### SPECIFICATIONS

#### General

System .....	Compact disc audio system
Usable discs .....	Compact Disc
Signal format .....	Sampling frequency: 44.1 kHz Number of quantization bits: 16; linear
Usable frequency .....	.89.1 MHz, 89.5 MHz
Power source .....	14.4 V DC (10.8 - 15.6 V allowable)
Max. current consumption .....	.9 A
Weight (CD player unit) .....	3.0 kg (6.6 lbs.)
Dimensions (CD player unit) .....	200 (W) x 75 (H) x 295 (D) mm [7-7/8 (W) x 3 (H) x 11-5/8 (D) in.]

(FM Modulator unit) ..... 160 (W) x 30 (H) x 100 (D) mm

[6-1/4 (W) x 1-1/8 (H) x 3-7/8 (D) in.]

(Keypad controller) ..... 55 (W) x 68 (H) x 15 (D) mm

[2-1/8 (W) x 2-5/8 (H) x 5/8 (D) in.]

These specifications were determined and are presented in accordance with specification standards established by the Ad Hoc Committee of Car Stereo Manufacturers.

#### Note:

Specifications and the design are subject to possible modification without prior notice due to improvements.

- **CD Player Service Precautions**

1. Since these screws protect the mechanism during transport, be sure to affix it when it is transported for repair, etc.
2. For pickup unit handling, please refer to "Disassembly" During replacement, handling precautions shall be taken to prevent an electrostatic discharge (protection by a short pin).
3. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.

## 1. SAFETY INFORMATION

### **CAUTION**

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

### **WARNING**

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5). When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

## 2. TRANSPORTATION SCREWS

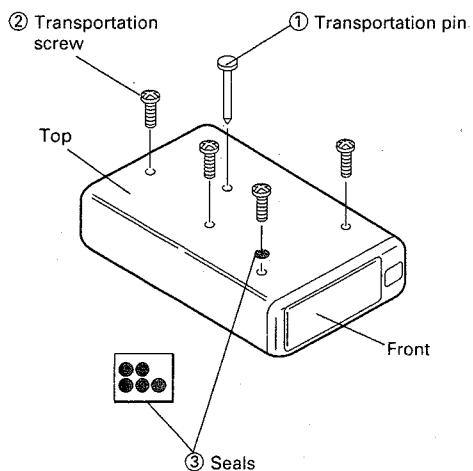

### **Removal of Screws**

Be sure to remove transportation screws (red) ② and ③ in this order and cover the screw holes with seals ③ before mounting the set. Peel off adhesive tape to remove the transportation pin ①. **The removed screws (red) and the pin will be required if you transport the player again later. Keep them in the bag for keeping transportation screws.**

### **Reinstallation of Screws**

Be sure to reinstall the transportation screws (red) in the procedure described below before re-transporting the set. Incorrect order of reinstallation or use of different screws may cause the set to fail.

1. Let the set operate the beginning of a disc and stop operation within 10 seconds thereafter before removing the set.
2. Remove the magazine and then the set.
3. Reinstall the transportation screws in the reverse order (② and ①) of removal. Fasten the transportation pin ① with adhesive tape.
- Before screwing in the transportation screws, position the player vertically.

### 3. CONNECTING THE UNITS

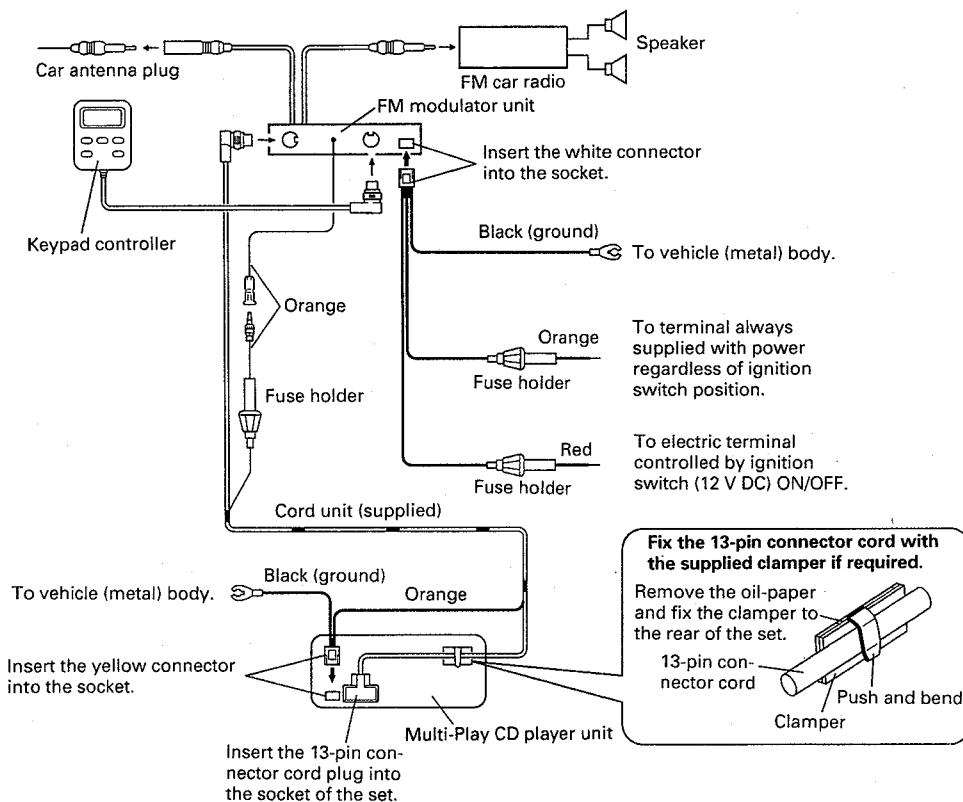

Fig. 1

### 4. GENERAL GUIDE

#### Multi-play CD Player Unit (Changer Assy)

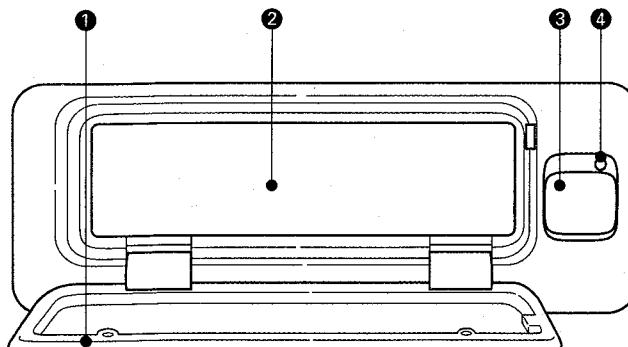

Fig. 2

The Magazine Type Multi-Play CD players with  mark and the Magazines with the same mark are compatible for 5-inch (12 cm) discs.

#### Precautions when using 8-cm (3-inch) CDs

- The magazine supplied with this CD player is for 12-cm (5-inch) CDs only. Do not put 8-cm (3-inch) CDs in the magazine, even with adapters, as they may cause a failure.
- To play 8-cm CDs, use the optional JD-M308 magazine, which holds six 8-cm CDs. The JD-M108 magazine for six 8-cm CDs cannot be used with this player.

##### ① Door

Be sure never to leave the door open.

##### ② Compact disc magazine slot

##### ③ Door open/eject button

Press this button to open the door ① and eject the magazine.

##### ④ Clear button

After connecting everything up, press the clear button with the tip of a pencil. If the power will not come on, or if the compact disc player does not operate when the button on the control unit is pressed, or if the control unit display is incorrect, press this button with the tip of a pencil to restore normal operation. **Always press the clear button on the FM modulator unit, too, after pressing this button.**

## FM Modulator Unit (Control Assy)

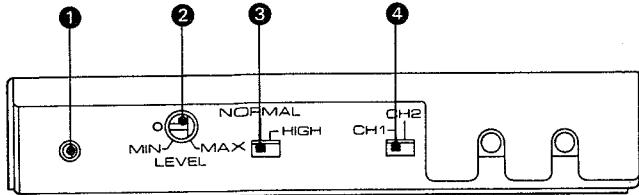

Fig. 3

### ① Clear button

After connecting everything up, press the clear button with the tip of a pencil. If the power does not switch on, or if the CD player does not operate, when the button on the control unit is pressed, or if the control unit display is incorrect, press this button with the tip of a pencil to restore normal operation. Always press the clear button on the multi-play CD player unit, too, after pressing this button.

### ② Source level adjuster

Normally, set the source level adjuster to the position indicated by a dot (•). If, when you play discs, the volume is low compared with that for FM, turn the control clockwise. If the volume is high, and there is distortion, turn the control counterclockwise.

## Keypad Controller (Control Assy)

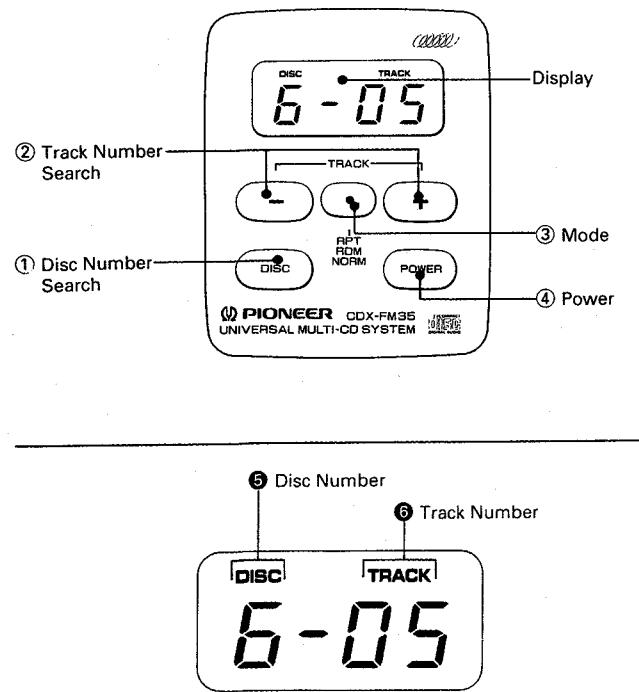

Fig. 4

### ③ Pre-emphasis correction switch

Normally, set the high-frequency correction switch to NORMAL. If you set it to HIGH, high-frequency sounds will emphasized a little; however, if this causes distortion (it depends on your radio), set the switch back to NORMAL.

### ④ Modulating frequencies selector

The channel selector determines the FM frequency used to play discs via your radio. Normally, set the selector to CH1 (89.1 MHz). If a strong station breaks in on this frequency, set the switch to CH2 (89.5 MHz).

### ① Switch the radio on and tune to 89.1 MHz or 89.5 MHz FM.

- Select CH1 (89.1 MHz) or CH2 (89.5 MHz) with the channel selector in the FM modulator unit beforehand.
- If your radio has preset tuning, you can preset the frequency of the selected channel.
- If your radio does not have muting, there may be some noise before power switch of control unit is ON. If this happens, turn down the volume of the radio.

### ② Press button ④ to switch on and start the player.

- If there is no magazine in the player, "N M" (no magazine) will appear on the control unit display for about five seconds to tell you to load a magazine.
- An "Err" (error) indicator is shown on the display and operation of the system becomes impossible when there are no discs in the magazine or when the discs are loaded in the magazine with their labels facing upwards whenever this message appears, remove the disc magazine and check the discs.

### ③ Use the Disc Number Search function to select a disc.

Press button ① to select the desired disc number. The disc number is displayed at ⑤.

- If a magazine tray contains no disc, the disc number will not displayed.

### ④ Use Track Number Search to select a track.

Press the (+) to (-) side of button ②. Press the (+) side to increase the track number ⑥, or the (-) side to decrease the number. Holding either side of button ② down changes the track number at high speed.

### ⑤ Set the volume, balance, bass, and treble to the desired level using the car radio.

### ⑥ To stop disc play, press button ④.

- If you want to listen to the radio or a cassette after stopping the player, turn down the volume of the radio and stop the player.

## 5. DISASSEMBLY

### • Case

1. Unfasten six Screws A and then remove the upper case.
2. Unfasten four Screws B and then remove the lower case.

### • Grille Assy

1. Unlock four catches and dismount the grille assembly.

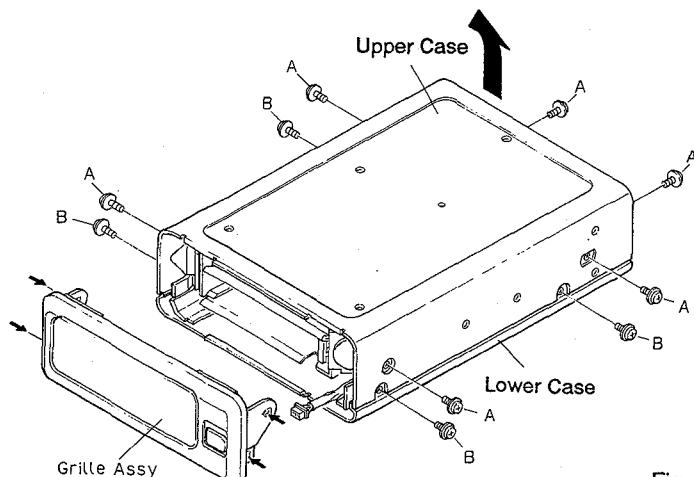

Fig. 5

### • Chassis L

1. Unfasten four screws.
2. Disconnect two connectors and remove the sub chassis.
3. Remove the damper holder.
4. Remove the spring.
5. Remove chassis L.
6. Remove chassis R.

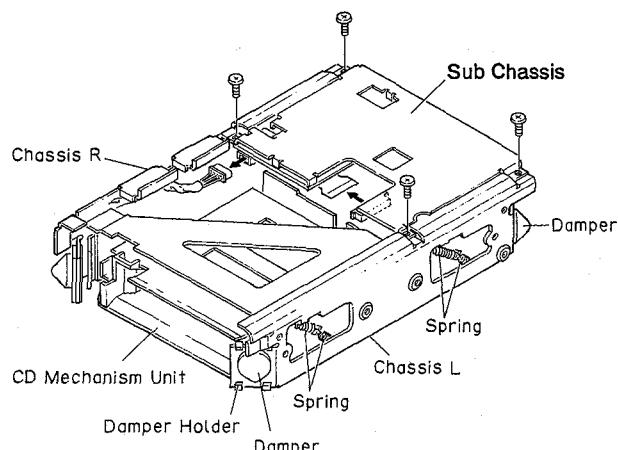

Fig. 6

**● CN351**

Before disconnecting the CN351 connector (PU unit connector), attach a short pin as illustrated.

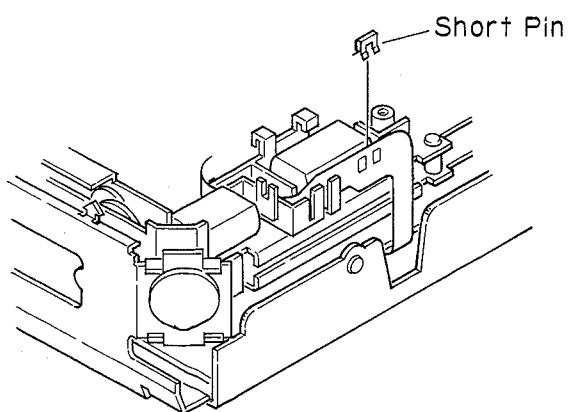

Fig. 7

## ● Measuring Equipment and Jigs

Adjustment	<ul style="list-style-type: none"> <li>Measuring equipment&amp;jigs</li> </ul>
Grating Adjustment	<ul style="list-style-type: none"> <li>Oscilloscope,clock driver,grating adjustment filter (bandpass filter)(GGF133),AC millivoltmeter</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
Tangential Skew Check	<ul style="list-style-type: none"> <li>Oscilloscope,screwdriver</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
Grating Adjustment	<ul style="list-style-type: none"> <li>Oscilloscope,clock driver,two low-pass filters</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
FE Bias Adjustment	<ul style="list-style-type: none"> <li>Oscilloscope,volume adjustment driver SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
RF Offset Adjustment	<ul style="list-style-type: none"> <li>Oscilloscope,volume adjustment driver SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
TE Offset Adjustment-1	<ul style="list-style-type: none"> <li>DC voltmeter or oscilloscope,volume adjustment driver</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
Tracking Balance Adjustment-1	<ul style="list-style-type: none"> <li>Oscilloscope,volume adjustment driver SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
Focus Servo Loop Gain Adjustment	<ul style="list-style-type: none"> <li>Oscillator,gain adjustment filter (GGF-065),Oscilloscope, dual meter milli-voltmeter,volume adjustment driver SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
Tracking Servo Loop Gain Adjustment	<ul style="list-style-type: none"> <li>Oscillator,gain adjustment filter (GGF-065),Oscilloscope, dual meter milli-voltmeter,volume adjustment driver SONY TYPE 4 (or TYPE 3)</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>
TE Offset Adjustment-2	<ul style="list-style-type: none"> <li>DC voltmeter,volume adjustment driver</li> <li>Extension Cable:GGF1157,GGF1158 • DIN Cord:GGF1159</li> <li>Relay P.C.Board:GGF1156</li> </ul>

• Adjustment Points

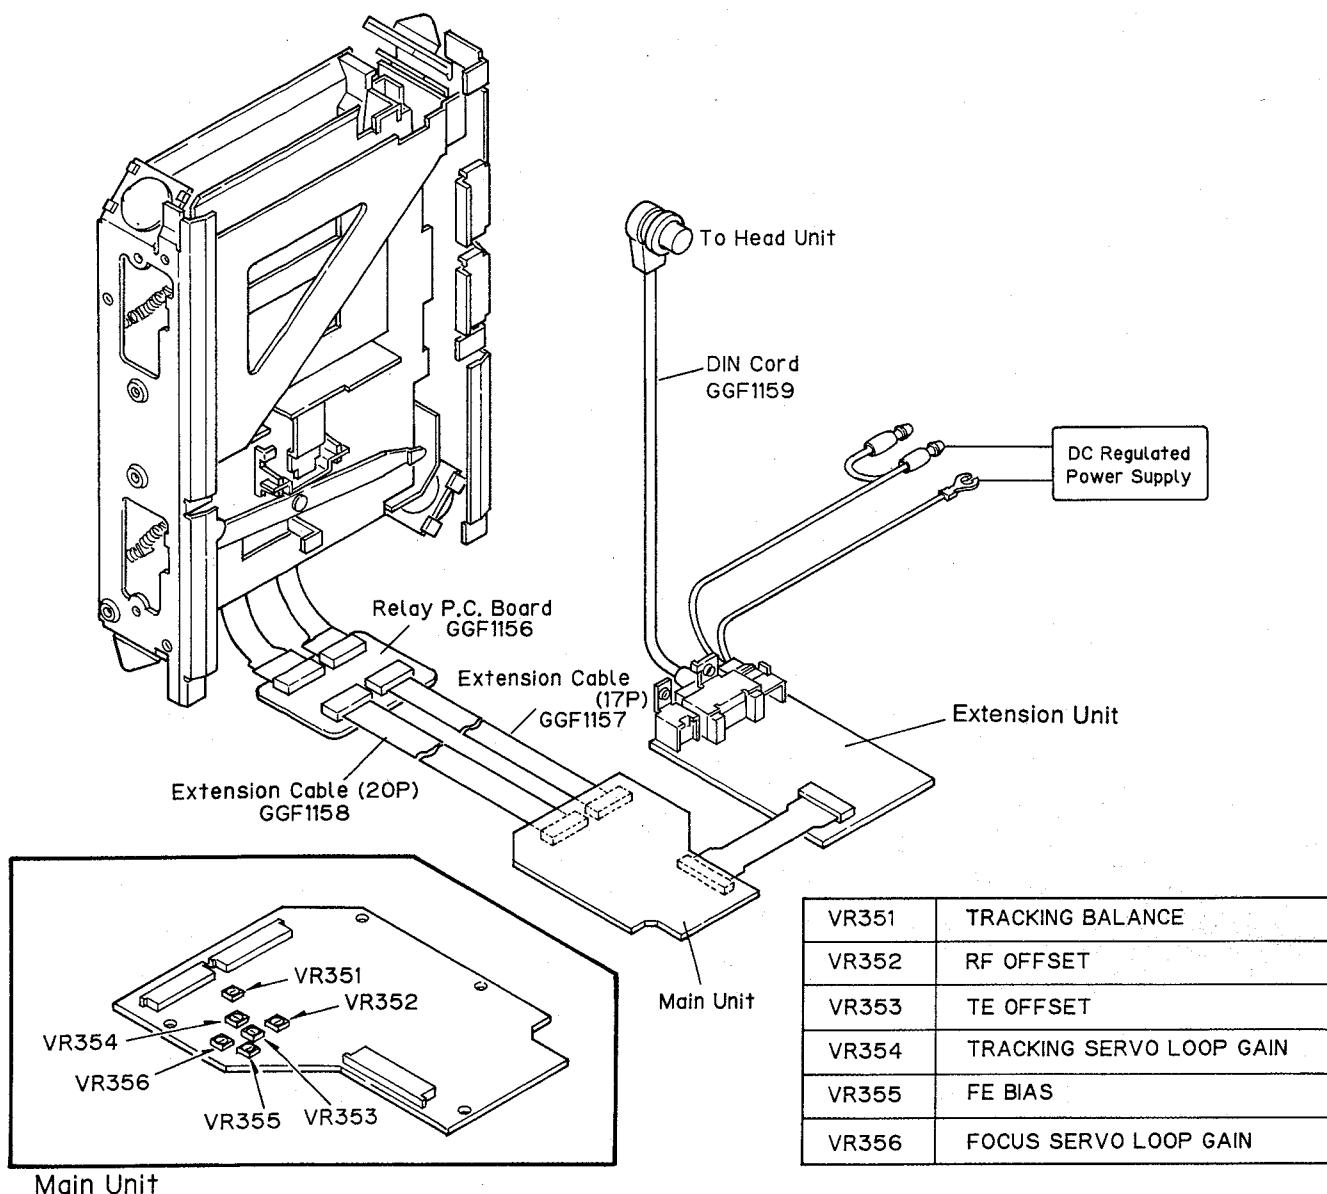

Fig. 9

## 6. BLOCK DIAGRAM

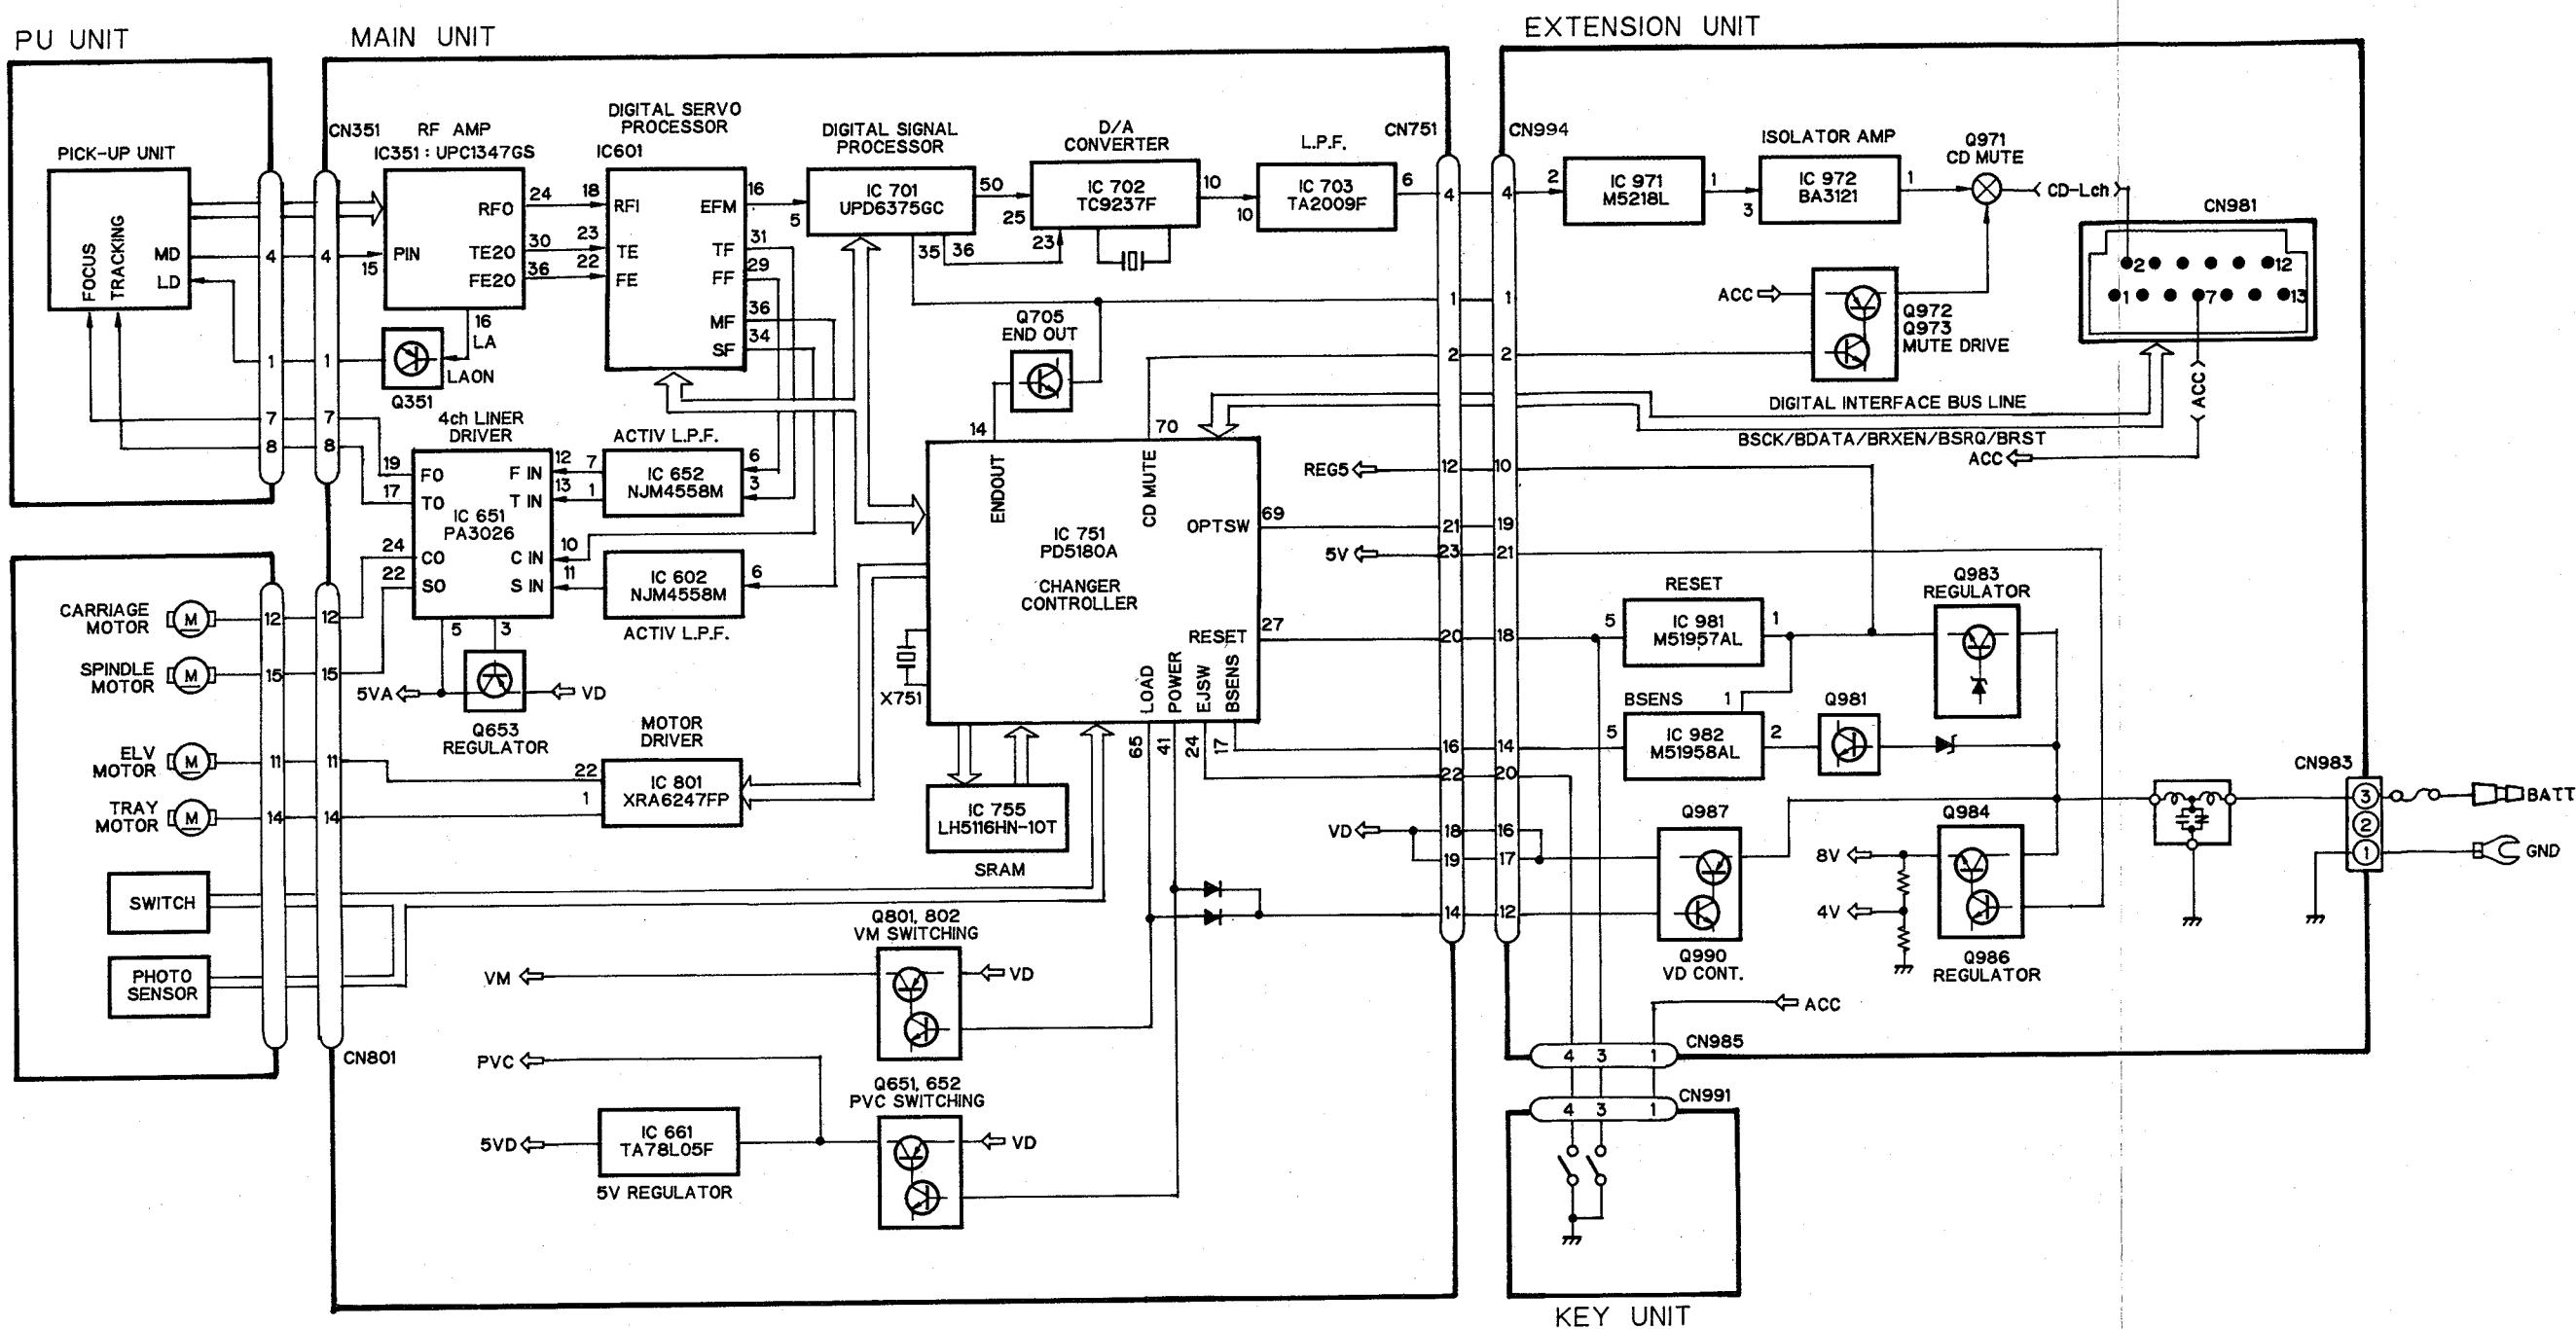

Fig. 8

## 7. ADJUSTMENT (Changer Assy)

### 1) Precautions

- This unit uses a single power supply (+5V) for the regulator. The signal reference potential, therefore, is connected to REFOUT(approx. 2.5V) instead of GND.

If REFOUT and GND are connected to each other by mistake during adjustments, not only will it be impossible to measure the potential correctly, but the servo will malfunction and a severe shock will be applied to the pick-up. To avoid this, take special note of the following.

Do not connect the negative probe of the measuring equipment to REFOUT and GND together. It is especially important not to connect the channel 1 negative probe of the oscilloscope to REFOUT with the channel 2 negative probe connected to GND.

And since the frame of the measuring instrument is usually at the same potential as the negative probe, change the frame of the measuring instrument to floating status.

If by accident REFOUT comes in contact with GND, immediately switch the regulator or power OFF.

- Always make sure the regulator is OFF when connecting and disconnecting the various filters and wiring required for measurements.

Before proceeding to further adjustments and measurements after switching regulator ON, let the player run for about one minute to allow the circuits to stabilize.

Since the protective systems in the unit's software are rendered inoperative in test mode, be very careful to avoid mechanical and /or electrical shocks to the system when making adjustment.

When loading and unloading discs during adjustment procedures, always wait for the disc to be properly clamped or ejected before pressing the another key. Otherwise, there is risk of the actuator being destroyed.

Turn power off when pressing the button **▶** or the button **◀** key for focus search in the test mode. (Or else lens may stick and the actuator may be damaged.)

### 2) Test mode

The model CDX-FM35 is adjusted in a combination with the multiple CD control head (FH-M75, etc.). Each regulator key should be operated at the head. With the FH-M75 taken up for reference, a description will be given below concerning how to enter into the test mode, including key operations. The key in the adjustment text is also one of the FH-M75 keys.

#### • How to enter into the test mode

While pressing keys 4 and 6 at a time, press the back-up ON or clear button ON the FH-M75.

#### • Resetting the test mode

Press the clear button ON the FH-M75. Subsequently press the clear button ON the CDX-FM35. Or turn off the CDX-FM35 and the FH-M75, back-up and wait for about one minute.

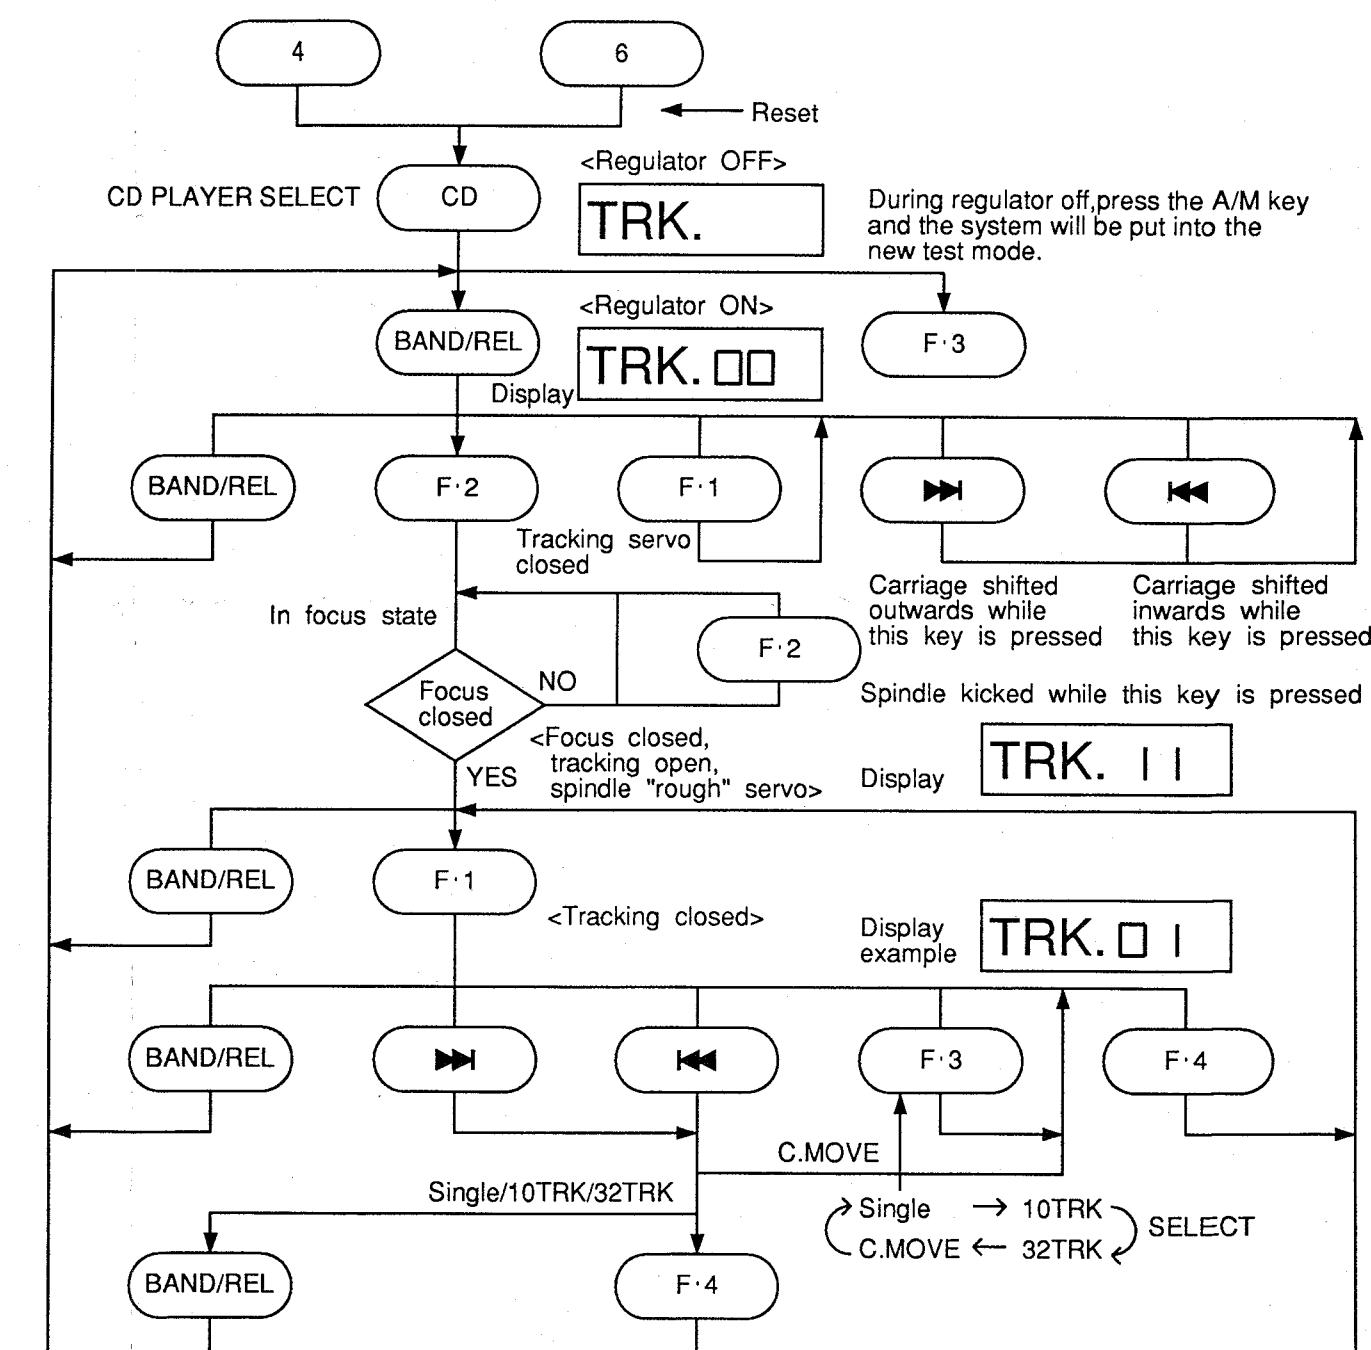

#### • Role to be played by each key in the test mode

A function key permits you to select the CD multi-player, single CD player, deck, TV or tuner.

Key	Function
BAND/REL	Regulator ON/OFF
<b>▶</b>	FWD Kick
<b>◀</b>	REV Kick
EJECT	EJECT
F·3	Jump mode
F·1	Tracking close
F·4	Tracking open
F·2	Focus close
CD	CD ON/OFF

- SINGLE/10TRK/32TRK will continue to operate even after the key is released. Tracking closed the moment C-MOVE is released.
- JUMP MODE resets to SINGLE as soon as power is off.

### ● Flow Chart

## 7.1 Grating Adjustment (Rough adjustment)

- Purpose: The grating may need adjustment in a replaced pick-up unit.
- Maladjustment symptoms: No disc playback; track jumping.

• Measuring equipment / jigs	• Oscilloscope, clock driver, grating adjustment filter (bandpass filter) (GGF-133), AC millivoltmeter
• Measuring point	• TEY
• Test disc and setting	• SONY TYPE 4 (or TYPE 3)
• Adjustment position	• Test mode • Pick-up grating adjustment hole

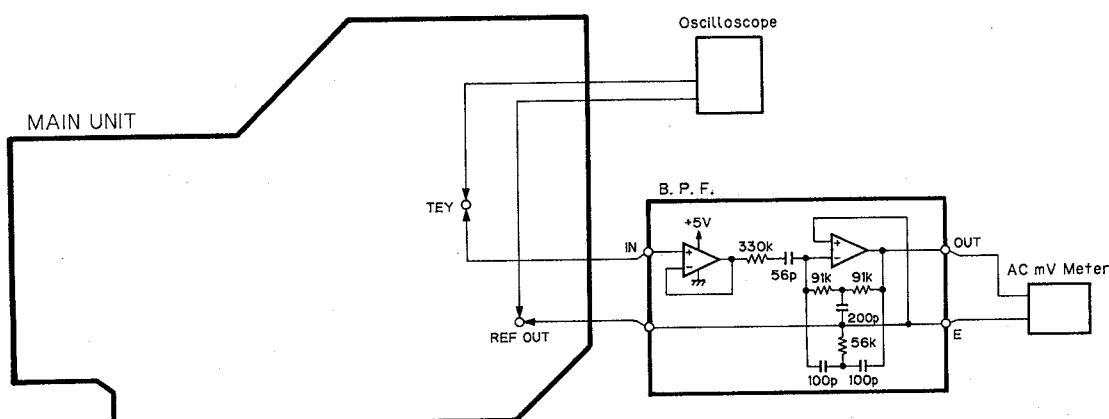

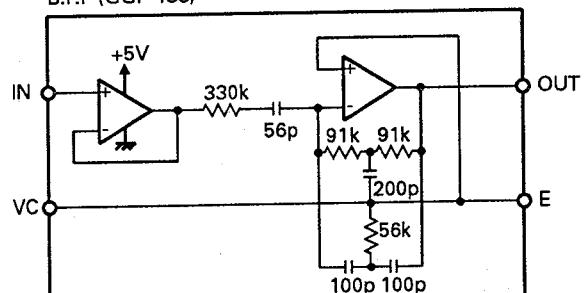

Fig.10

### Adjustment Procedure

- In the test mode, set a test disc-loaded magazine and select the tray with a test disc.
- Switch regulator ON.
- Using the  $\blacktriangleright$  or  $\blacktriangleleft$  key, move the pick-up to about the center of the test disc.
- Press the F•2 key to close focus.
- While monitoring the TEY filter output by AC millivoltmeter, turn the grating adjustment hole slowly. The AC voltage increases and decreases while turning the screw. Search for the minimum voltage level. (This corresponds to the position where the grating is on a track, and is referred to as the null point.)
- Then while monitoring TEY by oscilloscope, turn the driver slowly clockwise from the null point (as seen from under the pick-up) until the first waveform peak amplitude is reached.

B.P.F. (GGF-133)

## 7.2 Tangential Skew Check

- Purpose: To check whether tangential skew has been misaligned or not when replacing the pick-up unit.
- Maladjustment symptoms: No disc playback;track jumping.

• Measuring equipment / jigs	• Oscilloscope,screwdriver
• Measuring point	• RFO
• Test disc and setting	• SONY TYPE 4 (or TYPE 3)
• Adjustment position	• Normal mode • Pick-up tangential adjustment screw

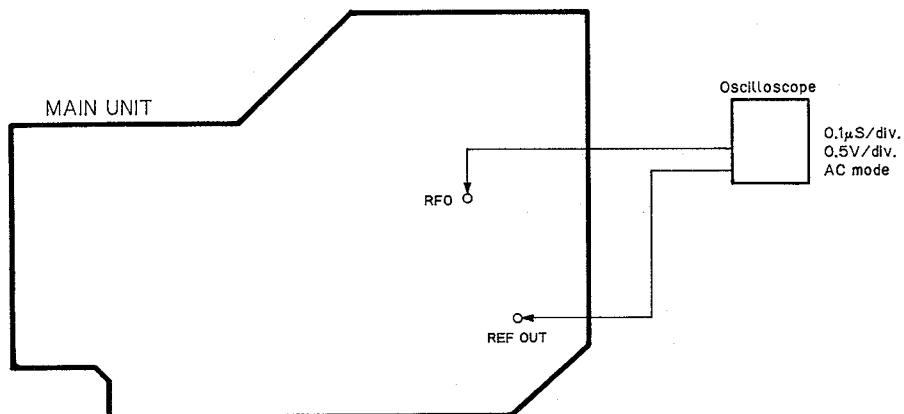

Fig.11

### Adjustment Procedure

- Play tune TNO 12 in normal mode.(TYPE 3:TNO 14)
- Adjust the tangential adjustment screw so that the RF wave-form will have a level maximized and an eye pattern clearly viewed. Turn the adjustment screw both clockwise and counterclockwise to points where the eye pattern deteriorates, and take the midway point as the adjustment point. As a general guide, look for an overall clear wave-form, and one of the diamond shapes in the eye pattern. The diamond shapes should appear in fine lines at the point of optimum adjustment. Take care not to knock the pick-up with the screwdriver at this stage. (This kind of accident can result in loss of focus.) (See Fig.12,13)
- Apply "screw-lock" to the tangential adjustment screw.
- After adjusting tangential skew, also adjust the grating.

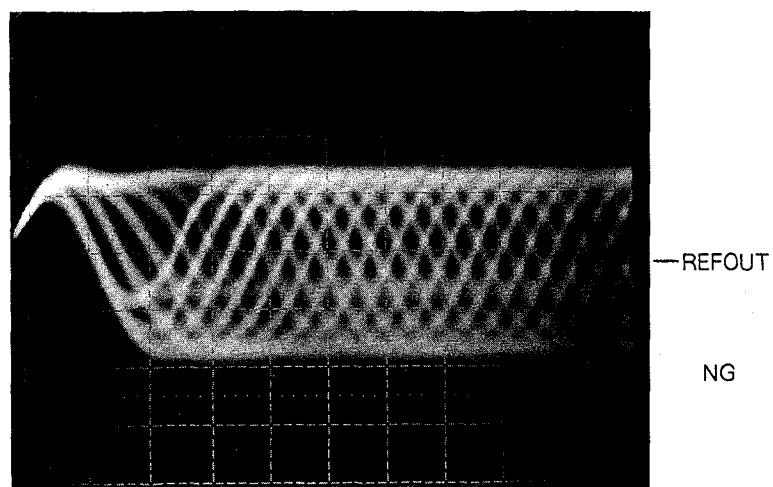

Fig. 12

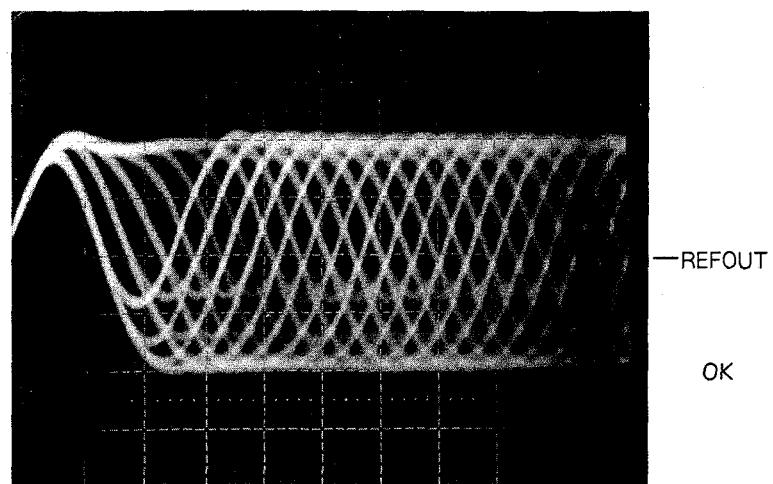

Fig. 13

0.5V/div.  
0.5  $\mu$ s/div.  
DC mode

### 7.3 Grating Adjustment (Fine adjustment)

- Purpose: The grating may need adjustment in a replaced pick-up unit.
- Maladjustment symptoms: No disc playback; track jumping.

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>Measuring equipment / jigs</li> <li>Measuring point</li> <li>Test disc and setting</li> <li>Adjustment position</li> </ul> | <ul style="list-style-type: none"> <li>Oscilloscope, clock driver, two low-pass filters</li> <li>E LPF output, F LPF output</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Test mode</li> <li>Pick-up grating adjustment hole</li> </ul> |
|---|---|

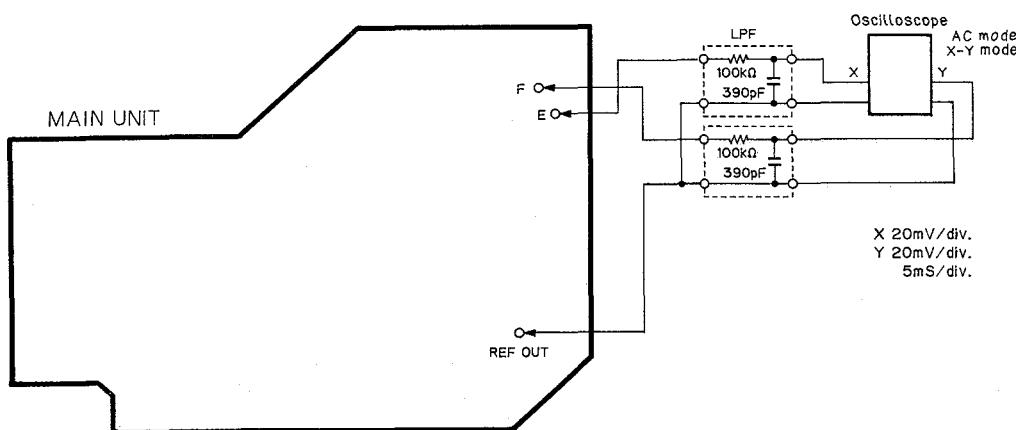

Fig.14

#### Adjustment Procedure

- Connect a low-pass filter as shown in the above diagram.
- Switch regulator ON in test mode, and load a disc.
- Using the  $\blacktriangleright$  or  $\blacktriangleleft$  key, move the pick-up to about the center of the test disc.
- Press the  $F\cdot 2$  key to close focus.
- Using the driver, adjust the Lissajous figure to a single line (or as close as possible).
- Switch regulator OFF and remove the filters.

TEY waveform 5ms/div, 500mV/div

Nul Point

Lissajous figure (AC input)  
 Horizontal axis E 20mV/div  
 Vertical axis F 20mV/div

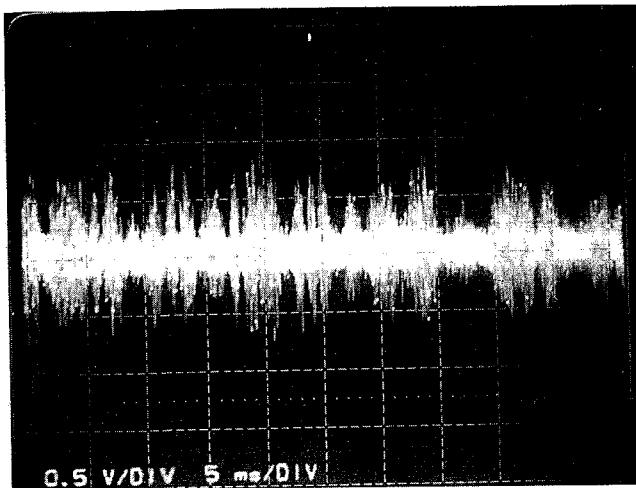

Fig. 15

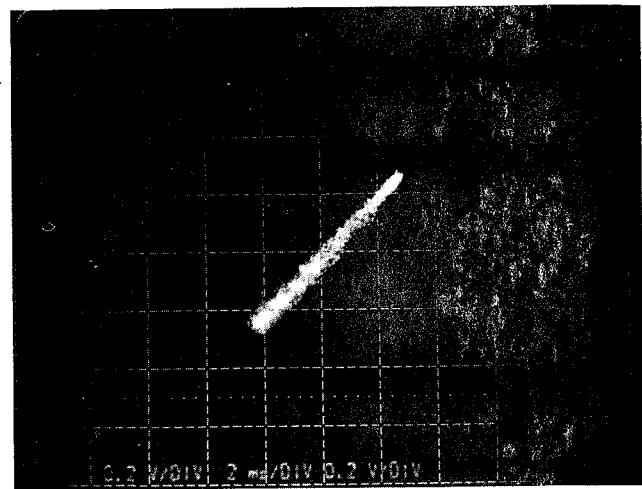

Fig. 16

"Rough" adjustment

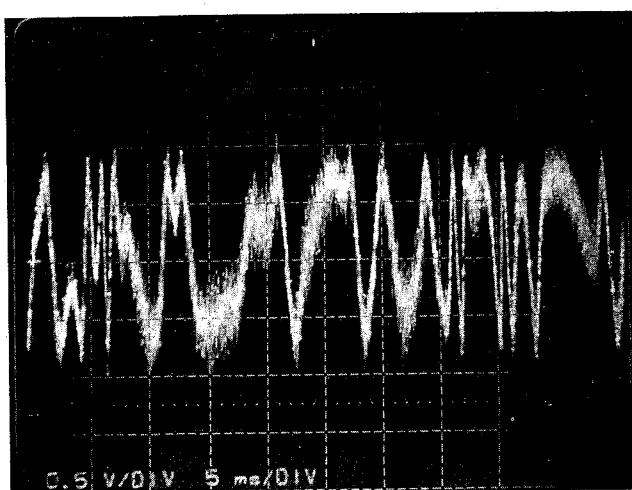

Fig. 17

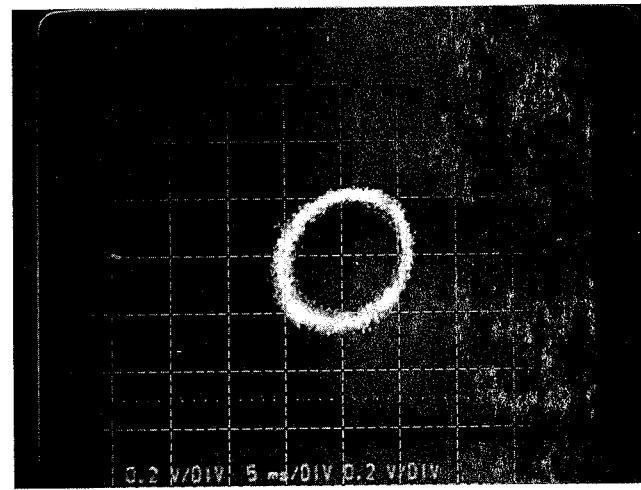

Fig. 18

Final adjustment

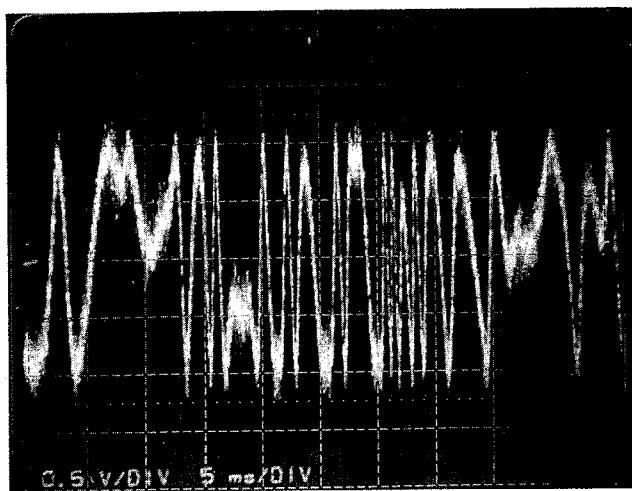

Fig. 19

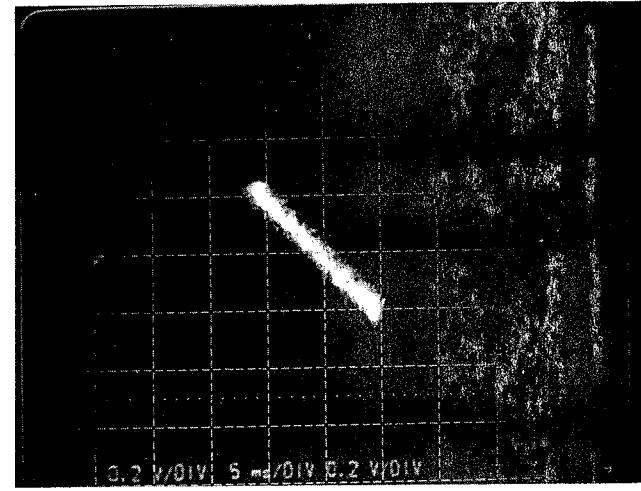

Fig. 20

## 7.4 FE Bias Adjustment

- Purpose: To adjust the focus servo bias to an optimum value.
- Maladjustment symptoms: Focus closing difficulty, poor playability.

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• Measuring equipment / jigs</li> <li>• Measuring point</li> <li>• Test disc and setting</li> <li>• Adjustment position</li> </ul> | <ul style="list-style-type: none"> <li>• Oscilloscope, volume adjustment driver</li> <li>• RFO</li> <li>• SONY TYPE 4 (or TYPE 3)</li> <li>• VR355(FEB)</li> <li>• Normal mode</li> </ul> |
|---|---|

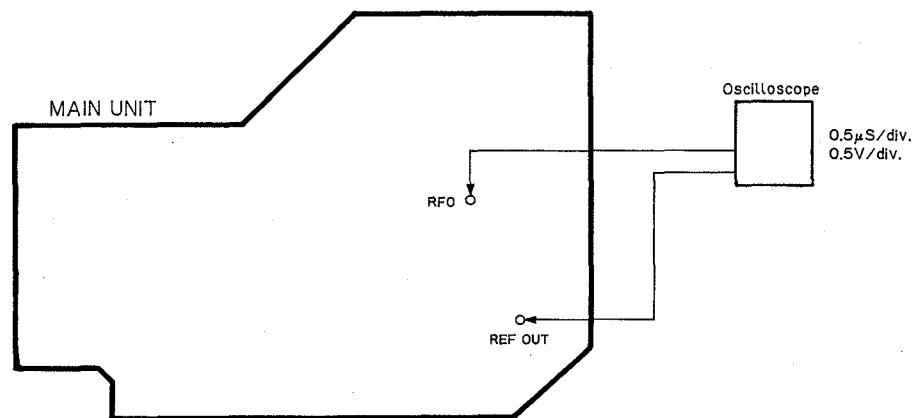

Fig.21

### Adjustment Procedure

1. Play tune TNO 12 in normal mode.(TYPE 3:TNO 14)
2. Observe RFO in respect to REFOUT in the oscilloscope, and adjust VR355(FEB) to obtain maximum RF and optimum eye pattern. (See Fig.22,23)

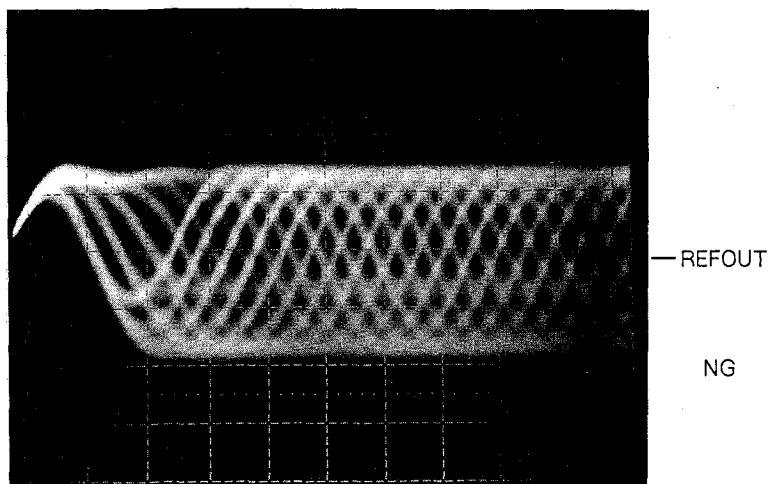

Fig. 22

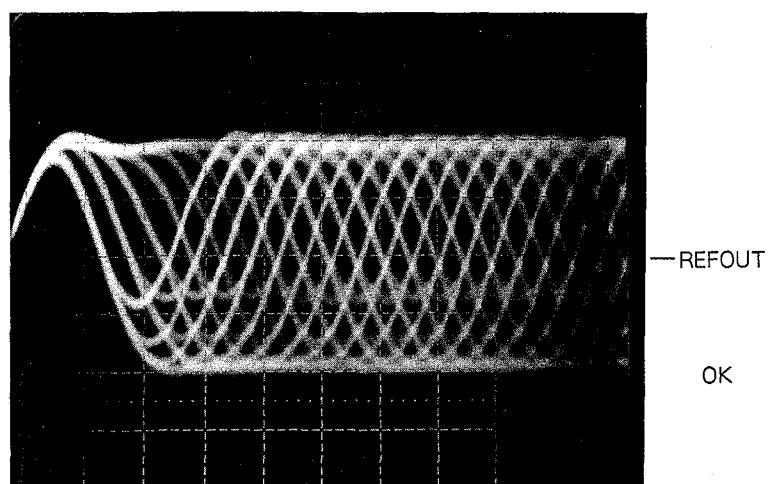

Fig. 23

0.5V/div.  
0.5 $\mu$ s/div.  
DC mode

## 7.5 RF Offset Adjustment

- Purpose: To adjust the RF amplifier offset to a suitable value.
- Maladjustment symptoms: Focus closure fails readily.

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>Measuring equipment / jigs</li> <li>Measuring point</li> <li>Test disc and setting</li> <li>Adjustment position</li> </ul> | <ul style="list-style-type: none"> <li>Oscilloscope, volume adjustment driver</li> <li>RFO</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Normal mode</li> <li>VR352(RFO)</li> </ul> |
|---|---|

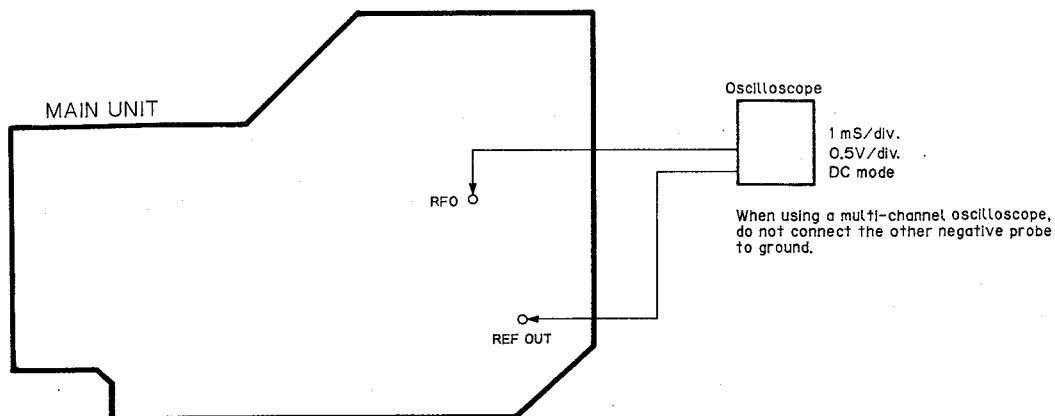

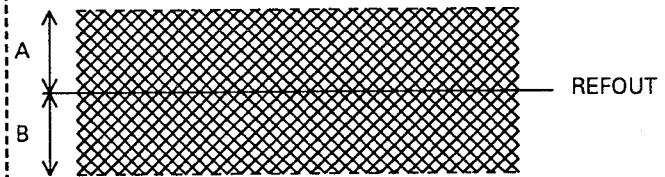

Fig.24

### Adjustment Procedure

- Play tune TNO 12 in normal mode. (TYPE 3:TNO 14)
- Use VR352 to adjust the RFO waveform so that REFOUT appears at the center. (A-B must not exceed 100 mV.)

## 7.6 TE Offset Adjustment-1

- Purpose: To adjust the electrical offset of the tracking servo to zero.
- Maladjustment symptoms: Search times too long, carriage run-away.

• Measuring equipment / jigs	• DC voltmeter or oscilloscope, volume adjustment driver
• Measuring point	• TEY
• Test disc and setting	• Empty magazine • Test mode
• Adjustment position	• VR353(TEO)

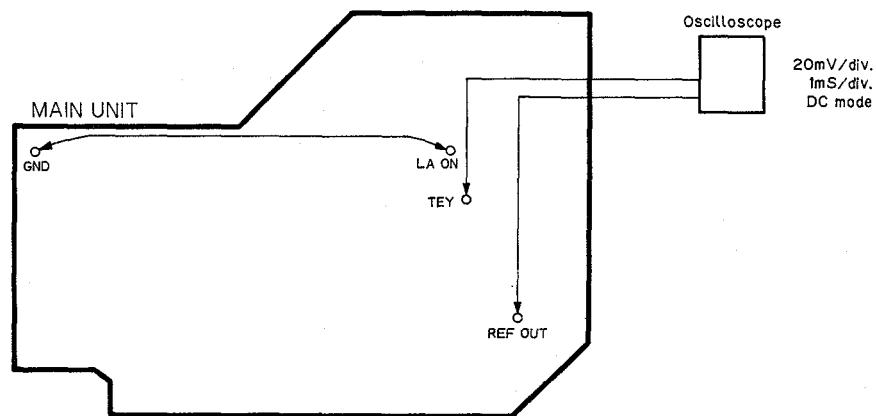

Fig.25

### Adjustment Procedure

1. Connect LAON to GND.
2. Switch regulator ON while in test mode.
3. Using VR353(TEO), adjust the TEY output DC voltage in reference to REFOUT to a value of  $0\pm25\text{mV}$ .
4. Switch regulator OFF.
5. Remove LAON to GND.

## 7.7 Tracking Balance Adjustment-1

- Purpose: To adjust the tracking servo offset to zero.
- Maladjustment symptoms: Search times too long, poor playability, carriage run-away.

<ul style="list-style-type: none"> <li>Measuring equipment / jigs</li> <li>Measuring point</li> <li>Test disc and setting</li> <li>Adjustment position</li> </ul>	<ul style="list-style-type: none"> <li>Oscilloscope, volume adjustment driver</li> <li>TEY (Tracking error signal)</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Test mode</li> <li>VR351(T.BAL)</li> </ul>
---	---

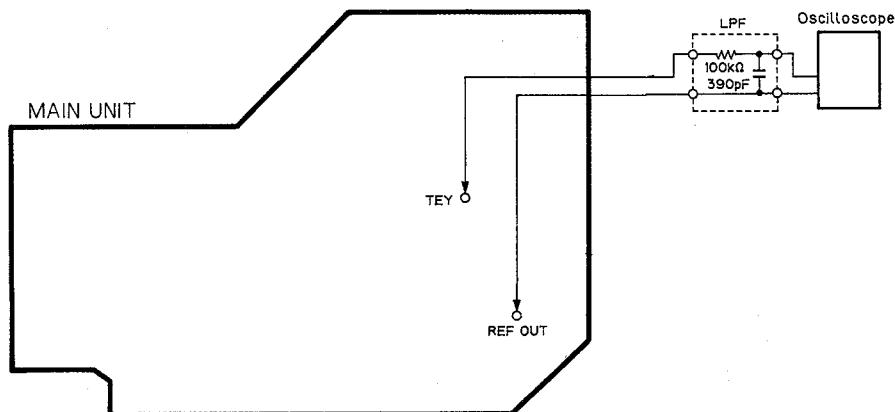

Fig.26

### Adjustment Procedure

- After checking that regulator is OFF, connect the low-pass filter as shown in the diagram.
- Set the test disc (SONY TYPE 4). Switch regulator ON.
- Using the **▶** or **◀** key, move the pick-up to about the center of the signal surface.
- Press the **F-2** key to close focus.
- Using an oscilloscope, observe the TEY signal in respect to REFOUT. Then adjust VR351(T.BAL) to set the positive and negative amplitudes to the same levels.(See Fig.27-29)
- Switch the power OFF.

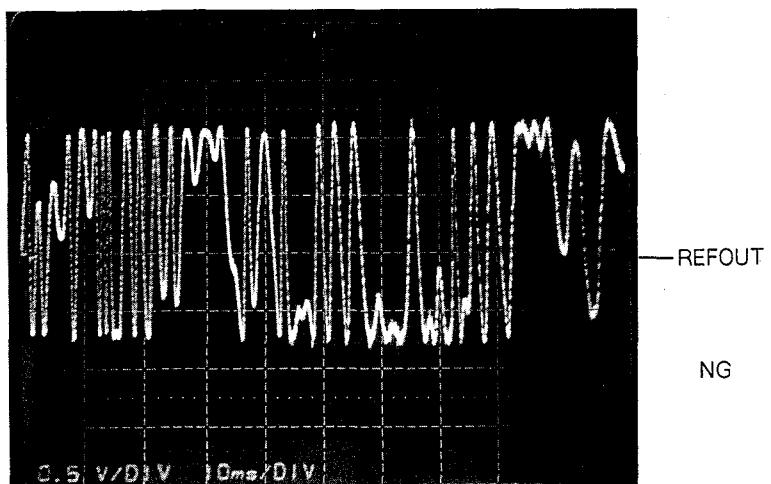

Fig. 27

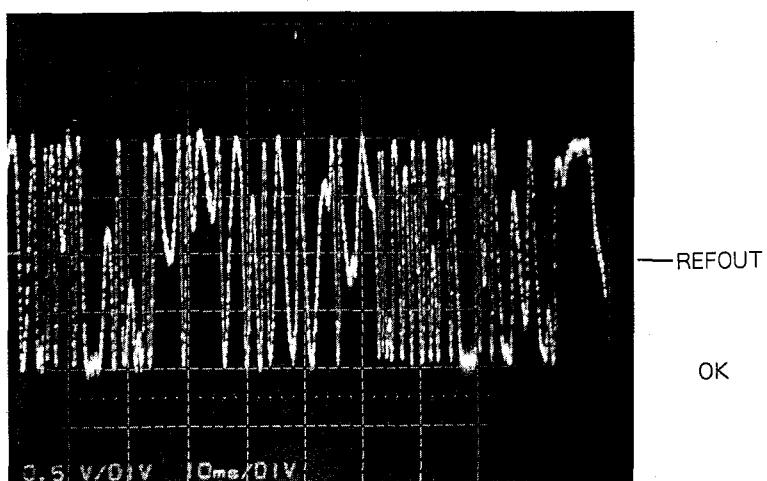

Fig. 28

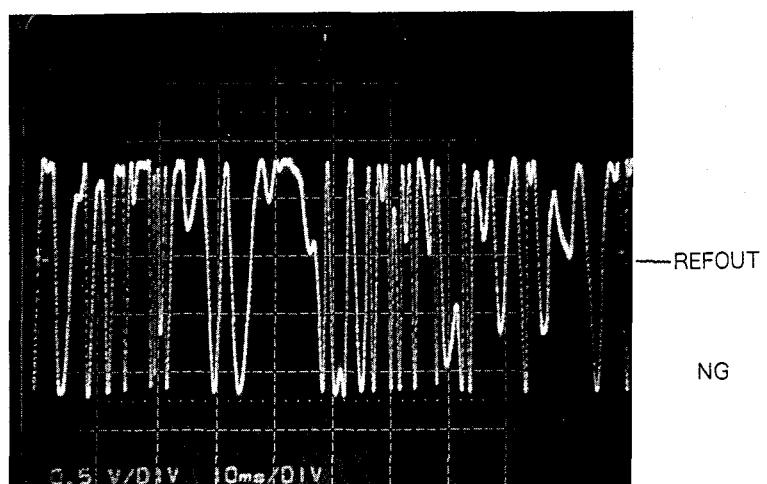

Fig. 29

## 7.8 Focus Servo Loop Gain Adjustment

- Purpose: To adjust the focus servo loop gain to an optimum value.
- Maladjustment symptoms: Poor playability, reduced resistance to vibration, focus closure fails readily.

<ul style="list-style-type: none"> <li>Measuring equipment / jigs</li> <li>Measuring point</li> <li>Test disc and setting</li> <li>Adjustment position</li> </ul>	<ul style="list-style-type: none"> <li>Oscillator, gain adjustment filter (GGF-065), dual meter milli-voltmeter, oscilloscope, volume adjustment driver</li> <li>FEX, FEY</li> <li>SONY TYPE 4 (or TYPE 3) • Normal mode</li> <li>VR356(FG)</li> </ul>
---	--

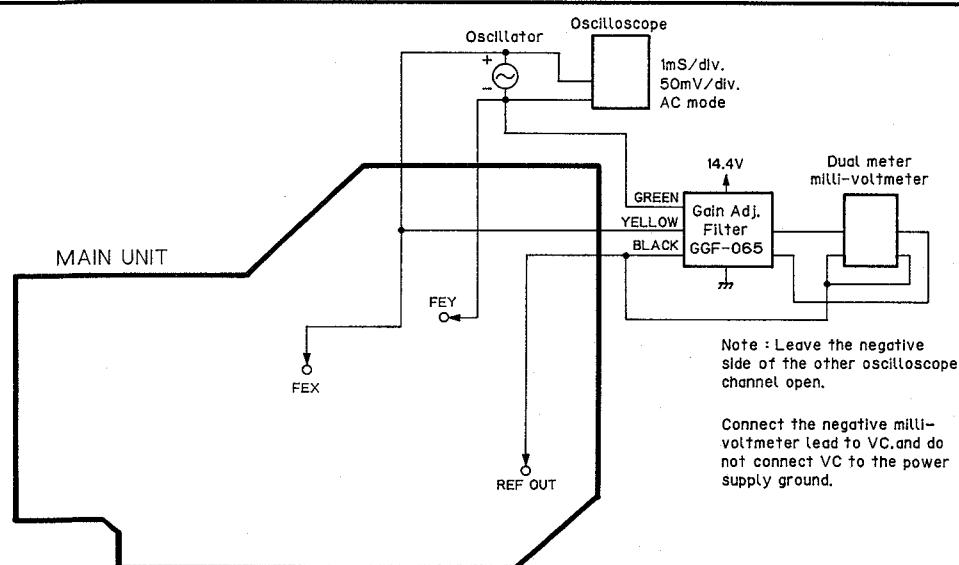

Fig.30

### Adjustment Procedure

- After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
- Play tune TNO 12 in normal mode. (TYPE 3:TNO 14)
- Set the oscillator to 1kHz, and observe the FEX/FEY output in the oscilloscope. Adjust the oscillator output to obtain a FEX/FEY output of 100mVp-p.
- Adjust VR356(FG) to obtain a milli-voltmeter difference of  $0 \pm 0.5\text{dB}$ .

## 7.9 Tracking Servo Loop Gain Adjustment

- Purpose: To adjust the tracking servo loop gain to an optimum value.
- Maladjustment symptoms: Poor playability, reduced resistance to vibration.

<ul style="list-style-type: none"> <li>Measuring equipment / jigs</li> <li>Measuring point</li> <li>Test disc and setting</li> <li>Adjustment position</li> </ul>	<ul style="list-style-type: none"> <li>Oscillator,gain adjustment filter (GGF-065),dual meter milli-voltmeter,oscilloscope,volume adjustment driver</li> <li>TEX,TEY</li> <li>SONY TYPE 4 (or TYPE 3)</li> <li>Normal mode</li> <li>VR354(TG)</li> </ul>
---	--

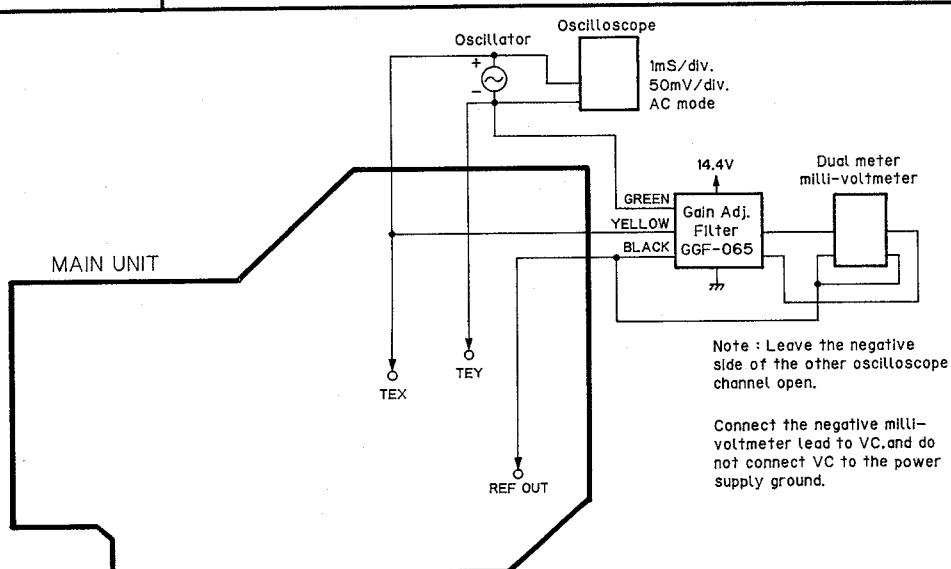

Fig.31

### Adjustment Procedure

- After checking that the power is OFF, connect the gain adjustment filter and measuring equipment as shown in the above diagram.
- Play tune TNO 12 in normal mode. (TYPE 3:TNO 14)
- Set the oscillator to 1.4kHz, and observe the TEX/TEY output in the oscilloscope. Adjust the oscillator output to obtain a TEX/TEY output of 300mVpp.
- Adjust VR354(TG) to obtain a milli-voltmeter difference of  $0\pm0.5$ dB.

**7.10 TE Offset Adjustment-2**

- Purpose: To adjust the electrical offset of the tracking servo to zero.
- Maladjustment symptoms: Search times too long,carriage run-away.

<ul style="list-style-type: none"><li>• Measuring equipment/jigs</li><li>• Measuring point</li><li>• Test disc and setting</li><li>• Adjustment position</li></ul>	<ul style="list-style-type: none"><li>• DC voltmeter,volume adjustment driver</li><li>• TEY</li><li>• No Disc • Test mode</li><li>• VR353</li></ul>
--	---

**Adjustment Procedure**

Same as for TE offset adjustment-1, but with the DC voltage of the TEY output adjusted to  $0\pm 50\text{mV}$ .  
The purpose of this additional adjustment is to correct any deviations generated when carrying out the tracking balance and tracking servo loop gain adjustments after completing TE offset adjustment-1.

## 7.11 Tracking Balance Adjustment-2

- Purpose: To adjust the tracking servo offset to zero.
- Maladjustment symptoms: Search times too long, poor playability, carriage run-away.

• Measuring equipment / jigs	• Oscilloscope, volume adjustment driver
• Measuring point	• TEY
• Test disc and setting	• SONY TYPE 4 (or TYPE 3)
• Adjustment position	• Test mode • VR351

### Adjustment Procedure

Steps 1 thru 5 same as tracking balance adjustment-1.

6. Check that the level difference between the positive and negative amplitudes of the TEY signal is within 5% (See Fig.27-29). If greater than 5%, adjust with VR351.
7. If further adjustment was necessary in step 6, repeat TE offset adjustment-2.

## 8. ADJUSTMENT (Control Assy)

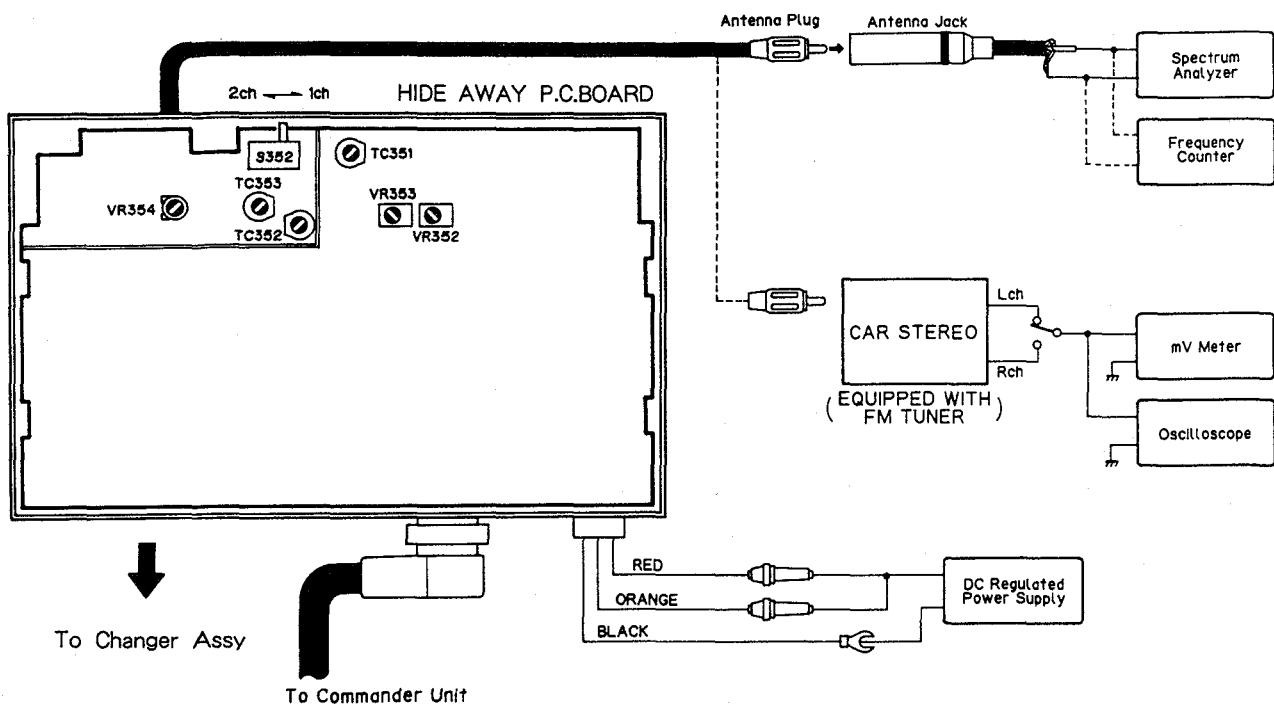

Fig. 32

## FREQUENCY ADJUSTMENT

No.		Adjusting Point	Adjustment Method (Switch Position)
1	No signal from multi-play CD player unit	TC352	Spectrum Analyzer or Frequency Counter : 89.1MHz (S352:1CH)
2	No signal from multi-play CD player unit	TC353	Spectrum Analyzer or Frequency Counter : 89.5MHz (S352:2CH)

## RF OUTPUT ADJUSTMENT

No.		Adjusting Point	Adjustment Method (Switch Position)
1	No signal from multi-play CD player unit	VR354	Spectrum Analyzer: $75 \pm 5 \text{dB}\mu\text{V}$ (S352:1CH and 2CH)

## DC OFFSET ADJUSTMENT

No.		Adjusting Point	Adjustment Method (Switch Position)
1	No signal from multi-play CD player unit	VR352	Leakage of 38kHz signal becomes minimum

## SEPARATION ADJUSTMENT

No.		Adjusting Point	Adjustment Method (Switch Position)
1	1kHz 0dB $\mu\text{V}$ (Lch) from multi-play CD player unit	TC351 VR353	Signal Leakage to the R-channel(crosstalk) becomes minimum

## ●ICs

QDO	8	29	TE2-
A	9	28	TE10
C	10	27	APCO
B	11	26	TE2+
D	12	25	APC-
E	13	24	RFO
F	14	23	NC
PIN	15	22	RF-
LA	16	21	RFS
LAON	17	20	RF+
VREF1	18	19	GND2

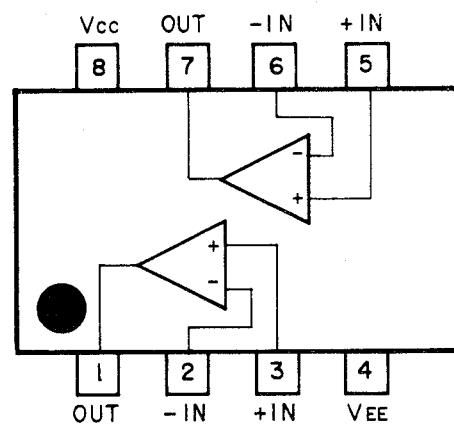

## ● Pin Functions (UPC1347GS)

Pin No	Pin Name	I/O	Function and Operation
1	VCC		
2	BP-	Input	Vibration detect amplifier 1 inverter input
3	BPO	Output	Vibration detect amplifier 1 output
4	WC+	Input	Window comparator non-inverting input
5	WC-	Input	Window comparator inverter input
6	GND		GND
7	QDH	Input	Vibration detect amplifier 3 non-inverting input
8	QDO	Output	Vibration detect amplifier 3 output
9	A	Input	A signal input
10	C	Input	C signal input
11	B	Input	B signal input
12	D	Input	D signal input
13	E	Input	E signal input
14	F	Input	F signal input
15	PIN	Input	APC circuit PD amplifier input
16	LA	Output	APC circuit LD amplifier output
17	LAON		Laser diode ON/OFF switching
18	VREF1		Reference voltage
19	GND2		GND
20	RF+	Input	RF amplifier non-inverting input
21	RFS	Output	RF summing virtual output
22	RF-	Input	RF amplifier inverter input
23	NC		
24	RFO	Output	RF amplifier output
25	APC-	Input	APC circuit PD amplifier inverter input
26	TE2+	Input	Tracking error amplifier 2 non-inverting input
27	APCO	Output	APC circuit PD amplifier output
28	TE10	Output	Tracking error amplifier 1 output
29	TE2-	Input	Tracking error amplifier 2 inverter input
30	TE20	Output	Tracking error amplifier 2 output
31	VREF2		Reference voltage
32	FE2+	Input	Focus error amplifier 2 non-inverting input
33	FE1+	Input	Focus error amplifier 1 non-inverting input
34	FE10	Output	Focus error amplifier 1 output
35	FE2-	Input	Focus error amplifier 2 inverter input
36	FE20	Output	Focus error amplifier 2 output

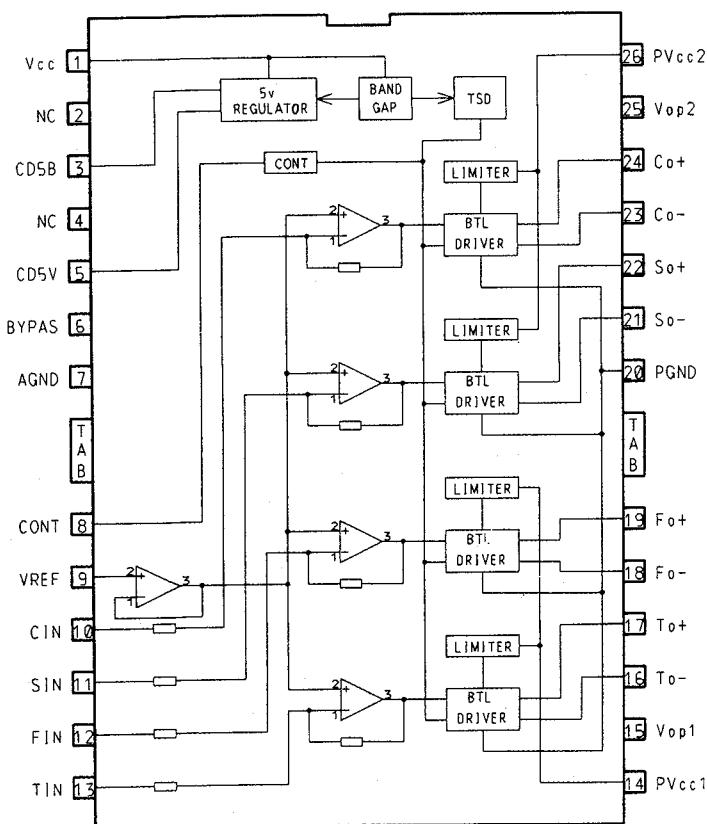

IC601 : GGF9001

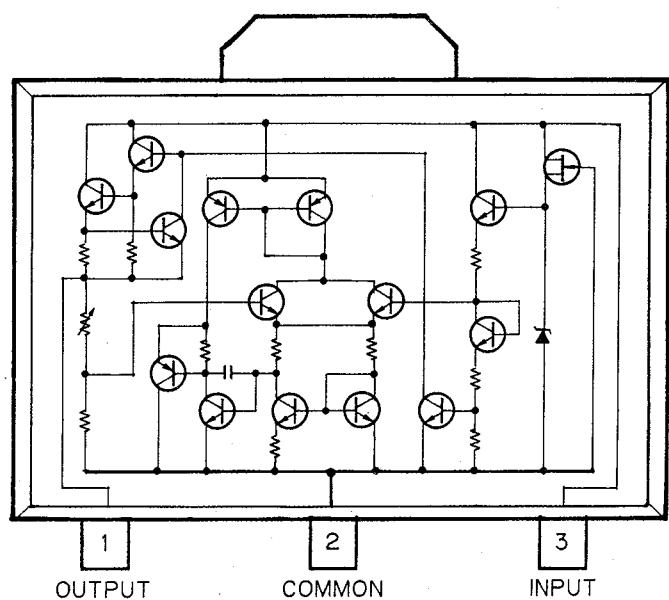

IC602, 652 : RC4558M

IC651 : PA3026

IC661 : TA78L05F

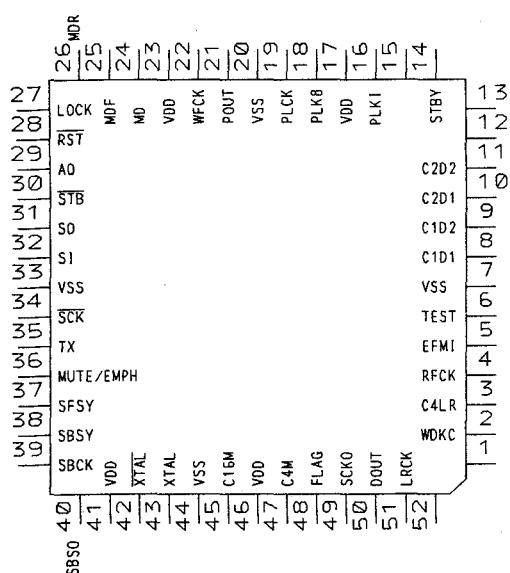

• Pin Functions (UPD6375GC)

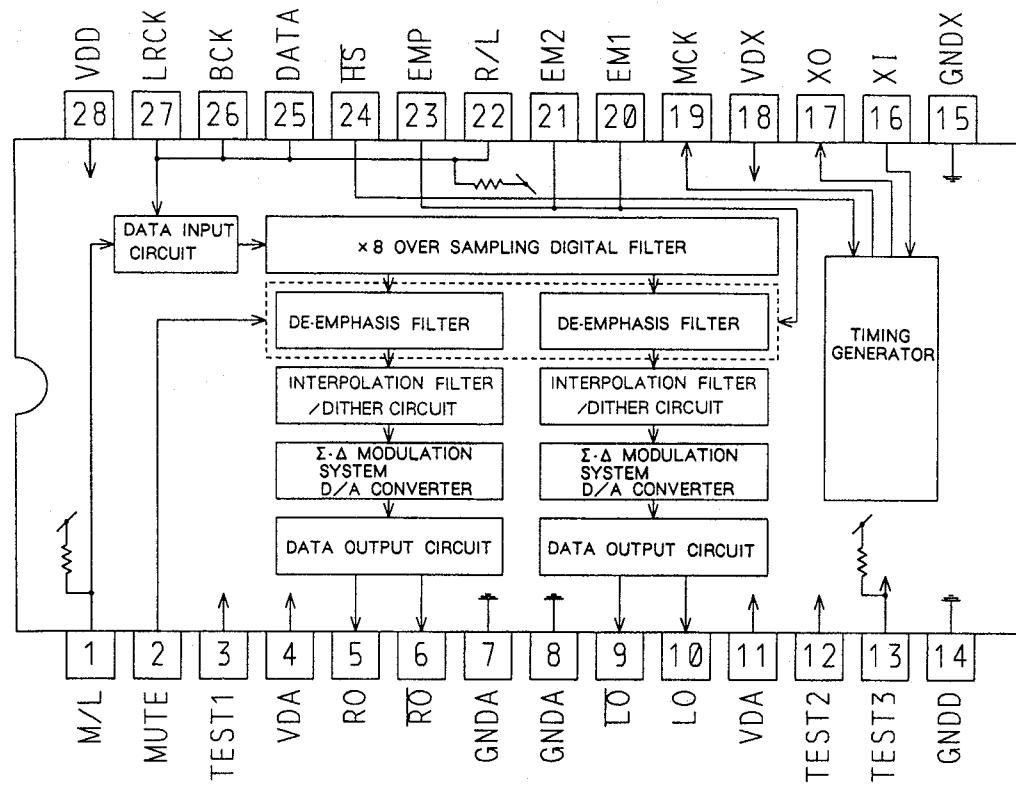

Pin No	Pin Name	I/O	Function and Operation
1	NC		
2	WDCK	Output	Output terminal for signal having double the frequency of LRCK
3	C4LR	Output	Output terminal for signal having four the frequency of LRCK
4	RFCK	Output	Oscillation clock divider signal, output terminal for signal giving one-frame synchronization
5	EFM1	Input	EFM signal input terminal
6	TEST		TEST
7	VSS		GND
8	C1D1	Output	Output terminal indicating C1 error correction status
9	C1D2	Output	
10	C2D1	Output	Output terminal indicating C2 error correction status
11	C2D2	Output	
12, 13	NC		
14	STBY	Input	Standby input terminal. STBY=H stops clock oscillation
15	NC		
16	PLK1	Output	VCO output terminal for use in analog PLL selection
17	VDD		VDD
18	PLK8	Input	VCO clock input terminal for use in analog PLL selection
19	PLCK	Output	Bit clock monitor terminal
20	VSS		GND
21	POUT	Output	Output terminal for phase comparison between EFM signal and bit clock
22	WFCK	Output	Signal issuing one-frame period (approximately 7.35kHz) by bit clock dividing signal
23	VDD		5 V
24	MD	Output	Signal indicating spindle motor CLV servo control output status
25	MDF	Output	Spindle motor CLV servo control positive direction output terminal
26	MDR	Output	Spindle motor CLV servo control negative direction output terminal
27	LOCK	Output	Becomes "H" when the synchronization signal and frame counter output coincide at EFM demodulator
28	RST	Input	Reset signal input terminal
29	A0	Input	Control signal distinguishing data from microcomputer
30	STB	Input	Signal latching within this LSI the serial data fetched from SI terminal
31	SO		Serial data input terminal
32	SI	Input	Input terminal fro data from microcomputer
33	VSS		GND
34	SCK	Input	Clock input terminal for serial data input
35	TX	Output	Digital audio interface data output terminal
36	MUTE/EMPH	Output	Output terminal for mute command decoding signal or sub-Q command pre-emphasis data
37	SFSY	Output	Signal indicating subcode one-frame synchronization
38	SBSY	Output	Signal indicating head of subcode block
39	SBCK	Input	Subcode data read clock input terminal
40	SBSO	Output	Subcode data output terminal
41	VDD		5 V
42	XTAL	Output	Oscillation continuation terminal
43	XTAL	Input	Oscillation continuation terminal

Pin No	Pin Name	I/O	Function and Operation
44	VSS		GND
45	C16M	Output	Oscillation clock output terminal
46	VDD		5V
47	C4M	Output	1/4 cycle output terminal for oscillation clock signals
48	FLAG	Output	Flag signal indicating that the current audio data output consists of incorrectable data
49	SCKO	Output	Clock output terminal for audio serial data
50	DOUT	Output	Serial audio data output terminal
51	LRCK	Output	Signal distinguishing between left and right channel DOUT terminal output
52	NC		

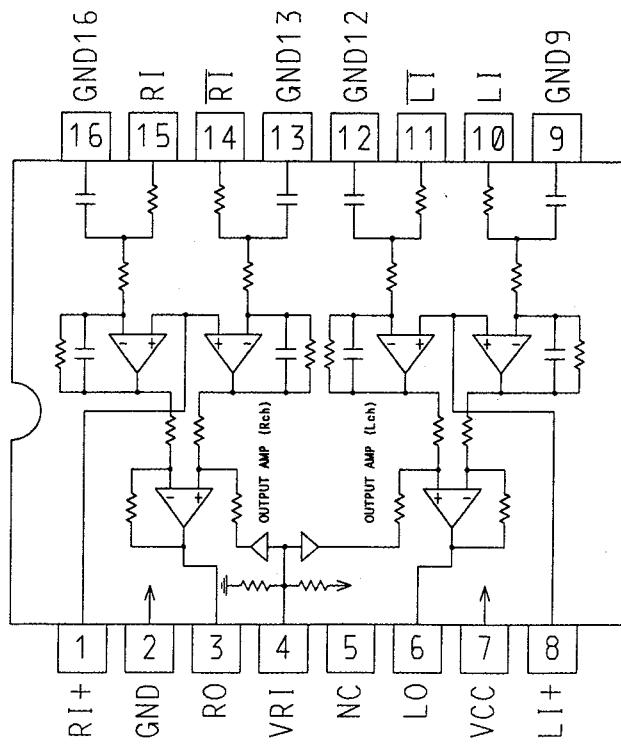

IC701 : UPD6375GC

IC702 : TC9237F

IC703 : TA2009F

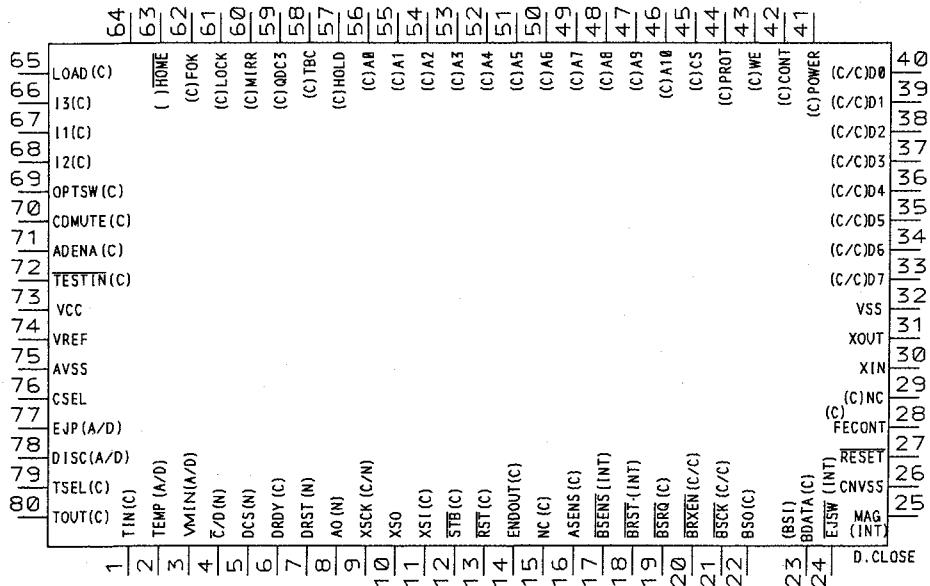

## ● Pin Functions (PD5180A)

Pin No.	Pin Name	I/O	I/O Format	Function and Operation
1	TIN	Input		Disc position detector switch
2	TEMP			Temperature detector
3	VMIN			Mechanism power supply detector input
4	C/D	Output	NM	Command/data appointment output
5	DCS	Output	NM	Chip select output
6	DRDY	Input		Ready input
7	DRST	Output	NM	Reset output
8	A0	Output	NM	LSI data control signal
9	XSCK	Input/ Output		LSI clock input/output
10	XSO	Output	NM	LSI data output
11	XSI	Input	NM	LSI data input
12	STB	Output	C	LSI strobe output
13	RST	Output	C	Reset output pin
14	ENDOUT	Output	C	Digital output enable signal
15, 16	NC			
17	BSENS	Input		Back up power sense input pin
18	BRST	Input		Bus communication reset input pin
19	BSRQ	Output	C	Bus communication service request output pin
20	BRXEN	Input/ Output	C	Bus communication reception enable input pin
21	BSCK	Input/ Output	C	Bus serial clock input/output
22	BSO	Output	C	Serial data output pin
23	BSI	Input		Bus serial data input
24	EJSW	Input		Eject signal input
25	MAG	Input		Magazine lock switch
26	CNVSS			GND
27	RESET	Input		Reset input
28	FECNT	Output	C	DEFECT port
29	NC			Not used
30	XIN	Input		Crystal oscillating element connection pin
31	XOUT	Output	C	Crystal oscillating element connection pin
32	VSS			GND
33-40	D7-D0	Input/ Output		External RAM data line
41	POWER	Output	C	CD +5V control
42	CONT	Output	C	Servo driver power supply control
43	WE	Output	C	External RAM write enable
44	PROT	Output	C	External RAM output enable
45	CS	Output	C	External RAM chip select
46-56	A10-A0	Output	C	External RAM address line
57	HOLD	Output	C	Hold control output
58	TBC	Output	C	Tracking bank switching output
59	NC			Not used
60	MIRR	Input		Mirror detector input
61	LOCK	Input		Spindle lock detector input
62	FOK	Input		FOK signal input
63	HOME	Input		Home position detector input
64	NC			Not used

Pin No.	Pin Name	I/O	I/O Format	Function and Operation
65	LOAD	Output	C	Mechanism power supply control
66-68	I2-I0	Output	C	Motor driver control
69	OPTSW	Input		Digital output ON/OFF input
70	CDMUTE	Output	C	CD mute output
71	ADENA	Output	C	A/D reference voltage output
72	TESTIN	Input		Test program mode input
73	VCC			Back up 5V
74	VREF	Input		A/D reference voltage input
75	AVSS			A/D GND
76	CSEL			Compression select
77	EJP			Eject position switch
78	DISK	Input		Disc detector input
79	TSEL	Input		Tray position detector photosensor
80	TOUTS	Input		Tray position detector switch

I/O Format	Meaning
C	CMOS output
NM	Middle resistivity N channel open drain

## ● Pin Functions(PD4267A)

Pin	Pin name	I/O	Output Format	Function
1	LDT	output	C	LCD driver data output
2	LCK	output	C	LCD driver clock output
3-6	GND	input		GND
7	RESET	input		Reset
8	X2			Oscillator
9	X1			Oscillator
10	BRXEN	input/output	C	Bus reception enable output input/output
11	BSRQ	input		Bus
12	BRST	output	C	
13	VSBUSY	input		Connect to VDD
14	VSLANG	output	C	Not used
15	VSST	output	C	Not used
16	VSCS	output	C	Not used
17	VSRST	output	C	Not used
18	VS13			
19	VS10	output	C	Not used
21	VS17			
25	VS14	output	C	Not used
26	VSS			GND
27	ENBL			Test program enable input
28	TEST			Test program input
29	ASENS			ACC sense input
30	BSENS			Back-up sense input
31-36	GND			
37	PWLED	output	C	Not used
38	VSMUTE	output	C	Not used
39	PEE	output	C	Not used
40	SYSPW	output	C	System power output
41	BSI	input		Bus serial data input
42	BSO	output	C	Bus serial data output
43	BSCK	input/output	C	Bus serial clock input/output
44-48	GND			
49	OPEN	output	NM	
50	KST2			
52	KST0	output	NM	Key strobe output
53	KD3			
56	KD0	input		Key return input
57	NC			
58	VDD			Power supply
59-62	GND			
63	LINH	output	C	LCD driver display inhibit output
64	LCE	output	C	LCD driver chip enable output

Output Format	Meaning
C	C-MOS
NM	Neutral resistivity N channel open drain

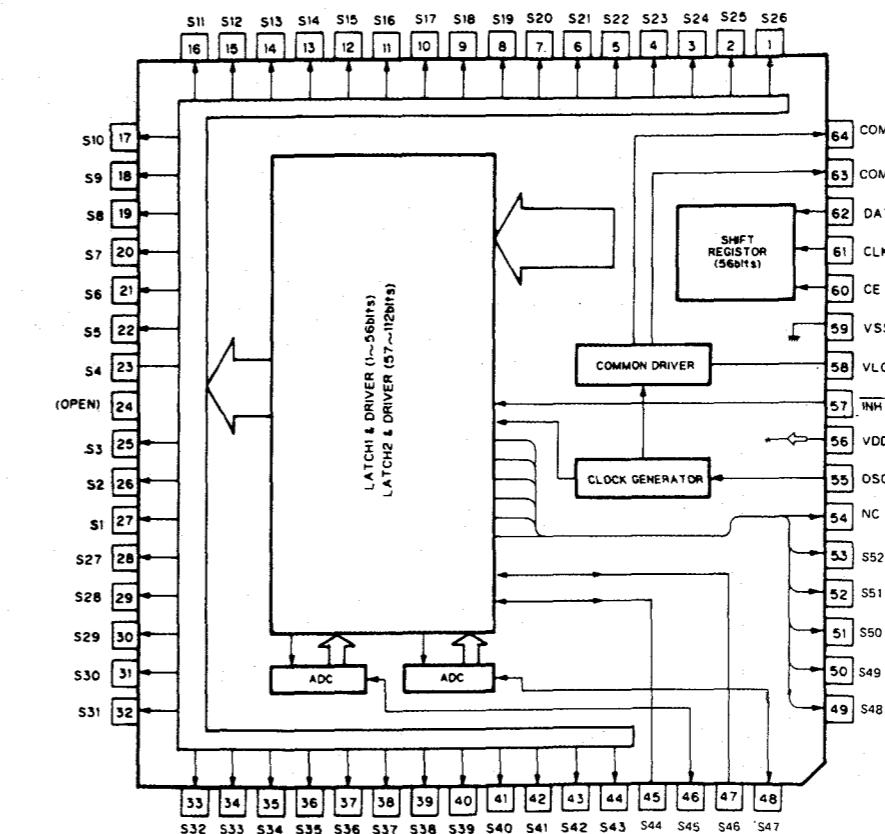

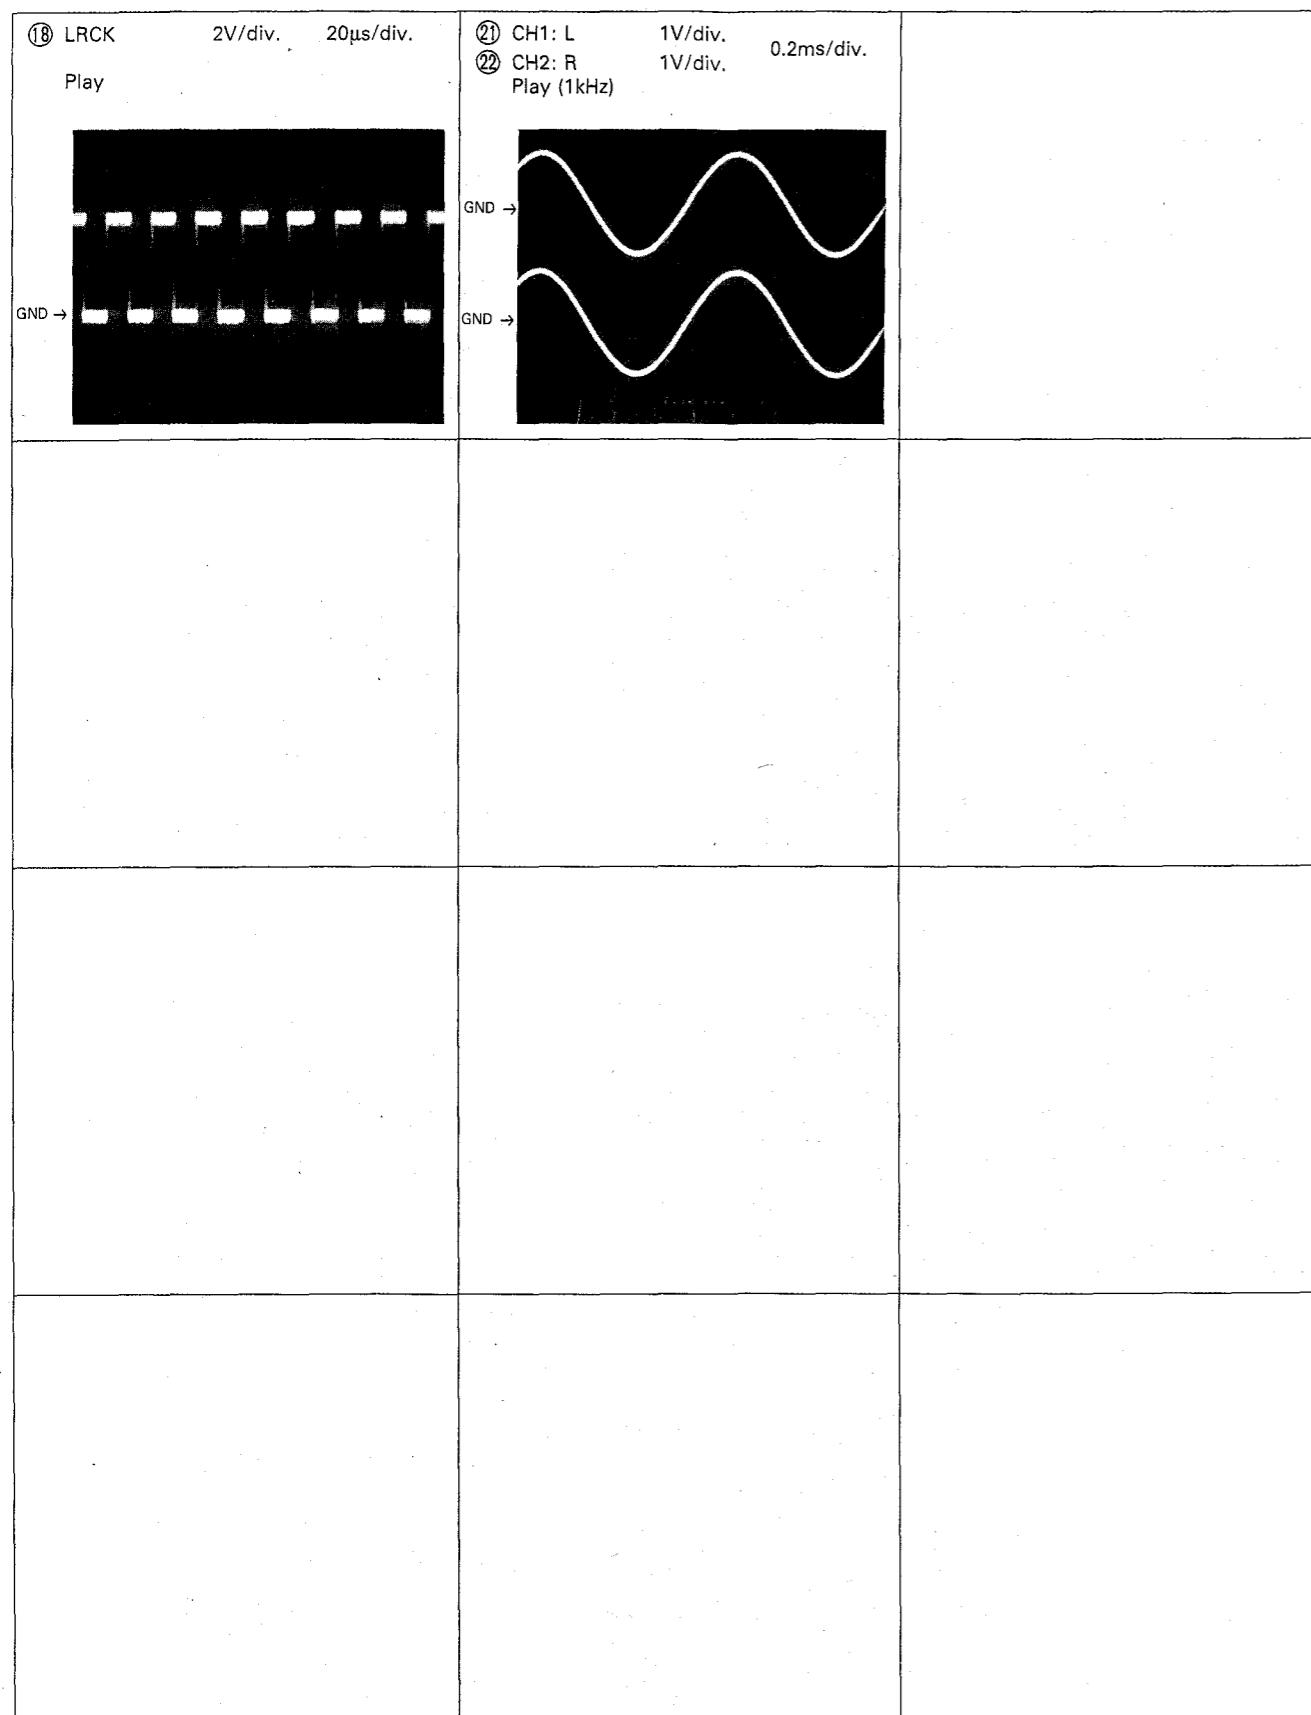

Note: 1. The encircled numbers denote measuring pointes in the circuit diagram.  
 2. Reference voltage  
 REFOUT: 2.5V
