CAUTION
Before servicing this chassis, it is important that the service person reads the "SAFETY PRECAUTIONS" in this service manual.

PRECAUTION
Avant un entretien/dépannage de ce châssis, il est important que la personne en charge lise les "MESURES DE SECURITE" dans ce manuel d'entretien/dépannage.

VORSICHT
Bevor Wartungsarbeiten an diesem Chassis ausgeführt werden, muβ das Wartungspersonal die "SICHERHEITSHINWEISE" in dieser Wartungsanleitung durchlesen.

ATTENZIONE
Prima di un intervento di assistenza tecnica sul telaio, è importante che il personale di assistenza tecnica legga le "MISURE DI SICUREZZA" contenute in questo manuale di assistenza.

PRECAUCIÓN
Antes de servir este chasis, es importante que la persona de servicio lea las "PRECAUCIONES DE SEGURIDAD" de este manual de servicio.

LET OP
Alvorens enig onderhoudswerk aan het chassis uit te voeren is het belangrijk dat de onderhoudsmonteur de VOORZORGSMAATREGELEN in deze service-handleiding aandachtig doorleest.

MITSUBISHI ELECTRIC

CONTENTS

TRADEMARK, REGISTERED TRADEMARK

SPECIFICATIONS

- **Power Input** : AC 100~240V ; 50 / 60Hz
- **Rated Input** : 5.0A
- **LCD Panels** : 1.3inch LCD panel: 3 pieces(for R,G,B)
  Pixels 1,024 × 768= 786,432 pixels
  Total 2,359,296 pixels
  Active pixel rate: 99.9% or more (each panel)
- **Projection Lens** : F 2.5~2.9 f = 52.8-68.6 mm
- **Light Source Lamp** : 280W DC metal halide lamp
- **Picture Size** : aspect rate 4:3 20~300 inch
- **Speakers** : 60mm round type, 2 pcs.
- **S-Video Input** : Luminance signal: 1.0Vp-p 75Ω (negative signal)
  Chroma signal: 0.286Vp-p 75Ω (burst signal)
- **Video Input** : 1.0Vp-p 75Ω (negative sync.)
- **Audio Inputs** : 350mVrms, 10kΩ or more
- **PC Audio Inputs** : 250mVrms, 10kΩ or more
- **Analog RGB Input** : Mini D-SUB 15P
  RGB: 0.7Vp-p 75Ω (positive sync.)
  HD/CS: TTL level (positive)
  VD: TTL level (positive)
  Horizontal frequency: 15~81kHz
  Vertical frequency : 43~85Hz
- **Cabinet Dimensions** : 13.0"(W) × 5.7"(H) × 15.2"(D)
  (Legs and lens are not included.)
- **Weight** : 21.5 lbs.
- **Length of Power Cord** : 70.8 inch

ENGLISH

- Weight and dimensions shown are approximate.
- Design and specifications are subject to change without notice.

SAFETY PRECAUTIONS

NOTICE: Observe all cautions and safety related notes located inside the cabinet and on the chassis.

WARNING

1. An isolation transformer should be used between the projector and the AC supply point before any test/service is performed on a LIVE chassis projector.
2. Operation of this projector outside the cabinet or with the cover removed, involves a shock hazard from the projector power supplies. Work on the projector should not be attempted by anyone who is not thoroughly familiar with precautions necessary when working on high voltage equipment.
3. When service is required, observe the original lead dressing. Extra precaution should be given to assure correct lead dressing in the high voltage area. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

LEAKAGE CURRENT COLD CHECK

Before returning the projector to the customer, it is recommended that leakage current be measured according to the following methods.
With the AC plug removed from the AC source, place a jumper across the two AC plug prongs. Turn the projector AC switch on. Using an 500V D.C. Insulation Tester, connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (screwheads, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 4 megohm. Any resistance below this value indicates an abnormality which requires corrective action.

LEAD DRESS

Note: 1. The inner wires are clamped so that they do not come close to heat generating or high voltage parts. After servicing route all wires in their original position.
2. Workers shall put on the wrist band to protect LCD against Static electricity during the operations.

1. Clamp the Lead Wires along the Clamping Zone* shown in the figure below.
*Clamping Zone shows the route of the Lead Wire.

REPLACEMENT OF A LIGHT SOURCE LAMP

The light source lamp is designed to project the image on the LCD panel. When the light source lamp no longer functions, replace it with a new one to ensure optimum performance.

ENGLISH

Caution:

- Do not remove the light source lamp from inside of this equipment immediately after using the projector, you may get burned because of the high temperature of the light source lamp.
- When you replace the light source lamp, press the power button to power off, then wait for 120 seconds in stand-by mode to cool down the lamp and LCD panels. Turn off the main switch, unplug the power code from the outlet and wait one hour so that the lamp is cool to the touch.
- Do not touch the lamp directly. It may be broken and may cause you to injure or burn yourself.
- Be sure not to drop the lamp lid screw into the projector. Also be sure also not to insert metal or any flammable objects, it may cause fire or an electric shock.
- Install the lamp securely, failure to do so it may cause a fire.

1. Loosen the screw of the lamp lid on the top cover using a screw driver(-) or a coin, and remove the lid. [Fig.4-1]

   Important:
   Be careful not to damage the electric wire connected to this equipment.

2. Use a screwdriver (+) to loosen the two lamp screws. Use a soft cloth to cover the lamp. [Fig.4-2]
3. Hold onto the projector by the handle as your pull out the lamp. [Fig.4-3]

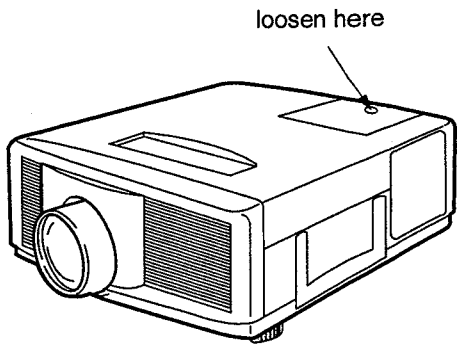

Fig. 4-1

Caution:
For the lamp you have removed, do not spill liquid on it, place it near flammable objects or where children can touch it. Otherwise, it will cause injury or fire.

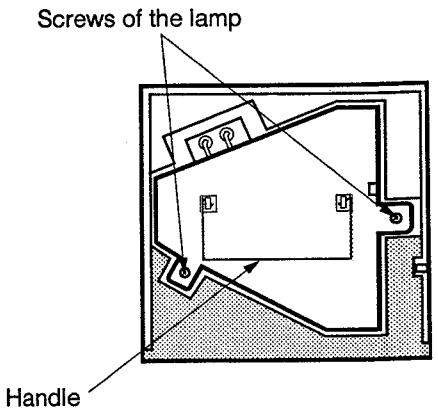

Fig. 4-2

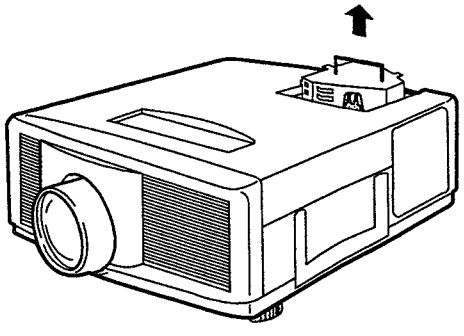

Fig. 4-3

4. Hold onto the projector by the handle and insert it securely into the projector body.
   Be sure that the projector guide is firmly inserted between the right and left lamp guides.
   Do not touch the lamp directly, place a cloth over the replacement lamp. [Fig.4-4]

Important:
- Replace with same type lamp rated.
- Avoid squeezing the light sources lamp or getting finger prints on it. Mishandling the lamp can shorten the lamp life, cause it to burst during operation or reduce its illumination.

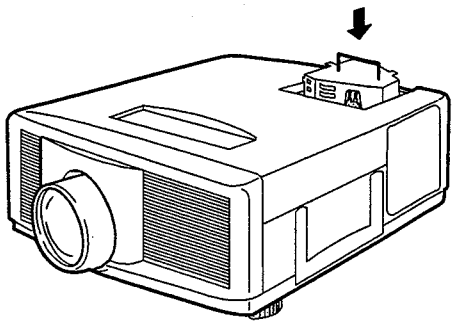

Fig. 4-4

5. Tighten up the two screws of the lamp using a screwdriver (+). [Fig.4-2]
6. Tighten up the screw of the lamp lid using a screwdriver (-) or a coin. [Fig.4-1]

Important:
The projector will not turn on if you do not secure the lamp lid.

7. Plug in the power cord, switch on the projector and reset lamp time by pressing the FINE< , > , and POWER buttons simultaneously.

Purchase of the light source lamp

The expected life of the metal halide light source lamp is 1,300 hours. However, to maintain optimum performance, it is recommended that the light source lamp be replaced at 1,000 hour intervals. When the lamp no longer works well, replace it with a new one specified for this projector. Consult your dealer, for recommended replacement lamps..

The life of the lamp

The average life of the lamp for the projector is about 1,300 hours of consecutive use. The lamp indicator will blink in red after approximately 1,000 hours. When the lamp has been used for about 1,300 hours, the projector will automatically shut off for the safety of the lamp and the power indicator light up in red. The projector cannot be used until the lamp has been replaced.

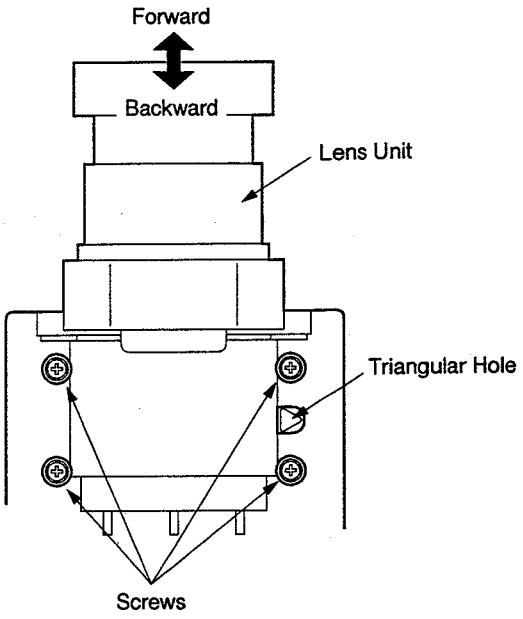
Caution:
- The light source lamp is fragile. Be careful not to cut yourself with the fragments.
- The lamp life depends on the environment. For replacement lamps, please contact your dealer.

The projector automatically shuts off when the lamp is used up in about 1,300 hours and not used until lamp replacement.

LENS FOCUS TRACKING ADJUSTMENT

After replacing the Lens Unit or the LCD Block, make this adjustment.
Fix the Lens Unit to optimize focus when zoomed out and in to the full.

1. Loosen the four screws securing the Lens Unit. Place the screws around the centre of the screw holes (elliptical).
2. Press the FOCUS/ZOOM button to indicate "ZOOM" on the screen.
3. Press the "ADJUST +" button to fully zoom out (to the smallest image).
4. Optimize the focus of the pixels on the screen.
5. Indicate the "ZOOM" on the screen. Press the "ADJUST –" button to fully zoom in (to the largest image).
6. Insert a minus screwdriver [equivalent to a 0.24 × 4 inch size (6 × 100 mm)] into the triangular hole for track adjustment. Turn the screwdriver to optimize the focus of the pixels on the screen. The Lens Unit moves forward and backward by turning the screwdriver.
7. Indicate the "ZOOM" on the screen. Press the "ADJUST +" button to fully zoom out.
8. Observe the focus. When the focus is optimized, this adjustment is completed. If not, make this adjustment again from the step 4.
9. Tighten the four screws. (screw torque 14±2kgf·m)



Optical Unit

ENGLISH

❑Adjustment with Microsoft® Windows® 95 Operating System

1. Starting

1. Start Windows® 95.
2. Double click [Accessories] holder.
3. Double click [Hyper Terminal] holder.
4. Double click [HyperTrm] icon.

2. Hyper Terminal Setting

1. Click [Properties] in File menu on the Hyper Terminal window.
   [Connection Properties] window will open.
   Set as follows on this window.
2. Click [Connecting] in communication menu on the window to connect LVP-X100E.

Item		Setting
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	Hardware
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line Local echo Delay (Line) : 1000msec. Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3. Adjustment

Enter the adjustment command and the adjustment value on the Hyper Terminal window in capitals with keyboard and press the enter key.

Note: When [<OK···] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command and value again.

4. Writing Adjustment Value

Enter the writing command and the adjustment value on the Hyper Terminal window in capitals with keyboard and press the enter key.

Note: This operation is not necessary for adjustment 1 (Clamp Level), 2 (RGB Input Level) and 3 (Bright Level) of automatic adjustment.

Note: When [<OK_EEPROM] is displayed, sending is accomplished correctly. When [<non···] is displayed, input the command and value again.

5. Close Window

Click the closing button placed upper right of the window to close the Hyper Terminal.
Close Windows® 95 after closing all opening windows.

Adjustment Procedures

ENGLISH

[A/D Pre-Amplification Circuit] 1. Clamp Level	**Adjustment purpose**	To set DC level of a picture signal to be entered to A/D converter.
	Symptom when incorrectly adjusted	Monochrome picture has a colour tint.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 100%, No. 01)
Input terminal	Analog RGB input terminal

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 100%, No. 01).
6. Enter [>?70] (RGB input clamp adjustment command) to the Hyper Terminal window and automatic adjustment will start.
7. When the adjustment is accomplished, [<OK_Auto CLUMP] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.
8. Supply an NTSC signal (colour bar) to the video input terminal.
9. Enter [>?71] (VIDEO input clamp adjustment command) to the Hyper Terminal window and automatic adjustment will start.
10. When adjustment is accomplished, [<OK_Auto CLUMP] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.

[A/D Pre-Amplification Circuit] 2. RGB Input Level	**Adjustment purpose**	To set amplitude of a video signal to be entered to A/D converter.
	Symptom when incorrectly adjusted	Monochrome picture has a colour tint.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 100%, No. 01)
Input terminal	Analog RGB input terminal

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 100%, No. 01).
6. Enter [>?52] (R signal adjustment command) to the Hyper Terminal window and automatic adjustment will start.
7. When the adjustment is accomplished, [<OK_Auto AD] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.
8. Enter [>?51] (G signal adjustment command) to the Hyper Terminal window and automatic adjustment will start.
9. When the adjustment is accomplished, [<OK_Auto AD] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.
10. Enter [>?53] (B signal adjustment command) to the Hyper Terminal window and automatic adjustment will start.
11. When the adjustment is accomplished, [<OK_Auto AD] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.

[Liquid Crystal Panel Driving Adjustment Circuit] 3. Bright Level	**Adjustment purpose**	To set DC level and amplitude of a video signal to be entered to Liquid crystal panel.
	Symptom when incorrectly adjusted	Monochrome picture has a colour tint. Whites are grey, or blacks are grey.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 100%, No. 01)
Input terminal	Analog RGB input terminal

* Preheat the set for one minute or more.

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 100%, No. 01).
6. Enter [>?6] (Bright level adjustment command) to the Hyper Terminal window. Automatic adjustment will start and the lamp indicator of LVP-X100E will flash in green.
7. When the adjustment is accomplished, [<OK_Auto BRIGHT] will be displayed on the Hyper Terminal window. If other massages are displayed, enter the command again.

[Liquid Crystal Panel Driving Adjustment Circuit] 4. Ghost	**Adjustment purpose**	To remove ghosts from the screen.
	Symptom when incorrectly adjusted	Ghosts appear every 12 picture elements.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (SMTPE, No. 14)
Input terminal	Analog RGB input terminal

* Make this adjustment only when ghosts remarkably appear on the screen.

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (SMTPE, No. 14).
6. Project pictures onto the screen.

Red

7. Operate the signal source to be projected in red monochrome on the screen.
8. Enter the adjustment command [>?3123 □□] to the Hyper Terminal window to minimise the red ghosts. Enter [BB] or [99] to □□ for minimum ghosts. [AA] has been written at □□ before adjustment.
   (*1) When [<OK_HIC] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.
9. Enter [>?1056 □□] to the Hyper Terminal window and write the changed value onto the EEPROM.
   (*2) When [<OK_EEPROM] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.

Green

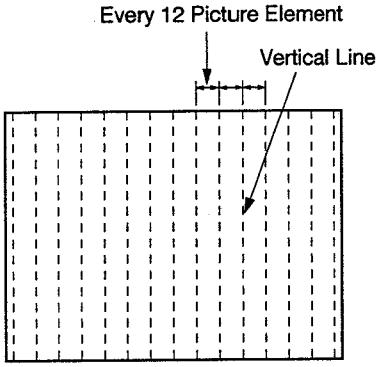
10. Operate the signal source to be projected in green monochrome on the screen.
11. Enter the adjustment command [>?3223 □□] to the Hyper Terminal window to minimise the green ghosts. Enter [BB] or [99] to □□ for minimum ghosts. [AA] has been written at □□ before adjustment. (*1)
12. Enter [>?1072 □□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 11 to □□. (*2)

Blue

13. Operate the signal source to be projected in blue monochrome on the screen.
14. Enter the adjustment command [>?3323 □□] to the Hyper Terminal window to minimise the blue ghosts. Enter [BB] or [99] to □□ for minimum ghosts. [AA] has been written at □□ before adjustment. (*1)
15. Enter [>?108E □□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 14 to □□. (*2)

[Liquid Crystal Panel Driving Adjustment Circuit] 5. Vertical Line	**Adjustment purpose**	To remove vertical lines form the screen.
	Symptom when incorrectly adjusted	Vertical lines appear every 12 picture elements.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 50%, No. 12)
Input terminal	Analog RGB input terminal



* Make this adjustment only when vertical lines remarkably appear on the screen.

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 50%, No. 12).
6. Project pictures onto the screen.
7. Enter the adjustment command [>?237 □□] to the Hyper Terminal window to minimise vertical lines. Enter any value from [00h] to [FFh] to □□ for minimum vertical lines. [10h] has been written at □□ before adjustment.
   (*1) When [<OK_DAC] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.
8. Enter [>?10F0 □□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 7 to □□.
   (*2) When [<OK_EEPROM] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.
9. Enter [>?10F1 □□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 7 to □□. (*2)
10. Enter [>?10F2 □□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 7 to □□. (*2)

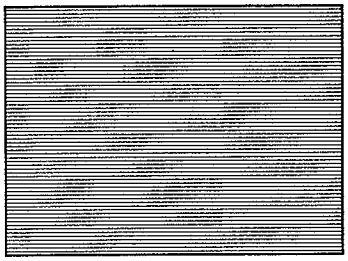
[Liquid Crystal Panel Driving Adjustment Circuit] 6. Flicker	**Adjustment purpose**	To remove flickers form the screen.
	Symptom when incorrectly adjusted	Flickers appear.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (Horizontal line every other picture element, No. 15)
Input terminal	Analog RGB input terminal



Horizontal Line Every other Picture Element Pattern

* Make this adjustment only when flickers remarkably appear on the screen.

1. Connect LVP-X100E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.12)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication programme [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.13)
4. Reset the normal mode on the main menu of this product.

Red

5. Supply an XGA signal (Horizontal line every other red picture element, No. 15).
6. Project pictures onto the screen.
7. Enter the adjustment command [>?239□□] to the Hyper Terminal window to minimise the red flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment.
   (*1) When [<OK_HIC] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.
8. Enter [>?103A□□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 7 to □□.
   (*2) When [<OK_EEPROM] is displayed, sending is accomplished correctly. When [<non···] is displayed, enter the command again.

Green

9. Supply an XGA signal (Horizontal line every other green picture element, No. 16).
10. Enter the adjustment command [>?23A□□] to the Hyper Terminal window to minimise the green flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment. (*1)
11. Enter [>?103B□□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 10 to □□. (*2)

Blue

12. Supply an XGA signal (Horizontal line every other blue picture element, No. 17).
13. Enter the adjustment command [>?23B□□] to the Hyper Terminal window to minimise the blue flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment. (*1)
14. Enter [>?103C□□] to the Hyper Terminal window and write the changed value onto the EEPROM. Enter the value of step 13 to □□. (*2)

SCHEMATIC DIAGRAM

MODEL : LVP-X100E

• NOTE

1. DC voltages were measured from points indicated to the circuit ground with a high-Z voltmeter.
2. Waveforms were taken with standard colour bar signal.
3. TP6A, etc. show Test Points.
4. Capacitors

Value	Not indicated	PF, for numbers more than 1 μF, for numbers less than 1	
Dielectric Strength	Not indicated :50V		
Tolerance	Not indicated =±10%	No Tolerance is indicated for electrolytic capacitors and ±20%	
	G=±2% J =±5% K=±10% M=±20%	P=+100% −0% Z=+80% −20%	Q=+30% −10% T=+200% −0%
	C=±0.25PF D=±0.5PF F=±1PF G=±2PF		
Sort	I Parts except for chips	Not indicated : Ceramic capacitor (MF) : Polyester capacitor (PP) : Polypropylene film capacitor (ALM) : Aluminus electrolytic capacitor (TF) : Twin film capacitor (SC) : Semiconductor ceramic capacitor (MP) : Metalized paper (MPP) : Metalized plastic film capacitor (MMF) : Metalized polyester capacitor (MF,PP) : Polyester polypropylence film capacitor (PS) : Styrol capacitor (TAN) or (TANT) : Tantalum capacitor : Electrolytic capacitor (BP) or (NP) : Non polarized electrolytic capacitor	
	II Chips	Not indicated : Ceramic capacitor chip : Electrolytic capacitor (BP) or (NP) : Non polarized electrolytic capacitor chip	
Characteristic (only ceramic capacitor)	Not indicated : F or B(high dielectric percentage) CH,SL,etc. : Temperature compensating types		

5. Resistors

Value	Not indicated = Ω K = kΩ(1000Ω) M = MΩ(1000kΩ)		
Wattage	Parts except for chips	Not indicated = 1/4W or 1/6W	
	Chips	Not indicated = 1/10W	
Tolerance	Not indicated =±5% D=±0.5% F=±1%	J=±5% K=±10%	
Sort	I Parts except for chips	Not indicated : Carbon resistor (S) : Fixed composition resistor (MB) : Metal oxide film resistor(type B) (CE) : Cemented resistor (W) : Wire wound resistor (M) : Metal film resistor (MPC) : Metal plate cement resistor (ML) : Metal liner resistor	
	II Chip	Not indicated : Chip resistor	

6. This is a basic schematic diagram. Some sets may be subject to modification according to engineering improvement.

modification according to engineering improvement.

SPECIFIC SYMBOL			
Zener Diode		Crystal unit	
Varicap		Air Gap	
Posistor		Part(resistor) attached on the copper-foil side of PCB	
Thermistor		Ceramic filter	
Fusible Resistor			

SERVICING PRECAUTION

SYMBOLS INDICATE COMPONENTS HAVING SPECIAL CHARACTERISTICS IMPORTANT TO SAFETY AND PERFORMANCE. THERFORE REPLACEMENT OF ANY SAFETY PARTS SHOULD BE IDENTICAL IN VALUE AND CHARACTERISTICS. FOR ACCURACY OF THE REPLACEMENT REFER TO THE PARTS LIST OF SERVICE MANUAL.
DON'T DEGRADE THE SAFETY OF THE RECEIVERS THROUGH IMPROPER SERVICING.
