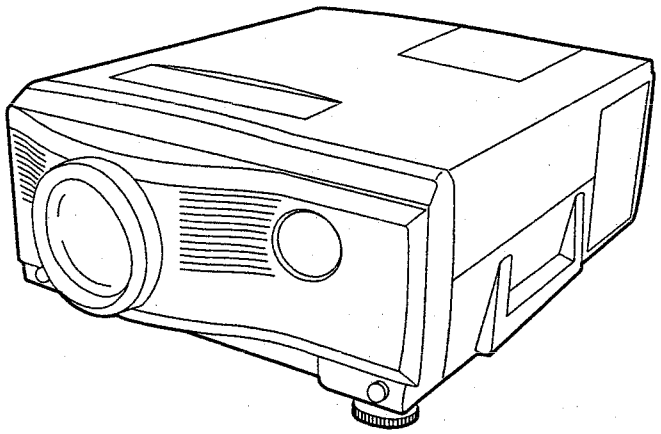
1998

MITSUBISHI Service Manual

LCD PROJECTOR
LC6 CHASSIS



MODEL
LVP-X200E

CAUTION
Before servicing this chassis, it is important that the service person reads the "SAFETY PRECAUTIONS" in this service manual.

PRECAUTION
Avant un entretien/dépannage de ce châssis, il est important que la personne en charge lise les "MESURES DE SECURITE" dans ce manuel d'entretien/dépannage.

VORSICHT
Bevor Wartungsarbeiten an diesem Chassis ausgeführt werden, muß das Wartungspersonal die "SICHERHEITSHINWEISE" in dieser Wartungsanleitung durchlesen.

ATTENZIONE
Prima di un intervento di assistenza tecnica sul telaio, è importante che il personale di assistenza tecnica legga le "MISURE DI SICUREZZA" contenute in questo manuale di assistenza.

PRECAUCIÓN
Antes de servir este chasis, es importante que la persona de servicio lea las "PRECAUCIONES DE SEGURIDAD" de este manual de servicio.

注意
维修服务人员，当进行本机箱的维修服务之前，请一定要细读本服务手册中的"有关安全的注意事项"。

CONTENTS

TRADEMARK, REGISTERED TRADEMARK

SPECIFICATIONS

- **Power Input** : AC 100~240V ; 50 / 60Hz
- **Rated Input** : 5.0A
- **LCD Panels** : 1.3inch LCD panel: 3 pieces(for R,G,B)
  Pixels 1,024 × 768= 786,432 pixels
  Total 2,359,296 pixels
  Active pixel rate: 99.99% or more (each panel)
- **Projection Lens** : F 2.3~2.7 f = 53.3-69.3 mm
- **Light Source Lamp** : 330W DC metal halide lamp
- **Picture Size** : aspect rate 4:3 40~300 inch
- **Speakers** : 60mm round type, 2 pcs.
- **S-Video Input** : Luminance signal: 1.0Vp-p 75Ω (negative signal)
  Chroma signal: 0.286Vp-p 75Ω (burst signal)
- **Video Input** : 1.0Vp-p 75Ω (negative sync.)
- **Audio Inputs** : 350mVrms, 10kΩ or more
- **PC Audio Inputs** : 350mVrms, 10kΩ or more
- **Analog RGB Input** : Mini D-SUB 15P
  RGB: 0.7Vp-p 75Ω (positive sync.)
  YCbCr: 1.0Vp-p (Y) (negative sync.)
  CbCr: 0.7Vp-p
  HD/CS: TTL level (positive)
  VD: TTL level (positive)
- **Cabinet Dimensions** : 330(W) × 145(H) × 398(D) mm (Legs and lens are not included.)
- **Weight** : 21.5 lb. (9.8kg)
- **Length of Power Cord** : 114 inch (2.9m)

ENGLISH

- Weight and dimensions shown are approximate.
- Design and specifications are subject to change without notice.

SAFETY PRECAUTIONS

NOTICE: Observe all cautions and safety related notes located inside the cabinet and on the chassis.

WARNING

1. An isolation transformer should be used between the projector and the AC supply point before any test/service is performed on a LIVE chassis projector.
2. Operation of this projector outside the cabinet or with the cover removed, involves a shock hazard from the projector power supplies. Work on the projector should not be attempted by anyone who is not thoroughly familiar with precautions necessary when working on high voltage equipment.
3. When service is required, observe the original lead dressing. Extra precaution should be given to assure correct lead dressing in the high voltage area. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

LEAKAGE CURRENT COLD CHECK

Before returning the projector to the customer, it is recommended that leakage current be measured according to the following methods.
With the AC plug removed from the AC source, place a jumper across the two AC plug prongs. Turn the projector AC switch on. Using an 500V D.C. Insulation Tester, connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (screwheads, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 4 megohm. Any resistance below this value indicates an abnormality which requires corrective action.

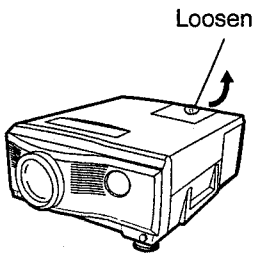
REPLACING THE LAMP BOX

The light source lamp is designed to project the image on the LCD panel. When the light source lamp no longer functions, replace it with a new one to ensure optimum performance.

⚠ Caution:

- Do not remove the light source lamp from inside of this equipment immediately after using the projector, you may get burned because of the high temperature of the light source lamp.
- When you replace the light source lamp, press the power button to power off, then wait for 120 seconds in stand-by mode to cool down the lamp and LCD panels. Turn off the main switch, unplug the power code from the outlet and wait one hour so that the lamp is cool to the touch.
- Do not remove the light source lamp except for replacement. Careless treatment can cause injury or fire.
- Do not touch the lamp directly. It may be broken and may cause you to injure or burn yourself.
- Be sure not to drop the lamp lid screw into the projector. Also be sure also not to insert metal or any flammable objects, it may cause fire or an electric shock. If any objects are inserted, please unplug and contact your dealer.
- Install the lamp securely, failure to do so it may cause a fire.
- **for Service Person**
  Be sure to attach the Top Cover Assy and the Top Case separately to the product after removing the Top Cover Assy from the product to replace the lamp.
  If they are attached together, the explosion-proof shutter may not operate. Do not turn on the product in such condition, or the lamp may explode.

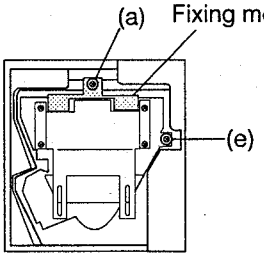
1. Loosen the screw of the lamp lid on the top cover using a screwdriver (–) , and remove the lid.
   - Remove the lamp cover in the direction of the arrow as indicated.



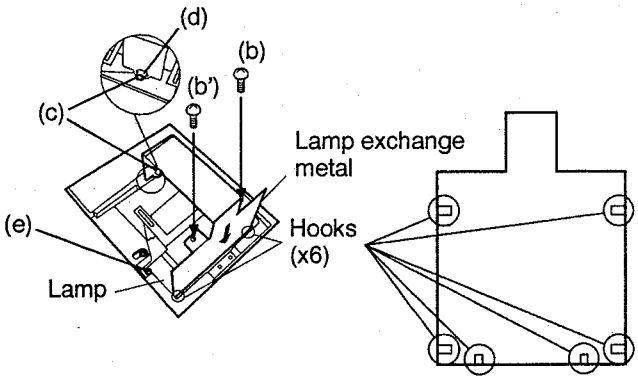
Important:

Be careful not to damage the electric wire connected to this equipment.

2. Loosen a screw (a) of fixing metal using a screwdriver (+), and remove them.
   Do not lose the fixing metal and screws.

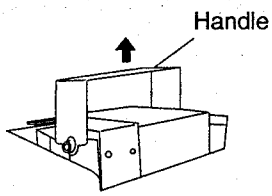


3. Set Lamp exchanging metal into the projector.
   1) Insert metal fittings for lamp replacement in the following positions: on the front face of the lamp (2 positions), between the lamp, and on the bottom edges (4 positions).
   2) Align screw holes (c) with node (d).
   3) Fasten the piece into place using the two screws included (b, b').

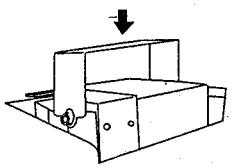


4. Loosen the lamp fixing screw (e) using a screwdriver (+), and remove it.

5. Hold onto the projector by the handle as you pull out the lamp.
   For the lamp you have removed, do not spill liquid on it, place it near flammable objects or where children can touch it. Otherwise, it will cause injury or fire.

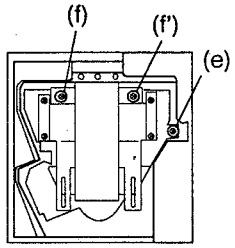


6. Insert the new lamp securely into the projector body in the right direction.



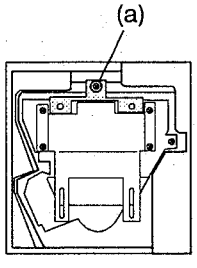
7. Tight up the screws (e) which have been removed in 4 using a screwdriver (+).

8. Loosen the two screws (f), (f') of lamp exchanging metal using a screwdriver, and remove them with the metal.



9. Remove the holes from the lamp replacement metal fittings (c) from the node (d).

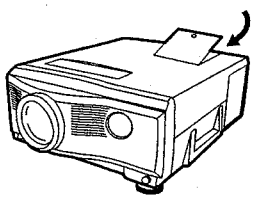
10. Insert the fixed metal pieces from step 2 into the screw holes (f) and (f'), and use one screw (a) to hold the piece in place.



ENGLISH

ENGLISH

11. Tighten up the screw of the lamp lid using a screwdriver (–).



How to reset the operation time meter
Plug in the power cord, switch on the projector and reset lamp time by pressing the < , > and POWER buttons simultaneously.

- Lamp cannot be removed from the projector unless setting the lamp exchanging metal.
- If you do not have the lamp exchanging metal, remove the metal from the new lamp and use it. Do not touch the lamp directly. It may be broken and may cause you to injure or burn or yourself.

⚠ Caution:
- For the lamp you have removed, do not spill liquid on it, place it near flammable objects or where children can touch it. Otherwise, it will cause injury or fire.
- Be sure that the projector guide is firmly inserted between the right and left lamp guides.
  Do not touch the lamp directly, place a cloth over the replacement lamp.

Important:
- The projector will not turn on if you do not secure the lamp lid.
- The operation time meter must be reset after the lamp has been replaced.
- Do not reset the operation time meter unless the lamp has been replaced.

The life of the lamp
The average life of the lamp for the projector is about 1,000 hours of consecutive use. Life span may differ according to operating environment, and may be shorter than 1000 hours. Decreases in luminescence and/or color brightness will indicate that the light source lamp is in need of replacement. When lamp operation time exceeds 1,000 hours, the indicator will flash alternately between green and red (while the lamp is in operation; when the lamp is not in operation, the indicator will appear red only). When the lamp has been used for about 1,250 hours, the message "LAMP!!." will appear on the screen. When the lamp has been used for about 1,300 hours, the projector will automatically shut off for the safety of the lamp and the power indicator light up in red. The projector cannot be used until the lamp has been replaced.

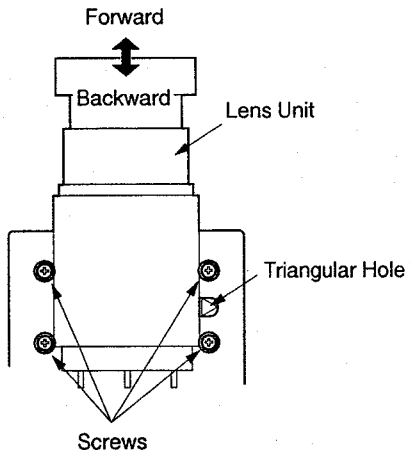
⚠ Caution:
- The light source lamp is fragile. Be careful not to cut yourself with the fragments.
- The lamp life depends on the environment. For replacement lamps, please contact your dealer.

The projector automatically shuts off when the lamp is used up in about 1,300 hours and not used until lamp replacement.

LENS FOCUS TRACKING ADJUSTMENT

After replacing the Lens Unit or the LCD Block, make this adjustment.
Fix the Lens Unit to optimize focus when zoomed out and in to the full.

1. Loosen the four screws securing the Lens Unit. Place the screws around the center of the screw holes (elliptical).
2. Press the FOCUS/ZOOM button to indicate "ZOOM" on the screen.
3. Press the "ADJUST +" button to fully zoom out (to the smallest image).
4. Optimize the focus of the pixels on the screen.
5. Indicate the "ZOOM" on the screen. Press the "ADJUST –" button to fully zoom in (to the largest image).
6. Insert a minus screwdriver (equivalent to a 0.24 X 4 inch size) into the triangular hole for track adjustment. Turn the screwdriver to optimize the focus of the pixels on the screen. The Lens Unit moves forward and backward by turning the screwdriver.
7. Indicate the "ZOOM" on the screen. Press the "ADJUST +" button to fully zoom out.
8. Observe the focus. When the focus is optimized, this adjustment is completed. If not, make this adjustment again from the step 4.
9. Tighten the four screws. (screw torque 14±2kgf·m)



Optical Unit

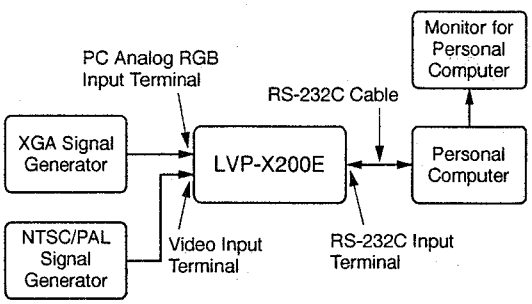
ELECTRICAL ADJUSTMENTS

Use communication program [Hyper Terminal] of Microsoft® Windows® 95 Operating system for every circuit adjustment of this product.

❑Necessary Equipment and Connecting

Connect the following equipment as shown in the right figure.

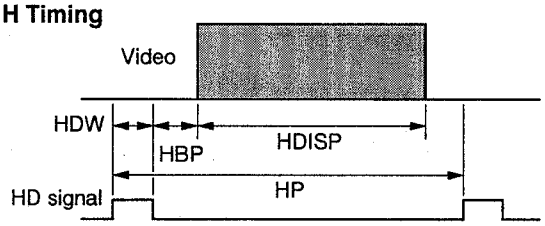
- LVP-X200E
- Personal Computer (with Microsoft® Windows® 95 Operating System)
- RS-232C Cable
- XGA Signal Generator (Equivalent to VG-814)
- NTSC Signal Generator
- PAL Signal Generator
- Monitor for Personal Computer



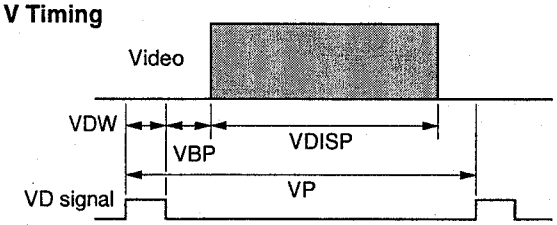
❑Test Signal

1. NTSC colour bar signal (Composite)
2. PAL colour bar signal (Composite)
3. XGA signal (Horizontal frequency 60Hz)
   The timing and patterns for the adjustment are as follows :

H Timing



V Timing



Program ROM : LC6 Ver. 1.1

Program No.	Pattern
01	White Raster 100%

❑Adjustment with Microsoft® Windows® 95 Operating System

1. Starting

1. Start Windows® 95.
2. Double click [Accessories] holder.
3. Double click [Hyper Terminal] holder.
4. Double click [HyperTrm] icon.

2. Hyper Terminal Setting

1. Click [Properties] in File menu on the Hyper Terminal window.
   [Connection Properties] window will open.
   Set as follows on this window.
2. Click [Connecting] in communication menu on the window to connect LVP-X200E.

Item		Setting
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	None
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line Local echo Delay (Line) : 1000msec. Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3. Adjustment

Enter the adjustment command and the adjustment value on the Hyper Terminal window in capitals with keyboard and press the enter key.

4. Writing Adjustment Value

Enter the writing command and the adjustment value on the Hyper Terminal window in capitals with keyboard and press the enter key.

Note: This operation is not necessary for adjustment 2 (Clamp Level), and 3 (A/D Convertor) of automatic adjustment.

5. Close Window

Click the closing button placed upper right of the window to close the Hyper Terminal.
Close Windows® 95 after closing all opening windows.

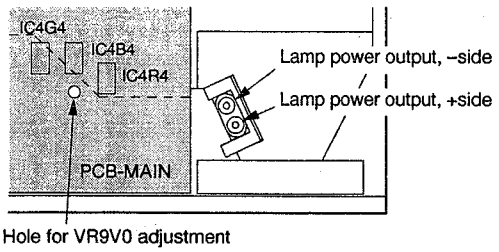
Adjustment Procedures

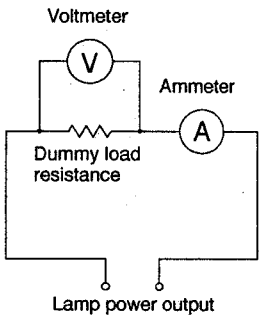
[Lamp Power Circuit] 1. Power of Lamp Power Source	**Adjustment purpose**	To set the power supplied to the lamp at the proper value.
	Symptom when incorrectly adjusted	The lamp doesn't burn at the specified brightness, or the lamp may explode.

Measuring instrument	Ammeter, Voltmeter
Test point	Lamp power output
EXT trigger	----
Measurement range	----
Input signal	----
Input terminal	----

*Finish this adjustment within 1 minute after turning on the product.

1. Remove the lamp box and the main shield cover from the product.
2. Connect an ammeter, a voltmeter and a dummy load resistance (non-inductive resistance 12Ω 350W) with the lamp power output as shown in the figure.
3. Turn on the product.
4. Adjust VR9V0 (PCB-LAMP POWER) so that the output is 338±2W (Voltage 64V, Current 5.28A, to be in the range shown in the following table and graph) Adjust VR9V0 using the adjustment hole on the PCB-MAIN.





Measuring instruments connection

Adjustment Summary Table

Voltage V	Current A (max)	Current A (min)
63.60	5.35	5.28
63.65	5.34	5.28
63.70	5.34	5.27
63.75	5.33	5.27
63.80	5.33	2.27
63.85	5.32	5.26
63.90	5.32	5.26
63.95	5.32	5.25
64.00	5.31	5.25
64.05	5.31	5.25
64.10	5.30	5.24
64.15	5.30	5.24
64.20	5.30	5.23
64.25	5.29	5.23
64.30	5.29	5.23
64.35	5.28	5.22
64.40	5.28	5.22
64.45	5.28	5.21
64.50	5.27	5.21

[A/D Pre-Amplification Circuit] 2. Clamp Level	**Adjustment purpose**	To set DC level of a picture signal to be entered to A/D converter.
	Symptom when incorrectly adjusted	Monochrome picture has a colour tint.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 100%, No. 01)
Input terminal	Analog RGB input terminal

* Enter the adjustment command with capital alphanumeric characters.

1. Connect LVP-X200E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.11)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication program [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.12)
4. Reset the normal mode on the main menu of this product.

RGB

5. Supply an XGA signal (White 100%, No. 01).
6. Enter [00~70] (RGB input clamp adjustment command) to the Hyper Terminal window and automatic adjustment will start.
7. The return command [00~70111] is displayed on the Hyper Terminal Window after the adjustment.
   The last 3 figures of the return command indicate the result of adjustment and each figure corresponds to R, G, and B. in order. The figure, 1 means that the adjustment has been successful. The figure, 0 means that the adjustment has been failed caused by faults on PCBs, wrong signals or wrong input selection.

VIDEO

8. Supply an NTSC signal (colour bar) to the video input terminal.
9. Enter [00~71] (VIDEO input clamp adjustment command) to the Hyper Terminal window and automatic adjustment will start.
10. The return command [00~7111] is displayed on the Hyper Terminal Window after the adjustment.
    The last 2 figures of the return command indicate the adjustment result and each figure corresponds to R-Y and B-Y. The figure, 1 means the adjustment has been successful. The figure, 0 means that the adjustment has been failed caused by faults on PCBs, wrong signals or wrong input selection.

[A/D Pre-Amplification Circuit] 3. A/D Convertor	**Adjustment purpose**	To set amplitude of a video signal to be entered to A/D converter.
	Symptom when incorrectly adjusted	Monochrome picture has a colour tint.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 100%, No. 01)
Input terminal	Analog RGB input terminal

* Enter the adjustment command with capital alphanumeric characters.

1. Connect LVP-X200E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.11)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication program [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.12)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 100%, No. 01).
6. Enter [00~5] (A/D adjustment command) to the Hyper Terminal window and automatic adjustment will start.
7. The return command [00~5111] is displayed on the Hyper Terminal Window after the adjustment.
   The last 3 figures of the return command indicate the result of adjustment and each figure corresponds to R, G, and B. in order. The figure, 1 means that the adjustment has been successful. The figure, 0 means that the adjustment has been failed caused by faults on PCBs, wrong signals or wrong input selection.

[Liquid Crystal Panel Driving Adjustment Circuit] 4. Ghost	**Adjustment purpose**	To remove ghosts from the screen.
	Symptom when incorrectly adjusted	Ghosts appear every 12 picture elements.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (SMTPE(R), No. 35)
Input terminal	Analog RGB input terminal

* Make this adjustment only when ghosts remarkably appear on the screen.
* Enter the adjustment command with capital alphanumeric characters.

1. Connect LVP-X200E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.11)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication program [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.12)
4. Reset the normal mode on the main menu of this product.
5. Project pictures onto the screen.

Red

6. Supply an XGA signal (SMTPE(R), No. 35).
7. Operate the signal source to be projected in red monochrome on the screen.
8. Enter the adjustment command [00~3123 □□] to the Hyper Terminal window to minimise the red ghosts. Enter [99], [AA], [BB], [CC] or [DD] to □□ for minimum ghosts. [BB] has been written at □□ before adjustment.
   (*1) When the sent command is displayed, sending is accomplished correctly. The current value can be confirmed by sending the command without entering any value to □□.
9. Enter command for writing [00~1E93 □□] to the Hyper Terminal window and write the changed value onto the EEPROM.
   Enter the value of step 8 to □□. (*1)

Green

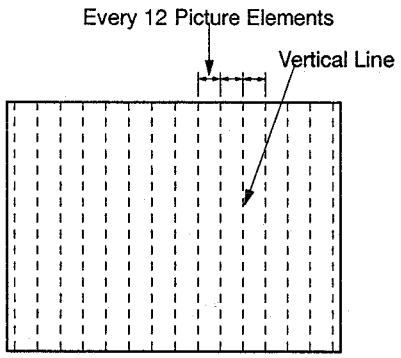
10. Supply an XGA signal (SMTPE(G), No. 36).
11. Operate the signal source to be projected in green monochrome on the screen.
12. Enter the adjustment command [00~3223 □□] to the Hyper Terminal window to minimise the green ghosts. Enter [99], [AA], [BB], [CC] or [DD] to □□ for minimum ghosts. [BB] has been written at □□ before adjustment. (*1)
13. Enter command for writing [00~1EAA □□] to the Hyper Terminal window and write the changed value onto the EEPROM.
    Enter the value of step 12 to □□. (*1)

Blue

14. Supply an XGA signal (SMTPE(B), No. 37).
15. Operate the signal source to be projected in blue monochrome on the screen.
16. Enter the adjustment command [00~3323 □□] to the Hyper Terminal window to minimise the blue ghosts. Enter [99], [AA], [BB], [CC] or [DD] to □□ for minimum ghosts. [BB] has been written at □□ before adjustment. (*1)
17. Enter command for writing [00~1EC1 □□] to the Hyper Terminal window and write the changed value onto the EEPROM.
    Enter the value of step 16 to □□. (*1)

[Liquid Crystal Panel Driving Adjustment Circuit] 5. Vertical Line	**Adjustment purpose** To remove vertical lines form the screen. **Symptom when incorrectly adjusted** Vertical lines appear every 12 picture elements.

Measuring instrument	—
Test point	—
EXT trigger	—
Measurement range	—
Input signal	XGA signal (White 50%, No. 12)
Input terminal	Analog RGB input terminal



* Make this adjustment only when vertical lines remarkably appear on the screen.
* Enter the adjustment command with capital alphanumeric characters.

1. Connect LVP-X200E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.11)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication program [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.12)
4. Reset the normal mode on the main menu of this product.
5. Supply an XGA signal (White 50%, No. 12).
6. Project pictures onto the screen.
7. Enter the adjustment command [00~227 □□] to the Hyper Terminal window to minimise vertical lines. Enter any value from [10h] to [FFh] to □□ for minimum vertical lines. [10h] has been written at □□ before adjustment.
   (*1) When the sent command is displayed, sending is accomplished correctly. The current value can be confirmed by sending the command without entering any value to □□.
8. Enter command for writing [00~1F2B □□] to the Hyper Terminal window and write the changed value onto the EEPROM.
   Enter the value of step 7 to □□. (*1)

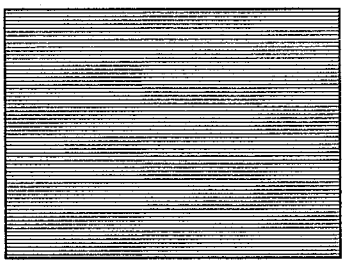
[Liquid Crystal Panel Driving Adjustment Circuit] 6. Flicker	**Adjustment purpose**	To remove flickers form the screen.
	Symptom when incorrectly adjusted	Flickers appear.

Measuring instrument	---
Test point	---
EXT trigger	---
Measurement range	---
Input signal	XGA signal (Horizontal line every other red picture element, No. 15)
Input terminal	Analog RGB input terminal



Horizontal Line Every other Picture Element Pattern

* Make this adjustment only when flickers remarkably appear on the screen.
* Enter the adjustment command with capital alphanumeric characters.

1. Connect LVP-X200E with a personal computer (with Microsoft® Windows® 95 Operating System). (Refer to the figure on P.11)
2. Start Microsoft® Windows® 95 in the personal computer.
3. Start the communication program [Hyper Terminal] in Microsoft® Windows® 95 to open the window. (For setting, refer to Hyper Terminal setting on P.12)
4. Reset the normal mode on the main menu of this product.

Red

5. Supply an XGA signal (Horizontal line every other red picture element, No. 15).
6. Project pictures onto the screen.
7. Enter the adjustment command [00~229□□] to the Hyper Terminal window to minimise the red flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment.
   (*1) When the sent command is displayed, sending is accomplished correctly. The current value can be confirmed by sending the command without entering any value to □□.
8. Enter command for writing [00~1F2D□□] to the Hyper Terminal window and write the changed value onto the EEPROM.
   Enter the value of step 7 to □□. (*1)

Green

9. Supply an XGA signal (Horizontal line every other green picture element, No. 16).
10. Enter the adjustment command [00~22A□□] to the Hyper Terminal window to minimise the green flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment. (*1)
11. Enter command for writing [00~1F2E□□] to the Hyper Terminal window and write the changed value onto the EEPROM.
    Enter the value of step 10 to □□. (*1)

Blue

12. Supply an XGA signal (Horizontal line every other blue picture element, No. 17).
13. Enter the adjustment command [00~22B□□] to the Hyper Terminal window to minimise the blue flickers. Enter any value from [00h] to [FFh] to □□ for minimum flickers. [A0h] has been written at □□ before adjustment. (*1)
14. Enter command for writing [00~1F2F□□] to the Hyper Terminal window and write the changed value onto the EEPROM.
    Enter the value of step 13 to □□. (*1)

LED ERROR INDICATION

This product is provided with the self-diagnosis function. In case of any abnormality, the LED at the top of the product will indicate the errors.

Diagnosis method : Every time the main power is turned on, the SW is turned on and each sensor is checked for any errors in 4 seconds. The POWER LED remains red during the check.

Diagnosis result indication : LED indication and failures are shown in the following table. LED can be reset "automatically" or "by turning on/off of the main power" when the fault detection is finished.

Forced power-on : When the product can't be turned on because of STBY power short or SW power short, press the 3 buttons of RGB, VIDEO and CARD at the top of the product simultaneously during 4 seconds of the sensor check to turn on the product for fault detection. In this case, protection circuits except for STBY power short and SW power short will operate.

ENGLISH

LED Error Indication List

Preferential order	Failure	Symptom	Purpose	LED Indication					Reset
				POWER	LAMP	TEMP	CARD1	CARD2	
1	STBY power short	No power-on	Fault Detection	Red/Green alternately	Orange	Red flash 2	*	*	Main Power
2	SW power short	No power-on	Fault Detection	Red/Green alternately	Orange	Red flash	*	*	Main Power
3	Fan stops (Optical unit)	No power-on	Fault Detection	Red/Green alternately	Red	Red flash 3	*	*	Main Power
4	Fan stops (Exhaustion)	No power-on	Fault Detection	Red/Green alternately	Red	Red flash 2	*	*	Main Power
5	Fan stops (Intake)	No power-on	Fault Detection	Red/Green alternately	Red	Red flash	*	*	Main Power
6	Fan stops (Power)	No power-on	Fault Detection	Red/Green alternately	Red	Red flash 4	*	*	Main Power
7	LBOX open	No power-on	Danger Prevention	Red/Green alternately	–	–	*	*	Auto
8	FBOX open	No power-on	Dust Intake Prevention	Red/Green alternately	–	–	*	*	Auto
9	Unplugged thermistor (Exhaustion)	No power-on	Fault Detection	Red/Green alternately	–	Red flash	*	*	Auto
10	Unplugged thermistor (Lamp)	No power-on	Fault Detection	Red/Green alternately	–	Red flash 2	*	*	Auto
11	Communication failure between the computers	No power-on	Fault Detection	Red/Green alternately	Orange	Red	*	*	Auto
12	IIC bus failure (EEPROM)	No power-on	Fault Detection	Red/Green alternately	Green	Red flash 2	*	*	Auto
13	IIC bus failure (Decoder)	Inferior display of VIDEO input	Fault Detection	Red/Green alternately	Green	Red flash	*	*	Auto

– : LED off
* : Need no confirmation
Orange : Both Red and Green light
Red flash N: The cycle that Red flashes N times and goes out for fixed time is repeated.

LED Error Indication List

Preferential order	Failure	Symptom	Purpose	LED Indication					Reset
				POWER	LAMP	TEMP	CARD1	CARD2	
14	Temperature sensor (Lamp)	No power-on	Temperature rise	Red	–	Red flash 2	*	*	Auto
15	Temperature sensor (Intake)	No power-on	Temperature rise	Red	–	Red flash	*	*	Auto
16	Temperature sensor (PCB)	No power-on	Temperature rise	Red	–	Red flash 3	*	*	Auto
17	Lamp's life (1000~1300h)	Only warning indication by LED	Warning indication by LED Indication during stand-by	Red	Red flash	–	*	*	Manual
			Warning indication by LED Indication during stand-by	Green	Red/Green alternately	–	*	*	Manual
	Lamp's life (1300h or over)	No power-on	Lamp's life	Red	Red	–	*	*	Manual
18	Lamp doesn't light	No power-on for 1 minute	Lamp protection	Red	Green flash	–	*	*	Auto
19	For 1 minute after power-on	No power-off for 1 minute	Lamp protection	Green	Green flash	–	*	*	Auto
20	For 1 minute after power-off	No power-on for 1 minute	Lamp protection	Red	Green flash	–	*	*	Auto
21	IIC bus failure (HIC)	Inferior display of all inputs	Fault detection	*	*	*	Green flash	Green flash	Auto
22	IIC bus failure (EEPROM)	No power-on	Fault detection	*	*	*	Green flash 2	Green flash 2	Auto

– : LED off
* : Need no confirmation
Orange : Both Red and Green light
Red flash N: The cycle that Red flashes N times and goes out for fixed time is repeated.

TABLE DES MATIERES

FRANÇAIS

TRADEMARK, REGISTERED TRADEMARK

SPECIFICATIONS

- **Alimentation** : CA 100~240V ; 50 / 60Hz
- **Entrée nominale** : 5,0A
- **Panneaux LCD** : Panneau LCD 1,3": 3 pièces (pour R, G, B)
  Pixels 1024 × 768 = 786 432 pixels
  Total 2 359 269 pixels
  Taux de pixel actifs: 99,99% ou plus (chaque panneau)
- **Objectif de Projection** : F 2,3~2,7 f = 53,3~69,3 mm
- **Lampe source lumineuse** : Lampe à halogénure métallique 330 W
- **Format d'image** : Rapport hauteur/largeur 4:3 40-300"
- **Enceintes** : rondes de 60 mm × 2 pces.
- **Entrée S-vidéo** : Signal de luminance
  1,0 Vc-c 75 ohms (sync. négative)
  Signal de chrominance
  0,286 Vc-c 75 ohms
  (signal de rafales)
- **Entrée vidéo** : 1,0 Vc-c 75 ohms (sync. négative)
- **Entrées audio** : 350mVrms, 10kohms min.
- **Entrées audio du PC** : 350mVrms, 10kohms min.
- **Entrée RGB analogique** : Mini D-SUB 15 broches
  RGB: 0,7Vp-p 75ohms (sync.négative)
  YCbCr: 1,0Vp-p (Y) (sync.négative)
  Cb, Cr: 0,7Vp-p
  HD/CS : niveau TTL (positif)
  VD : niveau TTL (positif)
- **Dimensions extérieures** : 330(L) × 145(H) × 398(P) mm
  Les pattes et objecifs ne sont pas inclus.
- **Poids** : 21,5 lb (9,8kg)
- **Longueur du cordon d'alimentation** : 114 inch (2,9m)

FRANCAIS

- La poids et les dimensions indiqués sont approximatifs.
- La présentation et les données techniques peuvent être sujettes à des modifications sans avertissement.

PRECAUTIONS SUR LA SECURITE

AVIS: Observer toutes les précautions et les mesures de sécurité se rapportant aux notes situées à l'intérieur du boîtier du projecteur et sur le châssis du projecteur.

AVERTISSEMENT

1. Un transformateur de séparation devra être utilisé entre le projecteur et le point d'alimentation C.A. avant d'effectuer n'importe quel essai/entretien sur le châssis du projecteur SOUS TENSION.
2. Le fonctionnement de ce projecteur à l'extérieur du boîtier ou avec le couvercle retiré implique un danger d'électrocution provenant de l'alimentation en courant du projecteur. Un travail sur le projecteur ne devra pas être tenté par quiconque n'est pas parfaitement familiarisé avec les précautions nécessaires devant être prises lorsque l'on travaille sur un équipement à haute tension.
3. Lorsqu'un entretien est nécessaire, observer la disposition initiale des fils. Des précautions supplémentaires devront être prises pour assurer une disposition correcte des fils dans les zones à haute tension. Lorsqu'un court-circuit se produit, remplacer les éléments constitutifs qui mettent en évidence un surchauffage.

VERIFICATION D'UN COURANT DE FUITE

Avant de renvoyer le projecteur au client, il est conseillé qu'un courant de fuite soit mesuré selon les méthodes suivantes.
Avec la fiche C.A. retirée de la source C.A., placer une jarretière à travers les deux ergots de la fiche C.A. Mettre en marche le courant secteur du projecteur. En utilisant un détecteur d'isolement, raccorder un fil à la fiche C.A. interconnectée et faire toucher l'autre fil à chaque pièce métallique exposée (têtes de vis, etc.), plus particulièrement les pièces métalliques exposées ayant un circuit de retour au châssis. Les pièces métalliques exposées ayant un circuit de retour au châssis devront présenter une lecture de résistance minimum de 4 mégohms. Toute résistance au-dessous de cette valeur indique une anormalité qui nécessitera une intervention corrective.

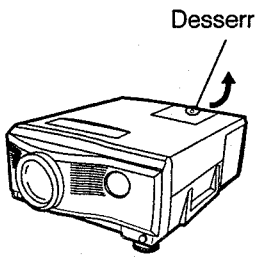
REMPLACEMENT DE LA LAMPE SOURCE DE LUMIERE

La lampe source de lumière est intégrée dans cet appareil pour projeter l'image sur le panneau à cristaux liquides. Quand la lampe source de lumière ne fonctionne plus, remplacez-la par une neuve fournie avec cet appareil de manière que l'image puisse être projetée.

Attention:

- Ne pas enlever la lampe de l'intérieur de cet appareil, aussitôt après avoir terminé l'utilisation du projecteur, sinon la température élevée de la lampe risque de vous brûler.
- Lorsque la lampe doit être remplacée, appuyer sur la touche d'alimentation pour mettre le projecteur hors circuit et attendre 120 secondes en mode d'attente pour refroidir la lampe et les panneaux LCD et couper l'interrupteur principal, puis débrancher de la prise et attendre 60 minutes afin de refroidir la lampe.
- Ne pas enlever la lampe, excepté pour la remplacer. Si cette recommandation n'est pas respectée, des blessures et un incendie risquent d'être provoqués.
- Ne pas toucher la lampe à mains nues. Elle risque de casser et de vous brûler.
- S'assurer de ne pas faire tomber la vis du couvercle de la lampe dans le projecteur. Ne pas insérer d'objets étrangers ou inflammables dans le projecteur, ils risquent de provoquer un incendie ou une décharge électrique. Si des objets sont insérés dans le projecteur, le débrancher et prendre contact avec votre revendeur.
- Fixer la lampe fermement, sinon il y a risque d'incendie.
- **Pour le personnel de service**
  S'assurer de fixer séparément le Top Cover Assy et le Top Case au produit. S'ils sont fixés ensemble, l'obturateur antidéflagrant risque de ne pas fonctionner. Ne pas mettre en marche l'appareil dans une telle condition, sinon la lampe risque d'exploser.

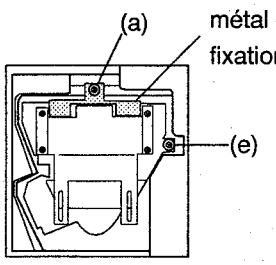
1. Desserrer la vis du couvercle de lampe située sur le capot supérieur en utilisant un tournevis (–) , et déposer le couvercle. (Retirer le couvercle de la lampe dans le sens indiqué par la flèche.)



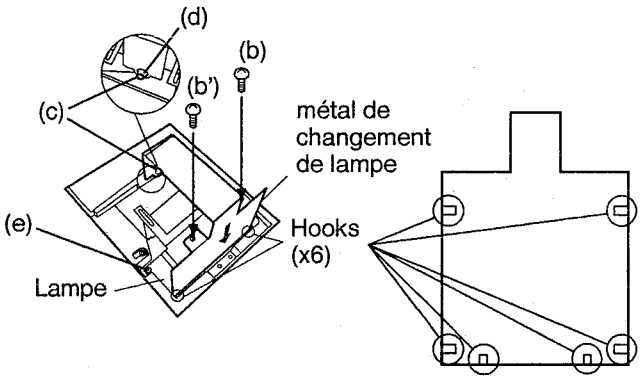
Important:

Faire attention à ne pas endommager le fil électrique connecté à cet équipement.

2. Desserrer la vis (a) du métal de fixation en utilisant un tournevis (+), et les déposer.
   Ne pas perdre le métal de fixation et la vis.

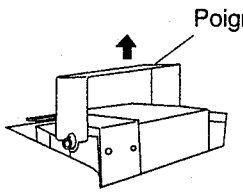


3. Placer le métal de changement de lampe dans le projecteur.
   1) Insérer les ferrures pour le remplacement de la lampe sur les positions suivantes : sur la face avant de la lampe (2 positions), entre les positions de la lampe et sur les bords inférieurs (4 positions).
   2) Aligner les trous de vis (c) sur le noeud (d).
   3) Fixer la pièce en place à l'aide des deux vis fournies (b, b').

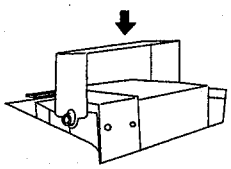


4. Desserrer la vis de fixation de lampe (e) en utilisant un tournevis (+), et la déposer.

5. Maintenir le projecteur par la poignée lorsque vous sortez la lampe.
   Ne pas verser de liquide sur la lampe déposée, la placer près d'objets inflammables ou à portée d'enfants pour ne pas risquer de blessure ou d'incendie.

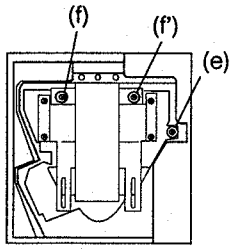


6. Insérer correctement la nouvelle lampe dans le corps du projecteur dans la bonne direction.



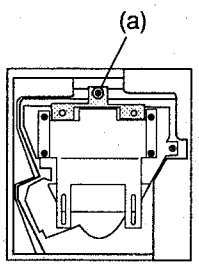
7. Resserrer les vis (e) déposées à l'étape 4 en utilisant un tournevis (+).

8. Desserrer les deux vis (f), (f') du métal de changement en utilisant un tournevis, et les déposer avec le métal.



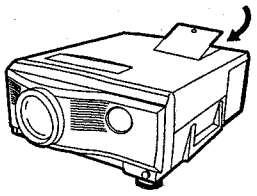
9. Retirer les orifices des ferrures de remplacement de la lampe (c) du node (d).

10. Introduire les pièces métalliques fixes de l'étape 2 dans les trous de vis (f) et (f'), et utiliser une vis (a) pour maintenir la pièce en place.



FRANCAIS

11. Serrez la vis du couvercle de la lampe en utilisant un tournevis (–) ou une pièce de monnaie.



Comment remettre à zéro le compteur de durée d'utilisation

Brancher le câble d'alimentation, mettre le projecteur sous tension, et réinitialiser la durée de lampe en appuyant simultanément sur les touches <,> et POWER.

- La lampe ne peut pas être déposée du projecteur à moins de mettre le métal de changement de lampe.
- Si vous n'avez pas le métal de changement de lampe, retirez le métal de la nouvelle lampe, et utilisez-le. Ne touchez pas directement la lampe. Elle risque de se casser et peut vous blesser ou vous brûler.

Précaution:

- Ne pas verser de liquide sur la lampe déposée, la placer près d'objets inflammables ou à portée d'enfants pour ne pas risquer de blessure ou d'incendie.
- Vérifier que le guide de projecteur est bien inséré entre les guides de lampe droit et gauche. Ne pas toucher directement la lampe, placer un tissu sur la lampe de rechange.

Important:

- Ce projecteur ne se met pas sous tension sans le couvercle de la lampe.
- Après le remplacement de la lampe, le compteur de durée d'utilisation doit être remis à zéro.
- Ne pas remettre à zéro le compteur de durée d'utilisation si la lampe n'a pas été remplacée.

La vie de la lampe

La durée de vie moyenne de la lampe pour ce projecteur est d'environ 1.000 heures d'utilisation consécutive. a durée de service peut être différente selon le milieu d'utilisation. Elle peut être inférieure à 1.000 heures. Une diminution de luminescence et/ou de luminosité des couleurs signale que la lampe de source lumineuse doit être remplacée. Lorsque la durée de service de la lampe de source lumineuse dépasse 1.000 heures, le voyant clignote alternativement en vert et en rouge (pendant l'utilisation de la lampe ; lorsque la lampe n'est pas utilisée, le voyant s'allume uniquement en rouge). Lorsque la lampe a été utilisée pendant environ 1.250 heures, le message "LAMP!!" apparaît sur l'écran. Lorsque la lampe aura été utilisée pendant environ 1.300 heures, le projecteur s'éteindra automatiquement pour la sécurité de la lampe et les indicateurs éclaireront en rouge. le projecteur ne pourra pas être utilisé tant que la lampe n'aura pas été remplacée.

Attention :

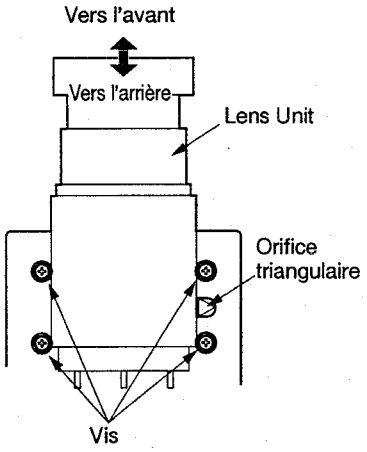
- La lampe de source lumineuse est fragile. Faire attention de ne pas se couper avec les éclats.
- La durée de vie de la lampe dépend de l'environnement. Pour le remplacement des lampes, contacter le détaillant.

Le projecteur s'éteint automatiquement lorsque la lampe est usée après environ 1.300 heures et ne fonctionne plus jusqu'à ce que la lampe soit remplacée.

REGLAGE D'ALIGNEMENT DU FOYER DE L'OBJECTIF

Après le remplacement de Lens Unit ou de LCD Block, réaliser cet ajustement. Fixer le Lens Unit pour optimaliser la mise au point lorsqu'on augmente ou qu'on diminue complètement la distance focale.

1. Desserrer les quatre vis fixant le Lens Unit. Placer les vis autour du centre des trous de vis (elliptique).
2. Appuyer sur la touche FOCUS/ZOOM pour indiquer "ZOOM" sur l'écran.
3. Appuyer sur la touche "ADJUST +" pour augmenter complètement la distance focale (à la plus petite image).
4. Optimaliser la mise au point des pixels sur l'écran.
5. Indiquer "ZOOM" sur l'écran. Appuyer sur la touche "ADJUST -" pour diminuer complètement la distance focale (à la plus grande image).
6. Insérer un petit tournevis [équivalent à 0.24 × 4 pouces (6 × 100 mm)] dans l'orifice triangulaire pour un réglage de l'alignement. Tourner le tournevis pour optimaliser la mise au point des pixels sur l'écran. Le Lens Unit se déplacera vers l'avant et l'arrière en faisant tourner le tournevis.
7. Indiquer "ZOOM" sur l'écran. Appuyer sur la touche "ADJUST +" pour augmenter complètement la distance focale.
8. Observer la mise au point. Lorsque la mise au point est optimalisée, cet ajustement est complété. Dans la négative, recommencer ce réglage à partir de l'étape 4.
9. Resserrer les quatre vis (couple de vissage de 14 ± 2 kgf·m).



Optical Unit

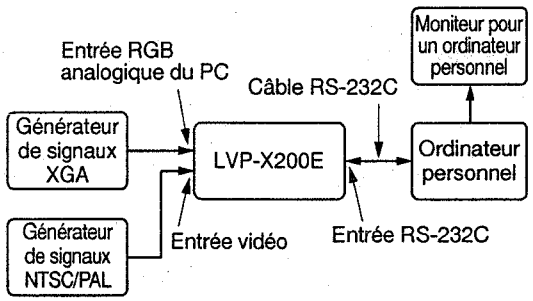
REGLAGES ELECTRIQUES

Utiliser le programme de communication [Hyper Terminal] du système de fonctionnement Microsoft® Windows® 95 pour le réglage de chaque circuit de ce produit.

❑Equipement nécessaire et raccordements

Raccorder l'équipement suivant, comme il est montré sur la figure de droite.

- LVP-X200E
- Ordinateur personnel (avec le système de fonctionnement Microsoft® Windows® 95)
- Câble RS-232C
- Générateur de signaux XGA (Equivalent à VG-814)
- Générateur de signaux NTSC
- Générateur de signaux PAL
- Moniteur pour un ordinateur personnel

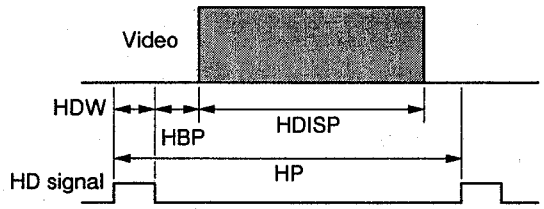


❑Signal d'essai

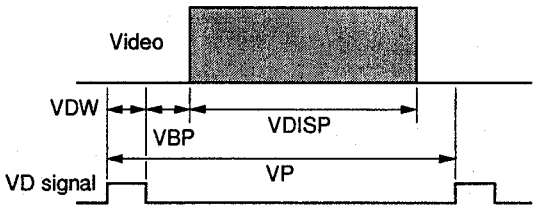
- Signal de barres colorées NTSC (composé)
- Signal de barres colorées PAL (composé)
- Signal XGA (fréquence horizontale de 60Hz)

Le marquage et les mires pour l'ajustement sont les suivants:

Marquage horizontal



Marquage vertical



Programme ROM: LC6 Version 1.1

N° du programme	Mire
01	Trame blanche de 100%

❑ Réglage avec le système de fonctionnement de Microsoft® Windows® 95

1. Mise en route

1. Démarrage de Windows® 95.
2. Support à double déclic [Accessories].
3. Support à double déclic [Hyper Terminal].
4. Icône à double déclic [HyperTrm].

2. Réglage de l'Hyper Terminal

1. Cliquer sur le menu du fichier [Properties] à la fenêtre de l'Hyper Terminal.
   La fenêtre [Connection Properties] s'ouvrira.
   Régler la fenêtre de la manière suivante.
2. Cliquer sur [Connecting] dans le menu de communication sur la fenêtre pour connecter LVP-X200E.

Article		Réglage
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	Hardware
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line Local echo Delay (Line) : 1000msec. Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3. Réglage

Introduire en capitales la commande de réglage et la valeur de réglage sur la fenêtre Hyper Terminal avec le clavier et appuyer sur la touche d'entrée.

4. Valeur de réglage de l'écriture

Introduire en capitales la commande d'écriture et la valeur de réglage sur la fenêtre Hyper Terminal avec le clavier et appuyer sur la touche d'entrée.

Note: Cette opération n'est pas nécessaire pour l'ajustement 2 (niveau de verrouillage) et 3 (convertisseur analogique/numérique) du réglage automatique.

5. Fermeture de la fenêtre

Cliquer sur la touche de fermeture placée en haut à droite de la fenêtre pour fermer Hyper Terminal.
Fermer Windows® 95 après la fermeture de toutes les fenêtres ouvertes.

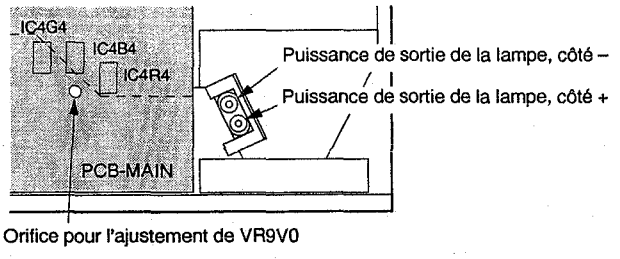
Procédures de mises au point

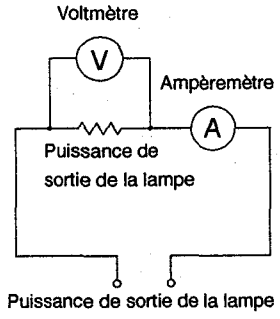
[Circuit de puissance de la lampe] 1. Puissance de la source d'énergie de la lampe	**But du réglage**	Pour régler la puissance fournie à la lampe à une valeur appropriée.
	Symptôme lors d'un réglage incorrect	La lampe ne saute pas à la luminosité spécifiée, ou la lampe risque d'exploser.

Appareil de mesurage	Ampèremètre, voltmètre
Point test	Puissance de sortie de la lampe
Déclencheur EXT	——
Plage de mesurage	——
Signal d'entrée	——
Borne d'entrée	——

* Achever ce réglage en deçà de 1 minute après avoir mis l'équipement sous tension.

1. Retirer le lamp box et le main shield cover de l'équipement.
2. Raccorder un ampèremètre, un voltmètre et une résistance de charge fictive (résistance non inductive de 12Ω 350W) avec la puissance de sortie de la lampe, comme il est montré sur la figure.
3. Mettre l'équipement sous tension.
4. Ajuster VR9V0 (PCB-LAMP POWER) de telle sorte que la puissance de sortie soit de 338±2W (tension de 64V, courant de 5,28A, devant être dans la plage montrée dans le tableau et le graphique suivants). Régler VR9V0 en utilisant l'orifice d'ajustement situé sur PCB-MAIN.





Raccordement des instruments de mesurage

[Circuit de préamplification analogique/numérique] 2. Niveau de verrouillage	**But du réglage**	Pour régler le niveau C.C. du signal d'image devant être introduit au convertisseur analogique/numérique.
	Symptôme lors d'un réglage incorrect	Une image monochrome a une teinte colorée.

Appareil de mesurage	—
Point test	—
Déclencheur EXT	—
Plage de mesurage	—
Signal d'entrée	Signal XGA (100% blanc, N° 01)
Borne d'entrée	Entrée RGB analogique du PC

* Introduire l'instruction d'ajustement avec des caractères alphanumériques en lettres capitales.

1. Raccorder le LVP-X200E à un ordinateur personnel (avec le système de fonctionnement Microsoft® Windows® 95). (Se référer à la figure de la page 11.)
2. Mettre en marche Microsoft® Windows® 95 dans l'ordinateur personnel.
3. Mettre en marche le programme de communication [Hyper Terminal] dans Microsoft® Windows® 95 pour ouvrir la fenêtre. (Pour le réglage, se référer au réglage de Hyper Terminal à la page 12.)
4. Remettre à l'état initial le mode normal sur le menu principal de ce produit.

RGB

5. Fournir un signal XGA (100% blanc, N° 01).
6. Introduire [00~70] (instruction pour le réglage du verrouillage de l'entrée RVB) à la fenêtre Hyper Terminal et le réglage automatique commencera.
7. L'instruction de retour [00~70111] est affichée à la fenêtre de Hyper Terminal après l'ajustement.
   Les 3 derniers chiffres de l'instruction de retour indiquent le résultat de l'ajustement et chaque chiffre correspond dans l'ordre à R, G et B. Le chiffre 1 signifie que l'ajustement est satisfaisant. Le chiffre 0 signifie que l'ajustement n'est pas satisfaisant, du fait d'anomalies sur les cartes à circuits imprimes, de signaux erronés ou d'une sélection d'entrée erronée.

VIDEO

8. Fournir un signal NTSC (barre colorée) à la borne d'entrée vidéo.
9. Introduire [00~71] (instruction pour le réglage du verrouillage de l'entrée VIDEO) à la fenêtre Hyper Terminal et le réglage automatique commencera.
10. L'instruction de retour [00~7111] est affichée à la fenêtre de Hyper Terminal après l'ajustement.
    Les 2 derniers chiffres de l'instruction de retour indiquent le résultat de l'ajustement et chaque chiffre correspond à R-Y et B-Y. Le chiffre 1 signifie que l'ajustement est satisfaisant. Le chiffre 0 signifie que l'ajustement n'est pas satisfaisant, du fait d'anomalies sur les cartes à circuits imprimés, de signaux erronés ou d'une sélection d'entrée erronée.

[Circuit de préamplification analogique/numérique] 3. Convertisseur analogique/numérique	**But du réglage**	Pour régler l'amplitude d'un signal vidéo devant être introduit au convertisseur analogique/numérique.
	Symptôme lors d'un réglage incorrect	Une image monochrome a une teinte colorée.

Plage de mesurage	—
Signal d'entrée	Signal XGA (100% blanc, N° 01)
Borne d'entrée	Entrée RGB analogique du PC

* Introduire l'instruction d'ajustement avec des caractères alphanumériques en lettres capitales.

1. Raccorder le LVP-X200E à un ordinateur personnel (avec le système de fonctionnement Microsoft® Windows® 95). (Se référer à la figure de la page 11.)
2. Mettre en marche Microsoft® Windows® 95 dans l'ordinateur personnel.
3. Mettre en marche le programme de communication [Hyper Terminal] dans Microsoft® Windows® 95 pour ouvrir la fenêtre. (Pour le réglage, se référer au réglage de Hyper Terminal à la page 12.)
4. Remettre à l'état initial le mode normal sur le menu principal de ce produit.
5. Fournir un signal XGA (100% blanc, N° 01).
6. Introduire [00~5] (instruction d'ajustement analogique/numérique) à la fenêtre Hyper Terminal et le réglage automatique commencera.
7. L'instruction de retour [00~5111] est affichée à la fenêtre de Hyper Terminal après l'ajustement.
   Les 3 derniers chiffres de l'instruction de retour indiquent le résultat de l'ajustement et chaque chiffre correspond dans l'ordre à R, G et B. Le chiffre 1 signifie que l'ajustement est satisfaisant. Le chiffre 0 signifie que l'ajustement n'est pas satisfaisant, du fait d'anomalies sur les cartes à circuits imprimes, de signaux erronés ou d'une sélection d'entrée erronée.

[Circuit du réglage de commande du panneau à cristaux liquides] 4. Image multiple	**But du réglage**	Pour éliminer les images multiples de l'écran.
	Symptôme lors d'un réglage incorrect	Les images multiples apparaissent à chaque 12 éléments d'image.

Plage de mesurage	---
Signal d'entrée	Signal XGA (SMTPE(R), N° 35)
Borne d'entrée	Entrée RGB analogique du PC

* Ne faire ce réglage que lorsque des images doubles sont particulièrement remarquables sur l'écran.
* Introduire l'instruction d'ajustement avec des caractères alphanumériques en lettres capitales.

1. Raccorder le LVP-X200E à un ordinateur personnel (avec le système de fonctionnement Microsoft® Windows® 95). (Se référer à la figure de la page 11.)
2. Mettre en marche Microsoft® Windows® 95 dans l'ordinateur personnel.
3. Mettre en marche le programme de communication [Hyper Terminal] dans Microsoft® Windows® 95 pour ouvrir la fenêtre. (Pour le réglage, se référer au réglage de Hyper Terminal à la page 12.)
4. Remettre à l'état initial le mode normal sur le menu principal de ce produit.
5. Images projetées sur l'écran.

Rouge

6. Fournir un signal XGA (SMTPE(R), N° 35).
7. Faire fonctionner la source du signal devant être projetée en rouge monochrome sur l'écran.
8. Introduire l'instruction du réglage [00~3123□□] à la fenêtre Hyper Terminal pour réduire au minimum les images doubles rouges. Introduire [99], [AA], [BB], [CC] ou [DD] à □□ pour réduire au minimum les images fantômes. [BB] a été écrit à □□ avant la mise au point.
   (*1) Lorsque l'instruction envoyée est affichée, la transmission est accomplie correctement. La valeur de l'intensité peut être confirmée en envoyant l'instruction sans introduire aucune valeur à □□.
9. Introduire une instruction pour l'écriture [00~1E93□□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 8 à □□. (*1)

Vert

10. Fournir un signal XGA (SMTPE(G), N° 36).
11. Faire fonctionner la source du signal devant être projetée en vert monochrome sur l'écran.
12. Introduire l'instruction du réglage [00~3223□□] à la fenêtre Hyper Terminal pour réduire au minimum les images doubles vertes. Introduire [99], [AA], [BB], [CC] ou [DD] à □□ pour réduire au minimum les images fantômes. [BB] a été écrit à □□ avant la mise au point. (*1)
13. Introduire une instruction pour l'écriture [00~1EAA□□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 12 à □□. (*1)

Bleu

14. Fournir un signal XGA (SMTPE(B), N° 37).
15. Faire fonctionner la source du signal devant être projetée en bleu monochrome sur l'écran.
16. Introduire l'instruction du réglage [00~3323□□] à la fenêtre Hyper Terminal pour réduire au minimum les images doubles bleus. Introduire [99], [AA], [BB], [CC] ou [DD] à □□ pour réduire au minimum les images fantômes. [BB] a été écrit à □□ avant la mise au point. (*1)
17. Introduire une instruction pour l'écriture [00~1EC1□□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 16 à □□. (*1)

[Circuit du réglage de commande du panneau à cristaux liquides] 5. Linéarité verticale	**But du réglage**	Pour éliminer les lignes verticales de l'écran.
	Symptôme lors d'un réglage incorrect	Des lignes verticales apparaissent à chaque 12 éléments d'image.

Rouge

5. Fournir un signal XGA (ligne horizontale à chaque autre élément d'image rouge, N° 15).
6. Images projetées sur l'écran.
7. Introduire l'instruction du réglage [00~229 □□] à la fenêtre Hyper Terminal pour réduire au minimum les papillotements rouges. Introduire n'importe quelle valeur de [00h] à [FFh] à □□ pour des papillotements minimum. [A0h] a été écrit à □□ avant le réglage.
   (*1) Lorsque l'instruction envoyée est affichée, la transmission est accomplie correctement. La valeur de l'intensité peut être confirmée en envoyant l'instruction sans introduire aucune valeur à □□.
8. Introduire une instruction pour l'écriture [00~1F2D □□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 7 à □□. (*1)

Vert

9. Fournir un signal XGA (ligne horizontale à chaque autre élément d'image vert, N° 16).
10. Introduire l'instruction du réglage [00~22A □□] à la fenêtre Hyper Terminal pour réduire au minimum les papillotements verts. Introduire n'importe quelle valeur de [00h] à [FFh] à □□ pour des papillotements minimum. [A0h] a été écrit à □□ avant le réglage.(*1)
11. Introduire une instruction pour l'écriture [00~1F2E □□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 10 à □□. (*1)

Bleu

12. Fournir un signal XGA (ligne horizontale à chaque autre élément d'image bleue, N° 17).
13. Introduire l'instruction du réglage [00~22B □□] à la fenêtre Hyper Terminal pour réduire au minimum les papillotements bleus. Introduire n'importe quelle valeur de [00h] à [FFh] à □□ pour des papillotements minimum. [A0h] a été écrit à □□ avant le réglage.(*1)
14. Introduire une instruction pour l'écriture [00~1F2F □□] à la fenêtre de Hyper Terminal et écrire la valeur modifiée sur EEPROM. Introduire la valeur de l'étape 13 à □□. (*1)

INDICATION D'UNE ERREUR DE LA DEL

Cet appareil est muni d'une fonction d'auto-diagnostic. Dans le cas de n'importe quelle anormalité, la DEL (diode electroluminescente) en haut de l'appareil indiquera les erreurs.

Méthode de diagnostic : Chaque fois que l'énergie principale est mise sous tension, le commutateur est mis en circuit et chaque détecteur est vérifié pour n'importe quelle erreur pendant 4 secondes. POWER LED reste rouge pendant la vérificaiton.

Indication du résultat du diagnostic : L'indication de la DEL et les défaillances sont montrées dans le tableau suivant. La DEL peut être remise "automatiquement" à l'état initial ou "en mettant en circuit/hors circuit l'énergie principale" lorsque la détection de la défaillance est terminée.

Mise sous tension forcée : Lorsque l'équipement ne peut être mis en marche du fait d'un court-circuit de l'énergie d'attente ou d'un court-circuit de l'énergie du commutateur, appuyer simultanément sur les trois touches RGB, VIDEO et CARD à la partie supérieure de l'appareil pendant les 4 secondes de vérification du détecteur pour mettre l'appareil en marche pour une détection de la défaillance. Dans ce cas, les circuits de protection fonctionneront, à l'exception d'un court-circuit de l'énergie d'attente et d'un court-circuit de l'énergie du commutateur.

Liste des indications d'une erreur de la DEL

Ordre de préférence	Défaillance	Symptôme	Objet	Indication de la DEL					Remise à l'état initial
				POWER	LAMP	TEMP	CARD1	CARD2	
1	Court-circuit de l'énergie d'attente	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Orange	2 clignotements rouge	*	*	Energie principale
2	Court-circuit du commutateur	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Orange	Clignotement rouge	*	*	Energie principale
3	Arrêt du ventilateur (unité optique)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Rouge	3 clignotements rouge	*	*	Energie principale
4	Arrêt du ventilateur (évacuation)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Rouge	2 clignotements rouge	*	*	Energie principale
5	Arrêt du ventilateur (aspiration)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Rouge	Clignotement rouge	*	*	Energie principale
6	Arrêt du ventilateur (énergie)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Rouge	4 clignotements rouge	*	*	Energie principale
7	Ouverture du boîtier de la lampe	Pas de mise sous tension	Prévention d'un danger	Rouge/Vert alternativement	–	–	*	*	Automatique
8	Ouverture du boîtier du ventilateur	Pas de mise sous tension	Prévention contre une admission de poussière	Rouge/Vert alternativement	–	–	*	*	Automatique
9	Thermistor débranché (évacuation)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	–	Clignotement rouge	*	*	Automatique
10	Thermistor débranché (lampe)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	–	2 clignotements rouge	*	*	Automatique
11	Défaillance de communications entre les ordinateurs	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Orange	Rouge	*	*	Automatique
12	Défaillance du bus IIC (EEPROM)	Pas de mise sous tension	Détection de la défaillance	Rouge/Vert alternativement	Vert	2 clignotements rouge	*	*	Automatique
13	Défaillance du bus IIC (décodeur)	Affichage inférieur de l'entrée VIDEO	Détection de la défaillance	Rouge/Vert alternativement	Vert	Clignotement rouge	*	*	Automatique

– : DEL hors circuit
* : Ne nécessite pas une confirmation.
Orange : Rouge et vert s'allument à la fois.
Clignotement rouge N : Le cycle où le rouge clignote et s'éteint N fois est répété pendant une durée fixée.

- **Länge des Einschaltcodes** : 2,9 m

- Gewicht und Abmessungen sind ungefähre Werte.
- Änderungen des Designs und der technischen Daten ohne Vorankündigung vorbehalten.

DEUTSCH

SICHERHEITSMASSREGELN

HINWEIS: Alle Warn und Sicherheitshinweise im Inneren des Projektorgehäuses und an dem Projektorchassis beachten.

WARNUNG

1. Ein Isoliertransformator sollte zwischen dem Projektor und der Wechselstromversorgung verwendet werden, bevor Prüfungen/Wartungen an einem unter Strom stehenden Projektorchassis ausgeführt werden.
2. Der Betrieb dieses Projektors außerhalb des Gehäuses oder mit abgenommenen Abdeckungen führt zu Stromschlaggefahr von der Stromversorgung des Projektors. Arbeiten an dem Projektor dürfen nur von ausgebildetem Personal ausgeführt werden, das mit allen erforderlichen Vorsichtsmaßnahmen bei Arbeiten an Hochspannungsgeräten vertraut ist.
3. Wenn Wartung erforderlich ist, die ursprüngliche Verlegung der Leitungsdrähte beachten. Besondere Vorsicht ist geboten, um richtiges Verlegen der Leitungsdrähte im Hochspannungsbereich sicherzustellen. Falls ein Kurzschluß verursacht wurde, alle Komponenten mit Anzeichen von Überhitzung erneuern.

KRIECHSTROMPRÜFUNG

Vor der Auslieferung des Projektors an den Kunden sollte der Kriechstrom gemäß nachfolgenden Methoden gemessen werden.
Den Netzstecker von der Wechselstromvrsorgung abziehen und eine Überbrückung an den beiden Klemmen des Netzsteckers anbringen. Den Netzschalter des Projektors einschalten. Ein 500V Gleichstrom-Isolationsprüfgerät verwenden, einen Leiter an den überbrückten netzstecker anschließen und mit dem anderen Leiter ein freiliegendes Metallteil (Schraubenkopf usw.) berühren (besonders ein freiliegendes Metallteil mit Verbindung zum Chassis). Freiliegende Metallteile mit Verbindung zum Chassis sollten eine minimale Widerstandsanzeige von 4 Mohm aufweisen. Jeder Widerstand unter diesem Wert Weist auf eine Abnormalität hin, die behoben werden muß.

ANORDNUNG DER LEITERPLATTEN

DEUTSCH

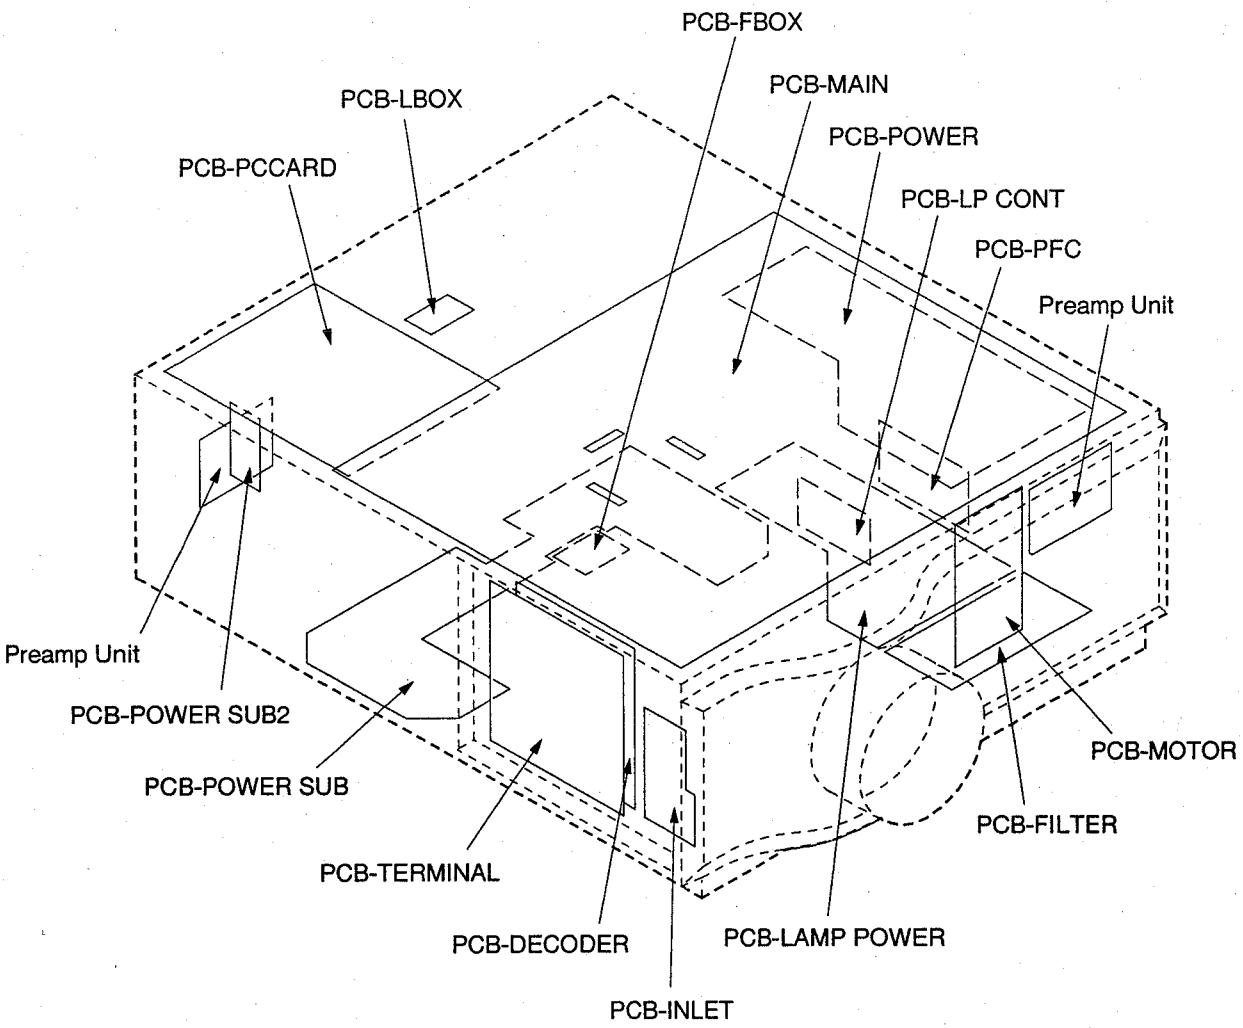

Abb. 1

AUSBAU VON KOMPONENTEN

Für die Teile-Nummer siehe die STÜCKLISTE.

Hinweis: Immer die Top Cover Assy und das Top Case getrennt am Produkt anbringen. Wenn diese Teile zusammen angebracht werden, kann es sein, daß der explosionsfester Verschluß nicht richtig arbeitet. Das Gerät darf in diesem Zustand nicht eingeschaltet werden, oder die Lampe kann explodieren.

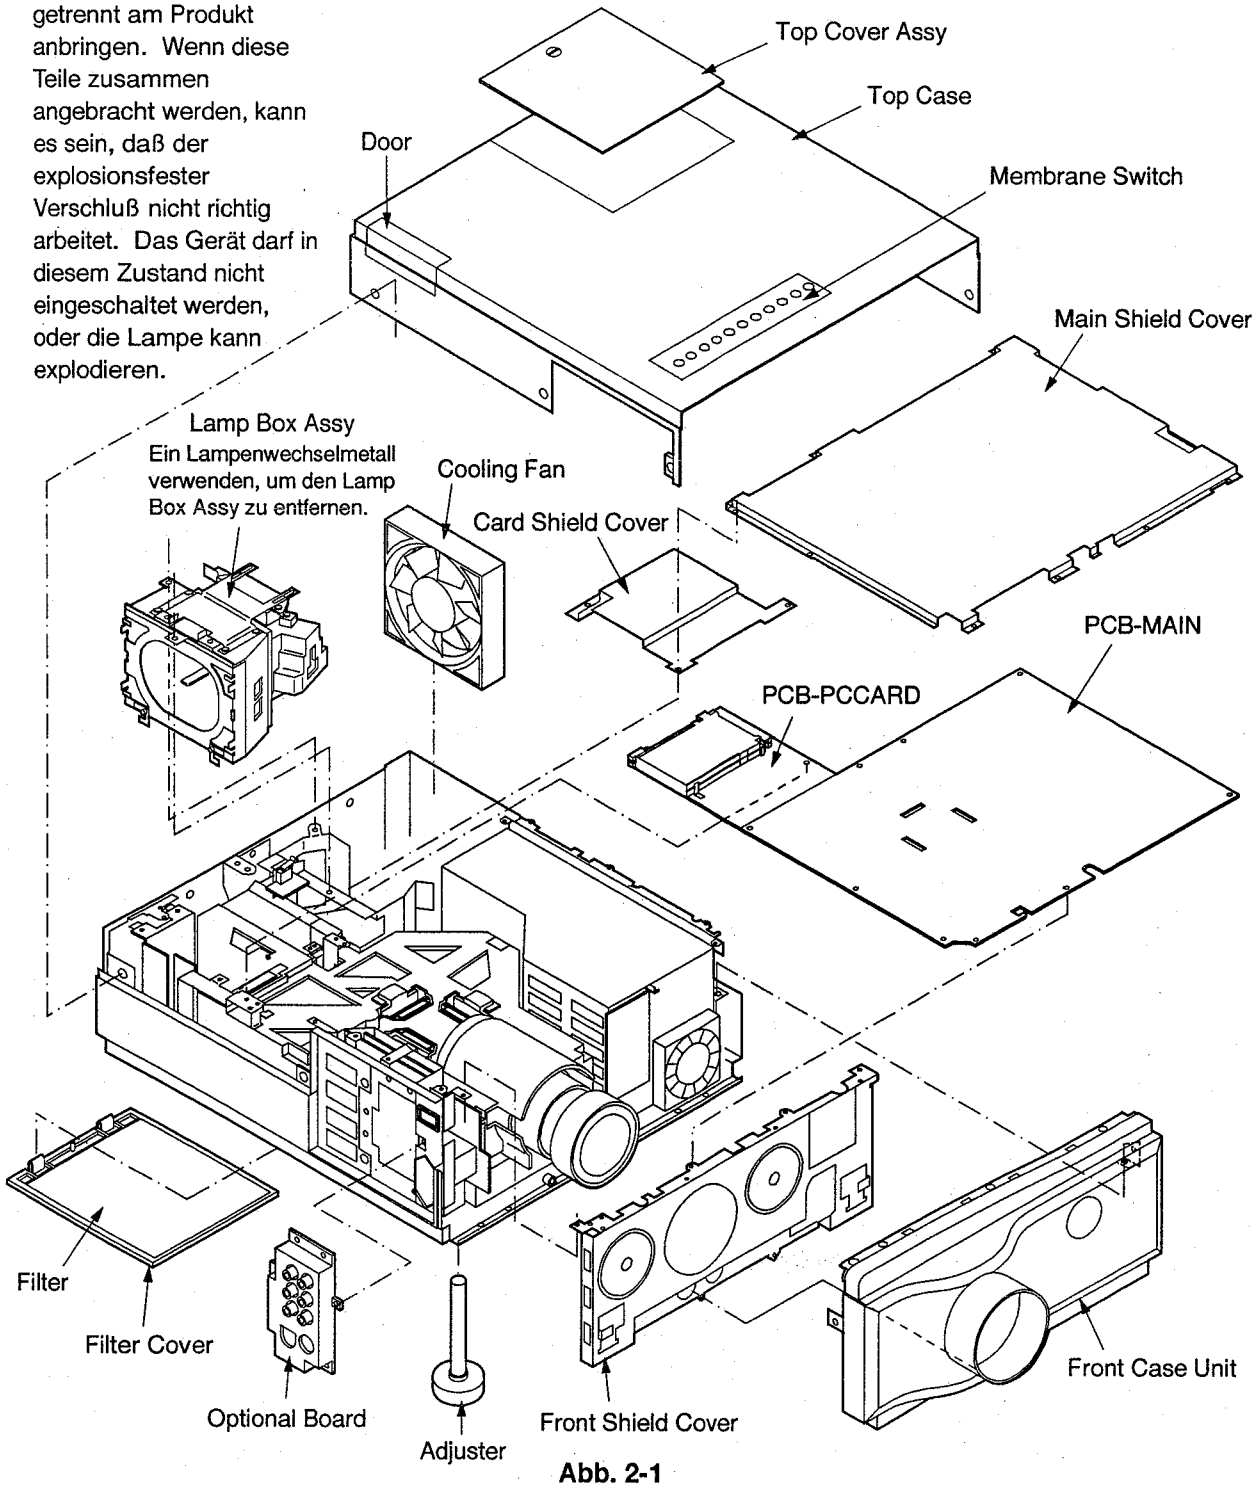

Abb. 2-1

Abb. 3-4

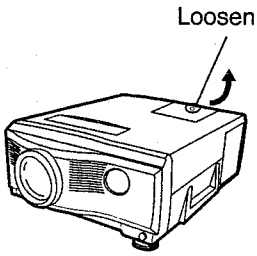
WECHSELN DER LAMPE

Die Lampe ist in diesem Gerät eingebaut, um das Licht auf das LCD-Kontrolldisplay zu projizieren. Wenn die Lampe nicht mehr funktioniert, wechseln Sie sie gegen eine neue aus, um eine maximale Leistung zu gewährleisten.

⚠ Hinweise:

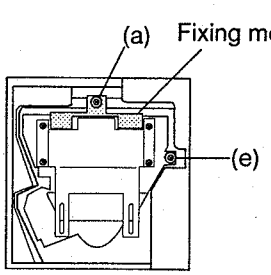
- Entfernen Sie die Lampe im dem Innern des Geräts nicht direkt nach Verwendung des Projektors, denn Sie könnten sich aufgrund der hohen Temperatur der Lampe verbrennen.
- Zum Auswechseln der Lampe betätigen Sie die Ein-/Aus-Taste, um das Gerät auszuschalten, und warten 90 Sekunden im Standby-Modus, damit sich die Lampe und das LCD-Kontrolldisplay abkühlen, dann schalten Sie den Hauptschalter aus, ziehen den Netzstecker heraus und warten noch dreißig Minuten, bis sich die Lampe kühl anfaßt.
- Entfernen Sie die Lampe nur zum Auswechseln. Eine nachlässige Behandlung kann zu Verletzungen oder Feuer führen.
- Berühren Sie die Lampe nicht direkt. Sie könnte zerbrechen und Verletzungen verursachen oder Sie könnten sich verbrennen.
- Stellen Sie sicher, daß die Schraube der Lampenabdeckung nicht in den Projektor fällt. Sorgen Sie auch dafür, daß kein Metall oder entzündliche Gegenstände in den Projektor gelangen, denn sie könnten Feuer oder Elektroschocks verursachen. Sollten dennoch Gegenstände irgendwelcher Art in den Projektor gelangen, ziehen Sie den Stecker heraus und wenden Sie sich an Ihren Händler.
- Schrauben Sie die Lampe fest ein, damit kein Feuer entsteht.
- **für den Wartungstechniker**
  Immer die Top Cover Assy und das Top Case getrennt am Produkt anbringen.
  Wenn diese Teile zusammen angebracht werden, kann es sein, daß der explosionsfester Verschluß nicht richtig arbeitet. Das Gerät darf in diesem Zustand nicht eingeschaltet werden, oder die Lampe kann explodieren.

1. Die Schraube des Lampendeckels auf der oberen Abdeckung mit einem Schraubendreher (–) und den Deckel abnehmen.

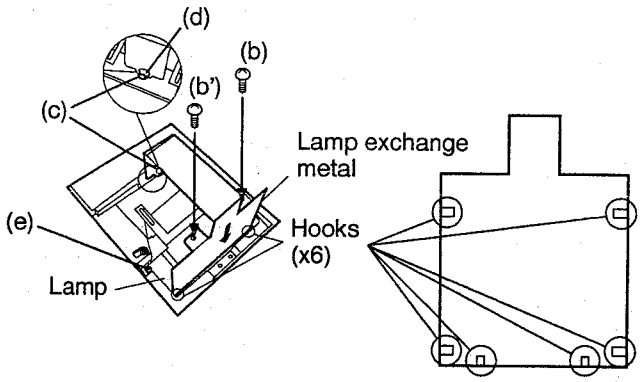


Wichtig:
Vorsichtig vorgehen, damit das an diesem Gerät angeschlossene Elektrikdraht nicht beschädigt wird.

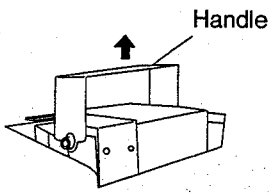
2. Die drei Schraubenen (a) des fixierende Metalls mit einem Schraubendreher (+) lösen und abnehmen.
   Das fixierende Metall und die Schrauben nicht verlieren.



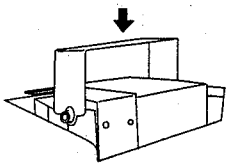
3. Das Lampen-Austauschmetall in den Projektor einsetzen.
   1) Die Metallverbinder für den Lampenaustausch in die folgende Position einfügen: auf der Vorderseite der Lampe (2 Positionen), zwischen der Lampe und an den Unterkanten (4 Positionen).
   2) Schraubenlöcher (c) mit dem Knotenpunkt (d) ausrichten.
   3) Das Stück mit den zwei beigefügten Schrauben (b, b') in Position befestigen.



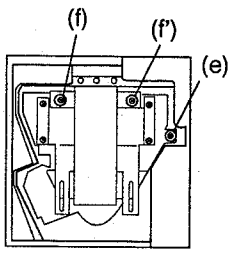
4. Die Befestigungsschraube (e) der Lampe mit einem Schraubendreher (+) lösen und abnehmen.



5. Wenn die Lampe herausgezogen wird, den Griff am Projektor festhalten. Keine Flüssigkeit über die herausgenommenen Lampe gießen, legen Sie sie nicht neben brennbaren Objekten und bewahren Sie sie für Kinder unzugänglich auf. Anderenfalls kann es zu Verletzungen oder Bränden kommen.

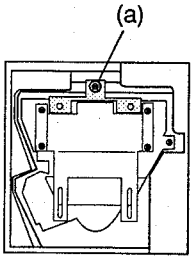


6. Die neue Lampe sicher und in der richtigen Richtung in das Projektorgehäuse einfügen.



7. Die Schrauben (e), die in Schritt 4 entfernt wurde, mit einem Schraubendreher (+) festziehen.

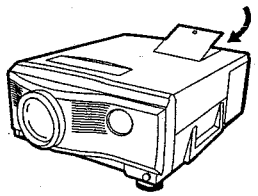
8. Die beiden Schrauben (f), (f') des Auswechselmetals der Lampe mit einem Schraubendreher lösen und sie mit dem Metall entnehmen.



DEUTSCH

9. Die Löcher von den Lampenaustauschmetallverbindern (c) vom Knotenpunkt (d) entfernen.

10. Die festen Metallstücke aus Schritt 2 in die Schraubenlöcher (f) und (f') einfügen, und mit einer Schraube (a) das Stück in Position halten.



11. Befestigen Sie die Schraube der Lampenabdeckung mit einem Schraubenzieher (–).

Wie der Betriebszeitmesser rückgesetzt wird Stecken
Sie das Netzkabel wieder ein, schalten Sie den Projektor an und stellen Sie die Lampenzeit wieder ein, indem Sie gleichzeitig die Tasten FINE < , > und POWER betätigen.

⚠ **Wichtig:**
- Ersctzen Sie die Lampe durch den greichen Typ.
- Berühren Sie die Lampe oder den Reflexspiegel nicht und über Sie keinen Druck darauf aus, da sonst Probleme wie verkürzte Funktionsdauer der Lampe, Zerbrechen der Lampe oder ein dunkles Bild auftreten könnten.

⚠ **Wichtig:**
- Der Projektor läßt sich ohne die Lampenabdeckung nicht einschalten.
- Der Betriebszeitmesser muß rückgesetzt werden, nachdem die Lampe ausgetauscht wurde.
- Den Betriebszeitmesser solange nicht rücksetzen, bis die Lampe ausgetauscht wurde.

Lebensdauer der Lampe
Die durchschnittliche Lebensdauer der Lampe für den Projektor liegt bei 1.000 Stunden bei ununterbrochenem Betrieb. Die Spanne der Lebensdauer ist entsprechend der Betriebsumgebung unterschiedlich und kann kürzer als 1.000 Stunden sein. Eine Verringerung in der Lumineszenz und/oder in der Bildhelligkeit zeigt an, daß die Lichtquellenlampe ausgetauscht werden muß. Wenn die Lampenbetriebszeit 1.000 Stunden übersteigt, blinkt die Anzeige (während des Lampenbetriebs; ist die Lampe nicht in Betrieb, erscheint die Anzeige nur in Rot) abwechselnd Grün und Rot auf. Wurde die Lampe mehr als 1.250 Stunden betrieben, erscheint die Mitteilung "LAMP!" auf dem Bildschirm. Wurde die Lampe mehr als 1.300 Stunden betrieben, wird der Projektor aus Sicherheitsgründen für die Lampe automatisch ausgeschaltet und die Spannungsanzeige leuchtet Rot. Der Projektor kann nicht betrieben werden, bis die Lampe ausgetauscht wurde.

⚠ **Vorsicht:**
- Die Lampe ist empfindlich. Achten Sie darauf, daß Sie sich nicht mit Splittern schneiden.
- Die Funktionsdauer der Lampe ist von der Umgebung abhängig. Ersatzlampen finden Sie bei Ihrem Händler.

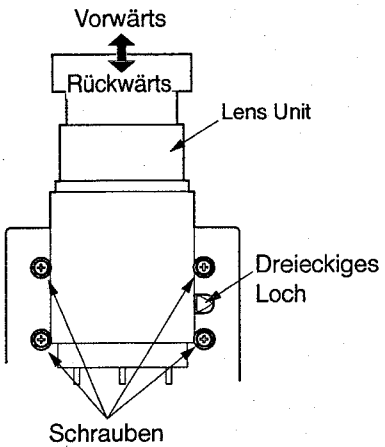
Der Projektor schaltet sich automatisch aus, wenn die Lampe nach ca. 1300 Stunden verbraucht ist, und kann erst wieder verwendet werden, nachdem die Lampe ersetzt wurde.

DEUTSCH

SCHARFEINSTELLUNG DES OBJEKTIVS

Nach dem Austausch der Objektiveinheit (Lens Unit) oder des LCD-Blocks (LCD Block), die folgende Einstellung ausführen. Die Objektiveinheit (Lens Unit) befestigen, um optimale Scharfeinstellung zu erhalten, wenn vollständig aus- und eingezoomt wird.

1. Die vier Befestigungsschrauben der Objektiveinheit (Lens Unit) lösen. Die Schrauben in der Mitte der Schraubenlöcher (elliptisch) anordnen.
2. Die FOCUS/ZOOM-Taste drücken, um "ZOOM" auf dem Bildschirm anzuzeigen.
3. Die "ADJUST+"-Taste drücken, um vollständig auszuzoomen (auf das kleinste Bild).
4. Die Pixel auf dem Bildschirm scharfeinstellen.
5. "ZOOM" auf dem Bildschirm anzeigen. Die "ADJUST-"-Taste drücken, um vollständig einzuzoomen (auf das größte Bild).
6. Einen Minus-Schraubendreher [gleichwertig zu einer Größe von 0,24 × 4 Zoll (6 × 100 mm)] in das dreieckige Loch für die Nachführeinstellung einführen. Den Schraubendreher drehen, um die Pixel auf dem Bildschirm optimal scharf einzustellen. Die Objektiveinheit (Lens Unit) wird nach vorne und rückwärts bewegt, wenn der Schraubendreher gedreht wird.
7. "ZOOM" auf dem Bildschirm anzeigen. Die "ADJUST+"-Taste drücken, um vollständig auszuzoomen.
8. Die Scharfeinstellung überprüfen. Falls die Scharfeinstellung optimiert ist, ist diese Einstellung beendet. Wenn nicht, diese Einstellung erneut ab Schritt 4 durchführen.
9. Die vier Schrauben festziehen (Anzugsmoment 14±2 kg·m).



Optical Unit

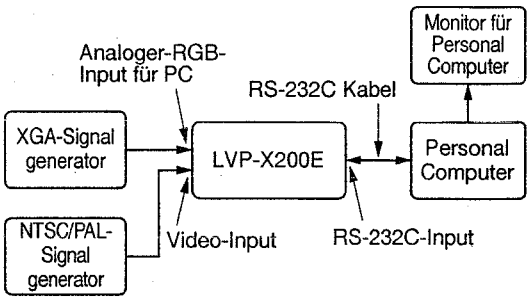
ELEKTRISCHE EINSTELLUNGEN

Verwenden Sie das Kommunikationsprogramm [Hyper Terminal] der Microsoft® Windows® 95 Betriebssystems für die einzelnen Schaltkreiseinstellungen dieses Produkts.

❑Erforderliche Ausrüstung und Anschlüsse

Die folgede Ausrüstung gemäß rechter Abbildung anschließen.

- LVP-X200E
- Personal Computer (mit Microsoft® Windows® 95 Betriebssystem)
- RS-232C Kabel
- XGA-Signalgenerator (gleichwertig zu VG-814)
- NTSC-Signalgenerator
- PAL-Signalgenerator
- Monitor für Personal Computer

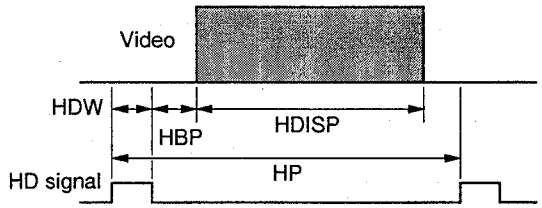


❑Testsignal

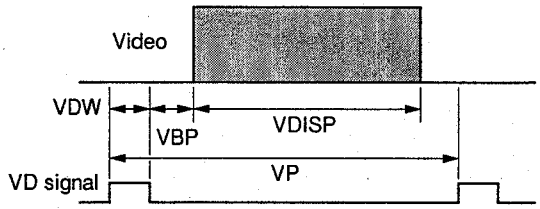
- NTSC-Farbbalkensignal (Bildaustastsynchronsignal)
- PAL-Farbbalkensignal (Bildaustastsynchronsignal)
- XGA-Signal (Horizontalfrequenz 60Hz)

Die Zeitsteuerung und die Muster für die Einstellung sind wie folgt:

Horizontale Zeitsteuerung



Vertikale Zeitsteuerung



Programm-ROM: LC6 Ver. 1.1

Programm -Nr.	Muster
01	Weißraster 100%
12	Weißraster 50%
15	Jede zweite horizontale Linie (rot)
16	Jede zweite horizontale Linie (grün)
17	Jede zweite horizontale Linie (blau)
35	SMTPE (rot)
36	SMTPE (grün)
37	SMTPE (blau)

Zeitsteuerung des XGA-Signals (Horizontalfrequenz 60Hz)

DOT-CLOCK [MHz]	65.0	VP [H]	806
HP [DOT]	1344	VDISP [H]	768
HDISP [DOT]	1024	VDW [H]	6
HDW [DOT]	136	VBP [H]	29
HBP [DOT]	160	Zeilensprung	—
		Signal-Polarität	HD : –, VD : –

❑ Einstellung mit Microsoft® Windows® 95 Betriebssystem

1. Starten

1. Windows® 95 starten.
2. Den [Accessories]-Ordner doppelt anklicken.
3. Den [Hyper Terminal]-Ordner doppelt anklicken.
4. Das [HyperTrm]-Icon doppelt anklicken.

2. Hyper Terminal-Einstellung

1. [Properties] in dem File-Menü des Hyper Terminal-Fensters anklicken.
   Das [Connection Properties]-Fenster wird geöffnet. Die Einstellung in diesem Fenster wie folgt vornehmen.
2. [Connecting] in dem Kommunikationsmenü in dem Fenster anklicken, um den LVP-X200E anzuschließen.

Benennung		Einstellung
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	Hardware
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line
		Local echo
		Delay (Line) : 1000msec.
		Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3. Einstellung

Den Einstellungsbefehl und den Einstellungswert in dem Hyper Terminal-Fenster in Großbuchstaben über die Tastatur eingeben und die Neuzeilentaste (Enter) drücken.

4. Schreiben des Einstellungswertes

Den Schreibbefehl und den Einstellungswert in dem Hyper Terminal-Fenster in Großbuchstaben über die Tastatur eingeben und die Neuzeilentaste (Enter) drücken.

Hinweis: Dieser Vorgang ist nicht für die Einstellung 2 (Klemmpegel) und 3 (A/D-Wandler) der automatischen Einstellung erforderlich.

5. Schließen des Fensters

Die oben rechts an dem Fenster angeordnete Schließtaste anklicken, um Hyper Terminal zu schließen.
Windows® 95 schließen, nachdem alle geöffneten Fenster geschlossen wurden.

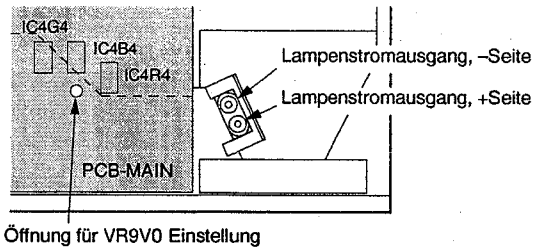
Einstellvorgänge

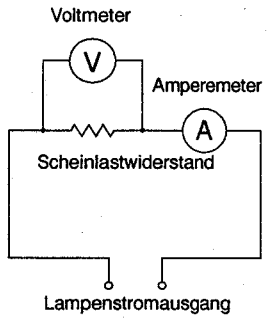
[Lampen-Betriebsstromkreis] 1. Lampenstromquellen-Stärke	**Einstellzweck:**	Zum Einstellen des zur Lampe angelegten Betriebsstroms auf den richtigen Wert.
	Symptom bei falscher Einstellung:	Die Lampe brennt nicht mit der vorgeschriebenen Helligkeit, oder die Lampe kann explodieren.

Meßinstrumente	Amperemeter, Voltmeter
Prüfpunkt	Lampenstromausgang
EXT-Trigger	-----
Meßbereich	-----
Eingangssignal	-----
Eingangsklemme	-----

* Diese Einstellung innerhalb von 1 Minute nach dem Einschalten des Produktes beenden.

1. Den lamp box und die main shield cover vom Produkt entfernen.
2. Ein Amperemeter, ein Voltmeter und einen Scheinlast-Widerstand (nicht-induktiver Widerstand 12Ω 350 W) mit dem Lampenausgang anschließen, wie in der Abbildung gezeigt.
3. Das Produkt einschalten.
4. VR9V0 (PCB-LAMP POWER) so einstellen, daß der Ausgang 338±2 W beträgt (Spannung 64V, Stromstärke 5,28A, so daß der Bereich eingehalten wird, wie in der folgenden Tabelle und Kurve gezeigt). VR9V0 mit der Einstellöffnung an der PCB-MAIN einstellen.





Meßinstrumentenanschluß

Zusammenfassungstabelle für Einstellung

Spannung V	Stromstärke A (max)	Stromstärke A (min)
63.60	5.35	5.28
63.65	5.34	5.28

[A/D-Vorverstärker-Schaltkreis] 2. Klemmpegel	**Einstellzweck:**	Einstellen des Gleichstrompegels des Bildsignals, das in den A/D-Wandler eingegeben wird.
	Symptom bei falscher Einstellung:	Schwarzweiß-Bild weist Farbton auf.

Meßinstrumente	—
Prüfpunkt	—
EXT-Trigger	—
Meßbereich	—
Eingangssignal	XGA-Signal (Weiß 100%, Nr. 01)
Eingangsklemme	Analoger-RGB-Input für PC

* Den Einstellbefehl mit Großbruchstaben und Zahlen eingeben.

1. Den LVP-X200E mit einem Personal Computer (mit Microsoft® Windows® 95 Betriebssystem) verbinden (siehe Abbildung auf Seite 11).
2. Microsoft® Windows® 95 in dem Personal Computer starten.
3. Das Kommunikationsprogramm [Hyper Terminal] in Microsoft® Windows® 95 starten, um das Fenster zu öffnen. (Für die Einstellung siehe "Hyper Terminal-Einstellung" auf Seite 12.)
4. Auf den normalen Modus in dem Hauptmenü dieses Produktes zurückstellen.

RGB

5. Ein XGA-Signal (Weiß 100%, Nr. 01) anlegen.
6. [00~70] (RGB-Eingangsklemmungs-Einstellungsbefehl) in das Hyper Terminal-Fenster eingeben, worauf die automatische Einstellung beginnt.
7. Der Rückkehrbefehl [00~70111] erscheint im Hyper Terminal-Fenster nach der Einstellung.
   Die letzten 3 Stellen des Rückkehrbefehls zeigen das Ergebnis der Einstellung an, und jede Ziffer entspricht der Reihe nach R, G und B. Die Ziffer 1 bedeutet, daß die Einstellung erfolgreich war. Die Ziffer 0 bedeutet, daß die Einstellung erfolglos war, aufgrund von Leiterplattenfehlern, falschen Signalen oder falscher Eingangswahl.

VIDEO

8. Ein NTSC-Signal (Farbbalken) an die Video-Eingangsklemme anlegen.
9. [00~71] (VIDEO-Eingangsklemmungs-Einstellungsbefehl) in das Hyper Terminal-Fenster eingeben, worauf die automatische Einstellung beginnt.
10. Der Rückkehrbefehl [00~7111] erscheint im Hyper Terminal-Fenster nach der Einstellung.
    Die letzten 2 Stellen des Rückkehrbefehls zeigen das Ergebnis der Einstellung an, und jede Ziffer entspricht R-Y und B-Y. Die Ziffer 1 bedeutet, daß die Einstellung erfolgreich war. Die Ziffer 0 bedeutet, daß die Einstellung erfolglos war, aufgrund von Leiterplattenfehlern, falschen Signalen oder falscher Eingangswahl.

[A/D-Vorverstärker-Schaltkreis] 3. A/D-Wandler	**Einstellzweck:**	Einstellen der Amplitude des Videosignals, das in den A/D-Wandler eingegeben wird.

13. Den Einstellungsbefehl [00~22B □□] in das Hyper Terminal-Fenster eingeben, um das blaue Flimmern zu minimieren. Einen beliebigen Wert von [00h] bis [FFh] in □□ eingeben, um minimales Flimmern zu erhalten. Vor der Einstellung wurde [A0h] in □□ eingeschrieben. (*1)
14. Den Befehl zum Schreiben [00~1F2F □□] zum Hyper Terminal-Fenster eingeben, und den neuen geäderten Wert zum EEPROM schreiben. Der Wert von Schritt 13 zu □□ eingeben. (*1)

DEUTSCH

LED-FEHLERANZEIGE

Dieses Gerät ist mit einer Selbstdiagnose-Funktion ausgestattet. Im Falle von anormalen Zuständen zeigt die LED oben am Gerät den Fehlerzustand an.

Diagnosemethode : Bei jedem Einschalten der Betriebsstromversorgung wird der Schalter eingeschaltet, und jeder Sensor wird in 4 Sekunden auf Fehler geprüft. Die POWER LED leuchtet während der Prüfung rot auf.

Diagnoseergebnis-Anzeige : Die LED-Anzeigen und Fehler werden in der folgenden Tabelle gezeigt. Die LED kann "automatisch" oder "durch Ein/Ausschalten des Betriebsstroms" zurückgestellt werden, wenn die Fehlererkennung beendet ist.

Gezwungenes Einschalten : Wenn das Gerät nicht eingeschaltet werden kann, weil ein STBY-Strom-Kurzschluß oder ein SW-Kurzschluß vorliegt, die 3 Tasten RGB, VIDEO und CARD oben am Gerät gleichzeitig während der 4 Sekunden der Sensorprüfung drücken, um das Gerät für Fehlererkennung einzuschalten. In diesem Fall arbeiten Schutzschaltkreise ausgenommen solche für STBY-STBY-Strom-Kurzschluß und SW-Kurzschluß.

LED-Fehleranzeigeliste

PRECAUZIONI PER LA SICUREZZA

AVVISO : Osservare scrupolosamente tutte le precauzioni e gli avvisi per la sicurezza sistemati all'interno mobile esterno e sul telaio del proiettore.

AVVERTIMENTO

1. Un trasformatore d'isolamento dovrebbe essere usato tra il proiettore e la presa di alimentazione a c.a. prima di eseguire qualsiasi test/manutenzione su un proiettore con il telaio SOTTO TENSIONE.
2. Le operazioni su questo proiettore eseguite all'esterno del mobile contenitore oppure con la copertura rimossa, comportano il rischio di scosse elettriche dall'alimentazione elettrica del proiettore. Il lavoro sul proiettore non deve essere affidato a persone che non abbiano acquisito una conoscenza completa delle precauzioni necessarie a lavorare su apparecchiature ad alto voltaggio.
3. Quando è richiesto un intervento di assistenza tecnica, preservare scrupolosamente il rivestimento conduttore originale. Precauzioni supplementari dovrebbero essere usate per assicurare un corretto rivestimento isolante del conduttore nelle parti ad alto voltaggio. Laddove si fosse verificato un corto circuito, sostituire quei componenti che risultano surriscaldati.

CONTROLLO A FREDDO DI DISPERSIONI DI CORRENTE

Prima di restituire il proiettore al cliente, viene raccomandata la misurazione di dispersioni di corrente osservando i metodi che seguono.
Con la spina di c.a. staccata dalla presa di c.a., posizionare un ponte tra i due elettrodi della spina. Accendere l'interruttore del proiettore. Utilizzando un Tester di Isolamento 500V c.c., collegare un filo conduttore alla spina con il ponte e toccare con l'altro capo del conduttore qualsiasi parte di metallo esposta (teste di viti, ecc.), in particolare ogni parte di metallo esposta che abbia un percorso di ritorno al telaio. Parti di metallo esposte che abbiano un percorso di ritorno al telaio devono dare una lettura di resistenza minima di 4 megaohm. Una resistenza di valore inferiore sottintende un'anomalia che richiede una azione correttiva.

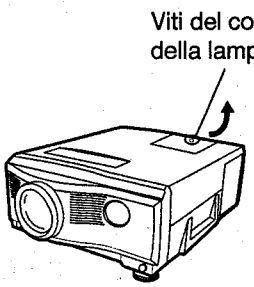
SOSTITUZIONE DELLA LAMPADA

La lampada è strutturata per proiettare l'immagine sul pannello LCD. Quando la lampada non funziona più, sostituirne una nuova per assicurare una prestazione ottimale.

⚠ **Avvertenza:**

- Non rimuovere la lampada dal dispositivo immediatamente dopo avere utilizzato il proiettore, in caso contrario ci potrebbe essere il rischio di bruciarsi a causa dell'alta temperatura della lampada.
- Se si desidera sostituire la lampada, spegnere il collegamento e attendere 90 secondi in standby per raffreddare la lampada e i pannelli LCD, quindi spegnere l'interruttore principale, staccare la presa dalla parete e attendere altri 30 minuti, finché la lampada non sia fredda al tatto.
- Non rimuovere la lampada, se non per sostituirla . Un approccio poco attento potrebbe provocare danni o incendi.
- Non toccare la lampada direttamente. In caso contrario potrebbe provocare danni o bruciature.
- Assicurarsi che le viti del coperchio della lampada non cadano all'interno del proiettore. Assicurarsi inoltre di non inserirvi oggetti metallici o infiammabili. Potrebbe provocare un incendio o una scossa elettrica.
- Se è stato inserito qualsiasi oggetto, contattare il fornitore.
- Montare saldamente la lampada, un montaggio scorretto potrebbe provocare un incendio.
- **per il personale di assistenza tecnica**
  Non mancare di fissare separatamente all'apparecchio il Top Cover Assy e il Top Case. Se vengono installati assieme, l'otturatore esplosione-prova potrebbe non funzionare. Non accendere l'apparecchio in queste condizioni, altrimenti la lampada potrebbe esplodere.

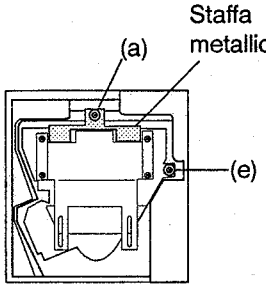
1. Allentate la vite dello sportello della lampada sul coperchio superiore utilizzando un cacciavite (–), quindi togliete lo sportello.



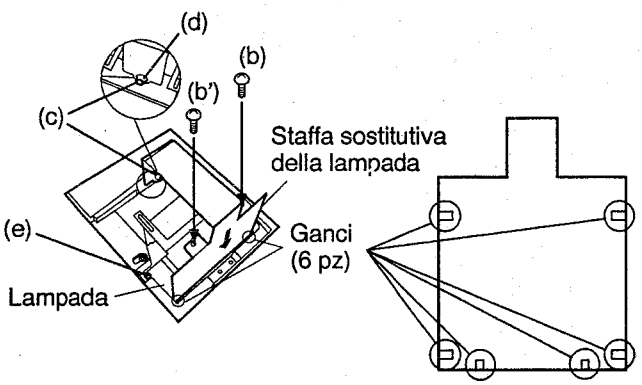
Importante:

- Prestate attenzione a non danneggiare il cavo elettrico collegato all'apparecchio.

2. Allentate una vite (a) della staffa metallica utilizzando un cacciavite (+), quindi toglietele. Prestate attenzione a non perdere la staffa metallica e le viti.

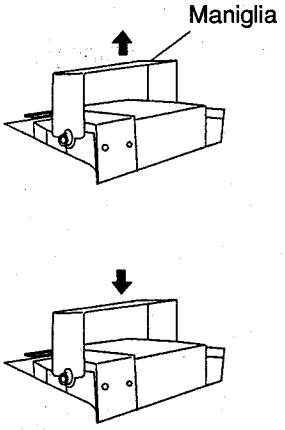


3. Inserite la staffa sostituiva della lampada nel proiettore.
   1) Inserite le staffe metalliche per la sostituzione della lampada nelle seguenti posizioni: sul lato anteriore della lampada (2 posizioni), all'interno della lampada e sui bordi inferiori (4 posizioni).
   2) Allineate i fori delle viti (c) ai nodi (d).
   3) Fissate il pezzo in posizione utilizzando le due viti in dotazione (b, b').



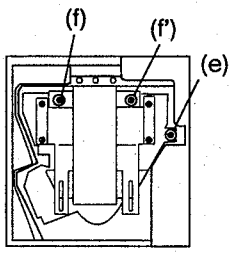
4. Allentate la vite di fissaggio della lampada (e) utilizzando un cacciavite (+) e rimuovetela.

5. Premete la maniglia sul proiettore per estrarre la lampada.
   Per quanto riguarda la lampada rimossa, prestate attenzione a non versare liquidi su di essa, non posizionatela accanto a fonti di calore e tenetela al di fuori della portata dei bambini. In caso contrario può provocare lesioni personali oppure incendi.



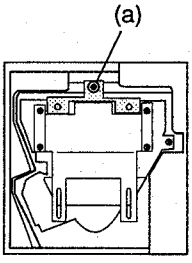
6. Inserite saldamente la nuova lampada nel corpo del proiettore nella direzione giusta.

7. Stringete le viti (e) rimosse al punto 4 utilizzando un cacciavite (+).



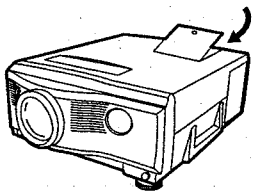
8. Allentate le due viti (f) (f1) della staffa sostitutiva della lampada con un cacciavite e toglietele con la staffa.

9. Togliete i fori dalle staffe metalliche sostitutive della lampada (c) dal nodo (d).



ITALIANO

10. Inserite le staffe metalliche fisse di cui al punto 2 nei fori delle viti (f) e (f1) utilizzando una vite (a) per fissare il pezzo in posizione.



11. Stringete la vite dello sportello della lampada utilizzando un cacciavite (–).

Come azzerare il contatore del tempo di funzionamento
Collegate il cavo di alimentazione, accendete il proiettore ed azzerate il tempo della lampada premendo contemporaneamente i tasti < , > e POWER.

- La lampada non può essere rimossa dal proiettore senza staffa metallica.
- Se non disponete della staffa metallica sostitutiva, togliete la staffa metallica dalla nuova lampada ed utilizzatela. Non toccate direttamente la lampada, altrimenti può rompersi e provocare lesioni personali oppure ustioni.

- Per quanto riguarda la lampada rimossa, prestate attenzione a non versare liquidi su di essa, non posizionatela accanto a fonti di calore e tenetela al di fuori della portata dei bambini.
- Accertatevi che la guida del proiettore sia saldamente inserita tra le guide destra e sinistra della lampada. Non toccate direttamente la lampada; avvolgete un panno sulla lampada sostitutiva. In caso contrario può provocare lesioni personali oppure incendi.

⚠ **Importante:**
- Il proiettore non si accenderà se non fissate il coperchio della lampada.
- Azzerate sempre il contatore del tempo di funzionamento dopo aver sostituito la lampada.
- Non azzerate il contatore del tempo di funzionamento nel caso in cui la lampada non sia stata sostituita.

Durata della lampada
La durata media della lampada del proiettore è circa 1.000 ore di funzionamento consecutive. La durata può differire in base all'ambiente operativo e ridursi a 1.000 ore circa. Una diminuzione di luminescenza e/o luminosità del colore indica che la lampada deve essere sostituita. Quando il tempo di utilizzo della lampada ha superato 1.000 ore, l'indicatore lampeggia alternativamente di verde e di rosso (quando la lampada è accesa; quando la lampada è spenta, l'indicatore rimane acceso di continuo in rosso). Quando la lampada è stata utilizzata per 1.250 ore circa, sullo schermo appare il messaggio "LAMP!". Quando la lampada è stata utilizzata per 1.300 ore, il proiettore si spegne automaticamente per evitare danni alla lampada e l'indicatore di funzionamento si accende di rosso. Il proiettore non può essere utilizzato finché non è stata sostituita la lampada.

⚠ **Precauzioni:**
- La lampada sorgente di luce è fragile. Attenti a non tagliarvi con i frammenti.
- La durata della lampada dipende dall'ambiente. Per le lampade sostitutive, si prega di consultare il vostro rivenditore.

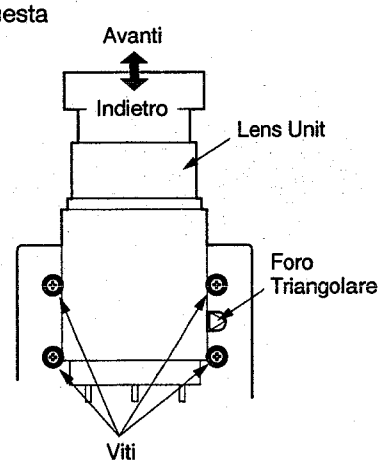
Quando la lampada è consumata, dopo circa 1300 ore, il proiettore si spegne automaticamente.

ITALIANO

REGOLAZIONE DEL CARRELLO DELLA LENTE DI MESSA A FUOCO

Eseguire questa regolazione dopo la sostituzione della Lens Unit o del LCD Block.
Fissare la Lens Unit per ottimizzare la messa a fuoco quando si zuma o si toglie la zumata fino in fondo.

1. Svitare le quattro viti che fissano la Lens Unit. Sistemare le viti accanto al centro del foro della vite (ellittico).
2. Premere il pulsante messa a FOCUS/ZOOM per indicare "ZOOM" sullo schermo.
3. Premere il pulsante "ADJUST +" per togliere la zumata fino in fondo (fino all'immagine più piccola).
4. Ottimizzare sullo schermo la messa a fuoco dei pixel.
5. Indicare lo "ZOOM" sullo schermo. Premere il pulsante "ADJUST -" per zumare fino in fondo (fino all'immagine più grande).
6. Inserire un piccolo cacciavite [equivalente a 0,24 × 4 pollici di misura (6 × 100 mm)] nel foro triangolare per la regolazione del carrello. Girare il cacciavite per ottimizzare la messa a fuoco dei pixel sullo schermo. Girando il cacciavite la Lens Unit viene spostata in avanti e indietro.
7. Indicare lo "ZOOM" sullo schermo. Premere il pulsante "ADJUST +" per togliere la zumata.
8. Esaminare la messa a fuoco. Quando la messa a fuoco viene ottimizzata, questa regolazione è completa. In caso contrario, eseguire questa regolazione di nuovo dal punto 4.
9. Avvitare le quattro viti. (torsione vite 14±2kgf·m)



Optical Unit

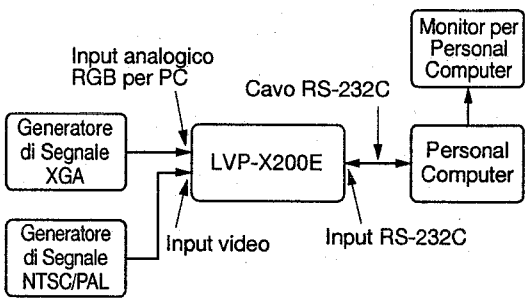
REGOLAZIONI ELETTRICHE

Per ogni regolazione di circuito di questo prodotto usare il programma di comunicazione [Hyper Terminal] del sistema Operativo Microsoft® Windows® 95.

❑ Collegamenti e Apparecchiature Necessarie

Collegare le seguenti apparecchiature come mostrato nella figura a destra.

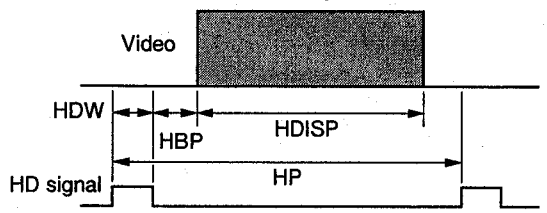
- LVP-X200E
- Personal Computer (con il Sistema Operativo Microsoft® Windows® 95)
- Cavo RS-232C
- Generatore di Segnale XGA (Equivalente a VG-814)
- Generatore di Segnale NTSC
- Generatore di Segnale PAL
- Monitor per Personal Computer



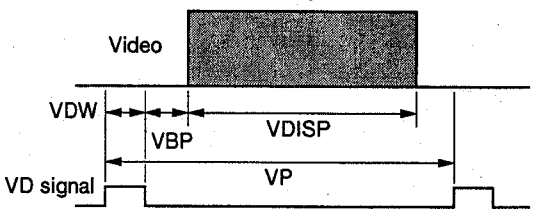
❑ Segnale di Prova

- Segnale barra dei colori NTSC (Composito)
- Segnale barra dei colori PAL (Composito)
- Segnale XGA (Frequenza orizzontale 60Hz)
  La determinazione dei tempi e i campioni per la regolazione sono come segue:

Determinazione dei tempi H



Determinazione dei tempi V



ROM Programma : LC6 Ver. 1.1

Num. Programma	Campione
01	100% Quadro Bianco
12	50% Quadro Bianco
15	Una Linea Orizzontale si e una no (Rosso)
16	Una Linea Orizzontale si e una no (Verde)
17	Una Linea Orizzontale si e una no (Blu)
35	SMTPE (Rosso)
36	SMTPE (Verde)
37	SMTPE (Blu)

Determinazione dei tempi del segnale XGA (Frequenza Orizzontale 60Hz)

		Polarità Segnale	HD : –, VD : –

ITALIANO

❑ Regolazione con il Sistema Operativo Microsoft® Windows® 95

1. Avvia

1. Avvia Windows® 95.
2. Doppio clic cartella [Accessories].
3. Doppio clic cartella [Hyper Terminal].
4. Doppio clic cartella [Hyper Trm].

2. Impostazione Hyper Terminal

1. Dal menu File cliccare sulla finestra Hyper Terminal [Properties].
   Si apre la finestra [Connecting Properties].
   In questa finestra impostare come segue.
2. Dal menu comunicazione cliccare [Connecting] per collegare LVP-X200E.

Elemento		Impostazione
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	Hardware
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line
		Local echo
		Delay (Line) : 1000msec.
		Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

ITALIANO

3. Regolazione

Tramite tastiera immettere in maiuscolo il comando di regolazione e il valore di regolazione nella finestra Hyper Terminal quindi premere il tasto di immissione.

4. Valore di Regolazione della Scrittura

Tramite tastiera immettere in maiuscolo il comando di scrittura e il valore di regolazione nella finestra Hyper Terminal quindi premere il tasto di immissione.

Nota: Questa operazione non è necessaria per la regolazione 2 (livello di bloccaggio) e 3 (convertitore A/D) della regolazione automatica.

5. Chiudere la Finestra

Cliccare il pulsante di chiusura situato nella parte alta a destra della finestra e chiudere Hyper Terminal.
Dopo avere chiuso tutte le finestre aperte chiudere Windows® 95.

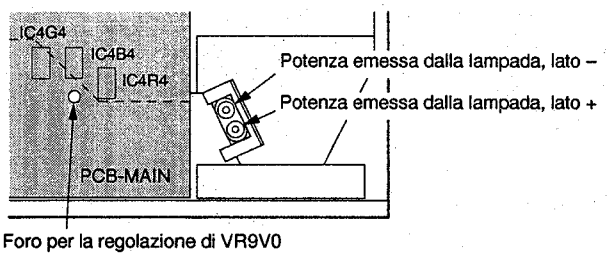
Procedure di Regolazione

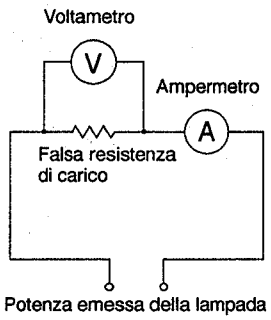
[Circuito di alimentazione lampada]	Scopo della Regolazione	Per impostare il valore corretto della tensione di alimentazione della lampada.
1. Potenza di alimentazione lampada	Sintomo di una Regolazione Errata	La lampada non raggiunge la luminosità specificata o la lampada potrebbe esplodere.

Strumento di Misurazione	Amperometro, voltametro
Punto di prova	Potenza emessa dalla lampada
Commutazione EXT	----
Gamma di misurazione	----
Segnale di ingresso	----
Terminale di ingresso	----

* Concludere la regolazione entro 1 minuto dall'accensione dell'apparecchio.

1. Rimuovere la Lamp Box e la main shield cover dall'apparecchio.
2. Collegare un amperometro, un voltametro e una falsa resistenza di carico (resistenza non induttiva 12Ω 350 W) con la potenza lampada mostrata nella figura.
3. Accendere l'apparecchio.
4. Regolare VR9V0 (PCB-LAMP POWER) in modo che la potenza emessa sia di 338±2 W (voltaggio 64V, amperaggio 5,28A, mantenendosi nell'intervallo indicato nella tabella e nel grafico seguenti).Regolare VR9V0 utilizzando il foro di regolazione sulla PCB-MAIN.





Collegamento strumenti di misurazione

* Immettere il comando di regolazione in caratteri alfanumerici maiuscoli.

1. Collegare LVP-X200E con un personal computer (con il Sistema Operativo Microsoft® Windows® 95). (Fare riferimento alla figura a P.11)
2. Avviare Microsoft® Windows® 95 nel personal computer.
3. Per aprire la finestra avviare il programma di comunicazione [Hyper Terminal] in Microsoft® Windows® 95. (Per l'impostazione, fare riferimento all'impostazione di Hyper Terminal a P.12)
4. Ripristinare il modo normale sul menu principale di questo prodotto.

Rosso

5. Dare un segnale XGA (Linea orizzontale una immagine rossa si e una no, Num. 15).
6. Proiettare immagini sullo schermo.
7. Immettere il comando regolazione [00~229 □□] nella finestra Hyper Terminal per ridurre al minimo gli sfarfallamenti rossi. Per sfarfallamenti minimi immettere qualsiasi valore da [00h] a [FFh] in □□. Prima della regolazione in □□ è stato scritto [A0h].
   (*1) Quando appare il comando inviato, l'immissione è stata eseguita correttamente. Il valore corrente può essere confermato inviando il comando senza immettere un valore in □□.
8. Immettere il comando per la scrittura di [00~1F2D □□] nella finestra di Hyper Terminal e registrare il valore modificato nella EEPROM. Immettere il valore del passo 7 in □□. (*1)

Verde

9. Dare un segnale XGA (Linea orizzontale una immagine verde si e una no, Num. 16).
10. Immettere il comando regolazione [00~22A □□] nella finestra Hyper Terminal per ridurre al minimo gli sfarfallamenti verdi. Per sfarfallamenti minimi immettere qualsiasi valore da [00h] a [FFh] in □□. Prima della regolazione in □□ è stato scritto [A0h]. (*1)
11. Immettere il comando per la scrittura di [00~1F2E □□] nella finestra di Hyper Terminal e registrare il valore modificato nella EEPROM. Immettere il valore del passo 10 in □□. (*1)

Blu

12. Dare un segnale XGA (Linea orizzontale una immagine blu si e una no, Num. 17).
13. Immettere il comando regolazione [00~22B □□] nella finestra Hyper Terminal per ridurre al gli sfarfallamenti immagini blu. Per sfarfallamenti minimi immettere qualsiasi valore da [00h] a [FFh] in □□. Prima della regolazione in □□ è stato scritto [A0h]. (*1)
14. Immettere il comando per la scrittura di [00~1F2F □□] nella finestra di Hyper Terminal e registrare il valore modificato nella EEPROM. Immettere il valore del passo 13 in □□. (*1)

ITALIANO

INDICAZIONI D'ERRORE DEL LED

Questo apparecchio è dotato della funzione di autodiagnosi. In caso di anomalie, il LED nella parte superiore dell'apparecchio indica l'errore.

Metodo di diagnosi : Ogni volta che viene attivata l'alimentazione principale, il SW si attiva e in 4 secondi viene eseguito il controllo degli errori di ogni sensore. Durante il controllo il POWER LED rimane rosso.

Indicazione del risultato della diagnosi : Nella tabella seguente vengono indicati i guasti e le indicazioni del LED. Il LED può essere ripristinato "automaticamente" o "disattivando e attivando l'alimentazione principale" dopo il rilevamento degli errori.

Accensione forzata : Quando non è possibile accendere l'apparecchio per mancanza di corrente di STBY o mancanza di corrente di SW, premere contemporaneamente i tre tasti RGB, VIDEO e CARD nella parte superiore dell'apparecchio durante i 4 secondi di controllo del sensore per accendere l'apparecchio e rilevare il guasto. In questo caso, funzionano i circuiti di protezione tranne per mancanza di corrente di STBY e mancanza di corrente di SW.

Elenco delle indicazioni d'errore LED

Ordine preferenziale	Guasto	Sintomo	Scopo	Indicazione del LED					Ripristino
				POWER	LAMP	TEMP	CARD1	CARD2

ESPECIFICACIONES

- **Alimentación nominal** : CA 100~240V ; 50 / 60Hz
- **Entrada nominal** : 5,0A
- **Paneles LCD** : Panel LCD de 1,9 pulgadas ; 3 unidades (para R,G,B)
  Pixels 1.024 × 768= 786.432 pixels
  Relación activa de pixels : 99,99% o más (cada panel)
- **Objetivo de proyección** : F 2,3~2,7 f = 53,3~69,3 mm
- **Lámpara de la fuente de luz** : Lámpara de haluro de metal de 330 W
- **Tamaño de la imagen** : Formato 4:3 40~300 pulgadas
- **Altavoces** : Tipo redondo de 60 mm × 2unidades
- **Entrada S-Video** : eñal de luminosidad :1,0 Vp-p 75 Ù (sincronización negativa)
  Señal de crominancia : 0,286Vp-p 75 Ù (señal de sincronización cromática)
- **Entrada de video** : 1,0 Vp-p 75 Ù (sincronización negativa)
- **Entrada audio** : 350mVrms, 10kΩ or more
- **Entradas de audio para PC** : 350mVrms, 10kΩ or more
- **Entrada analog RGB** : Mini D-SUB 15P
  RGB: 0.7Vp-p 75Ω (positive sync.)
  YCbCr: 1,0Vp-p (sincronización negativa)
  Cb, Cr: 0,7Vp-p
  HD/CS: TTL level (positive)
  VD: TTL level (positive)
- **Dimensiones exteriores** : 330(An) × 145(Al) × 398(P) mm
  No se incluyen patas y piezas del lente.
- **Peso** : 21,5 lbs. (9,8kg)
- **Largo del cable de alimentación** : 114 inch (2,9 m)

- El peso y las dimensiones mostradas son aproximadas.
- El Diseño y las especificaciones están sujetos a cambios sin previo aviso.

PRECAUCIONES DE SEGURIDAD

Nota: Observe todas las precauciones y notas relacionadas con la seguridad ubicadas dentro de la caja del proyector y en el chasis del proyector.

AVISO

1. Un transformador aislado debe usarse entre el proyector y el punto de suministro de CA antes de que se efectúe cualquier prueba/servicio en un proyector de chasis VIVO.
2. La operación del proyector fuera de la caja o con la cubierta removida, implica un peligro de electrocución de los suministros de corriente de proyector. Nadie que no esté completamente familiarizado con las precauciones necesarias debe tratar de trabajar en el proyector cuando funcione en un equipo de alto voltaje.
3. Cuando se requiera servicio, observe el revestimiento original de conductor. Debe ponerse extra precaución para asegurar correcto revestimiento del conductor en el área de alto voltaje. Donde haya ocurrido un cortocircuito, reemplace esos componentes que indican evidencia de recalentamiento.

COMROBACIÓN EN FRÍO DE CORRIENTE DE FUGA

Antes de devolver el proyector al cliente, se recomienda que la corriente de fuga se mida de acuerdo a los siguientes métodos.
Con el enchufe de CA removido de la fuente de CA, coloque un puente conector a través de las espigas de contacto del enchufe de CA. Usando Probador de Aislamiento de C.C. 500V, conecte un conductor al enchufe de CA ponteado y toque el otro conductor a cada parte metálica expuesta (cabezas de destornillador, etc.), particularmente cualquier parte metálica teniendo un paso de retorno al chasis. Las partes metálicas expuestas teniendo un paso de retorno al chasis deben tener una lectura de resistencia mínima de 4 megohmios. Cualquier resistencia inferior a este valor indica una anormalidad que requiere acción correctiva.

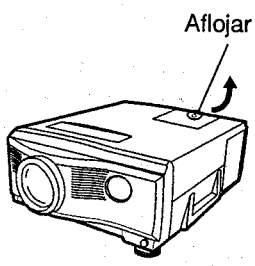
REEMPLAZO DE UNA LAMPARA DE FUENTE DE LUZ

La lámpara de fuente de luz está incorporada en este equipo para proyectar la imagen sobre el panel visualizador (LCD). Cuando la lámpara de fuente de luz ya no funcione, reemplácela por otra nueva para asegurar un óptimo rendimiento.

⚠ Precaución:

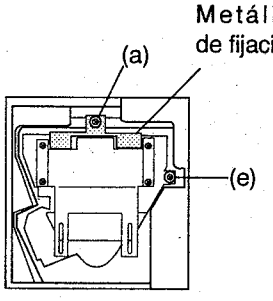
- No extraiga la lámpara de fuente de luz del interior del equipo inmediatamente después de terminar de usar el Proyector, porque si lo hace se puede quemar debido a la elevada temperatura de la misma.
- Al reemplazar la lámpara de fuente de luz, pulse el botón POWER para desactivar el aparato y espere 120 segundos en modo reserva para enfriar la lámpara y los paneles visualizadores (LCD) y apague el interruptor principal, después desenchufe de la toma de corriente y espere otros 60 minutos para que la lámpara esté fría al tocarla.
- No extraiga la lámpara de fuente de luz excepto con la finalidad de reemplazarla. Un tratamiento descuidado puede provocar heridas o fuego.
- No toque la lámpara directamente. Puede estar rota y causar heridas o quemar a alguien.
- Tenga cuidado de no dejar caer el tornillo de la tapa de la lámpara dentro del Proyector. Asegúrese también de no introducir objetos metálicos ni inflamables. Se puede producir fuego o descargas eléctricas. Si se introduce algún objeto, desenchufe el aparato y póngase en contacto con su distribuidor.
- Monte la lámpara con firmeza, de no hacerlo se puede provocar fuego.
- **para el personal de servicio técnico**
  Asegúrese de colocar en el equipo la Top Cover Assy y la Top Case en forma separada. Si están unidas entre sí, es posible que el obturador a prueba de explosión no opere. No encienda el equipo en esas condiciones porque la lámpara podría explotar.

1. Afloje el tornillo de la tapa de la lámpara de la cubierta superior con un destornillador (–), y retire la tapa. (Quite la cubierta de la lámpara en el sentido de la flecha, como se indica.)



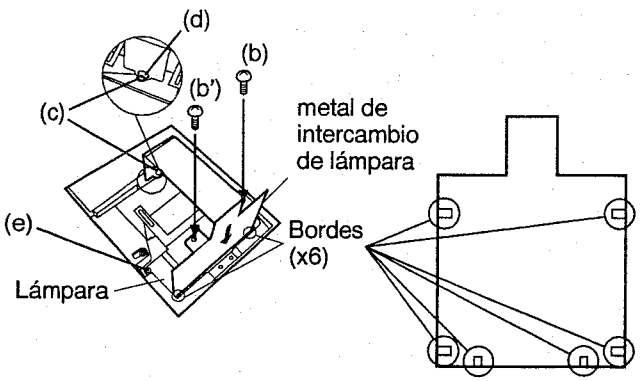
Importante:
Tenga cuidado de no dañar el cable eléctrico conectado al equipo.

2. Afloje el tornillo (a) de la parte metálica de fijación con un destornillador (+) y extráigalos.
   No afloje la parte metálica de fijación y el tornillo.

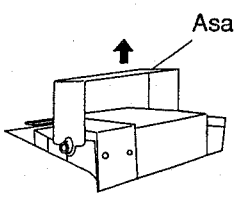


3. Coloque el metal de intercambio de lámpara en el proyector.
   1. Introduzca los accesorios metálicos para reemplazar la lámpara en las posiciones siguientes: en la cara delantera de la lámpara (2 posiciones), entre la lámpara y en los bordes inferiores (4 posiciones).
   2. Alinee los orificios de los tornillos (c) con el nodo (d).
   3. Apriete la pieza en su lugar usando los dos tornillos incluidos (b, b').

4. Afloje el tornillo de fijación de la lámpara (e) con un destornillador (+), y extráigalo.

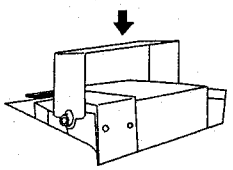


5. Sostenga el proyector por el asa mientras retira la lámpara.
   Después de haber sacado la lámpara, evite derramar líquidos sobre ella, colocarla cerca de objetos inflamables o donde los niños puedan tocarla. De lo contrario, podría causar lesiones o incendios.



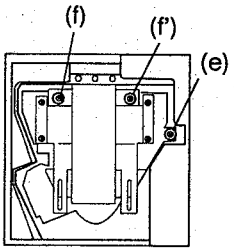
6. Inserte una lámpara nueva firmemente en el cuerpo del proyector, en el sentido correcto.

7. Ajuste el tornillo (e) que fueron extraídos en el paso 4, con un destornillador (+).



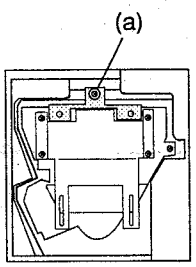
8. Afloje los dos tornillos (f), (f') de la parte metálica de fijación con un destornillador y extráigalos con la parte metálica.

9. Quite los orificios de los accesorios metálicos de reemplazo de la lámpara (c) del nodo (d).

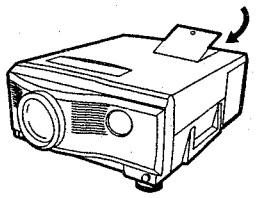


ESPAÑOL

10. Introduzca las piezas metálicas fijadas en el paso 2 en los orificios de tornillos (f) y (f'), y use un tornillo (a) para sujetar la pieza en su lugar.



11. Apriete el tornillo de la tapa de la lámpara utilizando un destornillador (–).



Cómo reponer el medidor del tiempo de funcionamiento

Para reajustar la cantidad de tiempo del alumbrado de la lámpara presione los botones FINE < , > y POWER en el proyector al mismo tiempo.

- No se puede extraer la lámpara del proyector a menos que se coloque la parte metálica de intercambio de lámpara.
- Si no tiene la parte metálica de intercambio de lámpara, quite el metal de la lámpara nueva y utilícelo. No toque la lámpara directamente. Puede romperse y causarle lesiones o quemaduras.

⚠ **Precaución:**

- Después de haber sacado la lámpara, evite derramar líquidos sobre ella, colocarla cerca de objetos inflamables o donde los niños puedan tocarla. De lo contrario, podría causar lesiones o incendios.
- Asegúrese de que la guía del proyector esté firmemente insertada entre las guías de lámpara derecha e izquierda.

Importante:

- El medidor del tiempo de funcionamiento debe reponerse después de haber reemplazado la lámpara.
- No reponga el medidor del tiempo de funcionamiento a menos que haya reemplazado la lámpara.
- No toque la lámpara directamente, coloque un trapo sobre la lámpara de recambio.

El tiempo de vida de la lámpara

El promedio de vida de la lámpara para este proyector es de unas 1.000 horas de uso consecutivo. La duración puede cambiar según el ambiente de funcionamiento, y puede ser inferior a 1.000 horas. La disminución en luminiscencia y/o en el brillo del color indicará que la lámpara de la fuente de luz necesita ser reemplazada. Cuando el tiempo de funcionamiento de la lámpara exceda 1.000 horas, el indicador parpadeará alternativamente entre verde y rojo mientras se usa la lámpara. Cuando la lámpara no funcione, el indicador aparecerá en color rojo. Cuando la lámpara ha sido utilizada por un espacio de tiempo de 1.250 horas, la indicación "LAMP!!" aparecerá en pantalla. Cuando la lámpara halla sido utilizada por más 1.300 horas, el proyector se desconectará automáticamente por la seguridad de la lámpara y los indicadores de la alimentación se encenderán de color rojo. No se podrá utilizar el proyector hasta que la lámpara sea reemplazada.

⚠ **Precaución:**

- La lámpara del proyector es frágil. Tenga cuidado de no cortarse con los fragmentos en caso que se quebrara.
- La vida de la lámpara depende del medio ambiente en el que se encuentre. Para su recambio, por favor contacte a su distribuidor.

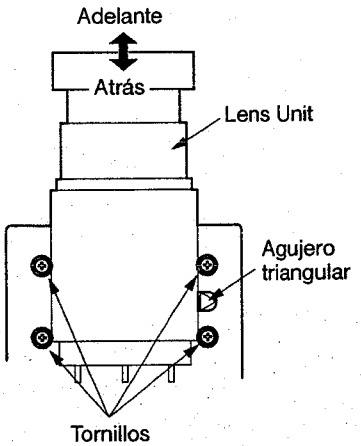
El proyector se paga automáticamente cuando la lámpara excede 1,300 horas de uso, y no se puede usar de nuevo hasta que se reemplaze la lámpara.

ESPAÑOL

AJUSTE DE SEGUIMIENTO DE ENFOQUE DE LENTE

Después de reemplazar la Lens Unit o el LCD Block, haga este ajuste. Fije la Lens Unit para optimizar enfoque cuando alejamiento y acercamiento de zoom al máximo.

1. Afloje los cuatro tornillos que aseguran la Lens Unit. Coloque los tornillos alrededor del centro de los agujeros para tornillo (el'pticos).
2. Pulse el botón FOCUS/ZOOM para indicar "ZOOM" en la pantalla.
3. Pulse el botón "ADJUST+" para alejamiento total de zoom (a la imagen menor).
4. Optimice el enfoque de los pixeles en la pantalla.
5. Indique el "ZOOM" en la pantalla. Pulse el botón "ADJUST-" para acercamiento total de zoom (a la imagen más grande).
6. Inserte un destornillador menos]equivalente a un tamaño de pulgada de 0,24 × 4 (6 × 100 mm)] en el agujero triangular para ajuste de seguimiento. Gire el destornillador para optimizar el enfoque de los pixeles en la pantalla. La Lens Unit se mueve adelante y atrás girando el destornillador.
7. Indique el "ZOOM" en la pantalla. Pulse el botón "ADJUST+" para el alejamiento total de zoom.
8. Observe el enfoque. Cuando el enfoque está optimizado, este ajuste está completo. Si no, haga este ajuste de nuevo desde el paso 4.
9. Apriete los cuatro tornillos. (torsión de tornillo 14±2kgf·m)



Optical Unit

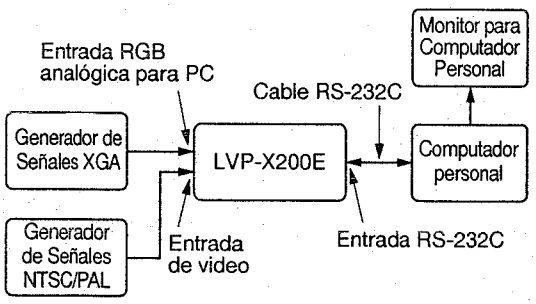
AJUSTES ELÉCTRICOS

Use el sistema de operación de programa de comunicación [Hyper Terminal] de Microsoft® Windows® 95 para cada ajuste de circuito de este producto.

❑ Equipo Necesario y Conexiones

Conecte el siguiente equipo como se muestra en la figura de la derecha.

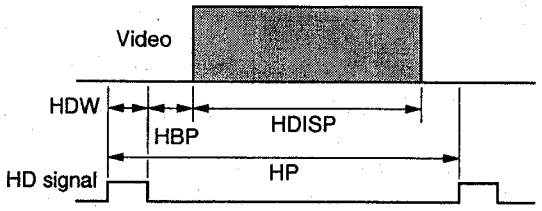
- LVP-X200E
- Computador personal (con Sistema de Operación Microsoft® Windows® 95)
- Cable RS-232C
- Generador de Señales XGA (Equivalente a VG-814)
- Generador de Señales NTSC
- Generador de Señales PAL
- Monitor para Computador Personal



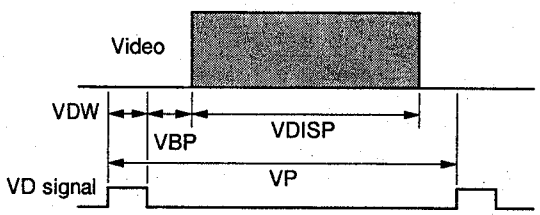
❑ Señal de Prueba

- Señal de barras de color NTSC (Compuesta)
- Señal de barras de color PAL (Compuesta)
- Señal XGA (Frecuencia horizontal 60 Hz)
  La sincronización y patrones para el ajuste son como sigue:

Sincronización H



Sincronización V



Programa ROM : LC6 Ver. 1.1

No. de Programa	Patrón

❑ Ajuste con Sistema de Operación Microsoft® Windows® 95

1. Puesta en marcha

1. Active Windows® 95.
2. Doble clic sujetador [Accessories].
3. Doble clic sujetador [Hyper Terminal].
4. Doble clic icon [Hyper Trm].

2. Puesta de Hyper Terminal

1. Clic [Properties] en menú de Archivo en ventanilla de Hyper Terminal.
   Se abrirá ventanilla de [Connection Properties]. Fije como sigue en esta ventanilla.
2. Clic [Connecting] en menú de comunicación de la ventanilla para conectar LVP-X200E.

Ítem		Puesta
Comm. Port		Port (COM1-COM4)
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	Hardware
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line
		Local echo
		Delay (Line) : 1000msec.
		Delay (Character) : 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3. Ajuste

Entre el mando de ajuste y el valor de ajuste en la ventanilla Hyper Terminal en mayúsculas con el teclado y pulse la tecla entrar.

4. Escribiendo valor de ajuste

Entre el mando de inscripción y el valor de ajuste de la ventanilla Hyper Terminal en mayúsculas con el teclado y pulse a tecla entrar.

Nota: Esta operación no es necesaria para el ajuste 2 (Nivel de sujectión) y 3 (Conversor A/D) del ajuste automático.

5. Cierre la ventanilla

Clic el botón de cierre colocado en la parte superior derecha de la ventanilla para cerrar el Hyper Terminal.
Cierre Windows® 95 después de cerrar todas la ventanillas de abertura.

Señal de entrada	Señal XGA (Blanco 100%, No. 01)
Terminal de entrada	Entrada RGB analógica para PC

* Ingrese el comando de ajuste con caracteres alfanuméricos mayúsculas.

1. Conecte LVP-X200E con un computdor personal (con Sistema de Operación de Microsoft, Windows, 95). (*Refiera a la figura de P.11*)
2. Active Microsoft® Windows® 95 en el computador personal.
3. Active el programa de comunicación [Hyper Terminal] en Microsoft® Windows® 95 para abrir la ventanilla. (Para fijar, refiera transmisión Hyper Terminal en P.12)
4. Reajuste el modo normal del menú principal de este producto.

RGB

5. Suministre señal XGA (Blanco 100%, No.01).
6. Entre [00~70] (Mando de ajuste de sujeción de entrada RGB) en la ventanilla Hyper Terminal y el ajuste automático comenzará.
7. Luego del ajuste, el comando de retorno [00~70111] aparece indicado en la ventana de Hyper Terminal.
   Las últimas 3 cifras del comando de retorno indican el resultado del ajuste y cada cifra corresponde al R (rojo), G (verde) y B (azul), en orden. La cifra 1 significa que el ajuste tuvo éxito. La cifra 0 significa que falló el ajuste a causa de defectos de las PCBs, señales incorrectas o selección de entrada incorrecta.

VIDEO

8. Suministre señal NTSC (barras de color) al terminal de entrada de v'deo.
9. Entre [00~71] (Mando de ajuste de sujeción de entrada de VÍDEO) en la ventanilla Hyper Terminal y el ajuste automático comenzará.
10. Luego del ajuste, el comando de retorno [00~7111] aparece indicado en la ventana de Hyper Terminal.
    Las últimas 2 cifras del comando de retorno indican el resultado del ajuste y cada cifra corresponde a R-Y y B-Y. La cifra 1 significa que el ajuste tuvo éxito. La cifra 0 significa que falló el ajuste a causa de defectos de las PCBs, señales incorrectas o selección de entrada incorrecta.

ESPAÑOL

[Circuito de Pre-amplificador A/D] 3. Conversor A/D	**Fin de ajuste**	Para fijar amplitud de una señal de v'deo a entrarse en convertidor A/D.
	S'ntoma cuando ajustado correctamente	La imagen monocroma tiene un tinte de color.

6. Entre [00~5] (Comando de ajuste A/D) en la ventanilla Hyper Terminal y el ajuste automático comenzará.
7. Luego del ajuste, el comando de retorno [00~5111] aparece indicado en la ventana de Hyper Terminal.
   Las últimas 3 cifras del comando de retorno indican el resultado del ajuste y cada cifra corresponde al R (rojo), G (verde) y B (azul), en orden. La cifra 1 significa que el ajuste tuvo éxito. La cifra 0 significa que falló el ajuste a causa de defectos de las PCBs, señales incorrectas o selección de entrada incorrecta.

ESPAÑOL

[Circuito de Ajuste de Excitación de Panel de Cristal L'quido] 4. Fantasma	**Fin de ajuste**	Para remover fantasmas de la pantalla.
	S'ntoma cuando ajustado correctamente	Fantasmas aparecen cada 12 elementos de imagen.

Instrumento de medición	—
Punto de prueba	—
Disparador EXT	—
Gama de medición	—
Señal de entrada	Señal XGA (SMTPE(R), No. 35)
Terminal de entrada	Entrada RGB analógica para PC

* Haga este ajuste sólo cuando fantasmas distintamente aparecen en la pantalla.
* Ingrese el comando de ajuste con caracteres alfanuméricos mayúsculas.

1. Conecte LVP-X200E con un computdor personal (con Sistema de Operación de Microsoft® Windows® 95). (Refiera a la figura de P.11)
2. Active Microsoft® Windows® 95 en el computador personal.
3. Active el programa de comunicación [Hyper Terminal] en Microsoft® Windows® 95 para abrir la ventanilla. (Para fijar, refiera a puesta de terminal Hyper Terminal en P.12)
4. Reajuste el modo normal del menú principal de este producto.

Rojo

5. Proyecte imágenes en la pantalla.
6. Suministre señal XGA (SMTPE(R), No.35).
7. Opere la fuente de señal a proyectarse en monocromo rojo en la pantalla.
8. Entre el mando de ajuste [00~3123□□] en la ventanilla de ajuste Hyper Terminal para minimizar los fantasmas rojos. Ingrese [99], [AA], [BB], [CC] o [DD] en □□ para lograr un fantasma mínimo. Antes del ajuste, se escribió [BB] en □□ .
   (*1) Cuando se indica el comando enviado, significa que se logró el envío correctamente. Es posible confirmar el valor actual enviando el comando sin ingresar ningún valor en □□ .
9. Ingrese el comando para escribir [00~1E93□□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 8 en □□ . (*1)

Verde

10. Suministre señale XGA (SMTPE(G), No.36).
11. Opere la fuente de señal a proyectarse en monocromo verde en la pantalla.
12. Entre el mando de ajuste [00~3223□□] en la ventanilla de Hyper Terminal para minimizar los fantasmas verdes. Ingrese [99], [AA], [BB], [CC] o [DD] en □□ para lograr un fantasma mínimo. Antes del ajuste, se escribió [BB] en □□ . (*1)
13. Ingrese el comando para escribir [00~1EAA□□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 12 en □□ . (*1)

Azul

14. Suministre señale XGA (SMTPE(B), No.37).
15. Opere la fuente de señal a proyectarse en monocromo azul en la pantalla.
16. Entre el mando de ajuste [00~3323□□] en la ventanilla de Hyper Terminal para minimizar los fantasmas azules. Ingrese [99], [AA], [BB], [CC] o [DD] en □□ para lograr un fantasma mínimo. Antes del ajuste, se escribió [BB] en □□ . (*1)
17. Ingrese el comando para escribir [00~1EC1□□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 16 en □□ . (*1)

ESPAÑOL

4. Reajuste el modo normal del menú principal de este producto.

Rojo

5. Suministre una señal XGA (L'nea horizontal cada otro elemento de imagen roj, No.15).
6. Proyecte imágenes en la pantalla.
7. Entre el mando de ajuste [00~229 □□] en la ventanilla de Hyper Terminal para minimizar parpadeos rojos. Entre cualquier valor de [00h] a [FFh] en □□ para minimizar parpadeos. [A0h] se ha escrito en □□ antes del ajuste.
   (*1) Cuando se indica el comando enviado, significa que se logró el envío correctamente. Es posible confirmar el valor actual enviando el comando sin ingresar ningún valor en □□ .
8. Ingrese el comando para escribir [00~1F2D □□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 7 en □□ . (*1)

Verde

9. Suministre una señal XGA (L'nea horizontal cada otro elemento de imagen verde, No. 16).
10. Entre el mando de ajuste[00~22A □□] en la ventanilla de Hyper Terminal para minimizar los parpadeos verdes. Entre cualquier valor de [00h] a [FFh] en □□ para m'nimos parpadeos. [A0h] se ha escrito en □□ antes del ajuste. (*1)
11. Ingrese el comando para escribir [00~1F2E □□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 10 en □□ . (*1)

Azul

12. Suministre una señal XGA (L'nea horizontal cada otro elemento de imagen azul, No. 17).
13. Entre el mando de ajuste [00~22B □□] en la ventanilla de Hyper Terminal para minimizar los parpadeos azules. Entre cualquier valor de [00h] a [FFh] en □□ para minimizar parpadeos. [A0h] se ha escrito en □□ antes del ajuste. (*1)
14. Ingrese el comando para escribir [00~1F2F □□] en la ventana de Hyper Terminal, y escriba el valor modificado en la EEPROM. Ingrese el valor de la etapa 13 en □□ . (*1)

ESPAÑOL

INDICACIÓN DE ERRORES DEL LED

Este equipo cuenta con una función de autodiagnóstico. En caso de anomalías, el LED ubicado en la parte superior del equipo indica los errores.

Método de diagnóstico : Cada vez que se enciende la alimentación principal, se enciende el SW y se realiza una verificación de errores de 4 segundos en cada sensor. El POWER LED permanece en rojo durante la verificación.

Indicación del resultado del diagnóstico : En la tabla siguiente se presentan los errores y la indicación del LED. Es posible volver el LED a cero "automáticamente" o "encendiendo/apagando la alimentación principal" una vez completada la detección de fallas.

Encendido forzado : Cuando no es posible encender el equipo por falta de corriente de STBY o falta de corriente de SW, presione simultáneamente los 3 botones RGB (Rojo, Verde, Azul), VIDEO (vídeo) y CARD (tarjeta) ubicados en la parte superior del equipo durante los 4 segundos de la verificación del sensor, con el fin de encender el equipo para realizar la detección de fallas. En este caso, operan los circuitos de protección, excepto para la falta de corriente de STBY y de SW.

Lista de indicación de errores del LED

Orden de preferencia	Falla	Síntoma	Objetivo	Indicación del LED					Puesta a cero
				POWER	LAMP	TEMP	CARD1	CARD2	
1	Falta de corriente de STBY	No enciende	Detección de fallas	Rojo/Verde alternativamente	Anaranjado	Rojo intermitente 2	*	*	Alimentación principal
2	Falta de corriente de SW	No enciende	Detección de fallas	Rojo/Verde alternativamente	Anaranjado	Rojo intermitente	*	*	Alimentación principal
3	Se detiene el Fan (Optical Unit)	No enciende	Detección de fallas	Rojo/Verde alternativamente	Rojo	Rojo intermitente 3	*	*	Alimentación principal
4	Se detiene el Fan (Agotamiento)	No enciende	Detección de fallas	Rojo/Verde alternativamente	Rojo	Rojo intermitente 2	*	*	Alimentación principal
5	Se detiene el Fan (Toma)	No enciende	Detección de fallas	Rojo/Verde alternativamente	Rojo	Rojo intermitente	*	*	Alimentación principal
6	Se detiene el Fan (Alimentación)	No enciende	Detección de fallas	Rojo/Verde alternativamente	Rojo	Rojo intermitente 4	*	*	Alimentación principal
7	LBOX abierta	No enciende	Prevención del peligro	Rojo/Verde alternativamente	–	–	*	*	Automático
8	FBOX abierta	No enciende	Prevencion de toma de polvo	Rojo/Verde alternativamente	–	–	*	*	Automático
9	Resistencia térmica desconectada (Agotamiento)	No enciende	Detección de fallas	Rojo/Verde alternativamente	–	Rojo intermitente	*	*	Automático
10	Resistencia térmica desconectada (Lámpara)	No enciende	Detección de fallas	Rojo/Verde alternativamente	–	Rojo intermitente 2	*	*	Automático
11	Error de comunicación entre los ordenadores	No enciende	Detección de fallas	Rojo/Verde alternativamente	Anaranjado	Rojo	*	*	Automático
12	Falla del bus IIC (EEPROM)	No enciende	Detección de fallas	Rojo/Verde alternativamente	Verde	Rojo intermitente 2	*	*	Automático
13	Falla del bus IIC (Decodificador)	Visualización inferior de la entrada de VÍDEO	Detección de fallas	Rojo/Verde alternativamente	Verde	Rojo intermitente	*	*	Automático

– : LED apagado
* : No requiere confirmación
Anaranjado : Luces roja y verde
Rojo intermitente N : Se repite el ciclo en el que el rojo destella n veces y se apaga durante un lapso fijo.

ESPAÑOL

Lista de indicación de errores del LED

Orden de preferencia	Falla	Síntoma	Objetivo	Indicación del LED					Puesta a cero
				POWER	LAMP	TEMP	CARD1	CARD2	
14	Sensor de temperatura (Lámpara)	No enciende	Aumento de la temperatura	Rojo	–	Rojo intermitente 2	*	*	Automático

SERVICING PRECAUTION

SYMBOLS INDICATE COMPONENTS HAVING SPECIAL CHARACTERISTICS IMPORTANT TO SAFETY AND PERFORMANCE. THERFORE REPLACEMENT OF ANY SAFETY PARTS SHOULD BE IDENTICAL IN VALUE AND CHARACTERISTICS. FOR ACCURACY OF THE REPLACEMENT REFER TO THE PARTS LIST OF SERVICE MANUAL.
DON'T DEGRADE THE SAFETY OF THE RECEIVERS THROUGH IMPROPER SERVICING.

SCHEMATIC DIAGRAM
MODEL : LVP-X200E

• NOTE

1. TP6A, etc. show Test Points.
2. Capacitors

Value	Not indicated	PF, for numbers more than 1 μF, for numbers less than 1	
Dielectric Strength	Not indicated :50V		
Tolerance	Not indicated =±10%	No Tolerance is indicated for electrolytic capacitors and ±20%	
	G=±2%	P=+100%	Q=+30% C=±0.25PF
	J=±5%	-0%	-10% D=±0.5PF
	K=±10%	Z=+80%	T=+200% F=±1PF
	M=±20%	-20%	-0% G=±2PF
Sort	I Parts except for chips	Not indicated : Ceramic capacitor (MF) : Polyester capacitor (PP) : Polypropylene film capacitor (ALM) : Aluminus electrolytic capacitor (TF) : Twin film capacitor (SC) : Semiconductor ceramic capacitor (MP) : Metalized paper (MPP) : Metalized plastic film capacitor (MMF) : Metalized polyester capacitor (MF,PP) : Polyester polypropylence film capacitor (PS) : Styrol capacitor (TAN) or (TANT) : Tantalum capacitor : Electrolytic capacitor (BP) or (NP) : Non polarized electrolytic capacitor	
	II Chips	Not indicated : Ceramic capacitor chip : Electrolytic capacitor (BP) or (NP) : Non polarized electrolytic capacitor chip	
Characteristic (only ceramic capacitor)	Not indicated : F or B(high dielectric percentage) CH,SL,etc. : Temperature compensating types		

3. Resistors

Value	Not indicated = Ω K = kΩ(1000Ω) M = MΩ(1000kΩ)	
Wattage	Parts except for chips	Not indicated = 1/4W or 1/6W
	Chips	Not indicated = 1/10W
Tolerance	Not indicated =±5% D=±0.5% J=±5% F=±1% K=±10%	
Short	I Parts except for chips	Not indicated : Carbon resistor (S) : Fixed composition resistor (MB) : Metal oxide film resistor(type B) (CE) : Cemented resister (W) : Wire wound resister (M) : Metal film resister (MPC) : Metal plate cement resister (ML) : Metal liner resister
	II Chip	Not indicated : Chip resistor

4. This is a basic schematic diagram. Some sets may be subject to modification according to engineering improvement.

目　录

中文

规　格

额定电源	：AC100～240V，50/60Hz
额定输入	：5.0A
LCD板	：1.3英寸LCD板：3片（R、G、B） 像素1,024×768=786,432个像素 总计2,359,296个像素 有效像素率：99.99%以上（每个板）
投影镜头	：F2.3～2.7 f=53.3～69.3mm
光源灯	：330W DC 金属卤素灯
图像尺寸	：纵横比 4：3 40～300英寸
音频输出	：1W+1W 立体声
扬声器	：6cm圆形（8Ω1W）×2只
S-Video输入	：亮度信号：1.0Vp-p 75Ω（负同步） 彩色信号：0.286Vp-p 75Ω （彩色同步信号）
视频输入	：1.0Vp-p 75Ω（负同步）
音频输入	：350mVrms，10kΩ以上
模拟RGB输入	：RGB：0.7Vp-p 75Ω（正同步）
（小型15针D-SUB）	YC_BC_R：Y：1.0Vp-p（负同步） C_B, C_R：0.7Vp-p HD/CS：TTL级（正） VD：TTL级（正）
PC音频输入	：350mVrms，10kΩ以上 ϕ3.5mm 立体声小型插孔
控制接口	：串口（9针D-DUB雄接头） RS-232C标准 串口（小型8针DIN雌接头） RS-232C标准
外形尺寸	：330×145×398mm 不包括支撑脚和镜头（宽×高×深）
重量	：21.5lb（9.8kg）
电源线长度	：114英寸（2.9m）
温度、湿度(正常工作范围)	：+41°F（+5°C）～+95°F（+35°C）， 30～90%

・重量以及尺寸都是近似值。
・设计以及规格，有时不经预告就进行更改。

有关安全的注意事项

注记：请一定要遵守写在壳体内部或机箱中的所有注意事项以及有关安全的说明。

警告

1．当带电的状态下进行投影显示仪的试验或维修时，在投影显示仪和交流电源之间，需要使用绝缘变压器。
2．在壳体外部，或在打开盖子的状态下，使本投影显示仪进行工作时，有可能由投影显示仪的电源部，受电冲击（触电）的危险。不熟悉高电压装置的注意事项的人，绝对不要进行投影显示仪的维修作业。
3．需要进行维修时，请调查原来的引线包复状态。特别是在高电压区域，需要特别注意来确认正确的引线包复状态。当发生短路时，请把有引起过热痕迹的元件换为新元件。

泄漏电流的低温检查

当把投影显示仪退还给顾客之前，推荐按照如下方法来测试泄漏电流：
把交流插头由交流电源拔出，在交流插头的两个销子之间放上搭接片。接通投影显示仪的交流开关。使用500伏的绝缘万用表，把一头的引线接到放上搭接片的交流插头上，把另一个引线接触到露出的金属件上（螺丝帽及其他），特别是要接触在具有回流路途的任意金属件上。
具有回流路途的金属件上的电阻读数为：最低也需具备4兆欧。在显示该值以下的电阻值时，则可认为不正常，需要采取必要措施。

取卸构件

有关零件号码，请参阅零件目录。

注意：Top Cover Assy和Top Case，需要分别地装到产品上。如果把这两个一起装上去时，有时防爆遮板不能进行工作。在这种状态下，请不要接通电源开关。当接通开关时，有时会使灯泡引起爆炸。

引线包复

注意：1．内部布线是为了不与生热零件或高压零件相接触起见，进行了固定的。当结束维修之后，需要把所有布线恢复到原来位置。
2．在进行作业过程中，为了由静电保护LCD起见，作业者需要带上袖套。

1．把引线沿着下图所示的固定区*，请进行固定。
* 固定区是表示引线的通路。

═══	固定区*
┅┅┅	隐藏的固定区*

在装设Optical Unit之前的引线包复。

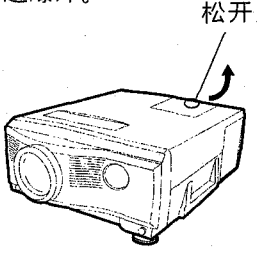
更换光源灯

光源灯用于将图像投射在LCD板上。如果光源灯损坏，请换上新的光源灯以保证投影仪发挥最佳性能。

小心：

- 请勿在投影仪刚用过时从机内卸下光源灯，否则您可能被光源灯的高温烫伤。
- 更换光源灯时，请先按电源钮关闭电源，在待机模式下等待120秒让光源灯和LCD板冷却。关闭主电源开关，从电源插座上拔下电源线插头，再等待一小时让光源灯冷却到可以触摸。
- 除非需要更换，请勿卸下光源灯。请谨慎处理以免引起人身伤害或火灾事故。
- 请勿直接触摸光源灯，否则光源灯会破损并造成划伤或烫伤。
- 请勿让光源灯盖板螺丝掉入投影仪机内。同时也千万不可将金属或任何易燃物品插入机内，否则会引起火灾或触电事故。如果有异物插入，请将电源线插头拔出并与您的供应商联系。
- 光源灯应安装牢固，否则会引起火灾。
- **对维修服务人员**
  Top Cover Assy和Top Case，需要分别地装到产品上。如果把这两个一起装上去时，有时防爆遮板不能进行工作。在这种状态下，请不要接通电源开关。当接通开关时，有时会使灯泡引起爆炸。

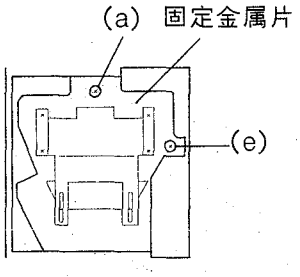


1. 用一字螺丝刀或硬币松开顶盖上的光源灯盖板螺丝，卸下盖板。
   - 将光源灯盖板朝箭头所指示的方向移动。

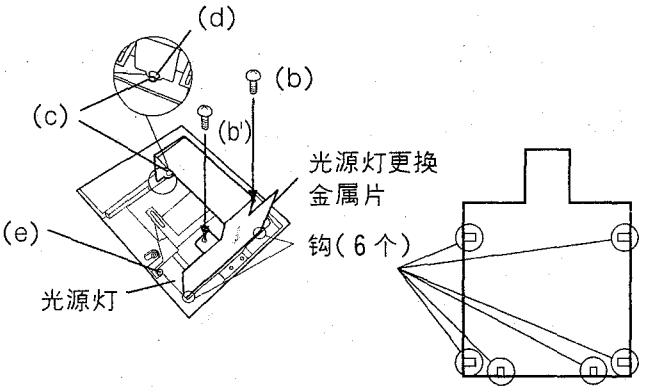
重要：

请小心不要损坏与该设备相连的电线。

2. 用十字螺丝刀松开固定金属片的螺丝（a）并将它们卸下。
   请勿遗失固定金属片和螺丝。

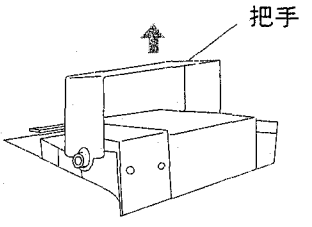


3. 将光源灯更换金属片装入机内。
   1) 将光源灯更换用固定金属片插入下述位置：光源灯前面（2处），光源灯与底端之间（4处）。
   2) 将螺丝孔（c）对准节点（d）。
   3) 用两颗螺丝（b，b'）固定金属片。

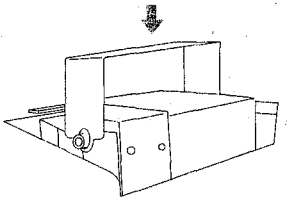


4. 用十字螺丝刀松开光源灯固定螺丝（e），将其卸下。

5. 抓住投影仪把手，拉出光源灯。
   请勿将液体泼洒在卸下的光源灯上，不可将其放在可燃物品附近或儿童能触及处。否则会引起人身伤害或火灾事故。

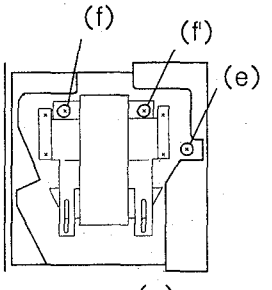


6. 按正确方向插入新的光源灯，并使其牢固。



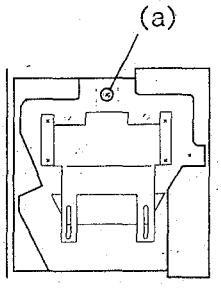
7. 用十字螺丝刀上紧在第4步中卸下的螺丝（e）。

8. 用螺丝刀松开光源灯更换金属片的两个螺丝（f）、（f'），与金属片一起卸下。



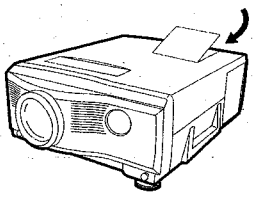
9. 从光源灯更换用固定金属片（c）和节点（d）上取下孔。

10. 将在步骤2已固定的金属片插入螺丝孔（f）和（f'）中，并用螺丝（a）将其固定。



中文

11. 用一字螺丝刀或硬币上紧光源灯盖板螺丝。



重新设定操作时间仪表的方法

插回电源线插头，接通投影仪电源，同时按 < 、> 和电源钮重设光源灯工作时间。

- 除非装上光源灯更换金属片，光源灯无法被卸下。
- 如果您没有光源灯更换金属片，请从新的光源灯上卸下金属片使用。请勿直接触摸光源灯。否则光源灯会破损并造成划伤或烫伤。

小心：

- 请勿将液体泼洒在卸下的光源灯上，不可将其放在可燃物品附近或儿童能触及处。否则会引起人身伤害或火灾事故。
- 请确认投影仪导片已牢固地插入在光源灯左右导片之间。
  请勿直接触摸光源灯，在替换光源灯上盖一块布。

重要：

- 如果光源灯盖板没有固定，投影仪电源无法接通。
- 在更换光源灯后，必须重新设定操作时间仪表。
- 若未更换光源灯，则请勿重新设定操作时间仪表。

光源灯的使用寿命

投影仪光源灯的平均使用寿命在连续使用的条件下约为1000小时。依使用环境之不同，其使用寿命的长短会有所差异，有时可能会低于1000小时。若发光量和（或）彩色亮度降低，则说明需要更换光源灯。当光源灯的工作时间超过1000小时时，指示灯会以绿色和红色交替闪烁（在光源灯工作时如此；光源灯未工作时，指示灯仅以红色闪烁）。当光源灯已使用约1250小时时，屏幕上会出现信息“LAMP!!.”当光源灯已使用约1300小时时，为光源灯的安全起见，投影仪会自动关闭，并且电源指示灯会亮起呈红色。这时，只有在更换光源灯之后，方可继续使用投影仪。

小心：

- 光源灯十分易碎。小心不要让碎片割伤您自己。
- 光源灯寿命与环境有关。更换光源灯事宜请与您的供应商联系。

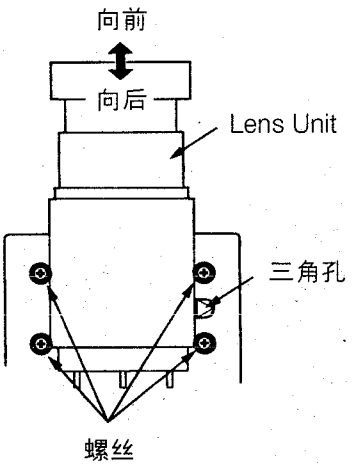
当光源灯使用约1,300小时后，本投影仪会自动关机，您必须更换光源灯方可继续使用本机。

凸镜焦距跟踪调整

当更换了Lens Unit或LCD Block时，要进行此项调整工作。

当把镜头进行最大限度移近目标或移离目标时，使焦距达到最适状态，并把Lens Unit进行固定。

1. 把固定Lens Unit的4根螺丝进行松动，定到螺孔的中间附近(图中没有表示)。
2. 按动FOCUS/ZOOM按钮，在画面上显示出“ZOOM”。
3. 按动“ADJUST+”按钮，进行最大限度的移离目标(直到最小画面)。
4. 在画面上，使像素的焦距达到最适程度。
5. 在画面上显示出“ZOOM”。按动“ADJUST−”按钮，进行最大限度的移近目标（直到最大画面)。
6. 在三角孔中插入一字头螺丝刀（相当于0.24×4英寸的)，来调整跟踪。转动螺丝刀来使画面上的像素焦距达到最适位置。当转动螺丝刀时，Lens Unit会向前后进行移动。
7. 在画面上显示出“ZOOM”，并按动“ADJUST+”按钮，进行最大限度的移离目标。
8. 要注意焦距，如果焦距达到最适位置时，调整工作可以结束。如果焦距定得不合适时，要从第4项，重新开始调整。
9. 固定好4根螺丝。(紧固扭矩为：14±2kgf-m)



Optical Unit

中文

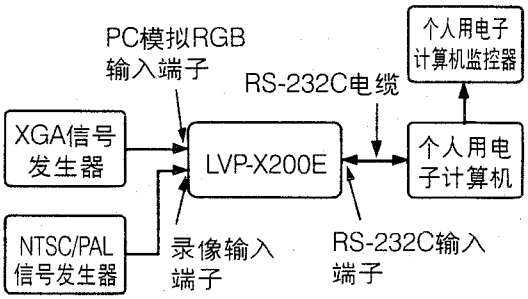
电气电路的调整

本产品的各个电路的调整工作，请使用Microsoft®，Windows®95操作系统的通讯程序［Hyper Terminal］来进行。

❑所需的设备和连接

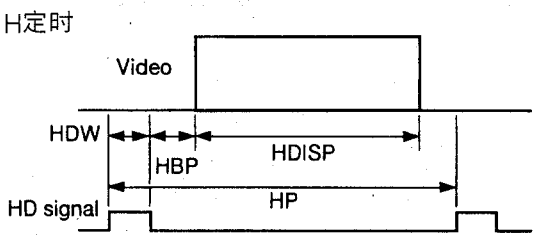
把下面所例举的设备，连接为如右图所示。

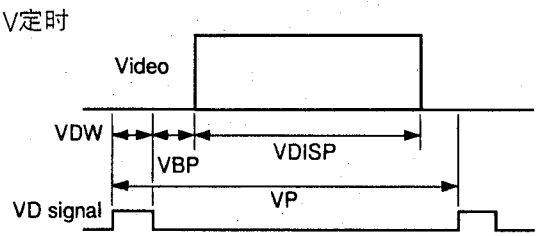
- LVP-X200E
- 个人用电子计算机（装有Microsoft®的Windows®95操作系统）
- RS-232C电缆
- XGA信号发生器（相当于VG-814）
- NTSC信号发生器
- PAL信号发生器
- 个人用电子计算机的监控器



❑试验信号

1．NTSC色带信号（合成的）
2．PAL色带信号（合成的）
3．XGA信号（水平频率60周）
调整用定时和式样，如下所示。





程序ROM：LC6版本1.1

程序号码	式样
01	白光栅100%
12	白光栅50%
15	隔一的水平行（红）
16	隔一的水平行（绿）
17	隔一的水平行（兰）
35	SMTPE（红）
36	SMTPE（绿）
37	SMTPE（兰）

XGA信号的定时（水平频率60周）

DOT-CLOCK［MHz］	65.0	VP［H］	806
HP［DOT］	1344	VDISP［H］	768
HDISP［DOT］	1024	VDW［H］	6
HDW［DOT］	136	VBP［H］	29
HBP［DOT］	160	隔行扫描	–
		信号极性	HD：–，VD：–

中文

❑使用Microsoft®的Windows®95操作系统进行的调整

1．开始调整

1．起动Windows®95。
2．把［Accessories］支持器，按动两次。
3．把［Hyper Terminal］支持器，按动两次。
4．把［Hyper Trm］图标，按动两次。

2．Hyper Terminal的设定

1．用Hyper Terminal窗口的文件单，指定［Properties］。这时［Connection Properties］窗口会打开。在该窗口上，进行如下设定。
2．在该窗口的通讯单中，指定［Connecting］，来接通到LVP-X200E上。

项　目		设　定
Comm. Port		Port（COM1-COM4）
Port setting	: Bit/sec	9600
	: Data bit	8 bit
	: Parity	None
	: Stop bit	1
	: Flow control	None
Setting	: Emulation	VT100
ASCII setting	: Sending ASCII	Put a line feed character at the end of the line Local echo Delay（Line）　: 1000msec. Delay（Character）　: 10msec.
	: Receiving ASCII	Put a line feed character at the end of received data

3．调整

在Hyper Terminal窗口上，使用键盘用大写文字输入调整指令和调整值，然后按动输入键。

4．写入调整值

在Hyper Terminal窗口上，使用键盘用大写文字输入写入指令和调整值，然后按动输入键。
注：当进行自动调整的调整 2（钳位电平）和调整 3（A/D变换器）时，则不必进行此项作业。

5．关闭窗口

按动窗口右上部的关闭按钮，来关闭Hyper Terminal。把开着的所有窗口进行关闭后，关掉Windows®95。

中文

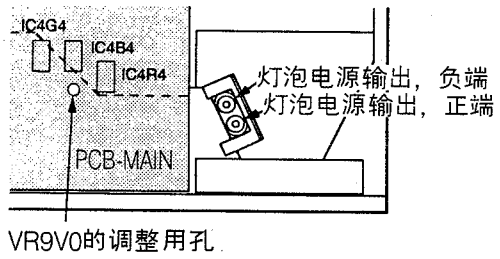
调整程序

[灯泡电源电路] 1．灯泡电源的输出	调整的目的	设定对灯泡所供应电力的合适值。
	调整不良的征兆	灯泡不能以所指定的亮度亮灯，或者灯泡进行爆裂。

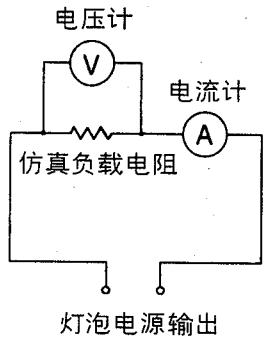
仪表	电流计，电压计
试验项目	灯泡的电源输出
EXT触发器	——
测定范围	——
输入信号	——
输入端子	——

*该项调整，要在对本产品接通开关之后，在1分钟之内进行。

1．由本产品卸下灯泡箱和主密封罩。
2．如图所示，在灯泡电源输出端上接通电流计，电压计，仿真负载电阻（无感应电阻，12欧，350瓦）。
3．接通本产品的开关。
4．把VR9V0（PCB LAMP POWER），调整为338±2瓦（电压64伏、电流5.28安。电压，电流值，应当为下表所示的图表范围之内）。调整VR9V0时，用PCB-MAIN上的调整用孔来进行。



VR9V0的调整用孔

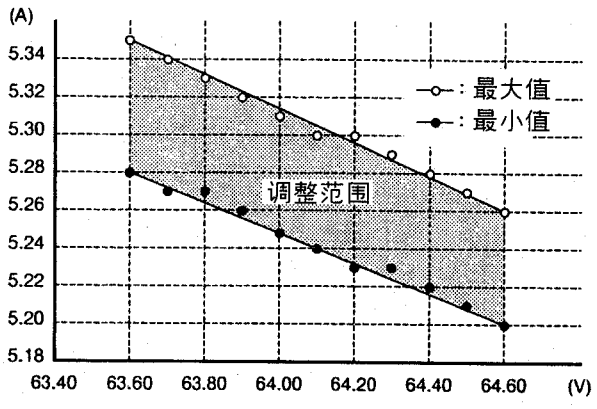


接通仪表类

调整一览表

电压：伏	电流:安(最大值)	电流:安(最小值)
63.60	5.35	5.28
63.65	5.34	5.28
63.70	5.34	5.27
63.75	5.33	5.27
63.80	5.33	2.27
63.85	5.32	5.26
63.90	5.32	5.26
63.95	5.32	5.25
64.00	5.31	5.25
64.05	5.31	5.25
64.10	5.30	5.24
64.15	5.30	5.24
64.20	5.30	5.23
64.25	5.29	5.23
64.30	5.29	5.23
64.35	5.28	5.22
64.40	5.28	5.22
64.45	5.28	5.21
64.50	5.27	5.21
64.55	5.27	5.21
64.60	5.26	5.20

灯泡电力的调整范围



[A/D前置放大器电路] 2．钳位电平	调整的目的	需要设定输入A/D变换器图像信号的DC水平。
	调整不良的征兆	在单色图像中带有色彩。

仪表	——
试验项目	——
EXT触发器	——
测定范围	——
输入信号	XGA信号 (白100%，No. 1)
输入端子	模拟RGB输入端子

*调整指令，请使用英数字大写文字输入。

1．对个人用计算机（装有Microsoft*的Windows*95操作系统），接通LVP-X200E。(参照p.11的图)
2．在个人用计算机上，要起动Microsoft*的Windows*95。
3．用Microsoft*的Windows*95，开始通信程序［Hyper Terminal］，打开窗口。(有关设定方法，请参照p.12的Hyper Terminal的设定。)
4．使用本产品的主键符单，进行通常状态的复位。

RGB：

5．供给XGA信号（白100%，No.01)
6．在Hyper Terminal窗口中，输入［00~70］(RGB输入钳位电平调整指令)。这时，自动调整则进行起动。
7．调整后，会在Hyper Terminal窗口上，显示出复位指令［00~70111］。复位指令中的最后三位数字是表示调整结果的，各数字是以R，G，B，的顺序，相对应的。数字1则表示调整是成功的，而数字0，则由于PCB上的故障，错误信号或者输入选择的失误，表示调整工作失败。

录像：

8．对图像输入端子，供给NTSC信号（色带)。
9．在Hyper Terminal窗口上，输入［00~71］(VIDEO输入钳位电平调整指令)。自动调整进行起动。
10．调整后，在Hyper Terminal窗口上，会显示出复位指令［00~7111］。复位指令的最后两位数字，表示调整结果，各数字相当于R-Y，B-Y。数字1则表示调整是成功的，而数字0，则由于PCB上的故障，错误信号或者输入选择的失误，表示调整工作失败。

中文

[A/D前置放大器电路] 3．A/D变换器	调整的目的	需要设定对A/D变换器进行输入的图像信号的振幅。
	调整不良的征兆	在单色图像中，带有色彩。

仪表	——
试验项目	——
EXT触发器	——
测定范围	——
输入信号	XGA信号 (白100%，No.1)
输入端子	模拟RGB输入端子

*调整指令，请使用英数字大写文字输入。

1．对个人用计算机（装有Microsoft®的Windows®95操作系统），接通LVP-X200E。（参照p.11的图）
2．在个人用计算机上，要起动Microsoft®的Windows®95。
3．用Microsoft®的Windows®95，开始通信程序［Hyper Terminal］，打开窗口。（有关设定方法，请参照p.12的Hyper Terminal的设定。）
4．使用本产品的主键符单，进行通常状态的复位。
5．供给XGA信号（白100%，No.1）。
6．在Hyper Terminal窗口上，输入［00~5］（A/D调整指令）。开始进行自动调整。
7．调整后，会在Hyper Terminal窗口上，显示出复位指令［00~5111］。复位指令中的最后三位数字是表示调整结果的，各数字是以R, G, B, 的顺序，相对应的。数字1则表示调整是成功的，而数字0，则由于PCB上的故障，错误信号或者输入选择的失误，表示调整工作失败。

中文

[液晶板驱动调整电路] 4．幻像	调整的目的	由屏幕排除幻像。
	调整不良的征兆	12每个像素都出现幻像。

仪表	——
试验项目	——
EXT触发器	——
测定范围	——
输入信号	XGA信号 (SMTPE（R），No. 35)
输入端子	模拟RGB输入端子

*该调整工作，只在屏幕上明显地出现幻像时进行。
*调整指令，请使用英数字大写文字输入。

1．对个人用计算机（装有Microsoft®的Windows®95操作系统），接通LVP-X200E。(参照p.11的图)
2．在个人用计算机上，要起动Microsoft®的Windows®95。
3．用Microsoft®的Windows®95，开始通信程序［Hyper Terminal］，打开窗口。(有关设定方法，请参照p.12的Hyper Terminal的设定。)
4．使用本产品的主键符单，进行通常状态的复位。
5．在屏幕上照射图像。

红：

6．供给XGA信号（SMTPE（R），No.35)。
7．操作信号源，在屏幕上的红单色内进行投影。
8．在Hyper Terminal窗口上，输入调整指令［00~3123□□］，使红色幻像达到最小程度。要想使幻像达到最小程度，要在□□中，输入［99］，［AA］，［BB］，［CC］或［DD］。在□□中，在调整之前已经写有［BB］。
(*1) 当送信被正确地进行时，会显示出送信结束指令。就是不在□□中输入字母，只要送出该指令，就能够确定电流值。
9．Hyper Terminal窗口上，输入写入指令［00~1E93□□］，在EEPROM上，填写变更值。把步骤8的值输入到□□中。(*1)

绿：

10. 供给XGA信号（SMTPE（G），No.36)。
11. 操作信号源，在屏幕上的绿单色内进行投影。
12. 在Hyper Terminal窗口上，输入调整指令［00~3223□□］，使绿色幻像达到最小程度。要想使幻像达到最小程度，要在□□中，输入［99］，［AA］，［BB］，［CC］或［DD］。在□□中，在调整之前已经写有［BB］。(*1)
13. Hyper Terminal窗口上，输入写入指令［00~1EAA□□］，在EEPROM上，填写变更值。把步骤12的值输入到□□中。(*1)

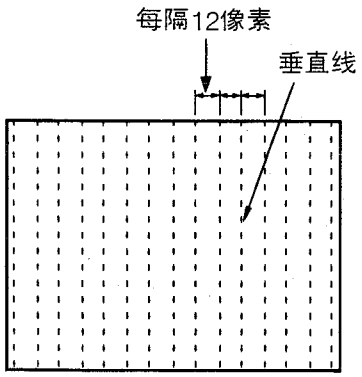
兰：

14. 供给XGA信号（SMTPE（B），No.37)。
15. 操作信号源，在屏幕上的兰单色内进行投影。
16. 在Hyper Terminal窗口上，输入调整指令［00~3323□□］，使兰色幻像达到最小程度。要想使幻像达到最小程度，要在□□中，输入［99］，［AA］，［BB］，［CC］或［DD］。在□□中，在调整之前已经写有［BB］。(*1)
17. Hyper Terminal窗口上，输入写入指令［00~1EC1□□］，在EEPROM上，填写变更值。把步骤16的值输入到□□中。(*1)

中文

[液晶板驱动调整电路] 5．垂直线	调整的目的	要从屏幕排除垂直线。
	调整不良的征兆	12每像素都出现垂直线。

仪表	——
试验项目	——
EXT触发器	——
测定范围	——
输入信号	XGA信号 (白50%，No.12)
输入端子	模拟RGB输入端子



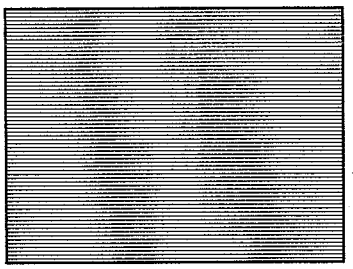
*该调整只限于在屏幕上明显出现垂直线时进行。
*调整指令，请使用英数字大写文字输入。

1．对个人用计算机（装有Microsoft®的Windows®95操作系统），接通LVP-X200E。(参照p.11的图)
2．在个人用计算机上，要起动Microsoft®的Windows®95。
3．用Microsoft®的Windows®95，开始通信程序［Hyper Terminal］，打开窗口。(有关设定方法，请参照p.12的Hyper Terminal的设定。)
4．使用本产品的主键符单，进行通常状态的复位。
5．供给XGA信号（白50%，No.12)。
6．在屏幕上投射图像。
7．在Hyper Terminal窗口上，输入调整指令［00~227□□］，使垂直线达到最小程度。要想使垂直线达到最小程度，要在□□中，输入由［10h］到［FFh］的任意数值。在□□中，在调整之前已经写有［10］。
(*1) 当送信被正确地进行时，会显示出送信结束指令。就是不在□□中输入数值，只要送出该指令，就能够确定电流值。

8．Hyper Terminal窗口上，输入写入指令［00~1F2B□□］，在EEPROM上，填写变更值。把步骤7的值输入到□□中。(*1)

[液晶板驱动调整电路] 6．闪变	调整的目的　　应当由屏幕排除闪变。 调整不良的征兆　　有闪变。

仪表	——
试验项目	——
EXT触发器	——
测定范围	——
输入信号	XGA信号 (隔红色像素No.15的水平线)
输入端子	模拟RGB输入端子



隔像素式样的水平线

*该项调整，只在屏幕上明显地出现闪变时进行。

1．对个人用计算机（装有Microsoft®的Windows®95操作系统），接通LVP-X200E。(参照p.11的图)
2．在个人用计算机上，要起动Microsoft®的Windows®95。
3．用Microsoft®的Windows®95，开始通信程序［Hyper Terminal］，打开窗口。(有关设定方法，请参照p.12的Hyper Terminal的设定。)
4．使用本产品的主键符单，进行通常状态的复位。

红：

5．供给XGA信号（隔红色像素No. 15的水平线）
6．在屏幕上投射图像。
7．在Hyper Terminal窗口上，输入调整指令［00~229□□］，使红色闪变达到最小程度。要想使闪变达到最小程度，要在□□中，输入由［00h］到［FFh］的任意数值。在□□中，在调整之前已经写有［A0h］。
(*1) 当送信被正确地进行时，会显示出送信结束指令。就是不在□□中输入数值，只要送出该指令，就能够确定电流值。
8．Hyper Terminal窗口上，输入写入指令［00~1F2D□□］，在EEPROM上，填写变更值。把步骤7的值输入到□□中。(*1)

绿：

9．供给XGA信号（隔绿色像素No.16的水平线）
10．在Hyper Terminal窗口上，输入调整指令［00~22A□□］，使绿色闪变达到最小程度。要想使闪变达到最小程度，要在□□中，输入由［00h］到［FFh］的任意数值。在□□中，在调整之前已经写有［A0h］。(*1)
11．Hyper Terminal窗口上，输入写入指令［00~1F2E□□］，在EEPROM上，填写变更值。把步骤10的值输入到□□中。(*1)

兰：

12．供给XGA信号（隔兰色像素No.17的水平线）
13．在Hyper Terminal窗口上，输入调整指令［00~22B□□］，使兰色闪变达到最小程度。要想使闪变达到最小程度，要在□□中，输入由［00h］到［FFh］的任意数值。在□□中，在调整之前已经写有［A0h］。(*1)
14．Hyper Terminal窗口上，输入写入指令［00~1F2F□□］，在EEPROM上，填写变更值。把步骤13的值输入到□□中。(*1)

中文

LED失误显示

本产品带有自我诊断功能。如果发生某种异常现象，在产品顶部的LED，会显示出失误。

诊断方法 ：当每输入主电力，会使SW进行起动，在4秒钟以内检查传感器，来寻找失误。在检查过程中，POWER LED会亮红灯。

显示诊断结果 ：LED的显示和故障，会以如下表来表示出。当结束故障的检查时，LED会自动地或“以主电力接通/断开转换”来进行复位。

强制电力接通 ：由于STBY电力短路或SW电力短路，当不能对本产品接通电源时，要同时按动产品顶部上的3个按钮，即RGB，VIDEO，CARD，按动时间为传感器检查所需的4秒钟，使故障检查进行起动。这时，STBY电力短路和SW电力短路以外的保护电路会进行动作。

LED失误显示一览表

优先顺序	故障	征兆	目的	LED显示					复位
				POWER	LAMP	TEMP	CARD1	CARD2	
1	STBY电力短路	电不通	故障的检测	红/绿交替	橙色	红色闪光2	*	*	主电力
2	SW电力短路	电不通	故障的检测	红/绿交替	橙色	红色闪光	*	*	主电力
3	风扇停止（光学总成）	电不通	故障的检测	红/绿交替	红色	红色闪光3	*	*	主电力
4	风扇停止（疲劳）	电不通	故障的检测	红/绿交替	红色	红色闪光2	*	*	主电力
5	风扇停止（通风孔）	电不通	故障的检测	红/绿交替	红色	红色闪光	*	*	主电力
6	风扇停止（电力）	电不通	故障的检测	红/绿交替	红色	红色闪光4	*	*	主电力
7	LBOX打开	电不通	防止危险	红/绿交替	—	—	*	*	自动
8	FBOX打开	电不通	防止吸入灰尘	红/绿交替	—	—	*	*	自动
9	热敏电阻的插塞脱落（疲劳）	电不通	故障的检测	红/绿交替	—	红色闪光	*	*	自动
10	热敏电阻的插塞脱落（灯泡）	电不通	故障的检测	红/绿交替	—	红色闪光2	*	*	自动
11	电子计算机之间的通讯失败	电不通	故障的检测	红/绿交替	橙色	红色	*	*	自动
12	IIC母线故障（EEPROM）	电不通	故障的检测	红/绿交替	绿色	红色闪光2	*	*	自动
13	IIC母线故障（译码器）	VIDEO输入的下方显示	故障的检测	红/绿交替	绿色	红色闪光	*	*	自动

—：LED断开状态　　橙色：红色和绿色同时亮灯

*：不需确认　　红色闪光N：红色闪灭N次之后，停顿一定时间，然后反复进行循环动作。

LED失误显示一览表

优先顺序	故障	征兆	目的	LED显示					复位
				POWER	LAMP	TEMP	CARD1	CARD2	
14	温度传感器（灯泡）	电不通	温度上升	红色	—	红色 闪光2	*	*	自动
15	温度传感器 （通风孔）	电不通	温度上升	红色	—	红色 闪光	*	*	自动

			等待中的LED显示来进行警告显示	绿色	红/ 绿交替	—	*	*	手动
	灯泡寿命 （1300小时以上）	电不通	灯泡寿命	红色	红色	—	*	*	手动
18	不亮灯	电力在1分钟内 不能接通	灯泡保护	红色	绿色 闪光	—	*	*	自动
19	1分钟之后 电力接通	电力在1分钟内 不能断开	灯泡保护	绿色	绿色 闪光	—	*	*	自动
20	1分钟之后 电力断开	电力在1分钟内 不能接通	灯泡保护	红色	绿色 闪光	—	*	*	自动
21	IIC母线故障 （HIC）	全输入的下部显示	故障的检测	*	*	*	绿色 闪光	绿色 闪光	自动
22	IIC母线故障 （EEPROM）	电不通	故障的检测	*	*	*	绿色 闪光2	绿色 闪光2	自动

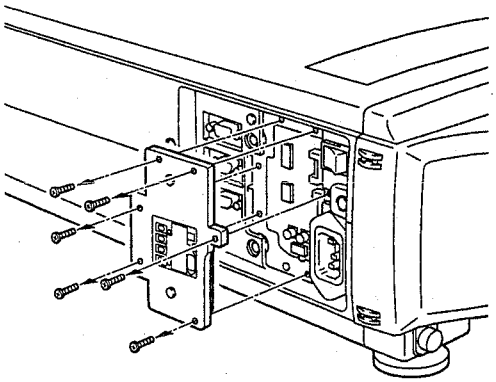
— ：LED断开状态　　橙色：红色和绿色同时亮灯

＊：不需确认　　红色闪光N：红色闪灭N次之后，停顿一定时间，然后反复进行循环动作。

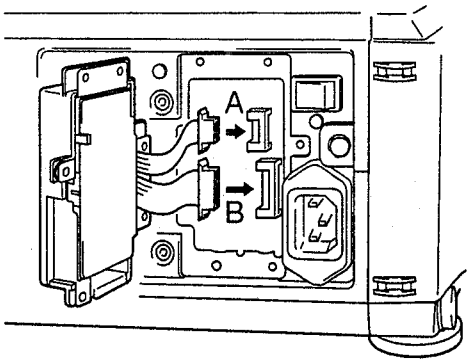
中文

OPTION BOARD INSTALLATION

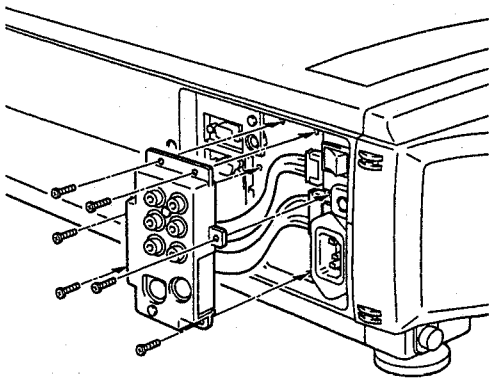
1 Remove 6 screws and detouch the plate from the Projector.



2 Connect 2 places of the connector on the terminal board.
* Connector A(small) upper.
  Connector B(large) below.



3 Fix the terminal board with 6 screws.



4 Put on the adhesive label attached.

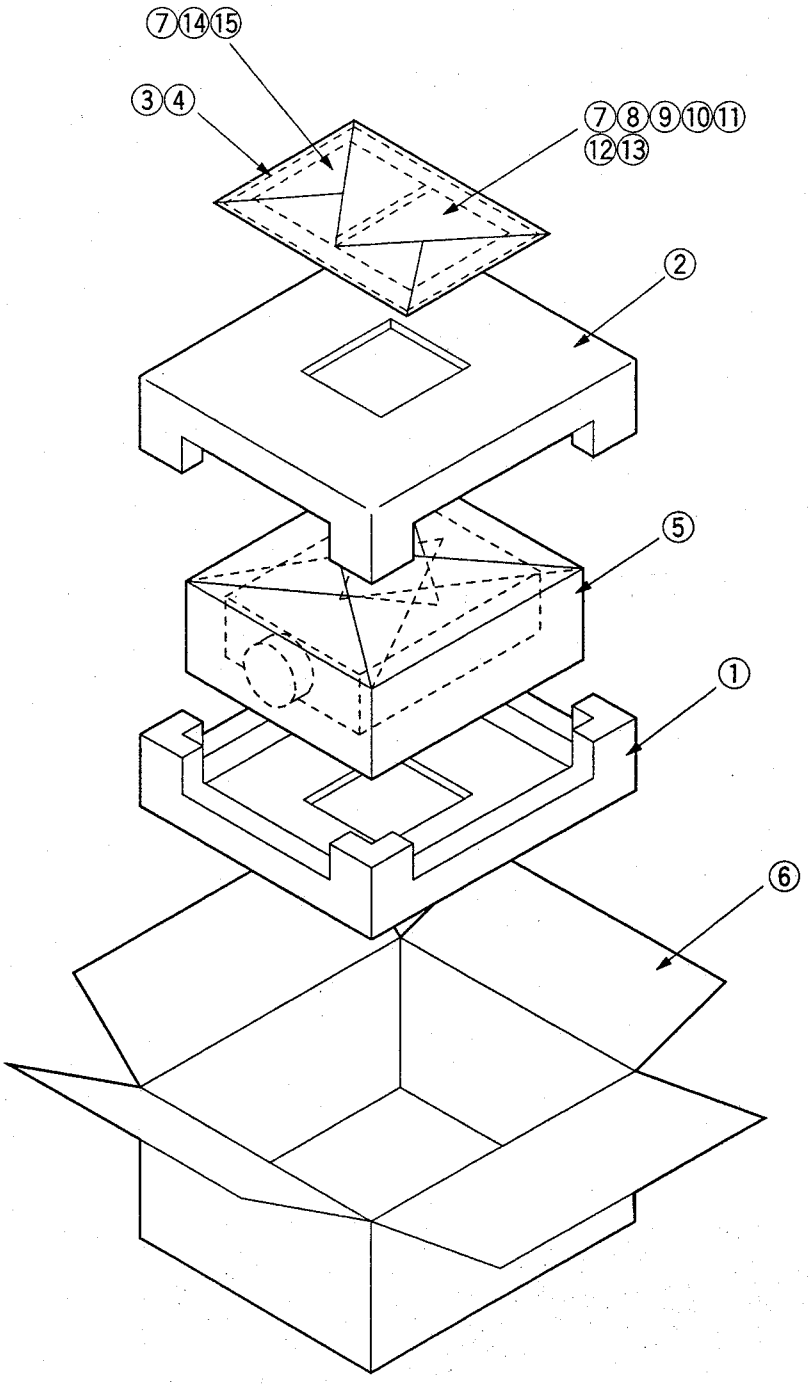
PARTS LIST

REPACKING PROCEDURE



COMMON USE

ELECTRICAL PARTS AND OTHERS

MODEL : LVP-X200E

In order to expedite delivery of replacement part orders.

Specify : 1. Model number/Serial number

2. Part number and Description

3. Quantity

Unless full information is supplied, delay in execution of orders will result.

⚠ : Critical components
