VS-6043
CAUTION

Before servicing this chassis, it is important that the service person reads the "SAFETY PRECAUTIONS" and "PRODUCT SAFETY NOTICE" in this service manual.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the VSS have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, etc. Replacement parts which have these special safety characteristics are identified in this service manual. Electrical components having such features are identified by shading on the schematic diagram and the parts list of this service manual and by the supplementary sheet for this chassis to be issued subsequently.

SAFETY PRECAUTIONS

NOTICE: Observe all cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.

WARNING

1. Operation of this receiver outside the cabinet or with the cover removed presents a shock hazard from the receiver power supplies. Work on the receiver should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high-voltage equipment.
2. Do not install, remove or handle the picture tube in any manner unless shatter-proof goggles are worn. People not so equipped should be kept away while the picture tube is being handled. Keep the picture tube away from the body while handling.

X-RADIATION WARNING

The surface of the picture tube may generate X-Radiation. Take precautions when servicing and, if possible, the use of a lead apron is recommended for shielding while handling.

When replacing the picture tube, use only the designated replacement part since it is a critical component with regard to X-Radiation as noted above. No high-voltage adjustments are provided. The high-voltage specification is described on the cover page.

LEAKAGE CURRENT CHECK

Before returning the receiver to the customer, it is recommended that leakage current be measured according to the following methods.

1. Cold Check

With the AC plug removed from the AC source, place a jumper across the two AC plug prongs. Turn the receiver AC switch on. Using an ohm-meter, connect one lead to the AC plug and touch the other lead to each exposed metal part (antennas, handle bracket, metal cabinet, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistance reading of 1 megohm. Any resistance below this value indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

2. Hot Check

Use the circuit in Fig. 1 to perform this test.

- (1) With switch S1 open, connect the receiver to the measuring circuit. Immediately after connection, measure the leakage current using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions.
- (2) Switch S1 is then closed, energizing the receiver. Immediately after closing the switch, measure the leakage current using both positions of switch S2, and with the switching devices in the receiver in all of their operating positions. Current measurements of items (1) and (2) are to be repeated after the receiver has reached thermal stabilization. The leakage current must not be more than 0.5 milliampere.

Table 2-2

LEAD DRESS

Note: The inner wires are clamped so that they do not come close to heat generating or high voltage parts. After servicing route all wires in their original position.

1. The Anode Lead Wires are routed so that no tensile strength is applied to the cap. If the route of the Anode Lead Wires are changed, return them to the initial route.
2. Clamp the Lead Wires along the Clamping Zone* shown in the figure below.
3. Take care so that the Lead Wires are not slack.

* Clamping Zone shows the route of the Lead Wire bundle, the high voltage Lead Wire and the Lead Wire on the primary side.

Fig. 4

SERVICING OF THE LENTICULAR SCREEN AND FRESNEL LENS

Removal of the Lenticular Screen and Fresnel Lens

[VS-4543, VS-4544]

Note: When separating the Lenticular Screen from the Fresnel Lens, pry the screens apart using a slot type screw driver, and remove the pressure sensitive Adhesive Double Coated Tape.

1. Remove the Screen Assy. [Fig. 2-1]
2. Remove 14 screws (a) retaining the Screen Holder. [Fig. 5-1]
3. Remove 4 screws (b) retaining the PCB-CONTROL Cover.
4. Remove 10 screws (c) retaining the Frame Cover.

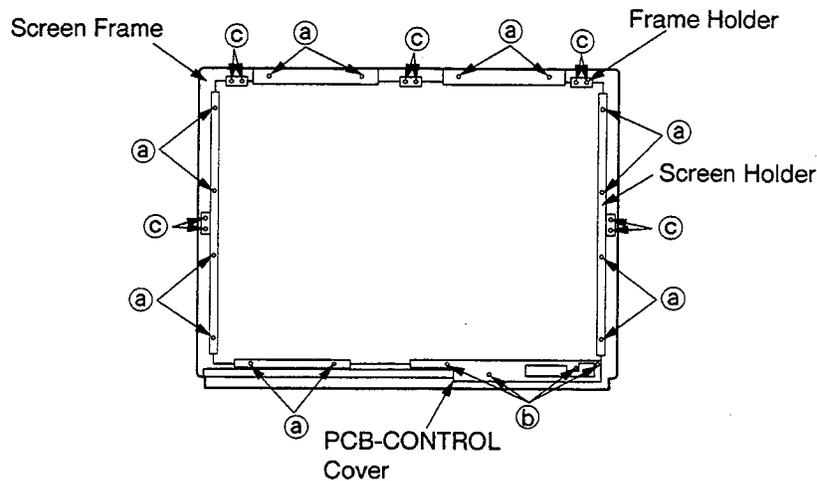

Fig. 5-1

Installation of the Lenticular Screen and Fresnel Lens

[VS-4543, VS-4544]

Note: 1) Wear gloves when handling the Lenticular Screen and the Fresnel Lens. This prevents cuts and finger prints.
2) Do not place the Fresnel Lens in the sun. This can cause fire and heat related injuries.
3) Store in a dry place. High humidity causes deformation of the Lenticular Screen and Fresnel Lens.

1. Apply Double Coated Tape(# 096Z465Y10) along the top front edge of the Fresnel Lens. [Fig. 5-2]
2. Set the Fresnel Lens on the top of the Lenticular Screen and apply pressure to the top edge, to join the screens together.

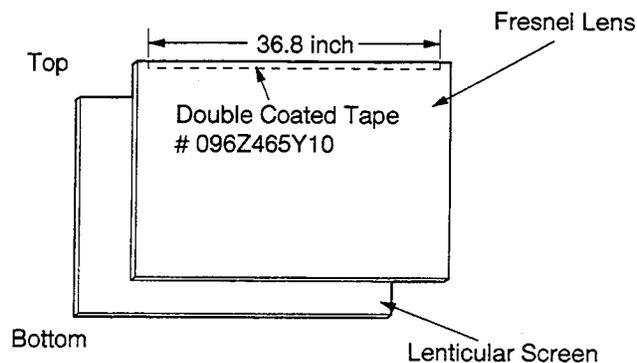

Fig. 5-2

Removal of the Lenticular Screen and Fresnel Lens

[VS-5043, VS-5044]

Note: When separating the Lenticular Screen from the Fresnel Lens, pry the screens apart using a slot type screw driver, and remove the pressure sensitive Adhesive Double Coated Tape.

1. Remove the Screen Assy. [Fig. 2-2]
2. Remove 23 screws (d) retaining the Screen Holder. [Fig. 5-3]
3. Remove 10 screws (e) retaining the Frame Holder.

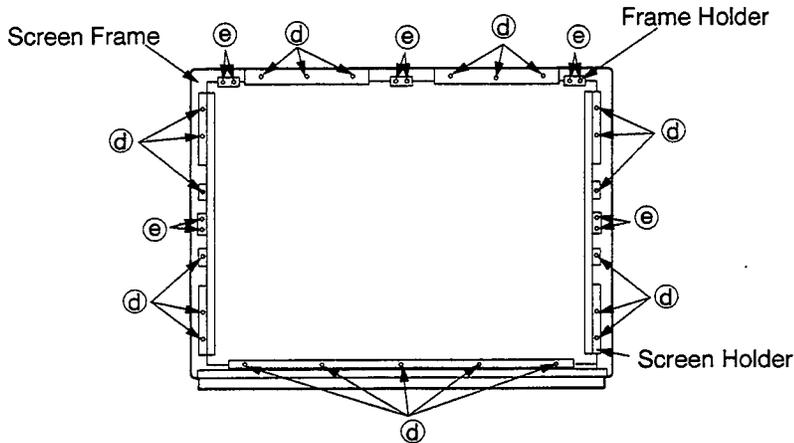

Fig. 5-3

Installation of the Lenticular Screen and Fresnel Lens

[VS-5043, VS-5044]

Note: 1) Wear gloves when handling the Lenticular Screen and the Fresnel Lens. This prevents cuts and finger prints.
2) Do not place the Fresnel Lens in the sun. This can cause fire and heat related injuries.
3) Store in a dry place. High humidity causes deformation of the Lenticular Screen and Fresnel Lens.

1. Apply Double Coated Tape(# 096Z465F10) along the top front edge of the Fresnel Lens. [Fig. 5-2]
2. Set the Fresnel Lens on the top of the Lenticular Screen and apply pressure to the top edge, to join the screens together.

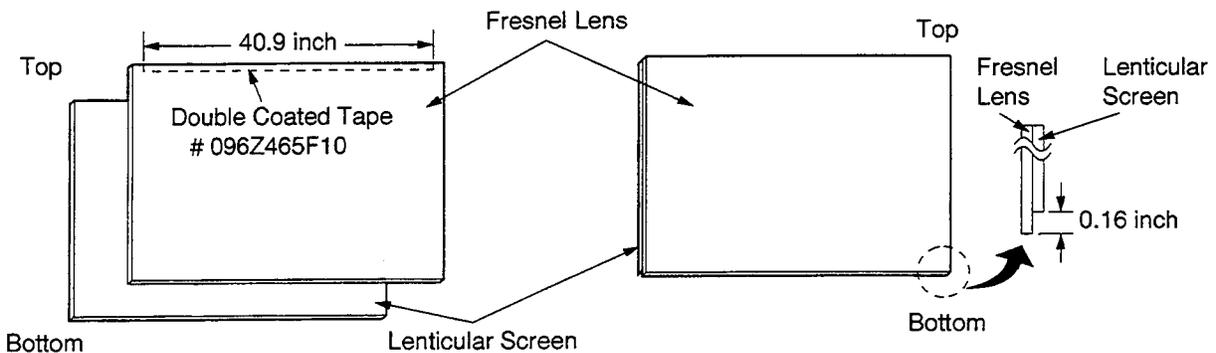

Fig. 5-4

Removal of the Lenticular Screen and Fresnel Lens

[VS-6043]

Note: When separating the Lenticular Screen from the Fresnel Lens, pry the screens apart using a slot type screw driver, and remove the pressure sensitive Adhesive Double Coated Tape.

1. Remove the Screen Assy. [Fig. 2-2]
2. Remove 5 screws (f) retaining the Screen Holder. [Fig. 5-5]
3. Remove 20 screws (g) retaining the Screen Frame.

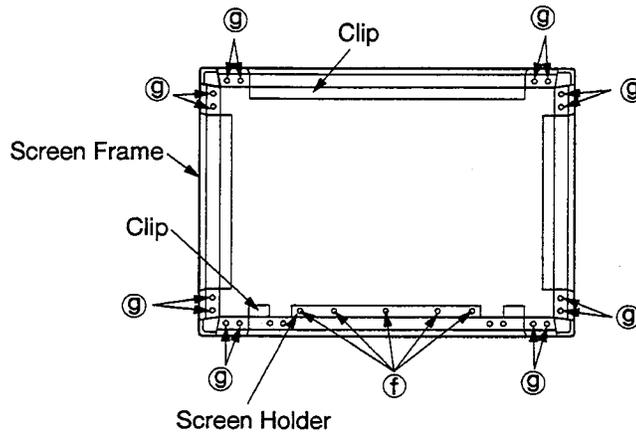

Fig. 5-5

Installation of the Lenticular Screen and Fresnel Lens

[VS-6043]

Note: 1) Wear gloves when handling the Lenticular Screen and the Fresnel Lens. This prevents cuts and finger prints.
2) Do not place the Fresnel Lens in the sun. This can cause fire and heat related injuries.
3) Store in a dry place. High humidity causes deformation of the Lenticular Screen and Fresnel Lens.

1. Apply Double Coated Tape(# 096Z465W10) along the top front edge of the Fresnel Lens. [Fig. 5-6]
2. Set the Fresnel Lens on the top of the Lenticular Screen and apply pressure to the top edge, to join the screens together.
3. Install Cushion(# 622D423O40) on the back of the Fresnel Lens of the Fresnel Lens at the Bottom.
4. Install Cushion(# 622D423O30) on the back of the Fresnel Lens of the Fresnel Lens at the Sides.
5. Apply Double Coated Tape(# 096Z465W10) along the top front edge of the Fresnel Lens.
6. Apply Double Coated Tape(# 096Z465W10) along the top front edge of the Lenticular Screen.

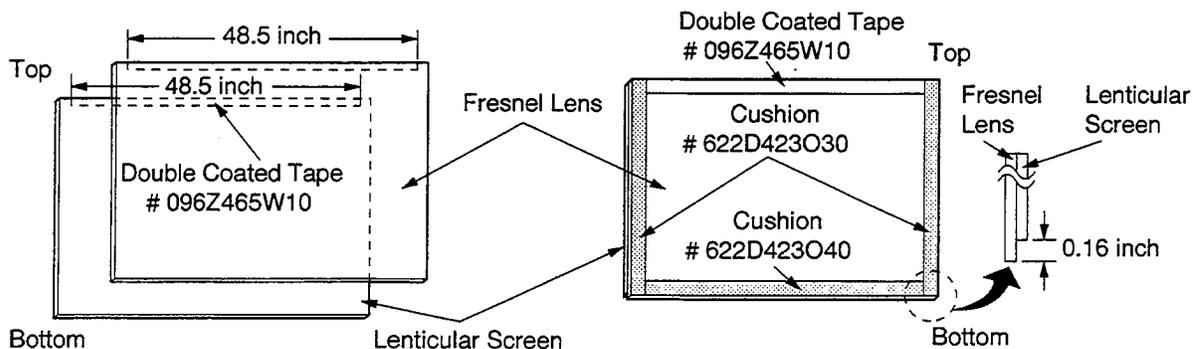

Fig. 5-6

CRT REPLACEMENT

Removal of the CRT

Caution! High voltage should be completely discharged prior to Anode Cap removal. Since all three CRTs receive high voltage from the Flyback Transformer, discharge simultaneously by shorting the open end of the high voltage cable to chassis ground.

[ALL]

1. Remove the Speaker Grille. [Fig. 2-1, 2-2]
2. Remove the Front Cover.
3. Remove the Screen Assy.
4. Remove the Back Board.

[VS-4543, VS-4544]

5. Remove the Rear Board. [Fig. 2-1]

[VS-5043, VS-5044]

6. Remove the Rear Board-1. [Fig. 2-2]
7. Remove the Rear Board-2.

[VS-6043]

8. Remove the Rear Board-3. [Fig. 2-2]
9. Remove the Inner Cabinet.

[ALL]

10. Remove the Anode Lead Wires from the Flyback Transformer.
11. Remove 3 PCB-CRTs.
12. Remove 4 hex-screws (a) retaining the Optical Unit. [Fig. 6-1]
13. Remove 4 screws (b) retaining the Lens. [Fig. 6-1]
- Note:** DO NOT Loosen RED screws.
14. Remove 4 screws (c) retaining the CRT. [Fig. 6-2]
15. Remove the Deflection Yoke from the neck of the CRT. [Fig. 6-7]

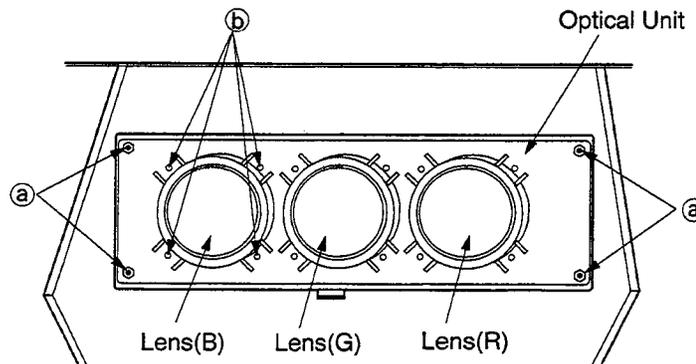

Fig. 6-1

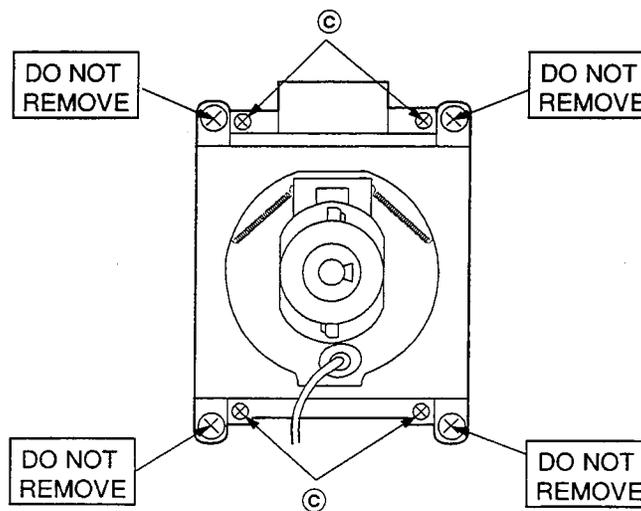

Fig. 6-2

Installation of the CRT

Note: The replacement CRT is supplied as an assembly, comprised of the CRT and the Inner Lens, with the space between them filled with ethylene glycol. Care should be taken during handling and installation to prevent shock from disrupting the seal or alignment between the CRT and Inner Lens. [Fig. 6-3]

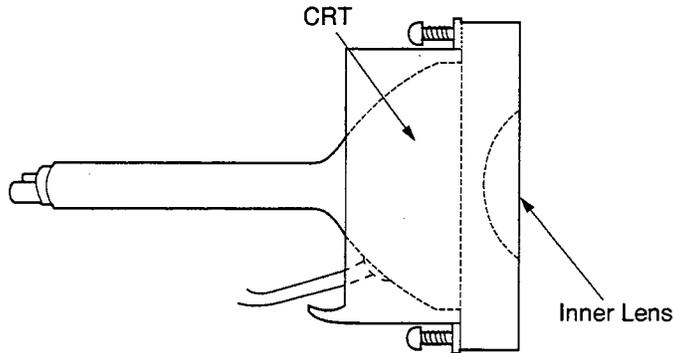

Fig. 6-3

Note: The CRT fixing screws should not be loosened nor should they be removed. [Fig. 6-4]

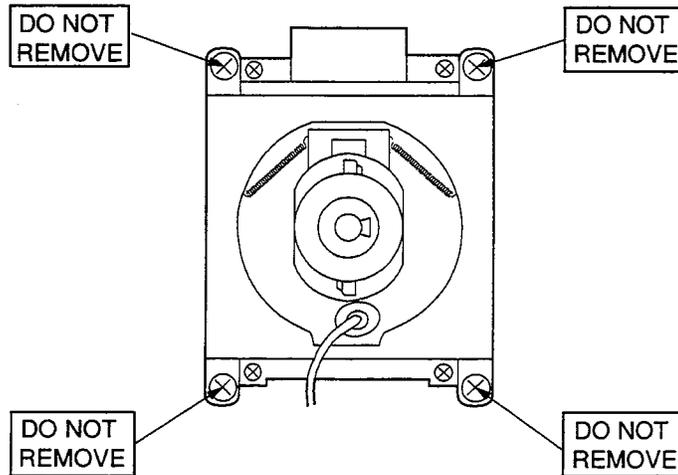

Fig. 6-4

1. Carefully position the replacement CRTs and fasten in place, using 4 screws (d) as shown in Figs. 6-5 and 6-6.

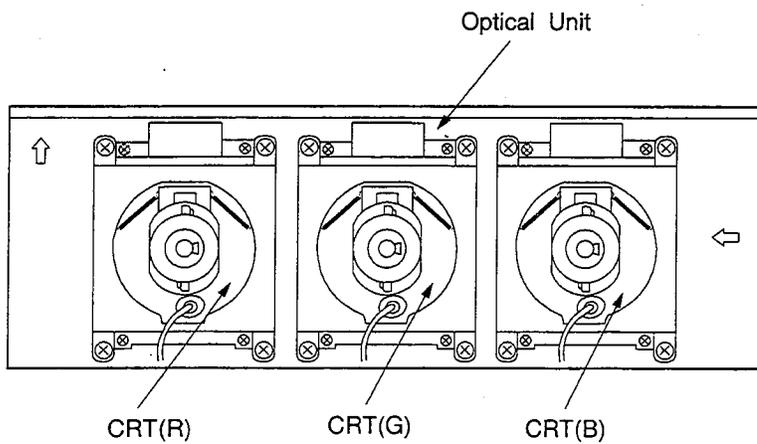

Fig.6-5

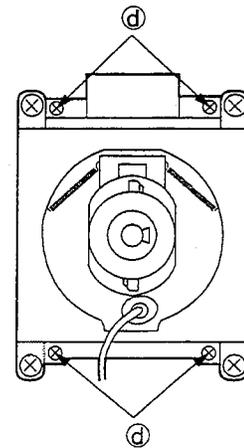

Fig.6-6

2. Install the Deflection Yoke on the CRT neck. [Fig. 6-7]
3. Install the Lens, removed in steps 13 and 14 of Removal of the CRT. [Figs. 6-1, 6-2]
 - 1) Position the Lens so that the Labels face the direction shown in Fig. 6-8.
 - 2) Install the mounting screws, refer to Fig. 6-1.
4. Install the PCB-CRTs.
5. Insert the Optical Unit in the Cabinet.
6. Insert the Anode Lead Wires into the Flyback Transformer.
7. Reclamp the Lead Wires in their original position.

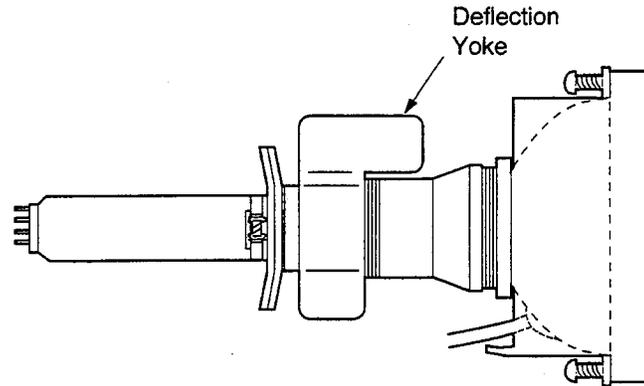

Fig. 6-7

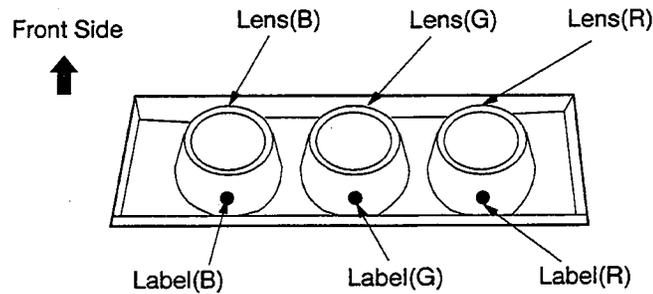

Fig. 6-8

Adjustment procedures after replacing the CRT

After replacing the CRT, perform the following adjustments.

- CRT Cut Off, White Adjustment
- Static Convergence Adjustment
- Dynamic Convergence Adjustment

ELECTRICAL ADJUSTMENTS

Perform only the adjustments required.

If proper equipment is not available, do not attempt an alignment.

Measuring equipment and Jigs

- Oscilloscope (Unless otherwise specified in particular, use 10:1 probes)
- Signal generator
- Frequency counter
- DC voltmeter
- Multiplex audio signal generator
- DC ampere meter
- Electrical tools
- Cable extension kits (Part No.859C431O60, 859C431O70 and 859C612O10)

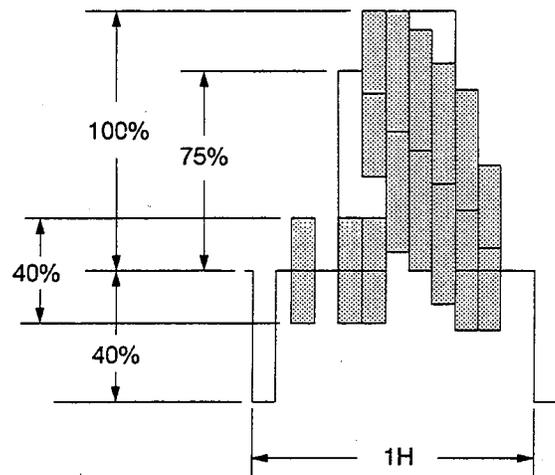

Test signal

1. Monoscope signal

When you have no monoscope signal source for adjustment, connect the unit to a VCR and play an alignment tape(Monoscope).

2. Color bar signal

In this manual, unless otherwise specified, use the color bar signal specified below.

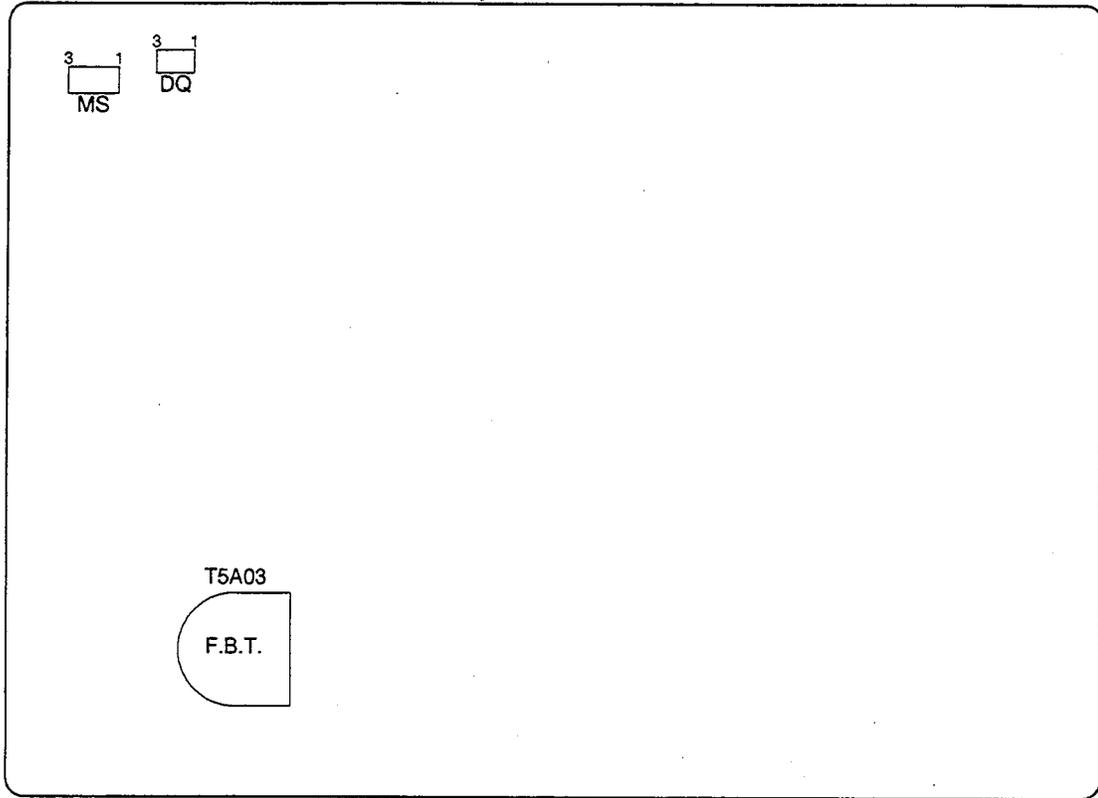

NTSC

Split-Field Color Bars (with 100% window)

Initial Set Up

Follow the steps below for the initial set up.

1. Set the receiver to "TV mode".
2. Press the "MENU" button on a remote hand unit one time to select the "MENU" display.
3. Press the buttons "2", "3", "5" and "8" in sequence to select the "OPTION MENU" display.
4. Press the "ADJUST" button to select "Initial".
5. Press "ENTER".

Note: At this time, channel 3 is automatically selected.

6. Repeat steps 2 and 3 above to display "OPTION MENU" screen.
7. Use the "ADJUST" button and "ENTER" button to set "OPTION MENU" as shown below.
8. Press the "MENU" button twice to return to normal viewing.

OPTION MENU

Initial	
Hotel	: Off
Power res	: Off
Antenna	: 2

Circuit Adjustment Mode

On these models, the following adjustments may only be performed using the remote hand unit.
 1 (SAP VCO) ~ 7 (CRT Cut Off, White),
 10 (Sub Cont) ~ 15 (Character Position),
 17 (Dynamic Convergence)

To perform these adjustments, use the following procedure to activate the circuit adjustment mode.

Note: Follow the steps in the adjustment 17 (Dynamic Convergence) only for adjustment 17 (Dynamic Convergence).

1. Activating the circuit adjustment mode

1. Press the "MENU" button on a remote hand unit.
(The "MENU" display will appear.)
2. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
If not changed to the circuit adjustment mode, repeat steps 1 and 2.

2. Selection of adjustment functions and adjustment items

To select an adjustment item in the circuit adjustment mode, first select the adjustment function, that includes the specific adjustment item to be selected, and next select the adjustment item.

Refer to the following pages for the listing of adjustment functions and adjustment items.

1. Press the "AUDIO" button on a remote hand unit to select an adjustment function. Each time the button is pressed, the adjustment function changes in the following sequence.

2. Press the "VIDEO" button to select a specific adjustment item.
The adjustment item number increases, each time the "VIDEO" button is pressed.

3. Changing data

After selecting an adjustment item, use the "ADJUST UP/DOWN" button to change adjustment data.

- If the "ADJUST DOWN" button is pressed, the adjustment data decreases.
- If the "ADJUST UP" button is pressed, the adjustment data increases.

4. Saving data

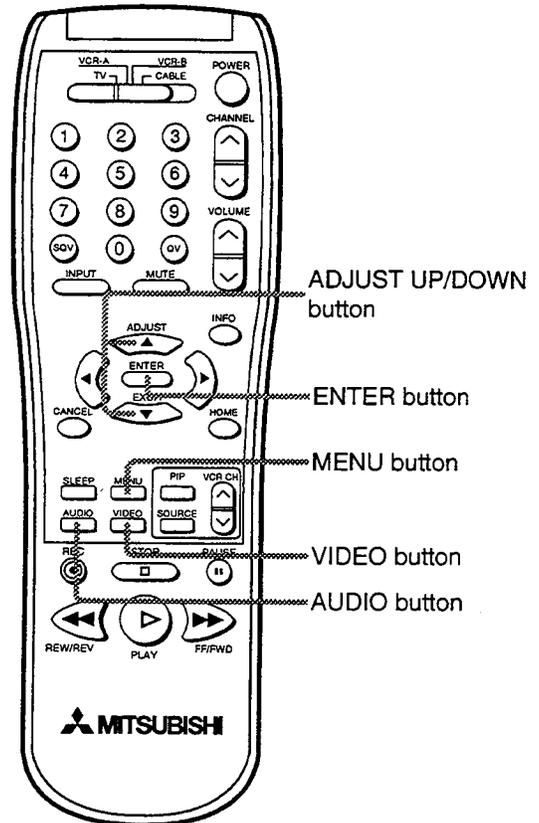

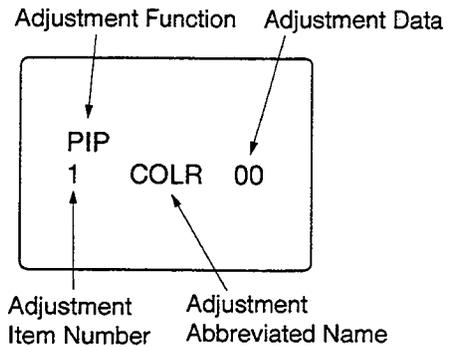

Press "ENTER" to save the adjustment data in memory.
The display characters go red for approx. one second in this step.

Note: If the circuit adjustment mode is terminated without pressing "ENTER", changes in adjustment data are not saved.

5. Terminating the circuit adjustment mode

Press the "MENU" button on the remote hand unit twice to terminate the circuit adjustment mode.

Note: The circuit adjustment mode can be also terminated by turning the power off.

When Replacing EEPROM(IC701)

The EEPROM(IC701) stores the adjustment data. After replacing the EEPROM, readjust the data to the values given in the following tables. If good performance is not obtained with these values, perform the Adjustment Procedure(s) given in the Note column.

Adjustment Procedures

[Multi Channel Sound Circuit] 1. SAP VCO	Adjustment purpose	Set the reference frequency for the SAP detection circuit.
	Symptom when incorrectly adjusted	No reception of SAP broadcasting.

Measuring instrument	Frequency counter
Test point	TPM2
EXT trigger	—
Measurement range	—
Input signal	RF signal (monaural sound)
Input terminal	RF IN terminal

1. Supply an RF signal (monaural sound 400Hz 100%MOD).
2. Connect TPM1 (pin ① of connector RJ) to ground.
3. Connect pin ⑧ of IC3E1 (pin ③ of connector RJ) to ground through a resistor (820k Ω , 1/4W).
4. Observe the frequency at TPM2 (pin ① of connector RG).
5. Press the "MENU" button on a remote hand unit.
6. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
7. Set the function to "MCS". ("AUDIO" button)
8. Set the items shown in the list below to the data value.
(("VIDEO" and "ADJUST" buttons)
9. Select item "0 PVC". ("VIDEO" button)
10. Set the data so that the frequency is 78.67 \pm 0.40kHz. ("ADJUST" button)
11. Write the data into memory. (Press "ENTER")
12. Terminate the circuit adjustment mode. (Press "MENU" twice)

PCB-SIGNAL(COMPONENT SIDE)

Note: Adjustment 2 (Stereo VCO) must be performed immediately after this adjustment.

Abbreviated Name	Data
0 PVC	32
1 TVC	32
2 INP	32
3 FIL	63
4 LSP	32
5 HSP	32

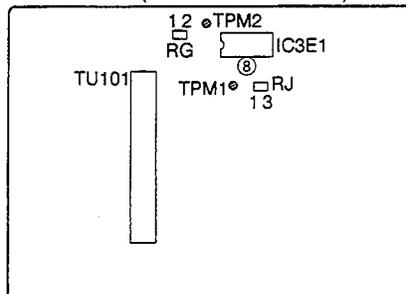

[Multi Channel Sound Circuit] 2. Stereo VCO	Adjustment purpose	Set the reference frequency for the multiplex IC oscillator.
	Symptom when incorrectly adjusted	No STEREO reception.

Measuring instrument	Frequency counter
Test point	TPM2
EXT trigger	—
Measurement range	—
Input signal	RF signal (monaural sound)
Input terminal	RF IN terminal

- * This adjustment must follow adjustment 1 (SAP VCO).
1. Refer to the steps 1 through 7 in adjustment 1 (SAP VCO) for the connection and setting of measuring instruments, etc.
 2. Select item "1 TVC". ("VIDEO" button)
 3. Set the data so the frequency is 15.73 \pm 0.08kHz. ("ADJUST" button)
 4. Write the data into memory. (Press "ENTER")
 5. Terminate the circuit adjustment mode. (Press "MENU" twice)
 6. Remove the resistor from pin ⑧ of IC3E1.
 7. Open circuit TPM1 and ground.

Note: Adjustment 3 (Input Level) must be performed immediately after this adjustment.

PCB-SIGNAL(COMPONENT SIDE)

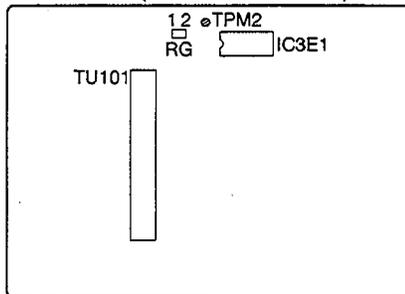

[Multi Channel Sound Circuit] 3. Input Level	Adjustment purpose	Set the level of the input signal for the multi channel sound circuit.
	Symptom when incorrectly adjusted	Distorted sound during an MCS broadcast.

Measuring instrument	Oscilloscope
Test point	TPM2
EXT trigger	—
Measurement range	DIV 50mV TIM 2ms
Input signal	RF signal (monaural sound)
Input terminal	RF IN terminal

- * This adjustment must follow adjustment 2 (Stereo VCO).
1. Supply an RF signal (monaural sound 400Hz 100%MOD).
 2. Observe the waveform at TPM2 (pin ① of connector RG).
 3. Press the "MENU" button on a remote hand unit.
 4. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
 5. Set the function to "MCS". ("AUDIO" button)
 6. Select item "2 INP". ("VIDEO" button)
 7. Set the data so the amplitude of the waveform is $1.41 \pm 0.03V_{p-p}$. ("ADJUST" button)
 8. Write the data into memory. (Press "ENTER")
 9. Terminate the circuit adjustment mode. (Press "MENU" twice)
- Note:** Adjustment 4 (Filter) must be performed immediately after this adjustment.

PCB-SIGNAL(COMPONENT SIDE)

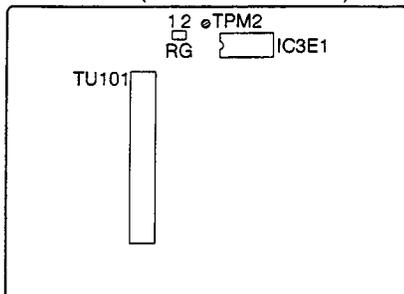

[Multi Channel Sound Circuit] 4. Filter	Adjustment purpose	Filter for the pilot signal.
	Symptom when incorrectly adjusted	Poor S/N ratio of signal in STEREO and SAP modes.

Measuring instrument	Oscilloscope
Test point	TPM2
EXT trigger	—
Measurement range	DIV 10mV TIM 2ms
Input signal	RF signal (stereo sound)
Input terminal	RF IN terminal

- * This adjustment must follow adjustment 3 (Input Level).
1. Supply an RF signal (Stereo Pilot signal but no sound signal).
 2. Observe the waveform at TPM2 (pin ① of connector RG).
 3. Press the "MENU" button on a remote hand unit.
 4. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
 5. Set the function to "MCS". ("AUDIO" button)
 6. Select item "3 FIL". ("VIDEO" button)
 7. Set the data for minimum amplitude of the waveform. ("ADJUST" button)
Decrease the data from 63, and set the data to the value where the first minimum amplitude is obtained.
 8. Write the data into memory. (Press "ENTER")
 9. Terminate the circuit adjustment mode. (Press "MENU" twice)
- Note:** Adjustment 5 (Separation) must be performed immediately after this adjustment.

PCB-SIGNAL(COMPONENT SIDE)

[Multi Channel Sound Circuit]
5. Separation

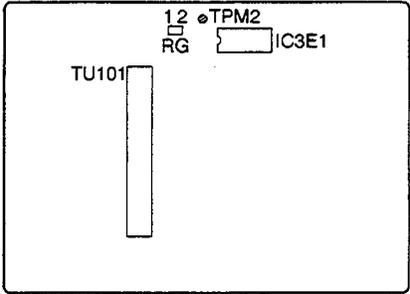

Adjustment purpose Adjust right and left separation.

Symptom when incorrectly adjusted Poor or no stereo separation.

Measuring instrument	Oscilloscope
Test point	TPM2
EXT trigger	—
Measurement range	DIV 10mV TIM 2ms
Input signal	RF signal (stereo sound)
Input terminal	RF IN terminal

- * This adjustment must follow adjustment 4 (Filter).
1. Supply an RF signal (L-CH only stereo sound 300Hz 30%MOD).
 2. Observe the waveform at TPM2 (pin ① of connector RG).
 3. Press the "MENU" button on a remote hand unit.
 4. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
 5. Set the function to "MCS". ("AUDIO" button)
 6. Make sure that the data of "5 HSP" is "32".
 7. Select item "4 LSP". ("VIDEO" button)
 8. Set the data so that the amplitude of the waveform (300Hz) is minimum.
("ADJUST" button)
 9. Change the modulating signal to 3kHz.
 10. Select item "5 HSP". ("VIDEO" button)
 11. Set the data so the amplitude of the waveform (3kHz) is minimum. ("ADJUST" button)
 12. Repeat the steps 7 to 8.
 13. Write the data into memory. (Press "ENTER")
 14. Terminate the circuit adjustment mode. (Press "MENU" twice)

PCB-SIGNAL (COMPONENT SIDE)

[High Voltage Circuit]
6. High Voltage Control

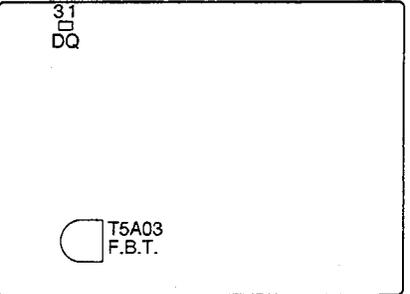

Adjustment purpose CRT anode voltage.

Symptom when incorrectly adjusted Too dark picture.

Measuring instrument	DC voltmeter
Test point	+lead : pin ② of connector DQ -lead : pin ① of connector DQ
EXT trigger	—
Measurement range	—
Input signal	VIDEO signal (monoscope)
Input terminal	VIDEO IN terminal

- * This adjustment must follow adjustment 7 (CRT Cut Off, White).
1. Supply a VIDEO signal (monoscope).
 2. Set the CONTRAST control to maximum and BRIGHTNESS control to center position.
 3. Observe the DC voltage between pins ① and ② of connector DQ.
(plus lead to pin ②)
 4. Press the "MENU" button on a remote hand unit.
 5. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
 6. Set the function to "HV". ("AUDIO" button)
(The screen will change to the black picture.)
 7. Set the data so the DC voltmeter reads $0.150 \pm 0.005V$. ("ADJUST" button)
 8. Write the data into memory. (Press "ENTER")
 9. Terminate the circuit adjustment mode. (Press "MENU" twice)

PCB-MAIN (COMPONENT SIDE)

[CRT Circuit]
7. CRT Cut Off, White

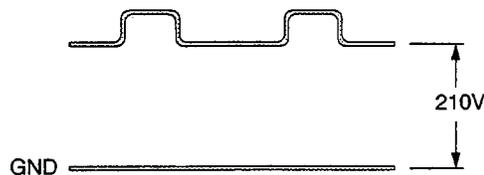

Adjustment purpose To set the cut off point of the three CRTs.

Symptom when incorrectly adjusted Monochrome with color tint, or incorrect brightness.

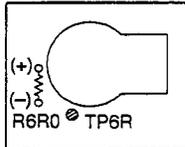

Measuring instrument	Oscilloscope, DC Ampere Meter
Test point	TP6R, TP6G, TP6B
EXT trigger	---
Measurement range	DIV 5V TIM 10 μ s
Input signal	---
Input terminal	---

1. Select the EXT-1 input with no signal supplied.
2. Press the "MENU" button on a remote hand unit.
3. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
4. Set the function to "VCH". ("AUDIO" button)
5. Set the items shown in the Table to the given data values.
6. Observe the waveform at TP6R.
7. Adjust the SCREEN control (R) so that the voltage is 210V.
8. Observe the waveform at TP6G
9. Adjust the SCREEN control (G) so that the voltage is 210V.
10. Observe the waveform at TP6B.
11. Adjust the SCREEN control (B) so that the voltage is 210V.

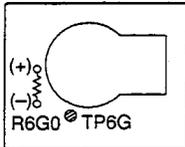

Abbreviated Name	Data
3 BRT	31
5 CTG	12
6 CTB	7
7 DRG	42
8 DRB	42
23 SBR	30

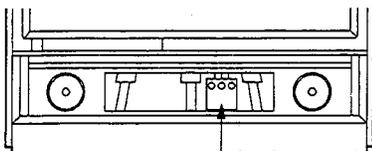

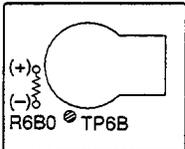

PCB-CRT(R)
(COMPONENT SIDE)

PCB-CRT(G)
(COMPONENT SIDE)

PCB-CRT(B)
(COMPONENT SIDE)

Focus Pack
(SCREEN control)

FRONT VIEW

12. Supply a VIDEO signal (white raster).
13. Set the data of "7 DRG" and "8 DRB" so that the white level is optimum at the center of the screen.
14. Observe the waveform at TP6G.
15. Set the data of "5 CTG" so that the voltage is 210V.
16. Observe the waveform at TP6B.
17. Set the data of "6 CTB" so that the voltage is 210V.
18. Measure the DC current as indicated in Table 1.

Note: The internal resistance of the ampere meter must be 30 Ω or less, and the length of a lead wire should be 30cm or less.

Connect a resistor, with a value equal to the internal resistance of the ampere meter, to each of the two CRTs not being measured. This is so that the load on each CRT will be equal.

Make sure that the current in GREEN and BLUE CRTs does not exceed the values shown in Table 2.

If excessive, repeat steps 1 through 18 readjusting the current settings to under the values given in Table 2.

19. Write the data into memory. (Press "ENTER")

20. Terminate the circuit adjustment mode. (Press "MENU" twice)

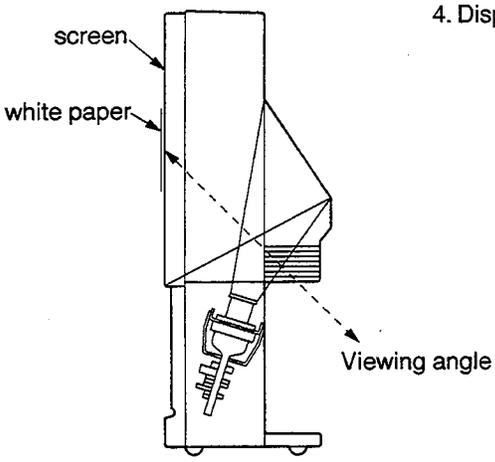

Note: Adjustment 10 (Sub Cont) must be performed immediately after this adjustment.

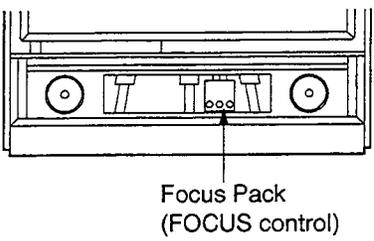

Connections of Ampere Meter		
	Positive	Negative
R	R6R0 (+ side)	R6R0 (- side)
G	R6G0 (+ side)	R6G0 (- side)
B	R6B0 (+ side)	R6B0 (- side)

Table 1

Maximum Current	
G	580 μ A
B	530 μ A

Table 2

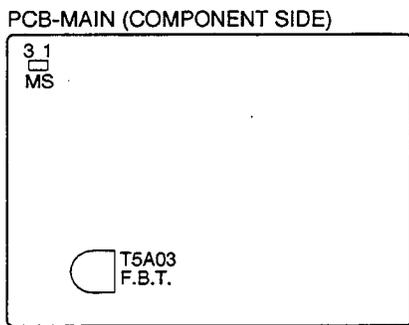

[Focus Circuit] 8. Lens Focus	Adjustment purpose The best resolution of the picture.									
	Symptom when incorrectly adjusted Blurred picture.									
Measuring instrument	---	<p>* This adjustment must follow adjustment 9 (Electrostatic Focus). * Perform this adjustment for RED, GREEN and BLUE monochrome pictures.</p> <ol style="list-style-type: none"> 1. Supply a VIDEO signal (monoscope). 2. Produce a monochrome picture. <ol style="list-style-type: none"> 1). Press the "MENU" button on a remote hand unit. 2). Press the buttons "2", "3", "5", "9" and press the button specified in the table below to select each color. 3. Adjust the position of lens, for the best picture resolution. <p>Note: Attach a white paper to the screen center. During the adjustment, observe the picture on the screen from inside for easier adjustment.</p> <ol style="list-style-type: none"> 4. Display the original picture. (Press "MENU" twice)

Input signal	VIDEO signal (crosshatch)
Input terminal	VIDEO IN terminal

- * This adjustment must follow adjustment 16 (Static Convergence).
- * Dynamic convergence should not be attempted until the Static convergence has been properly adjusted. (including centering adjustment, if required.)
- * Cover the RED or BLUE lens with a lens cover, and adjusts the color convergence in GREEN and RED or in GREEN and BLUE.
 1. Supply a VIDEO signal (crosshatch).
 2. Activate the Dynamic Convergence adjustment mode.
 - 1). Press the "MENU" button on a remote hand unit. (The "MENU" display will appear.)
 - 2). Press the buttons "2", "3", "5" and "9" in that order. (The screen will change to the adjustment mode.)
 3. Adjust the convergence according to the steps below.
 - 1). Press the "VIDEO" button to select a specific item.
- Note:** Use the "ENTER" button to switch between RED and BLUE.
 - 2). Press the "ADJUST UP/DOWN" buttons to change data.
- Note:** The newly entered data is automatically recorded.
- 4. Display a red raster and a blue raster. Confirm no black or bright horizontal line appears on the middle of the screen. If any line appears, set the data of the item "56 DA42" so that the line disappears.
- 5. Confirm no misconvergence occurs at the center of the screen.

Use one of the following methods to correct center screen misconvergence.

 - Use the customer convergence adjustment functions.
 - While in the Dynamic Convergence adjustment mode, select the items "0, 30 HSTA" and "1, 31 VSTA" to converge RED and BLUE at the center of the screen.
- 6. Terminate the Dynamic Convergence adjustment mode. (Press "MENU" twice.)

Measurement range	DIV 5mV TIM 10 μ s
Input signal	VIDEO signal (color bar)
Input terminal	VIDEO IN terminal

- * Preheat the set for one minute or more.
1. Supply a VIDEO signal (color bar).
 2. Press the "MENU" button on a remote hand unit.
 3. Press the buttons "2", "3", "5" and "7" in that order.
(The screen will change to the circuit adjustment mode.)
 4. Set the function to "PIP". ("AUDIO" button)
 5. Set all the items in function "PIP" to the data values given on page 19. ("VIDEO" and "ADJUST" buttons)
 6. Observe the waveform at TP63.
 7. Select item "1 COLR". ("VIDEO" button)
 8. Set the data so that the chroma signal amplitude of sub picture is $90 \pm 5\%$ of main picture. ("ADJUST" button)
 9. Write the data into memory. (Press "ENTER")
 10. Terminate the circuit adjustment mode. (Press "MENU" twice)

Note: Adjustment 20 (PIP Sub Tint) must be performed immediately after this adjustment.

PCB-PIP (COMPONENT SIDE)

[PIP Circuit] 20. PIP Sub Tint		Adjustment purpose To obtain the same hue in the main and sub pictures.
		Symptom when incorrectly adjusted Different hue between the main and sub pictures, and color smear.
Measuring instrument	—	<p>* Preheat the set for one minute or more. * This adjustment must follow adjustment 19 (PIP Chroma Gain).</p> <ol style="list-style-type: none"> 1. Supply a VIDEO signal (color bar). 2. Activate PIP and display the same picture on the main picture screen and sub pictures. 3. Press the "MENU" button on a remote hand unit. 4. Press the buttons "2", "3", "5" and "7" in that order. (The screen will change to the circuit adjustment mode.) 5. Set the function to "PIP". ("AUDIO" button) 6. Select item "0 TINT". ("VIDEO" button) 7. Set the data so that the hue in the sub picture corresponds to the hue in the main picture. ("ADJUST" button) 8. Write the data into memory. (Press "ENTER") 9. Terminate the circuit adjustment mode. (Press "MENU" twice)

CHIP PARTS REPLACEMENT

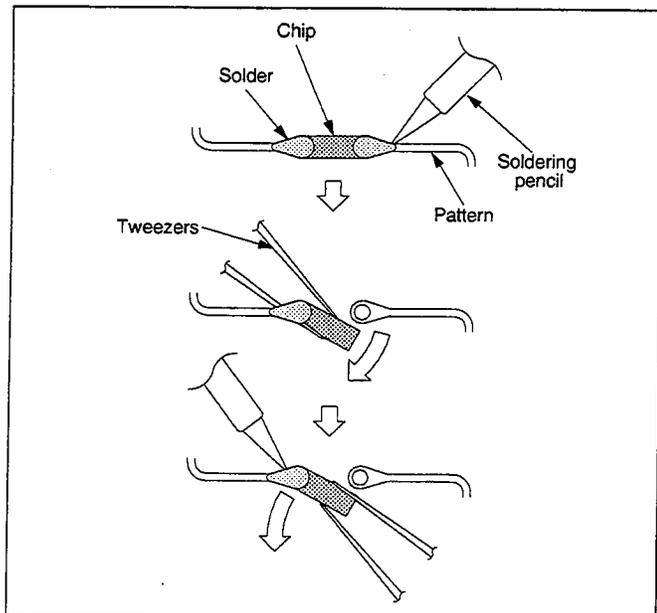

Some resistors, shorting jumpers (0Ω resistor), ceramic capacitors, transistors and diodes are chip parts. When replacing these parts, note the following cautions.

Cautions:

- A. Use fine tipped, well insulated soldering pencil (iron) about 30 watts and tweezers.
- B. Melt the solder and remove the Chip Parts carefully so not to tear off the copper foil from the printed circuit board.
- C. Discard removed chips, do not reuse them.
- D. Do not apply heat for more than 3 seconds to new Chip Parts.
- E. Avoid using a rubbing stroke when soldering.
- F. Take care not to scratch or damage the Chip Parts when soldering.
- G. Supplementary cementing is not required.

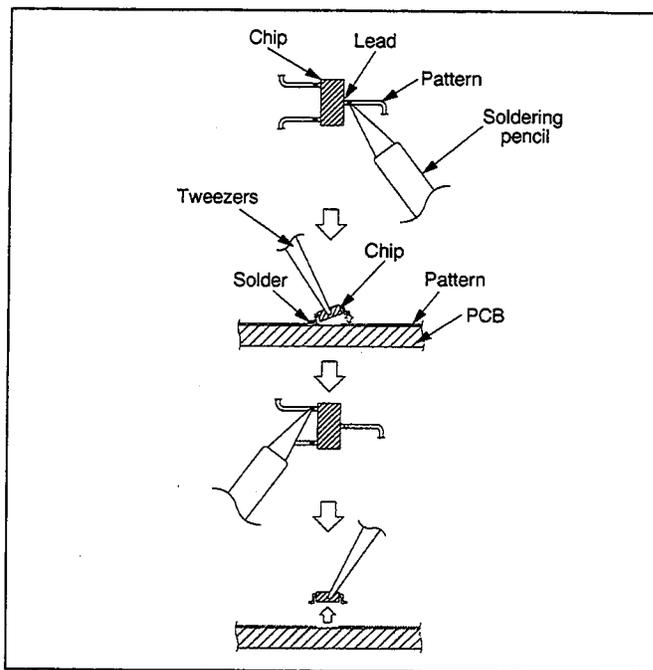

1 Removal of Chip Parts (Resistors, capacitors, etc.)

- A. Grasp the part with tweezers. Melt the solder at both sides alternately and remove one side of the part with a twisting motion.
- B. Melt the solder at the other side and remove the part.

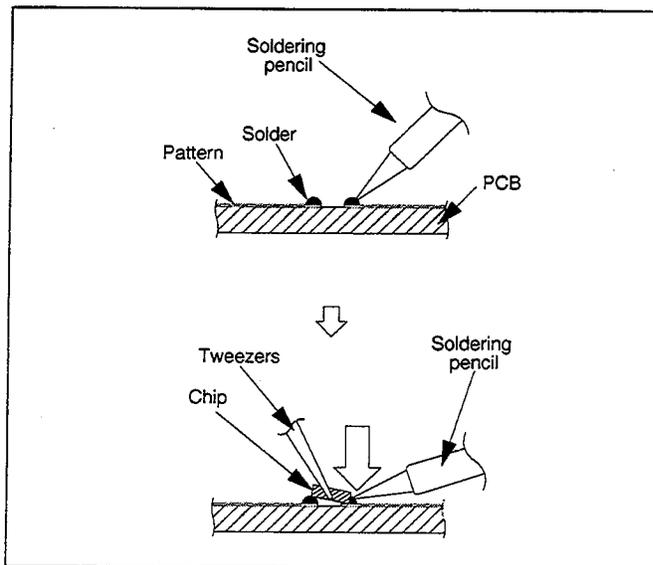

2 Removal of Chip Parts (Transistors)

- A. Melt the solder of one lead, and lift the side of that lead upward.
- B. Simultaneously melt the solder of the two remaining leads and lift the part from the PCB.

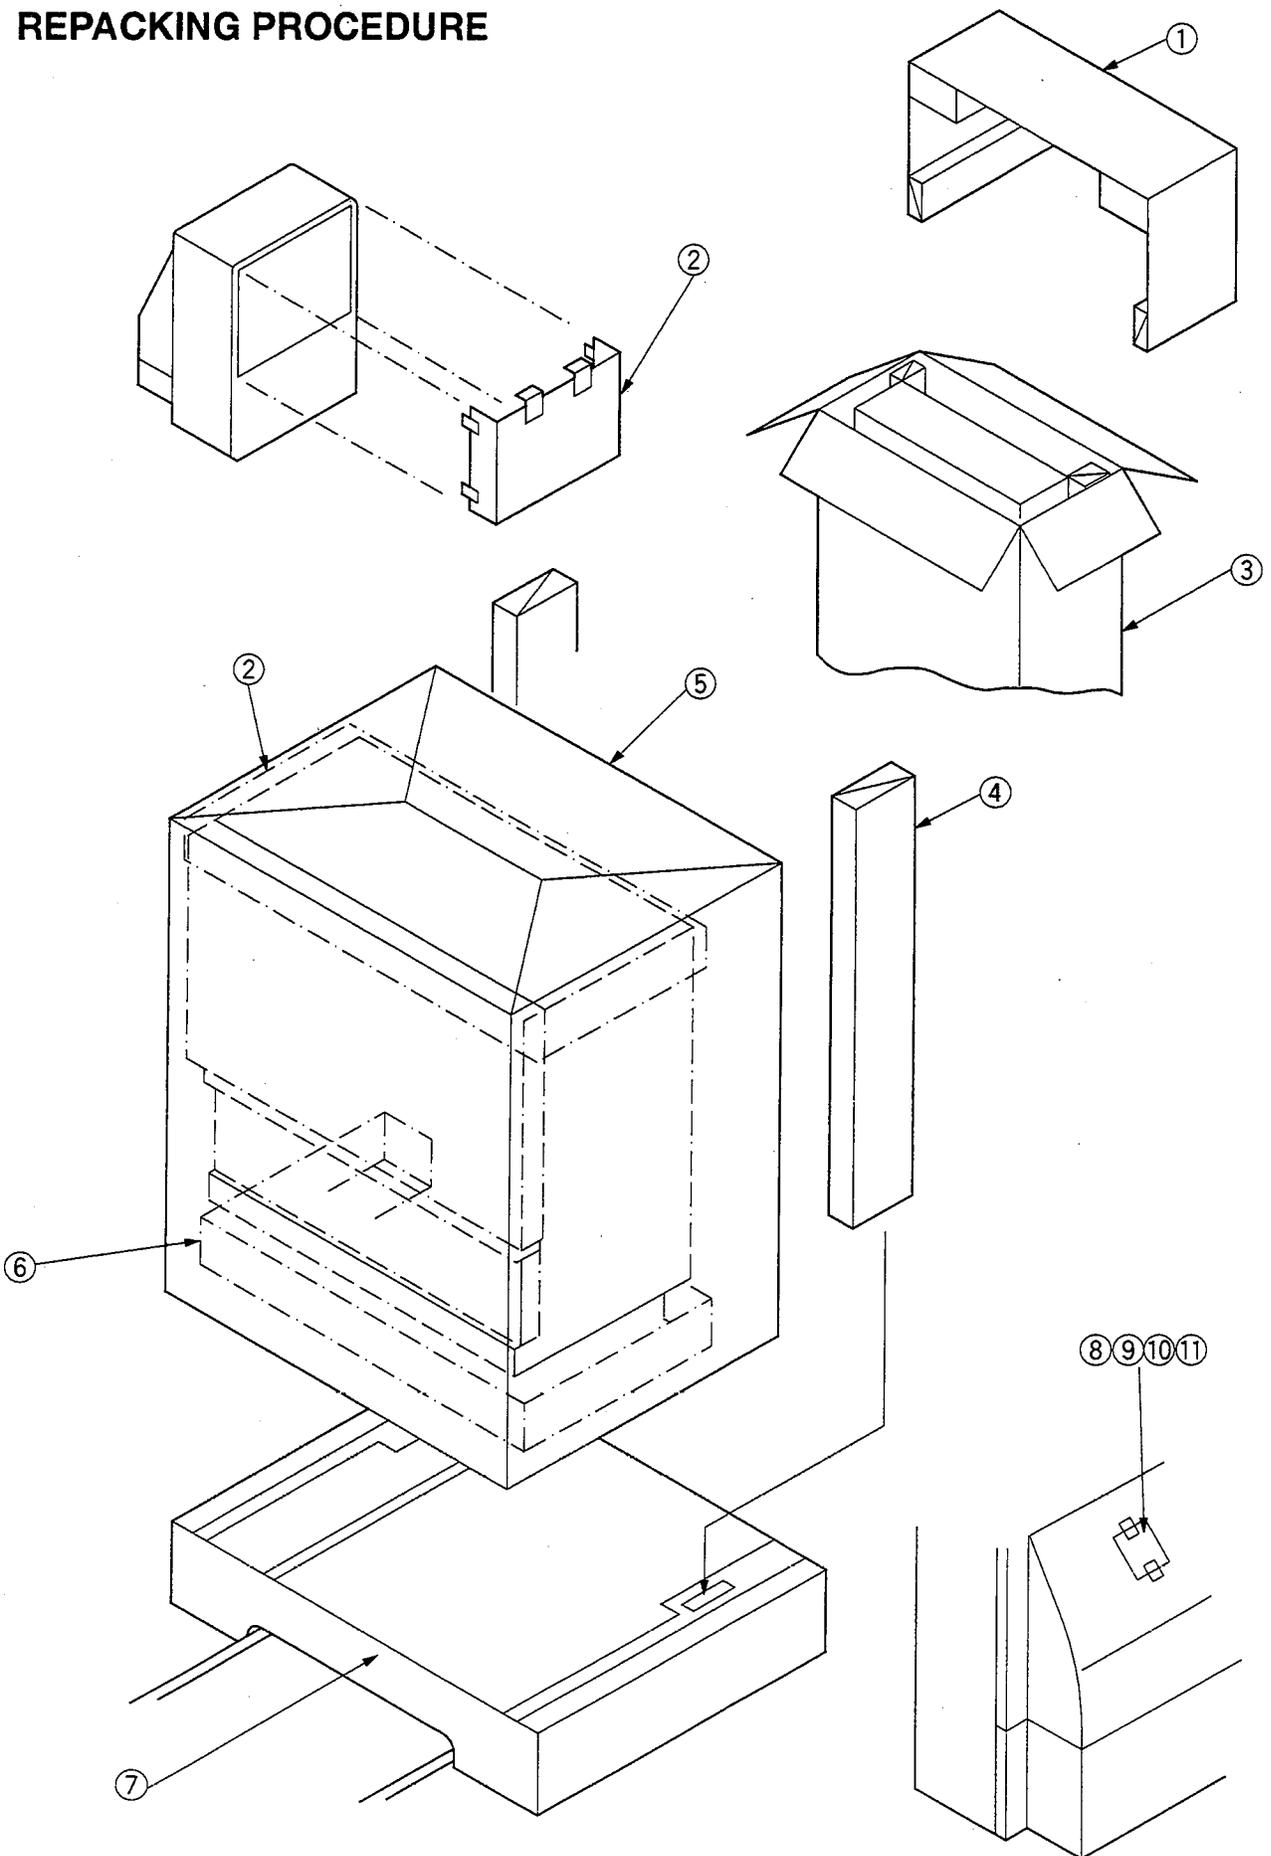

3 Replacement

- A. Presolder the contact points on the circuit pattern.
- B. Press the part downward with tweezers and apply the soldering pencil as shown in the figure.

PARTS LIST

REPACKING PROCEDURE

ELECTRICAL PARTS AND OTHERS

MODEL : VS-4543/VS-4544/VS-5043/VS-5044/VS-6043

In order to expedite delivery of replacement part orders.

Specify : 1. Model number/Serial number

2. Part number and Description

3. Quantity

Unless full information is supplied, delay in execution of orders will result.

* : Warranty return items

: Critical components

- *NOTE**
- DC voltages were measured from points indicated to the circuit ground.
 - Waveforms were taken with standard colour bar signal.
 - Trsa, etc. show Test Points.

4. CAPACITORS

Value	PF (for numbers more than 1 µF for numbers less than 1)
Not indicated	
Not indicated 30µV	
Not indicated ±5-10%	No Tolerance is indicated for electrolytic capacitors and 20%
Tolerance	G=±2% P=±100% Q=±30% C=±0.25PF K=±10% Z=±80% T=±200% D=±50% M=±20% -20% F=±1PF G=±25PF

Not indicated: Ceramic capacitor
 (C): Polymer capacitor
 (P): Polypropylene film capacitor
 (A): Aluminum electrolytic capacitor
 (T): Tantalum electrolytic capacitor
 (M): Metallized polyester film capacitor
 (F): Polyester polypropylene film capacitor
 (S): Signal capacitor
 (E): Electrolytic capacitor
 (N): Non-polarized electrolytic capacitor

5. RESISTORS

Value	Not indicated = Ω K = kΩ(1000Ω) M = MΩ(10000Ω)
Wattage	Not indicated = 1/4W or 1/8W
Tolerance	Not indicated = ±5% D=±0.5% J=±5% K=±10% F=±1%
Shot	Not indicated = Chip resistor

Not indicated: Carbon resistor
 (C): Metal oxide film resistor (type B)
 (M): Cemented resistor
 (W): Wire wound resistor
 (F): Metal film resistor
 (P): Metal plate current resistor
 (N): Metal film resistor
 (C): Chip resistor

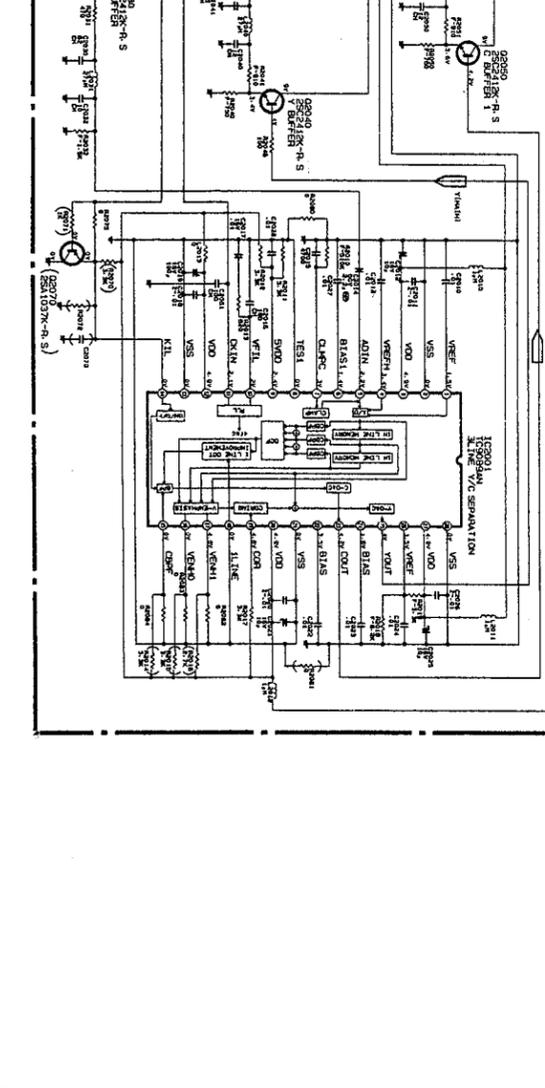

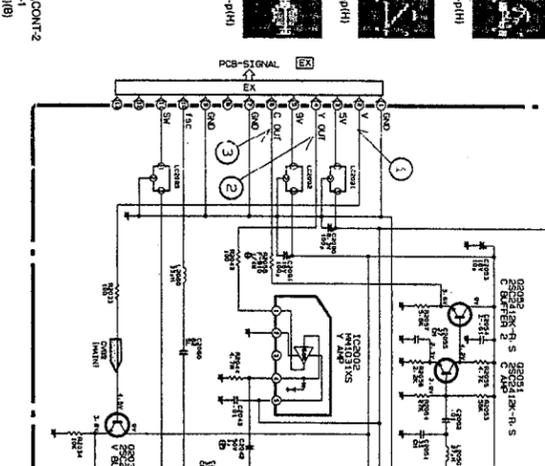

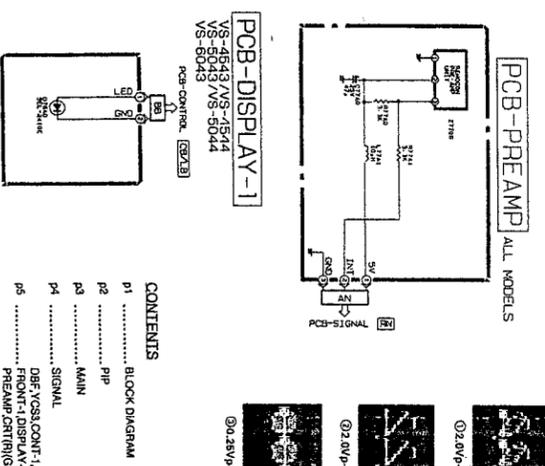

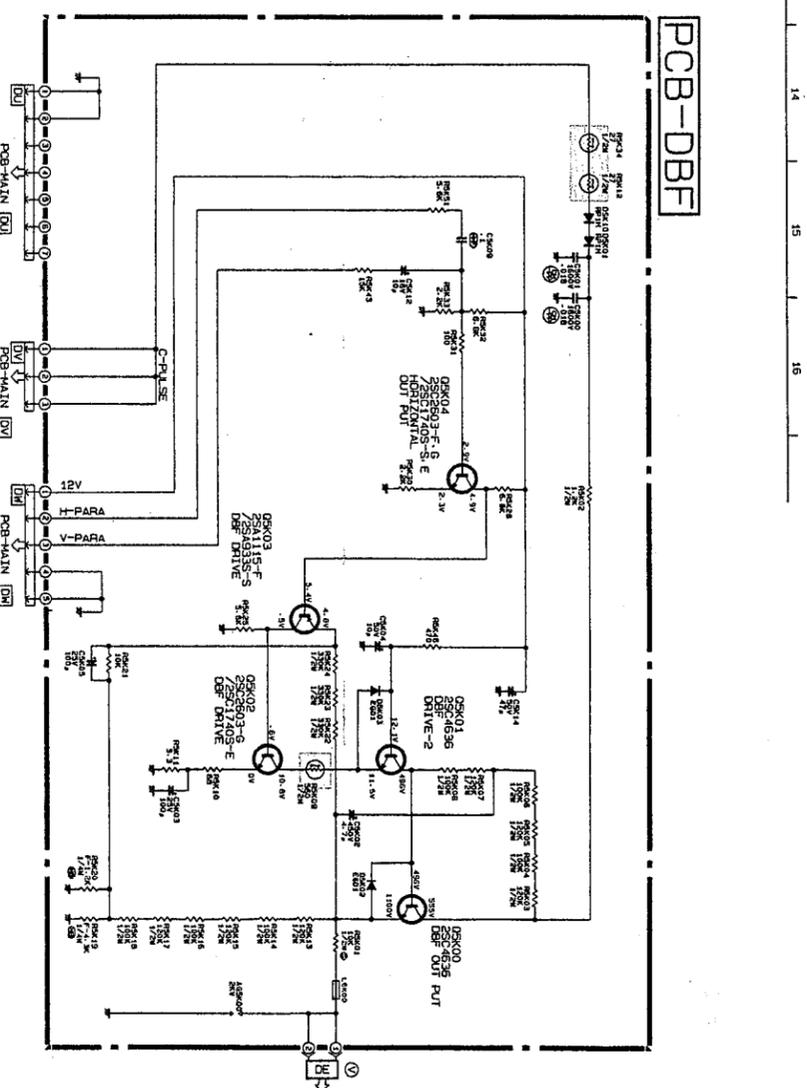

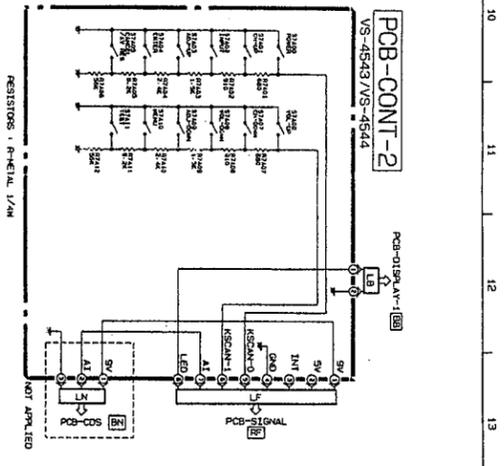

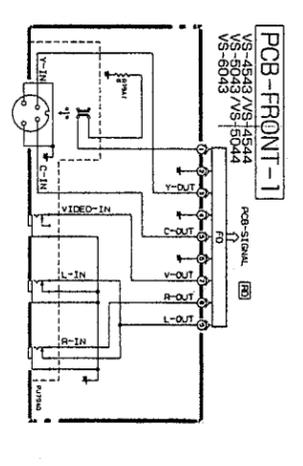

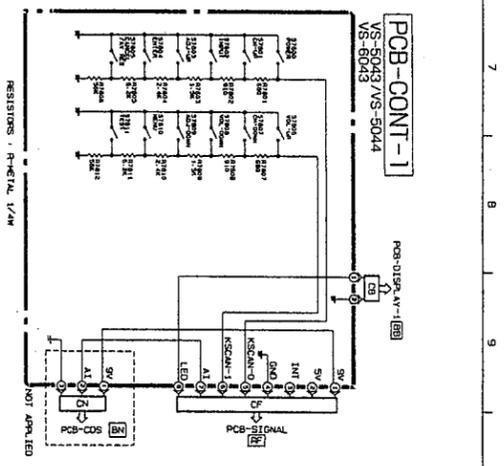

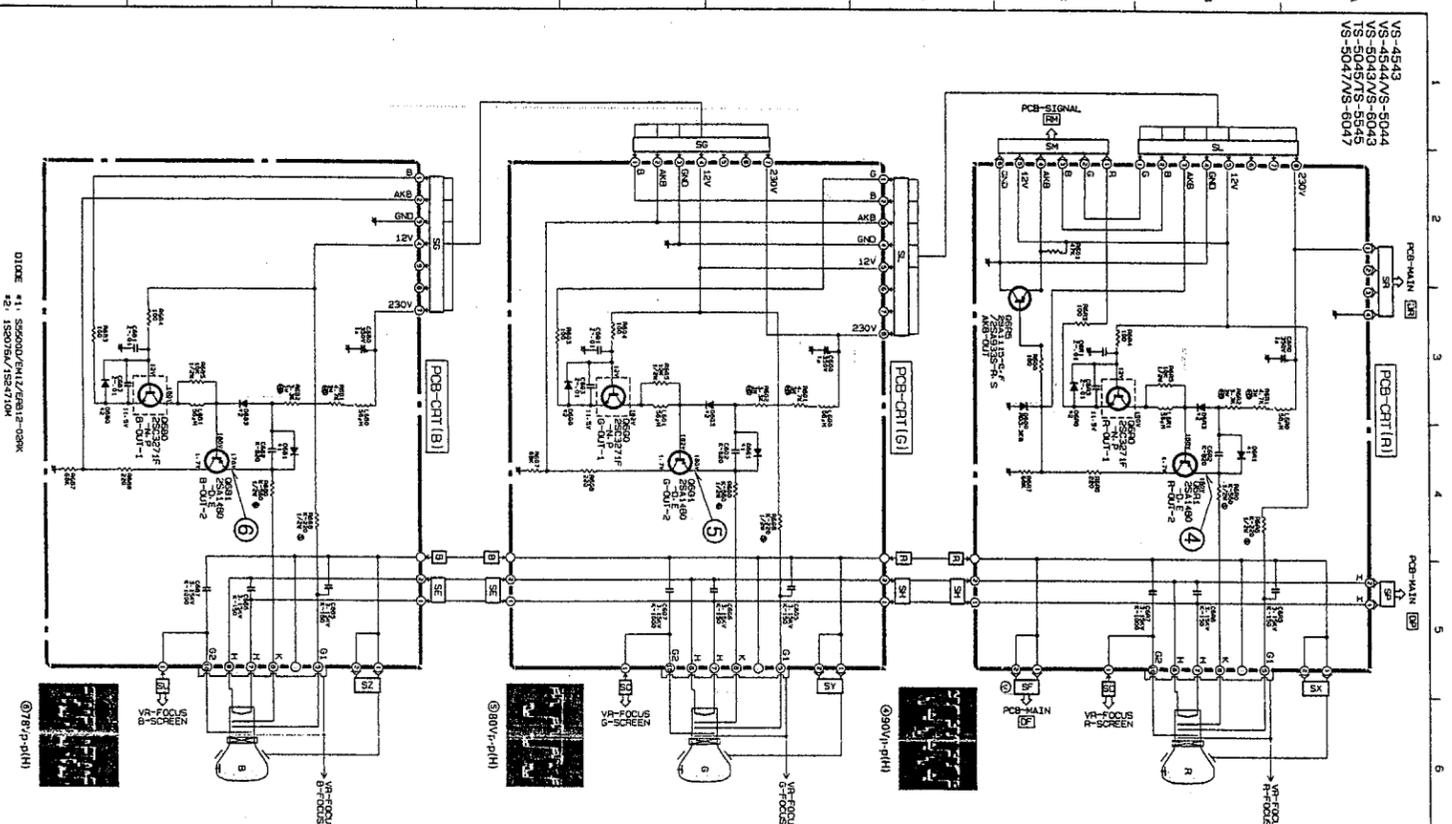

SPECIFIC SYMBOL

Zener Diode	Crystal unit
Vacuum tube	Air Gap
Posistor	Particularized ultraviolet exposure mask of PCB
Thermistor	EXX2
Fusible Resistor	Ceramic filter

STANDARD COMPONENTS MANUFACTURED BY SHARP CORPORATION
 SHARP CORPORATION IS NOT RESPONSIBLE FOR THE
 MOUNTING OF THESE COMPONENTS BECAUSE OF THE
 RISK OF FIRE. FOR MORE INFORMATION, SEE THE
 SERVICE MANUAL.
 TO AVOID POSSIBLE EXPOSURE TO X-RADIATION
 TAKE X-RADIATION PROTECTIVE MEASURES FOR
 PERSONNEL DURING SERVICING.
 SEE SERVICE INSTRUCTIONS FOR SPECIFIED RE-
 PLACEMENT PARTS AND SERVICE ADJUSTMENTS.

SERVICE MAN WARNING
 X-RADIATION PRECAUTION
 THIS PRODUCT INCLUDES CRITICAL ELECTRICAL
 AND MECHANICAL PARTS ESSENTIAL FOR X-RADI-
 ATION PROTECTION.
 TO AVOID POSSIBLE EXPOSURE TO X-RADIATION
 TAKE X-RADIATION PROTECTIVE MEASURES FOR
 PERSONNEL DURING SERVICING.
 SEE SERVICE INSTRUCTIONS FOR SPECIFIED RE-
 PLACEMENT PARTS AND SERVICE ADJUSTMENTS.
