

Service Manual

PROJECTION TELEVISION
VZ4 CHASSIS

MODEL

**VS-45501/VS-45502/VS-45501A
VS-50501/VS-50502/VS-50501A**

CAUTION:

Before servicing this chassis, it is important that the service person read the "SAFETY PRECAUTIONS" AND "PRODUCT SAFETY NOTICE" in this manual.

SPECIFICATIONS

- **Power Input** : AC 120V, 60Hz
- **Power Consumption** : 260W
- **Frequency Range** : VHF 54 ~ 470MHz
UHF 470 ~ 806MHz
- **Antenna Input** : VHF/UHF 75 Ω unbalanced
Single axis input
- **CRT** : [VS-45501/45502] [VS-45501A]
180DLB22 (R) 180DLB22 (R)
180DLB22 (G) 180DLB22 (G)

INTRODUCTION

This service manual provides service instruction for PTV Models: VS-45501, VS-45502, VS-45501A, VS-50501, VS-50502 and VS-50501A which use the VZ4 Chassis. Service personnel should read this manual thoroughly before servicing this chassis.

This service manual includes:

1. Assembly and disassembly instructions for the front and rear cabinet components
2. Servicing of the lenticular screen and fresnel lens.
3. Servicing printed circuit boards (PCBs).
4. CRT replacement procedure.
5. Electrical adjustments.
6. Chip parts replacement procedures.
7. Lead dress diagram.

The parts list section of this service manual includes:

1. Cabinet and screen parts.
2. Electrical parts.

Schematic and block diagrams of PTV Models: VS-45501, VS-45502, VS-45501A, VS-50501, VS-50502 and VS-50501A are included in this service manual for better understanding of the circuitry. PCB drawings are also included for easy location of parts and test points.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in television receivers have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have special safety characteristics are identified in this service manual.

Electrical components having such features are identified by shading on the schematic diagram and on the parts list of this service manual, and by marking on the supplementary sheet for this chassis to be issued subsequently. Therefore, the replacement for any safety part should be identical in value and characteristics.

SAFETY PRECAUTIONS

NOTICE: Observe all cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.

WARNING:

1. Operation of this receiver outside the cabinet or with the cover removed presents a shock hazard from the receiver's power supplies. Work on the receiver should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment.
2. Do not install, remove or handle the picture tubes in any manner unless shatterproof goggles are worn. People not so equipped should be kept away while the picture tube is being handled. Keep the picture tube away from the body while handling.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage area. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

B. X-radiation warning

The surface of the cathode ray tubes (CRTs) may generate X-Radiation, so take proper precautions when servicing. It is recommended that a lead apron be used for shielding while handling the CRT. Use this method if possible. When replacing the CRTs, use only the designated replacement part since it is a critical component with regard to X-Radiation. As noted above, no high voltage adjustments are provided. The high voltage specification is described on the cover page.

C. Leakage current check

Before returning the receiver to the customer, it is recommended that leakage current be measured according to the following methods.

1. Cold Check

With the alternating current (AC) plug removed from the AC source, place a jumper across the two AC plug prongs. Connect one lead of an ohm meter to the AC plug and touch the other lead to each exposed metal part (i.e. antennas, handle bracket, metal cabinet, screw heads, metal overlay, control shafts, etc.), particularly any exposed metal part that has a return path to the chassis. The resistance of the exposed metal parts having a return path to the chassis should be a minimum of 1Mega Ohm. Any resistance below this value indicates an abnormal condition and requires corrective action.

2. Hot Check

Use the circuit in Figure 1 to perform the hot check test.

1. Keep switch S1 open and connect the receiver to the measuring circuit. Immediately after connection, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2.
2. Close switch S1, energizing the receiver. Immediately after closing switch S1, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2. Repeat the current measurements of items 1 and 2 after the receiver has reached thermal stabilization. The leakage current should not be more than 0.5 milliamper (mA).

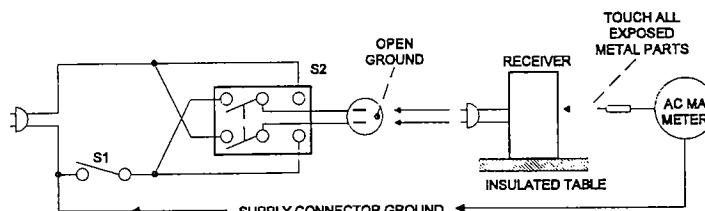

Figure 1

DISASSEMBLY/ FRONT AND REAR CABINET COMPONENTS

Table 1-2

SERVICING PCBs

PCB Locations

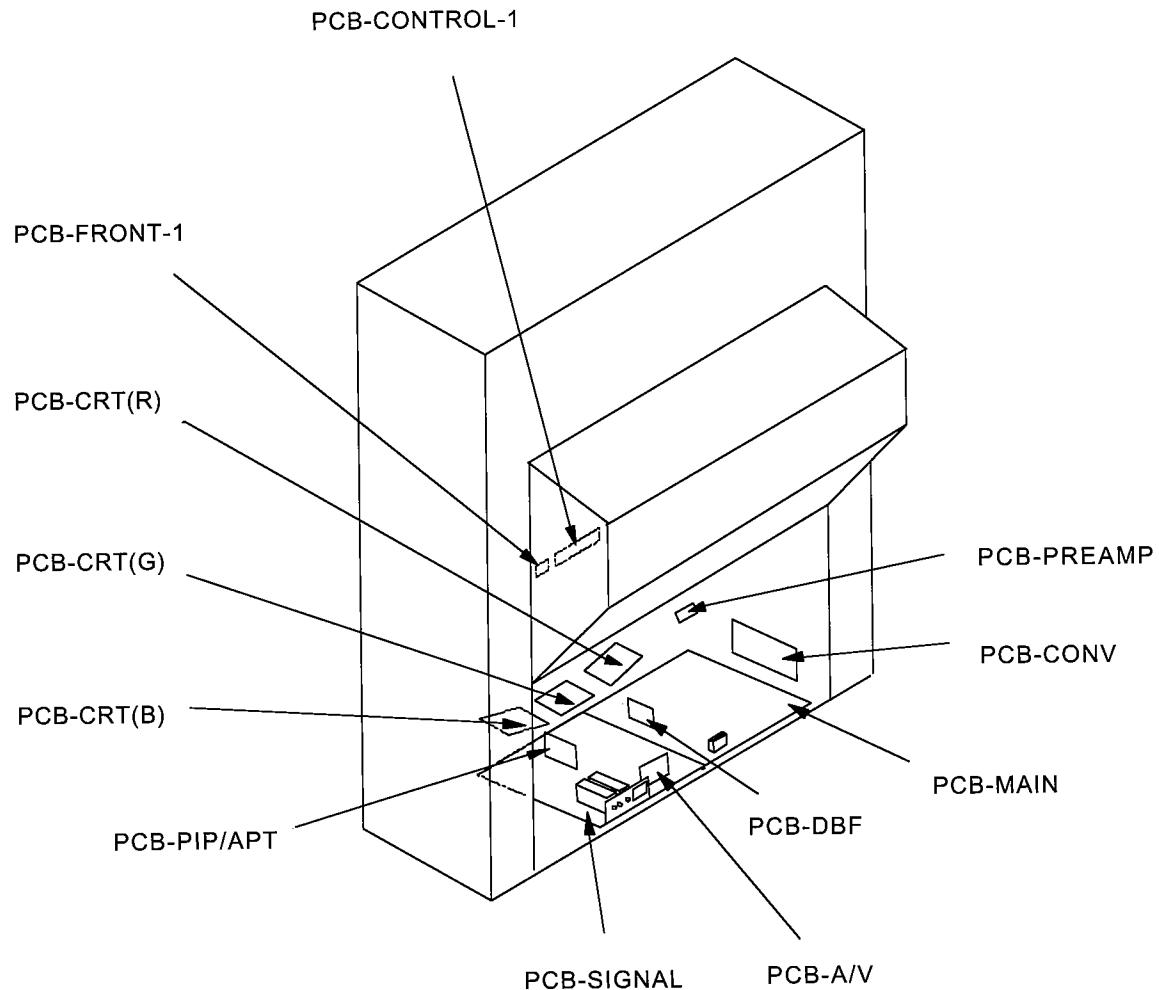

Fig. 3

Extension Cord Jigs Table

When servicing PCBs, use the Extension Cord Jigs for easier access.

PRINTED CIRCUIT BOARD	CONNECTOR	PART NUMBER
DBF	DV (3 PIN)	859C431060
DBF	DW (5 PIN)	859C432060
DBF	DU (7 PIN)	859C431070
PIP	GE (9 PIN), GF (9 PIN)	859C432050
A/V	GB (13 PIN)	859C432030
A/V	GA (11 PIN)	859C432040

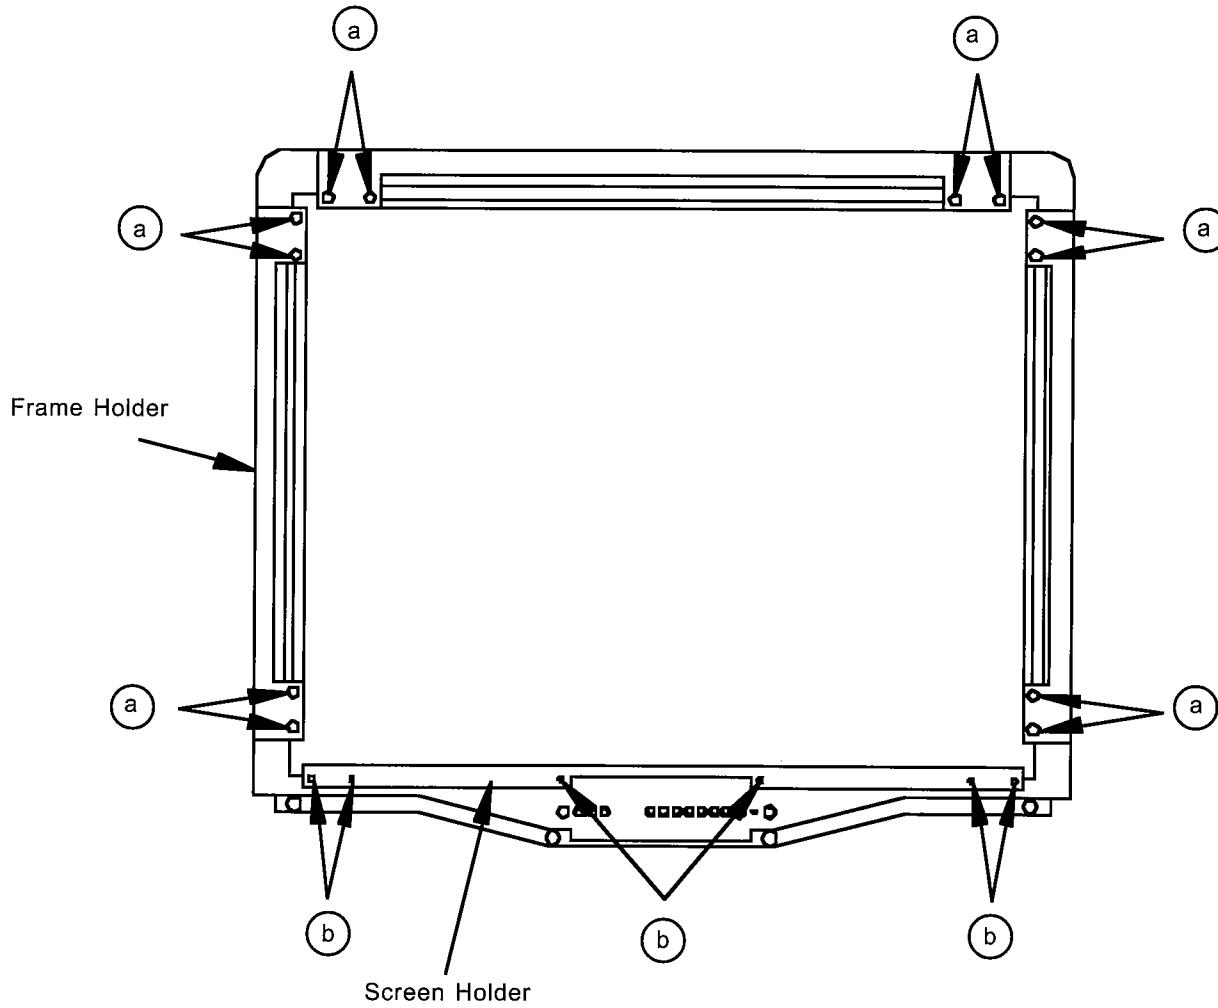

* Extension Jigs for servicing of the PCB-Convergence are not listed as the existing leads are of sufficient length.

Table 2

SERVICING OF THE LENTICULAR SCREEN AND FRESNEL LENS**1. Removal of the Lenticular Screen and Fresnel Lens****A. VS-45501/VS-50501**

1. Remove the screen assembly as shown in figure 2.
2. Remove Frame Holder by removing 12 screws (a).
3. Remove Screen Holder by removing 6 screws (b).

Note: When separating the Lenticular Screen from the Fresnel Lens, use caution while prying the Screen and Lens apart using a slot type screw driver, and remove the pressure sensitive, double sided tape.

**Figure 4-1**

2. Installation of the Lenticular Screen and Fresnel Lens

CAUTION: WEAR GLOVES WHEN HANDLING THE LENTICULAR SCREEN AND THE FRESNEL LENS. THIS PREVENTS CUTS AND FINGER PRINTS. DO NOT PLACE THE FRESNEL LENS IN THE SUN. THIS MAY CAUSE FIRE AND HEAT RELATED INJURIES.

Note: Store the Lenticular Screen and Fresnel Lens in a cool dry place. High humidity causes deformation of the Lenticular Screen and Fresnel Lens.

A. VS-45501

1. Apply double coated tape (Part # LENS-TAPE) along the top front edge of the Fresnel Lens as shown in figure 4-2.
2. Place the Fresnel Lens on top of the Lenticular Screen and apply pressure at the top edge to bond them together as shown in figure 4-2.

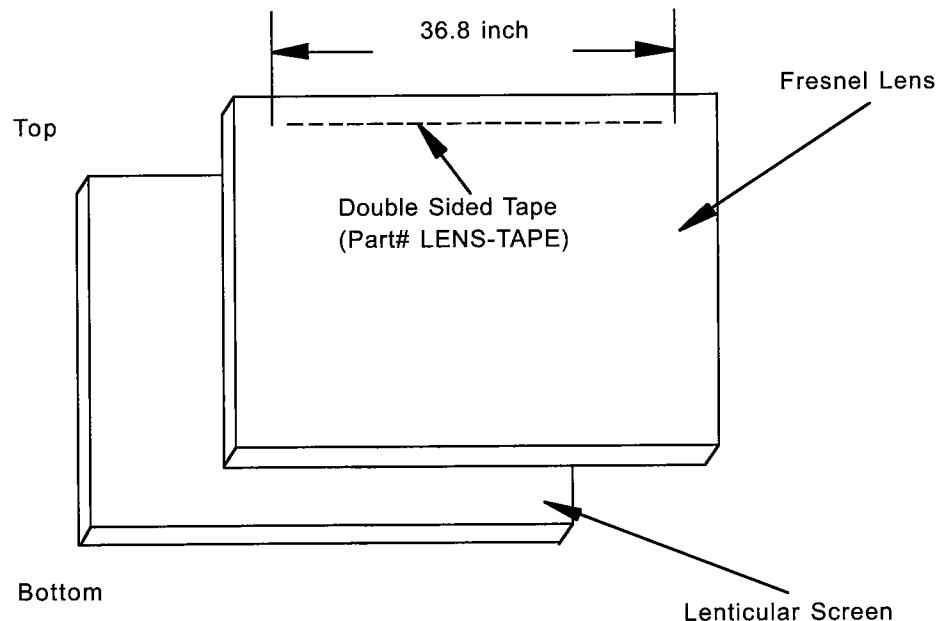

Figure 4-2

3. Installation of the Lenticular Screen and Fresnel Lens

CAUTION: WEAR GLOVES WHEN HANDLING THE LENTICULAR SCREEN AND THE FRESNEL LENS. THIS PREVENTS CUTS AND FINGER PRINTS.
DO NOT PLACE THE FRESNEL LENS IN THE SUN. THIS MAY CAUSE FIRE AND HEAT RELATED INJURIES.

Note: Store the Lenticular Screen and Fresnel Lens in a cool dry place. High humidity causes deformation of the Lenticular Screen and Fresnel Lens.

A. VS-50501

1. Apply double coated tape (Part # LENS-TAPE) along the top front edge of the Fresnel Lens as shown in figure 4-3.
2. Place the Fresnel Lens on top of the Lenticular Screen and apply pressure at the top edge to bond them together as shown in figure 4-3.

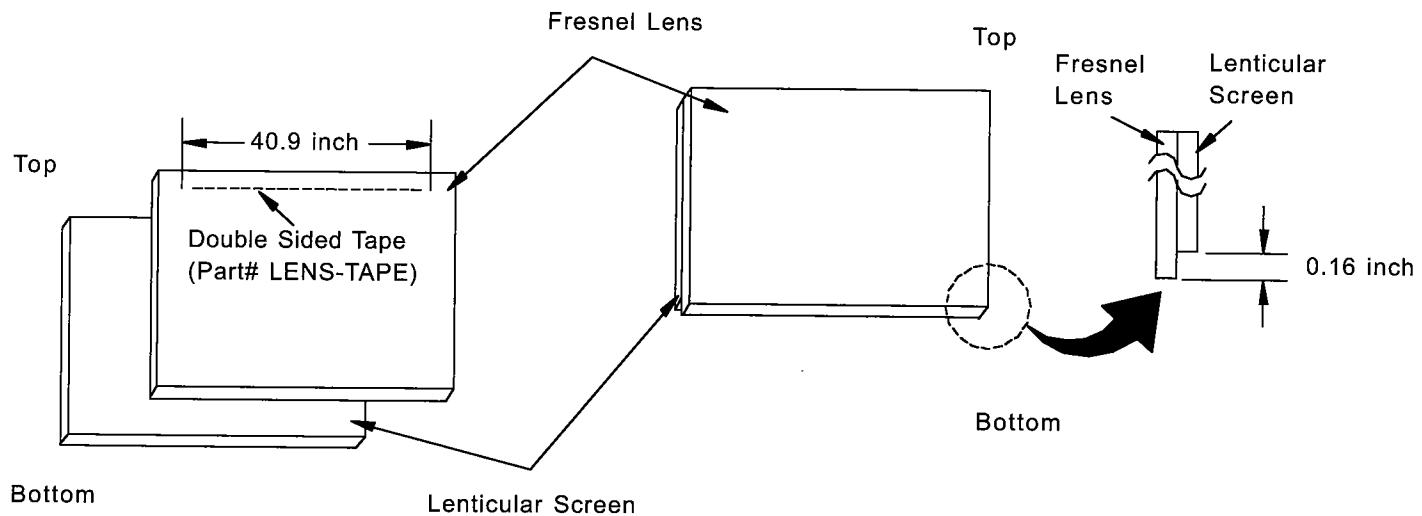

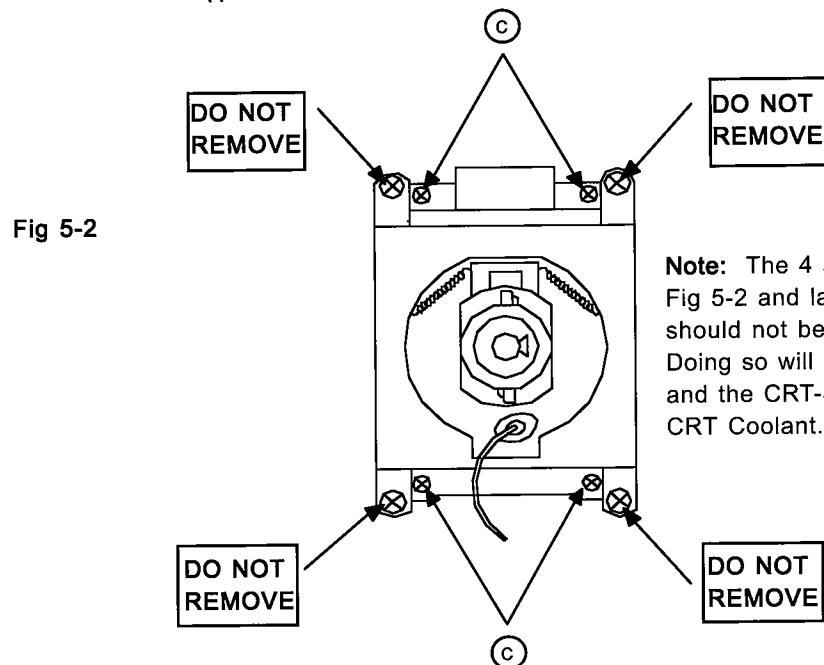

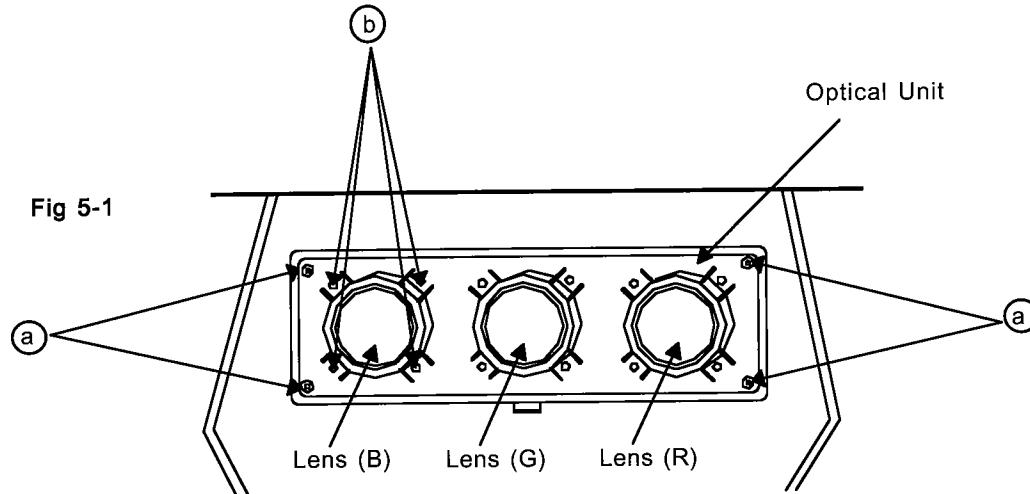

Fig. 4-3

CRT REPLACEMENT**1. Removal of the CRT**

CAUTION! HIGH VOLTAGE SHOULD BE COMPLETELY DISCHARGED PRIOR TO ANODE CAP REMOVAL. SINCE ALL THREE CRTS RECEIVE HIGH VOLTAGE FROM THE FLYBACK TRANSFORMER, DISCHARGE EACH CRT BY SHORTING THE OPEN END OF EACH RESPECTIVE HIGH VOLTAGE CABLE TO CHASSIS GROUND.

Note: Refer to figures 2, and 2-1 when performing steps 1 through 4.

1. Remove the Speaker Grille.
2. Remove the Front Cover.
3. Remove the Screen Assy.
4. Remove the Back Board.
5. Remove the Anode Lead Wire from the Flyback Transformer.
6. Remove the PCB-CRT.
7. Remove 4 hex-screws "a" retaining the Optical Unit. [Fig. 5-1]
8. Remove 4 screws "b" retaining the Lens.
- Note:** DO NOT loosen the RED screws. Doing so will break the seal between the C-Element and the # 6 Lens, causing leakage of the CRT Coolant.
9. Remove 4 screws "c" retaining the CRT. [Fig. 5-2]
10. Remove the Deflection Yoke from the neck of the CRT. [Fig. 5-7]

INSTALLATION OF THE CRT

Note: The replacement CRT is supplied as an assembly comprised of the CRT and the Inner Lens with the space between them filled with ethylene glycol. Care should be taken during handling and installation to prevent shock from disrupting the seal or alignment between the CRT and Inner Lens. [Fig. 5-3]

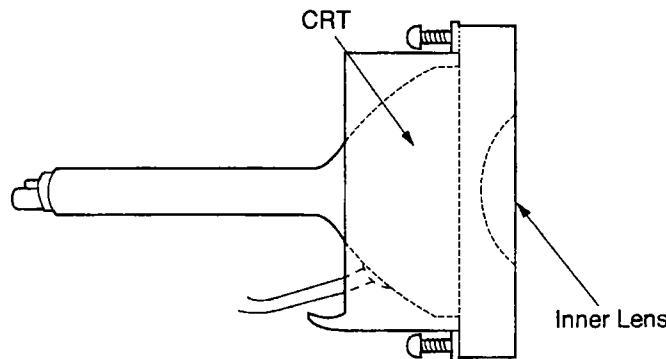

Fig 5-3

Note: The CRT fixing screws should not be loosened nor should they be removed. [Fig. 5-4]

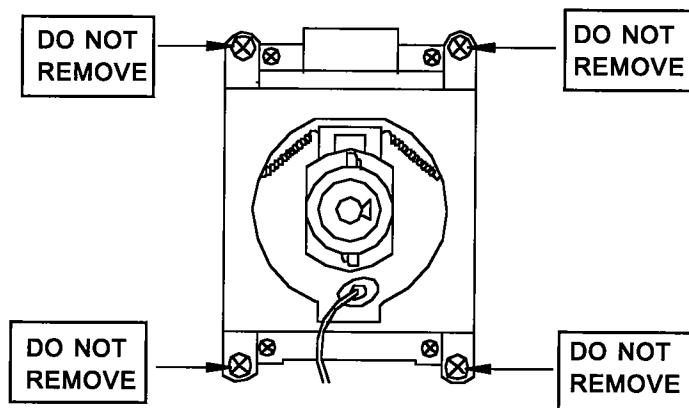

Fig 5-4

1. Carefully position the replacement CRT and fasten in place using 4 screws "d" shown in Fig. 5-6.

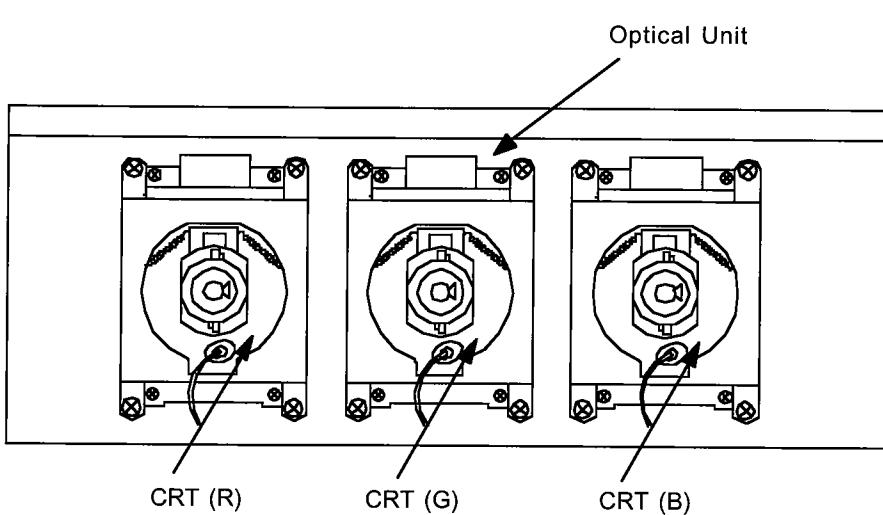

Fig 5-5

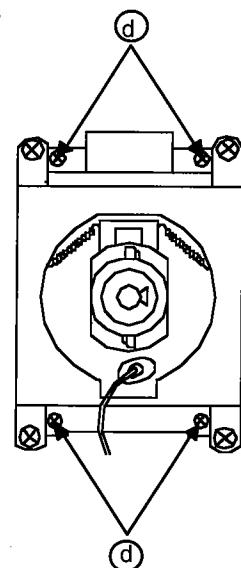

Fig 5-6

2. Install the Deflection Yoke on the CRT neck. [Fig. 5-7]
3. Install the Lens that was removed in steps 8 and 9 of Removal Of The CRT. [Figs. 5-1 and 5-2]
 - a) Position the Lens so that the Label faces the direction shown in Fig. 5-8.
 - b) Install the mounting screws. Refer to Fig. 5-1.
4. Install the PCB-CRT.
5. Insert the Optical Unit into the Light Box Assembly.
6. Insert the Anode Lead Wire into the Flyback Transformer.
7. Re-clamp the Lead Wire in its original position.

Note: Refer to Lead Dress Diagrams pages 46-47.

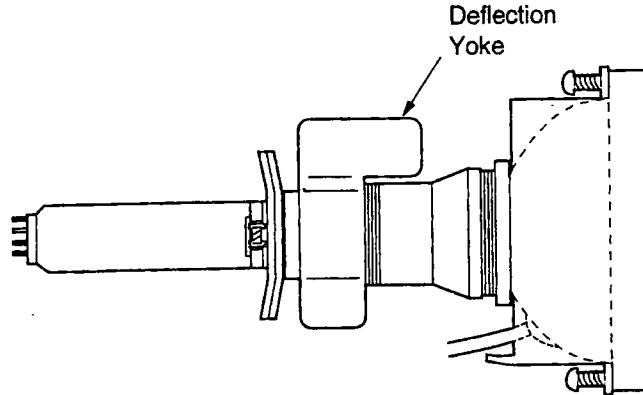

Fig 5-7

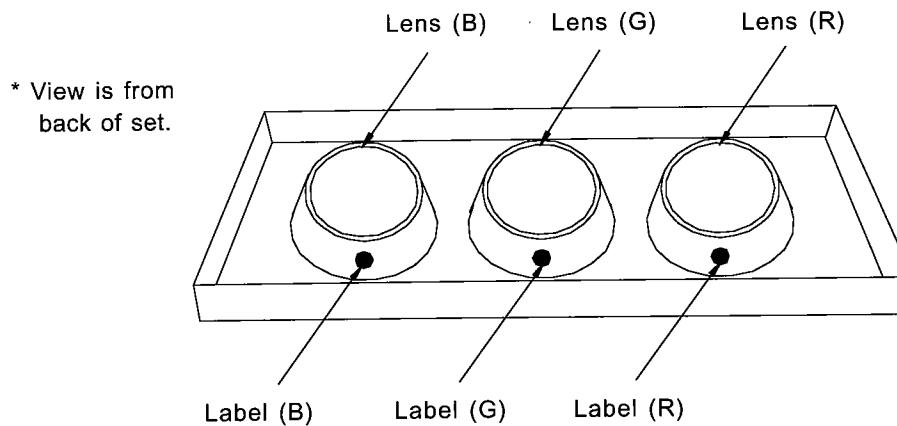

Fig 5-8

Adjustment procedures after replacing the CRT(s)

- CRT Cut Off / White Balance Adjustment
- Static Convergence Adjustment
- Dynamic Convergence Adjustment

ELECTRICAL ADJUSTMENTS

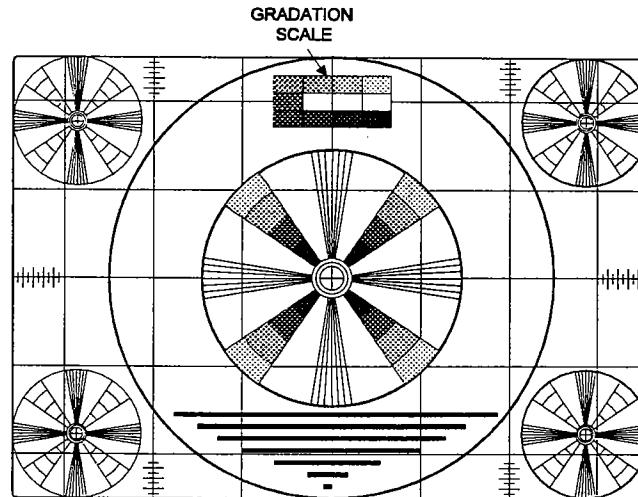

Note: Perform only the adjustments required.
Do not attempt an alignment if proper equipment is not available.

1. Measuring Equipment and Jigs

- * Oscilloscope (Unless otherwise specified, use 10:1 probes)
- * Signal Generator
- * Frequency Counter
- * Direct Current Voltmeter
- * Sweep Generator.
- * Direct Current Power Supply
- * Multiplex Audio Signal Generator
- * Direct Current Ampere Meter

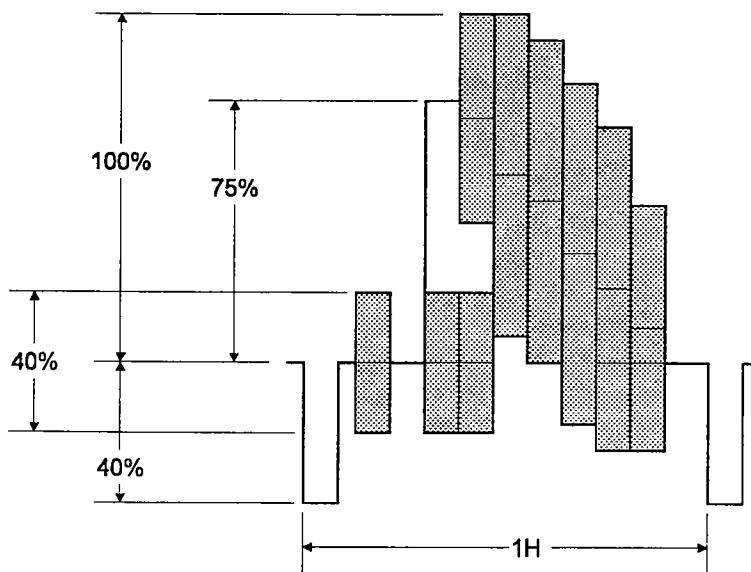

2. Test Signal**A. Monoscope Signal**

Note: Connect the unit to a VCR and play an *alignment tape (Monoscope), if you do not have a monoscope signal source for adjustment.
(* Part Number: 859C568020)

**B. Color Bar Signal**

Use the color bar signal shown below, unless otherwise specified in this manual.

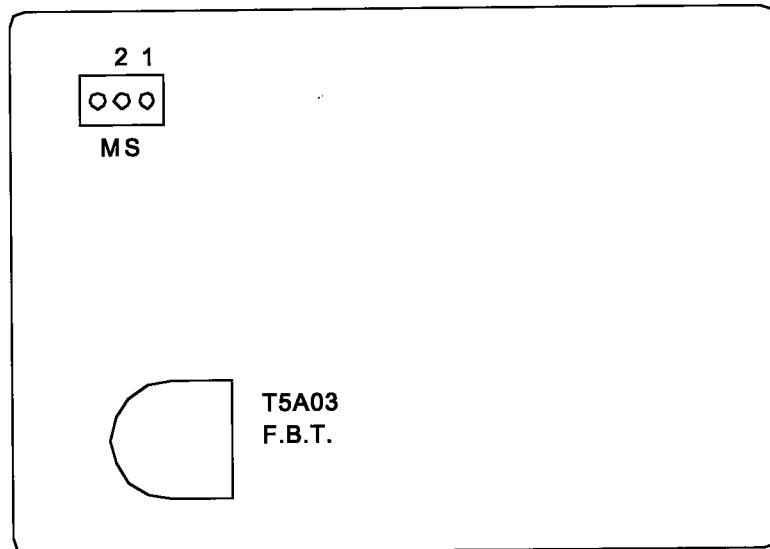

Monoscope Signal

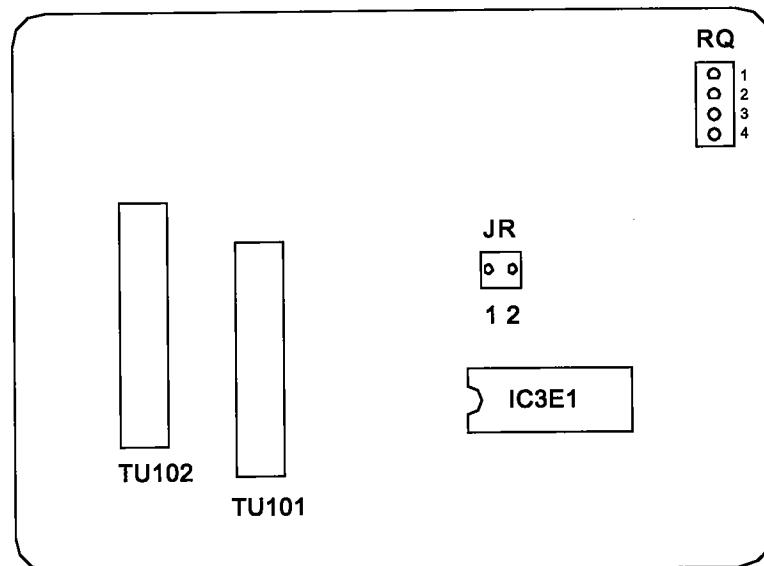

Split-Field Color Bars (100% window)

4. Option Menu Set Up

Follow the steps below for the Option Menu set up:

1. Set the receiver to the "TV" mode.
2. Select the "MENU" display by pressing the "MENU" button once.
3. Press the number buttons "2", "3", "5", "8" in sequence to select the "Option Menu" display.
4. Set the "Option Menu" as shown in the table below using the "ADJUST" and "ENTER" buttons.
5. Press the "MENU" button twice to return to normal viewing.

Option Menu

Initial	
Hotel	: OFF
Power Restore	: OFF

5. Service Menu Set Up

Follow the steps below for the initial set up:

1. Select the "MENU" display by pressing the "MENU" button once.
2. Press the number buttons "1", "3", "7", "0" in sequence to select the "SERVICE MENU" display.
3. Press the "ADJUST" button to select "Initial."
4. Press "ENTER."

NOTE: At this time channel 3 is automatically selected.

CAUTION: DO NOT ACTIVATE E2 RESET AS THIS WILL RESET ALL ALIGNMENT DATA.

Service Menu

E2 RESET	3 Dia:	On	
Hotel:	Off	Auto Clock:	On
Power Restore:	Off	Guide Plus:	Off
Antenna:	2		
Input:	3		
When Muting:	On		
Firmware Version Number <input type="text"/> <input type="text"/> <input type="text"/>			

5. Circuit Adjustment Mode

Except for the following, all adjustment items must be performed using the remote hand unit.

Adj. Item	Description
6	Lens Focus
7	Electrostatic Focus

A. Activating the Circuit Adjustment Mode

1. Press the "MENU" button on a remote hand unit.
(The "MENU" display will appear.)
2. Press the number buttons "2", "3", "5", "7" in sequence.
(The screen will change to the circuit adjustment mode.)

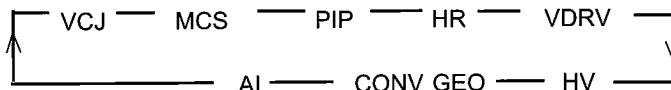

Note: Repeat steps 1 and 2 if circuit adjustment mode does not appear on screen.

B. Selection of adjustment Functions and Adjustment Items

To select an adjustment item in the circuit adjustment mode, first select the adjustment function that includes the specific adjustment item to be selected. Then, select the adjustment item.

Refer to the following pages for the listing of adjustment functions and adjustment items.

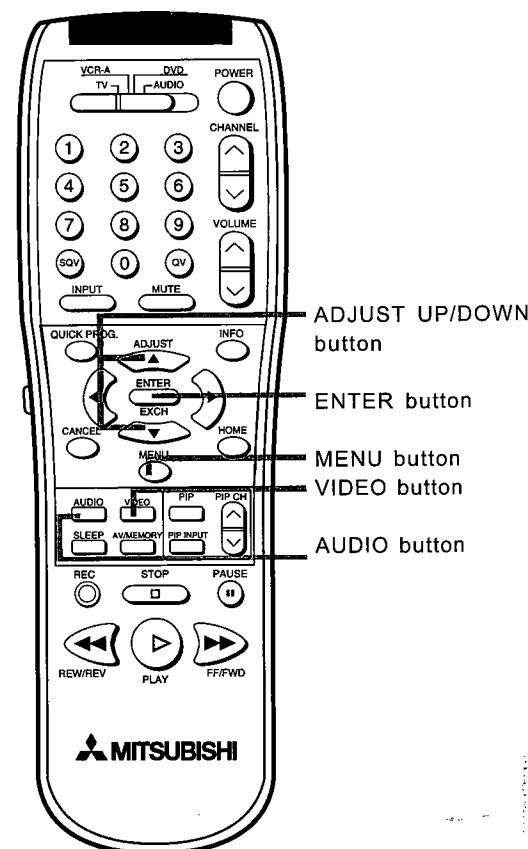

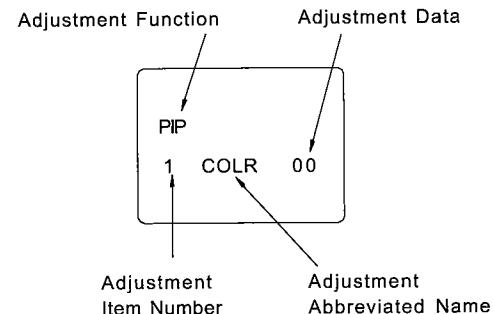

1. Press the "AUDIO" button on a remote hand unit to select an adjustment function. Each time the button is pressed, the adjustment function changes in the following sequence.

2. Press the "VIDEO" button to select a specific adjustment item. The adjustment item number increases each time the "VIDEO" button is pressed.

C. Changing data

After selecting an adjustment item, use the 'ADJUST' button to change the adjustment data.

D. Saving Adjustment Data

Press "ENTER" to save the adjustment data in memory. The character display turns red for approximately one second in this step.

Note: If the circuit adjustment mode is terminated without pressing the "ENTER" button, changes in adjustment data are not saved (with the exception of PIP adjustments).

E. Terminating the Circuit Adjustment Mode

Press the "MENU" button on the remote hand unit twice to terminate the circuit adjustment mode.

Note: The circuit adjustment mode can also be terminated by turning the power off.

When Replacing the EEPROM (IC701)

The EEPROM (IC701) stores the adjustment data. After replacing the EEPROM, readjust the data to the values given in the following tables. If good performance is not obtained with these values, perform the Adjustment Procedure(s) given in the Note column.

[MULTI CHANNEL SOUND CIRCUIT]		Adjustment purpose Adjust right and left separation.
2. Separation		Symptom when incorrectly adjusted Poor or no stereo separation.
Measuring Instrument	Oscilloscope	
Test Point	Connector "JR" pin 2	
Exit Trigger	----	
Measurement range	Division 10mV Time 2ms	
Input Signal	RF signal (Stereo Sound)	
Input Terminal	RF IN terminal	
<p>PCB-SIGNAL (COMPONENT SIDE)</p>		
<p>Note: This adjustment must follow item 1 (Input Level)</p> <p>1. Supply an RF signal (L-CH stereo sound 300Hz 30% MOD). 2. Connect the oscilloscope to connector "JR" pin 2. 3. Press the "MENU" button on a remote hand unit. 4. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode. 5. Set the adjustment function to "MCS" by pressing the "AUDIO" button. 6. Make sure that the value of item "3 SPC" is 16. 7. Select adjustment item "2 WDE" using the "VIDEO" button 8. Using the "ADJUST" button, set the adjustment data so that the amplitude of the 300Hz waveform is at minimum. 9. Change the modulation frequency to 3kHz. 10. Select adjustment item "3 SPC" using the "VIDEO" button. 11. Using the "ADJUST" button, set the adjustment data so that the amplitude of the 3kHz waveform is at minimum. 12. Repeat steps 7 and 8 . 13. Press "ENTER" to write the adjustment data into memory. 14. Press the "MENU" button twice to terminate the circuit adjustment mode.</p>		

[High Voltage Circuit]		Adjustment purpose	CRT anode voltage.
3. High Voltage Control		Symptom when incorrectly adjusted	Too dark picture.
Measuring Instrument	DC Voltmeter		
Test Point	- Lead: pin 1 of connector DQ + Lead: pin 2 of connector DQ		Note: This adjustment must follow item 4 (CRT Cut OFF, White Balance). Set the CONTRAST control to maximum and BRIGHTNESS control to center position..
Exit Trigger	-----		
Measurement range	----		
Input Signal	VIDEO signal (Monoscope)		
Input Terminal	VIDEO IN terminal		

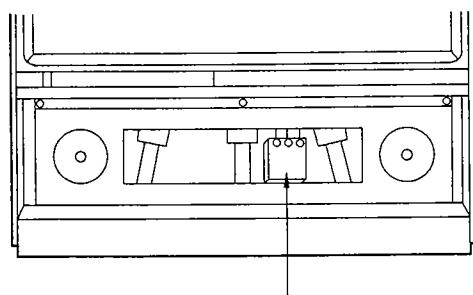

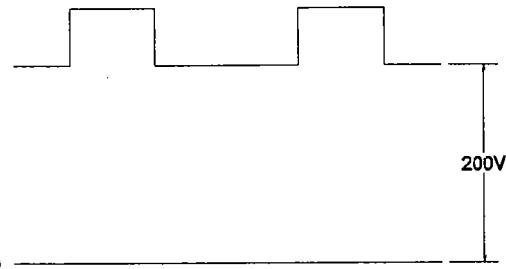

PCB-MAIN (COMPONENT SIDE)

The diagram shows a rectangular PCB area. On the left side, there is a rectangular outline representing a connector. Inside this outline, at the top, are two small circles labeled '2' and '1' respectively. Below these circles is a larger rectangle containing three smaller circles labeled 'ooo'. To the right of this connector outline, the letters 'DQ' are printed. In the bottom-left corner of the PCB area, there is a small, irregular shape representing a component. To its right, the text 'T5A03' and 'F.B.T.' are printed vertically.

[CRT Circuit]		Adjustment purpose	To set the cut off point of the three CRTs
4. CRT Cut Off, White Balance		Symptom when incorrectly adjusted	Monochrome with color tint, or incorrect brightness.
Measuring Instrument	DC Ammeter Oscilloscope	1. Select the EXT-1 input with no signal supplied.	
Test Point	TP6R/G/B	2. Press the "MENU" button on a remote hand unit.	
Exit Trigger	-----	3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.	
Measurement Range	Division 5V Time 2ms	4. Set the adjustment function "VCJ" by pressing the "AUDIO" button.	
Input Signal	----	5. Set the items shown in the Table to the given data values.	
Input Terminal		6. Observe the waveform at TP6R.	

Abbreviated Name	Data
3 BRT	31
5 CTG	7
6 CTB	7
7 DRG	42
8 DRB	42
25 SBR	31

1. Select the EXT-1 input with no signal supplied.
2. Press the "MENU" button on a remote hand unit.
3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.
4. Set the adjustment function "VCJ" by pressing the "AUDIO" button.
5. Set the items shown in the Table to the given data values.
6. Observe the waveform at TP6R.
7. Adjust the SCREEN control (R) so that the voltage is 200V.
8. Observe the waveform at TP6G.
9. Adjust the SCREEN control (G) so that the voltage is 200V.
10. Observe the waveform at TP6B.
11. Adjust the SCREEN control (B) so that the voltage is 200V.

[Video Circuit]		Adjustment purpose To set the beam current to its optimum value.
7. Sub Contrast		Symptom when incorrectly adjusted Excessive or insufficient contrast.
Measuring Instrument	DC Milliammeter	Note: This adjustment must follow item 4 (CRT Cut-Off, White Balance). Preheat the set for two minutes or more.
Test Point	+ Lead: pin 3 of connector MS - Lead: pin 1 of connector MS	1. Supply an RF signal (gray scale 87.5% MOD). 2. Press the "MENU" button on a remote hand unit. 3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode. 4. Set the adjustment function "VCJ" by pressing the "AUDIO" button. 5. Select the adjustment item "69 SCT" using the "VIDEO" button. 6. Measure the current at pins 1 and 3 of connector MS (Plus lead to pin 3). 7. Set the adjustment data so the DC milliammeter reads $725 \pm 25\mu A$. 8. Press "ENTER" to write the adjustment data into memory. 9. Press the "MENU" button twice to terminate the circuit adjustment mode.
Exit Trigger	-----	
Measurement range	3mA	
Input Signal	RF signal (Gray scale 87.5% MOD)	
Input Terminal	RF IN terminal	

PCB-MAIN (COMPONENT SIDE)

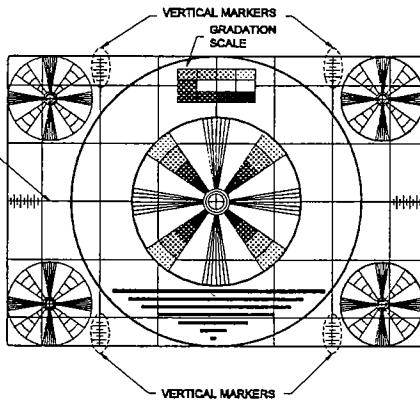

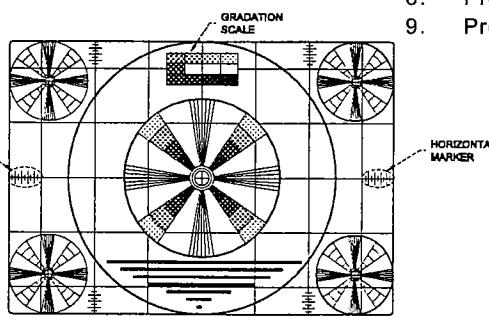

[Video Circuit]		Adjustment purpose Picture Luminance.
8. Black Level		Symptom when incorrectly adjusted Excessive or insufficient brightness.
Measuring Instrument	-----	Note: This adjustment must follow item 7 (Sub-Contrast).
Test Point	-----	1. Supply an VIDEO signal (monoscope). 2. Press the "MENU" button on a remote hand unit. 3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode. 4. Set the adjustment function "VCJ" by pressing the "AUDIO" button. 5. Select the adjustment item "25 SBR" using the "VIDEO" button. 6. Observe the gradation pattern inside a monoscope signal, and set the adjustment data so that both levels, at the 10% and 0% areas of the gradation pattern, are the same (black level 8%) using the "ADJUST" button. 7. Press "ENTER" to write the adjustment data into memory. 8. Press the "MENU" button twice to terminate the circuit adjustment mode.
Exit Trigger	-----

60%	70%	80%	90%

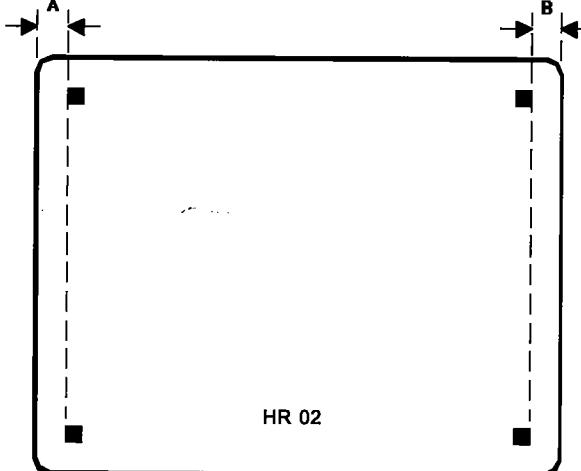

GRADATION SCALE

[Deflection Circuit]		Adjustment purpose	To set vertical linearity.
9. Vertical Linearity, Height and S-Correction		Symptom when incorrectly adjusted	Incorrect vertical height and linearity.
Measuring Instrument	-----	1. Supply a VIDEO signal (monoscope)	
Test Point	-----	2. Press the "MENU" button on a remote hand unit.	
Exit Trigger	-----	3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.	
Measurement range	-----	4. Set the adjustment function to "VCJ" by pressing the "AUDIO" button.	
Input Signal	VIDEO signal (Monoscope)	5. Select adjustment item "47 VHT" using the "VIDEO" button. Adjust so that the vertical markers are equal using the "ADJUST" button.	
Input Terminal	VIDEO IN terminal	6. Select the adjustment item "42 VLR" using the "VIDEO" button	
		7. Set the adjustment data so that the largest circle is round using the "ADJUST" button.	
		8. Supply a VIDEO signal (crosshatch).	
		9. Select the adjustment item "41 VSC"(Vertical S) using the "VIDEO" button.	
		10. Set the adjustment data so that the height of the squares in the cross hatch signal are equal at the top, bottom and middle of the screen using the "ADJUST" button.	
		11. Press "ENTER" to write the adjustment data into memory.	
		12. Press the "MENU" button twice to terminate the circuit adjustment mode.	
			

[Deflection Circuit]		Adjustment purpose	To set the width of the picture.
10. Horizontal Width		Symptom when incorrectly adjusted	Picture compressed or expanded horizontally.
Measuring Instrument	-----	Note: This adjustment must follow item 4 (CRT Cut Off, White Balance) and item 3 (High Voltage Control). Perform this adjustment alternately with item 11 (Raster Distortion Correction).	
Test Point	-----	1. Supply a VIDEO signal (monoscope).	
Exit Trigger	-----	2. Cover the RED and BLUE lenses, producing a GREEN monochrome picture.	
Measurement range	-----	3. Press the "MENU" button on a remote hand unit.	
Input Signal	VIDEO signal (Monoscope)	4. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.	
Input Terminal	VIDEO IN terminal	5. Set the adjustment function to "CONV GEO" by pressing the "AUDIO" button.	
		6. Select the adjustment item "0 HWID" using the "VIDEO" button.	
		7. Set the adjustment data so the sum of the horizontal width markers is 6.0 using the "ADJUST" button.	
		8. Press "ENTER" to write the adjustment data into memory.	
		9. Press the "MENU" button twice to terminate the circuit adjustment mode.	
			

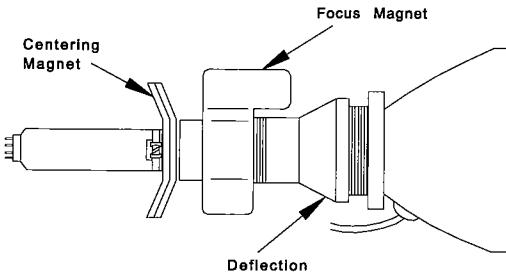

[Raster Correction Circuit]	Adjustment purpose	To correct picture distortion.	
11. Raster Correction	Symptom when incorrectly adjusted	Distorted picture.	
Measuring Instrument		1. Supply a VIDEO signal (Crosshatch) 2. Cover the RED and BLUE lenses, producing a GREEN crosshatch picture. 3. Press the "MENU" button on a remote hand unit. 4. Press the buttons 2-3-5-7 in sequence. (The screen will change to the circuit adjustment mode.) 5. Set the function to "CONV GEO." ("AUDIO" button) 6. Set the data of the items below so that all the green horizontal and vertical lines are straight and spacing is linear. 7. Write the data into memory. (Press "ENTER") 8. Terminate the circuit adjustment mode. (Press "MENU" twice) NOTE: Adjustment 14 (Dynamic Convergence) must be performed immediately after this adjustment.	
Test Point	---		
Exit Trigger	---

[Screen Character Circuit]		Adjustment purpose	To position the character display.
12. Character Position		Symptom when incorrectly adjusted	Incorrect Character position
Measuring Instrument	-----	1.	Supply a VIDEO signal (Monscope).
Test Point	-----	2.	Press the "MENU" button on a remote hand unit.
Exit Trigger	-----	3.	Press the buttons 2-3-5-7 in sequence. (The screen will change to the circuit adjustment mode.)
Measurement range	-----	4.	Set the function to "HR" using the "AUDIO" button.
Input Signal	Standard RF Broadcast	5.	Using the "ADJUST" button, align so that the widths for A and B are equal.
Input Terminal	Antenna A/B		

 HR 02

[CRT]		Adjustment purpose	To correct convergence caused by installation direction.
13. Static Convergence		Symptom when incorrectly adjusted	Color edging.
Measuring Instrument	-----	1.	Degauss the shield cover and bracket unit of the CRT assembly and chassis sheet metal.
Test Point	-----	2.	Supply a VIDEO signal (crosshatch).
Exit Trigger	-----	3.	Make sure that the vertical linearity is generally correct. If not, change the adjustment data of "VCJ" item "42 VLR" in the circuit adjustment mode so that the vertical height and linearity is roughly correct. (refer to Adjustment 9).
Measurement range	-----	4.	Cover the RED and BLUE lenses with lens caps to produce a GREEN monochrome picture. Rotate the centering magnet attached to the GREEN CRT, so that the center of the displayed crosshatch signal is set at the screen center.
Input Signal	VIDEO signal (Crosshatch)	5.	Remove lens caps covering the RED and BLUE lenses.
Input Terminal	VIDEO IN terminal	6.	Rotate the deflection Yoke and Centering Magnet on the RED CRT, so that the center horizontal line of the displaced RED crosshatch signal is converged on the GREEN signal to produce a yellow horizontal line.
		7.	Rotate the deflection Yoke and Centering Magnet on the BLUE CRT, so that the center horizontal line of the displaced BLUE crosshatch signal is converged on the GREEN signal to produce a white horizontal line.

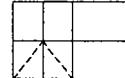

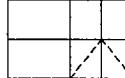

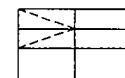

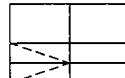

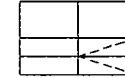

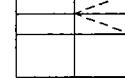

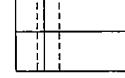

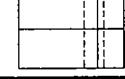

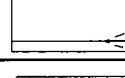

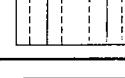

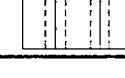

[Convergence Circuit]		Adjustment purpose To correct color misconvergence in RED, GREEN, and BLUE.
14. Dynamic Convergence		Symptom when incorrectly adjusted Colors misconverged.
Measuring Instrument	-----	Note: This adjustment must follow item 13 (Static Convergence). Dynamic convergence should not be attempted until the static convergence has been properly adjusted. (including centering adjustment, if required). Cover the RED or BLUE lens with a lens cap, and adjust the color convergence in GREEN and RED or in GREEN and BLUE.
Test Point	-----	1. Supply a VIDEO signal (crosshatch).
Exit Trigger	-----	2. Press the "MENU" button on a remote hand unit.
Measurement Range	-----	3. Press the numerical buttons 2-3-5-9 in sequence to change the screen to the adjustment mode.
Input Signal	VIDEO signal (Crosshatch)	4. Adjust the convergence according to the steps described below: a. Press the "VIDEO" button to select a specific adjustment item. b. Press the "ADJUST UP/DOWN" button to change adjustment data. c. Press "ENTER" to switch between RED and BLUE.
Input Terminal	VIDEO IN terminal	Note: The newly entered data is automatically recorded.

[PIP Circuit]		Adjustment purpose	Set the clock frequency of PIP.
15. PIP fsc		Symptom when incorrectly adjusted	Interference or no color in the sub picture.
Measuring Instrument	Frequency Counter		
Test Point	TP61		
Exit Trigger	----		
Measurement range	----		
Input Signal			
Input Terminal			

1. Supply a Video Color Bar signal input.
2. Select PIP window to display the Color Bar image.
3. Switch INPUT to External signal mode. Do not supply an input signal.
4. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.
5. Set the adjustment function to "PIP" by pressing the "AUDIO" button.
6. Adjust item #44 FSC from 0 to 2.
7. Observe the frequency at TP61
8. Adjust VC7001 so that the frequency is $3.579545\text{ MHz} \pm 50\text{ Hz}$.
9. Set #44 FSC back to a value of 0.
10. Press "MENU" twice to terminate the circuit adjustment mode.

PCB-PIP/APT (COMPONENT SIDE)

[PIP Circuit]		Adjustment purpose	To set the color level between main and sub picture.
16. PIP Chroma Gain		Symptom when incorrectly adjusted	Different color level between main and sub picture.
Measuring Instrument	Oscilloscope		
Test Point	TP63 (pin 5 of IC7001)		
Exit Trigger	----		
Measurement range	Division 20mV Time 10μs		
Input Signal	VIDEO signal (Color Bar)		
Input Terminal	VIDEO IN terminal		

- Note:** Preheat the set for one minute or more.
1. Supply a VIDEO signal (color bar).
 2. Press the "MENU" button on a remote hand unit.
 3. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.
 4. Set the adjustment function to "PIP" by pressing the "AUDIO" button.
 5. Set all the items in adjustment function "PIP" to the initial data value (refer to page 21) using the "VIDEO and AUDIO" button.
 6. Observe the waveform at TP63 (pin 5 of IC7001).
 7. Select adjustment item "1 COLOR" using the "VIDEO" button.
 8. Set the adjustment data so that the chroma signal amplitude of sub picture is $90 \pm 5\%$ of main picture using the "ADJUST" button (Fig.7).
 9. Press the "ENTER" to write the adjustment data into memory.
 10. Press the "MENU" button twice to terminate the circuit adjustment mode.

Note: Adjustment item 17 (PIP Sub Tint) must be performed immediately after this adjustment.

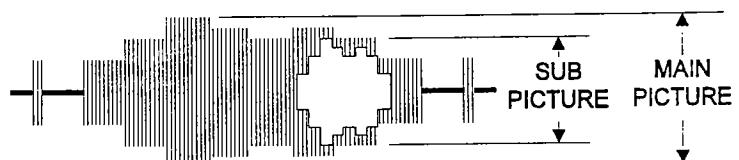

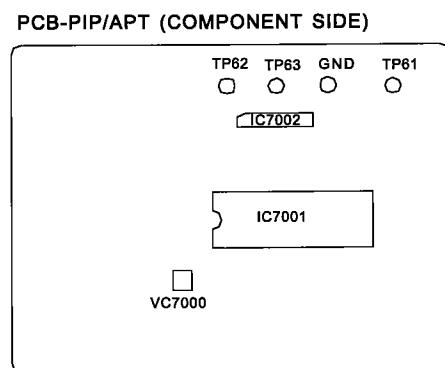

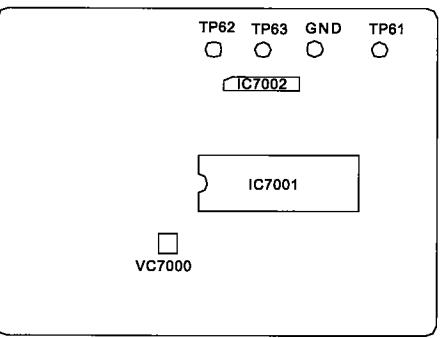

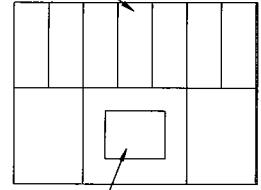

Fig. 7

[PIP Circuit]		Adjustment purpose To obtain the same hue in the main and sub picture.
17. PIP Sub Tint		Symptom when incorrectly adjusted Different hue between the main and sub picture, and color smear.
Measuring Instrument	----	Note: Preheat the set for one minute or more. This adjustment must follow item 16 (PIP Chroma Gain)
Test Point	----	1. Supply a VIDEO signal (color bar).
Exit Trigger	----	2. Activate PIP and display the same picture on main screen and sub picture screen.
Measurement range	----	3. Press the "MENU" button on a remote hand unit.
Input Signal	VIDEO signal (Color Bar)	4. Press the numerical buttons 2-3-5-7 in sequence to change the screen to the circuit adjustment mode.
Input Terminal	VIDEO IN terminal	5. Set the adjustment function to "PIP" by pressing the "AUDIO" button.
		6. Select adjustment item "2 TINT" using the "VIDEO" button.
		7. Set the adjustment data so that the sub picture corresponds to the hue in the main picture using the "ADJUST" button.
		8. Press the "ENTER" to write the adjustment data into memory.
		9. Press the "MENU" button twice to terminate the circuit adjustment mode.

[PIP Circuit]		Adjustment purpose To obtain the proper contrast ratio in the sub picture.
18. PIP Contrast		Symptom when incorrectly adjusted Sub picture too light or too dark.
Measuring Instrument	Oscilloscope	1. Apply Color Bar signal to External Input and select this image on both the Main and PIP pictures.
Test Point	TP-62	2. Using the PIP position button on a remote hand unit, adjust to place the PIP window as shown in figure 8 .
Exit Trigger		3. Connect Oscilloscope probe to TP-62 and observe the waveform.
Measurement range		4. Synchronize the waveform on the Oscilloscope as shown in figure 8 .
Input Signal	VIDEO (Color Bars)	5. Press the "MENU" button on a remote hand unit.
Input Terminal	VIDEO IN terminal	6. Press the numerical buttons 2-3-5-7 in sequence to enter the circuit adjustment mode.
PCB-PIP/APT (COMPONENT SIDE)		7. Select the "PIP" function using the "AUDIO" button.
		8. Adjust item "0 CONT" using the "ADJUST UP/DOWN" buttons to obtain the waveform ratio shown in figure 7 (Adjustment #16). PIP amplitude should be equal to $90 \pm 5\%$ of Main picture.
		9. Press the "ENTER" button to write the adjustment data into memory.
		10. Press the "MENU" button twice to terminate the circuit adjustment mode.
		Main Picture
		
		PIP Window

CHIP PARTS REPLACEMENT

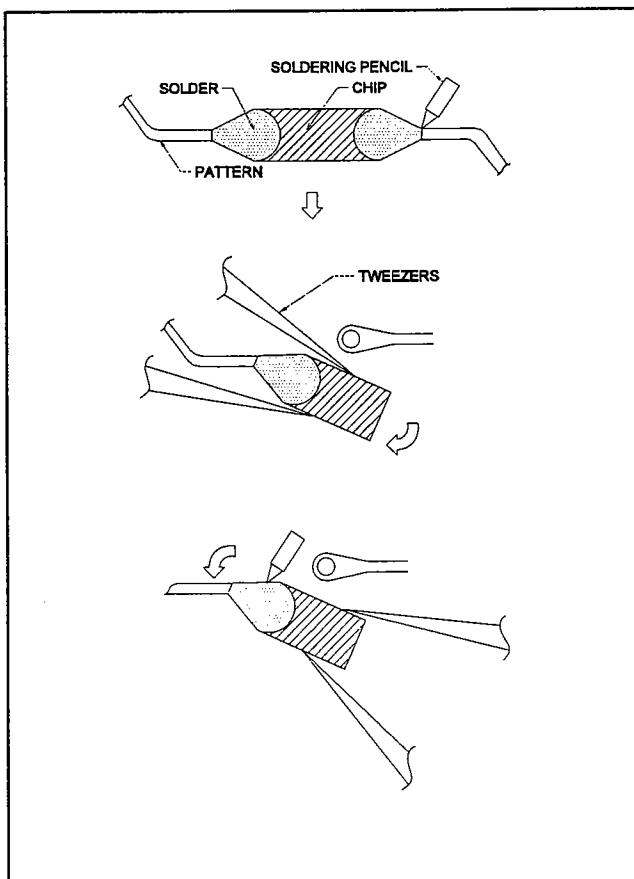

Some resistors, shorting jumpers (0 Ohm resistors), ceramic capacitors, transistors and diodes are chip parts. The following precautions should be taken when replacing these parts.

CAUTIONS:

1. Use a fine tipped, well insulated soldering iron (approximately 30 watts), and tweezers.
2. Melt the solder and remove the chip parts carefully so as not to tear the copper foil from the printed circuit board.
3. Discard removed chips; do not reuse them.
4. Do not apply heat for more than 3 (three)seconds to new chip parts.
5. Avoid using a rubbing stroke when soldering.
6. Take care not to scratch, or damage the chip parts when soldering.
7. Supplementary cementing is not required

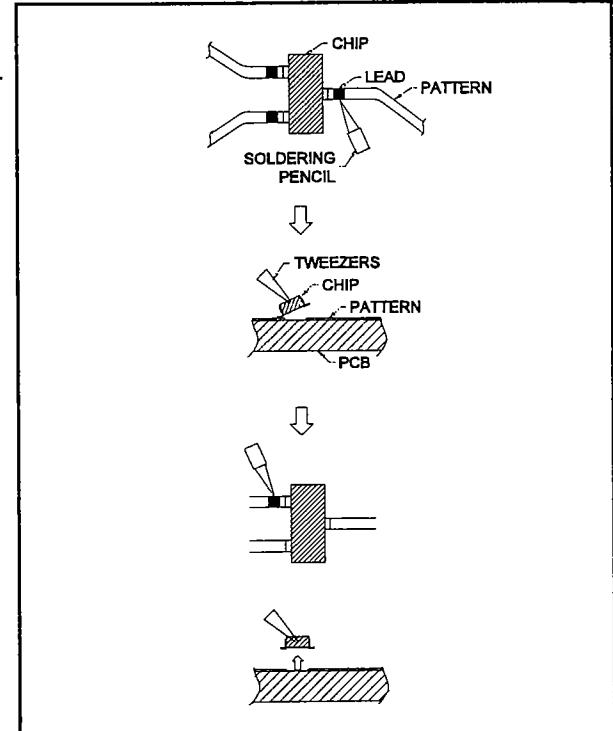

1. Removal of Chip Parts (Resistors, Capacitors, etc)

- A. Grasp the part with tweezers. Melt the solder at both sides alternately and remove one side of the part with a twisting motion.
- B. Melt the solder at the other side and remove the part.

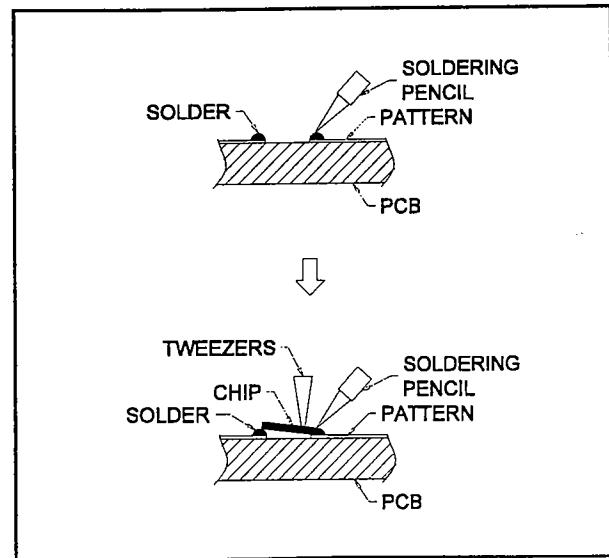

2. Removal of Chip Parts (Transistors)

- A. Melt the solder of one lead and lift the side of that lead upward.
- B. Simultaneously melt the solder of the other two leads and lift the part from the PCB.

3. Replacement

- A. Presolder the contact points on the circuit pattern.
- B. Press the part downward with tweezers and apply the soldering iron as shown

2. Electrical Parts and Others

A. Model : VS-45501/VS-45502/VS-45501A/VS-50501/VS-50502/VS-50501A

In order to expedite delivery of replacement parts orders, specify the following:

1. Model Number/Serial Number
2. Part Number and description
3. Quantity

Note: Unless complete information is supplied, delay in processing of orders will result.

B. Symbol

The electrical parts with shading are critical components, and the parts with * are warranty return items.

PACKAGING ITEMS

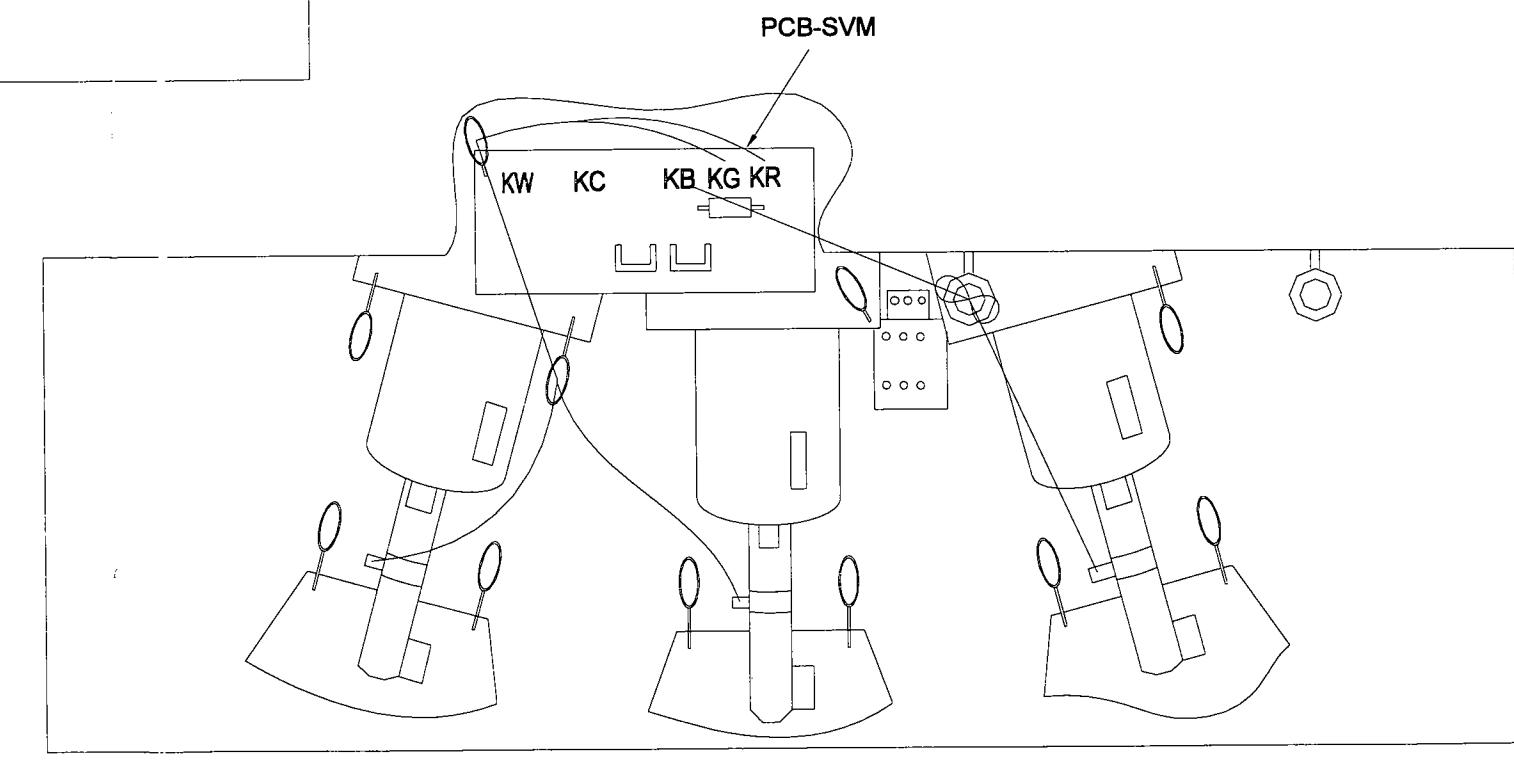

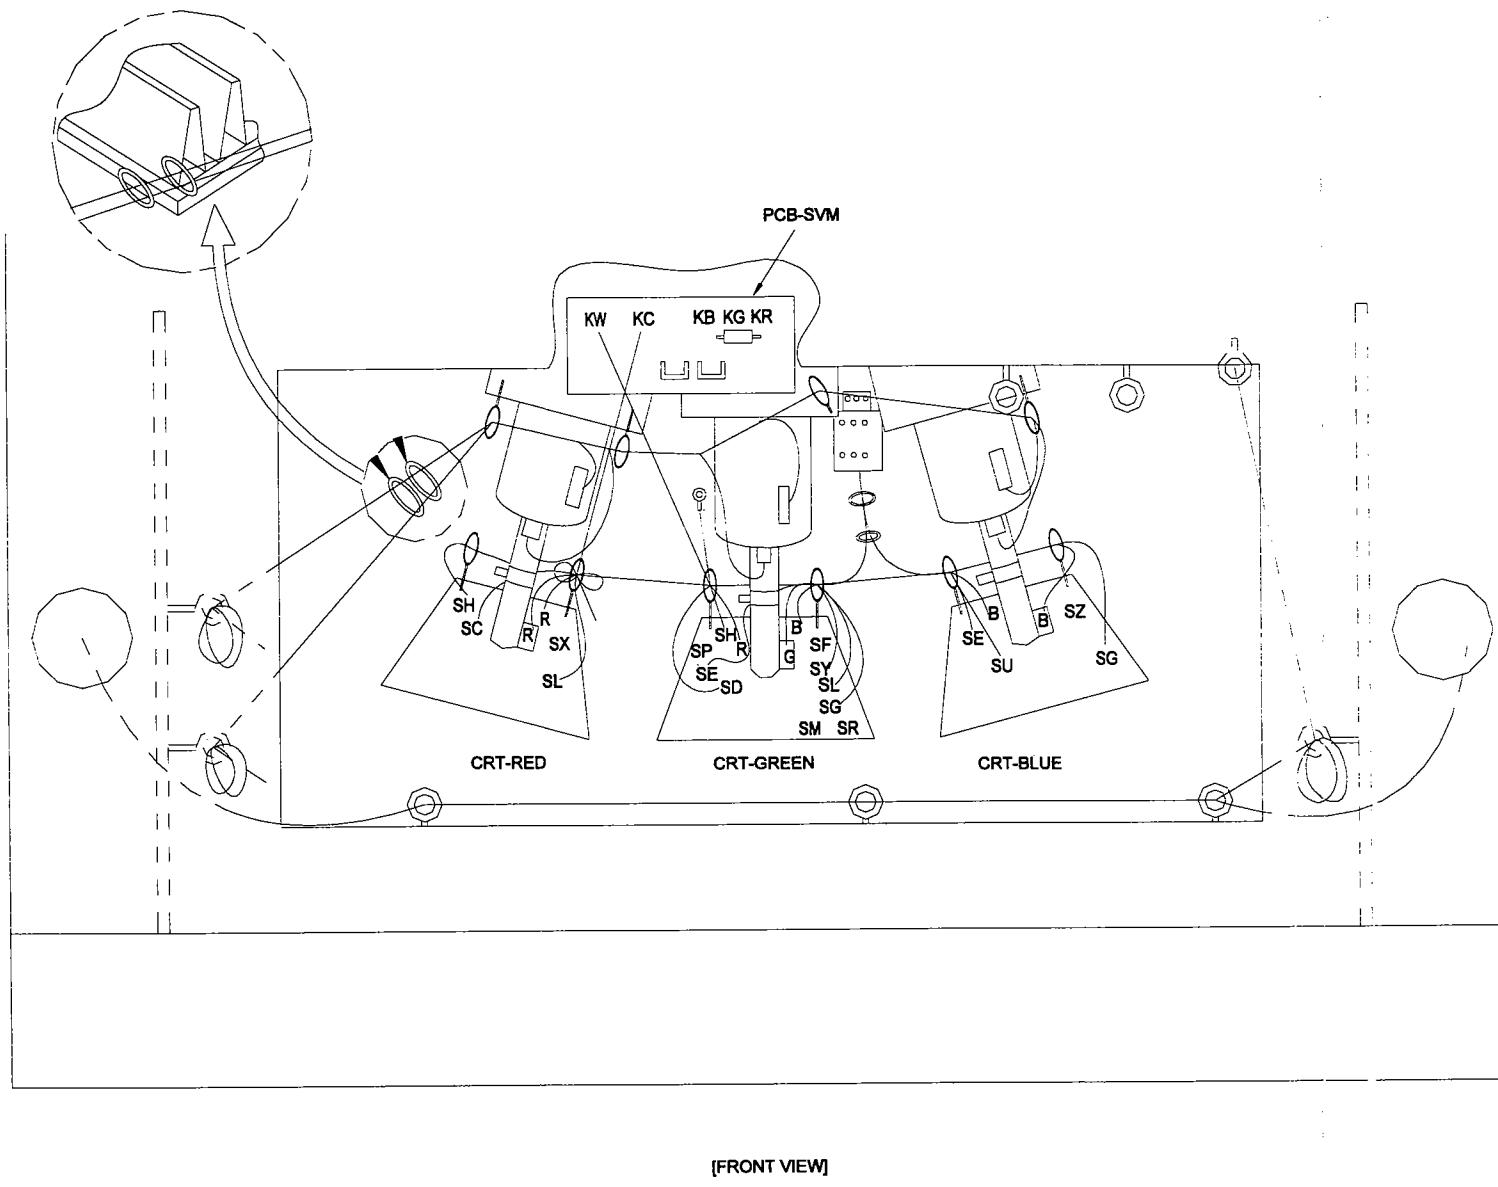

LEAD DRESS

CAUTION: THE INNER WIRES ARE CLAMPED SO THAT THEY DO NOT COME CLOSE TO HEAT GENERATING OR HIGH VOLTAGE PARTS. AFTER SERVICING, ROUTE ALL WIRES IN THEIR ORIGINAL POSITIONS.

Note: The Anode Lead Wires are routed so that no tension is applied to the Anode Caps. If the routes of the Anode Lead Wires are changed during service, return them to their original positions. Clamp the Lead Wires along the clamping path as shown in the figure below. Insure that the Lead Wires are not slack.
