of the small gear mounting shaft of the reel gear lock unit goes into the notch on the arm of the cam plate assembly, then fix with the fixing screw.

4-21-23 Attaching reel gear A

(1) Attach the thrust washer to the reel gear A mounting shaft. (See Fig. 3-21-19.)

(2) Move part ⓐ of the cam plate assembly in arrow direction a little, attach the reel gear A onto the main plate so that the lower side gear of the reel gear A is meshed with the small gear of the reel lock unit, then fix with the cut washer.

4-21-24 Attaching gear TU1-A

(1) Attach the thrust washer to the gear TU1-A mounting shaft. (See Fig. 3-21-19.)

(2) Attach the gear TU1-A onto the main plate in a manner that the gear of the gear TU1-A is meshed with the gear of the reel gear A, then fix with the cut washer.

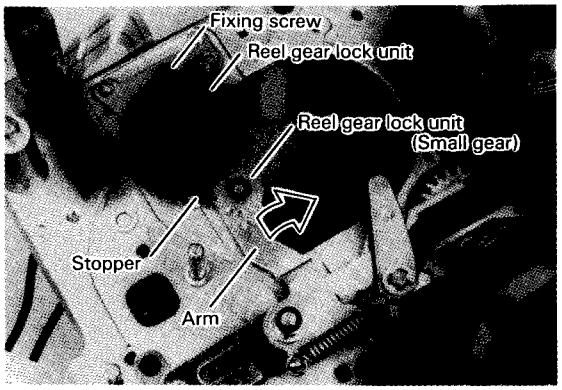

Fig.3 – 21 – 18

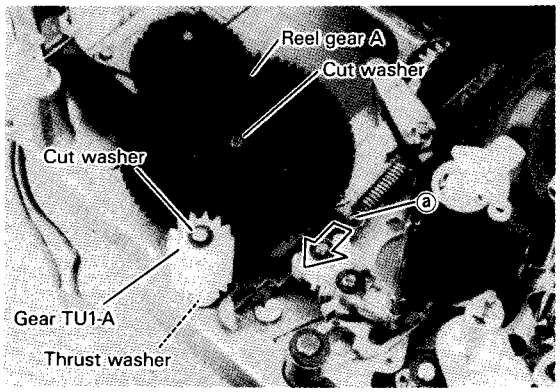

Fig.3 – 21 – 19

4-22 Positioning and attaching procedure of peripheral parts of main cam gear (rear side)

4-22-1 Attaching main cam gear and gear LA2

(1) Turn the gear LA5 counter-clockwise to change the supply & Takeup tape guide to unloading mode. (See Fig. 3-22-1.)

(2) Slide the lever A to left and match the check-up mark of the cam plate assembly.

(3) Attach the main cam gear onto the main plate so that the check-up mark on the main cam gear matches the check-up mark on the main plate, then fix with the cut washer. (See Fig. 3-22-2.)

(4) Attach the gear LA2 onto the main plate, and fix with the cut washer.

4-22-2 Attaching switch lever A and switch spring A

(1) Attach the switch lever A onto the main plate.

(2) Attach the switch spring A to the switch lever A and the PCB sensor (reel gear A rotary sensor).

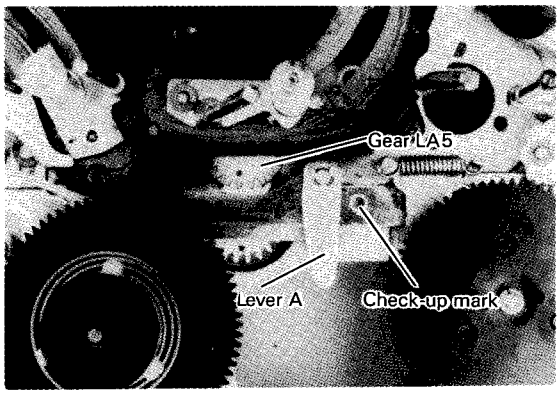

Fig.3 – 22 – 1

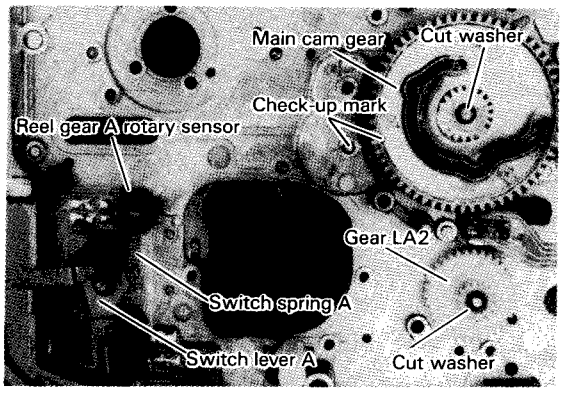

Fig.3 – 22 – 2

4-22-3 Attaching eject lever assembly

(1) Insert the mounting shaft of the eject lever assembly into the mounting hole on the main plate a little. (See Fig. 3-22-3.)

(2) Adjust position of the pin of the eject lever assembly so that the pin goes into the groove of the main cam gear.

(3) Adjust position of the left side mounting hole of the eject lever assembly, attach the assembly to the main plate, then fix with the cut washer.

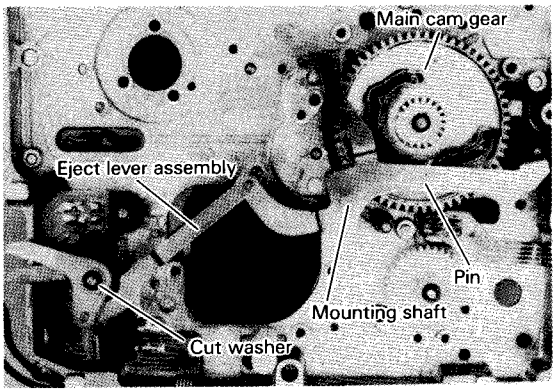

Fig.3 – 22 – 3

4-22-4 Attaching reel idler

(1) Attach the reel idler onto the main plate in a manner that two positioning holes match two positioning pins of the main plate, then fix temporarily with two fixing screws (ⓐ, ⓑ : Fig. 3-22-4).

4-22-5 Attaching loading motor assembly

(1) Attach the loading motor assembly onto the main plate so that the gear LA1 mounting shaft attached to the loading motor assembly goes into the mounting hole on the main plate.

(2) Fix the loading motor assembly with the fixing screw ⓒ (Fig. 3-22-4) and the cut washer (see Fig. 3-22-5).

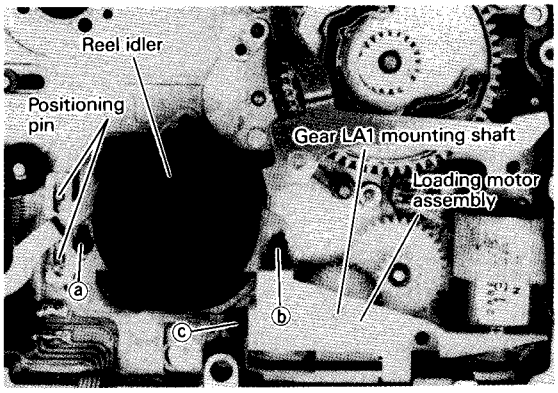

Fig.3 – 22 – 4

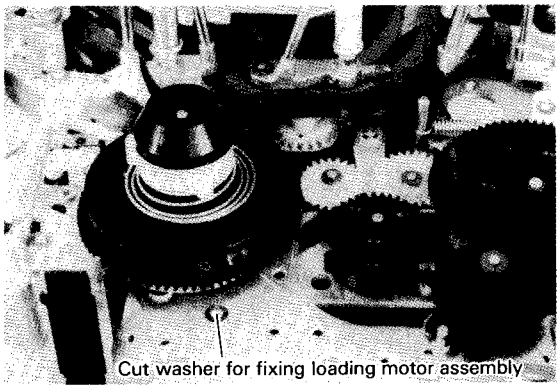

Fig.3 – 22 – 5

4-22-6 Attaching gear LA3

(1) Attach the gear LA3 to the main plate and fix with the cut washer (Fig. 3-22-6).

Note : It can be attached easily by moving the main cam gear a little.

4-22-7 Attaching capstan motor

(1) Attach the capstan motor to the main plate from the rear side of the plate. (See fig. 3-22-6.)

(2) From the front side of the main plate, fix the capstan motor with 3 fixing screws (ⓒ, ⓓ, ⓔ : Fig. 3-22-7) while holding the capstan motor firmly.

4-22-8 Attaching SYNC belt

(1) Attach the SYNC belt to the capstan motor and the reel idler. (See Fig. 3-22-6.)

(2) Slide the reel idler in arrow direction to stop and fix with two fixing screws (ⓐ, ⓑ : Fig. 3-22-6).

4-22-9 Attaching capstan brake

(1) Attach the capstan brake to the main plate so that the positioning pin matches the positioning hole on the main plate, and fix with the fixing screw ⓐ (Fig. 3-22-8).

4-22-10 Attaching mode switch

(1) Match the check-up mark of the mode switch. (See Fig. 3-22-9.)

(2) Perform fine adjustment by turning the gear of the mode switch to the following conducting state between the common terminal of the mode switch and each terminal while checking with a tester.

Note : Use a tester of ×1000 range.

P0 ..... Conducting
P1 ..... Conducting
P2 ..... Open
P3 ..... Conducting

(3) Attach the mode switch onto the main plate so that the gear is geared with the gear (centre side) of the main cam gear while paying attention so as not turn the mode switch gear, and fix with two fixing screws (ⓑ, ⓒ : Fig. 3-22-8)

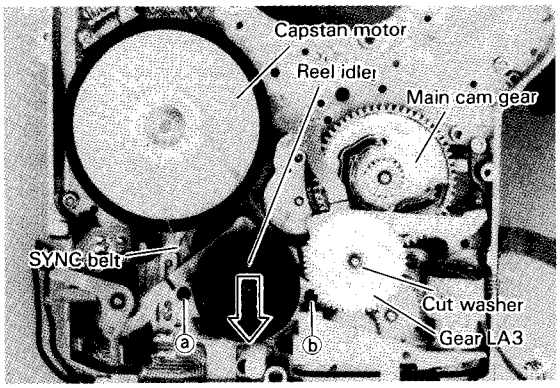

Fig.3 – 22 – 6

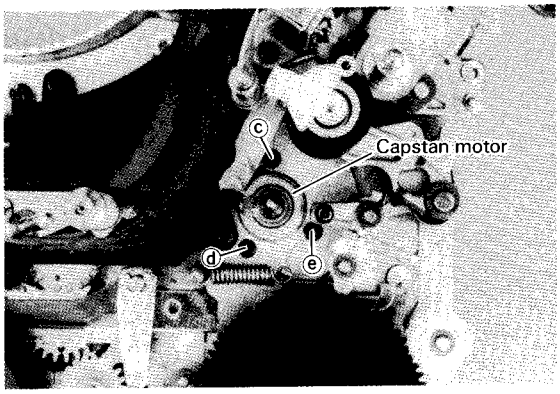

Fig.3 – 22 – 7

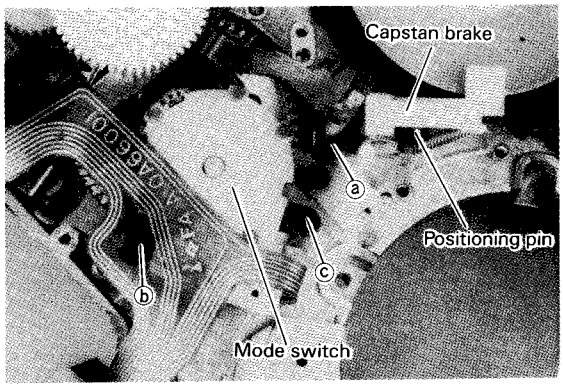

Fig.3 – 22 – 8

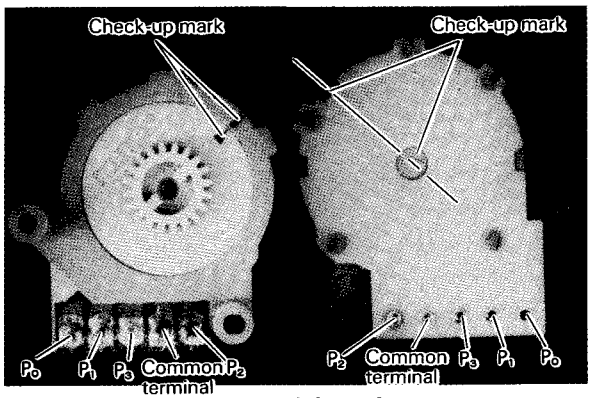

Fig.3 – 22 – 9

4-22-11 Attaching cam gear hold plate and eject lever hold plate

(1) Match the positioning pin of the cam gear hold plate to the positioning hole on the main plate.

(2) Turn the cam gear hold plate counter-clockwise around the positioning pin to attach onto the main plate, then fix with the fixing screw ⓐ (Fig. 3-22-10).

(3) Attach the eject lever hold plate onto the main plate, and fix with the fixing screw ⓑ (Fig. 3-22-10).

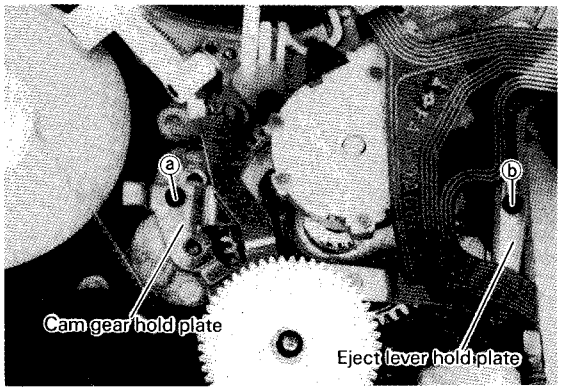

Fig.3 – 22 – 10

5. ADJUSTMENT

Note : Refrain from operating the eject lever while keeping a cassette tape inserted into the cassette housing and keeping the deck under loading mode.

5-1 rear tension & tension pole position adjustment

Before starting adjustment, keep a self-recording tape for a couple of minutes to warm up the reel disk and the travel system.

(1) Turn to playrear mode.
(2) Make sure that the left side edge of the tension lever position check unit is within the range of the position check mark on the guide slider.
(3) If the result of the above checking isn't favourable, adjust position by turning the tension pole position adjust screw.
(4) Set a rear tension measuring jig and change the mode to playrear.
(5) Make sure that the left side edge of the tension lever position check unit is within the range of the position check mark on the guide slider.
(6) After making sure that the tape runs in stable condition, read the indication on the rear tension measuring jig and make sure that the reading is within the specified range, 27±3g-cm.
(7) If the reading is outside the specified range, change the tension spring and check again.
(8) Make sure that the tape runs under stable condition and indication on the rear tension measuring jig varies only within the range of 4g-cm.
(9) If rear tension varies beyond the range of 4g-cm, the cause is deflection or flaw on the reel desk or others. Check and repair the defective unit.
(10) After completing adjustment, apply thread-lock to the tension pole position adjust screw.

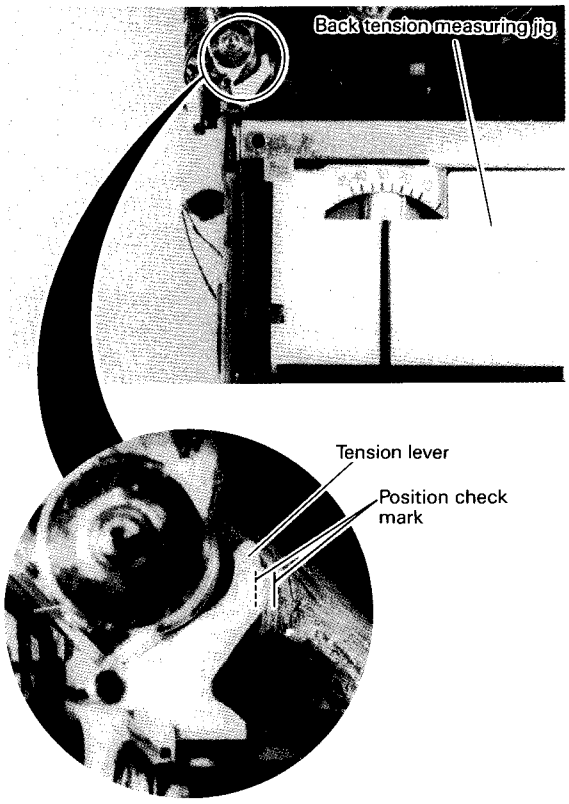

Fig.4 − 1 − 1

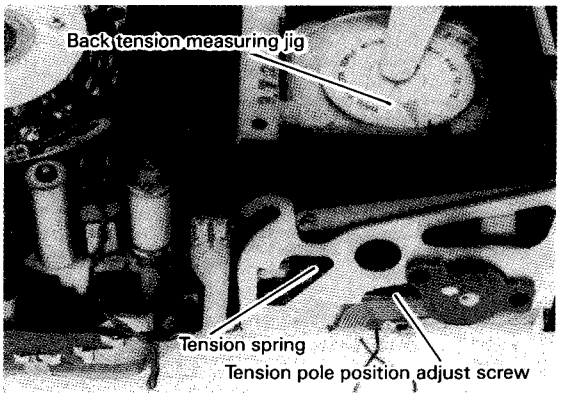

Fig.4 − 1 − 2

5-2 Tape run system and deck motion checking and adjustment

Note : Please clean the deck prior to this adjustment.

5-2-1 Checking tape loading motion

(1) Make sure that the lower end of the tape is not damaged or by the head tip, when loading and unloading are repeated at the tape read unit.

5-2-2 Playrear mode check

(1) Supply impedance roller
There shall be a gap allowed between the tape and the upper flange and no gap between the tape and the lower flange, and the tape shall be free from any folding or crease.

(2) Supply guide roller
There shall be a gap allowed between the tape and the upper flange and no gap between the tape and the upper flange, yet the tape must be free from any folding or crease.

(3) Around tape lead inlet
The tape lead unit shall be free from any riding on, gap, folding, or crease of the tape, and the tape shall not be catched by the head tip. If the tape runs above the drum lead path, a "pit-a-pat" sound is generated because the video head catches the tape edge.

(4) Around tape lead outlet
The tape lead unit shall be free from any riding on, gap, folding or crease of the tape.

(5) Takeup guide roller
There shall be a gap between the tape and the lower flange, no gap between the tape and the upper flange, yet the tape shall be free from any folding or crease.

(6) Takeup guide pole
There shall be a gap between the tape and the upper flange, no gap between the tape and the lower flange, yet the tape shall be free from any folding or crease.

(7) Takeup guide arm
there shall be a gap allowed to the tape at the point of the upper flange and of the lower flange.

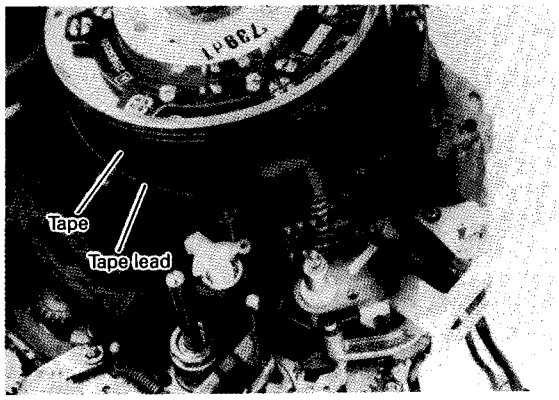

Fig.4 – 2 – 1

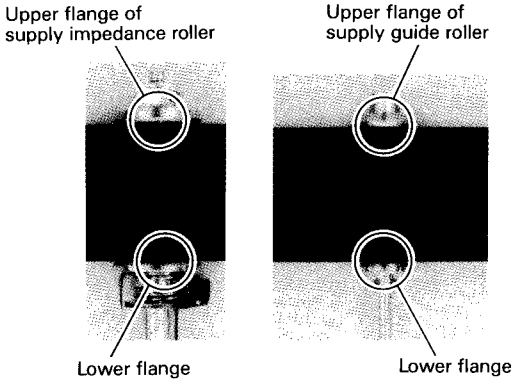

Fig.4 – 2 – 2

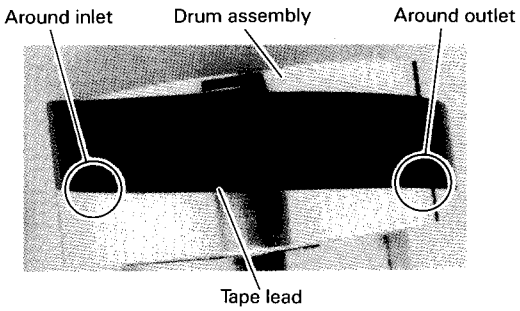

Fig.4 – 2 – 3

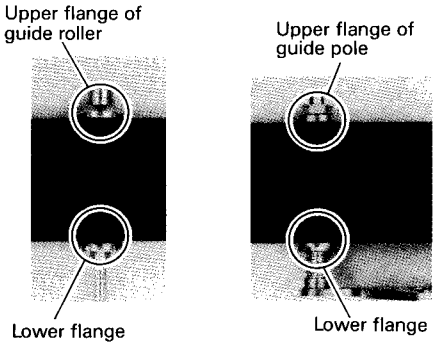

Fig.4 – 2 – 4

5-2-3 AC head rough adjustment

(1) Playrear a self-recording tape.

(2) Check running condition of the tape near the Takeup guide pole.

(3) Adjust by turning the AC head inclination adjust screw ⓐ (Fig. 4-2-6) so that a gap is provided between the tape and the upper flange and no gap is allowed between the tape and the lower flange, and that any fold mark or crease is eliminated from the tape.

Note : When the AC head inclination adjust screw ⓐ is turned, azimuth of the AC head changes. To adjust inclination of AC head, it is necessary to correct azimuth by turning the azimuth adjust screw ⓑ. (See Fig. 4-2-6.)

A) If tape position is high to the Takeup guide pole, turn the AC head inclination adjust screw ⓐ (Fig. 4-2-6) clockwise to adjust the position.

B) If tape position is low to the Takeup guide pole, turn the AC head indlination adjust screw ⓐ (Fig. 4-2-6) counter-clockwise to adjust the position.

(4) While checking visually, adjust height of the AC head by turning the nut ⓒ (Fig. 4-2-6) to the extent that the audio head upper edge of the AC head is slightly seen above the tape upper edge (0.1mm max. : Fig. 4-2-7).

(5) After completing above adjustment, proceed to AC head adjustment (azimuth adjustment in particular).

(6) After repeating loading and unloading of the tape, make sure there is a gap allowed between the tape and the upper flange of the Takeup guide pole and no gap is allowed between the tape and the lower flange, and that the tape is free from any folding or crease.

(7) If the result of the above check isn't favourable, repeat procedure from (2) to (6) above.

Note : If the adjust screws ⓐ, ⓑ and ⓓ (Fig. 4-2-6) are adjusted in this case, thread lock shall be applied to the adjust screws after completing the adjustment. Be careful, at this time, so that no thread lock is deposited onto the tape run system.

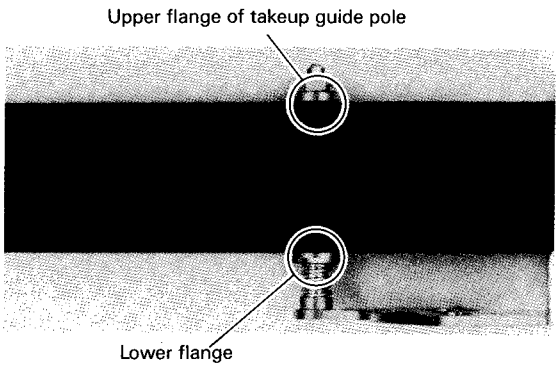

Fig.4 – 2 – 5

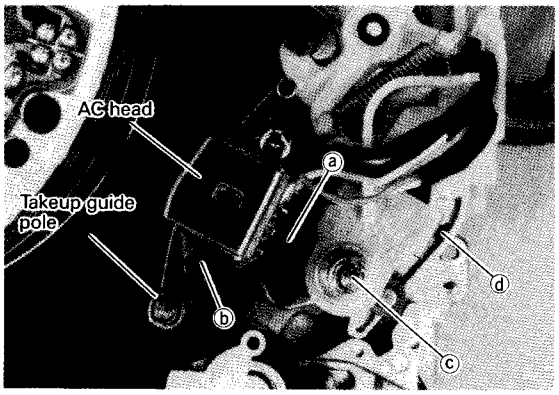

Fig.4 – 2 – 6

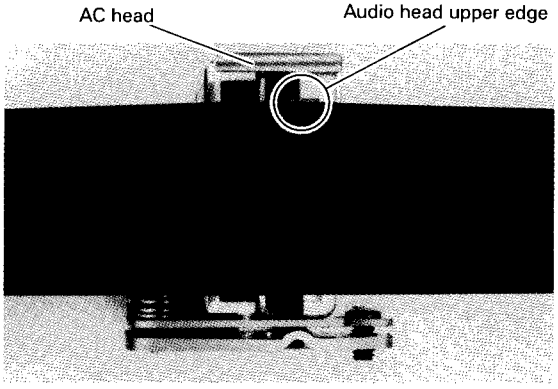

Fig.4 – 2 – 7

5-3 Guide roller height adjustment

Note : Checking and adjustment of the tape run system shall have been practiced prior to this height adjustment.

(1) Play rear staircase (2H mode) of the alignment tape.

(2) Connect an oscilloscope to TP2A (PCB SIGNAL) and apply external trigger (- slope) by TP5A.

(3) Turn the tracking to manual mode, and make sure that amplitude level of FM waveform at the supply side (left side of waveform), centre, and Takeup side (right side of waveform) changes synchronizing eadh other when the amplitude level of FM waveform (centre) is changed repeatedly from the maximum to the minimum.

(4) If the result of the above confirmation isn't favourable, adjust guide roller height according to the following instructions.

(5) Observe FM waveform at the supply side and the Takeup side.

If variation of amplitude level of the waveform delays to the waveform centre, the guide roller height is low. Adjust the height by loosening the set screw to the degree that the guide roller turns easily, and by turning the guide roller counter-clockwise.

If variation of amplitude level of the wave form preceeds the waveform centre, the guide roller height is high. Adjust the height by loosening the set screw to the degree that the guide roller turns easily and by turning the guide roller clockwise.

Note : In adjusting guide roller height, pay attention to following points;

To turn the guide roller little by little.

To refrain from turning the guide roller more than ± 180°.

(6) After completing height adjustment of the guide roller, tighten the set screw.

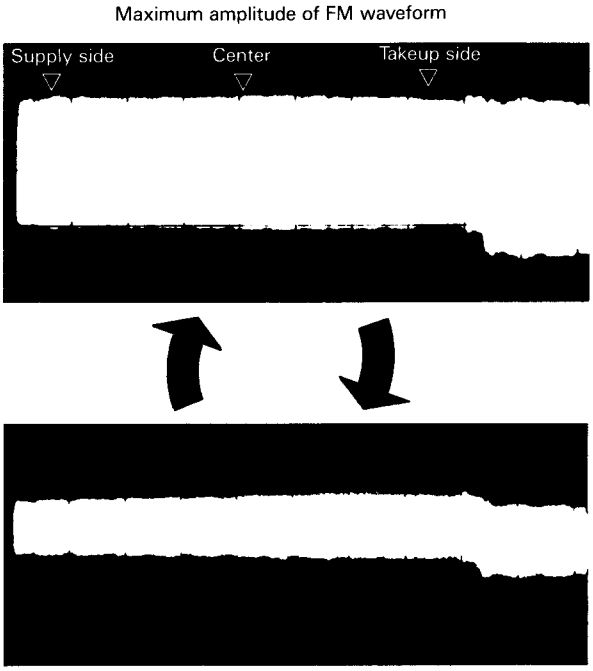

Fig.4 – 3 – 1

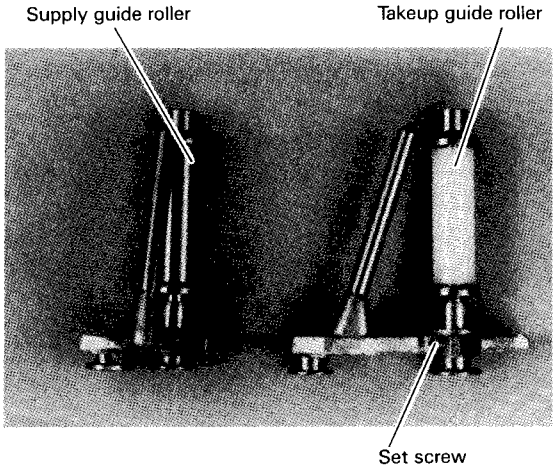

Fig.4 – 3 – 2

5-4 AC head adjustment

5-4-1 AC head height adjustment

(1) Play rear an alignment tape (6KHz audio signal).

(2) Connect an oscilloscope to the audio out terminal.

(3) Adjust amplitude level of audio out signal to the maximum by turning the AC head height adjust nut ⓒ (Fig. 4-4-2).

5-4-2 AC head inclination adjustment

(1) Playrear a self-recording tape.

(2) Check tape run condition near the Takeup guide pole.

(3) By turning the AC head inclination adjust screw ⓐ (Fig. 4-4-2), adjust head inclination so that a gap is allowed between the tape and the upper flange, no gap is allowed between the tape and the lower flange, and any fold mark or crease is eliminated from the tape.

Note : Azimuth of the AC head changes when the AC head inclination adjust screw ⓐ (fig. 4-4-2) is turned. Accordingly, adjust inclination while turnng the azimuth adjust screw ⓑ (Fig. 4-4-2) and correcting azimuth by visual check.

If position of the tape is low to the Takeup guide pole, adjust by turning the AC head inclination adjust screw ⓐ (Fig. 4-4-2) counter-clockwise.

5-4-3 AC head azimuth adjustment

(1) Connect an oscilloscope to the audio output terminal.

(2) Playrear an alignment tape (6KHz audio signal). After completing the adjustment, apply thread lock to the adjust screw. Be careful so that no thread lock is deposited onto the tape run system.

(3) Turn the screw ⓑ (Fig. 4-4-2) for A/C head azimuth adjustment so that the audio output level is maximum.

Note : If the adjust screws ⓐ, ⓑ and ⓓ (Fig. 4-4-2) are adjusted in this case, thread lock shall be applied to the adjust screws after completing the adjustment. Be careful, at this time, so that no thread lock is deposited onto the tape run system.

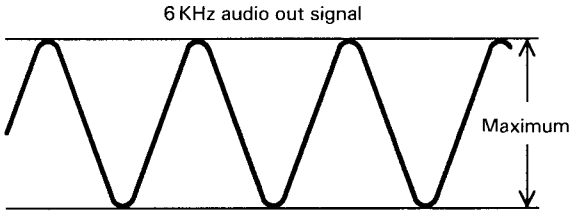

Fig.4 − 4 − 1

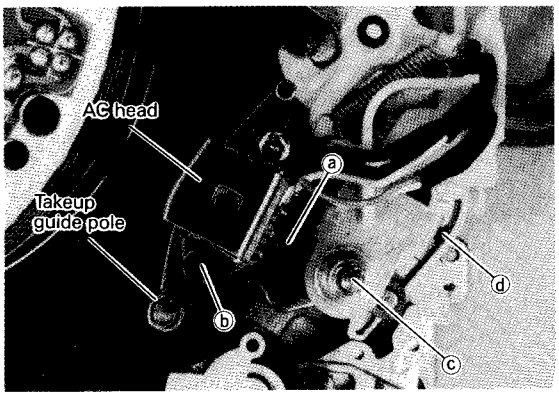

Fig.4 − 4 − 2

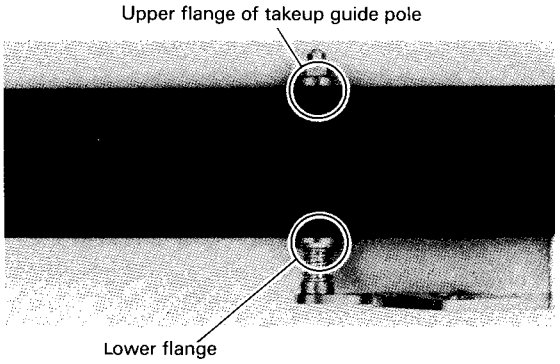

Fig.4 − 4 − 3

5-5 Phase adjustment

(1) Playrear staircase (2H mode) of an alignment tape.
(2) Connect an oscilloscope to TP2A (PCB SIGNAL) and apply external trigger (- slope) by TP5A.
(3) Connect TP-5B on the main board to GND, and keep tracking forcefully at preset mode.
(4) Turn the phase adjust screw ⓓ (Fig. 4-5-1) clockwise to tighten softly.
(5) Turn the phase adjust screw ⓓ (Fig. 4-5-1) counter-clockwise to adjust FM waveform amplitude level to the point next to the maximum.
(6) Release forced preset mode of tracking.
(7) Turn tracking to manual mode and adjust FM waveform to the maximum amplitude level.
(8) Make sure that the FM waveform amplitude level at tracking preset is equal to the maximum value of FM waveform amplitude level under manual mode.
(9) If the result of the above check isn't favourable, repeat adjustment from (3) to (8) above.
(10) After completing phase adjustment, shake the AC head assembly a little around the mounting shaft to make sure that audio output signal is maximum.
(11) If the result of the above checking isn't favourable, repeat adjustment of the AC head again.

Note : When the adjust screws ⓐ, ⓑ, ⓓ (Fig. 4-5-1) are used for the above adjustment, apply thread lock to the adjust screws at the end of the adjustment. Be careful, at that time, so that no thread-lock is deposited onto the tape run system.

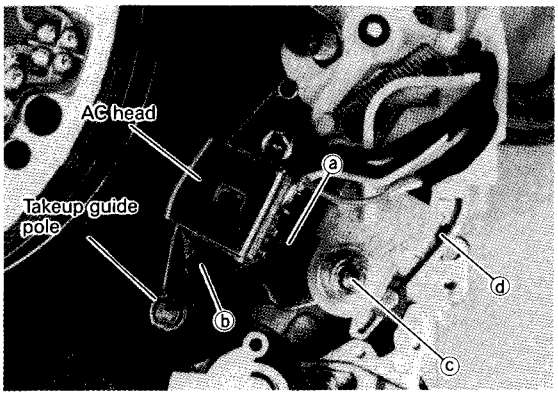

Fig.4 – 5 – 1

CHIP PARTS REPLACEMENT

Some resistors, shorting jumpers (0Ω resistor), ceramic capacitors, transistors and diodes are chip parts which are used for certain circuit elements. When replacing these parts, note the cautions as follows.

Cautions:

A. Use fine tipped, well insulated soldering pencil (iron) about 30 watts and the tweezers.
B. Melting the solder, remove the Chip Parts carefully not to tear off the copper foil of the printed circuit board.
C. Discard removed chips; do not reuse them.
D. Do not apply heat for more than 3 seconds to the new chip Parts.
E. Avoid using a rubbing stroke when soldering.
F. Take care not to scratch when soldering, or damage the Chip Parts.
G. Supplementary cementing is not required.

1. Removal of chip Parts (Resistors, capacitors, etc.)

A. Grasp the part with tweezers. Melting the solder at both side alternately, remove the one side of the part with a twisting motion.
B. Melt the solder at the other side and remove the part.

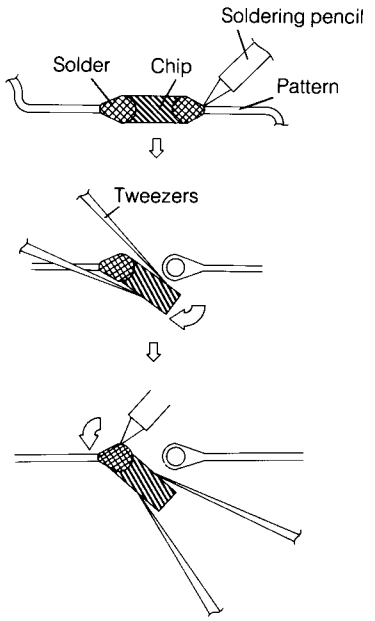

Fig. 1

2. Removal of Chip Parts (Transistors)

A. Melting the solder of one lead, Lift the side of that lead upward.
B. Simultaneously melt the solder of the two remaining leads and lift the part to remove.

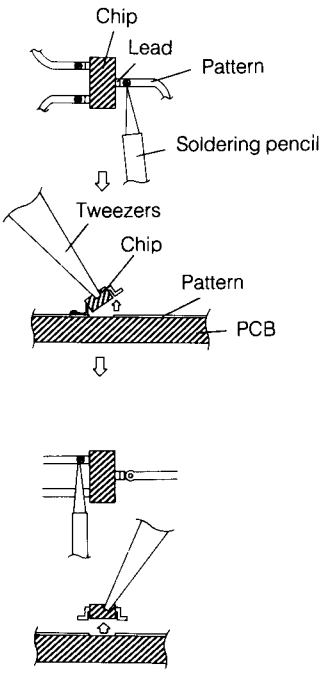

Fig. 2

3. Replacement

A. Presolder the contact points of the circuit pattern.
B. Press the part downward with tweezers and apply the soldering pencil as shown in the figure.

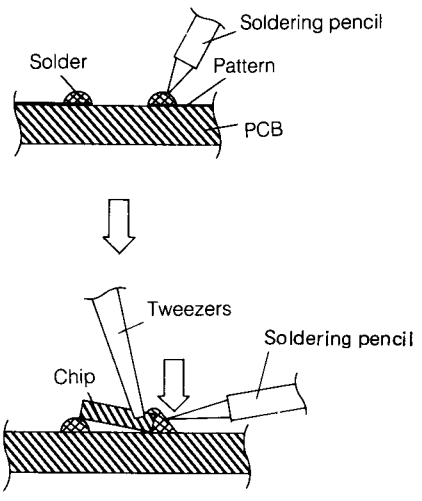

Fig. 3

SCHEMATIC DIAGRAM

NOTE 1:

- DC voltages were measured from points indicated to the circuit ground with a Digital voltmeter.
- The voltages of camera section were measured with the Y/C MIX adapter.
- Waveforms of camera section were taken with the four color chart.
- Waveforms of VTR section were taken with standard color bar signal.
- The unit of resistance "ohm" entirely omitted.
  Accordingly, K=1000 ohms.
  M=1000K ohms.
- Resistors, not specifically designated, are R-M-chip resistors.
- The tolerance of resistor value, not specifically designated, is: ±5%.
- The unit of capacitance, not specifically designated, is:
  a) μF, for numbers less than 1
  b) PF, for numbers more than 1
- Capacitors, not specifically designated are Ceramic chip capacitors except electrolytic capacitors.
- The marks of capacitors are as follows:
  (TAN) : Tantalum capacitor
  ⧧ : Electrolytic capacitor
- The tolerance of capacitor value, not specifically designated is: ±10%
  and J = ±5% K = ±10% M = ±20% P = $^{+100\%}_{-\ 0\%}$
  C = ±0.25PF D = ±0.5PF F = ± 1PF Z = $^{+80\%}_{-20\%}$ N = ±30%
- Ceramic capacitors with the marks RH, UJ, SL, etc. are temperature compensating types.

SPECIFIC SYMBOL	
Zener Diode	Crystal unit
LE Diode	
Photo Diode	Ceramic filter

This is a basic schematic diagram. Some sets may be subject to modification according to engineering improvement.

SERVICING PRECAUTION

SYMBOLS INDICATE COMPONENTS HAVING SPECIAL CHARACTERISTICS IMPORTANT TO SAFETY AND PERFORMANCE. THEREFOR REPLACEMENT OF ANY SAFETY PARTS SHOULD BE IDENTICAL IN VALUE AND CHARACTERISTICS.

DON'T DEGRADE THE SAFETY OF THE RECEIVERS THROUGH IMPROPER SERVICING.
