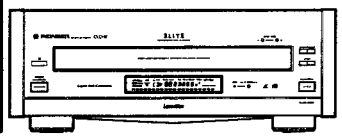
Service Manual



CLD-97

ORDER NO.
ARP2743

CD CDV LD PLAYER

CLD-97
CLD-98

CLD – 97 AND CLD – 98 HAVE THE FOLLOWING :

Type	Model		Power Requirement	Remarks
	CLD – 97	CLD – 98		
KU/CA	○	–	AC120V only	
SD	–	○	AC110V, 120V – 127V, 220V, 240V (switchable)	

- **This manual is applicable to CLD – 97/KU/CA and CLD – 98/SD.**

FN MAY 1993 Printed in Japan

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).
When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE
(FOR CANADIAN MODEL ONLY)
Fuse symbols -▮▭- (fast operating fuse) and/or -▮▭⊠- (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE
(POUR MODÈLE CANADIEN SEULEMENT)
Les symboles de fusible -▮▭- (fusible de type rapide) et/ou -▮▭⊠- (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

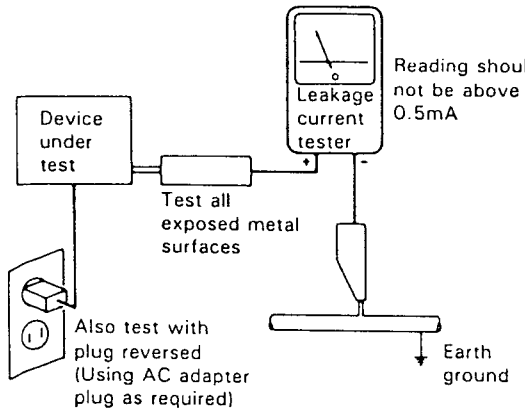
(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.



AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.
The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. EXPLODED VIEWS, PACKING AND PARTS LIST

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

2.1 PACKING AND PARTS LIST

Parts List

Mark	No.	Description	Parts No.
	1	Operating instructions (CLD−97, English)	VRB1087

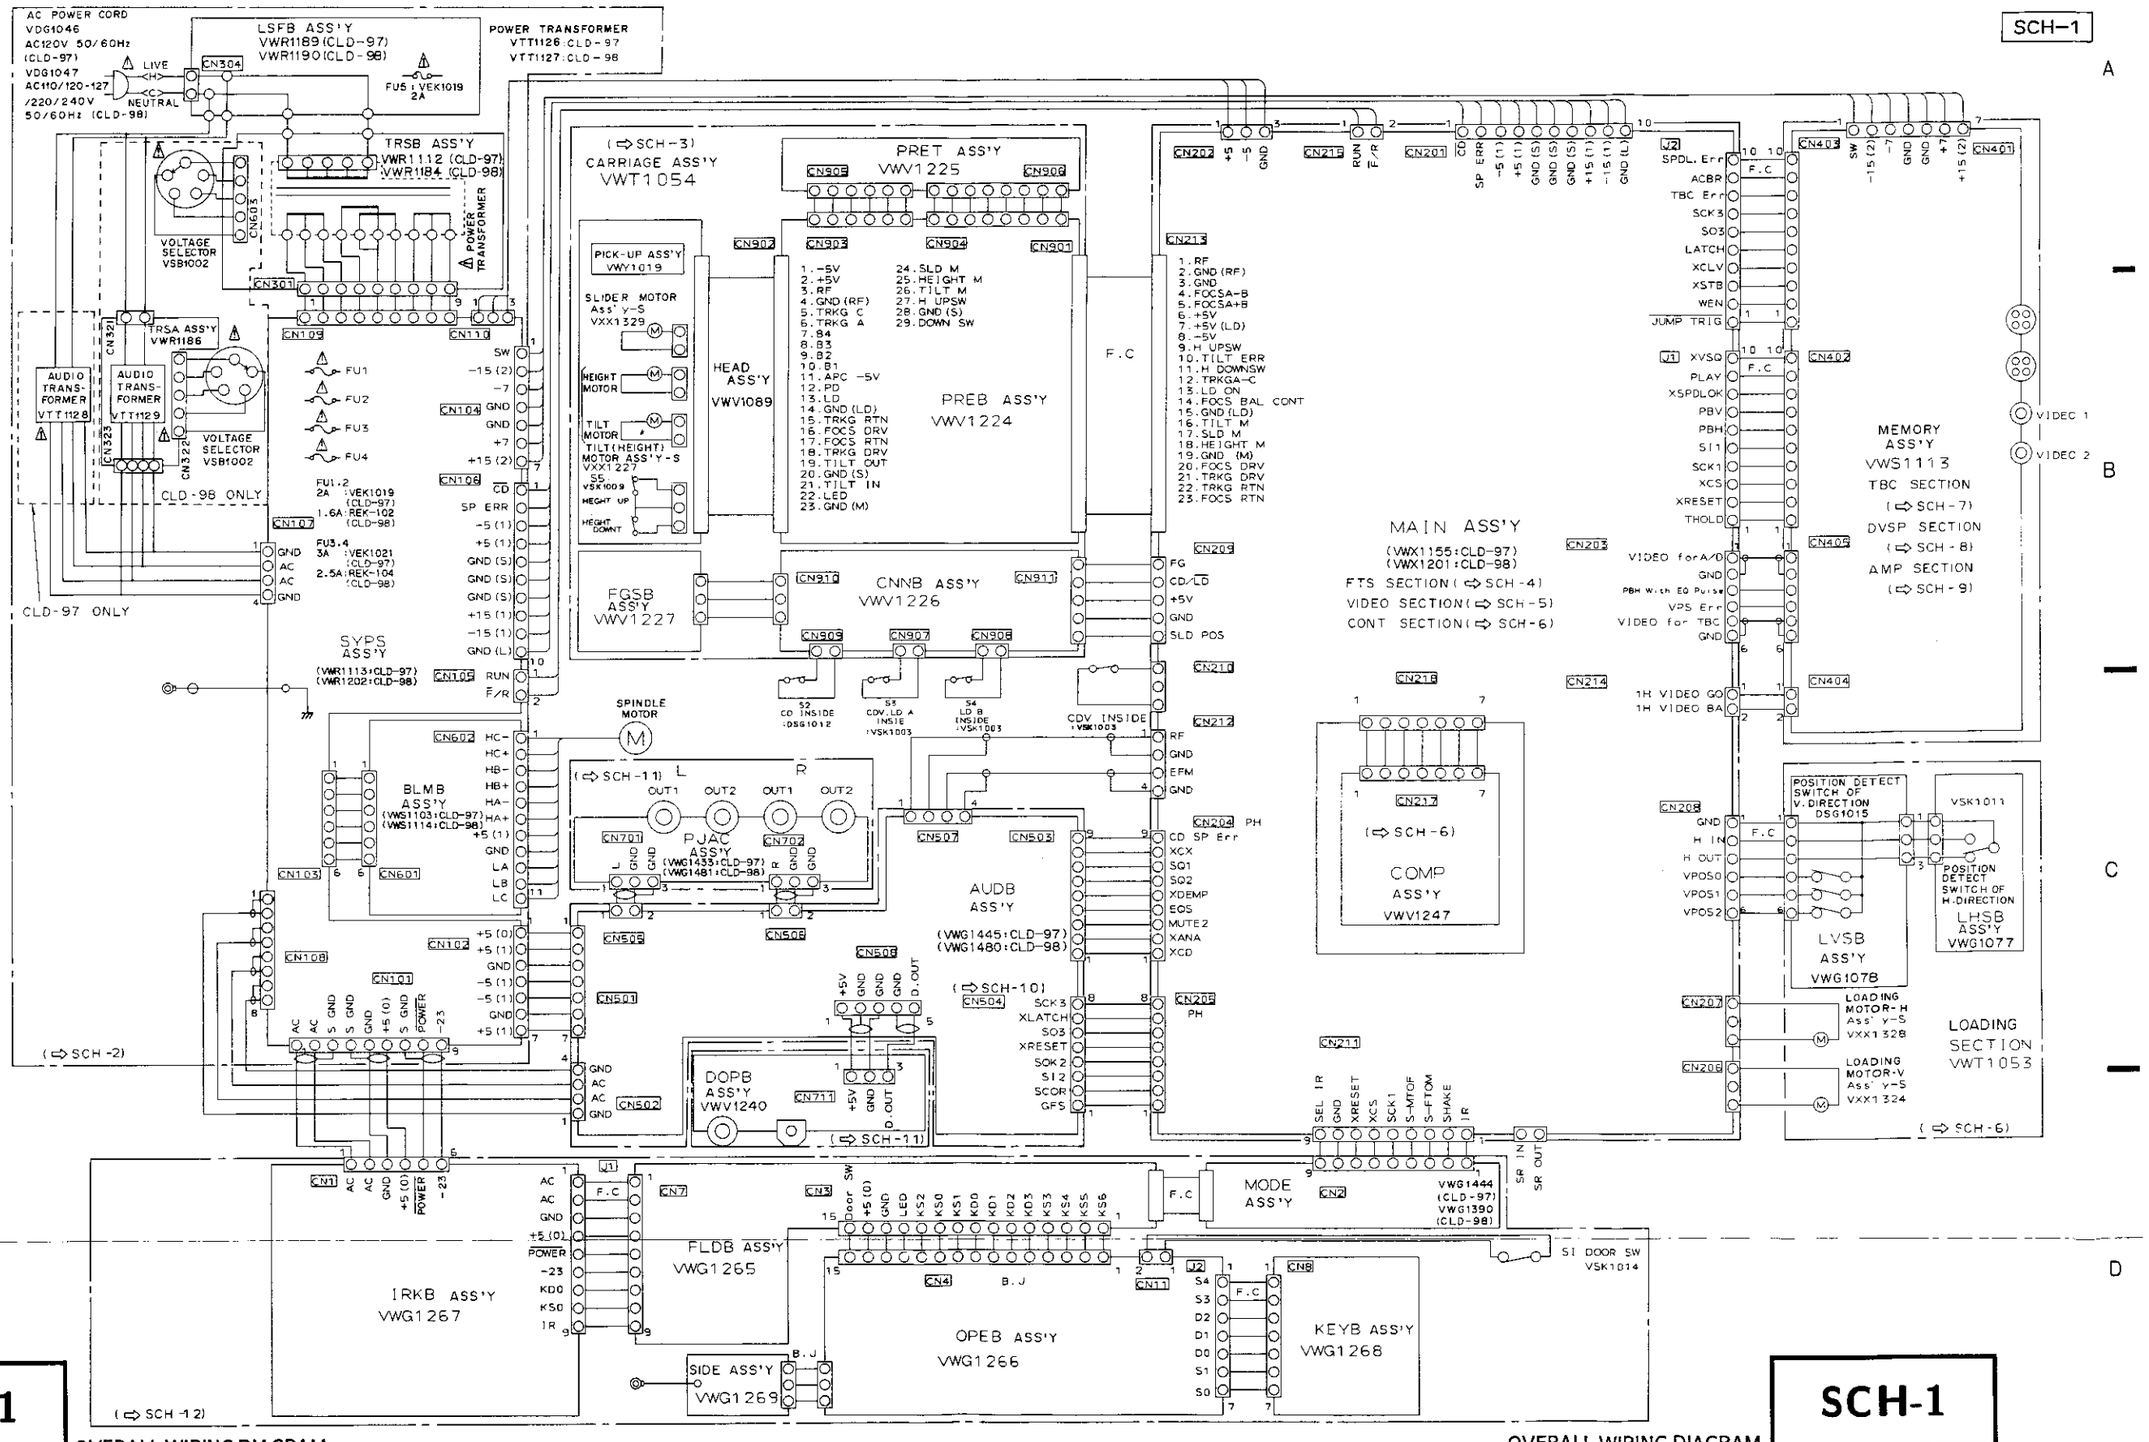
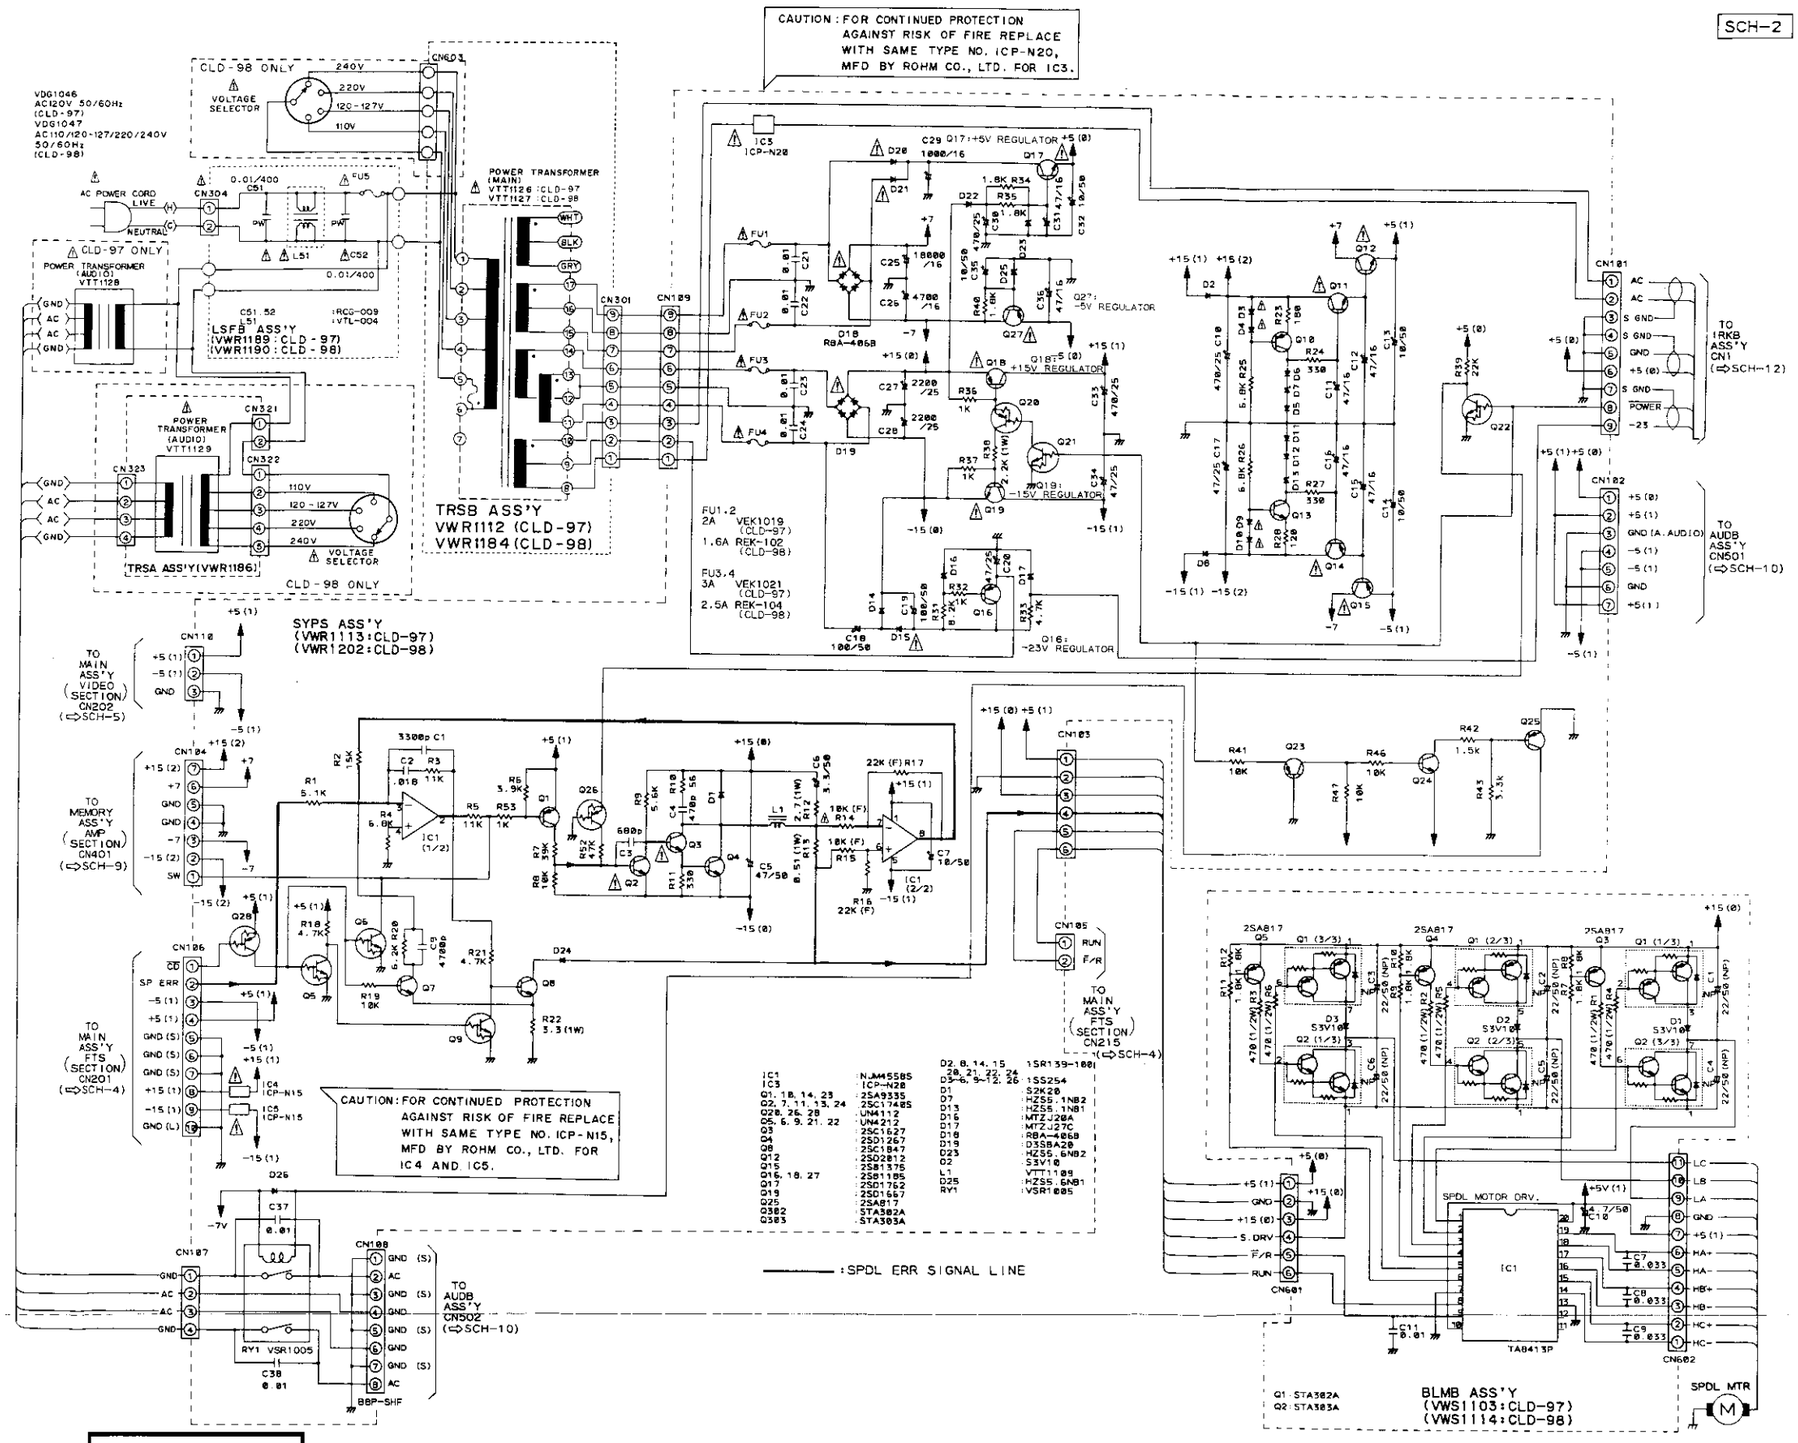
3. SCHEMATIC AND PCB CONNECTION DIAGRAMS

3.1 OVERALL WIRING DIAGRAM



3.2 SYPS, BLMB, LSFB, TRSB, AND TRSA ASSEMBLIES



Note: (Type 4)

1. **When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".**
2. **Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.**
3. **RESISTORS:**
   Unit: k:kΩ, M:MΩ, or Ω unless otherwise noted.
   Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
   Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.
4. **CAPACITORS:**
   Unit: p:pF or μF unless otherwise noted.
   Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
   Rated voltage: 50V except for electrolytic capacitors.
5. **COILS:**
   Unit: m:mH or μH unless otherwise noted.
6. **VOLTAGE AND CURRENT:**
   □ : DC voltage (V) in PLAY mode unless otherwise noted.
   ⇨ mA or ← mA : DC current in PLAY mode unless otherwise noted.
   Value in ( ) is DC current in STOP mode.
7. **OTHERS:**
   - ➡ : Signal route.
   - ⊘ : Adjusting point.
   - ▼ (Red) : Measurement point.
   - The ⚠ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.
8. **SWITCHES** (Underline indicates switch position):
   OUTSIDE OF PCB ASSEMBLIES
   S 1 : DOOR OPEN-CLOSE

3. PCB PARTS LIST

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*
- *When ordering resistors, first convert resistance values into code form as shown in the following examples.*

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω → 56 × 10¹ → 561 ..... RD1/8PM[5][6][1]J
47kΩ → 47 × 10³ → 473 ..... RD1/4PS[4][7][3]J
0.5Ω → 0R5 ..... RN2H[0][R][5]K
1Ω → 010 ..... RS1P[0][1][0]K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ→ 562 × 10¹ →5621 ..... RN1/4PC[5][6][2][1]F

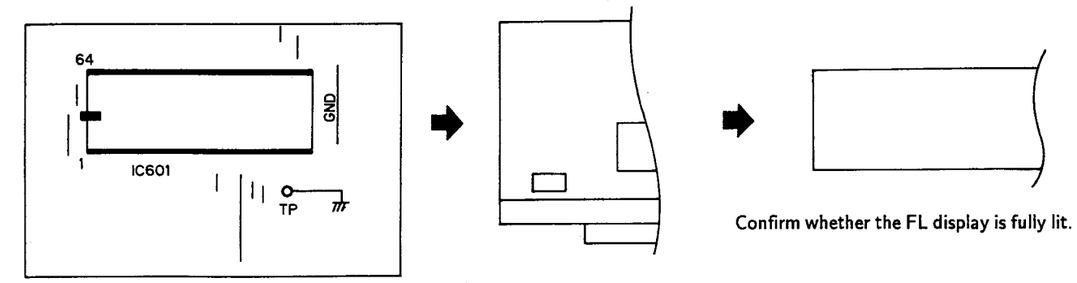
5. ADJUSTMENTS

5.1 TEST MODE

● Test Mode Initiation

1. Connect the TEST TP in CONT section of the MAIN assembly to GND. Then turn on the power switch.
2. Confirm whether the FL display is fully lit.
3. Disconnect the TEST TP from GND.

NOTE: When using the remote control unit (GGF 1067) for the test mode: Press the [TEST] key after pressing the [ESC] key while power is ON.

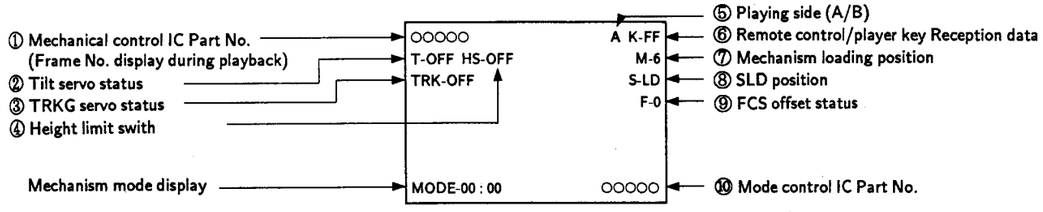


Connect TEST TP in the MAIN assembly and GND.

Turn on the power switch.

Confirm whether the FL display is fully lit.

● Displays in the Test Mode



① The Mechanical Control IC Part No. will be Displayed.

② Tilt Servo Status Display – Key operation –
ON ··· Tilt servo ON — RAND PLAY, Speed +
OFF ··· Tilt servo OFF — Skip F.R, Speed –

③ TRKG Servo Status Display – Key operation –
ON ··· TRKG servo ON — Step REV
OFF ··· TRKG servo OFF — Step FWD
Key Operation : ▶ (PLAY)
TRKG servo ON/OFF alternately.

④ Height Limit Switch Display
ON ··· Height limit switch ON
(On at the bottom end)
OFF ··· Height limit switch OFF
Key Operation : Durling Side A is clamped state :
CH SKIP +··· Height down
CH SKIP –··· Height up

⑤ Playing Side
A ··· Durling playback Side A
B ··· Durling playback Side B
Key Operation : SIDE A ··· Side A Playback
SIDE B ··· Side B Playback

⑥ Remote Control/Player Key Reception Code No.

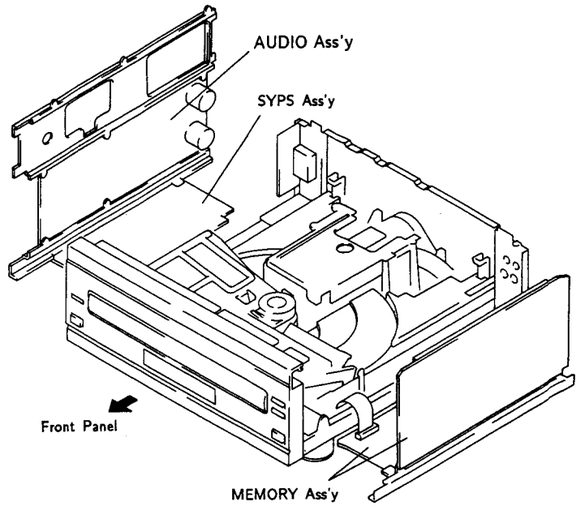
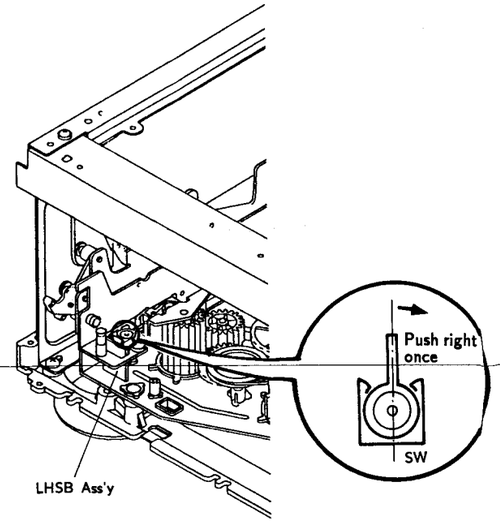
● Player Settings for Adjustment

Adjustment should be performed with AUDIO, SYPS and MEMORY assemblies are opened as shown in figure below.



● Playing the disc without disc tray

After pressing the PLAY key, push right the lever SW in the LHSB assembly once.



5.2 MECHANICAL ADJUSTMENT

	Adjustment name	Adjustment point	Measuring equipment and jigs	Measurement point	Player condition	Adjustment procedure		Waveform and connection diagram
1	Coarse grating and Tracking (TRKG) Balance Adjustment	· Grating adjustment hole (Coarse grating) · PREB assembly VR101 (TRKG balance)	· Small⊖ screwdriver (flat blade) · Oscilloscope · GGV1003	·PREB assembly TP2−2 (TRKG error)	· Test mode (TRKG servo OFF) · The carriage assembly should be in the forward state. · #6,500 still	<Coarse Grating Adjustment> 1. Play the LD test disc. 2. Move the pickup to frame #6,500 by scanning or searching. 3. OFF the TRKG servo. 4. Connect an oscilloscope to TP2−2 in the PREB assembly and observe the waveform. 5. Insert the small ⊖screwdriver into grating adjustment hole. Turning the grating will allow you to vary the amplitude of the TRKG error waveform. Find the position where the waveform amplitude becomes minimum with a smooth envelope. (This indicates that the 3−way split laser beams are directed onto the track. This is called the "on−track" position.) 6. Slowly turn the grating counterclockwise from the on track position until the waveform amplitude becomes maximum. 7. ON the TRKG servo and check that a normal picture is displayed on the TV screen. <TRKG Balance Adjustment> 1. Align the oscilloscope GND so that it comes to the center of the oscilloscope screen. 2. Adjust VR101 in the PREB assembly so that the positive and negative amplitude of the TRKG error waveform become equal. Note : If the tracking is so bad that it cannot be adjusted, set the PREB assembly's VR104 to the mechanical center. Then adjust the tracking.	2 (1)	Crosstalk adjustment(1) (Tilt Gain adj.) Tilt servo balance adj. Pickup tangential inclination adj.	·PREB assembly VR103 (TILT GAIN) ·PREB assembly VR104 (TILT BAL.) ·Pickup tangential direction angle adjustment screw	· Oscilloscope · TV monitor · GGV1003 · Oscilloscope · L−shaped eccentric screwdriver · TV monitor · GGV1003	· Dot marking on the tilt sensor · MAIN assembly TP1(RF) (CN218) · MAIN assembly TP1(RF) (CN218)	·Power OFF ·#2,701still (#115still) ·TRKG servo ON ·#2,701still (#115still) ·TRKG servo ON	<TILT GAIN ADJUSTMENT> 1. Check the color of the dot marked on the top of the tilt sensor, at the side of the post. Some players have red and blue dots. According to the color of the dot, adjust the PREB assembly VR103 as follows : Red dot : Turn VR103 fully counterclockwise. Blue dot : Turn VR103 fully clockwise. No dot : Set VR103 to the center position. <TILT SERVO BALANCE ADJUSTMENT> (Pickup TRKG directional angle adjustment) 2. Make sure the TILT servo is ON. Set the TILT servo balance adjustment VR(VR104) to the mechanical center. 3. Connect TP1 to an oscilloscope. 4. Search for #2,701 and look at the RF waveform. 5. Adjust VR104 on the PREB assembly to maximize the waveform's amplitude. Turn VR104 slowly to allow the TILT servo to keep pace. (When VR104 is adjusted, the pickup assembly's TRKG directional angle will change.) 6. Search for #115 and make sure there is no conspicuous crosstalk on the TV monitor. 7. If the crosstalk on the TV monitor is conspicuous, do the following tangential adjustment. <PICKUP TANGENTIAL DIRECTION ANGLE ADJUSTMENT> 8. Loosen the two screws as shown in the connection diagram. 9. Search for #2,701 and look at the RF waveform. 10. Insert an L−shaped eccentric screwdriver into the pickup tangential direction angle adjustment hole. 11. While referring to the RF waveform, adjust the tangential direction to maximize the waveform's amplitude. 12. Search for #115 and make sure there is no conspicuous crosstalk on the TV monitor. 13. After completing the adjustment, tighten the two screws. Note : If the pickup tangential direction angle has been changed on the side A playback side, be sure to execute the following: "4. Spindle Motor Centering Check," "10. Centering Adjustment for Side B Play," and "11. Pickup Tangential Direction Angle Adjustment for Side B Play."	2 (2)	Crosstalk adjustment(2) TRKG error level max adjustment LD FOCS error balance adjustment (RF level max adjustment)	·PRET assembly VR202 ·PRET assembly VR206	· Oscilloscope · GGV1003 · Oscilloscope · TV monitor · GGV1003	·PREB assembly TP2−2 ·MAIN assembly TP1	·#6,500still ·TRKG servo ON ·#2,701still ·#115still ·TRKG servo ON	<TRKG ERROR LEVEL MAX ADJUSTMENT> 1. Connect PREB assembly TP2−2 to an oscilloscope. 2. Search for #6,500 and OFF the TRKG servo. 3. Adjust VR202 to maximize the TRKG error waveform's amplitude.	<LD FOCS ERROR BALANCE ADJUSTMENT> 1. Connect TP1 to an oscilloscope. 2. Search for #2,701 and look at the RF waveform. 3. Adjust VR206 on the PRET assembly to maximize the waveform's amplitude. 4. Search for #115 and make sure there is minimal crosstalk on the TV monitor. If the crosstalk still exceeds the allowable amount even after VR206 is adjusted, execute "Pickup tangential direction angle adjustment" and "TILT servo balance adjustment." Note : Adjustment of VR206 must be performed after VR202 has adjusted.	
	Adjustment name	Adjustment point	Measuring equipment and jig	Measurement point	Player condition	Adjustment procedure	Waveform and connection diagram
3	FOCS SUM level adjustment	· PRET assembly VR205	· Oscilloscope · GGV1003	· PRET assembly IC201 1pin	·#15,000 still ·TRKG servo ON	1. Connect IC201−1 of PRET assembly to an oscilloscope. 2. Search for #15,000 and observe the voltage level. 3. Adjust VR205 so that the voltage level becomes 1.8Vp−p ±0.1V.	 3. Adjust VR205 in PRET Ass'y so that the voltage level becomes 1.8Vp-p±0.1V.
4	Spindle motor centering check	Check the lissajous figure	· Oscilloscope · GGV1003 · YEDS−7	· PREB assembly TP2−2 (TRKG error) TP2−1 (TRKG SUM)	·Test mode (TRKG servo OFF) ·The carriage assembly should be in the forward state. ·#22,000 still ·#100 still	Note: LD test disc F2 is not suitable for this adjustment because the recorded portion with a track pitch of 1.52μm is present only around inner tracks #1 to #500. 1. Play the 8−inch LD test disc. 2. Move the pickup to frame #22,000 by scanning or searching, then OFF the TRKG servo. 3. Connect TP2−2 in the PREB assembly to the X−input(CH−1)of the oscilloscope and TP2−1 to the Y−input(CH−2). Set the oscilloscope to the X−Y mode and observe the Lissajous figures of the TRKG error signal and the TRKG sum signal. 4. Write down the Y−axis amplitudes of the Lissajous figures. 5. ON the TRKG servo and search frame #100, then OFF the TRKG servo again to observe the Lissajous figure. At this time, check that the Y−axis amplitude of the Lissajous figure is the same as that noted in step 4. 6. Remove the 8−inch LD test disc from the player, then load the CD test disc and repeat the checking procedures steps 1 to 5. However, it is not necessary to specify the inner or outer track positions of the disc. If the Y−axis amplitude of the Lissajous figure is different for the inner and outer tracks, perform "5. Spindle Motor Centering Adjustment."	 5. The Y-axis of the Lissajous figure should be the same for the inner and the outer tracks.
5	Spindle motor centering adjustment	Spindle motor centering adjustment hole	·L−shaped phillips ⊕screwdriver · Oscilloscope · GGV1003 · YEDS−7	· PREB assembly TP2-2 (TRKG error) TP2-1 (TRKG SUM)	·Test mode (TRKG servo ON/OFF) ·The carriage assembly should be in the forward state. ·#22,000 still ·#100 still	Note 1: Before making the adjustment, remove the rear panel. Note 2: The LD test disc F2 is not suitable for this adjustment. 1. Connect TP2−2 in the PREB assembly to the X−input(CH−1) of the oscilloscope and TP2−1 to the Y−input(CH−2). 2. Play the 8−inch LD test disc and search frame #22,000. 3. OFF the TRKG servo and observe the Lissajous figures of the TRKG error signal and the TRKG sum signal. 4. Fine−adjust the grating so that the Y−axis amplitude of the Lissajous figure is minimized. 5. ON the TRKG servo and search frame #100. 6. OFF the TRKG servo again and observe the Lissajous figure and write the Y−axis amplitude. 7. Insert the L−shaped Philips screwdriver into the adjusting hole from the left bottom of the unit, and turn slowly so that the Y−axis amplitude of the Lissajous figure is reduced. 8. After the Y−axis amplitude of the Lissajous figure is minimized, turn the adjusting screw further until the amplitude becomes the same shape as that observed in procedure 6. 9. ON the TRKG servo, and move the pickup assembly to the outer track of the disc(#22,000). 10. OFF the TRKG servo again and observe the Lissajous figure to check that the Y−axis amplitude is minimum. If the Y−axis amplitude of the Lissajous figure is larger than specified, repeat the adjustment procedures from steps 3 to 8. 11. After adjustment is complete, perform the adjustment in "4. Spindle Motor Centering Check" item 6.	 7. Adjust the centering adjustment hole.

	Adjustment name	Adjustment point	Measuring equipment and jigs	Measurement point	Player condition	Adjustment procedure	Waveform and connection diagram
6	Fine grating adjustment	Grating adjustment hole	· Small⊖ screwdriver · Oscilloscope · GGV1003	·PREB assembly TP2-2 (TRKG error) TP2-1 (TRKG SUM)	·Test mode (TRKG servo OFF) ·The carriage assembly should be in the forward state. ·#6,500 still	1. Play the LD test disc and search frame #6,500, then OFF the TRKG servo. 2. Connect TP2-2 in the PREB assembly to the X-input(CH-1)of the oscilloscope and TP2-1 to the Y-input(CH-2). Set the oscilloscope to the X-Y mode and observe the Lissajous figures of the TRKG error signal and the TRKG sum signal. 3. Insert the small ⊖screwdriver into the grating adjustment hole, and fine-adjust the grating so that the Y-axis amplitude of the Lissajous figures is minimized. If the grating is turned too much and the optimum position can no longer be found, repeat the "Coarse Grating Adjustment". 4. Select the oscilloscope's X-input(CH-1) and check that the positive and negative amplitudes of the TRKG error signal are equal. If they are not, repeat the "Tracking Balance Adjustment". 5. ON the TRKG servo and check that the picture (image) on the TV screen is normal.	 3. Insert the small ⊖ screwdriver into the grating adjustment hole to fine adjust it.   3. Y-axis amplitude of Lissajous figure becomes minimum.  4. The positive and negative amplitude are equal.
7	RF gain adjustment	PRET assembly VR201(RF gain)	· Oscilloscope · GGV1003	· MAIN assembly TP1 (RF signal) (CN218)	·The carriage assembly should be in the forward state. ·#15,000 still (TRKG servo ON)	1. 6. CIRCUIT DESCRIPTION

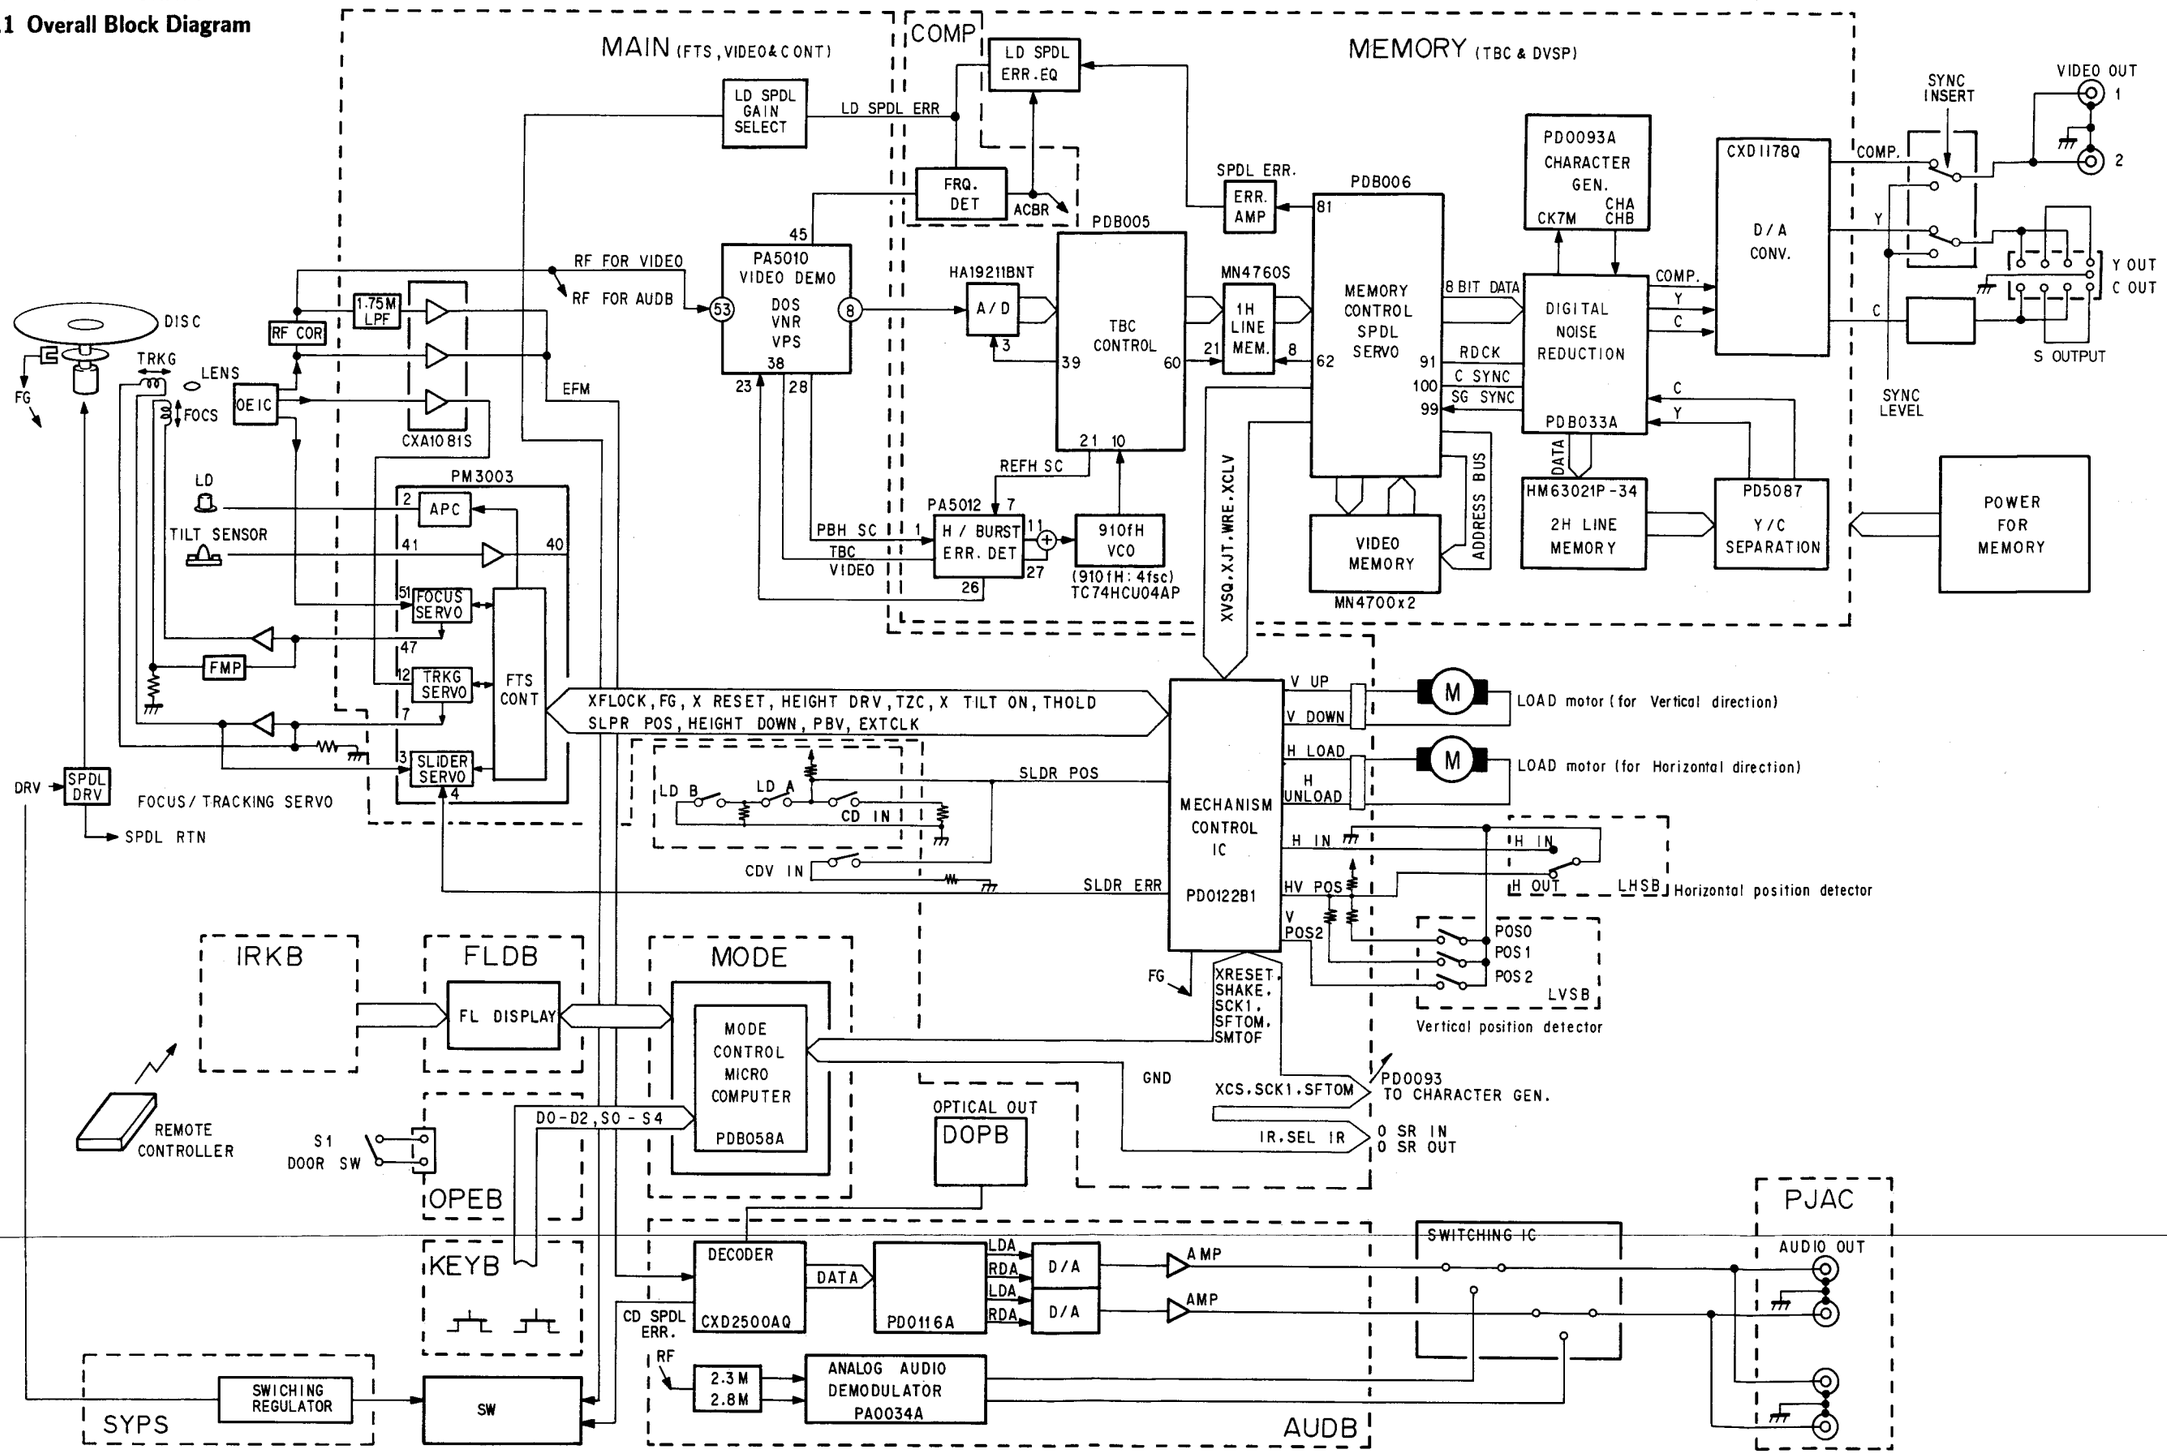
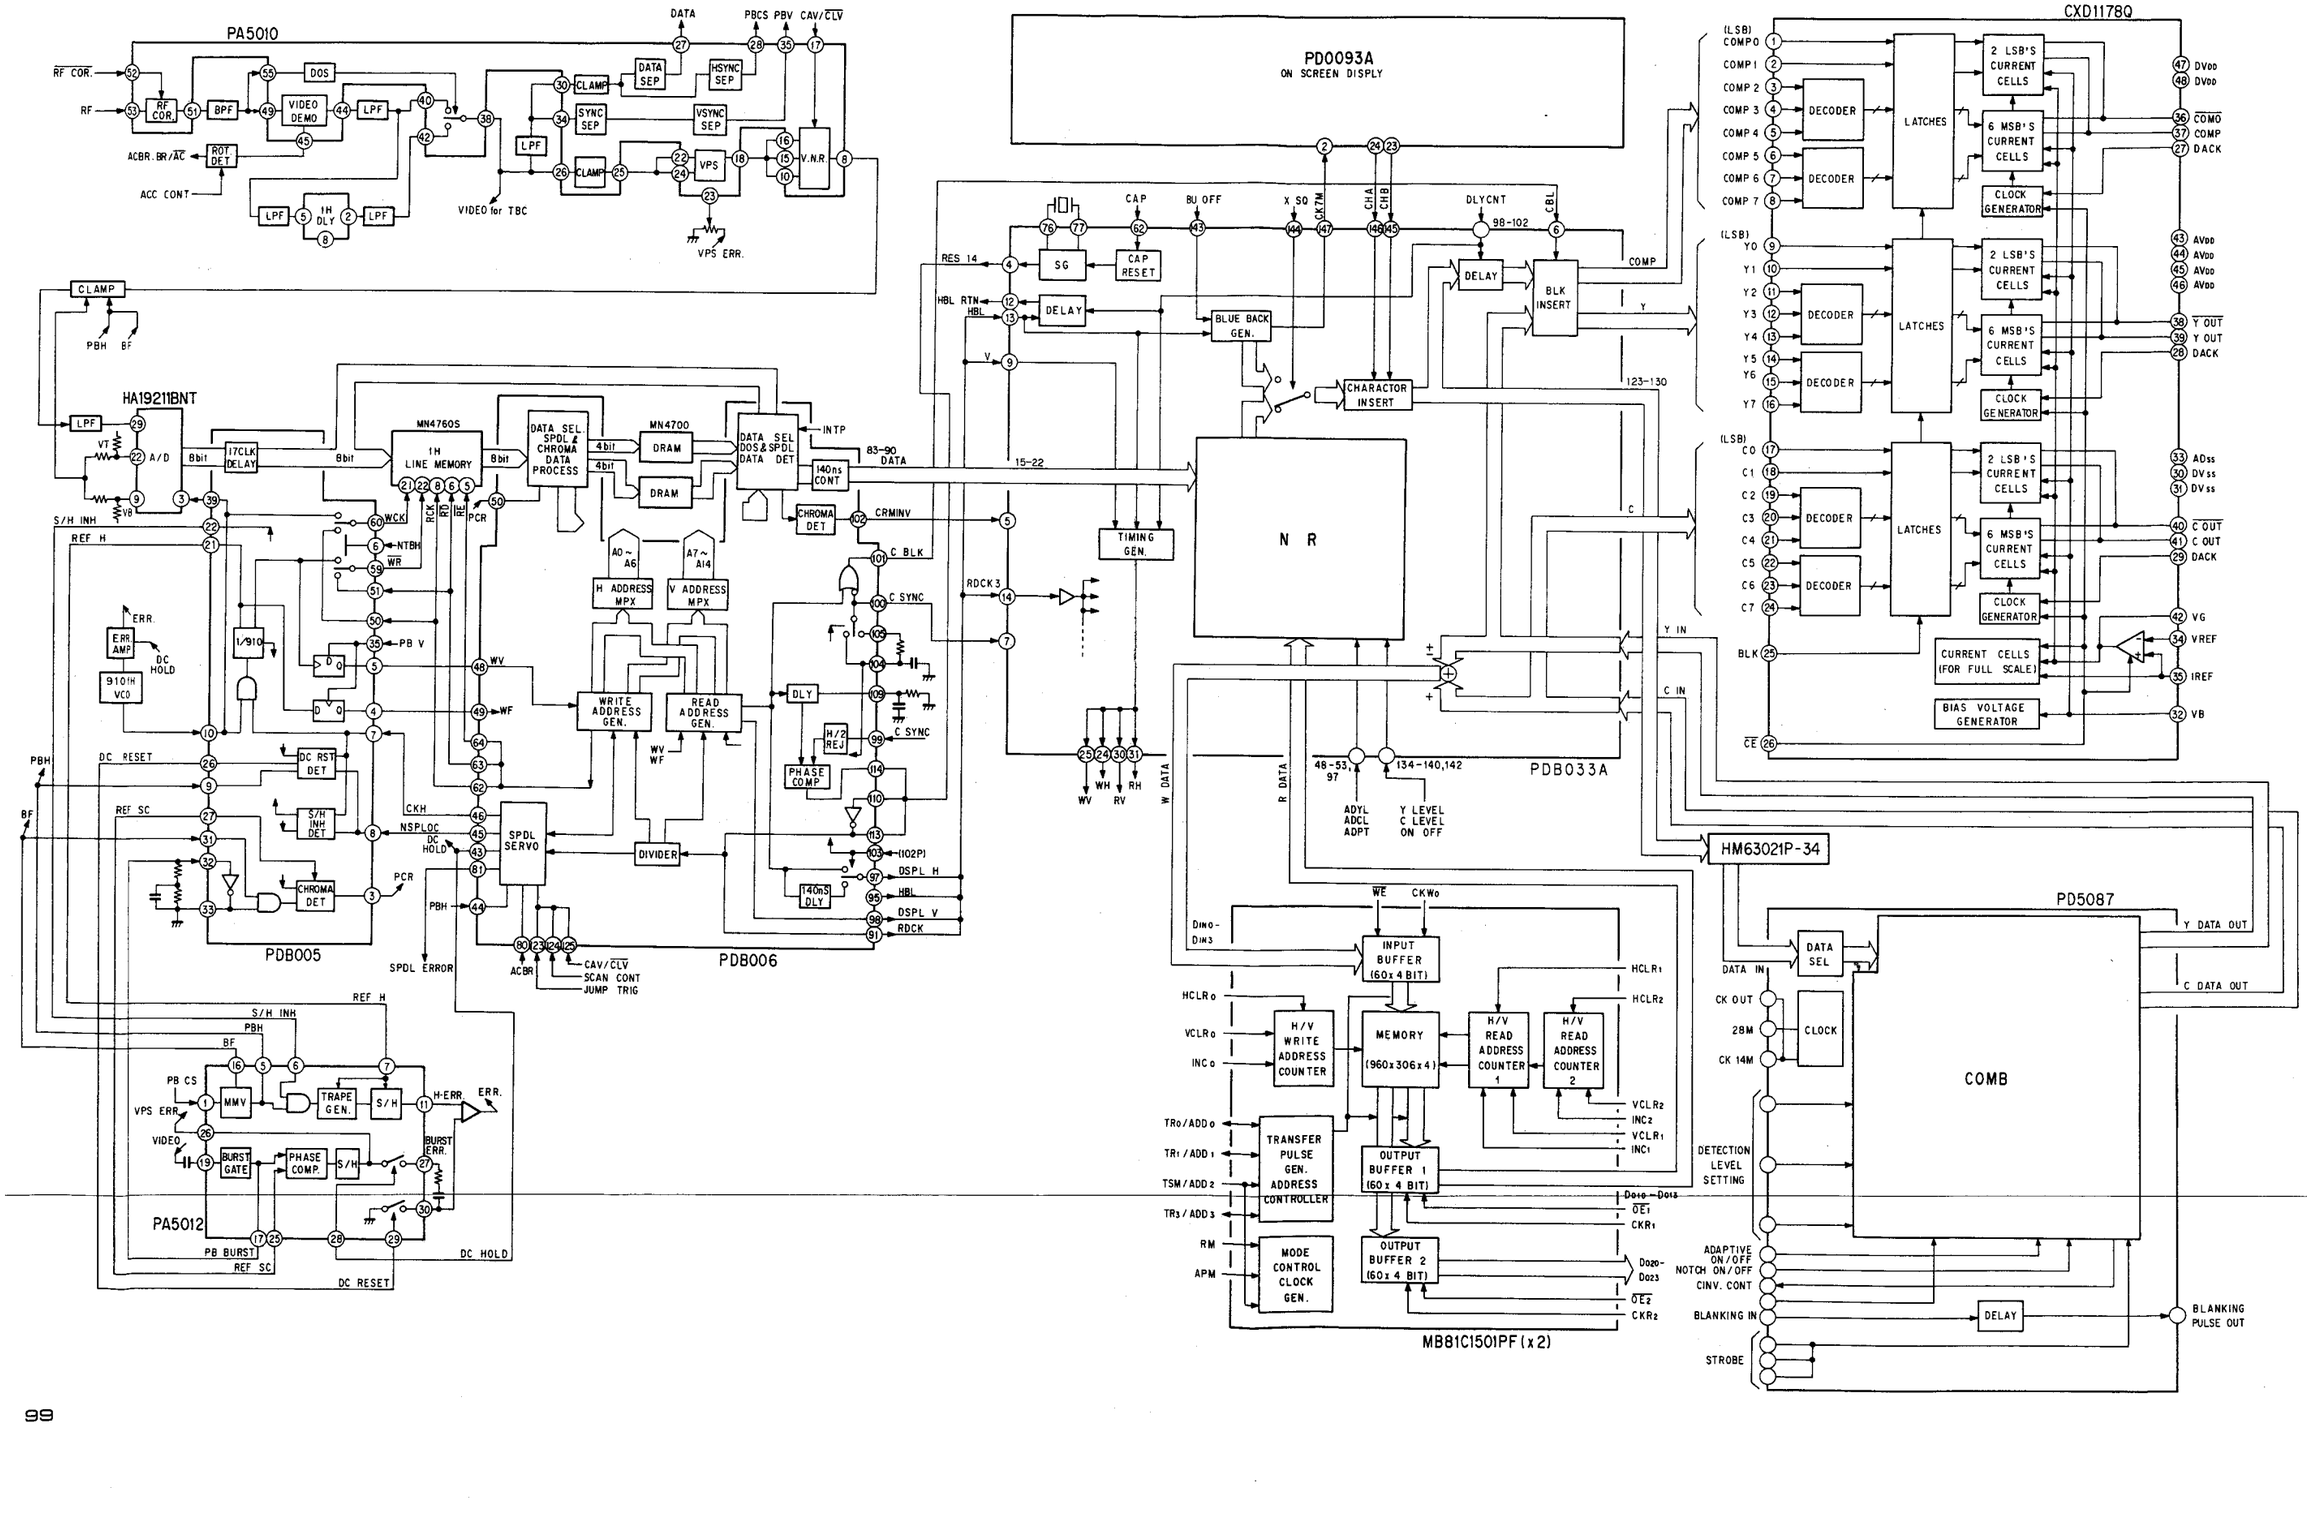
6.1 BLOCK DIAGRAM

6.1.1 Overall Block Diagram



6.1.2 Video Block Diagram



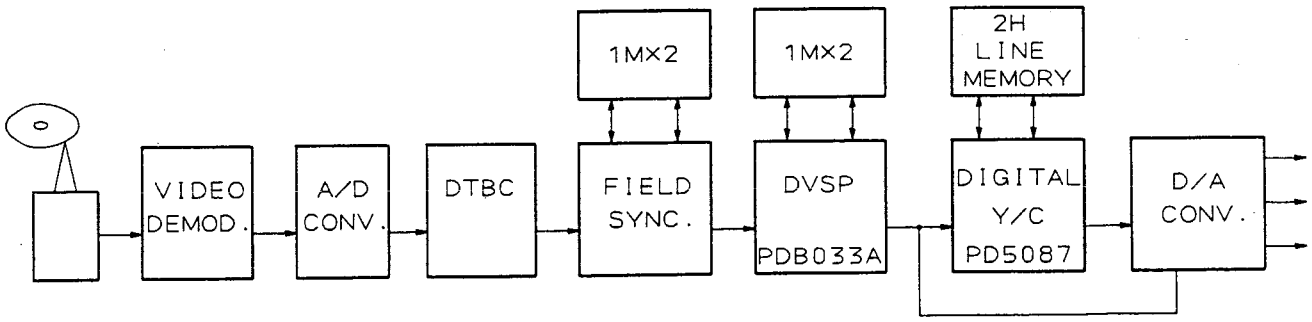
6.2 VIDEO NOISE REDUCTION SECTION

An advantage of digital processing of video signals is that an FIR filter can be used to obtain flat phase characteristics. And because S/N does not deteriorate even after processing several times, it is advantageous after A/D conversion of video signals with digital TBC to carry out processing as much as possible digitally and to lessen analog processing after D/A conversion to obtain better picture quality.

This unit employs the PDB033A as a high-quality field coefficient DVSP (Digital Video Signal Processor) in the last stage of the digital TBC system. This is directly connected to PD5087, a 3-line direct matrix digital Y/C separator IC. The DVSP acts as the core of this system. Because video signal processing as well as character displays is carried out digitally, it is possible to greatly reduce analog circuits. The D/A converter is a single chip 3 channel D/A converter which carries out D/A conversion of the Y and C signals as well as the composite signal. The analog circuits after D/A conversion are basically limited to the amplifier.

Description of the Video Noise Reduction Block Diagram

The 8 bits of video data output from pins 83 through 90 of PDB006 are input to the NR block via pins 15 through 22 of PD0093A. CHA and CHB from PD0093A cause the video data with characters to be output as YCCOMP data from pins 123 through 130 of PDB033A. This is input to the 2 H line memory and PD5087. A 1 H delay signal and 2 H delay signal are read from the 2 H line memory. These are both input to PD 5087 where 3-line correlated Y/C separation takes place.
The separated Y data and C data is input again to PDB033A where it is divided into two systems.
After the Y and C data is added, the data is input to MB81C1501PF (an 1 M DRAM) and written to the required address. The address of this DRAM is reset by WV and incremented one line at a time by WH. Reading of the data from the DRAM is done by incrementing the addresses in succession by RV and RH.
This is then input to the NR block.
Blanking is inserted in the Y data of the COMP data and the Y data of the Y/C data and these are both input to the D/A converter. The Y and COMP signals emerging from the D/A converter undergo sync-insert to complete processing.



Video Signal Processing Summary

6.3 DESCRIPTION OF PDB033A

6.3.1 Summary

PDB033A is an IC whose core is a noise reduction device for processing 8 bits of 4 fsc video data. It includes the following circuits :

1. SG circuit
2. Black back generation circuit
3. Character insertion circuit
4. Caption circuit

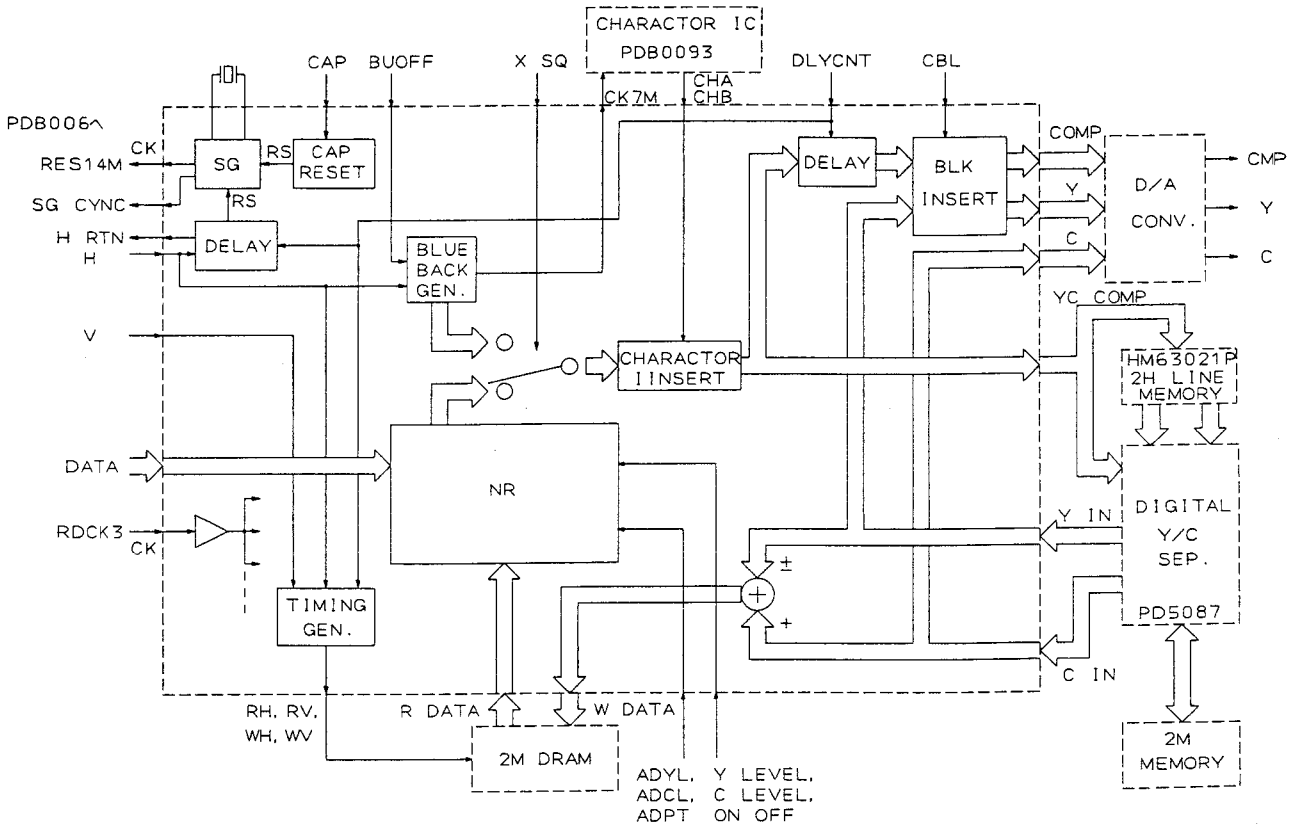
6.3.2 Functions

1) Digital Noise Reduction

It is possible with the Y signal and C signal to set independent reduction levels (limiter levels).

2) Sync-Insert

By inputting the CBL signal of PDB006, the pedestal level is inserted inside PDB033A as digital data during blanking.



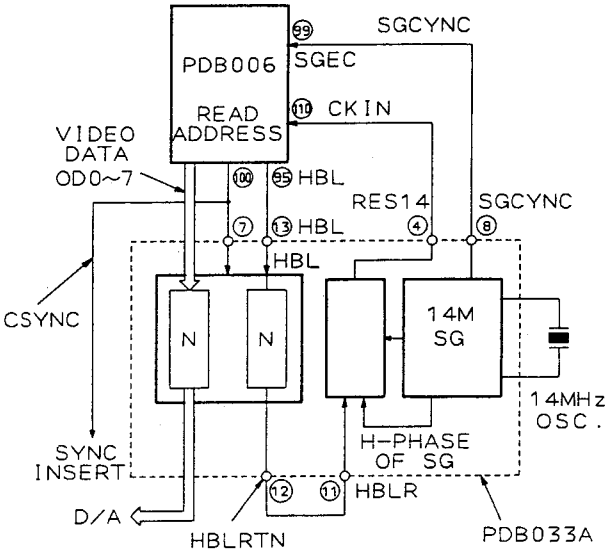
PDB033A block diagram

3) SG Circuit

With the original 14 M digital TBC the SG block was composed of a separately attached TC9015 and a sync-insert phase synchronizing circuit. With the PDB033A, this is included inside the IC. The 14 MHz oscillation circuit set on the SG block becomes the standard frequency for all blocks. The SGCYNC created by that block becomes the standard for reading of video data.

The SGCYNC operates the read address counter inside the PDB006.

An HBL indicating the position of the H-SYNC is output from this address counter and the output data from PDB006 is output synchronously with this. Because the output data undergoes N clock delay in the NR block, the HBL also undergoes delay for the same number of steps and is sent to the SG block. The RES 14 clock is stopped until the phase of H from HBLR and SGCYNC agree with each other. This controls the read address counter and matches the phase of C-SYNC of SG and the video data.



SG block

4) Black Back

For the black back screen, a counter reset with the HBL (13 pin) is used to set the pedestal, burst and luminance period. The 3.58 MHz reset with the HLS (10 pins) is used to change the setting value of the burst and luminance.

Black back data

5) Character Insert

Digital character insert is made possible by connecting the CHB and CHA outputs of PD0093A and PDB033A and supplying CK 7 Mϕ for the dot counter.

6) Clock Stop

With this unit, when "CD" and "FL & DISP are OFF", the unit goes to the CD Hi-Fi mode and the video clock goes off. This is done at memory substrate Q802 by shunting the oscillation circuit PDB033A. As a result, all the clocks of the reference 14 MHz (standard frequency system) go to a stop state.

7) Caption Reset

At PDB006, the field of the sync for insertion and the field of the video signal for reading are determined and output as WFMON and RFMON. If the sync and video field are different according to this information, PDB033A emits a field reversal command to the SG to constantly match the field of the synch and video signal.

This function operates when CAP is H. Caption decode is possible due to this function. (However, it can only be used for composite output.)

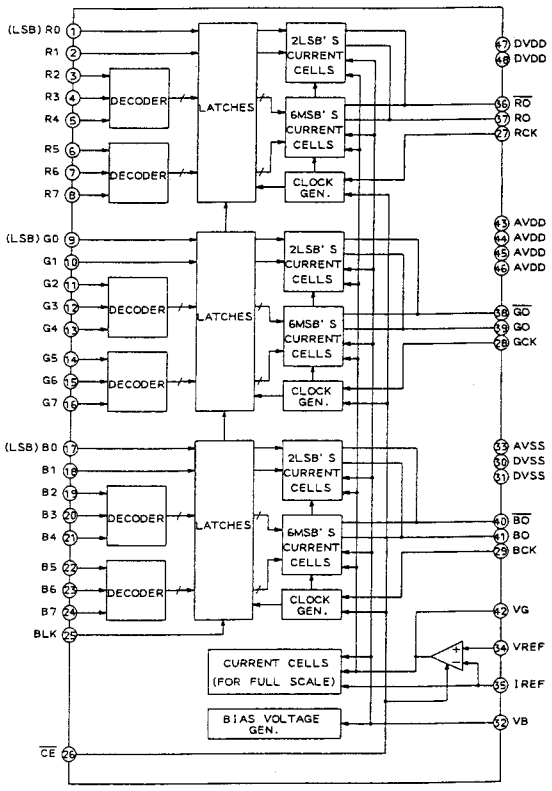
6.4 DESCRIPTION OF CXD1178Q

CXD1178Q is an 8-bit high-speed D/A converter for the video band. It includes input/output of 3 channels: Y,C and COMP.

It has the following features:

- 8-bit resolution
- Maximum conversion speed of 40 MSPS
- RBG (Y,C,COMP on this unit)
- 3-channel input/output
- 48 pin silicon gate CMOS

CXD1178Q block diagram



6.5 DESCRIPTION OF MB81C1501PF

The MB81C1501PF is a 3-port type 1 M bit field memory.

It has the following features:

- 293 x 760 word x 4 bits composition (serial write board)
- 293 x 760 word x 4 bits composition (serial read board)
- Silicon gate 3-layer CMOS

● CLD—97

1. General

System ..... LaserVision Disc system and Compact Disc digital audio system
Laser ..... Semiconductor laser wavelength 780 nm
Power requirements ..... AC 120 V, 60 Hz
Power consumption ..... 58 W
Weight ..... 17.0 kg (37 lbs 8 oz)
Dimensions ..... 459 (W) x 452 (D) x 174 (H) mm
18-1/16 (W) x 17-13/16 (D) x 6-7/8 (H) in
Operating temperature ..... +5°C ~ +35°C (41°F - 95°F)
Operating humidity ..... 5% ~ 85%
(There should be no condensation of moisture.)

2. Disc

LaserVision Discs

*Maximum playing times
12-inch standard play disc ..... 1 hour/both sides
12-inch extended play disc ..... 2 hours/both sides
8-inch standard play disc ..... 28 min/both sides
14 min/one side
8-inch extended play disc ..... 40 min/both sides
20 min/one side

Spindle motor speed
Standard play disc ..... 1,800 rpm
Extended play disc ..... 1,800 rpm (inner circumference) to 600 rpm (outer circumference)
(For a 12-inch disc)

Compact Discs

DISC ..... Diameter: 5-inch, 3-inch, Thickness: 1.2 mm
Rotation direction (pickup side) ..... Counterclockwise
Linear speed ..... 1.2 ~ 1.4m/sec
*Maximum playing time ..... 74 min. 5-inch discs
20 min. 3-inch discs
(For stereo playback)

Compact Discs with Video

Disc ..... Diameter: 5-inch, Thickness: 1.2 mm
Rotation direction (pickup side) ..... Counterclockwise
