1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).
When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE
(FOR CANADIAN MODEL ONLY)
Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE
(POUR MODÈLE CANADIEN SEULEMENT)
Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

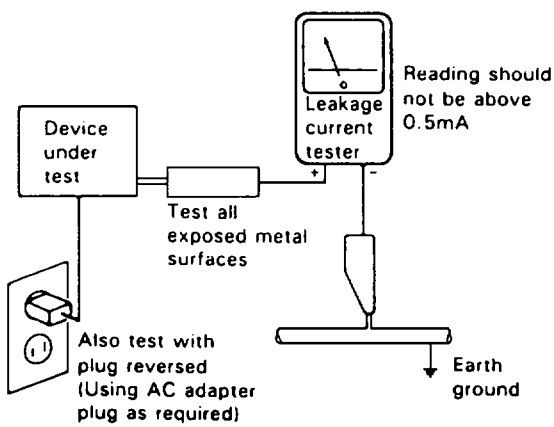
(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.



AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.
The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

Additional Laser Caution

1. The ON/OFF statuses of slider-position detection switches (PARK INNER, PARK OUTER on the PKSB assembly) and loading-status detection switches (SW 1, 2 and 3 on LMSB assembly) are detected by the microprocessor (IC101 in the PTCB unit). To permit the laser diode to oscillate, it is required to set the slider-position detection switch for the LD ACTIVE status (PARK INNER : OFF, PARK OUTER : OFF), and to set the loading-status detection switch for tilt neutral state (SW1 : ON, SW2 : OFF, SW3 : ON). As long as these requirements are not satisfied, the laser diode will not oscillate. When the requirements are met in any way, the laser diode can oscillate. The laser diode oscillation will continue if pin 13 of IC801 is shorted to GND or the emitter and collector of Q834 are shorted each other (fault condition) in FTAU unit.
   In the test mode ＊, the laser diode oscillates when the microprocessor detects a PLAY signal or when the PLAY key is pressed (S1309:ON in the U.COM assembly), with the above requirements satisfied.
2. When the cover is open, close viewing through the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

＊ : Refer to page 141.

2. DISASSEMBLY

2.1 TRAY (See Fig. 1 and 2)

1. Remove 13 screws to remove the bonnet.
2. Insert a finger between the front panel and SPDR UNIT, and turn the gear pulley counterclockwise (see from the top position.) until the tilt base comes to uppermost position. (Fig. 1)
3. Turn the worm gear counterclockwise (see from the front position.) to move the carriage assy from CD area to LD area. (The carriage assy moves from the center to rear of the carriage shaft.)
4. Turn the gear pulley clockwise (see from the top position.) where the tray starts to move out. Pull out the tray to enable the gear pulley to be turned by hand. (Fig. 2)
5. Tray put turn back for about 2–3 cm, then remove the tray while pressing two hooks of the tray at the same time.

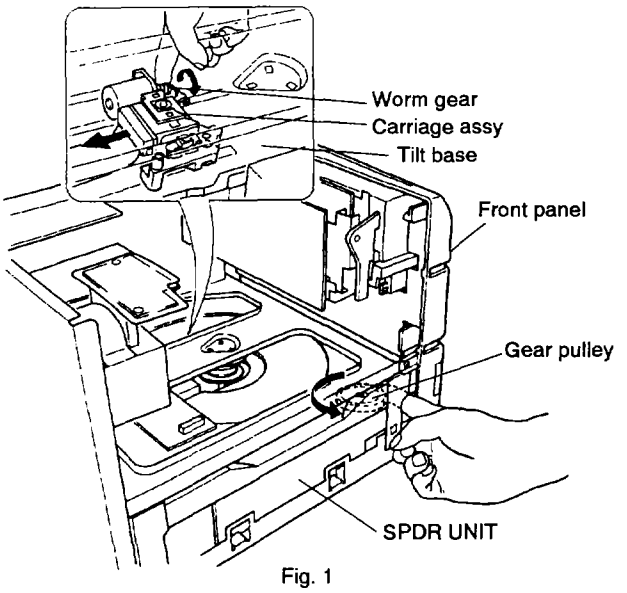

Fig. 1

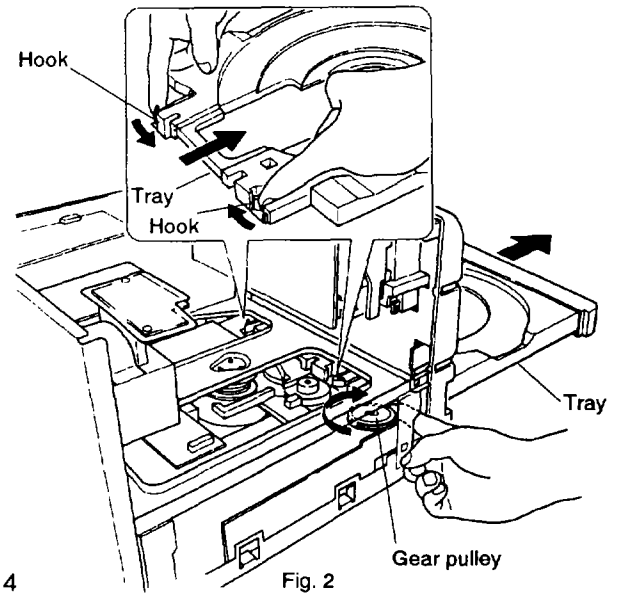

Fig. 2

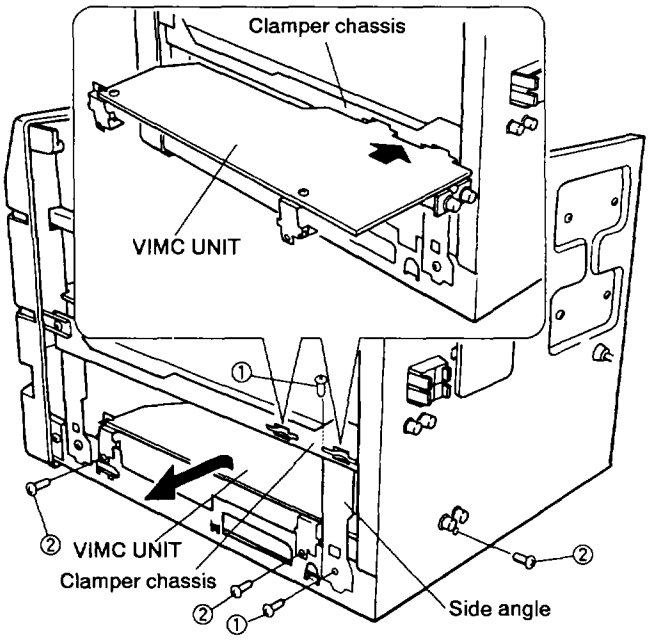
2.2 VIMC UNIT (See Fig. 3.)

1. Remove the bonnet and the tray. (Refer to section 2.1.)
2. Remove two screws ① to pull out the side angle.
3. Remove three screws ② to pull out the VIMC UNIT.
4. Insert the PCB to the installation hole of the clamper chassis.

• Remove five screws ② only HEZI/DI, HE, HE/FR and HB types.



HEZI/DI, HE, HE/FR and HB types only

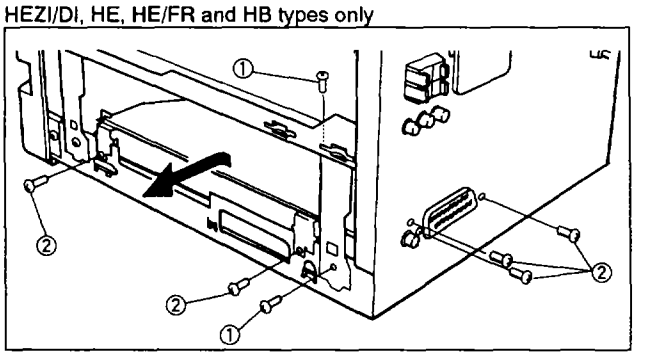


Fig. 3

2.3 PICKUP ASSY (See Fig. 4 and 5.)

1. Remove the bonnet and the tray. (Refer to section 2.1.)
2. Remove four screws ③ to remove the POWER AMP MODULE. (Fig. 4)
3. Reconnect the connector while pulling up the black portion of the connector. (Fig. 5)
4. Insert the screw driver to the hole of clamper chassis and remove a screw of the carriage shaft.
5. Remove the carriage assy with the carriage shaft.

Note: when installing the pickup assy, confirm that the CA hook is meshed with the tilt base.

2.4 SPINDLE MOTOR (See Fig. 6–8.)

1. Remove the bonnet and the tray. (Refer to section 2.1.)
2. Loosen a cord holder and remove a parallel wire.(Fig. 6)
3. Turn over the player. (Fig. 7)
4. Remove the VIMC UNIT. (Refer to section 2.2.)
5. Remove four screws ④ of side angle, five screws ⑤ of rear panel and two screws ⑥ of front panel to remove the CLD section by lifting up from the rear side. At this time, if the parallel wire of CN14 of FTAU UNIT is pulled out, CLD section will be separated from the player.
6. Remove four screws ⑦ , two flexible cables and a connector to remove the mecha. assy. (Fig. 8)
7. Remove the PCB holder by sliding it in the direction of arrow and remove three screws ⑧ to remove the spindle motor.

- Caution of replacing the transistor and fuse in the SPDR UNIT

When replacing the power transistor and thermal fuse, certainly fix their with the screw and nut.

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by " ◉ " are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

4.1 OVERALL WIRING DIAGRAM, LMSB, PKSB AND FG ASSEMBLIES

NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

1. **When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".**
2. **Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.**
3. **RESISTORS:**
   Unit: kiloΩ, MegaΩ, or Ω unless otherwise noted.
   Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
   Tolerance:(F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.
4. **CAPACITORS:**
   Unit: picoF or μF unless otherwise noted.
   Ratings: capacitor (μF) / voltage (V) unless otherwise noted.
   Rated voltage: 50V except for electrolytic capacitors.
5. **COILS:**
   Unit: milliH or μH unless otherwise noted.
6. **VOLTAGE AND CURRENT:**
   ▭ or ← V:
   DC voltage (V) in PLAY mode unless otherwise noted.
   ⇨ mA or ← mA:
   DC current in PLAY mode unless otherwise noted.
   Value in ( ) is DC current in STOP mode.
7. **OTHERS:**
   - Ⓐ or Ⓑ : Adjusting point.
   - ◁ : Measurement point.
   - The ⚠ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.
8. **SCH – □ ON THE SCHEMATIC DIAGRAM:**
   - SCH–□ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)

5. PCB PARTS LIST (For CL-J35LD/KU)

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*
- *When ordering resistors, first convert resistance values into code form as shown in the following examples.*

Ex.1 When there are 2 effective digits(any digit apart from 0), such as 560 ohm and 47k ohm(tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10¹ → 561 ····· RD1/8PM 5 6 1 J
47k Ω → 47 × 10³ → 473 ····· RD1/4PS 4 7 3 J
0.5 Ω → 0R5 ····· RN2H 0 R 5 K
1 Ω → 010 ····· RS1P 0 1 0 K

Ex.2 When there are 3 effective digits(such as in high precision metal film resistors).

5.62k Ω → 562 × 10¹ → 5621 ····· RN1/4PC 5 6 2 1 F

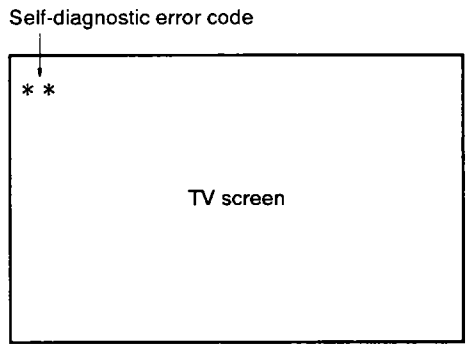
6. SELF-DIAGNOSTIC FUNCTIONS

6.1 SELF-DIAGNOSTIC FUNCTIONS

The self-diagnostic functions automatically display an error code on the TV screen and front panel fluorescent display section when there is an error. The customer checks the error code and conveys it to the service personnel to make repairs more efficient.

After an error occurs, even if the error code goes off, you can display the error code again by holding down the CLEAR key for 10 seconds (except a loading error L * display). However, if the power cord is unplugged, the error code information is lost.



This table explains the information for analyzing the cause when an error occurs with the CLD player.

Self-diagnostic error code	Contents	Conditions	Probable cause
H0	Spindle overcurrent detection error.	In the play state, overcurrent was detected in the spindle motor. Monitoring starts 5 seconds after the start of play or special playback mode, this error is detected if the overcurrent port is "L" for 4 seconds.	•Motor NG •Clamper rubbing
U0	FG abnormality error	①At LD start-up, the rate of rotation calculated from the FG was less than 15 rpm for 5 consecutive seconds from the spindle run command. ②At CD start-up, there was less than 1/8th rotation even after 5 seconds had passed since the end of acceleration. ③During play search, CD : subcodes are being read/LD : Phillips codes are being read and the spindle is locked, but a state in which the rate of rotation calculated from the FG was less than 15 rpm continued for 5 seconds or more. In the above case, it is judged that an abnormality has occurred in the FG sensor and that accurate rotation rate calculation has become impossible.	•FG sensor abnormality, FG signal not coming to mechanism controller •FG sensor clogged •Rubbing between FG sensor and slit •Turntable dropped •FG slit deposition NG
H1	Partial short error	①At LD start-up, the speed did not reach 1200 rpm within a certain time (12 seconds) after the spindle run command. ②At CD start-up, a certain speed (313 rpm) was not reached within 6 seconds from the end of spindle acceleration.	•Spindle motor NG •Commutator NG •Bearing too tight •Power supply NG
H2	Power supply abnormality error	– 5V power supply abnormality detected. The power supply abnormality port is constantly monitored and if its signal stays high for about 1 second consecutively, the power supply is judged to be abnormal.	• – 5V not fed from SPDR unit •Parts shorted
L *	Loading error	①When loading operation goes over time (approx. 10 sec.). ②When assist at disc sense entry ends and is not tilt neutral. ③When assist at set up entry ends and is not tilt neutral.	•Tilt switch 1, 2, 3 abnormal, so tilt/loading state not read in correctly •Tilt/loading mechanism mechanically locked •Drive IC NG •Power supply NG

Self-diagnostic error code	Contents	Conditions	Probable cause
E ＊	Slider error	During slider movement, a time over run occurred (track count search 20 seconds, mandatory movement 10 seconds)	•Slider ceased being able to run •The slider mechanism is mechanically locked and can no longer move to its target. •Slider position switch NG •Flexible cable pulled out •Drive IC NG •Power supply abnormal
U1	Mis clamp error	①During LD setup, after 1/8th rotation, the track count during 1/8 rotation exceeded 511. ②During start-up, the focus was lost once and refocusing was attempted, but the focus could not be locked. ③When the spindle motor rotation is stopped once before CDV A ⟷ V area change, but stop is not carried out within 2.0 seconds, it is determined that there are two discs on each other and clamp error is set. ④Two FG pulses did not come within 800 ms from the start of LD start-up. ⑤During CD start-up, it took more than 860 ms to reach 416 rpm (CD+LD both mounted detected). ⑥The disc clamp operation did not end within 5 seconds.	•Disc sandwiched •Disc shifted •Spindle motor NG •Disc scratched or dirty defocused during start-up •Two discs loaded •PU actuator NG •Tilt sensor NG •Tilt neutral NG (tilt base NG)
P ＊	Spindle error	①During TOC reading with an LD, the spindle servo was not locked within 60 seconds from the start of the spindle run. ②When CAV/CLV determination is not finished within 60 seconds from spindle servo lock. ③The codes could not be read for 10 − 15 seconds consecutively for an LD or 7 − 10 seconds for a CD/CDV and the spindle servo was not locked. ④The speed exceeded 2100 rpm during LD start-up.	P0:•PH code, SUB-Q code can not be read •VCO, PLL offset out of adjustment •Disc defect P5:•PAL disc, mirror disc, etc. PLAY •No RF P6:•Spindle servo does not lock •Spindle motor NG
F ＊	Focus error	①"In the "no disc" state, a setup command was received from the mode controller. ②When LD is out of focus when slider is moved to starting position during set up. In case of CD/CDV is NG even after three focus tries. ③During start-up, the maximum slider servo duty continued for 3 loops or more.	F5:•CD, LD on top of each other •LD scratched or dirty defocused during slider movement •DISC NG •Slider position switch NG F6:•Inner edge of disc scratched or dirty •Slider ran into inner edge mechanical stopper

※ Besides the above errors, there is the "U2" communications error (the mode controller could not communicate normally with the mechanism controller).
※ The probable cause is a defective mechanism controller, disconnected cable, etc..

Mechanism mode contents (meanig of ＊ for L ＊ etc.)

0 : Play
1 : Open
2 : Standby
3 : Clamp
4 : Disc sense
5 : Setup (rotation start)
6 : TOC read
7 : Play
8 : Search

※ 0 : Normal playing
7 : Moving to play operation

Note:

• When checking the player to the horizontally during playing the disc, be careful not to damage the disc and the pickup because of disc is rolled.

7. ADJUSTMENTS

7.1 FM/AM TUNER MODULE SECTION

1. FM TUNER SECTION

- Set the mode selector to FM BAND.
- Connect the wiring as shown in Fig. 7 - 1

• For AXQ1012 (KU, SD, SD/HO and SL types) and AXQ1013 (HE, HE/FR and HB types)

Step No.	Adjustment title	FM SG (1kHz, ± 75kHz dev.)		Reception Frequency Display	Adjustment Location	Specifications
		Frequency (MHz)	Level (dB μV)			
1	Center Adjustment	98 Non modulation	80 or more	98MHz	L6207	Adjust so that the DC voltage between Pin 4 and Pin 28 of IC6201 (or + leads of C6224 and C6261) becomes 0V ± 50mV.
2	Front End Sensitivity	98	0 - 30	98MHz	L6102 T6101	Adjust so that the DC voltage between the Pin 12 of IC6201 and GND (or + leads of C6238 and GND) becomes at maximum level.
3	Stereo Distortion	98	80	98MHz	T6101	Minimize the distortion with 1/8 rotation of the core.
4	TUNED IND. Lighting Level	98	15 ± 2	98MHz	VR6201	Adjust so that the indicator of TUNED IND. starts to light up.

Note :
- Before adjusting, make sure there is no gap between L6101 and L6102. If there is a gap between them, bring them into contact with each other first, and then make adjustments.
- Make indicator adjustments in order of AM → FM.

• For AXQ1016 (S/DF type)

7.2 POWER AMP. MODULE SECTION

1. Handling Precautions

- Since the heat sink and transistor metallic parts are connected to the Front Amp. output, make sure they do not contact the GND (chassis) or other circuits.
- Since there is residual high voltage in the ± B1 in the FRONT 50W assy and ± B2 in the REGULATOR assy (or REAR REGULATOR assy) even when the power is OFF, caution should be exercised. (If necessary, the voltage should be discharged).
- When handling the Power Amp. Module, make sure you do not touch the fan motor blade.

2. Adjustment and Confirmation of Idle Current

- Basically, the idle current needs to be confirmed when replacing a power transistor, driver transistor, or bias transistor, or when the entire split board assy of the Power Amp. Module has been replaced.
- Make sure the heat sink has cooled sufficiently before measuring the idle current. (Temperature should be the same as room temperature ; 25 °C is ideal, if possible.)
- Idle current stipulated value : 3 - 100mA.

■ Front Amp. side (FRONT 50W assy)

Note : Step 1 is CL-J75LD only.

Step	Measurement	Item	Remarks
1	L ch side	Short both sides of C7144 and C7145 on the Rear Amp. side. (Refer to Fig. 7-6)	Do not operate the Rear Amp. side.
2		Insert a resistor (0.22 Ω , 3W or more) in series in the connector CN7502 + B1 (or − B1) line (terminal No. 5 or 6). (Refer to Fig. 7-4.)	For measuring voltage at both sides of resistor.
3		Short both sides of C7524.	Do not operate R ch side.
4		Turn the power ON, wait 6 seconds, and then measure the resistance voltage in Step 2.	L ch Idle current I=V/0.22
5	R ch side	• Same as Steps 1 and 2 above. • Short both sides of C7523.	Do not operate L ch side.
6		Turn the power ON under the above conditions, and after 6 seconds measure the resistance voltage in Step 2.	
7	–	If the measured idle current is greater than 100mA, perform the following procedure.	
8	L ch side	Short between the Point Ⓐ pattern in Fig. 7-6 using solder.	Connect R7517 to R7515 in a parallel circuit.
9	R ch side	Short between the Point Ⓑ pattern in Fig. 7-6 using solder.	Connect R7518 to R7516 in a parallel circuit.
10	–	After performing Step 8 and 9, remeasure the idle current and confirm that it is below 100mA.	
11	–	If the idle current is below 3mA, perform the following procedure.	
12	L ch side	Short between the point Ⓒ pattern in Fig. 7-6 using solder.	Connect R7551 to R7519 in a parallel circuit.
13	R ch side	Short between the point Ⓓ pattern in Fig. 7-6 using solder.	Connect R7552 to R7520 in a parallel circuit.
14	–	After performing steps 12 and 13, remeasure the idle current and confirm that it is greater than 3mA (within 3-100mA).	

■ Rear Amp. side (REAR REGULATOR assy) (CL - J75LD only)

Step	Measurement	Item	Remarks
1	Center amp. side	Short both sides of C7523 and C7524 on the Front Amp. side. (Refer to Fig. 7 - 6)	Do not operate the Front Amp. side.
2		Insert a resistor (0.22 Ω , 2W or more) in series in the connector CN7102 + B2 (or − B2) line (terminal No. 5 or 6). (Refer to Fig. 7 - 5.)	For measuring voltage at both sides of resistor.
3		Short both sides of C7145 on the Sorround amp. side.	Do not operate the Surround Amp.
4		Turn the power ON, wait 6 seconds, and then measure the resistance voltage in Step 2.	Idle current : I=V/0.22
5	Surround amp. side	• Same as Steps 1 and 2 above. • Short both sides of C7144 on Surround amp. side.	Do not operate the Surround Amp.
6		Turn the power ON under the conditions in steps 1 and 2, and after 6 seconds measure the resistance voltage in Step 2.	
7	−	If the measured idle current is greater than 100mA, perform the following procedure.	
8	Center amp. side	Short between the Point Ⓔ pattern in Fig. 7 - 6 using solder.	Connect R7117 to R7115 in a parallel circuit.
9	Surround amp. side	Short between the Point Ⓕ pattern in Fig. 7 - 6 using solder.	Connect R7118 to R7116 in a parallel circuit.
10	−	After performing steps 8 and 9, remeasure the idle current and confirm that it is below 100mA.	
11	−	If the idle current is below 10mA, perform the following procedure.	
12	Center amp. side	Short between the point Ⓖ pattern in Fig. 7 - 6 using solder.	Connect R7151 to R7119 in a parallel circuit.
13	Surround amp. side	Short between the point Ⓗ pattern in Fig. 7 - 6 using solder.	Connect R7152 to R7120 in a parallel circuit.
14	−	After performing steps 12 and 13, remeasure the idle current and confirm that it is greater than 10mA (within 10 - 100mA).

3. Adjusting the Operating Temperature Setting of the Fan Motor (VR7201)

This adjustment is necessary when IC7401 (+12V regulator), Q7301 and Q7302 (temperature sensors), IC7201 (protection IC) or VR7201 has been replaced, or when the entire split board assy of the Power Amp. Module has been replaced.

■ Adjustment-Related Cautions

- Make sure the heat sink has sufficiently cooled (is the same as room temperature Ta.)
- Once the power has been turned ON, make measurements and adjustments as quickly as possible. (If too much time is taken, the heat sink temperature will rise, and the measurements will deviate from the Ta measurement point.)

■ Adjustment

1. Connect a voltmeter between VTEMP and VL (or between IC7201 terminals No. 9 and 7).
   (Refer to Fig. 7-6 and 7.)
2. Determine the fan motor operating temperature setting by means of the following formula. (Tolerance is within ± 30mV.)
   Formula :(75 ° C − Ta) × 19(mV)
   Ta : ambient temperature (° C)
3. Adjust VR7201 so that the voltage between VTEMP and VL is the value obtained from the above formula.
   For example:
   when the room temperature is 25 ° C,
   set value = (75 − 25) × 19 (mV)
   = 950mV(tolerance within ± 30mV)

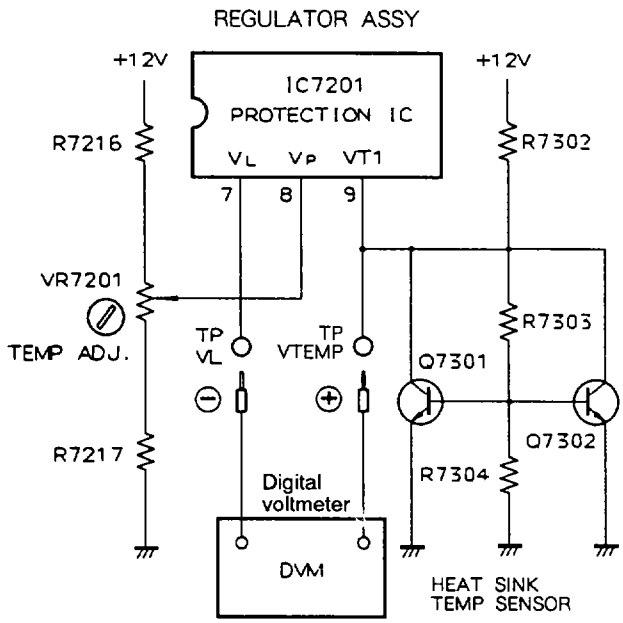

Fig. 7-7 Adjustment of operating temperature setting of fan motor

7.3 CASSETTE DECK SECTION

- Adjustment point and test point are shown Fig.7 - 9 and 7 - 11.

■ Mechanical Adjustment

- Set the TAPE function.
- Test tape : STD - 301 (3kHz, 30min)

1. Tape Speed Adjustment

No.	Mode	Test Tape	Adjustment point	Measurement point	Adjustment procedure	Remarks
1	PLAY	STD-301 (Playback : 3kHz)	DECK unit VR4111	TAPE TEST POINT(Rch)	Press the PLAY SW and adjust so that the reading becomes 3010Hz ± 10Hz, Confirm that wow & flutter level is below 0.2% (in the reverse direction, confirm that the reading is within 3010Hz ± 60Hz).	

■ Electrical Adjustment

Check the following before starting

1. Confirm that the tape speed adjustment has been completed.
2. Clean the heads and demagnetize them using a head eraser.
3. Set the measurement level to 0dBV=1Vrms.
4. Use the specified tape for adjustment. Use the labeled (A) side of the test tape.
   STD - 331E : For playback adjustment
   STD - 631 : Normal blank tape
5. Provide yourself with the following measuring devides :
   - AC millivoltmeter
   - Low-frequency oscillator
   - Attenuator
   - Oscilloscope
6. Adjust both right and left channels unless otherwise specified.
7. Turn the DOLBY NR switch off unless otherwise specified.
8. Warm up the unit for several minutes before adjustment. In particular, be sure to warm up the unit in the REC/PLAY mode for 3 to 5 minutes before starting recording/playback frequency characteristics adjustment.
9. Always follow the indicated adjustment order. Otherwise, a complete adjustment may not be achieved.

Playback Adjustment (DECK Ⅰ and DECK Ⅱ)

1. Head Azimuth Adjustment
2. Playback Level Adjustment

Recording Adjustment (DECK Ⅱ)

1. Bias Oscillation Frequency Adjustment
2. Recording Bias Adjustment
3. Recording Level Adjustment
4. ALC Operation Check

※ As the reference recording level is 250nwb/m for STD - 331E, the recording level will be higher by 4 dB for STD - 331B (160nwb/m). When adjusting, pay careful attention to the type of tape used.

1. Test Mode

1)How to start test mode

On the VIMC unit, Short circuit the test mode jumper W423 and GND (chassis), the test mode is started by putting the power switch ON. (Fig. 7 - 12)
After confirming that all FL indicators are lit, remove test mode jumper wire and GND connection. If you have test mode remote control unit (GGF1067), press ESC key and TEST key in order with power switch ON.

2)How to cancel test mode

Turn power switch OFF. Or, press test mode remote control unit ESC key.

3)Functions and key control when in test mode

Note : For keys not on player or on accompanying remote control unit, use test mode remote control unit(GGF1067).

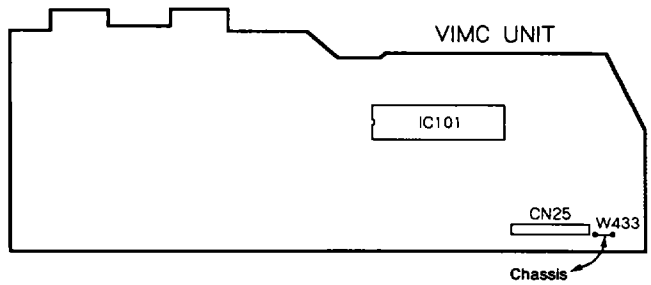

Fig. 7 - 12

Note : When you open the tray in test mode, the screen displays goes out. To display the screen again, press the [DISPLAY] key.

Note 1: Press SKIP (⏮/⏭) keys after the tray is set to open state by pressing OPEN (⏏) key.
In tray open state, pressing PLAY (▶) key causes it to set to clamp state is to TILT neutral state and SKIP keys cannot function properly.

1 - 1 Player Operation in the Test Mode (disc tray is removed)

Operate the player by selecting a test mode function with the keys on the player or on the remote control unit.

- CD PLAYBACK
  ① Place the CD disc on the turn table.
  ② Press the PLAY (▶) key once.
  (Twin gear starts to move.)
  ③ Push the cam plate (Fig. 7 - 13) in the direction of the arrow and wait until the CD disc is clamped.

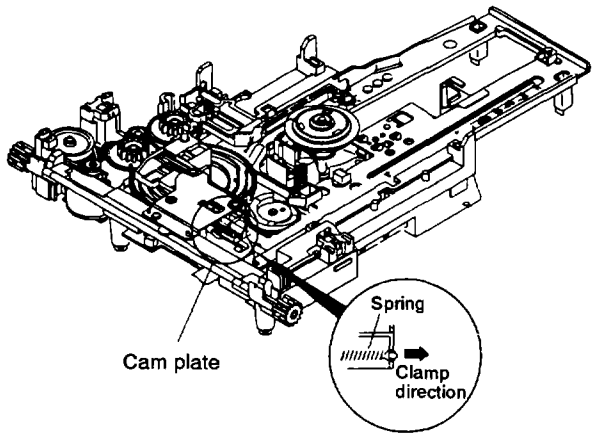

Fig. 7 - 13

④ Press the [◀◀] or [▶▶] keys to appear "S - CD" on the TV screen display.

⑤ After pressing the PLAY (▶) key once to clamp the disc, press the PLAY (▶) key twice, disc will be normally playbacked.

- LD PLAYBACK
  ① Press the PLAY (▶) key once.
  (Twin gear starts to move.)
  ② Press the SKIP REV (|◀◀) key to raise the turn table (spindle motor section) while pressing the cam plate (Fig. 7 - 13) in the direction of the arrow.
  Raise it to the position where the LD disc can be easily placed on the turn table.
  If the turn table is raised too high, lower it with the SKIP FWD (▶▶|) key.
  ③ Place the LD disc on the turn table and press the PLAY (▶) key once to clamp the disc.
  ④ Press the [◀◀] or [▶▶] keys to appear "S - LD" on the TV screen display.

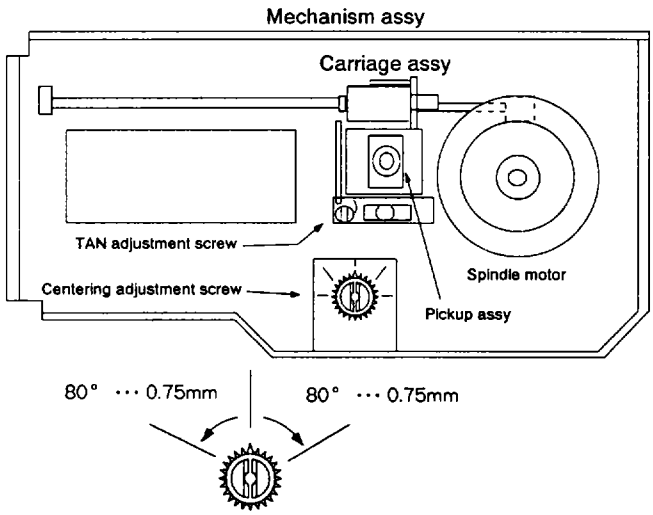
2-1 Before Adjustment Mechanism System

● Centering adjustment screw and TAN adjustment screw

Note : Be careful not to turn centering adjustment screw and TAN adjustment screw past their adjustment range.

After the completion of adjustment, apply locktite or the like to the centering and TAN adjustment screws.



Do not turn the Centering and TAN adjustment screws past their ranges, which are ± 0.75mm and ± 80° from center.
After the completion of adjustment, apply locktite or the like to the Centering and TAN adjustment screws.
Apply at least 1/3 the circumference about 1/2 half the circumference as in the figure.

Fig. 7-16 Adjustment point of mechanism assy

● The mechanical adjustments can all be carried out with disc tray mounted.

● Notes When Adjusting Centering

If waveform S/N is bad and difficult to observe in "3. Spindle motor centering adjustment" (Refer to page 145) use the low pass filter in diagram.

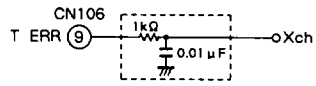


Fig. 7-17 Low pass filter

● Carriage Assy Position When Adjusting Centering

When moving slider to inner position to adjust the innermost track of disc during centering adjustment, be careful not keep the mechanism stopper and Carriage assy from bumping each other. (Fig. 7-18)

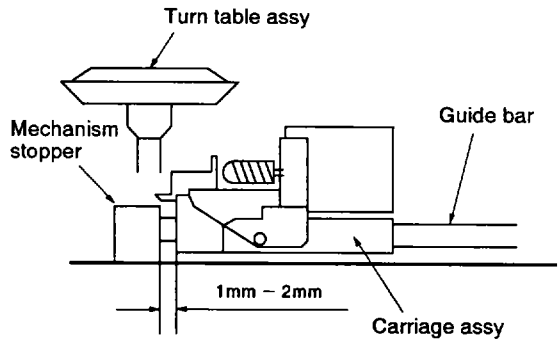

Fig. 7-18

● Notes When Adjusting Pickup Assy

Please clean lens first when readjusting the PICKUP assy that is on this product. Also when changing PICKUP assy, change whole CARRIAGE assy (VWT1110).

(NOTE)

- This adjustment can be thought to be about the same adjustment as on the manufacturing line with differing adjustment tools. Follow the adjustment procedures even for checking the adjustments.
- The test disc is a GGV1012 (8-inch LD test disc) and corresponds to YEDS-7 (CD).
- When you open the tray in test mode, the screen displays goes out. To display the screen again, press the DISPLAY key.
- The mechanical adjustment can be all carried out with disc tray mounted.

11.1 CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*
- *When ordering resistors, first convert resistance values into code form as shown in the following examples.*

Ex.1 When there are 2 effective digits(any digit apart from 0), such as 560 ohm and 47k ohm(tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10¹ → 561 ····· RD1/8PM 5 6 1 J
47k Ω → 47 × 10³ → 473 ····· RD1/4PS 4 7 3 J
0.5 Ω → 0R5 ····· RN2H 0 R 5 K
1 Ω → 010 ····· RS1P 0 1 0 K

Ex.2 When there are 3 effective digits(such as in high precision metal film resistors).

5.62k Ω → 562 × 10¹ → 5621 ····· RN1/4PC 5 6 2 1 F

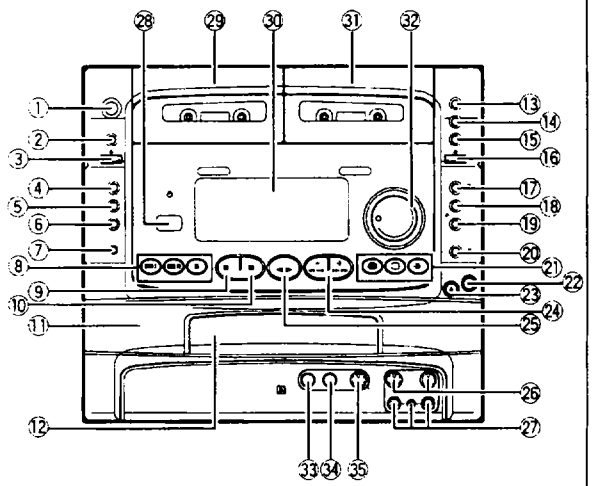
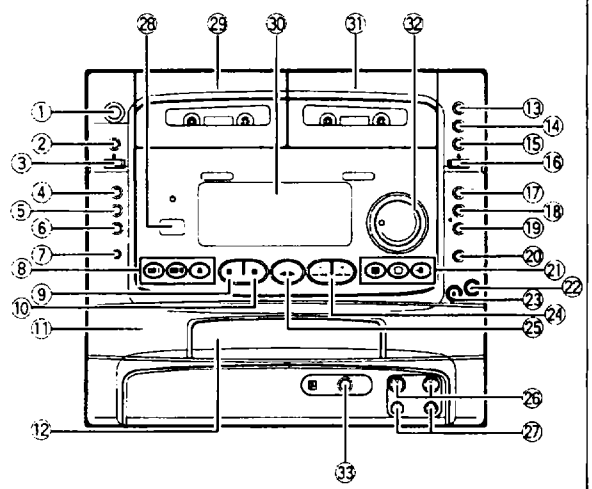
[CL-J55LD]



[CL-J35LD]



* For instructions regarding this section, see the auxiliary pro-logic operating instruction accompanying the CL-J75LD.

This unit features an "illumination guide function" which utilizes flashing indicators to indicate the operation to be performed next.

Operations on pages featuring this symbol use the illumination guide function. When several operations must be adjusted or changed in sequence, flashing indicators designate the control or buttons to be adjusted next.

① **POWER switch (STANDBY/ON)**
② **Dolby NR ON/OFF button**
③ **Tape I eject button (⏏)**
④ **SFC button**
⑤ **P.BASS button**

Each time this button is pressed, the function changes alternately as shown below:

OFF → P.BASS 1 → P.BASS 2 →

Select P.BASS 1 when you want enhanced bass sound, and P.BASS 2 for even greater bass resonance.

- If you notice the sound being distorted when the P.BASS function is turned ON, reduce the sound volume to a lower level.

⑥ **SOURCE DIRECT button**

When this button is pressed to on, the indicator lights and the unit produces pure sound unmodified by the sound field control. Use this function when you wish to record sounds without modification, in their original condition.

⑦ **Headphone jack (PHONES)**
⑧ **Input selector buttons**
⑨ **Pause button (II)**
⑩ **Stop button (■)**
⑪ **LD disc tray**

FRONT PANEL FACILITIES

Display Section

When timer/tuner is selected

① Displays timer recording ON/OFF status
② Displays wakeup timer ON/OFF status
③ Displays sleep timer ON/OFF status
④ Lights when memorizing a broadcast station
⑤ Lights when a stereo broadcast is received
⑥ Lights during broadcast reception
⑦ Lights during auto tuning
⑧ Lights when MONO button is set to ON
⑨ Lights during station mode
⑩ Displays frequency and main operating statuses

Tone/Volume controls

① Selected SFC is indicated with ❙❙ mark
② Displays spectrum analyzer pattern
③ ❙❙ mark lights when one-touch karaoke button is set to ON
④ Lights when source direct button is set to ON
⑤ Displays key-control status (CL-J55LD/CL-J75LD models only)
⑥ ◗ ◖ (P.BASS 1) or ◗◗ ◖◖ (P.BASS 2) lights when P.BASS button is set to ON

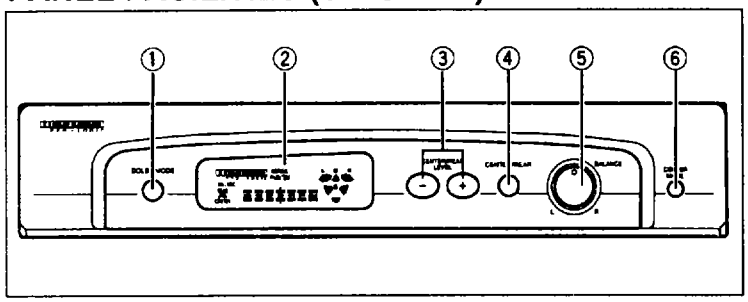
When cassette deck is selected

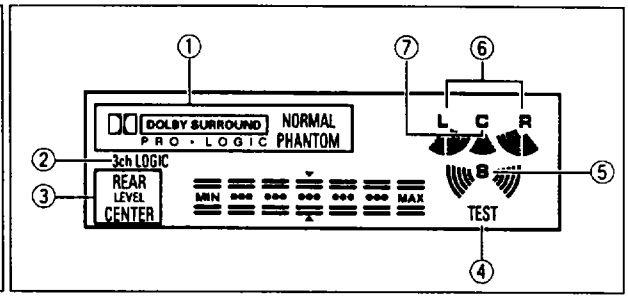
① TAPE II reverse direction
② TAPE II forward direction
③ ◘◘ B symbol lights when Dolby NR button is set to ON
④ Lights during tape recording.
⑤ Lights during ASES operation
⑥ Lights during tape copy
⑦ Lights when Beat Cut function is ON
⑧ Tape counter :
The numbers shown in this indicator change during tape travel, thus providing an indication of the position of programs on the cassette tape.

When CD/LD is selected

① Lights during program playback
② Lights during repeat mode
③ Lights during random playback
④ Lights when a CD is loaded in the tray
⑤ Visual calendar display :
Indicates disc track numbers; when a disc with 16 or more tracks is loaded, ► is displayed.
During program playback, only the numbers of the programmed tracks light. In the case of discs without a TOC (table of contents), only the disc's currently playing chapter number lights. When playback of the track is completed, the track or chapter number disappears.
⑥ Lights during playback; flashes during search mode
⑦ Lights during pause mode
⑧ Indicates audio output channels
⑨ Displays the frame number or elapsed time
⑩ Total remaining time on disc (ALL)
⑪ Total playing time of current disc side (TOTAL)
⑫ Remaining playing time on the track or chapter (REMAIN)

PANEL FACILITIES (CL–J75LD)





① DOLBY MODE button
② Display section
③ CENTER/REAR LEVEL (+, –) buttons
④ CENTER/REAR select button
⑤ Speaker BALANCE (L, R) control
⑥ CENTER MODE button

Display Section
① Lights during use of DOLBY PROLOGIC SURROUND (NORMAL or PHANTOM).
② Lights during use of Dolby 3ch LOGIC.
③ Lights during setting of CENTER or REAR LEVEL.
④ Lights when the TEST TONE button is set to ON.
⑤ Lights when surround speakers are used.
⑥ Lights when front speakers are used.
⑦ Lights when center speaker is used.

FRONT

Continuous Average Power Output is 35 Watts* per channel, min, at 6 ohms from 70 Hz to 20,000 Hz with no more than 0.9% total harmonic distortion.**

Continuous power output (RMS) ..... 55 W + 55W
(1 kHz, T.H.D. 10 %, 6 Ω)

Peak music power ..... 1,000 W

REAR

Continuous power output (RMS) ..... 7.5 W + 7.5 W
(1 kHz, T.H.D. 10 %, 16 Ω)

CENTER

Continuous power output (RMS) ..... 15 W
(1 kHz, T.H.D. 10 %, 8 Ω)

[CL-J55LD]

Continuous Average Power Output is 35 Watts* per channel, min, at 6 ohms from 70 Hz to 20,000 Hz with no more than 0.9% total harmonic distortion.**

Continuous power output (RMS) ..... 55 W + 55W
(1 kHz, T.H.D. 10 %, 6 Ω)

Peak music power ..... 800 W

[CL-J35LD]

Continuous Average Power Output is 33 Watts* per channel, min, at 8 ohms from 70 Hz to 20,000 Hz with no more than 0.9% total harmonic distortion.**

Continuous power output (RMS) ..... 50 W + 50W
(1 kHz, T.H.D. 10 %, 8 Ω)

Peak music power ..... 750 W

(U.S. model only)

Continuous Average Power Output is 35 Watts* per channel, min, at 6 ohms from 70 Hz to 20,000 Hz with no more than 0.9% total harmonic distortion.**

Continuous power output (RMS) ..... 55 W + 55W

FM tuner

Frequency range ..... 87.5 — 108 MHz

Antenna Input ..... 75Ω unbalanced

AM tuner

Frequency range

9 kHz step ..... 531 kHz — 1,602 kHz

10 kHz step ..... 530 kHz — 1,700 kHz

Antenna ..... Loop antenna

Spectrum analyzer

Central frequencies 100Hz, 330Hz, 1kHz, 3.3kHz, 10kHz

Stereo double cassette deck

Tracks ..... 4-track, 2-channel stereo

Frequency response

Type II (High-position, CrO_2) ..... 20Hz — 16,000Hz ±6dB
(except for general export model CL-J35LD)

Type I (Normal) ..... 20Hz — 16,000Hz ±6dB

Signal-to-Noise ratio 56dB
(Peak recording level, audible compensation)

DOLBY "B" NR ON ..... 10dB improvement at 5kHz

Compatible LaserDisc Player

Type ..... LaserDisc and Compact Disc digital audio system.

Laser used ..... Semiconductor laser, wavelength 780nm

Permissible operating temperature range ..... +5°C — +35°C
(41°F — 95°F)

Permissible operating humidity ..... 5% — 85%
(without condensation)

Audio output

Channels ..... 2 channel

Digital response

Frequency response ..... 4Hz — 20kHz, +0dB, –1.3dB (EIAJ)

Signal-to-Noise ratio ..... 100dB (EIAJ)

Dynamic range ..... 96dB (EIAJ)

Video output (Two sets can be connected to CL-J55LD/CL-J75LD.) (Only one set can be connected to CL-J35LD.)

Output level ..... 1Vp-p (75Ω load, synch)

Output jacks ..... Pin jacks

Electrical, etc.
