

Service Manual

VIDEO COPY PROCESSOR

**MODEL
P67E**

- ※The HEAD LEVER on the FRONT PANEL should be at the "UP" position after servicing.
- ※Use a white CLEANING PAPER (Parts No. 857P003O40) or a HEAD CLEANING PEN (Parts No. 859C425O50) for cleaning of the THERMAL HEAD.
- Do not use a russet CLEANING PAPER (Parts No. 857P001O10). It may damage the THERMAL HEAD.

Before servicing this chassis, it is important that the serviceman reads the "SAFETY PRECAUTIONS" and "PRODUCT SAFETY NOTICE" in this service manual.

Specifications

● Power supply	AC220V ~240V 50Hz	● Standard accessories	BNC/BNC connection cable 1 piece
● Power consumption	1.0A		(78-23/32")
● Input terminal	BNC contact plug (NTSC /PAL) video signal		Wired remote controller 1 set
● Output terminal	1 Vp-p (75Ω) BNC contact Plug (NTSC /PAL) video signal		AC power cord 1 piece
● Resolutions	1 Vp-p (75Ω) Under Scan (Standard) (H)1216dots X (V)600line		Thermal paper K65HM 1 roll
● Gradations	256 gradations		Cleaning paper 1 sheet
● Printing time	Approx. 5.8 sec. (PAL under scan)		Easy operation label 1 sheet
● Operating conditions	Temperature 5°C ~40°C (41°F ~104°F) Humidity 35%~80%RH (No dewing)	● Optional accessory	Thermal paper K65HM,K61S,K61B
● Print size	100×75mm (Standard)		
● External Dimensions	154(W)×125(H)×314(D)mm 6" 4-15/16" 12-3/8"		
● Weight	3.5kg(7.71lbs)

SAFETY PRECAUTIONS

CAUTION : Observe all cautions and safety related notes located inside the cabinet and on the chassis.

LEAKAGE CURRENT CHECK

Before returning the UNIT to the customer, it is recommended that leakage current be measured according to the following methods.

1. Cold Check

With the AC plug removed from the AC source, place a jumper across the two AC plug prongs. Turn the receiver AC switch on. Using an ohm-meter, connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (screwheads, metal overlays, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 1 megohm. Any resistance below this value indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

2. Hot Check

The test sequence, with reference to the measuring circuit in Fig. A, is as follows:

- (1) With switch S1 open, connect the unit to the measuring circuit. Immediately after connection, measure leakage current, using both positions of switch S2, and with the switching devices in the unit in all of their operating positions.
- (2) Close switch S1, energizing the receiver, immediately after closing the switch, measure leakage current, using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions. Repeat measurements of items (1) and (2) after the receiver has reached thermal stabilization. The leakage current must not be more than 0.5 millampere.

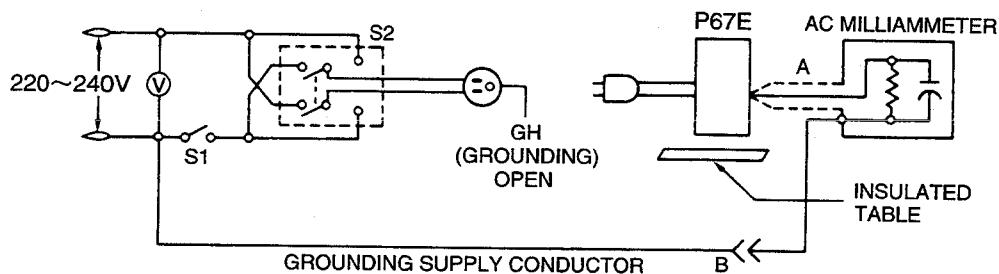

Fig. A

PRODUCT SAFETY NOTICE

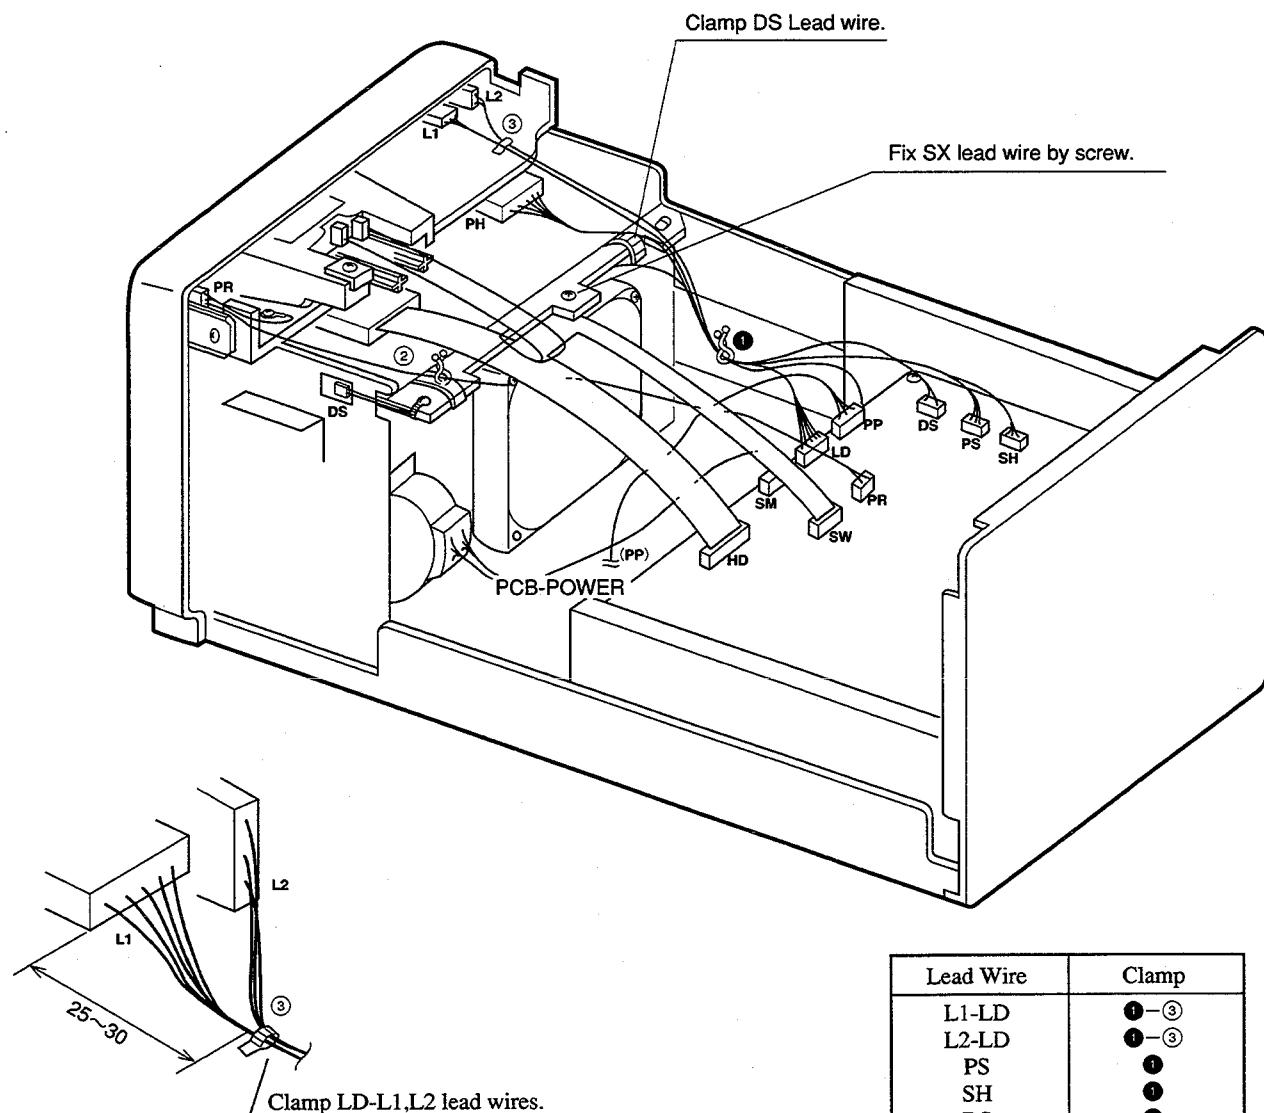

Many electrical and mechanical parts in the video copy processor have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this service manual. Electrical components having such features are identified by shading on the schematic diagram and the parts list of this service manual, and by marking on the supplementary sheet for this chassis to be issued subsequently. Therefore replacements for any safety parts should be identical in value and characteristics.

LEAD DRESSING

The lead wires to be clamped are listed in the table below.

NOTE: The inner wires are clamped so that they do not come close to heat generating or high voltage components After servicing route all wires in their original position.

※Reverse printed character indicates aerial clamp.

Lead Wire	Clamp

PR	②

DISASSEMBLY

Removal of CABINET

1. Remove the 4 screws securing the CABINET. (Fig.1-1)
2. Slide the cabinet slightly to the rear and remove it.

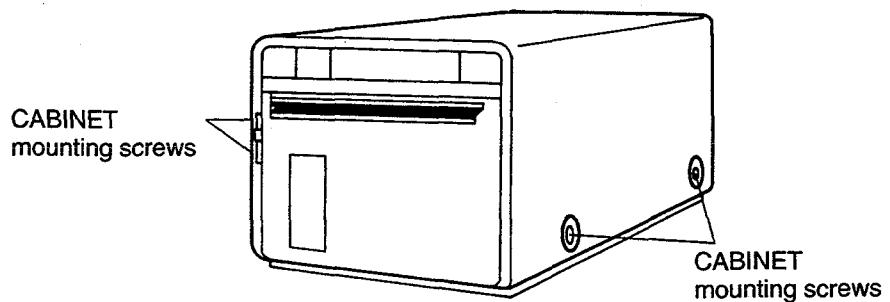

Fig.1-1

Removal of DOOR

1. Set the knob to "OPEN" and open the DOOR.
2. Remove the CAPS. (Fig 1-2)
3. Remove the 2 snaps using a driver. (Fig.1-2)
4. Raise the PAPER HOLDER slightly and remove the DOOR. (Fig.1-3)
5. For re-assembly, reverse the procedure.

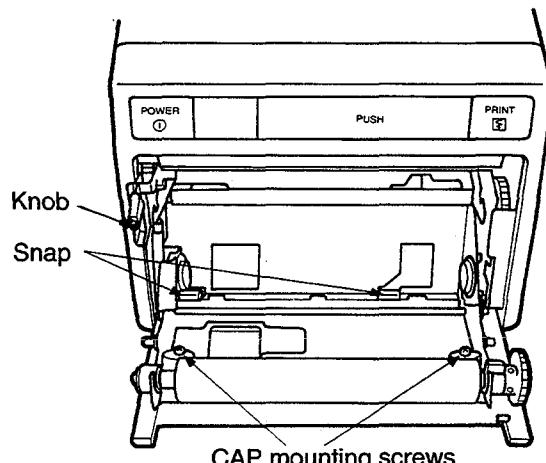

Fig.1-2

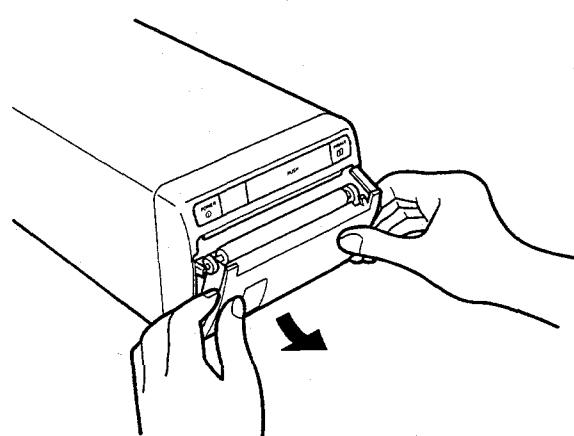

Fig.1-3

**Removal of the
FRONT PANEL**

1. Remove the CABINET. (Fig.1-1)
2. Remove the DOOR. (Fig.1-2,1-3)
3. Disconnect the CONNECTORS LD, PR, SW connected to PCB-MAIN.
4. Remove the MEMBRANE SWITCH mounting screw connected to the fan bracket. (Fig.1-4)
5. Remove 4 screws securing the FRONT PANEL. (Fig.1-5)
6. Remove the KNOB. (Fig.1-5)
7. Remove the FRONT PANEL
8. For re-assembly, reverse the procedure.

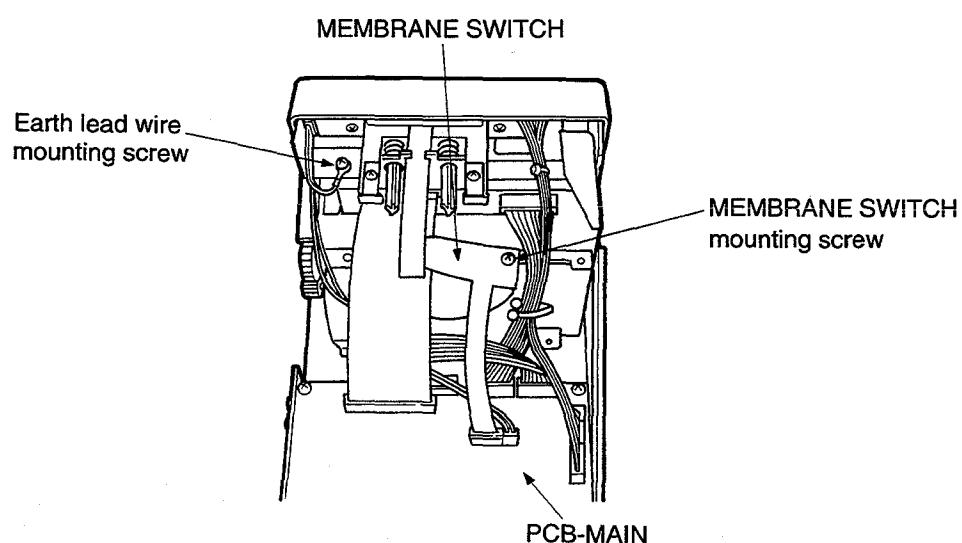

Fig. 1-4

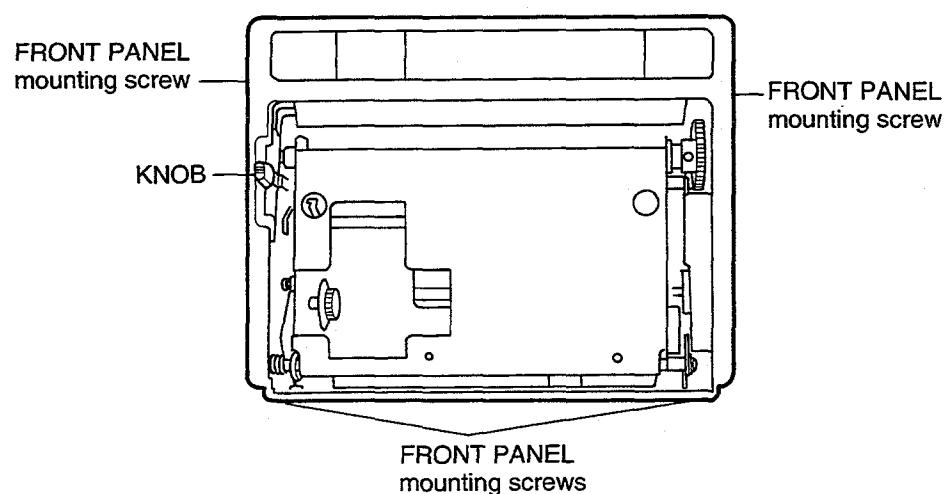

Fig. 1-5

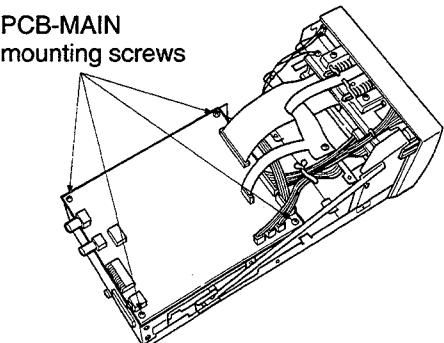

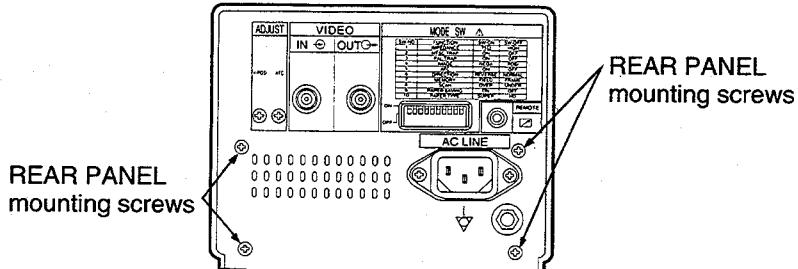

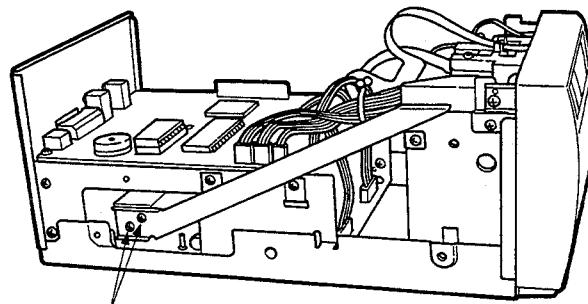

Removal of PCB-MAIN	<p>1. Remove the CABINET.(Fig.1-1) 2. Disconnect all the connectors to the PCB-MAIN. 3. Remove the 4 screws securing the PCB-MAIN. (Fig.1-6) 4. For re-assembly, reverse the procedure.</p>  <p>PCB-MAIN mounting screws</p>
Removal of PCB-POWER	<p>1. Remove the CABINET.(Fig.1-1) 2. Remove the 2 screws securing the POWER SWITCH BRACKET. (Fig.1-8) 3. Remove the POWER SWITCH BRACKET.(Fig.1-8) 4. Remove the REAR PANEL.(Fig.1-7) 5. Remove the PCB-POWER.(Fig.1-6) 6. Remove the TOP HOLDER.(Fig.1-9) 7. Remove the 1 screw securing the POWER UNIT, remove POWER UNIT.(Fig.1-9) 8. Remove the 5 screws securing the HEAT SINK of D951,Q952,IC971, IC901 on POWER UNIT , remove the HEAT SINK.(Fig.1-10) 9. Disconnect all the connectors coonnected to PCB-POWER. 10. Remove the 4 screws securing the PCB-POWER. (Fig.1-10) 11. Remove the PCB-POWER from POWER UNIT. 12. For re-assembly, reveres the procedure.</p>  <p>REAR PANEL mounting screws</p> <p>REAR PANEL mounting screws</p>

Fig.1-7

POWER SWITCH BRACKET
mounting screws

Fig.1-8

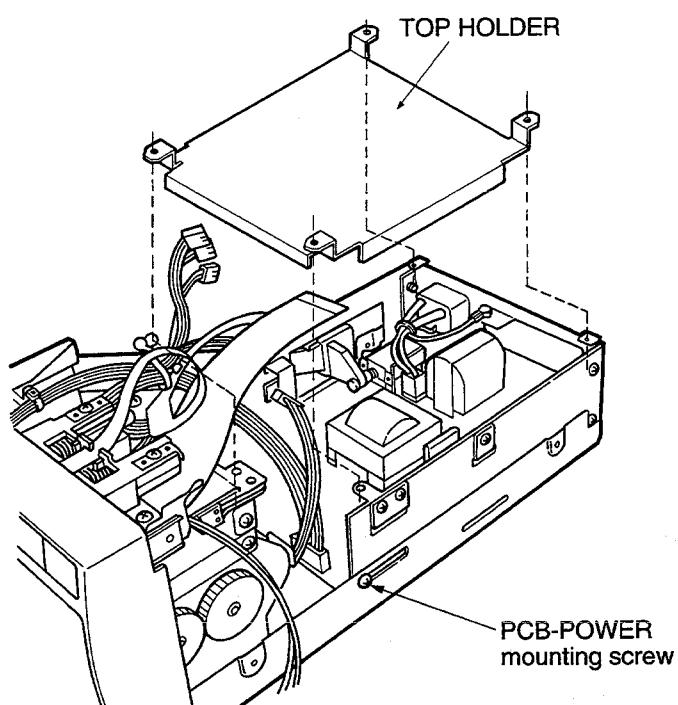

Fig.1-9

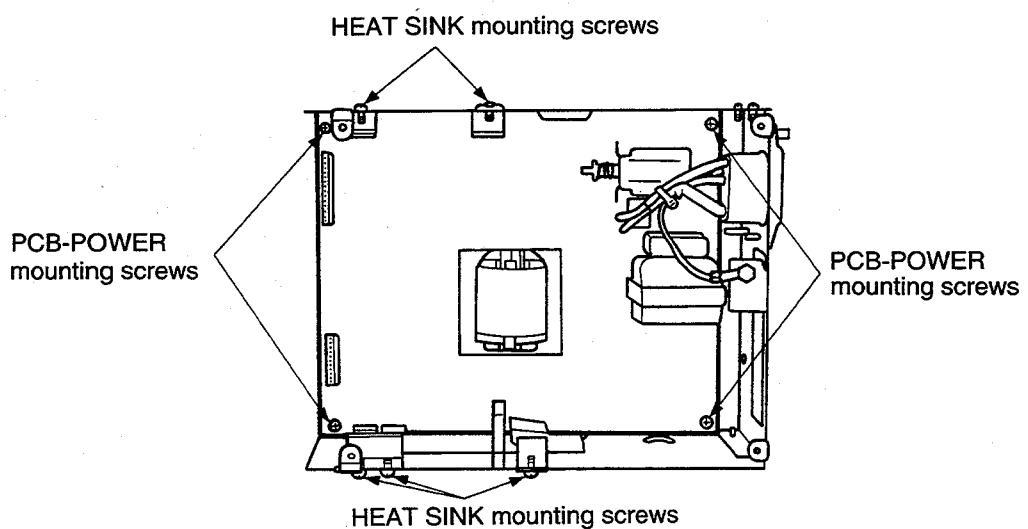

Fig.1-10

**Removal of
PRINTER UNIT**

1. Remove the CABINET.(Fig.1-1)
2. Remove the DOOR. (Fig.1-2,1-3)
3. Remove the FRONT PANEL. (Fig.1-4,1-5)
4. Remove the 2 screws securing the POWER SWITCH BRACKET. (Fig.1-8)
5. Remove the POWER SWITCH BRACKET. (Fig.1-8)
6. Disconnect all the connectors connected to PRINTER UNIT.
7. Disconnect connectors PS , DS , SH , LD , SM , HD , SW connected to PCB-MAIN.
8. Remove the 2 screws securing the PRINTER UNIT. (Fig.1-11)
9. Remove the PRINTER UNIT.
10. For re-assembly, reverse the procedure.

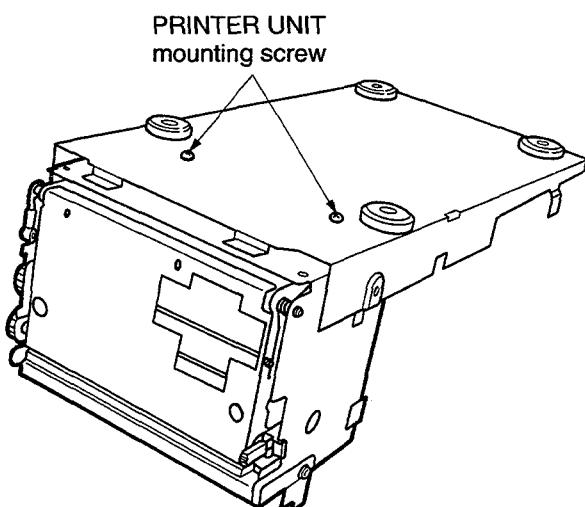

Fig.1-11

REPLACEMENT OF MECHANICAL PARTS

Replacement of STEP MOTOR

1. Remove the PRINTER UNIT. (Fig.1-11)
2. Remove the 2 screws securing the STEP MOTOR. (Fig.2-1)
3. For re-assembly, reverse the procedure.

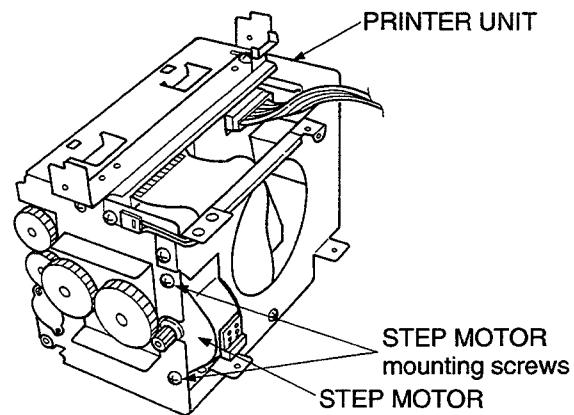

Fig.2-1

**Replacement of
PLATEN ROLLER**

1. Remove the DOOR. (Fig.1-2,1-3)
2. Remove the E-RING on the left side of the PLATEN ROLLER. (Fig.2-2)
3. Remove BEARING. (Fig.2-2)
4. Side the PLATEN ROLLER to the right and remove it.
5. For re-assembly, reverse the procedure.

Note : Be careful of the direction of bearings.

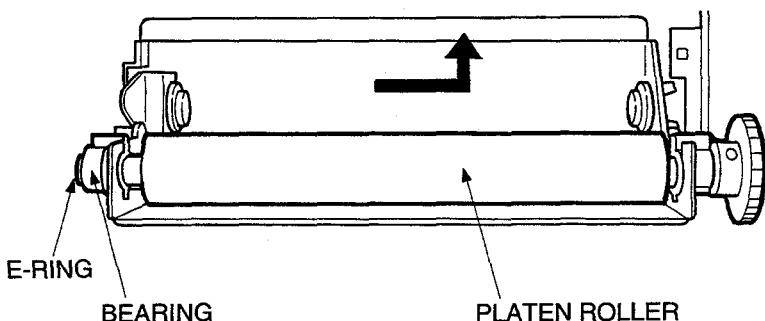

Fig. 2-2

**Replacement of
PAPER HOLDER**

1. Remove the PRINTER UNIT. (Fig.1-11)
2. Remove the E-RINGS (both sides) of the PAPER SHAFT. (Fig.2-3)
3. Pull the PAPER SHAFT out, to right side.
Note : Be careful not to lose the door spring which comes off during the above process. (Fig.2-3)
4. Remove the PAPER HOLDER to your side.
5. For re-assembly, reverse the procedure.

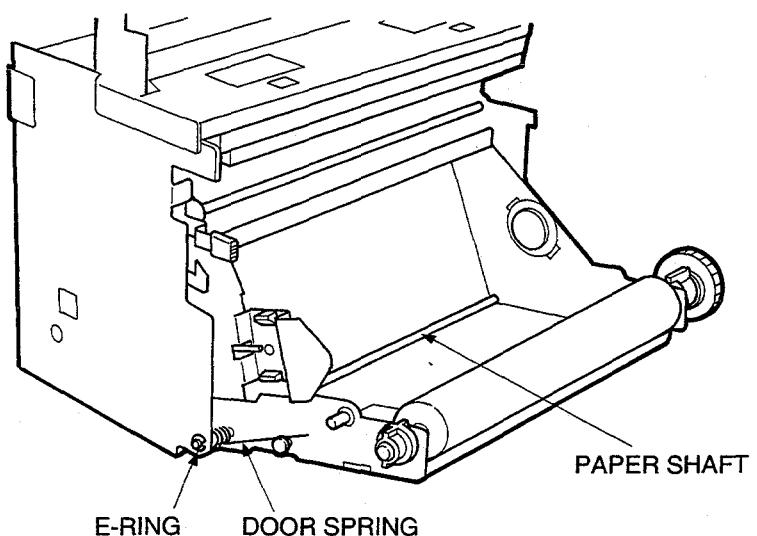

Fig. 2-3

**Replacement of
THERMAL HEAD**

1. Remove the CABINT. (Fig.1-1)
2. Remove the FRONT PANEL.
3. Remove the screws securing POWER SWITCH BRACKET. (Fig.1-8)
4. Remove the B-P SWITCH HOLDER and remove the POWER SWITCH BRACKET. (Fig.1-8)
5. Remove the screws securing the UPPER PLATE. (Fig.2-4)
Note : The HEAD SPRING is held by the UPPER PLATE. Be careful not to lose the HEAD SPRING.
6. Disconnect all the connectors connected to the THERMAL HEAD.
7. Remove the 3 screws securing the HEAT SINK. (Fig.2-4)

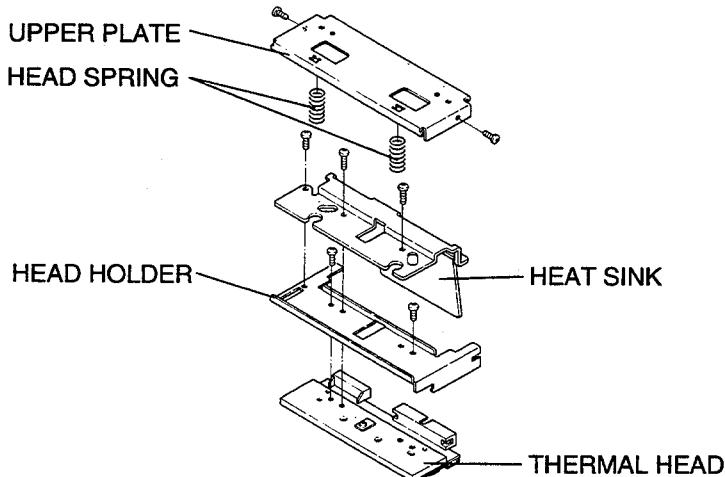

Fig. 2-4

8. Raise the front part of the HEAD HOLDER, slide it and remove it.
9. Remove screws securing the THERMAL HEAD.
Note : Be careful not to touch the HEAT GENERATING PART. (Fig.2-5)
10. For re-assembling, reverse the procedure.
Note : When fixing the THERMAL HEAD to the HEAD HOLDER with screws,use the GAUGE BAR and TIGHTEN screws after confirming that the holes are aligned. (Fig. 2-6)

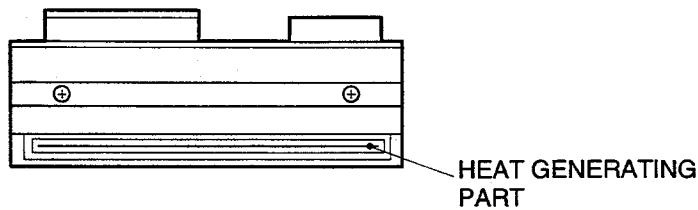

Fig.2-5

**Replacement of
THERMAL HEAD**

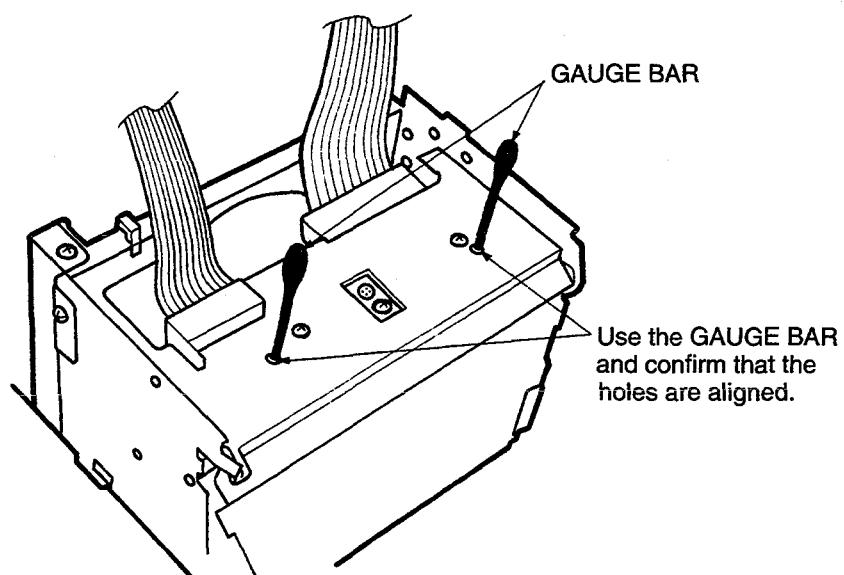

Fig.2-6

CLEANING METHOD

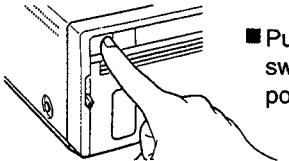

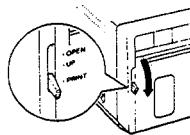

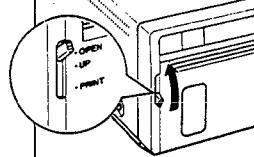

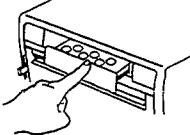

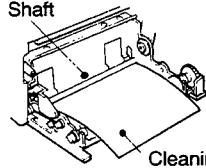

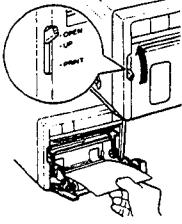

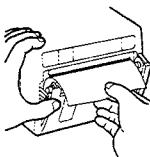

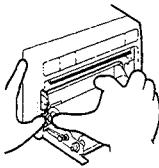

Cleaning of THERMAL HEAD

When the thermal head is dirty with dust or other dirt, rain-drop patterns or white vertical lines may appear in the printed picture.

In this case, use the cleaning sheet (parts No. 857P003O40) or a THERMAL HEAD CLEANER PEN TH-2000 (859C425050) (which can be purchased separately) in the following manner.

- ※ Do not use a russet CLEANING PAPER (parts No. 857P001O10).
It may damage the THERMAL HEAD.

● How to use the CLEANING PAPER

1 Turn on the power.	5 Set the lever to the "PRINT" position.
	 ■ The lever located on the left side to "PRINT" position.
2 Open the door.	6 Press the "FEED" button.
	 ■ Press the button Until the cleaning paper come out about 2 inch.
3 Insert the cleaning paper.	7 Take out the cleaning paper.
 Shaft Cleaning paper	 ■ Open the door. ■ Remove the cleaning paper. ■ Do not pull out the cleaning paper while the door is closed.
4 Close the door.	8 Repeat the steps 3 - 7 1 or 2 times, and print 2-3 sheets to verify the cleaning effect.
	9 Install the paper roll.
	 ■ Install the paper. See "4 installation of paper".

● How to use THERMAL HEAD CLEANER PEN

1. Draw out the pen from the body and pour an appropriate amount of cleaning solvent to the pen body.
 - When the pen core becomes dirty, replace it with the spare core.
 - Note : Move the cleaner pen parallel to the heat generating part (brown part). (Fig.3-1)
 - Since the cleaning solvent is inflammable, close the cap after use and be particularly careful against fire.
 - Keep it in a cool, dark place with no direct exposure to the sun.

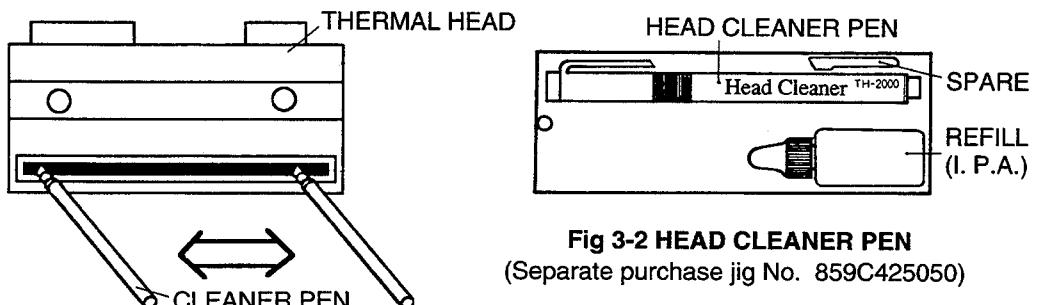

Fig 3-1

Fig 3-2 HEAD CLEANER PEN
(Separate purchase jig No. 859C425050)

Cleaning of PLATEN ROLLER

When the PLATEN ROLLER is very dirty print quality may be poor. In such cases, clean the platen roller by the following procedure.

1. Open the DOOR or the SET so that the PLATEN ROLLER can be cleaned.
2. Check the PLATEN ROLLER. If dirt or dust is adhered, clean the ROLLER using the blower brush shown in Fig.3-4.
3. When the PLATEN ROLLER is extremely dirty, use alcohol and clean it with a tooth brush while taking care not to damage the ROLLER.
4. When the cleaning is finished, check that normal printing is performed.

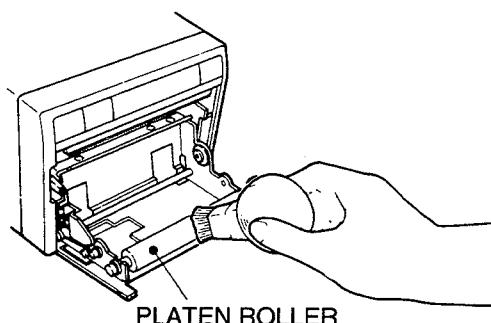

Fig.3-3

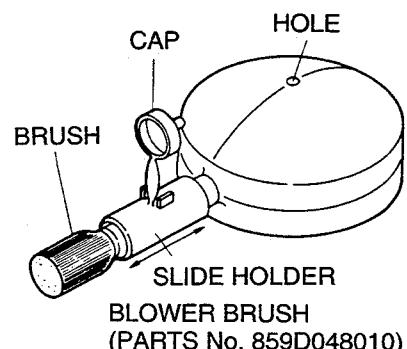

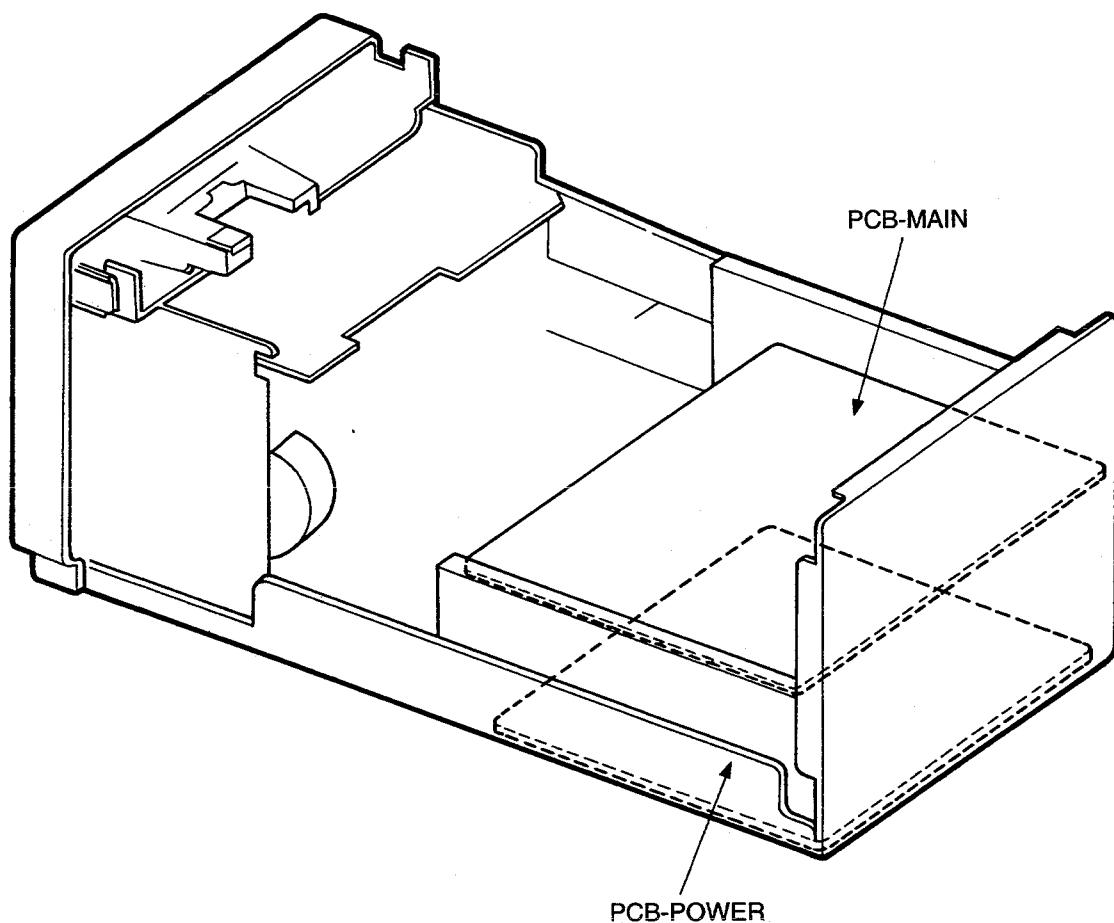

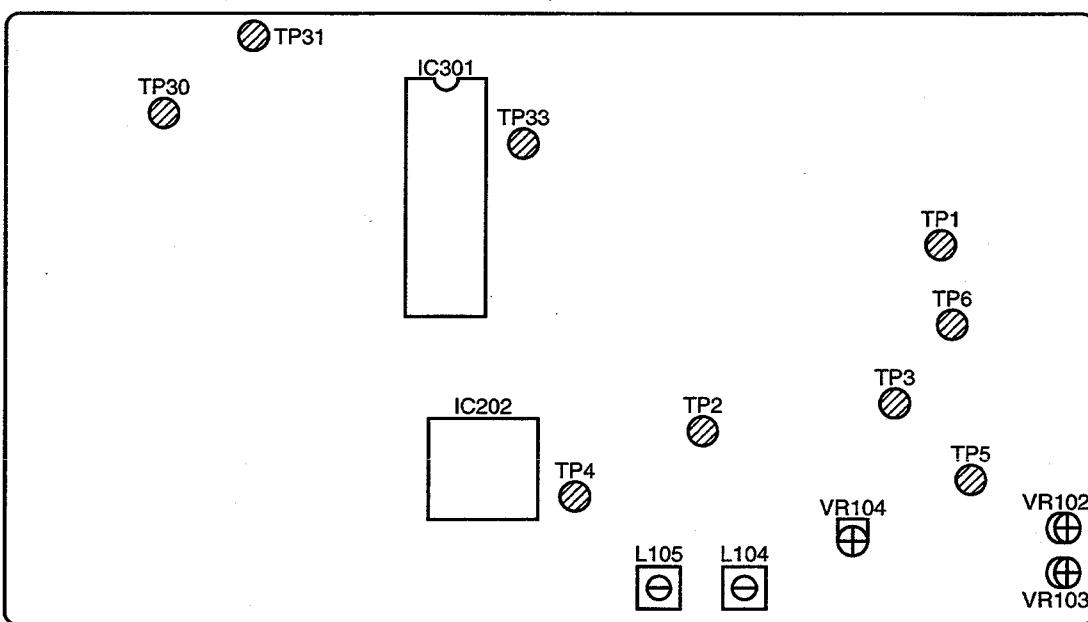

Fig.3-4

Printed Circuit Boards Location

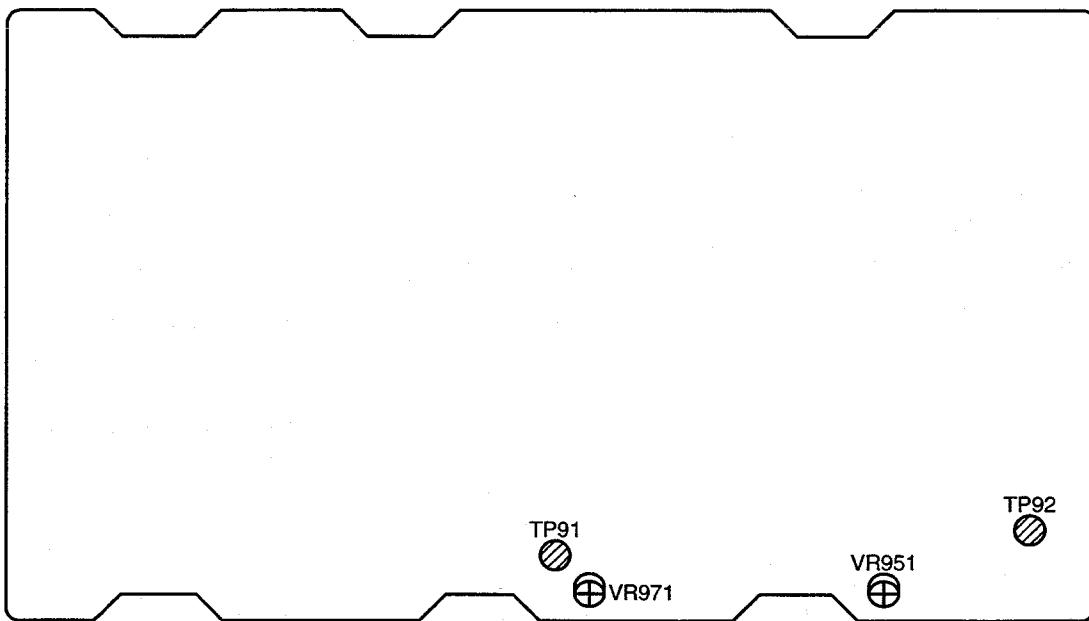

ADJUSTMENT POINTS

PCB-MAIN (COMPONENT SIDE)

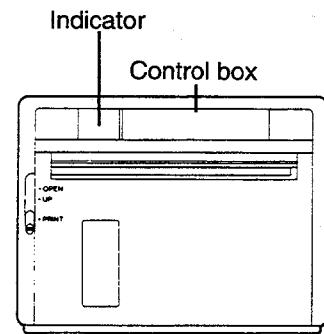

PCB-POWER (COMPONENT SIDE)

SERVICE MODE

Select the service mode with the buttons in the control box to perform the following adjustment and checks.

- Check the head position detecting level
(Refer to Page19)
- Check the paper detecting level
(Refer to Page19)
- Adjustment of item 9
(SUB-BRIGHT and SUB-CONTRAST)

1. How to Select the Service Mode

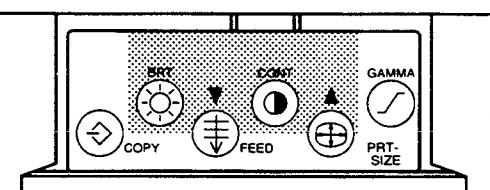

- ① Turn the power off.
- ② Connect TP33 on the PCB-MAIN to GND.
- ③ Turn the power on while pressing the COPY button.

When the indicator LED changes from "55" to

"00", stop pressing the button.

(The service mode is selected.)

Note: After ③ is completed, the unit is set to the stand-by mode, with the indicator LED "00".

2. How to Select a Specific Set Up Mode

- ① Select the set up mode with the CONT button, observing the indicator LED.

Note: The set up mode varies in the order shown by the arrow in the figure.

3. How to Set the Adjustment Value

- ① After the set up mode is selected, set the adjustment value with the UP or DOWN button.

Note: The adjustment value appears on the right side of the indicator LED.

MODE	LED indication
Stand-By	00
Head Position Detecting Level	H5
Paper Detecting Level	P5
Sub-BRIGHT	b5
SUB-CONTRAST	c5
Density	d0
Saturation Monitor	s0
Aperture Control	p0
Dither	g1
Buzzer	bh
Total amount of printed pictures	n0

Adjustment value

Remarks in Setting the Adjustment Value

- The values for the head position and paper detecting level in the set up mode are fixed.
- Although variation of the values for SUB-BRIGHT and SUB-CONTRAST can be observed by the amplitude of the waveform on the oscilloscope, the indicator LEDs are fixed. (Refer to item 9 in the Adjustment Procedure.)

The table below describes each set up mode position.

MODE	LED indicata			Right indication of the LED	Note
	Left	Right			
Stand-By	0	0	0	Print size can be set by varying the adjustment value. It is not necessary to set this in the service mode.	The initial value is restored by pressing the CONT button if the adjustment value is varied in the service mode.
Head Position Detecting Level	H	S		The EED does not vary as much as in the normal mode. (Refer to p.19)	Fixed
Paper Detecting Level	P	S		The LED does not vary as much as in the normal mode. (Refer to p.19)	Ditto
SUB-BRIGHT	b	S		Index of brightness. The LED does not vary even if the adjustment value varies.	Setting can be performed by observing the waveform. (Refer to the Paragraph 8 under Circuit Adjustmens.)
SUB-CONTRAST	C	C		Index of contrast. The LED does not vary even if the adjustment value varies.	Ditto
Density	d	.9~9		Index of density, from .9 (-9) to 9 (9).	Initial setting at shipment is restored by initializing the E ² PROM.
Saturation Monitor	S	0	1	Used to reverse the signal polarity (white-black) of the image area that expands over the limits during BRIGHT and CONTRAST adjustment. When 1 (in), the image is reversed and when 0 (out), not reversed.	Ditto
Aperture Control	E	S	n	Index of aperture control. H indicates maximum aperture correction H (Hard), n (Normal), and S (Soft).	Ditto
Dither	G	0	1	Used to select the gradation. 1 (in) indicates 256 gradations and 0 (out) 64 gradations.	Ditto
Buzzer	B	0	L	Used to select the buzzer.	Ditto
Total amount of printed Pictures	n	0	1	Used to print (or not print) the total amount of the printed picture on the paper. When 1 (in), it is printed and when 0 (out) it is not printed.	Ditto Only when checking the number of the printed picture, the value of 1 (in) should be set.

4. How to Memorize the Adjustment Value and to Quit the Service Mode

① Either press the BRT button or press PRINT button, print.

(To memorize the adjustment value and to quit the service mode.)

Note: If power is switched off, the service mode is terminated, but adjustment data is not memorized.

ADJUSTMENT MODE

Select the adjustment mode with the buttons in the control box to perform the circuit adjustments in item 7 (clock frequency).

Note: Do not select any adjustment mode except for the above adjustments.

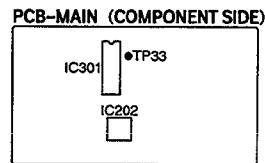

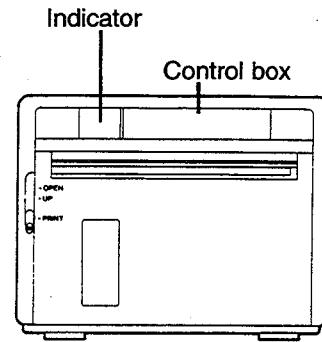

1. How to Select the Adjustment Mode

- ① Turn the power off.
- ② Connect TP33 on the PCB-MAIN to GND.
- ③ Turn the power on while pressing the GAMMA button.

When the indicator LED is turned from "  " to "  ", stop pressing the button.

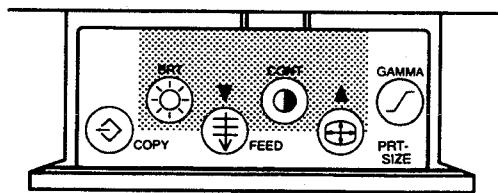

(Adjustment mode is selected.)

Note: After ③ is completed, the unit is set to the stand-by mode, with the indicator LED "  ".

2. How to Select the Adjustment Item

- Adjustment in item 7 (clock frequency)
- ① Press the UP button.
- ② Check that the LED indicates "  " after approximately two seconds.

3. How to Quit the Adjustment Mode

- ① Turn the power off.

Note: If you make an error during the adjustment mode, turn the power off and select the adjustment mode again.

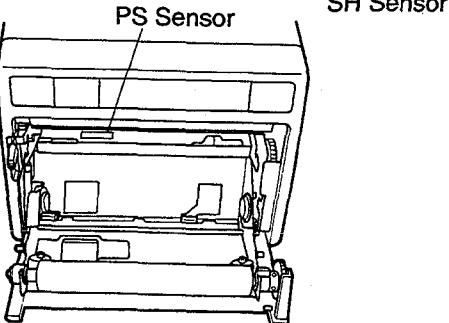

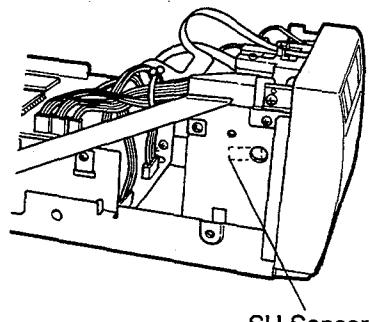

Check of Detection Level for Head Position and Paper

This procedure checks the performance of SH sensor and PS sensor.

Select the service mode to make the check. (Page 16)

1. Check of Detection Level for Head Position (SH sensor)

- ① Select the service mode.
- ② Press the CONT button to set the indicator LED to "HS".
- ③ Lower the front lever to PRINT position.
- ④ Check that the indicator LED turns from "HS" to "HD" when press the COPY button.
- ⑤ Check that the indicator LED turns into "Er" when the front lever is in the UP position.
Note: If the LED indicates "Er" with procedures ④ and ⑤, check the SH sensor or PCB-MAIN.
- ⑥ Terminate the service mode. (Page 17)

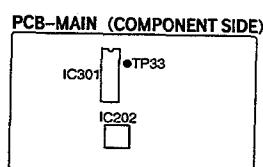

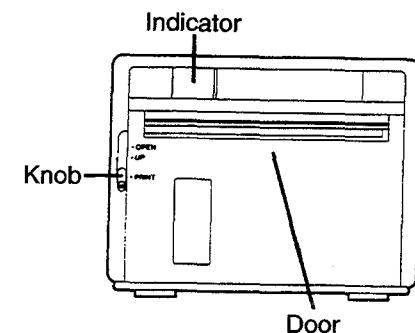

2. Check of Detection Level for Paper (PS sensor)

- ① Select the service mode.
- ② Open the door and take the paper out.
- ③ Insert cleaning paper and close the door.

Note: The cleaning paper should be placed with the less sensitive side up. It should have no mechanical damage or dirt. The less sensitive side is specified by observing the voltage at TP31. The lowest voltage indicates less sensitive side.

- ④ Press the CONT button to change the indicator LED into "PS".
- ⑤ Press the COPY button and check that the indicator LED changes from "PS" to "PD".
- ⑥ Check that the LED dose not indicate "Er" then open the door and remove the paper.
Note: If the LED indicate "Er" with the procedures ⑤ and ⑥, check the PS sensor or PCB-MAIN.
- ⑦ Terminate the service mode. (Page 17)

INITIALIZATION OF THE E²PROM

When the PCB-MAIN, EPROM (IC303) or E²PROM (IC309) is replaced, initialize the E²PROM with the following procedure.

- ① Turn the power off.
- ② Turn the power on while pressing the GAMMA and COPY buttons at the same time.
- ③ Check that the indicator LED turns from " **11** " to " **00** ".

Note: Keep pressing the buttons until the indicator LED turns from " **11** " to " **00** ".

After E²PROM is initialized, the following adjustment values in the setting mode are restored to the initial values at shipment.

Therefore they need not be set.

- Density (LED indicate: " **d0** ")
- Saturation Monitor (LED indicate: " **50** ")
- Aperture Control (LED indicate: " **p0** ")
- Dither (Gradation) (LED indicate: " **G1** ")
- Buzzer (LED indicate: " **BH** ")
- Total amount of the printed pictures (LED indicate: " **n0** ")

INTIAL SETTING

Before making adjustments , preset the mode switch.

1) Mode switch and other

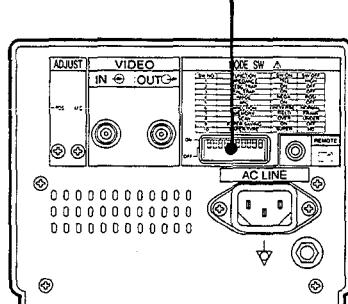

Mode switch presets

3.Vertical Sync Separation		Adjustment purpose To set the timing of the vertical sync signal versus the input signal.
Symptom when incorrectly adjusted		The odd and the even fields of the printed image are reversed.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Connect CH1 of the oscilloscope to TP1 and CH2 to TP3. 3. Trigger in the falling edge of CH2. 4. Magnify the falling edge of CH2. 5. Adjust VR101 so that t_v , in following figure, is $18 \pm 1 \mu\text{sec}$.
Test point	CH1 : TP1 CH2 : TP3	
EXT trigger	---	
Measurement range	DIV : CH1 CH2 TIM : $10 \mu\text{sec}$ (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	
 <p>PCB-MAIN (COMPONENT SIDE)</p>		
 <p>CH1</p> <p>CH2</p> <p>Magnified</p> <p>CH1</p> <p>CH2</p> <p>tv</p> <p>Trigger</p> <p>CH1</p> <p>CH2</p> <p>tv</p>		

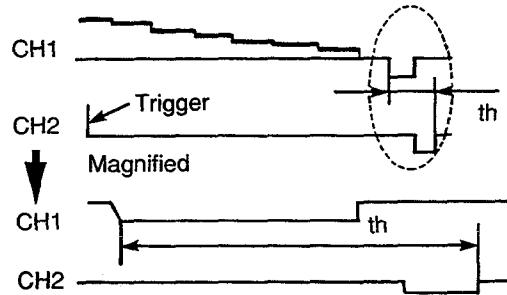

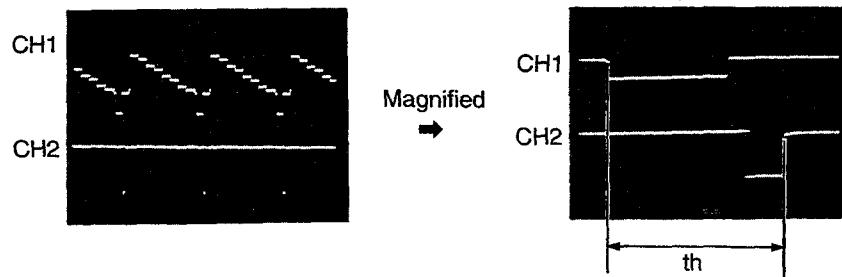

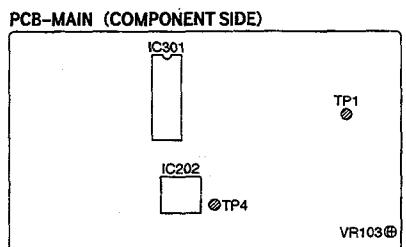

4.Horizontal Sync Pulse Width		Adjustment purpose To set the pulse width of the horizontal sync signal.
Symptom when incorrectly adjusted		Horizontal position of the printed picture shifts to left or right when using a composite signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Check that #5: AFC switch of S101 (MODE) is in the "OFF" position. 3. Connect CH1 of the oscilloscope to TP5. 4. Trigger in the rising edge of CH1. Magnify the pulse width (tp) of CH1 using delay sweep. 5. Adjust VR104 so that the pulse width of the waveform is $tp=4.5 \pm 0.1 \mu\text{sec}$.
Test point	CH1:TP5	
EXT trigger	---	
Measurement range	DIV:0.1V TIM: $1 \mu\text{sec}$ (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	
 <p>PCB-MAIN (COMPONENT SIDE)</p>		
 <p>CH1</p> <p>tp</p>		

5. Horizontal AFC		Adjustment purpose To correct stabilize the horizontal AFC circuit when inputting video signal.
	Symptom when incorrectly adjusted	Erratic horizontal sync. when inputting video signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (gray scale). 2. Check that #4: AFC switch of S101 (MODE) is on the "OFF" position. 3. Connect CH1 of the oscilloscope to TP1 and CH2 to TP5. 4. Trigger in the falling edge of CH2. 5. Magnify the falling edge of CH1 by using delay trigger and set it to the centre in the screen of the oscilloscope. 6. set the AFC to "ON". Adjust VR102 so that the phase difference between the centre of the screen and the falling edge of CH1 is $ta = 0 \pm 0.1 \mu\text{sec}$. Then turn #5: AFT switch of the S101 (MODE) off.
Test point	CH1:TP1 CH2:TP5	
EXT trigger	---	
Measurement range	DIV:CH1 50mV CH2 0.2V TIM:2 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

PCB-MAIN (COMPONENT SIDE)

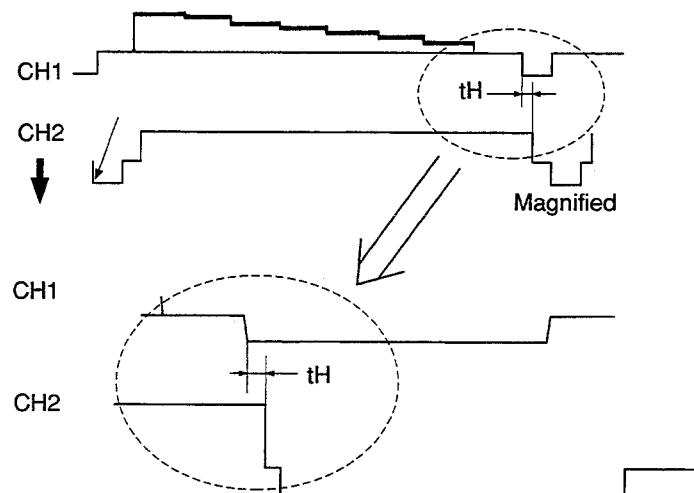

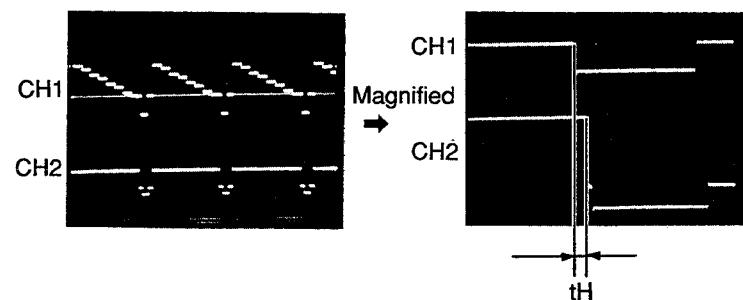

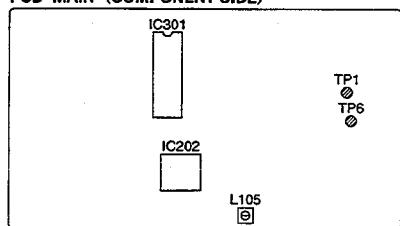

6.Horizontal position		Adjustment purpose To set the horizontal position for composite signal.
Symptom when incorrectly adjusted		Horizontal position of printed picture shifts to left or right when inputting composite signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Check that #5: AFC switch of S101 (MODE) is in the "OFF" position. 3. Connect CH1 of the oscilloscope to TP1 and CH2 to TP4. 4. Trigger in the falling edge of CH2 and magnify that portion using delay sweep. 5. Adjust VR103 so that the phase difference between the falling edge of CH1 and the rising edge of CH2 is $th=5.0 \pm 0.1 \mu\text{sec}$.
Test point	CH1:TP1 CH2:TP4	
EXT trigger	---	
Measurement range	DIV:CH1 50mV CH2 0.2V TIM:1 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

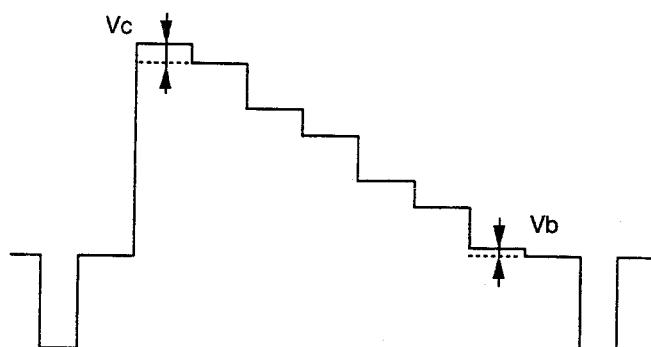

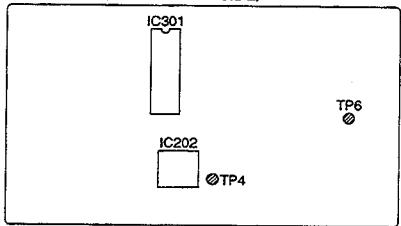

7.Clock frequency		Adjustment purpose To set the oscillating frequency of the sampling clock oscillator.
Symptom when incorrectly adjusted		Too wide or too narrow horizontal image printed.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Press the GAMMA button to set the LED to "II" (stand-by mode). 3. Press the UP button to set the LED to "FP". 4. Connect CH1 of the oscilloscope to TP1 and CH2 to TP6. 5. Adjust L105 so that tH in the following figure is $0.55 \pm 0.1 \mu\text{sec}$.
Test point	CH1:TP1 CH2:TP6	
EXT trigger	---	
Measurement range	DIV:CH1 50mV CH2 0.1V TIM:1 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

PCB-MAIN (COMPONENT SIDE)

8.SUB-BRIGHT SUB-CONTRAST		Adjustment purpose To set the brightness and white level saturation of the input signal.
Symptom when incorrectly adjusted		Poor brightness, or poor contrast, level of the printed or memorized picture.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Select the service mode. 3. Press the CONT button three times to set the LED to "b5". 4. Connect CH1 of the oscilloscope to TP6 and CH2 to TP4. 5. Trigger in the rising of CH2. 6. Observe the waveform to TP6. 7. Press the UP and DOWN buttons so that Vb in the figure below is 0.05 ± 0.01 Vp-p. 8. Press the CONT button once to set the LED to "cc". 9. Press the UP and DOWN buttons so that Vc, in the figure below is 0.05 ± 0.01 Vp-p.
Test point	CH1:TP6 CH2:TP4	
EXT trigger	---	
Measurement range	DIV:10mV TIM:10 μ sec	
Input signal	Video Signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

PCB-MAIN (COMPONENT SIDE)

CHIP PARTS REPLACEMENT

CHIP PARTS REPLACEMENT

Some resistors, shorting jumpers (0Ω resistor), ceramic capacitors, transistors and diodes are chip parts which are used for certain circuit elements. When replacing these parts, note the following cautions.

Cautions:

- A. Use fine tipped, well insulated soldering pencil (iron) about 30 watts and tweezers.
- B. Melting the solder, remove the Chip Parts carefully not to tear off the copper foil of the printed circuit board.
- C. Discard removed chips; do not reuse them.
- D. Do not apply heat for more than 3 seconds to the new Parts.
- E. Avoid using a rubbing stroke when soldering.
- F. Take care not to scratch when soldering, or damage the Chip Parts.
- G. Supplementary cementing is not required.

1 Removal of chip Parts

(Resistors, capacitors, etc.)

- A. Grasp the part with tweezers. Melting the solder at both side alternately, remove the one side of the part with a twisting motion.
- B. Melt the solder at the other side and remove the part.

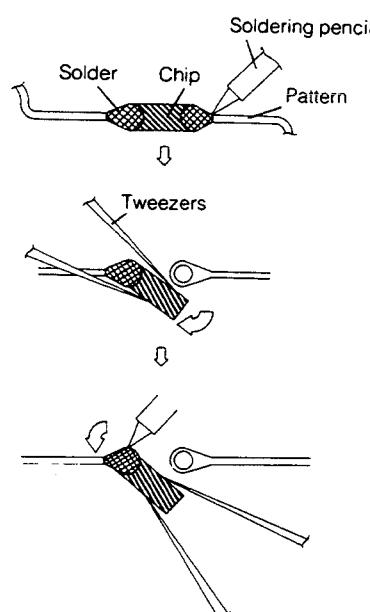

Fig. 1

2 Removal of Chip Parts (Transistors)

- A. Melting the solder of one lead, Lift the side of that lead upward.
- B. Simultaneously melt the solder of the two remaining leads and lift the part to remove.

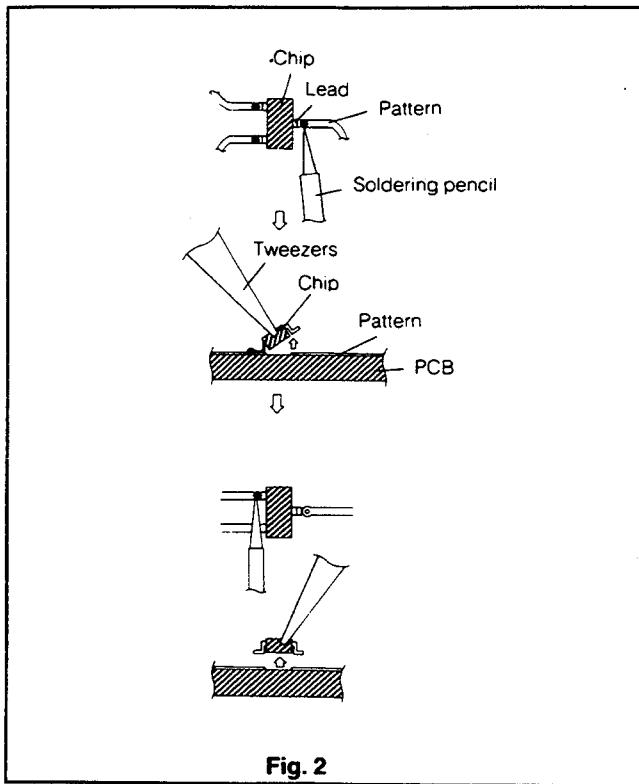

Fig. 2

3 Replacement

- A. Presolder the contact points of the circuit pattern.
- B. Press the part downward with tweezers and apply the soldering pencil as shown in the figure.

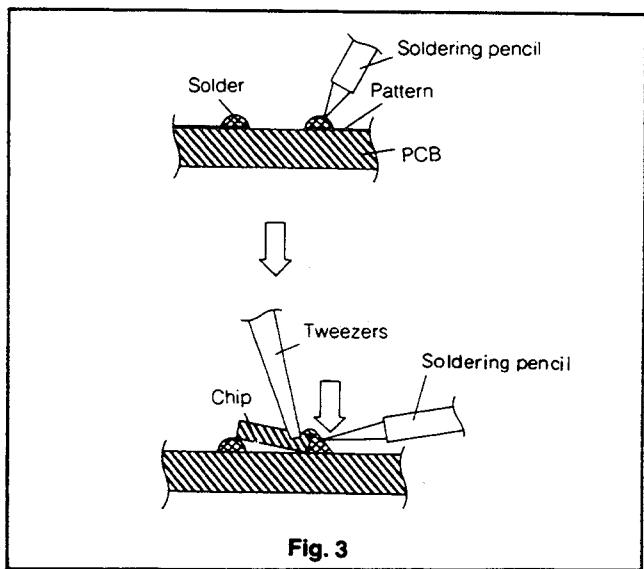

Fig. 3

PARTS LIST

MODEL : P67E

In order to expedite delivery of replacement part orders.

- Specify : 1. Model number/Serial number
- 2. Part number and Description
- 3. Quantity

Unless full information is supplied, delay in execution of orders will result.

Δ : Critical components

The diagram shows the internal structure of the IC103 MB40576PF. It consists of several operational amplifiers (1, 2, 62, 63), resistors (R_{1-4} , R_{5-8} , R_{FB}), and logic blocks (63 TO 6 ENCODER, LATCH & BUFFER). The inputs VNA D, VRT, and VFB are connected to the non-inverting inputs of amplifiers 1, 2, and 62 respectively. The inverting inputs of these amplifiers are connected to ground. The outputs of amplifiers 1, 2, and 62 are connected to the inputs of the 63 TO 6 ENCODER. The output of the 63 TO 6 ENCODER is connected to the inputs of the LATCH & BUFFER. The output of the LATCH & BUFFER is the six-bit digital output (D1 to D6). The CLX input is connected to the non-inverting input of amplifier 1. The VFB input is also connected to the non-inverting input of amplifier 63.

IC206 M5M5256BFP-85/μPD43256AGU-85LL

Detailed description of the circuit:

- Address Path:** Address pins A8-A13 and R2-R9 are buffered and decoded. A 512 decoder takes A8-A13 as input and produces 512 row address lines. A 64 decoder takes R2-R9 as input and produces 64 column address lines.
- Control Path:** Chip Select (CS), Output Enable (OE), and Address Latch Enable (ALE) are buffered and connected to the appropriate control inputs of the memory array.
- Clock Path:** The CLOCK signal is buffered and supplied to the memory array.
- Memory Array:** The central 32768x8bit (512x512) memory array is connected to the address and control buses.
- Output Path:** The outputs of the memory array are buffered through an output buffer stage before being presented on pins DQ1-DQ8 and DQ9-DQ19.

$A_1 - A_{11}$: ADDRESS
$I/O, -I/O,$: DATA I/O
CS	: CHIP SELECTIVE INPUT
WE	: WRITE ENABLE
OE	: OUTPUT ENABLE
Vcc	: +5V
GND	: GROUND

H	X	X	NON-SELECTING	HIGH Z	I _{SS}
L	H	H	OUTPUT DISABLE		I _{CCA}
L	L	H	READ	D _{out}	
L	X	L	WRITE	D _{in}	

The diagram illustrates the internal architecture and pin connections of the IC301 M50734SP microcontroller. It features a central DATA BUS connected to various internal components:

- Processor Registers:** Processor Status Register PS(8), Program Counter PC(8), Program Counter PC(8), and Stack Pointer SP(8).
- Memory and I/O:** Address Bus AB(16), Address/Data Bus AD(16), and Data Bus D(8).
- Peripherals:** A/D Converter, BDT Operational Unit, Accumulator AB(8), Index Registers X(8) and Y(8), Prescalers (P1, P2, P3), Timers (T1B, T2B, T3B, T4B, T5B, T6B, T7B, T8B), Step Motors, Timer X TX(16), USART, and I2C.
- Control and Power:** Control logic, PWMOUT, STBout, CNTR, and power pins Vcc, Vss, and WDOUT.

Pin connections include:

- Pin 1: XIN, XOUT, 4
- Pin 2: Vss
- Pin 3: WR, RD, SYNC, ALE, RESET
- Pin 4: Vcc
- Pin 5: Vss
- Pin 6: WDOUT
- Pin 7: Vss

PCB-MAIN

SAFETY PRECAUTIONS

CAUTION : Observe all cautions and safety related notes located inside the cabinet and on the chassis.

LEAKAGE CURRENT CHECK

Before returning the UNIT to the customer, it is recommended that leakage current be measured according to the following methods.

1. Cold Check

With the AC plug removed from the AC source, place a jumper across the two AC plug prongs. Turn the receiver AC switch on. Using an ohm-meter, connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (screwheads, metal overlays, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 1 megohm. Any resistance below this value indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

2. Hot Check

The test sequence, with reference to the measuring circuit in Fig. A, is as follows:

- (1) With switch S1 open, connect the unit to the measuring circuit. Immediately after connection, measure leakage current, using both positions of switch S2, and with the switching devices in the unit in all of their operating positions.
- (2) Close switch S1, energizing the receiver, immediately after closing the switch, measure leakage current, using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions.
Repeat measurements of items (1) and (2) after the receiver has reached thermal stabilization.
The leakage current must not be more than 0.5 millampere.

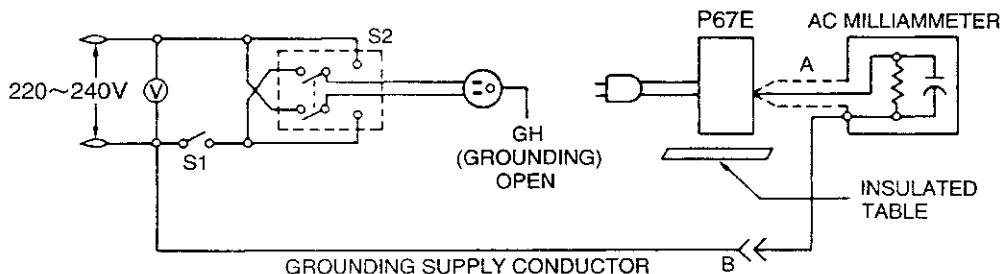

Fig. A

PRODUCT SAFETY NOTICE

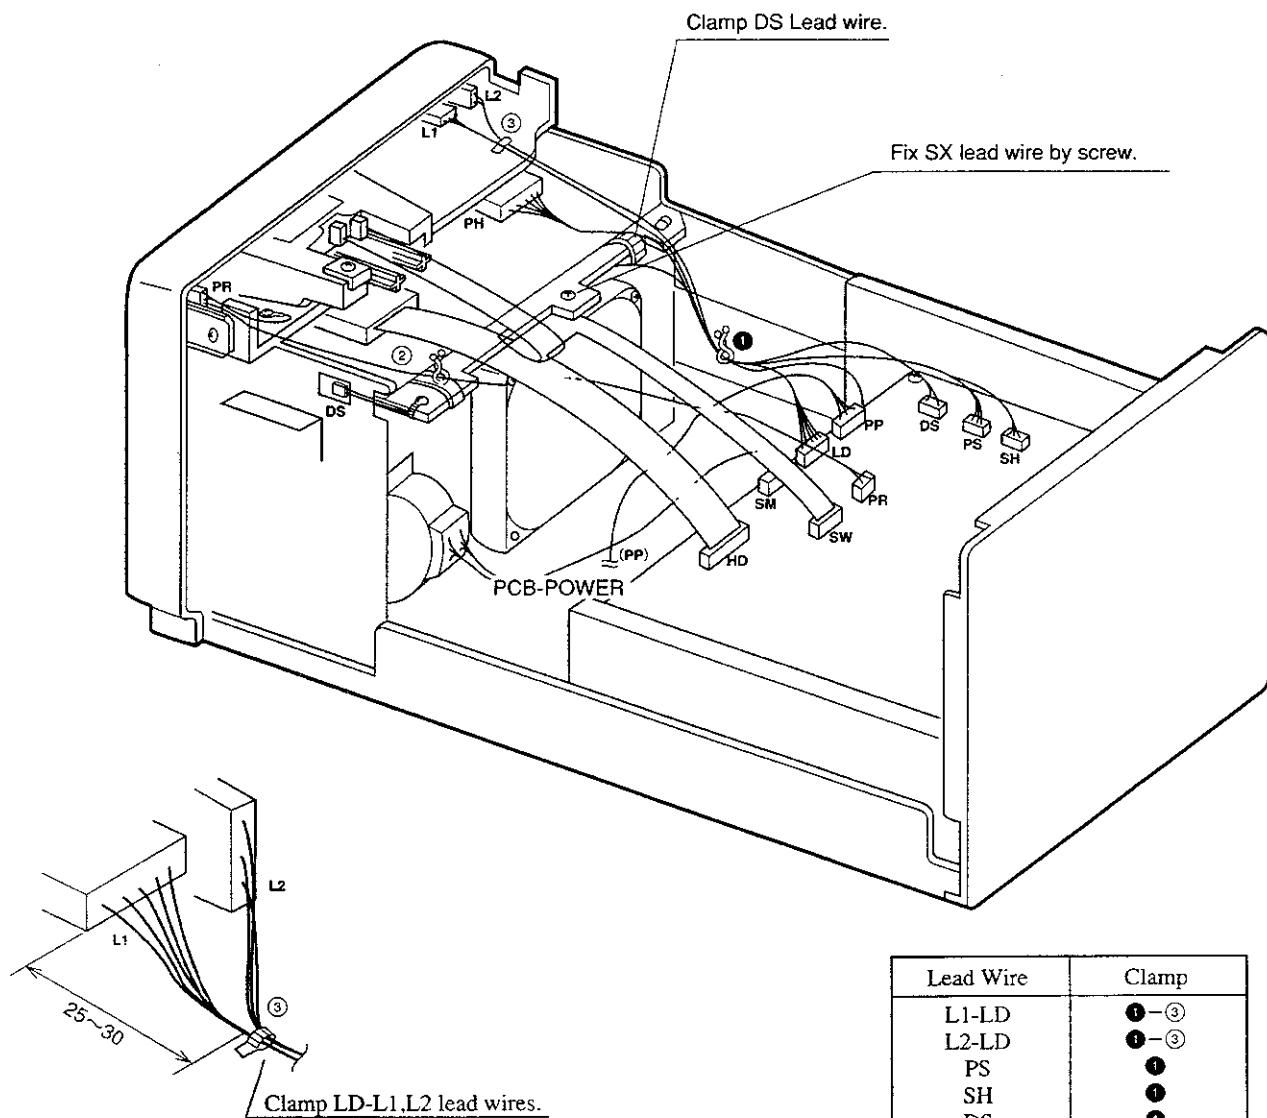

Many electrical and mechanical parts in the video copy processor have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this service manual. Electrical components having such features are identified by shading on the schematic diagram and the parts list of this service manual, and by marking on the supplementary sheet for this chassis to be issued subsequently. Therefore replacements for any safety parts should be identical in value and characteristics.

LEAD DRESSING

The lead wires to be clamped are listed in the table below.

NOTE: The inner wires are clamped so that they do not come close to heat generating or high voltage components After servicing route all wires in their original position.

※Reverse printed character indicates aerial clamp.

DISASSEMBLY

Removal of CABINET

1. Remove the 4 screws securing the CABINET. (Fig.1-1)
2. Slide the cabinet slightly to the rear and remove it.

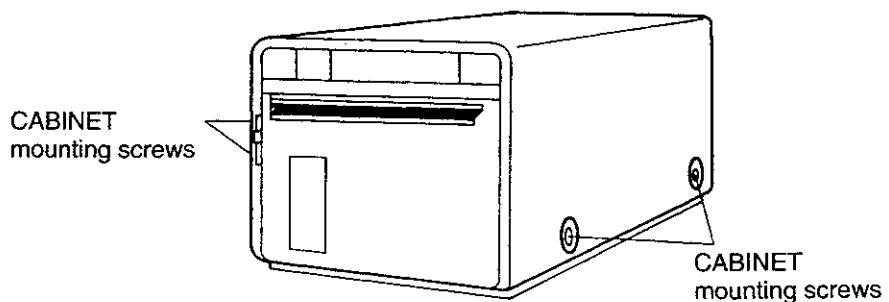

Fig.1-1

Removal of DOOR

1. Set the knob to "OPEN" and open the DOOR.
2. Remove the CAPS. (Fig 1-2)
3. Remove the 2 snaps using a driver. (Fig.1-2)
4. Raise the PAPER HOLDER slightly and remove the DOOR. (Fig.1-3)
5. For re-assembly, reverse the procedure.

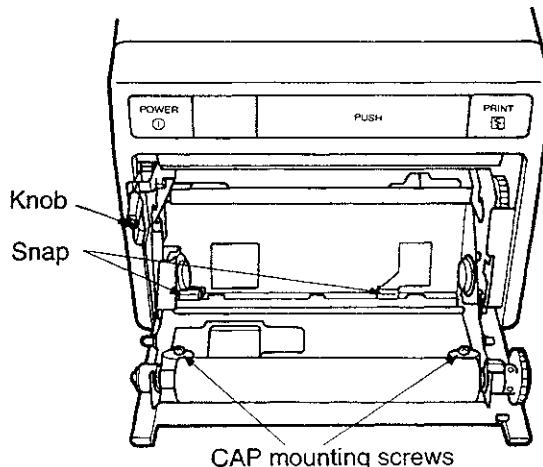

Fig.1-2

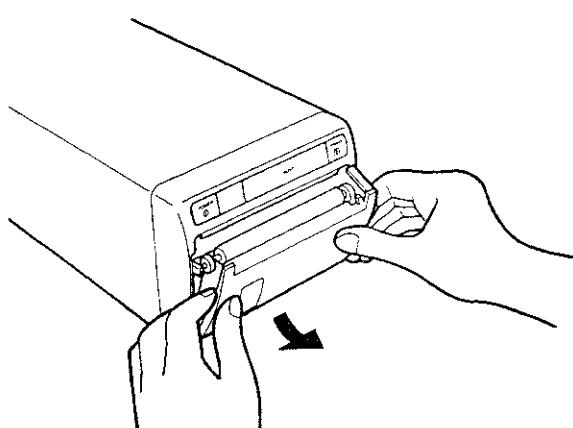

Fig.1-3

**Removal of the
FRONT PANEL**

1. Remove the CABINET. (Fig.1-1)
2. Remove the DOOR. (Fig.1-2,1-3)
3. Disconnect the CONNECTORS LD, PR, SW connected to PCB-MAIN.
4. Remove the MEMBRANE SWITCH mounting screw connected to the fan bracket. (Fig.1-4)
5. Remove 4 screws securing the FRONT PANEL. (Fig.1-5)
6. Remove the KNOB. (Fig.1-5)
7. Remove the FRONT PANEL
8. For re-assembly, reverse the procedure.

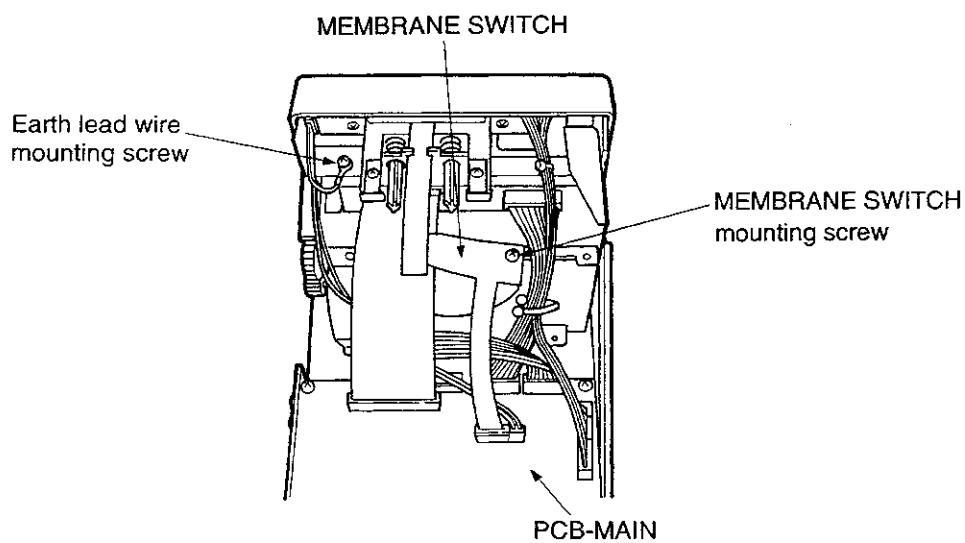

Fig. 1-4

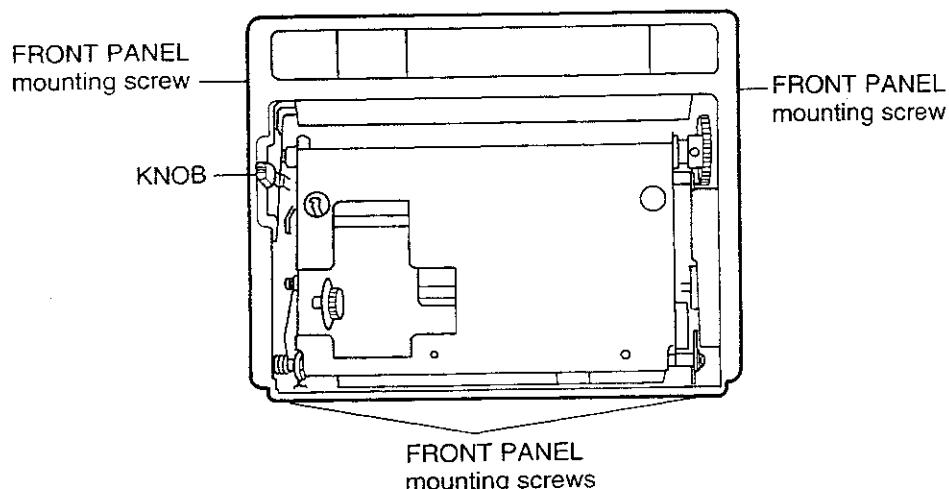

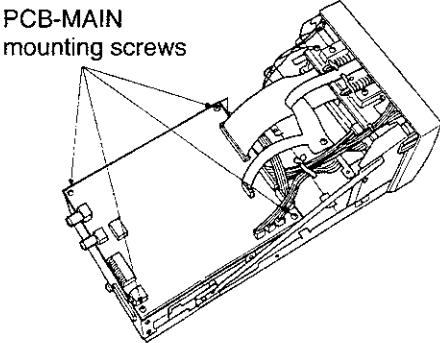

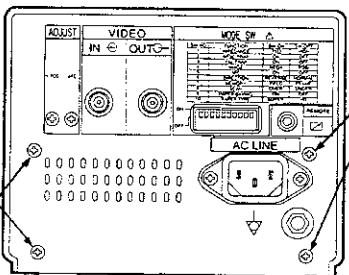

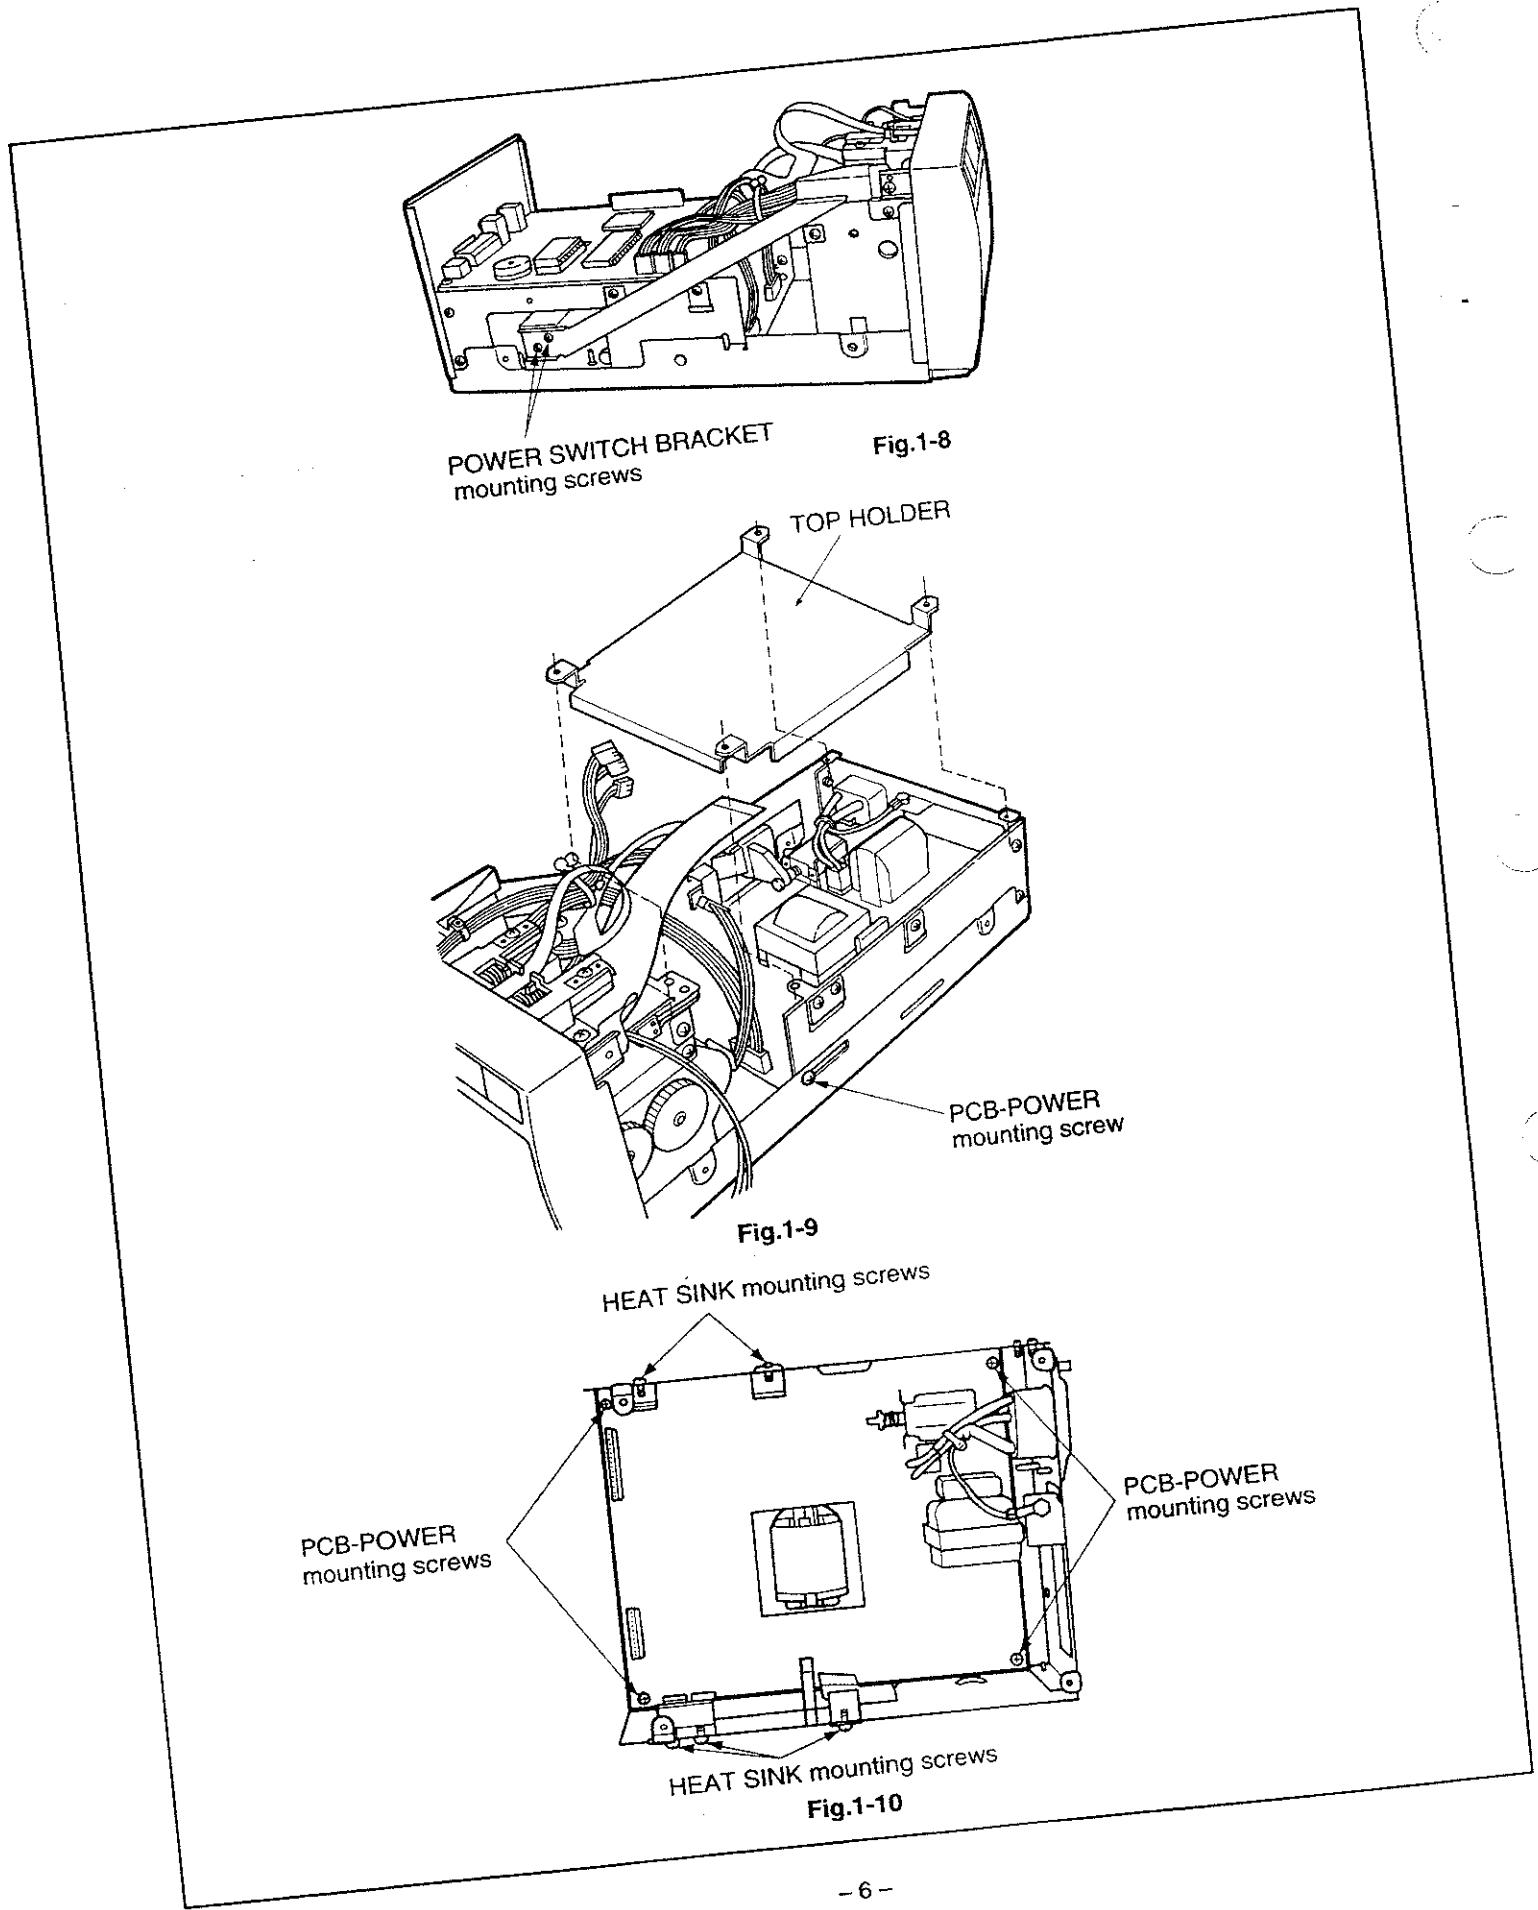

Fig. 1-5

Removal of PCB-MAIN	<p>1. Remove the CABINET.(Fig.1-1) 2. Disconnect all the connectors to the PCB-MAIN. 3. Remove the 4 screws securing the PCB-MAIN. (Fig.1-6) 4. For re-assembly, reverse the procedure.</p>
	 <p>PCB-MAIN mounting screws</p> <p>Fig.1-6</p>  <p>REAR PANEL mounting screws</p> <p>REAR PANEL mounting screws</p> <p>Fig.1-7</p>

**Removal of
PRINTER UNIT**

1. Remove the CABINET. (Fig.1-1)
2. Remove the DOOR. (Fig.1-2,1-3)
3. Remove the FRONT PANEL. (Fig.1-4,1-5)
4. Remove the 2 screws securing the POWER SWITCH BRACKET. (Fig.1-8)
5. Remove the POWER SWITCH BRACKET. (Fig.1-8)
6. Disconnect all the connectors connected to PRINTER UNIT.
7. Disconnect connectors PS , DS , SH , LD , SM , HD , SW connected to PCB-MAIN.
8. Remove the 2 screws securing the PRINTER UNIT. (Fig.1-11)
9. Remove the PRINTER UNIT.
10. For re-assembly, reverse the procedure.

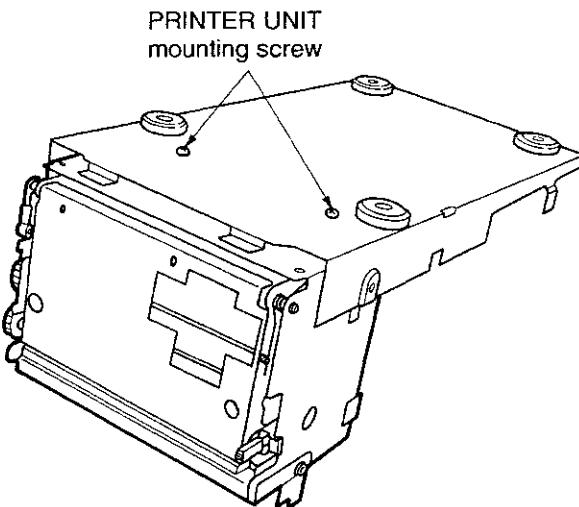

Fig.1-11

REPLACEMENT OF MECHANICAL PARTS

Replacement of STEP MOTOR

1. Remove the PRINTER UNIT. (Fig.1-11)
2. Remove the 2 screws securing the STEP MOTOR. (Fig.2-1)
3. For re-assembly, reverse the procedure.

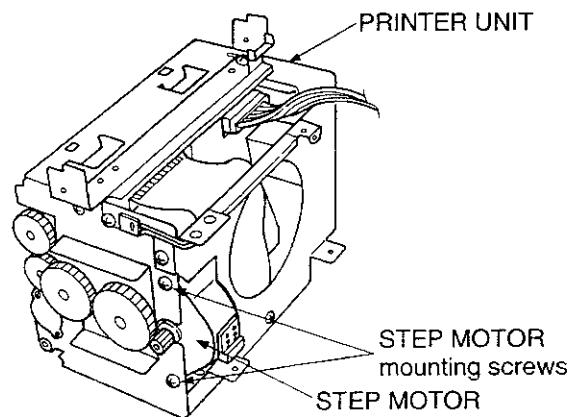

Fig.2-1

**Replacement of
PLATEN ROLLER**

1. Remove the DOOR. (Fig.1-2,1-3)
2. Remove the E-RING on the left side of the PLATEN ROLLER. (Fig.2-2)
3. Remove BEARING. (Fig.2-2)
4. Side the PLATEN ROLLER to the right and remove it.
5. For re-assembly, reverse the procedure.

Note : Be careful of the direction of bearings.

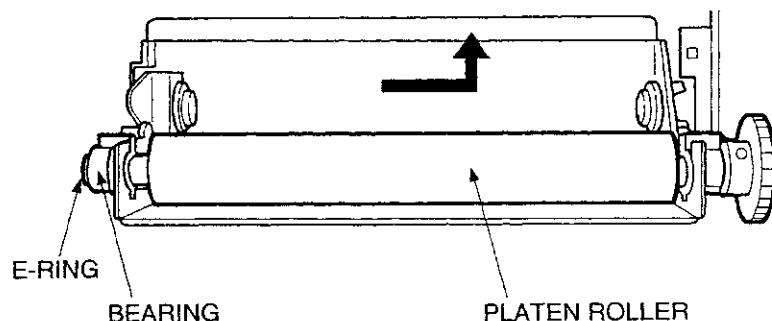

Fig. 2-2

**Replacement of
PAPER HOLDER**

1. Remove the PRINTER UNIT. (Fig.1-11)
2. Remove the E-RINGS (both sides) of the PAPER SHAFT. (Fig.2-3)
3. Pull the PAPER SHAFT out, to right side.
Note : Be careful not to lose the door spring which comes off during the above process. (Fig.2-3)
4. Remove the PAPER HOLDER to your side.
5. For re-assembly, reverse the procedure.

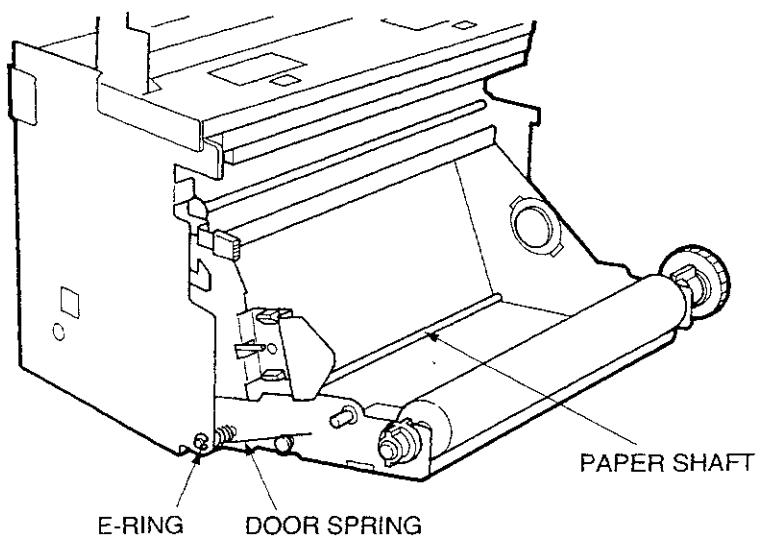

Fig. 2-3

**Replacement of
THERMAL HEAD**

1. Remove the CABINT. (Fig.1-1)
2. Remove the FRONT PANEL.
3. Remove the screws securing POWER SWITCH BRACKET. (Fig.1-8)
4. Remove the B-P SWITCH HOLDER and remove the POWER SWITCH BRACKET. (Fig.1-8)
5. Remove the screws securing the UPPER PLATE. (Fig.2-4)
Note : The HEAD SPRING is held by the UPPER PLATE. Be careful not to lose the HEAD SPRING.
6. Disconnect all the connectors connected to the THERMAL HEAD.
7. Remove the 3 screws securing the HEAT SINK. (Fig.2-4)

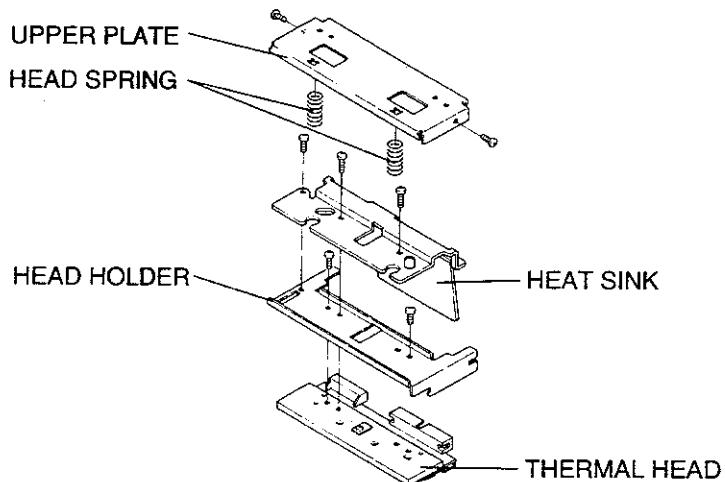

Fig. 2-4

8. Raise the front part of the HEAD HOLDER, slide it and remove it.
9. Remove screws securing the THERMAL HEAD.
Note : Be careful not to touch the HEAT GENERATING PART. (Fig.2-5)
10. For re-assembling, reverse the procedure.
Note : When fixing the THERMAL HEAD to the HEAD HOLDER with screws,use the GAUGE BAR and TIGHTEN screws after confirming that the holes are aligned. (Fig. 2-6)

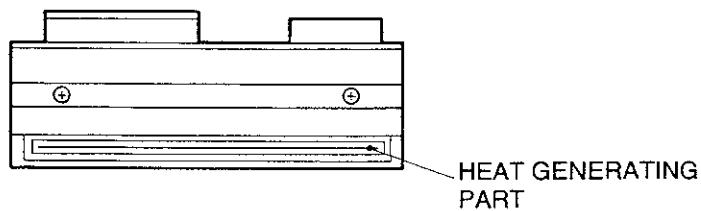

Fig.2-5

**Replacement of
THERMAL HEAD**

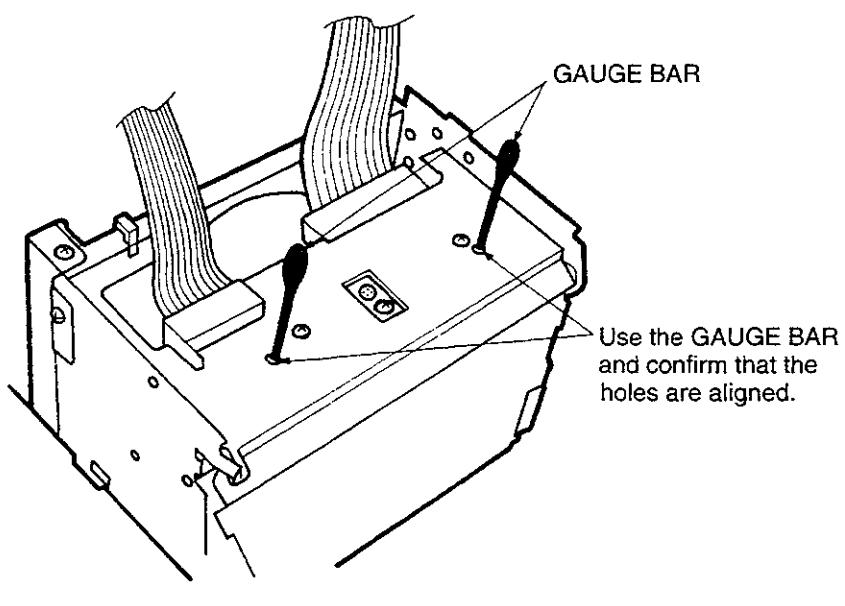

Fig.2-6

CLEANING METHOD

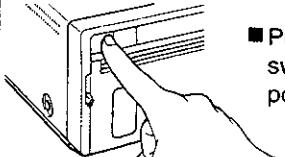

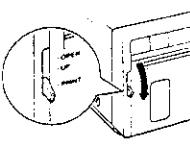

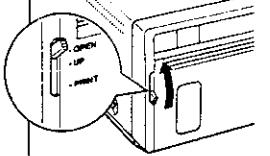

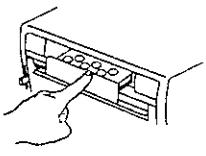

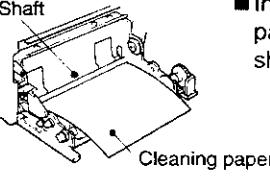

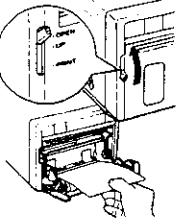

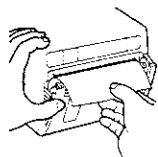

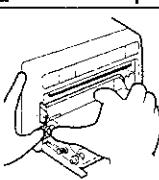

Cleaning of THERMAL HEAD

When the thermal head is dirty with dust or other dirt, rain-drop patterns or white vertical lines may appear in the printed picture.

In this case, use the cleaning sheet (parts No. 857P003O40) or a THERMAL HEAD CLEANER PEN TH-2000 (859C425050) (which can be purchased separately) in the following manner.

※ Do not use a russet CLEANING PAPER (parts No. 857P001O10).
It may damage the THERMAL HEAD.

● How to use the CLEANING PAPER

1 Turn on the power.	5 Set the lever to the "PRINT" position.
	 ■ The lever located on the left side to "PRINT" position.
2 Open the door.	6 Press the "FEED" button.
	 ■ Press the button Until the cleaning paper come out about 2 inch.
3 Insert the cleaning paper.	7 Take out the cleaning paper.
 Shaft Cleaning paper	 ■ Open the door. ■ Remove the cleaning paper. ■ Do not pull out the cleaning paper while the door is closed.
4 Close the door.	8 Repeat the steps 3 - 7 1 or 2 times, and print 2-3 sheets to verify the cleaning effect.
	9 Install the paper roll.
	 ■ Install the paper. See "4 installation of paper".

● How to use THERMAL HEAD CLEANER PEN

1. Draw out the pen from the body and pour a appropriate amount of cleaning solvent to the pen body.
 - When the pen core becomes dirty, replace it with the spare core.
Note : Move the cleaner pen parallel to the heat generating part (brown part). (Fig.3-1)
 - Since the cleaning solvent is inflammable, close the cap after use and be particularly careful against fire.
 - Keep it in a cool, dark place with no direct exposure to the sun.

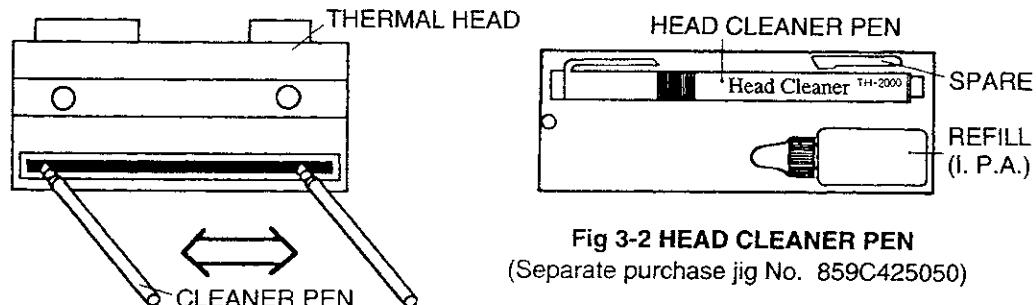

Fig 3-2 HEAD CLEANER PEN
(Separate purchase jig No. 859C425050)

Fig 3-1

Cleaning of PLATEN ROLLER

When the PLATEN ROLLER is very dirty print quality may be poor. In such cases, clean the platen roller by the following procedure.

1. Open the DOOR or the SET so that the PLATEN ROLLER can be cleaned.
2. Check the PLATEN ROOLER. if dirt or dust is adhered, clean the ROLLER using the blower brush shown in Fig.3-4.
3. When the PLATEN ROLLER is extremely dirty, use alcohol and clean it with a tooth brush while taking care not to damage the ROLLER.
4. When the cleaning is finished, check that normal printing is performed.

(PARTS No. 859D048010)

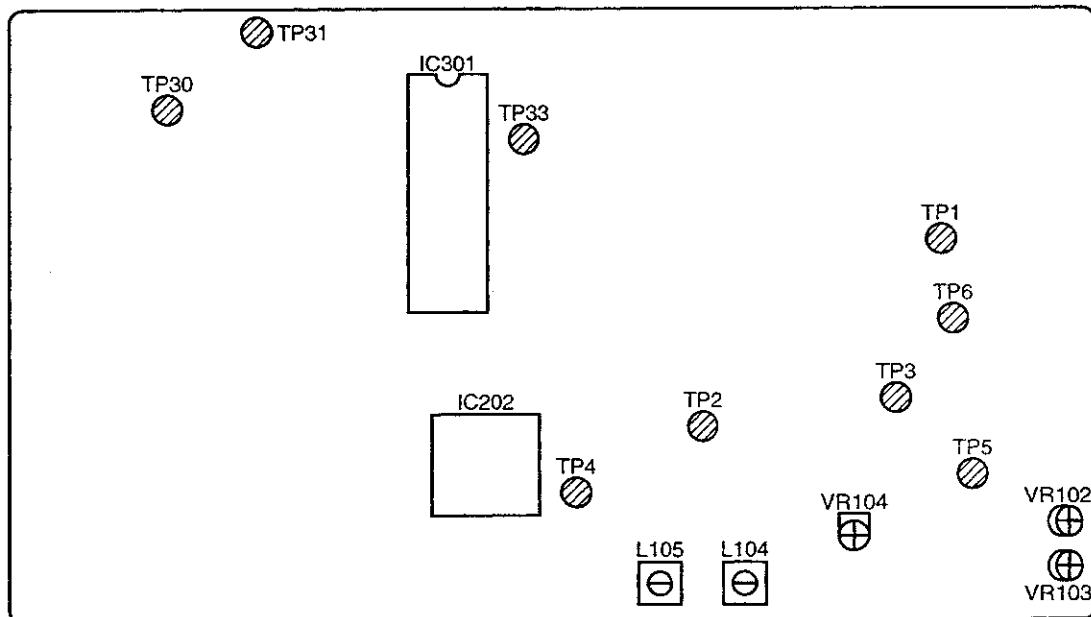

Fig.3-4

Printed Circuit Boards Location

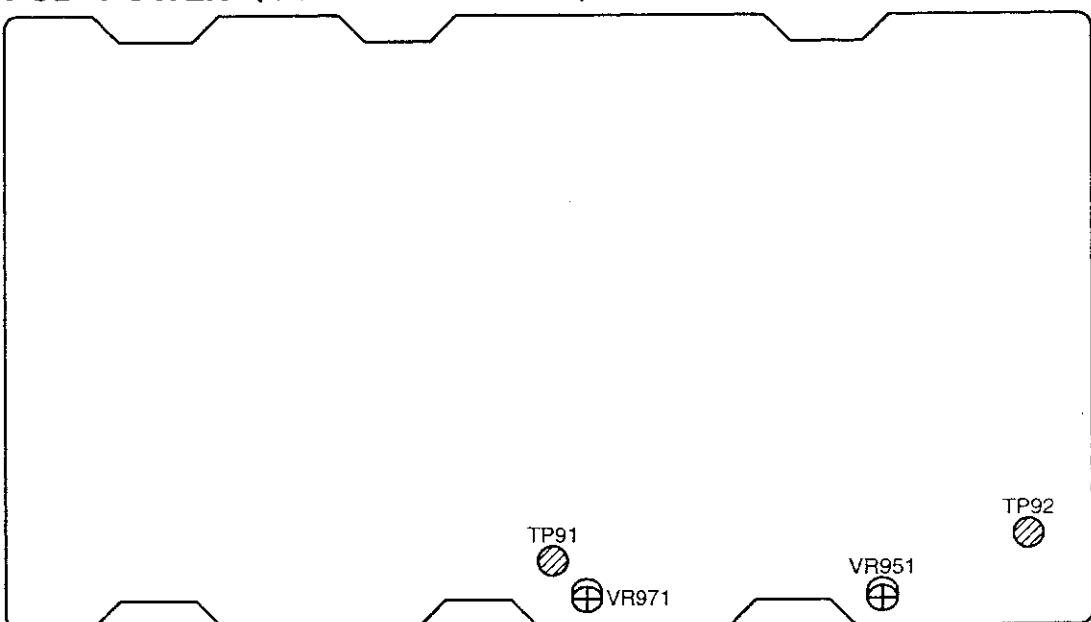

ADJUSTMENT POINTS

PCB-MAIN (COMPONENT SIDE)

PCB-POWER (COMPONENT SIDE)

SERVICE MODE

Select the service mode with the buttons in the control box to perform the following adjustment and checks.

- Check the head position detecting level
(Refer to Page19)
- Check the paper detecting level
(Refer to Page19)
- Adjustment of item 9
(SUB-BRIGHT and SUB-CONTRAST)

1. How to Select the Service Mode

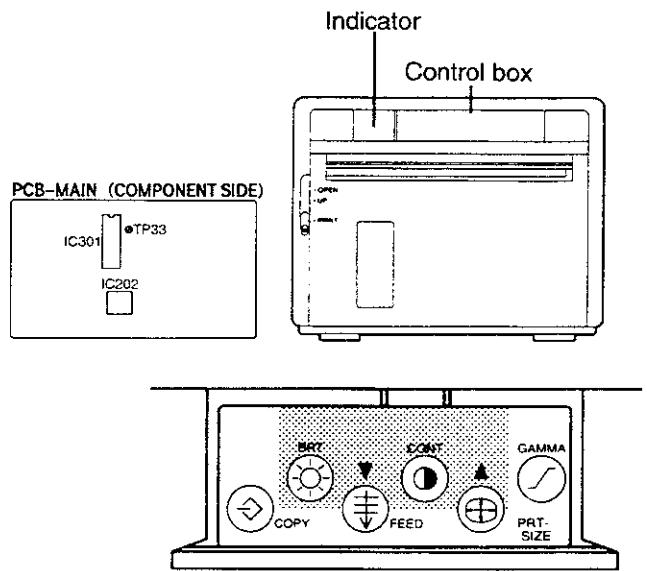

- ① Turn the power off.
- ② Connect TP33 on the PCB-MAIN to GND.
- ③ Turn the power on while pressing the COPY button.

When the indicator LED changes from "55" to

"00", stop pressing the button.

(The service mode is selected.)

Note: After ③ is completed, the unit is set to the stand-by mode, with the indicator LED "00".

2. How to Select a Specific Set Up Mode

- ① Select the set up mode with the CONT button, observing the indicator LED.

Note: The set up mode varies in the order shown by the arrow in the figure.

MODE	LED indication
Stand-By	00
Head Position Detecting Level	H5
Paper Detecting Level	P5
Sub-BRIGHT	b5
SUB-CONTRAST	c5
Density	d0
Saturation Monitor	s0
Aperture Control	p0
Dither	d1
Buzzer	b1
Total amount of printed pictures	n0

3. How to Set the Adjustment Value

- ① After the set up mode is selected, set the adjustment value with the UP or DOWN button.

Note: The adjustment value appears on the right side of the indicator LED.

Remarks in Setting the Adjustment Value

- The values for the head position and paper detecting level in the set up mode are fixed.
- Although variation of the values for SUB-BRIGHT and SUB-CONTRAST can be observed by the amplitude of the waveform on the oscilloscope, the indicator LEDs are fixed. (Refer to item 9 in the Adjustment Procedure.)

The table below describes each set up mode position.

MODE	LED indicata		Right indication of the LED	Note
	Left	Right		
Stand-By	0 0 0 1		Print size can be set by varying the adjustment value. It is not necessary to set this in the service mode.	The initial value is restored by pressing the CONT button if the adjustment value is varied in the service mode.
Head Position Detecting Level	H S		The EED does not vary as much as in the normal mode. (Refer to p.19)	Fixed
Paper Detecting Level	P S		The LED does not vary as much as in the normal mode. (Refer to p.19)	Ditto
SUB-BRIGHT	b S		Index of brightness. The LED does not vary even if the adjustment value varies.	Setting can be performed by observing the waveform. (Refer to the Paragraph 8 under Circuit Adjustmens.)
SUB-CONTRAST	c c		Index of contrast. The LED does not vary even if the adjustment value varies.	Ditto
Density	d .9~9		Index of density, from .9 (-9) to 9 (9).	Initial setting at shipment is restored by initializing the EPROM.
Saturation Monitor	S 0 1		Used to reverse the signal polarity (white-black) of the image area that expands over the limits during BRIGHT and CONTRAST adjustment. When 1 (in), the image is reversed and when 0 (out), not reversed.	Ditto
Aperture Control	E 5 n H		Index of aperture control. H indicates maximum aperture correction H (Hard), n (Normal), and S (Soft).	Ditto
Dither	G 0 1		Used to select the gradation. 1 (in) indicates 256 gradations and 0 (out) 64 gradations.	Ditto
Buzzer	B 0 L H		Used to select the buzzer.	Ditto
Total amount of printed Pictures	n 0 1		Used to print (or not print) the total amount of the printed picture on the paper. When 1 (in), it is printed and when 0 (out) it is not printed.	Ditto Only when checking the number of the printed picture, the value of 1 (in) should be set.

4. How to Memorize the Adjustment Value and to Quit the Service Mode

① Either press the BRT button or press PRINT button, print.

(To memorize the adjustment value and to quit the service mode.)

Note: If power is switched off, the service mode is terminated, but adjustment data is not memorized.

ADJUSTMENT MODE

Select the adjustment mode with the buttons in the control box to perform the circuit adjustments in item 7 (clock frequency).

Note: Do not select any adjustment mode except for the above adjustments.

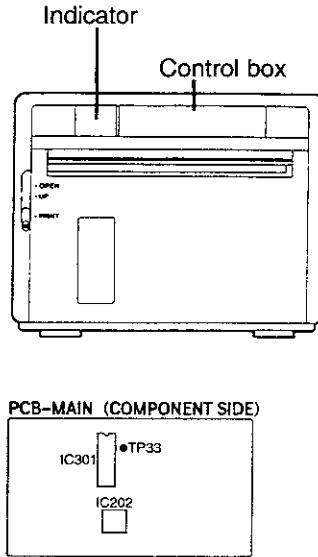

1. How to Select the Adjustment Mode

- ① Turn the power off.
- ② Connect TP33 on the PCB-MAIN to GND.
- ③ Turn the power on while pressing the GAMMA button.

When the indicator LED is turned from "  " to "  ", stop pressing the button.

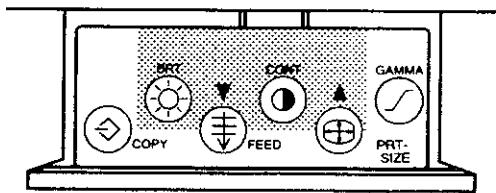

(Adjustment mode is selected.)

Note: After ③ is completed, the unit is set to the stand-by mode, with the indicator LED "  ".

2. How to Select the Adjustment Item

- Adjustment in item 7 (clock frequency)
- ① Press the UP button.
- ② Check that the LED indicates "  " after approximately two seconds.

3. How to Quit the Adjustment Mode

- ① Turn the power off.

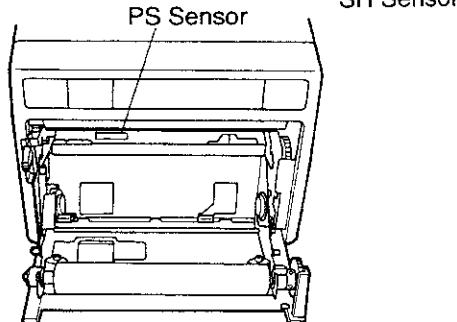

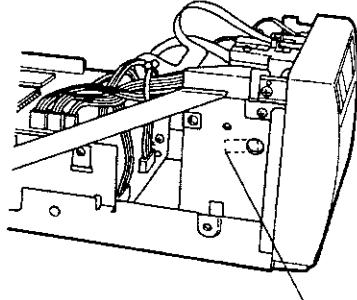

Note: If you make an error during the adjustment mode, turn the power off and select the adjustment mode again.

Check of Detection Level for Head Position and Paper

This procedure checks the performance of SH sensor and PS sensor.
Select the service mode to make the check. (Page 16)

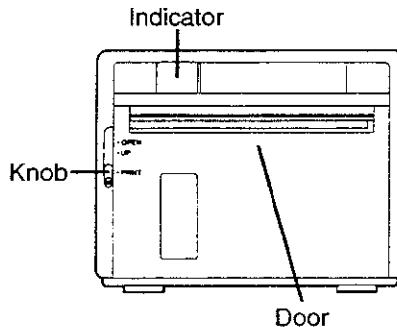

1. Check of Detection Level for Head Position (SH sensor)

- ① Select the service mode.
- ② Press the CONT button to set the indicator LED to "*H5*".
- ③ Lower the front lever to PRINT position.
- ④ Check that the indicator LED turns from "*H5*" to "*H0*" when press the COPY button.
- ⑤ Check that the indicator LED turns into "*Er*" when the front lever is in the UP position.
Note: If the LED indicates "*Er*" with procedures ④ and ⑤, check the SH sensor or PCB-MAIN.
- ⑥ Terminate the service mode. (Page 17)

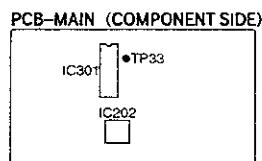

2. Check of Detection Level for Paper (PS sensor)

- ① Select the service mode.
- ② Open the door and take the paper out.
- ③ Insert cleaning paper and close the door.
Note: The cleaning paper should be placed with the less sensitive side up. It should have no mechanical damage or dirt.
The less sensitive side is specified by observing the voltage at TP31. The lowest voltage indicates less sensitive side.

- ④ Press the CONT button to change the indicator LED into "*PS*".
- ⑤ Press the COPY button and check that the indicator LED changes from "*PS*" to "*P0*".
- ⑥ Check that the LED dose not indicate "*Er*" then open the door and remove the paper.
Note: If the LED indicate "*Er*" with the procedures ⑤ and ⑥, check the PS sensor or PCB-MAIN.
- ⑦ Terminate the service mode. (Page 17)

INITIALIZATION OF THE E²PROM

When the PCB-MAIN, EPROM (IC303) or E²PROM (IC309) is replaced, initialize the E²PROM with the following procedure.

- ① Turn the power off.
- ② Turn the power on while pressing the GAMMA and COPY buttons at the same time.
- ③ Check that the indicator LED turns from " // " to " 00 ".

Note: Keep pressing the buttons until the indicator LED turns from " // " to " 00 ".

After E²PROM is initialized, the following adjustment values in the setting mode are restored to the initial values at shipment.

Therefore they need not be set.

- Density (LED indicate: " 00 ")
- Saturation Monitor (LED indicate: " 50 ")
- Aperture Control (LED indicate: " Pn ")
- Dither (Gradation) (LED indicate: " Gf ")
- Buzzer (LED indicate: " BH ")
- Total amount of the printed pictures (LED indicate: " n0 ")

INTIAL SETTING

Before making adjustments , preset the mode switch.

1) Mode switch and other

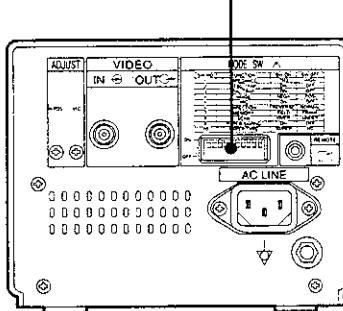

Mode switch presets

Setting point		Setting
S101 mode switch	# 10	PAPER TYPE
	# 9	PAPER SAV.
	# 8	SCAN
	# 7	MEMORY
	# 6	DIRECTION
	# 5	AFC
	# 4	IMAGE
	# 3	PAL TRAP
	# 2	NTSC TRAP
	# 1	IMPEDANCE

Other preset

Setting point		Setting
Power	OFF/ON	ON

VIDEO OUT	Output Terminal	Monitor
AC IN	Power Input	220~240V 50HZ

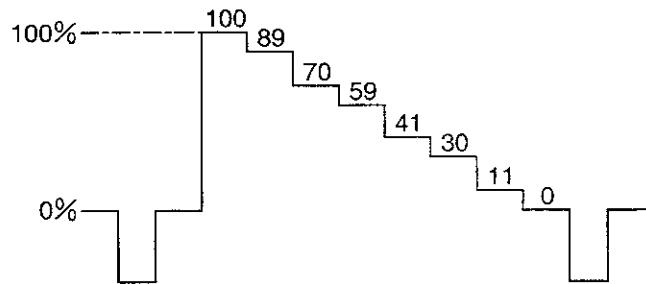

mode switch

2) Input signal

Video Signal Grey scale (1.0Vp-p)

$100\% = 0.714 \pm 0.01\text{Vp-p}$ (at 75Ω load end)

3) Oscilloscope

Unless otherwise specified, use 10:1 probes

1.Rough adjustment of power Voltage		Adjustment purpose To set the power voltage. Symptom when incorrectly adjusted No LED indication or the picture is not printed.
Measuring instrument	Digital voltmeter	1.Connect the positive (+) of the voltmeter to TP91 and the negative (-) to TP71. Then turn VR971 Counter - clockwise so that it is at 90° 2. Turn the power on. 3. Adjust VR971 for $25V \pm 0.5V$.
Test point	TP91	
EXT trigger	---	
Measurement range	---	
Input signal	---	
Input Terminal	---	

PCB-POWER (COMPONENT SIDE)

TP91
VR971

2.Main Voltage/Head voltage		Adjustment purpose To correct uneven density of the printed picture caused by unevenness of head resistance. Symptom when incorrectly adjusted Too dense or too thin printed pictures, particularly in black areas resulting in dull or burnt black picture.
Measuring instrument	Digital voltmeter	1. Calculate E1 and E2 using the equation given below, and the resistance R indicated on the THERMAL HEAD. E2[V] : Refer to Conversion Table.(Refer to page 23,24) $E1=E2+2.5 [V]$
Test point	TP91, TP92	2. Connect TP30 to the chassis sheet metal by a short-circuit lead. 3. Connect the positive (+) of voltmeter to TP91 and the negative (-) to the chassis sheet metal. Adjust VR971 so that the reading is $E1 \pm 0.05V$. 4. Connect the positive (+) of the voltmeter to TP92 and the negative (-) to the chassis sheet metal. 5. Adjust VR951 so that the reading is $E2 \pm 0.05V$. 6. Remove the voltmeter and the short-circuit lead.

3.Vertical Sync Separation		Adjustment purpose To set the timing of the vertical sync signal versus the input signal.
Symptom when incorrectly adjusted		The odd and the even fields of the printed image are reversed.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Connect CH1 of the oscilloscope to TP1 and CH2 to TP3. 3. Trigger in the falling edge of CH2. 4. Magnify the falling edge of CH2. 5. Adjust VR101 so that t_v , in following figure, is $18 \pm 1 \mu\text{sec}$.
Test point	CH1 : TP1 CH2 : TP3	
EXT trigger	---	
Measurement range	DIV : CH1 CH2 TIM : $10 \mu\text{sec}$ (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

Magnified

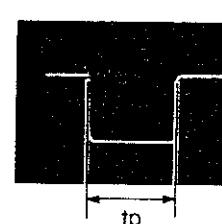

4.Horizontal Sync Pulse Width		Adjustment purpose To set the pulse width of the horizontal sync signal.
Symptom when incorrectly adjusted		Horizontal position of the printed picture shifts to left or right when using a composite signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Check that #5: AFC switch of S101 (MODE) is in the "OFF" position. 3. Connect CH1 of the oscilloscope to TP5. 4. Trigger in the rising edge of CH1. Magnify the pulse width (tp) of CH1 using delay sweep. 5. Adjust VR104 so that the pulse width of the waveform is $tp=4.5 \pm 0.1 \mu\text{sec}$.
Test point	CH1:TP5	
EXT trigger	---	
Measurement range	DIV:0.1V TIM: $1 \mu\text{sec}$ (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

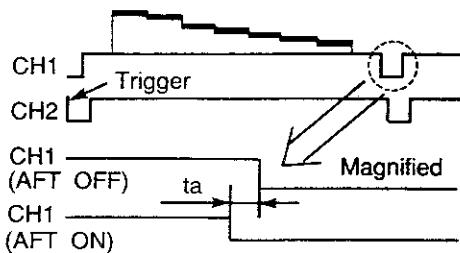

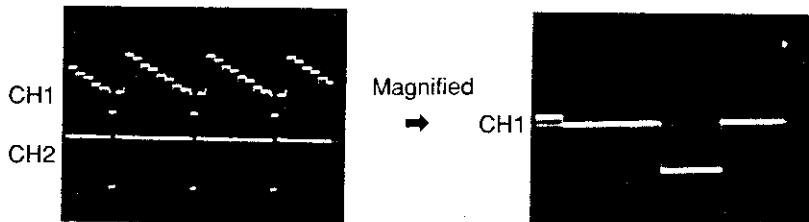

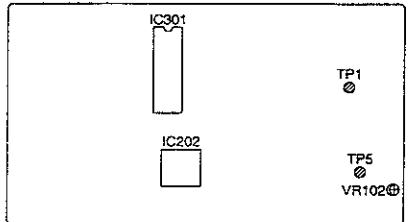

5. Horizontal AFC		Adjustment purpose To correct stabilize the horizontal AFC circuit when inputting video signal.
	Symptom when incorrectly adjusted	Erratic horizontal sync. when inputting video signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (gray scale). 2. Check that #4: AFC switch of S101 (MODE) is on the "OFF" position. 3. Connect CH1 of the oscilloscope to TP1 and CH2 to TP5. 4. Trigger in the falling edge of CH2. 5. Magnify the falling edge of CH1 by using delay trigger and set it to the centre in the screen of the oscilloscope. 6. Set the AFC to "ON". Adjust VR102 so that the phase difference between the centre of the screen and the falling edge of CH1 is $ta = 0 \pm 0.1 \mu\text{sec}$. Then turn #5: AFT switch of the S101 (MODE) off.
Test point	CH1:TP1 CH2:TP5	
EXT trigger	---	
Measurement range	DIV:CH1 50mV CH2 0.2V TIM:2 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

PCB-MAIN (COMPONENT SIDE)

6.Horizontal position		Adjustment purpose To set the horizontal position for composite signal. Symptom when incorrectly adjusted Horizontal position of printed picture shifts to left or right when inputting incorrectly adjusted composite signal.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Check that #5: AFC switch of S101 (MODE) is in the "OFF" position. 3. Connect CH1 of the oscilloscope to TP1 and CH2 to TP4. 4. Trigger in the falling edge of CH2 and magnify that portion using delay sweep. 5. Adjust VR103 so that the phase difference between the falling edge of CH1 and the rising edge of CH2 is $th=5.0\pm0.1\ \mu\text{sec}$.
Test point	CH1:TP1 CH2:TP4	
EXT trigger	--	
Measurement range	DIV:CH1 50mV CH2 0.2V TIM:1 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal	

PCB-MAIN (COMPONENT SIDE)

CH1 CH2 Magnified

CH1 CH2 Magnified

7.Clock frequency		Adjustment purpose To set the oscillating frequency of the sampling clock oscillator.
		Symptom when incorrectly adjusted Too wide or too narrow horizontal image printed.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Press the GAMMA button to set the LED to "00" (stand-by mode). 3. Press the UP button to set the LED to "FP". 4. Connect CH1 of the oscilloscope to TP1 and CH2 to TP6. 5. Adjust L105 so that tH in the following figure is $0.55 \pm 0.1 \mu\text{sec}$.
Test point	CH1:TP1 CH2:TP6	
EXT trigger	---	
Measurement range	DIV:CH1 50mV CH2 0.1V TIM:1 μsec (DELAY mode)	
Input signal	Video signal (Grey scale)	
Input Terminal	VIDEO IN terminal

tH

PCB layout showing component side with IC301, IC202, L105, and test points TP1 and TP6. The PCB diagram shows the physical locations of these components and points relative to the oscilloscope traces. The top section shows the main board with IC301, IC202, and L105. Below it, two oscilloscope traces are shown: CH1 and CH2. A magnified view of the transition between CH1 and CH2 is provided, with a dimension tH indicating the time interval between the leading edges of the two signals. Arrows point from the PCB layout to the corresponding points on the oscilloscope traces and the magnified view.

8.SUB-BRIGHT SUB-CONTRAST		Adjustment purpose To set the brightness and white level saturation of the input signal. Symptom when incorrectly adjusted Poor brightness, or poor contrast, level of the printed or memorized picture.
Measuring instrument	Oscilloscope	1. Supply a video signal (grey scale). 2. Select the service mode. 3. Press the CONT button three times to set the LED to "b5". 4. Connect CH1 of the oscilloscope to TP6 and CH2 to TP4. 5. Trigger in the rising of CH2. 6. Observe the waveform to TP6. 7. Press the UP and DOWN buttons so that Vb in the figure below is 0.05 ± 0.01 Vp-p. 8. Press the CONT button once to set the LED to "cc". 9. Press the UP and DOWN buttons so that Vc, in the figure below is 0.05 ± 0.01 Vp-p.
Test point	CH1:TP6 CH2:TP4	
EXT trigger	---	
Measurement range	DIV:10mV TIM:10 μ sec	
Input signal	Video Signal (Grey scale)

CHIP PARTS REPLACEMENT

CHIP PARTS REPLACEMENT

Some resistors, shorting jumpers (0Ω resistor), ceramic capacitors, transistors and diodes are chip parts which are used for certain circuit elements. When replacing these parts, note the following cautions.

Cautions:

- A. Use fine tipped, well insulated soldering pencil (iron) about 30 watts and tweezers.
- B. Melting the solder, remove the Chip Parts carefully not to tear off the copper foil of the printed circuit board.
- C. Discard removed chips; do not reuse them.
- D. Do not apply heat for more than 3 seconds to the new Parts.
- E. Avoid using a rubbing stroke when soldering.
- F. Take care not to scratch when soldering, or damage the Chip Parts.
- G. Supplementary cementing is not required.

1 Removal of chip Parts

(Resistors, capacitors, etc.)

- A. Grasp the part with tweezers. Melting the solder at both side alternately, remove the one side of the part with a twisting motion.
- B. Melt the solder at the other side and remove the part.

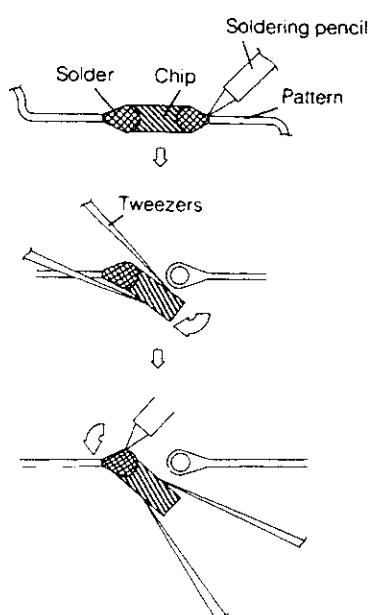

Fig. 1

2 Removal of Chip Parts (Transistors)

- A. Melting the solder of one lead, Lift the side of that lead upward.
- B. Simultaneously melt the solder of the two remaining leads and lift the part to remove.

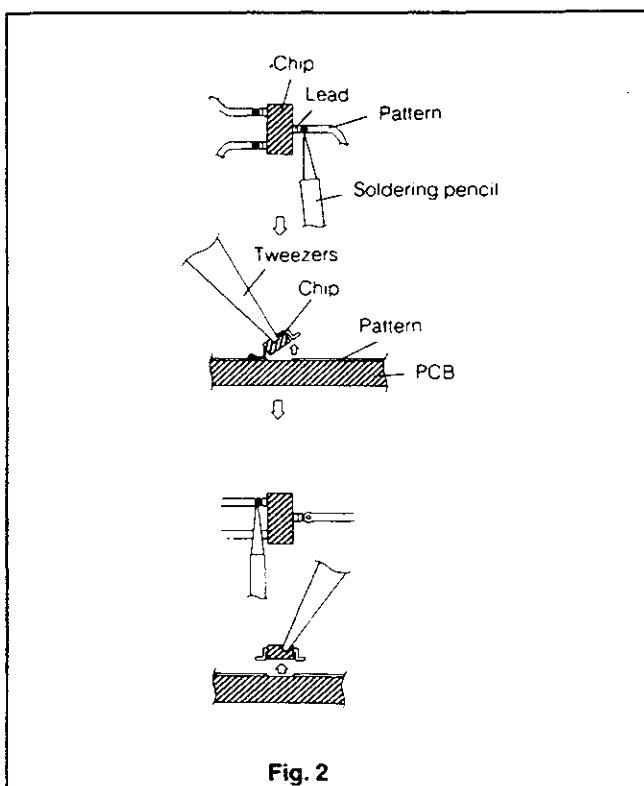

Fig. 2

3 Replacement

- A. Presolder the contact points of the circuit pattern.
- B. Press the part downward with tweezers and apply the soldering pencil as shown in the figure.

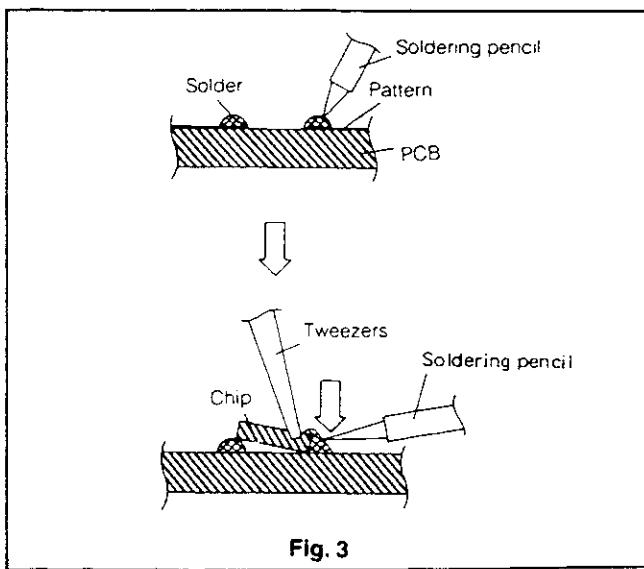

Fig. 3

PARTS LIST

MODEL : P67E

In order to expedite delivery of replacement part orders.

- Specify : 1. Model number/Serial number
- 2. Part number and Description
- 3. Quantity

Unless full information is supplied, delay in execution of orders will result.

▲ : Critical components
