# SAFETY INFORMATION

A This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

## WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

B

## NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

## REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

C

## (FOR USA MODEL ONLY)

### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

#### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (waterpipe , conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

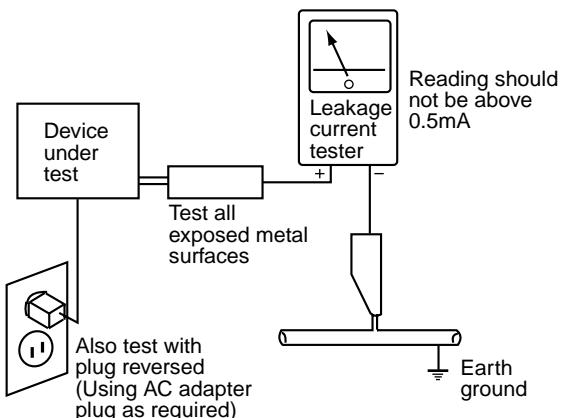

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\Delta$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

AC Leakage Test

F

**IMPORTANT**

THIS PIONEER APPARATUS CONTAINS  
LASER OF CLASS 1.  
SERVICING OPERATION OF THE APPARATUS  
SHOULD BE DONE BY A SPECIALLY  
INSTRUCTED PERSON.

**LASER DIODE CHARACTERISTICS**

MAXIMUM OUTPUT POWER: 5 mW  
WAVELENGTH: 780 – 785 nm

**WARNING !**

The AEL(accessible emission level) of the laser power output is less than **CLASS 1**  
but the laser component is capable of emitting radiation exceeding the limit for  
**CLASS 1**.

A specially instructed person should servicing operation of the apparatus.

**LABEL CHECK****CDJ-800MK2 WYXJ5 and KUCXJ : Types Only****CAUTION**

TO THE BEAM.**

**注意:打開時會有 CLASS 3B 不可見  
輻射輻射, 請勿受輻射奈輻射。**

DRW2248

(DRW2248)

**Additional Laser Caution****1. Laser Interlock Mechanism**

The position of the switch (S1901) for detecting loading completion is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch is not in LPS1 terminal side (when the mechanism is not clamped and LPS1 signal is high level.)

Thus, the interlock will no longer function if the switch is deliberately set to LPS1 terminal side. (if LPS1 signal is low level).

In the test mode\* the interlock mechanism will not function. Laser diode oscillation will continue, if pin 41 of TC94A15FG (IC101) on the MAIN Assy is connected to GND, or else the terminals of Q101 are shorted to each other (fault condition).

**2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.**

\* : Refer to page 86.

## [Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.  
Please be sure to confirm and follow these procedures.

### A 1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.  
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.  
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.  
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.  
Please pay attention to your surroundings and repair safely.

### B 2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.  
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

### C 3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.  
Make sure the proper amount is applied.

### D 4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

### E 5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

# 1. SPECIFICATIONS

## Specifications

### • KUCXJ type

#### 1. General

System.....	Compact disc digital audio system
Power requirements.....	AC 120 V, 60 Hz
Power consumption.....	20 W
Operating temperature.....	+5°C to +35°C (+41°F to +95°F)
Operating humidity.....	5 % to 85 % (There should be no condensation of moisture.)
Weight.....	4.0 kg (8.8 lb)
Dimensions.....	305 (W) x 344.1 (D) x 106.5 (H)mm 12 (W) x 13 9/16 (D) x 4 1/4 (H) in

B

#### 2. Audio section

Frequency response.....	4 Hz to 20 kHz
Signal-to-noise ratio.....	115 dB or more (JEITA)
Distortion.....	0.006 % (JEITA)

C

#### 3. Accessories

• Operating instructions.....	1
• Power cord.....	1
• Audio cable.....	1
• Control cable.....	1
• Forced eject pin (housed in a groove in the bottom panel)...	1
• Limited warranty.....	1

*NOTE:*

### • RLFXJ type

#### 1. General

System.....	Compact disc digital audio system
Power requirements ....	AC 110-120 V/220-240 V, 50/60 Hz
Power consumption .....	22 W
Operating temperature .....	+5°C to +35°C
Operating humidity .....	5 % to 85 % (There should be no condensation of moisture.)
Weight .....	4.0 kg
Dimensions .....	305 (W) x 344.1 (D) x 106.5 (H) mm

For Taiwan: 21 W

#### 2. Audio section

Frequency response.....	4 Hz to 20 kHz
Signal-to-noise ratio .....	115 dB or more (JEITA)
Distortion .....	0.006 % (JEITA)

#### 3. Accessories

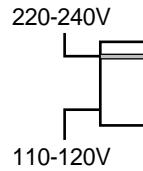

• Operating instructions .....	1
• Power cord .....	1
• Audio cable .....	1
• Control cable .....	1
• Forced eject pin (housed in a groove in the bottom panel)...	1

*NOTE:*

*Specifications and design are subject to possible modification with-out notice.*

#### Voltage selector (RLFXJ type only)

- You can find the voltage selector switch on the bottom plate of the unit.  
The factory setting for the voltage selector is 220 – 240 V.  
Please set it to the correct voltage for your country or region.
- For Taiwan, please set to 110 – 120 V before using.  
Before changing the voltage, disconnect the AC power cord.  
Use a medium size screwdriver to change the voltage selector switch.

## 2. EXPLODED VIEWS AND PARTS LIST

- A**
- NOTES:
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  $\triangle$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - Screws adjacent to  $\nabla$  mark on product are used for disassembly.
  - For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

V: 5.0 V/div. H: 200 msec/div.

- (38) CH5 : DRVMUTE2 from CPU to IC102**  
V: 5.0 V/div. H: 200 msec/div.

**Conditions:** At the time of power on, without a disc loaded

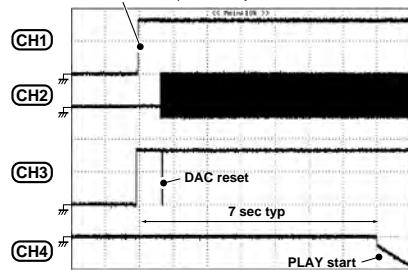

a - b : 1 256 msec  
a - c : 1 318 msec

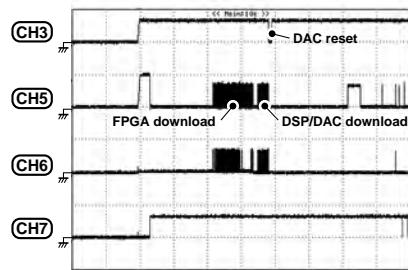

**A MAIN ASSY****DAC****DAC reset**

- (18) CH1 : RST from CPU Reset IC  
V: 2.0 V/div. H: 1 sec/div.  
(35) CH2 : DAC11M from AUDIO DSP  
V: 5.0 V/div. H: 1 sec/div.  
(39) CH3 : Dacrst from CPU IC  
V: 2.0 V/div. H: 1 sec/div.  
(40) CH4 : L4 (JACK Assy) Audio Signal Line  
V: 20.0 V/div. H: 1 sec/div.

The MPU is started after a specific delay time.

**DAC****Initialization of DAC (downloading using the common 3-wire serial lines)**

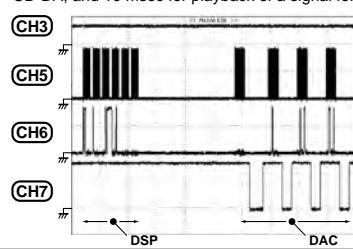

- (39) CH3 : Dacrst from CPU IC  
V: 5.0 V/div. H: 200 msec/div.  
(32) CH5 : CLK from CPU IC  
V: 5.0 V/div. H: 200 msec/div.  
(26) CH6 : DATA from CPU IC  
V: 5.0 V/div. H: 200 msec/div.  
(33) CH7 : Dacccs from CPUIC  
V: 5.0 V/div. H: 200 msec/div.

**DAC****DAC controlled by the MPU (fixed-cycle polling using the common 3-wire serial lines)**

- (39) CH3 : Dacrst from CPU IC  
V: 5.0 V/div. H: 5 μsec/div.  
(32) CH5 : CLK from CPU IC  
V: 2.0 V/div. H: 5 μsec/div.  
(26) CH6 : DATA from CPU IC  
V: 2.0 V/div. H: 5 μsec/div.  
(33) CH7 : Dacccs from CPU IC  
V: 2.0 V/div. H: 5 μsec/div.

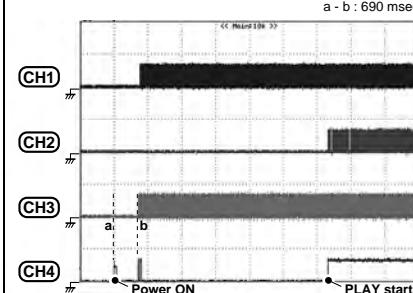

**Remarks:**

- The MPU polls the audio DSP and DAC in a fixed cycle.
- The intervals of a cycle are 3 msec for playback of a CD-DA, and 10 msec for playback of a signal for MP3.

**Audio mute****Association between zero-data detection and muting control (1/2)**

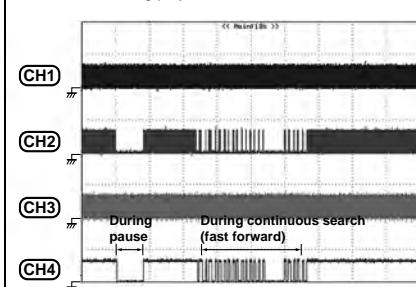

- (41) CH1 : Daclrck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(42) CH2 : Dacdata from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(43) CH3 : Dacbck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.

**Conditions:** At the time of power on, with a disc loaded

**Audio mute****Conditions in which muting for zero-data detection is activated (pause, continuous search)**

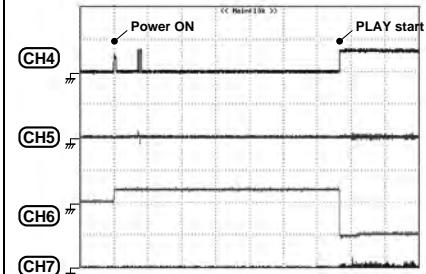

- (41) CH1 : Daclrck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(42) CH2 : Dacdata from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(43) CH3 : Dacbck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.

**Conditions:** During playback

**Audio mute****Association between zero-data detection and muting control (2/2)**

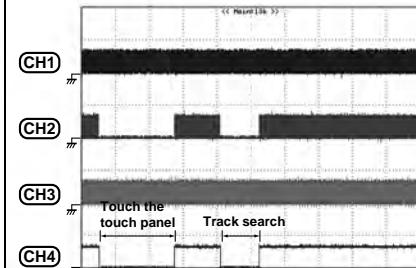

- (44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.  
(45) CH5 : L ch to JACK Assy  
V: 5.0 V/div. H: 1 sec/div.  
(46) CH6 : Mute to JACK Assy  
V: 5.0 V/div. H: 1 sec/div.  
(47) CH7 : L ch (JACK Assy)  
V: 5.0 V/div. H: 1 sec/div.

**Conditions:** At the time of power on, with a disc loaded

**Audio mute****Conditions in which muting for zero-data detection is activated (Jog Touch, track search)**

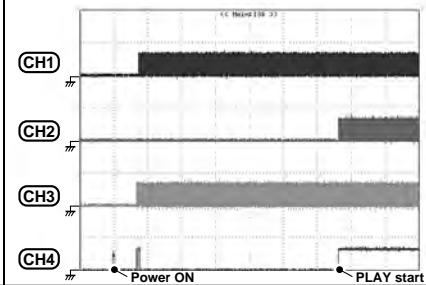

- (41) CH1 : Daclrck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(42) CH2 : Dacdata from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(43) CH3 : Dacbck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.

**Conditions:** During playback

**Audio mute****Conditions in which muting for zero-data detection is activated (Standby)**

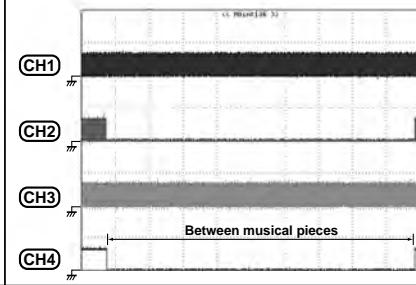

- (41) CH1 : Daclrck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(42) CH2 : Dacdata from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(43) CH3 : Dacbck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.

**Conditions:** At the time of power on, with a disc loaded

**Audio mute****Conditions in which muting for zero-data detection is activated (between musical pieces)**

- (41) CH1 : Daclrck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(42) CH2 : Dacdata from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(43) CH3 : Dacbck from DAC  
V: 5.0 V/div. H: 1 sec/div.  
(44) CH4 : ZERO to CPU  
V: 5.0 V/div. H: 1 sec/div.

## 3.12 VOLTAGES

**Note:** The voltage measured using the HOZAN DT-113 Digital Tester is an approximation of DC voltage.

Note that the result of measurement of a waveform comprising many AC-current components will vary from tester to tester.

**Conditions of measurement:**

Play back Track 2 of the STD-905 Test Disc from Pioneer.

- For the IC mounted on the SECB Assy, measurement is performed with loads at the downstream stages lifted.
- The voltage at the MPU (IC301 on the MAIN Assy) is to be measured in Standby mode (not during CD playback), because the unit will freeze up (cannot play back a CD) if the core block is defective.
- As IC303 (SDRAM), IC101 (Servo DSP), IC312 (Logic), IC311 (Logic), IC103 (OP AMP), and IC310 (Logic) are mounted on surface B, measurement is performed with the FFC cable connecting the MAIN and JACK Assys disconnected.

## 4. PCB CONNECTION DIAGRAM

### NOTE FOR PCB DIAGRAMS :

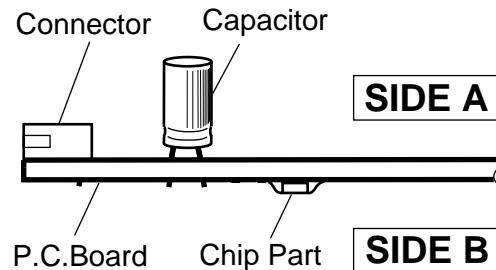

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol In PCB Diagrams	Symbol In Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

3. The parts mounted on this PCB include all necessary parts for several destinations.

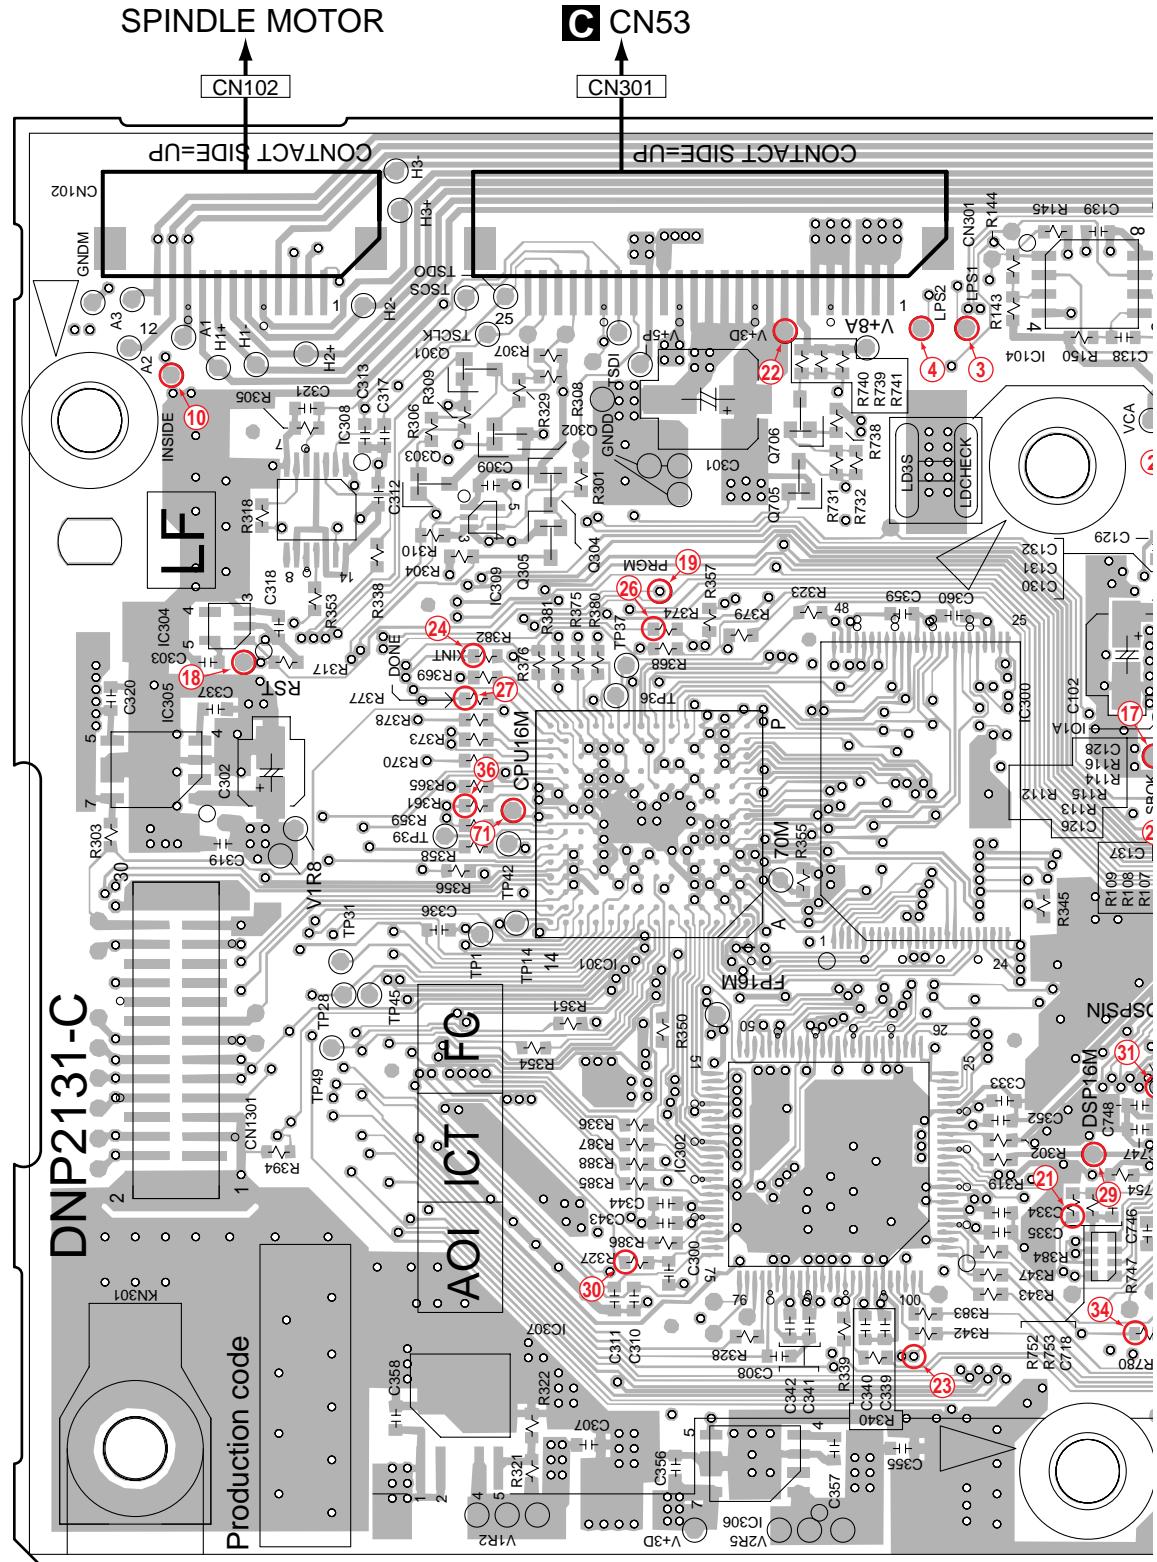

For further information for respective destinations, be sure to check with the schematic diagram.

4. View point of PCB diagrams.

## 5. PCB PARTS LIST

- A NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10<sup>1</sup> → 561 ..... RDI/4PU[5|6|1]J

47k Ω → 47 × 10<sup>3</sup> → 473 ..... RDI/4PU[4|7|3]J

0.5 Ω → R50 ..... RN2H[R|5|0]K

1 Ω → 1R0 ..... RS1P[1|R|0]K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω → 562 × 10<sup>1</sup> → 5621 ..... RNI/4PC[5|6|2|1]F

## 6. ADJUSTMENT

### • Mode for checking the load on the Jog dial

It is the mode which judges the load (light/- heavy) numerically when rotating JOG dial.

If it goes into the above-mentioned check mode of button and display function of the display part, a TOUCH/RELEASE knob is made in the maximum (right-hand side) and arbitrary buttons are pushed once, it will become JOG load check mode and top speed and time will displayed on a dot-matrix part.

#### Measuring method

In this state, if you rotate the Jog dial rapidly either clockwise or counterclockwise, figures are displayed.

For example, if "16.14 0135" is displayed, it means as follows:

16.14: Highest speed (given that the normal [1x] speed is when it takes 1.8 sec for the Jog dial to rotate one full turn.)  
0135: Time (msec) required for the Jog dial to decrease its speed from 3x speed to 1.5x speed

As to the time required for the Jog dial to decrease its speed, if the measurement is performed for several times repeatedly, from the second measurement and afterward, the average of the current required time and the previous required time is displayed. Thus, after several measurements, the result becomes closer to the mean.

#### Notes

- Perform the measurement of load on the Jog dial more than three times.
- The measurement result is displayed only when the Jog dial is rotated 7 times normal speed "07.00" or more.

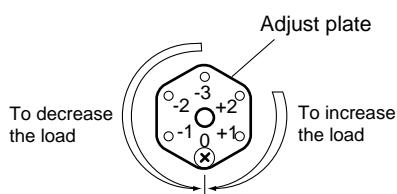

#### Management value

Jog management value:  $150 \pm 25$  (msec)

#### Load adjustment method

Remove the screw fixing the adjust plate, then screw it into the hole corresponding to the value (-1, -2, -3, +1, or +2) for a load to be added:

-1, -2, -3 : To decrease the load  
+1, +2 : To increase the load

#### JOG Check Mode : CANCEL

# 7. GENERAL INFORMATION

## 7.1 DIAGNOSIS

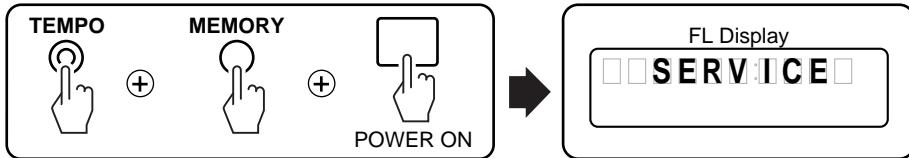

### 7.1.1 SERVICE MODE

#### A 1.The outline in service mode

This machine is controlled by two microcomputers, a display microcomputer and a player microcomputer, and test mode is prepared for each. A display microcomputer performs processing to a button input, display of FL, and lighting of LED. A player microcomputer drives a player.

- [1] Check mode of a button and a display function of a display microcomputer.  
It is the mode which checks a button input and a display function.
- [2] Check mode of the load of JOG dial  
It is the mode which measures the load when rotating JOG dial.
- [3] Check mode of operation of a player microcomputer  
It is the mode which performs the check of the mechanism and serbo of a player microcomputer of operation.  
This mode consists of "player operation mode" and "test operation mode."
- [4] Version check mode  
It is the mode which can check the version of the software of each microcomputer.
- [5] Error display list / Error display mode  
The history of the contents of an error can be checked to 16 pieces.

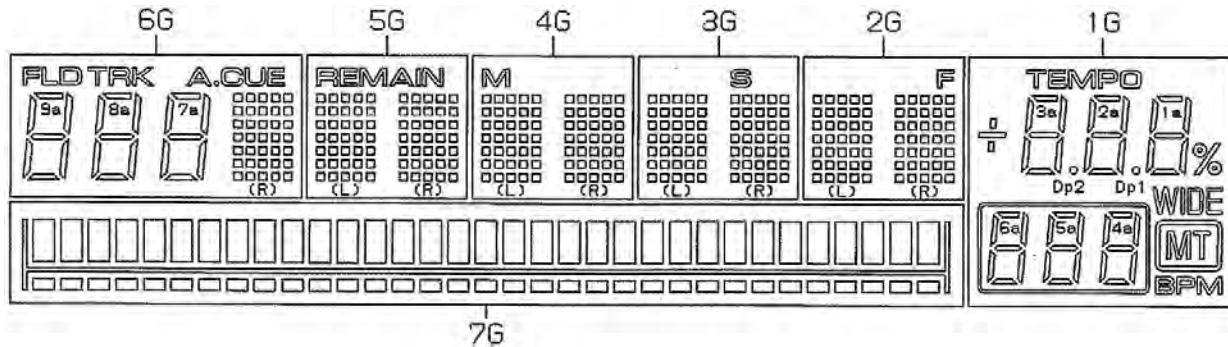

#### B 2.Check mode of a button and a display function of a display microcomputer.

In this mode, it can check whether a display microcomputer can be made to turn on partially as follows, the input of each button and volume is normal, and a display is normal. In addition, a display is turned on only while pushing the button.

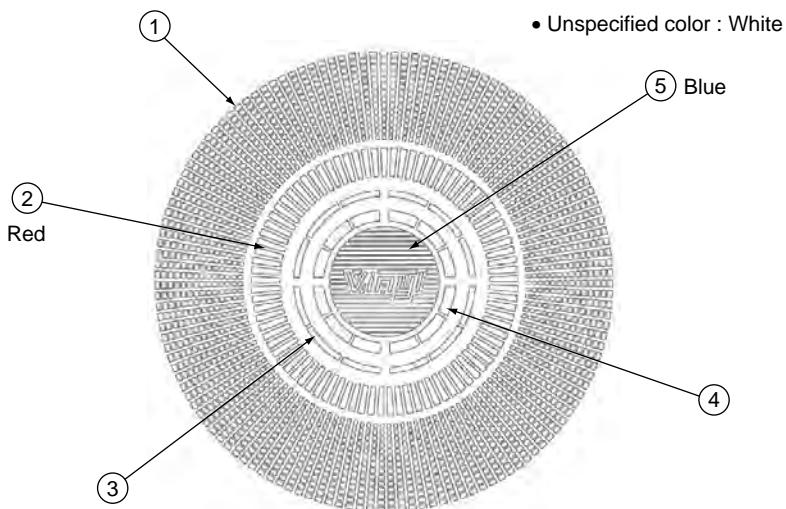

- If a TOUCH/RELEASE knob is made into states other than the maximum (right-hand side), it will become the check mode of button and display function, and if each button is pushed, FL display and LED which correspond light up.  
Moreover, if a knob is made into the maximum (right-hand side) and arbitrary buttons are pushed once, it will become JOG load check mode and top speed and time will be displayed on a FL dot-matrix part. (After-mentioned)

Button, Switch	FL Dot-matrix display	FL Other display	Light up LED
PLAY/PAUSE	PLAY		PLAY/PAUSE
CUE	CUE		CUE

TOUCH SENSOR	TOUCH SW	(4)	REV
JOG rotating to FWD	JOG >		
JOG rotating to REV	< JOG		

A

7G

B

A display of TOUCH/RELEASE and TEMPO slider reading value

TOUCH/RELEASE and the TEMPO slider reading value is displayed in the form of a bar in 7G area of FL display part.  
CUE Area : If a TOUCH/RELEASE knob is turned to the right, the number of display dots will increase.

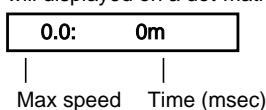

Playing Address : If TEMPO slider knob is moved to + side, the number of display dots will increase.

D

### 3.Check mode of the load of JOG dial

It is the mode which judges the load (light/- heavy) numerically when rotating JOG dial.

If it goes into the above-mentioned check mode of button and display function of the display part, a TOUCH/RELEASE knob is made in the maximum (right-hand side) and arbitrary buttons are pushed once, it will become JOG load check mode and top speed and time will displayed on a dot-matrix part.

E

It goes into this mode, and a number will be displayed if JOG dial is turned with sufficient vigor.  
the rotation direction -- right-handed rotation and left-handed rotation -- either is O.K.

For example, when displayed as "8.6: 115", the following contents are shown, respectively.

8.6 = What time speed came out by the highest. (The time of turning one rotation in 1.8 seconds is made into 1 time.)

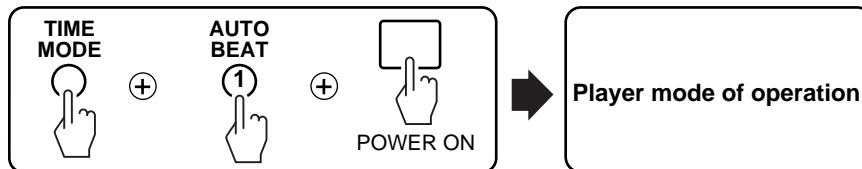

115 = Time taken for rotation to fall by 1.5 times from 3 times (msec)

It is necessary to make it rotate top speed to 7.0 or more times to measure the rotation fall time required.

When it carries out continuously several times, the time which took the average with a part for greatest ever 4 time is displayed 2nd henceforth. Measurement which absorbed variation can be performed by performing this.

F

#### 4.Check mode of operation with a player microcomputer simple substance

This mode consists of "player operation mode" and "test operation mode."

##### ⟨ Player operation mode ⟩

Basic operation of SABO, such as setup, play, pause, and track search, is carried out.  
Moreover, measurement of an error rate can also be performed.

##### ⟨ Test opalation mode ⟩

Servo operation is finely controllable gradually.

- B \* It becomes player operation mode and shifts to test operation mode by the key input in the beginning.  
\* The command treated here is for mainly testing a mechanism and a servo system, and is not for DJ functions, such as scan and tempo.

Function	The button of the main body
⟨ Player operation mode ⟩ Play(trace) / Pause Track Search F/R Error Rate Count Eject Mode Change	PLAY/PAUSE TRACK SEARCH F/R CUE EJECT MASTER TEMPO
⟨ Test opalation mode ⟩ Servo All Off LD On/Off Focus On/Off Spindle Kick, Tracking On/Off Tracking Off Slide FWD (2mm) Slide REV (2mm) Pickup Up/Down Mode Change	TIME TEMPO RELOOP LOOPIN LOOPOUT SEARCH FWD SEARCH REV TEXT MASTER TEMPO

##### ◆ Player operation mode command

###### Play(trace) / Pause

If it is in a stop state, it will set up and play.  
Moreover, if it is in a play state, whenever it will push a button, a pause and a play are carried out by turns.  
The address under present reproduction is displayed on FL.

- D \* In this mode, even if it inserts a disk, an automatic setup is not carried out.  
Moreover, a play is not carrying out audio reproduction, but is tracing the signal side of a disk.  
At a play, a disk is traced by 4X rotation. A sound is not outputted.

###### Track Search F/R

It searches in the direction of FWD or REV and stops in of the displayed track.

###### Error Rate Count

The error rate for about 10 seconds after the present position currently played is measured, and it displays on FL.

Usually, a track to measure is made to search and this button is inputted from a pause state.

For example, it is displayed as "3.56E-4 O.K." etc.

If an error rate is less than 3.00E-3, it will be displayed as O.K. If an error rate is larger than 3.00E-3, it will be displayed as NG.

Measurement with the managed disk at the time of factory shipments is a premise.

- E The product does not judge whether they are inferior goods at the time of service.

###### Eject

A disk is ejected.

###### Mode Change

If the MASTER TEMPO button is pushed into player operation mode, MASTER TEMPO LED will light up, and it will shift to the below-mentioned "test operation mode."

◆ **Test operation mode command**

Serbo operation is finely controllable gradually.

Keep in mind a test operation mode command that it may give a damage to a player sa mistaking the usage.

**Servo All Off**

When serbo is ON, all serbo will be turned off if the TIME button is pushed.

A

**LD On/Off**

If the TEMPO button is pushed, On and Off of LD will change.

**Focus On**

If the RELOOP button is pushed when having stopped, LD will be turned on and an auto focus will be performed.

B

**Spindle Kick, Tracking On/Off**

If the LOOP IN button is pushed into tracking serbo OFF, a spindle kick is performed and automatic adjustment processing and tracking serbo are turned on. Moreover, tracking serbo is turned off if it pushes into tracking serbo ON.

**Tracking Off**

Tracking serbo is turned off if the LOOP OUT button is pushed into tracking serbo ON.

B

**Slide FWD**

If the SEARCH FWD button is pushed into tracking serbo ON, tracking serbo will be turned off and a slider will be moved in the FWD direction about 2mm.

B

**Slide REV**

If the SEARCH REV button is pushed into tracking serbo ON, tracking serbo will be turned off and a slider will be moved in the REV direction about 2mm.

B

**Pickup UP/DOWN**

If an TEXT button is pushed when stopped, LD will be turned on and a pickup will be moved up and down.

A focus is not made to close.

C

**Mode Change**

If the MASTER TEMPO button is pushed into "player operation mode", MASTER TEMPO LED will light up, and it will shift to the below-mentioned "test operation mode."

- \* When you rise at a step in test mode, please input a command in order of "Servo All Off", "Focus On", and "Spindle Kick, Tracking On."

D

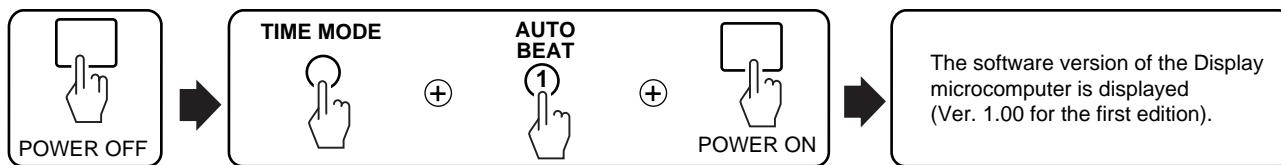

E

F

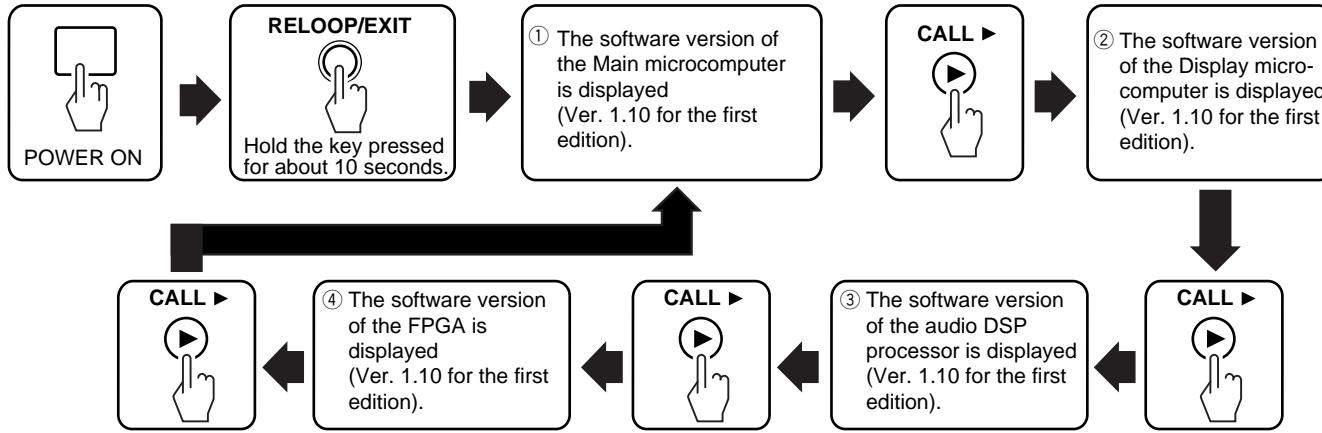

## 5. Version Check mode

Mode for checking the software version of each microcomputer

- How to check the software version of the Main microcomputer

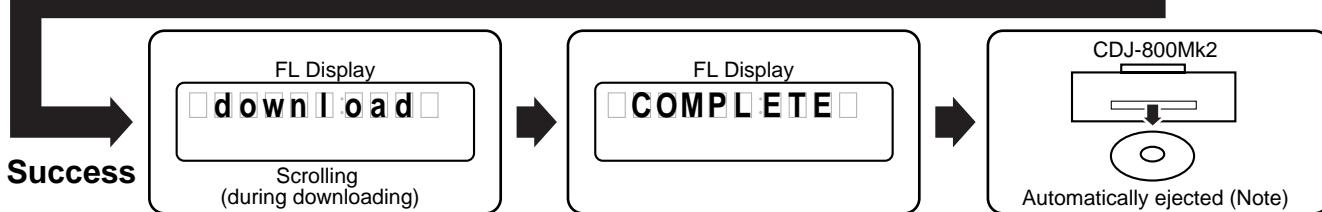

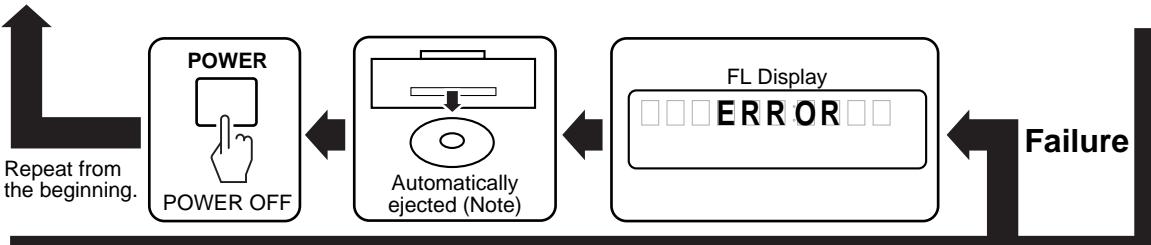

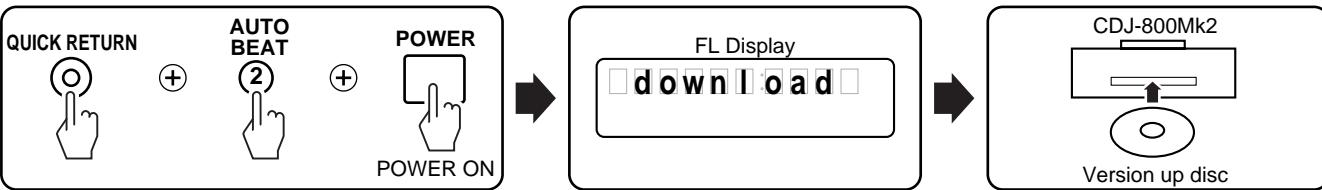

- How to check the software version of the Player microcomputer

- C
- |               |   |
|---------------|---|
| [1] Ver. 1.00 | The version of the microcomputer of a player part (main microcomputer). |
| [2] disp 1.00 | The version of the microcomputer of a display part.                     |
| [3] DSP 1.00  | The version of the audio DSP processor.                                 |
| [4] FPGA 1.00 | The version of the FPGA.  |

\* Audio DSP and FPGA are the processors which performs audio processing and various signal control, and operates independently with a player microcomputer. However, the program is stored in FLASH-ROM of a player microcomputer, and has structure transmitted to each processor from a player microcomputer at the time of a power supply ON.

- How to upgrade the software of the microcomputer

**Note:**

- Do NOT turn off the power after the upgrade disc is loaded till it is automatically ejected. If you do, the unit may not operate properly afterward.
- Eject a disc automatically even if updating fails.

## 6. Error display list / Error display mode

When it cannot operate normally in the usual use, the following error numbers are displayed on a display part. Moreover, at the time of the mode of the above-mentioned "check of the software version of a player microcomputer", if a JOG MODE button is pushed, a detailed error (E-XX which is the number of the "contents of an error" of the following table) can be checked. Whenever it pushes JOG MODE button, "a version display" and "an error display" are changed by the toggle. The error which pushed JOG MODE button and appeared first is the newest error. And the past error is displayed by pushing the CALL REV button (a push on the CALL FWD button displays the oldest error). The error is memorized to 16 pieces.

Moreover, only "E-12" and "E-15" memorize the place (TNO : MIN:SEC:FRM) which the error generated. And it can change with the TIME button. (Toggle operation)

Error number	Error name	The contents of an error
E-6002	DSP PROGRAM DOWNLOAD ERROR	A program cannot be written in DSP.
E-7201	TOC READ ERROR	26: TOC data cannot be read.
E-8301	PLAYER ERROR (Starting is unusual.)	12 : A desired address has not been searched. 15 : An address cannot be read. 22 : Focal serbo cannot be closed. 91 : A pickup does not return to an inner circumference. } (*Notes
E-8302	PLAYER ERROR (Reproduction is unusual.)	12 : A desired address has not been searched. 15 : An address cannot be read. 22 : Focal serbo cannot be closed.
E-8303	PLAYER ERROR (The writing of a buffer is unusual.)	99: The writing of a buffer is unusual.
E-8304	MP3 DECODE ERROR (The abnormalities of decoding)	Decoding is unusual.
E-8305	DATA FORMAT ERROR (The format of data is unusual.)	The format of those other than MP3
E-8709	COMMUNICATION ERROR	Communication of the microcomputer of a display part and the microcomputer of a player part cannot be performed.
E-9101	MECHANICAL TIME OUT	90: A disk loading mechanism's abnormalities (Timeout).

\* Notes : (1) Before a disk is recognized to be CD, when these errors take place, a disk is ejected automatically. Although an error number is not displayed at this time, since the contents of an error are stored in the memory, please refer to it.  
(2) E-8304 and E-8305 are not memorized by the internal memory.

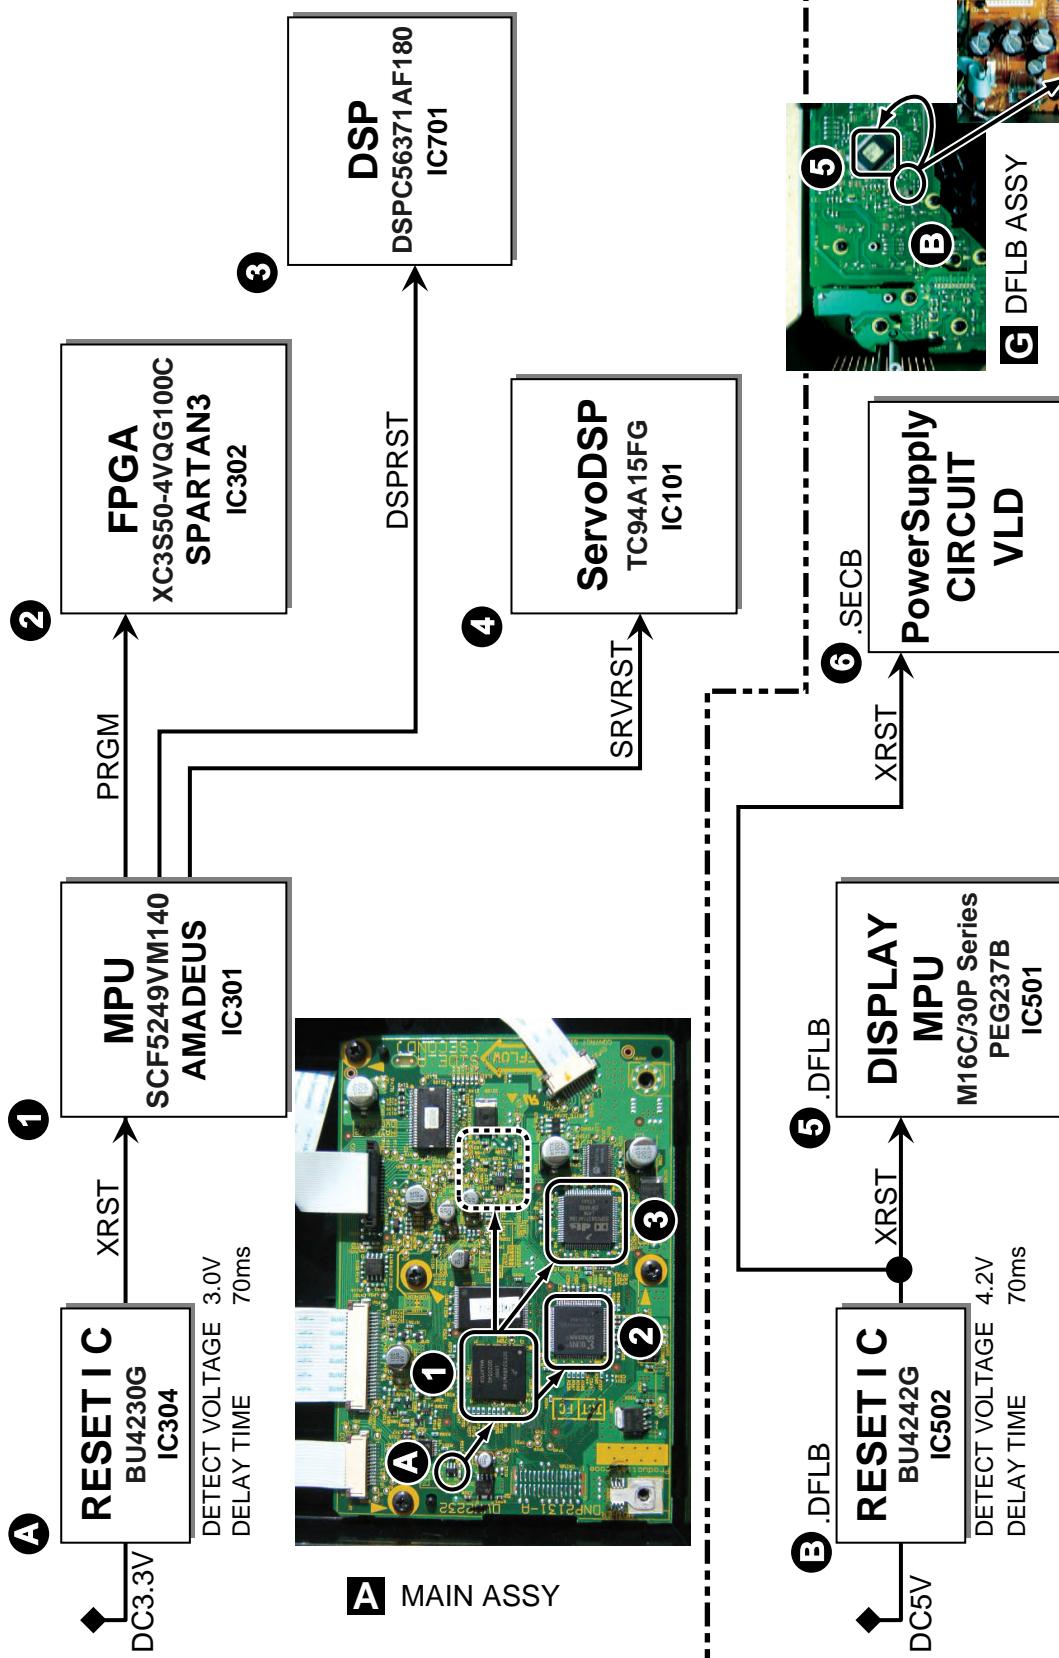

An error history is clearable if a power supply is switched on pushing the QUICK RETURN button and the BEAT[4] button together. At this time, a setup of AUTO CUE and TIME MODE turns into a setup at the time of factory shipments together. (AUTO CUE LEVEL=-60dB, TIME MODE=REMAIN)

\* CAUTION! There is a function which carries out the memory of the CUE/LOOP point for the 800 maximum disks in this machine. If an error history is cleared, since all CUE/LOOP memories will also be cleared simultaneously, please take great care about use in this mode.

## 7.1.3 TROUBLE SHOOTING

**Note :** The numbers for the waveform photos are identical to those for the schematic diagrams and board diagrams.

**Points to be checked beforehand and a note :**

- When a failure judgment of the ICP (Micro Fuse) is performed using a tester, be sure to judge according to the resistance values. If a simplified measurement method, such as Short-circuit Check mode, is used for testing, a partially-damaged ICP cannot be detected.
- The ICP is very sensitive. First, check the power line to verify that the placed ICP is not damaged.
- Defective soldering of surface mount devices may have caused a problem. Check if the symptom changes when you press the corresponding surface mount device with a finger.
- For the address-bus and data-bus lines on the MAIN Assy, the dump (serial) resistance is never used.

### ■ Freeze (1/2)

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks	
A	E8709 error	If the power supply is normal, this symptom is caused either by a defective core block of the MAIN Assy or a failure in communication between the DISPLAY MPU (IC501) and MAIN Assy. A defective core block means that the processes up to the FPGA (IC302) configuration have not been completed. In a case of a failure in the communication line, the core block is normal. In either case, no error indication is displayed on the control panel because the E8709 error code is sent to the DATA-FL display by the DISPLAY MPU itself. <b>Note:</b> The core block comprises 4 main ICs: MPU (IC301), SDRAM (IC303), FLASH (IC300), and FPGA (IC302).			 Control panel
B	DFLB Assy SECB Assy	① Play back a CD. Check if the audio signal is output from the analog output terminal (JA801).	If the audio signal is output, the core block is OK. The cause is a failure in communication between the DISPLAY MPU and the MAIN Assy. On the contrary, if the CD cannot be played, the core block is in failure. Proceed to Step ③.		
C	Unit	② Disconnect then reconnect the FFC cable between the DFLB and SECB Assys, and that between the SECB and MAIN Assys to check if the symptom is ameliorated.	If the symptom is ameliorated, loose connection of the FFC cable is the cause.		
D	DFLB Assy SECB Assy MAIN Assy	③ Disconnect then reconnect the FFC cable between the MAIN and JACK Assys and the cable with connectors that connects the JACK and SECB Assys to check if the symptom is ameliorated. Also check for the 5 V power line, including loose connection of the connectors.	If 5 V power is not supplied to the DAC (IC702), the 3-wire serial signal level between the DAC and the MPU is lowered, because the DAC is not started, which will lead to a failure in starting of the FPGA (the loading motor rattles). Repair the 5 V power line.		
E	MAIN Assy	④ Check the waveform at the points (TSDLK, TSDO, TSDI, and TSCS) designated in the waveform photo to confirm that the communication line between the DISPLAY MPU (IC301) and FPGA (IC302) is normal.	If the waveform is unstable or extremely low in level, loose connection of the output terminals or connectors on the line, chip fracture, poor power supply to IC308, or partial damage of IC308 may be the cause. Replace IC308 and check the connections.		
F	MAIN Assy	⑤ Deployment of the data that had been written in the flash memory (IC300) into the SRAM built into the MPU (IC301) may have failed. Check that the voltage at TP19 is 0 V.	If the waveform at TP19 continuously fluctuates, deployment of the data failed. A checksum error of the SRAM built into the MPU (IC301) was generated. Check the mounting status of IC301.		
	MAIN Assy	⑥ Deployment of the program and data that had been written in the flash memory (IC300) into the SDRAM (IC303) may have failed. Check that the voltage at TP30 is 0 V.	If the waveform at TP30 continuously fluctuates, deployment of the program and data failed. A checksum error of the SDRAM (IC303) was generated. Check the mounting status of IC303.		
	MAIN Assy	⑦ Check if the soldered portion of IC311 on the CLK line is lifted off the board. <b>Note:</b> It has been found that the cell and the part are not compatible. With the Assys of the lots before the modification, defective mounting may have occurred.	If the defective mounting of IC311 is the cause, "POWER ON" is displayed for a while, a rattle is generated from the player, then E8709 error is indicated. A disc cannot be loaded in the player.		
	MAIN Assy	⑧ Check if the soldered portion of IC312 on the PRGM line is lifted off the board. <b>Note:</b> It has been found that the cell and the part are not compatible. With the Assys of the lots before the modification, defective mounting may have occurred.	If the defective mounting of IC312 is the cause, "POWER ON" is displayed for a while, then E8709 error is indicated. A disc cannot be loaded in the player.		
	MAIN Assy SECB Assy REGB Assy	⑨ Check the power system for the core block, paying attention to the following points: (1) Is the ICP damaged?, and (2) Are cables firmly connected?	Replace the ICP or check the cable connections.		
	TRNS Assy ACIN Assy	⑩ If power is not supplied to any power system, check the primary source. Inappropriate commercial power input or blown primary fuse (FU8001) or transformer fuse (T21) may be the cause.	Replace the fuses.		
F	MAIN Assy	⑪ Check the waveform at the RST Test Land, referring to the waveform photo, to confirm that the Reset IC (IC304) resets the MPU (IC301) properly. The Reset IC is normal if resetting is canceled about 70 msec after the power is turned on.	Abnormal delay time or an unstable waveform suggests fracture of the C303 chip. Replace the C303. If the symptom is not ameliorated, replace the IC304.		

**Freeze (2/2)**

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
MAIN Assy	MAIN Assy ⑦	⑫ Check the waveform at the CPU16M Test Land, referring to the waveform photo, to confirm that the crystal oscillation circuit is operating normally.	An unstable waveform or extremely low level suggests chip fracture or partial damage of the crystal oscillator (X301). Replace the chip or X301.	A
MAIN Assy	MAIN Assy ⑯	⑬ Check the waveform at the designated point on the PRGM line, to confirm that the MPU (IC301) resets the FPGA (IC302) properly.	An unstable waveform suggests loose connection of the output terminal of the MPU (IC301) or chip fracture on the PRGM line. Even if the waveform at the designated point is	
MAIN Assy	MAIN Assy ⑩ to ⑪	⑭ Check the waveform at the point designated on the waveform photo, to confirm that the configuration procedures between the MPU (IC301) and FPGA (IC302) are properly performed.	An unstable waveform suggests loose connection of the output terminal or chip fracture. Even if the waveform at the designated point is normal, there may be poor contact of connectors in downstream lines. Resolder the output connectors,	

**Display (1/2)**

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>Lighting of the LEDs and indications and the FL display on the control panel do not function.</b>				
If the power supply is normal, this symptom is caused by a defective DISPLAY MPU (IC501,) which controls the display on the control panel, including the FL indication and lighting of the LEDs. (If the DISPLAY MPU is normal, the indications of internal data on the DISPLAY MPU, such as POWERON and E-8709, will be displayed on the DATA-FL display.) To confirm that the core block of the MAIN Assy is normal, play back a CD without using the control panel and check the audio output.				
DFLB Assy SECB Assy REGB Assy		① Check the power to be supplied to the control panel, paying attention to the following points: (1) Is the ICP damaged?, and (2) Are cables firmly connected?	Replace the ICP or check the cable connections.	C
TRNS Assy ACIN Assy		② If power is not supplied to any power system, check the primary source. Inappropriate commercial power input or blown primary fuse (FU8001) or glass fuse (T21) are possible.	Replace the fuses.	
DFLB Assy	DFLB Assy ⑯	③ Check the waveform of the XRST line, referring to the waveform photo, to confirm that the Reset IC (IC502) resets the DISPLAY MPU (IC501) properly. The Reset IC is normal if resetting is canceled about 70 msec after the power is turned on.	Abnormal delay time or an unstable waveform suggests fracture of the C507 chip. Replace the C507. If the symptom is not ameliorated, replace the IC502.	
DFLB Assy	DFLB Assy ⑦	④ Check the waveform at Pin 12 of IC501, referring to the waveform photo, to confirm that the crystal oscillation circuit is operating normally.	An unstable waveform or extremely low level suggests chip fracture or partial damage of the crystal oscillator (X501). Replace the chip or X501.	
<b>No indication only on the DATA-FL display</b>				
If the power supply is normal, this symptom can be caused only by a failure in the DATA-FL (V501) or the communication between the DATA-FL and DISPLAY MPU (IC501).				
		① Enter Display Check mode of Service mode and check if other keys on the control panel function and if the LEDs light.	If the LEDs and JOG-FL (V601) do not light, nor does the DATA-FL (V501) display, the DISPLAY MPU that controls those will not function properly. See "Lighting"	D
ACIN Assy		② Check the setting of the voltage selector switch (on the rear panel). (for RLF model)	Set the switch to the position that corresponds to the commercial power source.	
DFLB Assy SECB Assy TRNS Assy		③ Check the Vload voltage (VLD, VLDD). If the voltage measured at the periphery of the power terminal of the DATA-FL (V501) is 29.3 V DC or more, it is OK.	If the voltage is 0 V, the ICPs (IC25, IC58, and IC59) are fried. Replace the ICPs.	
DFLB Assy	DFLB Assy ④	④ Check the FLAC voltage (FLAC1, FLAC2). If the voltage measured at the both ends of the DATA-FL (V501) lead is 4 V AC or more, it is OK.	If the AC current waveform does not appear, check the connection between the Assys.	
DFLB Assy		⑤ Check the waveform at Pin 46 of DATA-FL (V501), to confirm that 5 V power is supplied to the built-in driver.	If the 5 V power is not supplied, soldering touchup is needed.	E
DFLB Assy	DFLB Assy ⑮ to ⑯	⑥ Check the points designated in the waveform photo to confirm that the procedures of the communication between the DISPLAY MPU (IC501) and the DATA-FL (V501) are normal.	A solder fracture of the DATA-FL terminal or loose connection of the terminals on the communication line between the DISPLAY MPU and the DATA-FL is suspected. Soldering touchup is needed. If the symptom is not ameliorated after soldering touchup, replace the DATA-FL.	

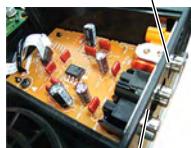

## ■ Display (2/2)

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>No indication only on the JOG-FL display</b>				
If the power supply is normal, this symptom can be caused only by a failure in the JOG-FL (V601) or the communication between the JOG-FL and the DISPLAY MPU (IC501).				
		① Enter Display Check mode of Service mode and check if other keys on the control panel function and if the LEDs light.	If the LEDs and DATA-FL (V501) do not light, nor does the JOG-FL (V601) display, the DISPLAY MPU that controls those will not function properly. See "Lighting of the LEDs and indications and the FL display on the control panel do not function."	
	ACIN Assy	② Check the setting of the voltage selector switch (on the rear panel). (for RLF model)	Set the switch to the position that corresponds to the commercial power source.	
B	JFLB Assy DFLB Assy SECB Assy TRNS Assy	③ Check the Vload voltage (VLD, VLDD, VLDJ). If the voltage measured at the periphery of the power terminal of the JOG-FL (V601) is 27.8 V DC or more, it is OK.	If the voltage is 0 V, the ICPs (IC25, IC58, IC59, and IC603) are fried. Replace the ICPs.	
	JFLB Assy	④ Check the FLAC voltage (FLAC3, FLAC4). If the voltage measured at the both ends of the JOG-FL (V601) lead is 2.6 V AC or more, it is OK.	If the AC current waveform does not appear, check the connection between the Assys.	
	JFLB Assy	⑤ Check the waveform at Pin 23 of JOG-FL (V601), to confirm that 5 V power is supplied to the built-in driver.	If the 5 V power is not supplied, soldering touchup is needed.	
C	JFLB Assy ⑥ to ⑧	⑥ Check the points designated in the waveform photo to confirm that the procedures of the communication between the DISPLAY MPU (IC501) and the JOG-FL (V601) are normal.	A solder fracture of the JOG-FL terminal or loose connection of the terminals on the communication line between the DISPLAY MPU and the JOG-FL is suspected. Soldering touchup is needed. If the symptom is not ameliorated after soldering touchup, replace the JOG-FL.	
<b>No indication on either the DATA-FL nor JOG-FL displays</b>				
This symptom occurs when the Vload voltage, to be supplied to both the DATA-FL (V501) and JOG-FL (V601), is not supplied.				
	JFLB Assy DFLB Assy	① Check if the Vload voltage (VLD, VLDD, VLDJ) is supplied.	If the voltage is 0 V, the ICPs on the line are fried. Replace the ICPs.	
	SECB Assy	② Check if the Vload power circuit is reset canceled. Check if the voltage at Pin 9 of CN56 becomes high after the power is turned on.	Resetting of this circuit is performed by the Reset circuit (IC502) mounted on the DFLB Assy. Resetting is done simultaneously with the DISPLAY MPU (IC501). As only the FL display has a problem, Pin 9 of CN501 on the DFLB Assy is in failure.	
<b>Part of the FL display does not light, frequently flickers, or is dark.</b>				
D	DFLB Assy JFLB Assy	① Visually check if the symptom occurs constantly in the same area.	If the symptom occurs constantly in the same area, the FL display is defective.	
	JFLB Assy DFLB Assy SECB Assy TRNS Assy	② If the symptom does not occur in the same area, check the waveform of the Vload voltage, FLAC voltage and 5 V power, to confirm that the supply is stable. (See Steps ③, ⑤, and ⑥ in "No indication only on the DATA (or JOG)-FL display.")	If the supply is unstable, soldering touchup is needed. If the symptom persists, replace the part.	
<b>Black dots or stains appear on some parts of the FL display after Display Check mode of Service mode is entered.</b>				
			Impurities in the FL tube are the cause. For amelioration, replace the DATA-FL or JOG-FL.	

E

F

## ■ Audio output

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>No audio signal is output.</b> If a signal waveform is normally output from the digital output terminal (JA802), the AUDIO DSP (IC701) is judged to be normal. In such a case, the problem exists at the subsequent stages of the AUDIO DSP output. During CD playback, first check the analog output terminal (JA801) then the previous stages. Be sure to carefully check for solder fractures at the phono plug.				A
JACK Assy		① Check the waveform of the audio output signal at the analog output terminal (JA801). Check if the audio signal is not output from L and R channels, or only from one channel.		 JA802
JACK Assy		② Check if the digital audio signal is output from the digital output terminal (JA802).	If the digital audio signal is also not output, the AUDIO DSP (IC701) Assy is defective. See Step ④ in "No digital output."	
JACK Assy	JACK Assy ⑩	③ Check the waveform at the L4 and R4 Test Lands near analog output terminal (JA801).	If the audio signal is output from those points, a solder fracture of the phono plug or chip fracture on the audio line is suspected. Soldering touchup is needed.	B
JACK Assy SECB Assy		④ Check if 8 V and -7 V power are supplied to the OP AMP (IC801).	If the power is not supplied, check the cable connection of the power line.	
JACK Assy		⑤ Check the waveform at the L1 and R1 Test Lands on the OP AMP (IC801).		
MAIN Assy	MAIN Assy ⑯	⑥ Check the waveform at the Lch and Rch Test Lands near C705/C706.	If the audio signal is output at the point, audio muting may remain activated. During CD playback, check if the logical state of the signal at Pin 4 of CN801 is low.	C
MAIN Assy		⑦ Check if 5 V power is supplied to the DAC (IC702).	If the power is not supplied, check the cable connection of the power line.	
MAIN Assy	MAIN Assy ⑯	⑧ Check the waveform at the 11M Test Land, referring to the waveform photo, to confirm that the clock input to the DAC (IC702) is normal.	An unstable waveform or extremely low level suggests loose connection of the clock terminal on the AUDIO DSP.	
MAIN Assy	MAIN Assy ⑪ to ⑬	⑨ Check the points (DACLCK, DACDATA, DACBCK) designated in the waveform photo to confirm if the procedures of the communication between the DAC (IC702) and AUDIO DSP (IC701) are normal.	An unstable waveform suggests loose connection output terminals on the AUDIO DSP or chip fracture on the line.	
<b>Audio performance is poor.</b> As grounding to the chassis is poor with this model, audio performance is largely affected if the specify screws are not tightened with the standard torque.				D
		① Check if the screw that secures the bottom plate and is located near the plug is a screw with a projection (BBT).	Replace with a BBT screw if the original screw is not BBT.	
		② Check if the two screws that secure the bottom plate, including the above-mentioned screw with a projection, are firmly secured.	If the screws are loosely tightened, retighten the screws with the standard torque.	
<b>Poor S/N ratio at the intervals of no sound, such as between musical pieces</b> The S/N ratio is poor at the intervals of no sound, such as between musical pieces and at the time of power on, because audio muting is not activated. Possible causes are zero-data detection signals not output from the DAC (IC702) or a defective audio muting circuit. The following checks must be performed during CD playback.				E
MAIN Assy	MAIN Assy ⑭	① Check the waveform at the terminal (Pin 21) for zero-data detection on the DAC (IC702). If the level is low between musical pieces and at the time of power on and high during CD playback, the terminal is normal.	If inversion of the logical state of signals is not performed, loose connection of Pin 21 on the DAC is most likely. Soldering touchup is needed.	
MAIN Assy	MAIN Assy ⑯	② Check the waveform at Pin 6 of CN701. If the level is high between musical pieces and at the time of power on and low during CD playback, the terminal is normal.	If audio muting remains deactivated, check chip fracture on the line or cable connection.	

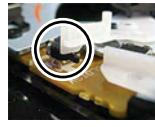

## Digital output

	Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
A		No digital output	First, check if neither analog nor digital signals are output. If neither is output, the AUDIO DSP (IC701) is in failure. During CD playback, first check the digital output terminal (JA802) then the previous stages. Be sure to carefully check for solder fractures at the digital output terminal.		
	JACK Assy		① Check the waveform of the digital audio signal at the digital output terminal (JA802).		
	JACK Assy		② Check if the analog audio signal is output from the analog output terminal (JA801).	If neither digital nor analog audio signal is output, the AUDIO DSP (IC701) does not function properly. Proceed to Step ④.	
B	MAIN Assy	MAIN Assy ⑦	③ Check the waveform at the point designated.	No signal suggests lifted soldered portion of the AUDIO DSP (Pin 69 of IC701) or chip fracture on the line. If there is a signal output, poor cable connection, loose connection of the connectors, or solder fracture of the phono plug is suspected.	
	MAIN Assy	MAIN Assy ⑨	④ Check the waveform at the DSP16M Test Land, to confirm that the 16 MHz clock signal is supplied from the MPU (IC301) via the FPGA (IC302).		
	MAIN Assy	MAIN Assy ⑪, ⑫, ⑬, ⑭, ⑮, ⑯	⑤ Check the waveform at the point designated, to confirm that the configuration procedures between the MPU (IC301) and the AUDIO DSP (IC701) are properly performed.	An unstable waveform suggests loose connection of the output terminal or chip fracture.	

## Player (1/4)

	Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
C		No disc playback. A disc is ejected immediately after it is loaded. (without an error code)			
	RLYB Assy		① Visually check if the LD short-circuit switch (S1101) remains closed.	Set the LD short-circuit switch to OPEN.	 LD short-circuit switch
	Player		② Check if the slot-in mechanism SV Assy is securely hooked to the player unit.	Firmly secure the Assy with the four hooks.	
	Pickup Assy		③ Visually check if solder is short-circuited at the LD short-circuit Land on the Pickup Assy.		
D	Unit		④ Check if the FFC cables between the pickup and the RLYB Assy and the RLYB and MAIN Assys are improperly connected, if the conductor side is defective, and if there is poor contact, such as cable disconnection. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	 LD short-circuit land
	MAIN Assy		⑤ Check the voltage of each section on the MAIN Assy.		
	MAIN Assy		⑥ Replace the MAIN Assy.		
E		A disc cannot be loaded.			
	Unit		① Check if the FFC cables between the pickup and the RLYB Assy and the RLYB and MAIN Assys are improperly connected, if the conductor side is defective, and if there is poor contact, such as cable disconnection. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	
	MAIN Assy		② Check the voltage of each section on the MAIN Assy.		
	MAIN Assy		③ Replace the MAIN Assy.		

**Player (2/4)**

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>Loading-in attempts are repeated although no CD is loaded.</b> (On the DATA-FL display, the indications "NO-DISC" and "EJECT" are alternately displayed.)				
SLMB Assy		① Visually check if the loading detection switch (S1902) is kept pressed by the switch lever (white) as the lever overrides the switch.	Disengage the switch lever from the loading detection switch (S1902). If the detection switch is not closely seated on the board, soldering touchup is needed.	A 
MAIN Assy	MAIN Assy ③,④	② Check the SW signal at the LPS2 and LPS1 Test Lands at the time of CD loading, referring to the waveform photo. Does the SW signal change from L to H? Especially pay attention to a change at LPS2.	Repeated loading-in attempts may be caused by short-circuiting of the line to ground. Disabled CD loading may be caused by a solder fracture at the loading detection switch (S1902), soldered portion lifted off the board or the surface mount part on the line, or loose connection of the FFC cables.	B
MAIN Assy	MAIN Assy ⑤	③ By observing the waveform at the PWMLO Test Land, check that the duty at PWMLO changes, as indicated in the waveform photo: • During stop: Duty 50 % • During loading-in: Duty 0 % • During loading-out: Duty changes from 100 %, 25 %, then to 75 %.		C
MAIN Assy		④ Check the voltage at the MPU (IC301), FPGA (IC302), IC105 (TC7W04), and the driver IC (IC102).		D
<b>No ejection. Abnormal noise generated after a CD is loaded</b> A failure in the detection system of the slot-in mechanism SV Assy is most likely the cause. The detection switch detects a trigger signal for operation start or stop of the loading motor. The present symptom may be caused by the disability of detection of a trigger signal for operation stop.				
MAIN Assy	MAIN Assy ③,④	① Check the SW signal at the LPS1 and LPS2 Test Lands at the time of CD loading, referring to the waveform photo. Does the SW signal change from L to H? Especially pay attention to a change at LPS2.	This symptom may be caused by short-circuiting of the line to ground. It may also be caused by a solder fracture at the loading detection switch (S1901), soldered portion lifted off the board or the surface mount part on the line, or loose connection of the FFC cables.	E
MAIN Assy	MAIN Assy ⑤	② By observing the waveform at the PWMLO Test Land, check that the duty at PWMLO changes, as indicated in the waveform photo: • During stop: Duty 50 % • During loading-in: Duty 0 % • During loading-out: Duty changes from 100 %, 25 %, then to 75 %.		F
MAIN Assy		③ Check the voltage at the MPU (IC301), FPGA (IC302), IC105 (TC7W04), and the driver IC (IC102).		

**Player (3/4)**

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>The error rate measured in Test Operation mode of Service mode is high.</b>				
A		① To which the cause is attributed, disc or player, must be judged first. Visually check the disc for stains on the recording surface.	If the disc is clearly stained, replace it with a clean CD.	
		② Using the disc that produced a high error rate, measure an error rate at addresses in a different area.	If the error rate at addresses in a different area is not high, the CD is defective. Replace it with a high-quality CD. If the error rates at addresses in different areas on the whole disc are high, proceed to Step ③.	
B	Pickup Assy	③ Check if shavings or dirt are attached to the pickup lens.	Clean the lens.	
	Player	④ Check if the TM Assy (servo mechanism) is securely attached.		
	Player	⑤ Check if the loading mechanism SV Assy is securely attached.		
	Pickup Assy	⑥ Check if any foreign object is on the spindle table.	Remove the foreign object.	
	Pickup Assy	⑦ Check if any foreign object is attached to the magnet section of the Pickup Assy.	Remove the foreign object.	
	Player	MAIN Assy ①,②,⑧,⑪	⑧ Check the S-curve, TE, RFO, and AGCRF levels in Service mode.	See "Failure judgment of the Pickup Assy" for details.
<b>The LD is not turned on after entering Test Operation mode of Service mode.</b>				
C	RLYB Assy	① Visually check if the LD short-circuit switch (S1101) remains closed.	Set the LD short-circuit switch to OPEN.	
	MAIN Assy	② Check that Pins 41 and 42 on the Servo DSP (IC101) are open or short-circuited.		
	Player	③ Check if the FFC cable that connects the Pickup and the RLYB Assys is securely connected to the Pickup Assy, if the conductor side is defective, and if there is any cable breakage. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	
D	MAIN Assy	④ Check if the R101 to R105 or Q105 are missing.		
	MAIN Assy	⑤ Check if the FFC cable that connects the RLYB and MAIN Assys is firmly connected to CN101.		
<b>The pickup lens does not move up or down after entering Test Operation mode of Service mode.</b>				
E	Player	① Check if the FFC cable that connects the TM and the RLYB Assy is securely connected to the Pickup Assy, if the conductor side is defective, or if there is any cable breakage. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	
	Pickup Assy	② Check if the resistance of the focus coil is too large or if the focus coil is broken, using Service mode.	See "Failure judgment of the Pickup Assy" for details.	
	MAIN Assy	③ Check if the 7 V power is supplied to Pin 32 of IC102.		
	MAIN Assy ⑨	④ Check if the signal output from the FOO terminal on the MAIN Assy oscillates centered around 1.65 V.		

LD short-circuit switch

## ■ Player (4/4)

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>The spindle motor does not rotate after entering Test Operation mode of Service mode.</b>				
MAIN Assy		① Check if the FFC cable that connects the TM and MAIN Assys is securely connected to CN102, if the conductor side is defective, or if there is any cable breakage. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	A
Player		② Check if the Loading Mechanism Assy operates normally. (Check if there is a clamping error or scratching noise of the disc.)		
MAIN Assy		③ Check if 7 V power is supplied to R121 to R126 on the MAIN Assy.		
MAIN Assy	MAIN Assy ⑫	④ Check if the PWM waveform that oscillates centered around 1.65 V can be observed for the DMO Test Land on the MAIN Assy.		
<b>The slider does not move after entering Test Operation mode of Service mode.</b>				
RLYB Assy		① Check if the FFC cable (stepper flexible cable) is connected to CN1104 on the RLYB Assy.		B
MAIN Assy		② Because the slider does not move until the Inside signal is recognized, check if the FFC cable that connects the TM and MAIN Assys is securely connected to CN102, if the conductor side is defective, and if there is any cable breakage. Also check for loose connection of connectors.	If the symptom is ameliorated by replacement of the FFC cable, the defective cable is the cause.	
MAIN Assy		③ Check if the signal at Pin 1 of CN102 becomes low when the power is turned on. (Is the Inside switch damaged?)		
MAIN Assy		④ Check if power is supplied to IC102.		
MAIN Assy	MAIN Assy ⑮,⑯	⑤ Check if a sine-wave signal is input to Pins 1 and 2 of IC102.		

Inside switch

## ■ User setting

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>After the power is turned off, the user settings, such as AUTO CUE and TIME MODE settings, are cleared.</b> With this model, the CUE point, AUTO CUE, and TIME MODE settings and error logs are stored in the flash memory on the MAIN Assy as user settings. No error indication is displayed for this symptom.				
MAIN Assy		After resetting the user settings to default in Service mode, set a CUE point while a CD is being played back. After the CUE point setting, wait at least 5 seconds and turn the power off then back on. Check if the CUE point is called.	Loose connection of the FLASH IC (IC300) connector is likely. If the symptom is not ameliorated after touching up the solder with a soldering iron, replace the FLASH IC.	D

## ■ Updating

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>"ERROR" is displayed on the DATA-FL display.</b> Updating of the firmware is possible in Service mode. All errors generated during updating are indicated as "ERROR," and updating fails.				
Player		① Check if a wrong CD has been loaded.	Use the correct CD for updating.	E
Player		② Check if the recording surface of the disc is stained.	Replace with a clean CD for updating.	
RLYB Assy		③ Visually check if the LD short-circuit switch (S1101) remains closed.	Set the LD short-circuit switch to OPEN.	
Pickup Assy		④ Check if shavings or dirt are attached to the pickup lens.	Clean the lens.	
MAIN Assy		⑤ After resetting the user settings to default in Service mode, set a CUE point while a CD is being played back. After the CUE point setting, wait at least 5 seconds and turn the power off then back on. Check if the CUE point is called.	Loose connection of the FLASH IC (IC300) connector is likely. If the symptom is not ameliorated after touching up the solder with a soldering iron, replace the FLASH IC.

## ■ Error codes (1/2)

	Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
A			<b>E-6002 DSP PROGRAM DOWNLOAD ERROR</b> At the time of initialization, the program was not downloaded (written) to the EEPROM on the AUDIO DSP. There may be a factor that hampers normal initialization of the EEPROM on the AUDIO DSP at the time of power on. The possible cause is defective state of 3-wire serial lines that are commonly used by the MPU and the FPGA, AUDIO DSP, and DACs. The data on this symptom are not stored in the internal memory.		
	MAIN Assy	MAIN Assy ②, ③, ④	Check the waveforms of the 3-wire serial lines (CLK, DATA, DSPDREQ) to confirm that the configuration procedures are properly performed.	Chip fracture or soldered portion of IC lead lifted off the board on the line where the waveform does not change is most likely the cause. In the former case, replace the chip. In the latter case, soldering touchup is needed.	
B			<b>E-7201 TOC READ ERROR</b> Table of Contents (TOC) data cannot be read. This symptom is associated with the reading accuracy of the servo motor of the CD player.		
	Player		Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.	Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	
C			<b>E-8301 PLAYER ERROR (Startup error)</b> • E830112: The desired address could not be searched for. • E830115: The address could not be read. • E830122: The focus servo could not be closed. • E830191: The pickup did not return toward the inner tracks. If the above-mentioned error codes are indicated before the loaded disc is recognized as a CD, the disc will be automatically ejected. This symptom is associated with the reading accuracy of the servo motor of the CD player.		 <p>Joint spring Slider</p>
	MAIN Assy	MAIN Assy ⑩	② Check the waveform at the INSIDE Test Land near CN102, by changing the positions of the Inside switch. Does the signal change between low and high according to the switch settings?	If the signal does not change, a defective Inside switch, solder fracture, soldered portion lifted off of the surface mount on the line, and loose connection of the FFC cables are likely causes.	
	Player		③ Visually check if the joint spring on the TM Assy is deformed. Also check for the sliding smoothness of the slider.	If the joint spring is deformed or displaced or if the slider moves abnormally smoothly, replace the pickup.	
D	Player		④ Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.	Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	
E			<b>E-8302 PLAYER ERROR (Abnormality in playback)</b> • E-830212: The desired address could not be searched for. • E-830215: The address could not be read. • E-830222: The focus servo could not be closed. This symptom is associated with the reading accuracy of the servo motor of the CD player.		
	Player		Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.	Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	

## Error codes (2/2)

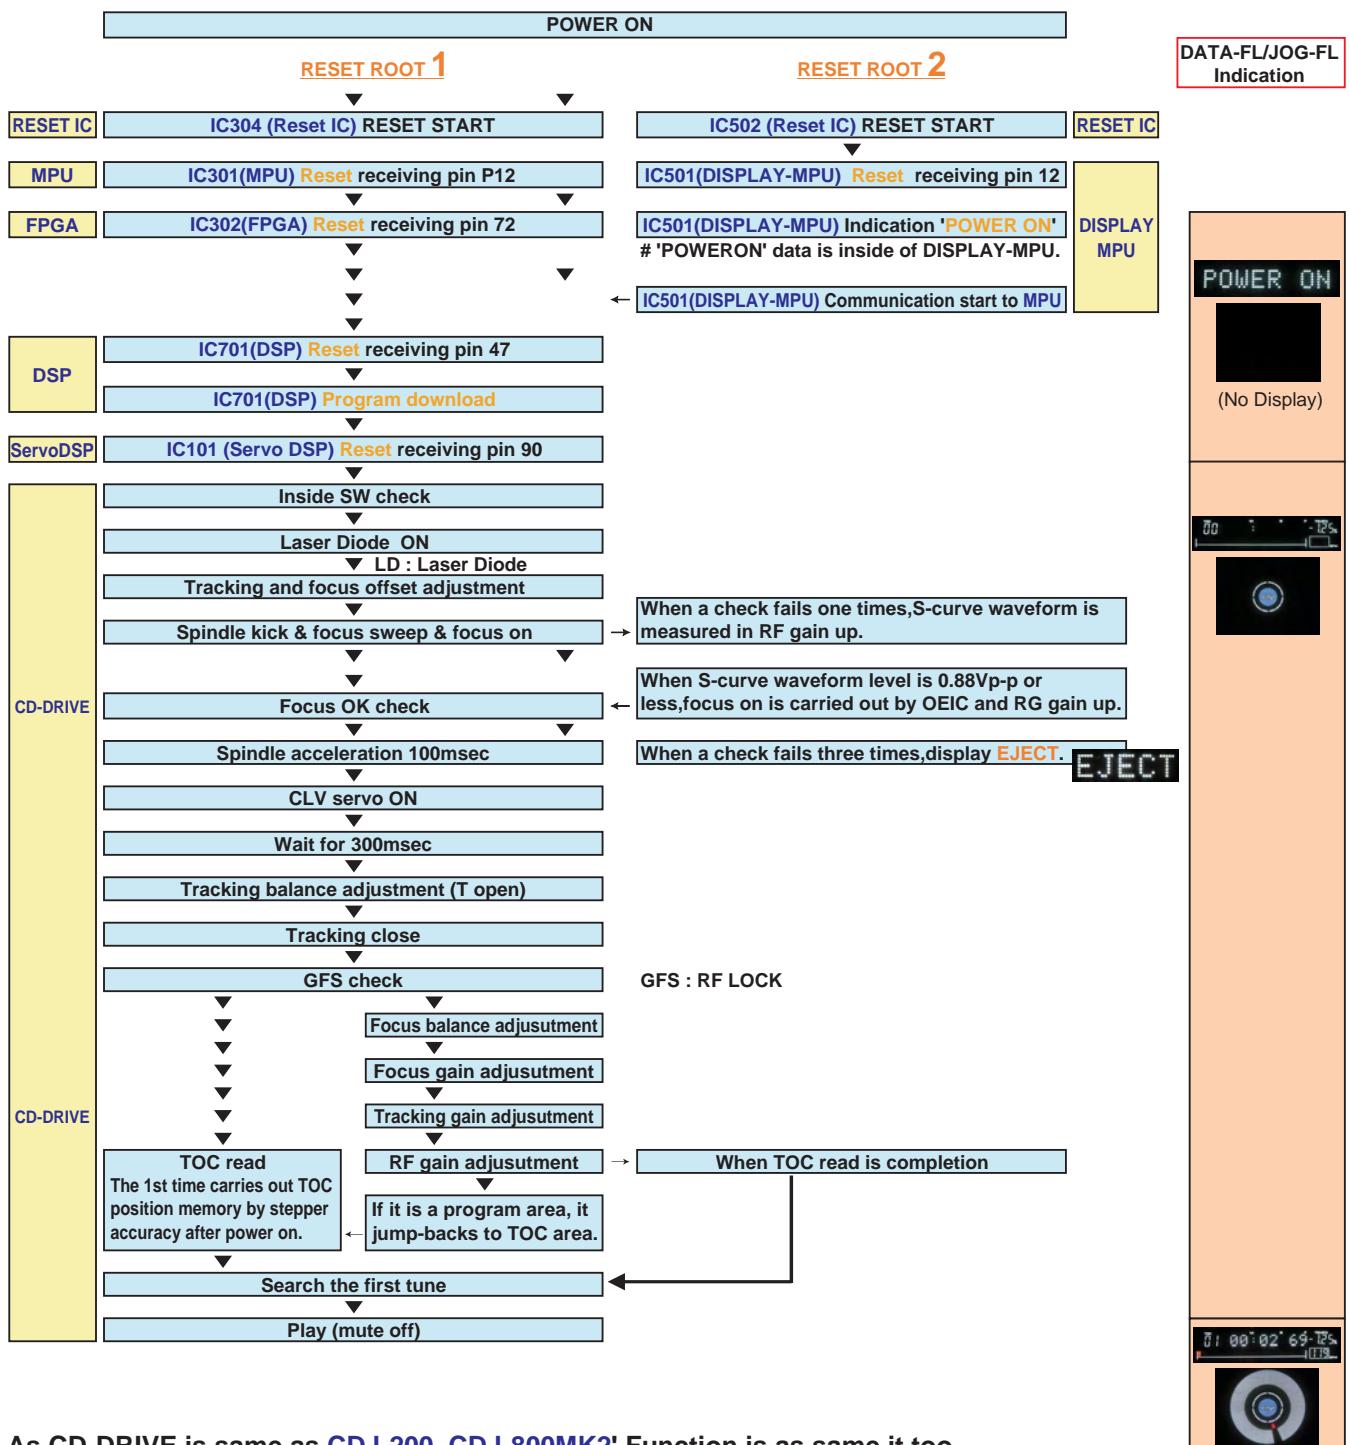

Sites	Waveforms	Points to be checked	Causes & Measures to be taken	Remarks
<b>E-8303</b> <b>PLAYER ERROR (Abnormality in writing in the buffer)</b> • E830399: Abnormality in writing in the buffer		In theory, this error code means that buffering to the SDRAM (IC303) was impossible. However, a defective SDRAM may not be a real cause, because the unit would freeze if the SDRAM were defective. This error code is generated by factors associated with the reading accuracy of the servo motor of the CD player, such as a high error rate and subcode not read.		A
Player		Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.	Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	
<b>E-8304</b> <b>MP3 DECODE ERROR (Abnormal decoding)</b>		As this is a decoding error code for MP3 format, it is of no relevance to reading of data in CD-DA format, which does not need decoding. As the MP3 decoding process precedes the process of writing in the buffer, this error code is associated with the process that precedes the process with which E-8303 is associated. This code may also be indicated when the quality of the RF signal is deteriorated.		B
Player		Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.		
<b>E-8305</b> <b>DATA FORMAT ERROR (Abnormal data format)</b>		The CD is played back in a format other than MP3. Or the quality of the RF signal is deteriorated. The data on this symptom are not stored in the internal memory.		C
		① Check if the CD being played back is in MP3 format.		
Player		② Measure the error rate in Player Operation mode of Service mode. To which the cause is attributed, disc or player, must be judged first. For measuring, play back the lead-in point indicated in the error code by listening the sound.	Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	
<b>E-8709</b> <b>COMMUNICATION ERROR</b> See "E8709" error.				
<b>E-9101</b> <b>MECHANICAL TIME OUT</b> • E910190: Abnormality in the disc-loading mechanism (timeout)				D
Player			Follow the procedures described in "The error rate measured in Test Operation mode of Service mode is high."	

## FAILURE JUDGMENT OF THE Pickup Assy

Item	Specifications	Measurement procedures	Failure judgment	Remarks
Laser Diode (LD) current	Typ 70 mA Max 80 mA	<p>① Make sure that no CD is loaded.            ② Enter Service mode.            ③ During Test Operation mode, press the TEMPO button to turn the LD on.            ④ Measure the voltage difference (DC value) between the Test Lands LD3S and LDCHECK on the MAIN Assy.</p>	If the measurement result of the LD current is 80 mA or more, the LD is deteriorated.  <b>Note:</b> Check the mounting status of R101 to R104 (22 ohms).	To prevent damage to the LD, after the LD is turned on (Step 3 of the measurement procedures and after), never connect or disconnect the measuring equipment.
Focus coil resistance	$3.4 \pm 0.5 \Omega$	<p>① Make sure that no CD is loaded.            ② Remove the bottom plate and set the LD short-circuit switch (S1101) to Short-circuiting.            ③ Disconnect the FFC cable that connects the RLYB Assy and the MAIN Assy from the CN101 connector.            ④ Measure the conductor resistance of the terminal assembly between Pins 13 and 14 of the FFC cable.</p>	If the measurement result is beyond the specified value, the pickup is in failure.	
Tracking coil resistance	$4.1 \pm 0.6 \Omega$	<p>① Make sure that no CD is loaded.            ② Remove the bottom plate and set the LD short-circuit switch (S1101) to Short-circuiting.            ③ Disconnect the FFC cable that connects the RLYB Assy and the MAIN Assy from the CN101 connector.            ④ Measure the conductor resistance of the terminal assembly between Pins 15 and 16 of the FFC cable.</p>	If the measurement result is beyond the specified value, the pickup is in failure.	
S-curve level	Reference: 1.5 Vp-p Usually use a pressed CD, as the measurement result depends on the disc type.	① Enter Service mode. ② Load a pressed CD. (Standby) ③ During Test Operation mode, press the TIME, A, then CUE buttons to send a command.	The pickup or the MAIN Assy is in failure if the measurement result is more than double or less than 50% of the specified (reference) value.	
Tracking Error (TE) level	Reference: 1.1 Vp-p Usually use a pressed CD, as the measurement result depends on the disc type.	<p>① Enter Service mode.            ② Load a pressed CD. (Standby)            ③ During Test Operation mode, press the buttons in the following order to send a command: TIME, TEMPO, RELOOP, then LOOPIN twice.            ④ Measure the peak-to-peak TE waveform at the TE Test Land on the MAIN Assy.</p>	The pickup or the MAIN Assy is in failure if the measurement result is more than double or less than 50% of the specified (reference) value.	
RFO level	Reference: 1.2 Vp-p ± 10 % Usually use a pressed CD, as the measurement result depends on the disc type.	<p>① Play back a pressed CD.            ② Measure the peak-to-peak RF waveform at the RFO Test Land on the MAIN Assy.</p>	The pickup or the MAIN Assy is in failure if the measurement result is more than double or less than 50% of the specified (reference) value.	If the RFO level is within the specified values, and if the AGC RF level is outside the range of the specified values, the MAIN Assy is in failure.
Auto Gain Control (AGC) RF level	$1.2 \text{ Vp-p} \pm 10 \%$ The measurement result does not depend on the disc type.	<p>① Play back a CD.            ② During playback, measure the peak-to-peak RF waveform at the AGCRF Test Land on the MAIN Assy.</p>	You may disconnect the measuring equipment during measurement, if you wish.	You may disconnect the measuring equipment during measurement, if you wish.

## 7.1.4 POWER ON SEQUENCE

### POWER ON SEQUENCE

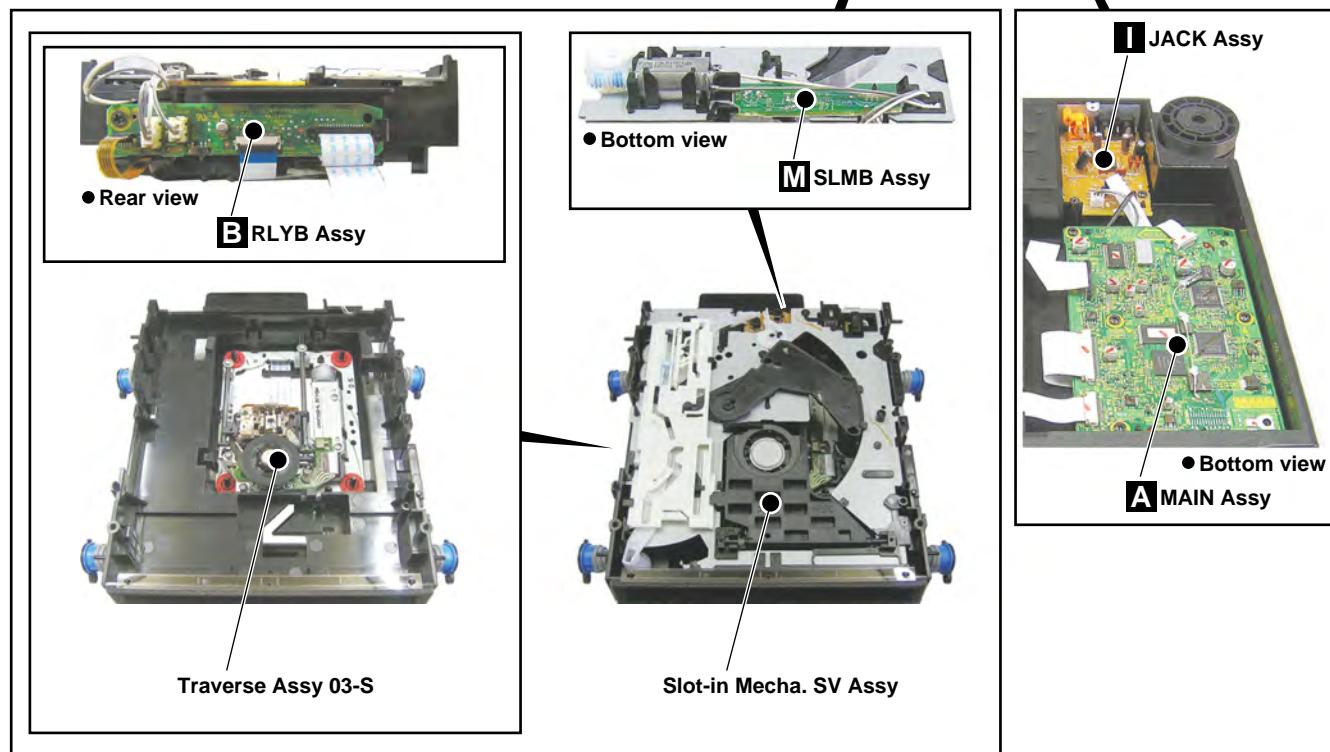

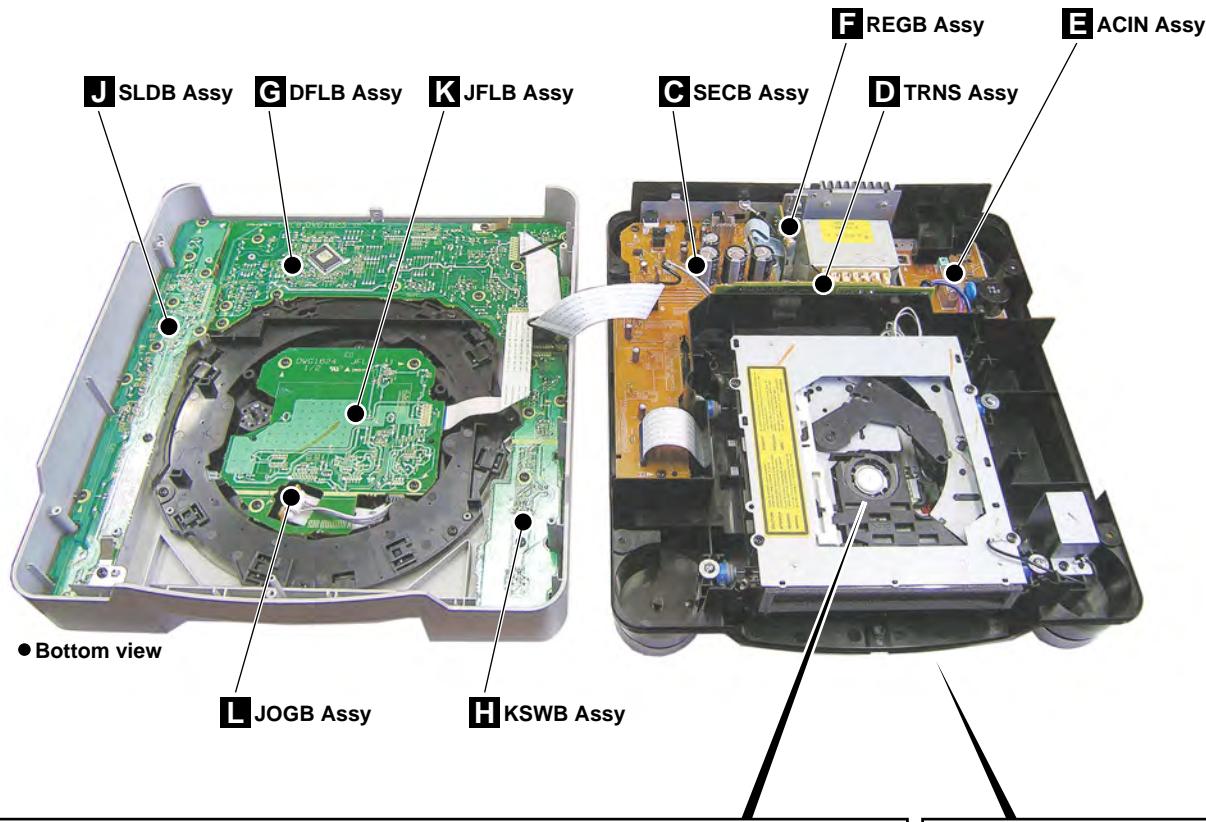

## 7.1.5 DISASSEMBLY

**Note 1:** Do NOT look directly into the pickup lens. The laser beam may cause eye injury.

**Note 2:** Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

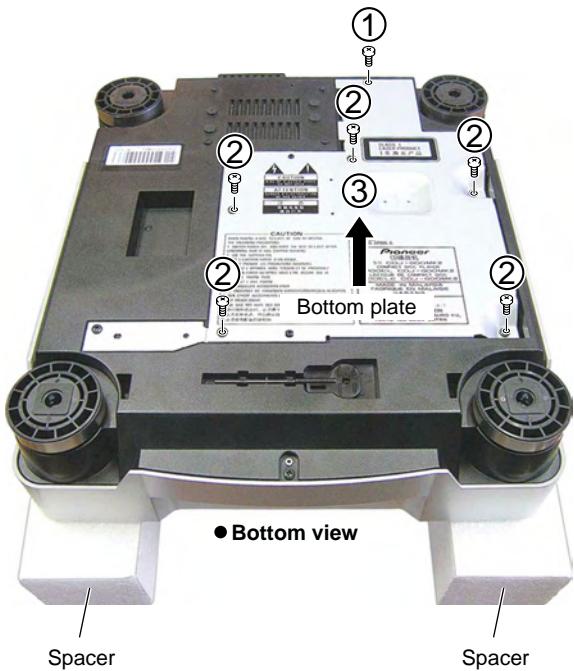

### PCB Location

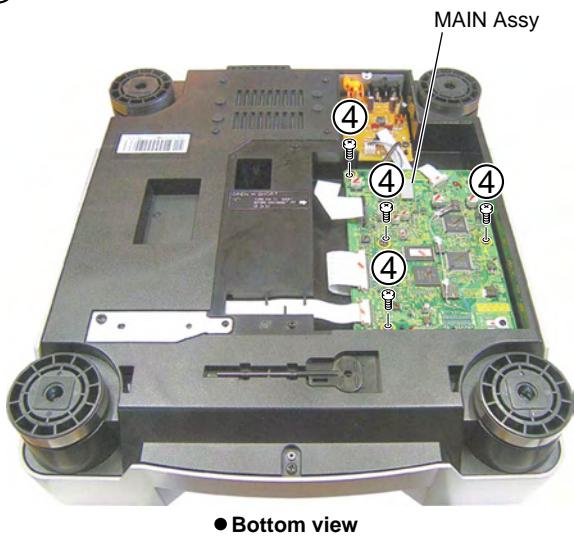

## Diagnosis of MAIN Assy

**Note:** To work on the unit having it set upside-down, place spacers below it, as shown in the photo below, to avoid imparting stress to the sheet SW of the JOG section.

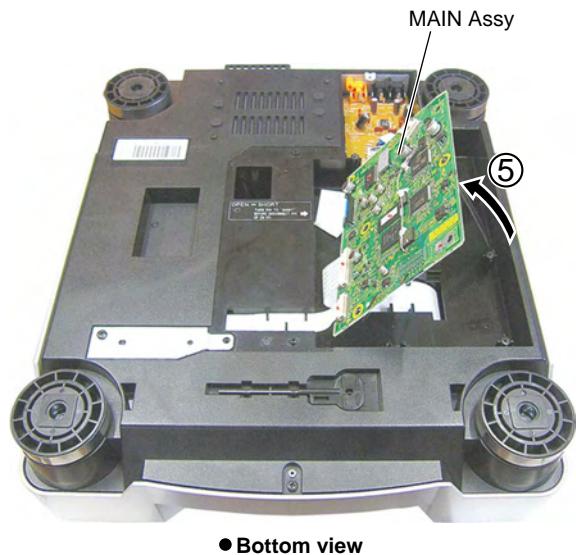

- ① Remove the one screw.
- ② Remove the five screws.
- ③ Remove the bottom plate.

- ④ Remove the four screws.

- ⑤ Stand the MAIN Assy.

**Diagnosis**

## Disassembly

### 1 Control Panel Section

- (1) Remove the one screw.

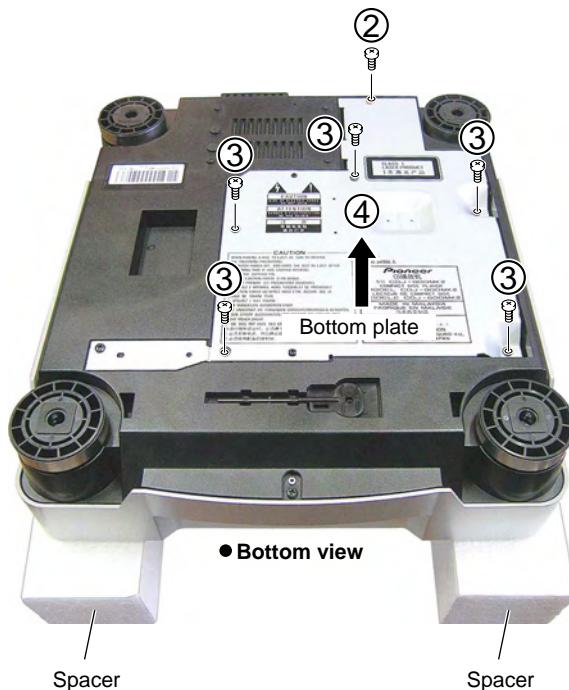

● Rear view

**Note:** To work on the unit having it set upside-down, place spacers below it, as shown in the photo below, to avoid imparting stress to the sheet SW of the JOG section.

- (2) Remove the one screw.

- (3) Remove the five screws.

- (4) Remove the bottom plate.

Bottom plate

● Bottom view

Spacer

Spacer

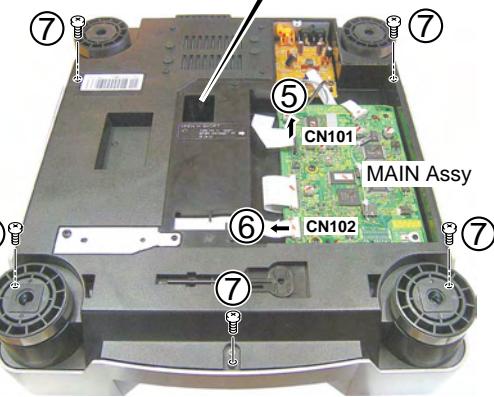

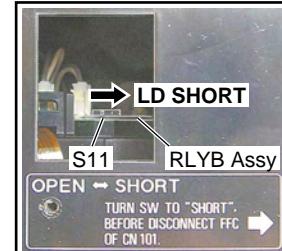

#### ● Short-circuit switch for the pickup

Before disconnecting the flexible cable for the pickup, change the position of the S1101 switch on the RLYB Assy to LD SHORT.

- (5) Disconnect the flexible cable for the pickup.

- (6) Disconnect the flexible cable.

- (7) Remove the five screws.

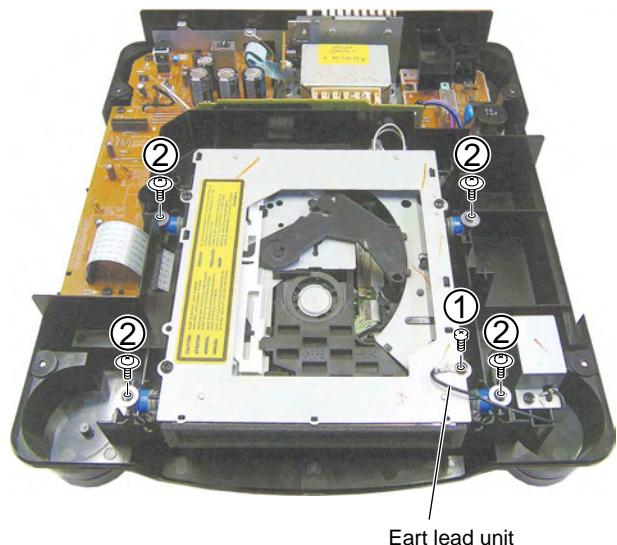

● Bottom view

- (8) Remove the control panel section.

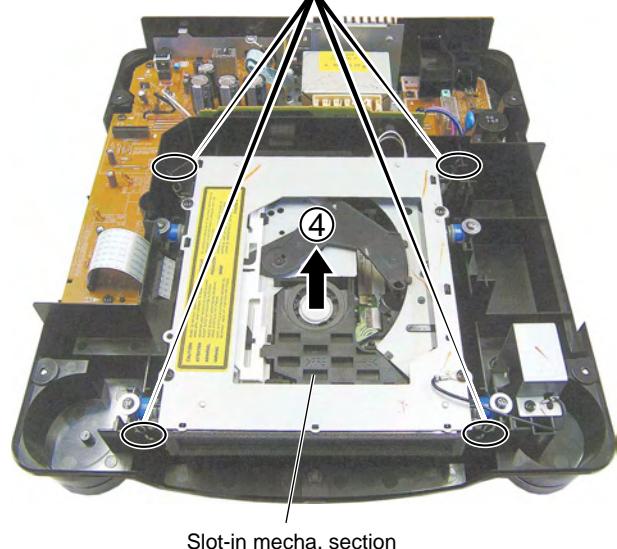

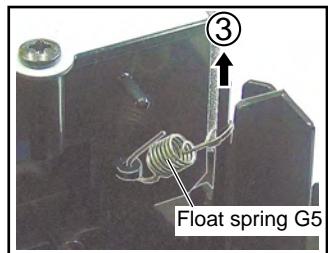

## 2 Slot-in Mecha. Section

- ① Remove the earth lead unit by removing the one screw.
- ② Remove the four DM screws.

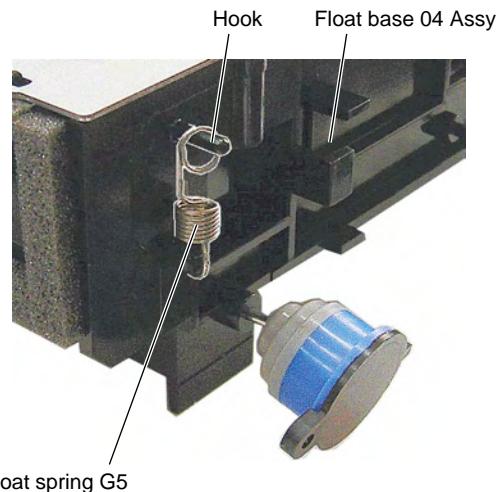

- ③ Remove the four float springs G5.
- ④ Remove the slot-in mecha. section.

### ● How to handle the float spring G5

To avoid losing the float spring G5, after removing it, put it on the hook of the float base 04 Assy.

A

B

C

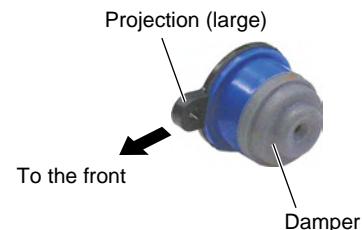

D

E

F

### ● Direction of the dampers when attaching them

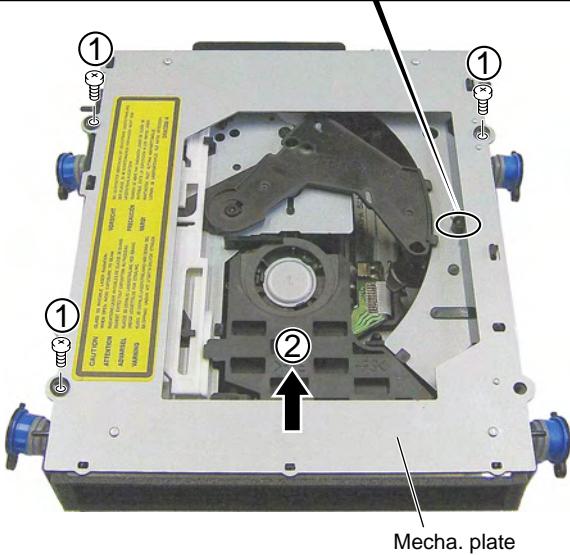

When attaching the dampers, place them so that their projections (large) face front.

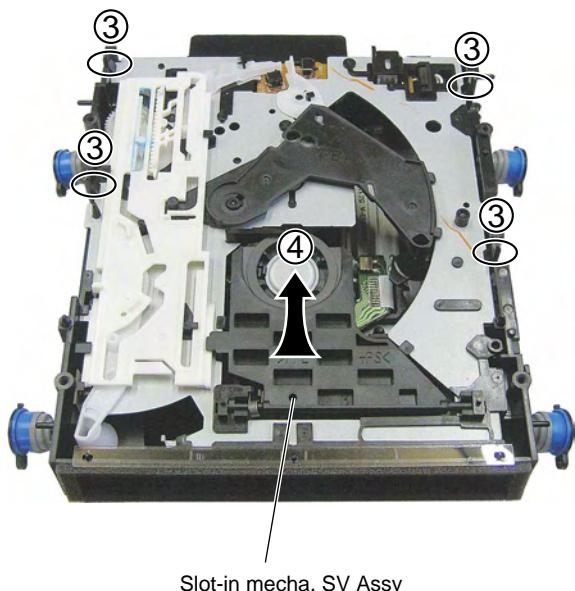

109

### 3 Slot-in Mecha. SV Assy

- ① Remove the three screws.
- ② Remove the mecha. plate.

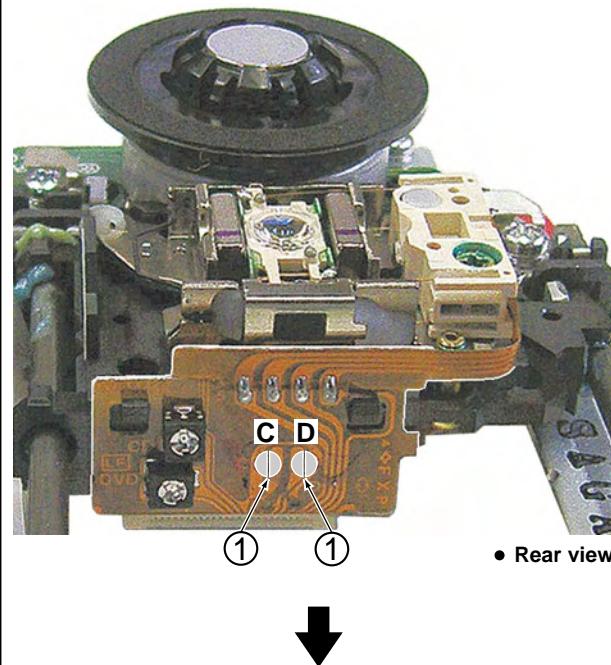

- ③ Unhook the four hooks.
- ④ Remove the slot-in mecha. SV Assy.

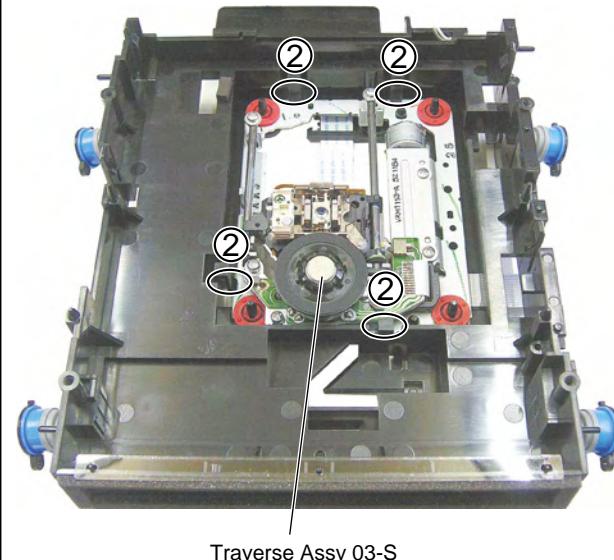

### 4 Traverse Assy 03-S

- ① Short-circuit two points C and D soldering.

**Note:** After replacement, connect the flexible cable, then remove the soldered joint (open).

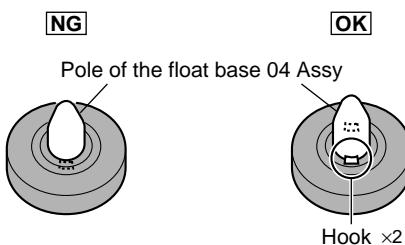

- ② Unhook the four hooks.
- ③ Disconnect cables, as required.
- ④ Remove the traverse Assy 03-S.

**Replace**

### ● Note on the float rubber installation

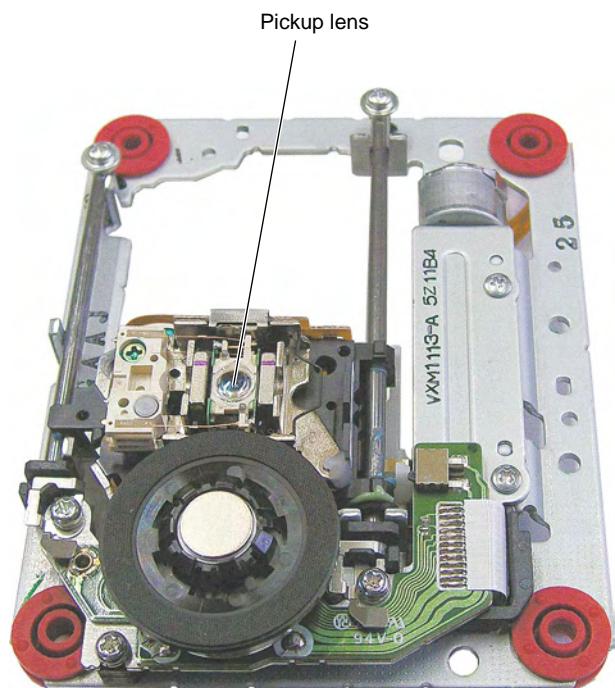

### ● Cleaning the pickup lens

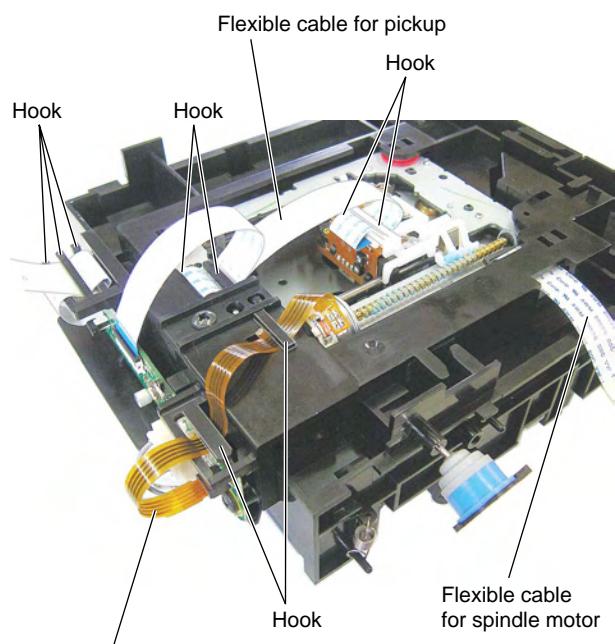

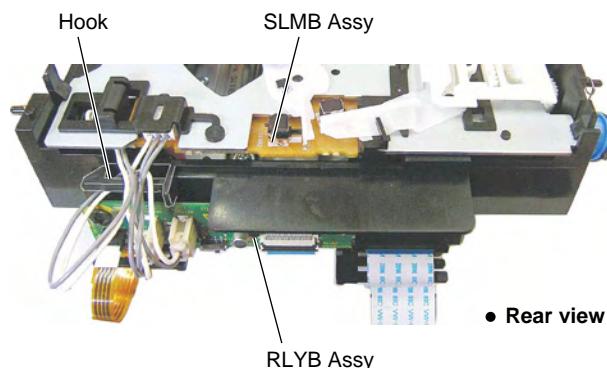

Before shipment, be sure to clean the pickup lens, using the following cleaning materials:

Cleaning liquid : GEM1004  
Cleaning paper : GED-008

### ● Arrangement of the flexible cables

A

B

C

D

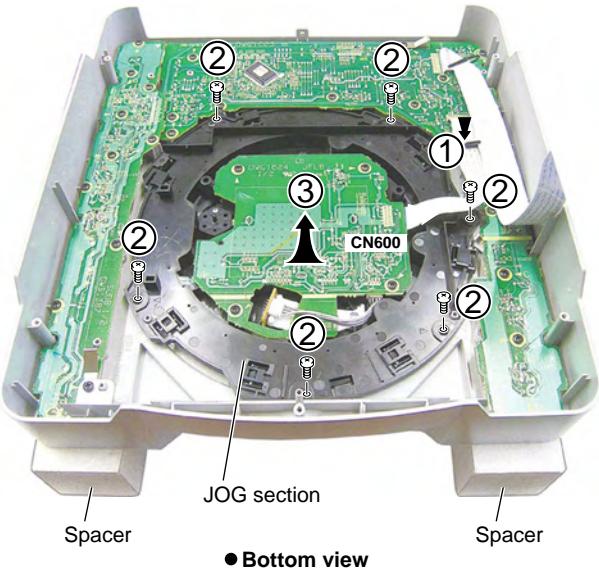

E

F

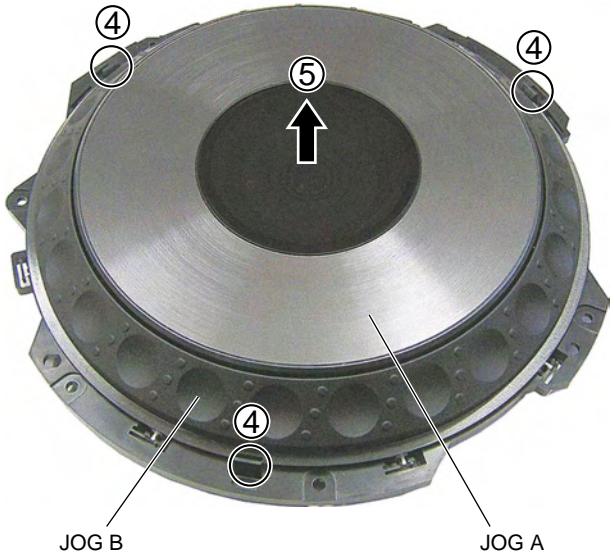

## **5 JOG Section**

**Note:** To work on the unit having it set upside-down, place spacers below it, as shown in the photo below, to avoid imparting stress to the sheet SW of the JOG section.

- ① Disconnect the flexible cable.
  - ② Remove the six screws.
  - ③ Remove the JOG section.

- ④ Unhook the three hooks.
- ⑤ Remove the JOG A and JOG Bs.

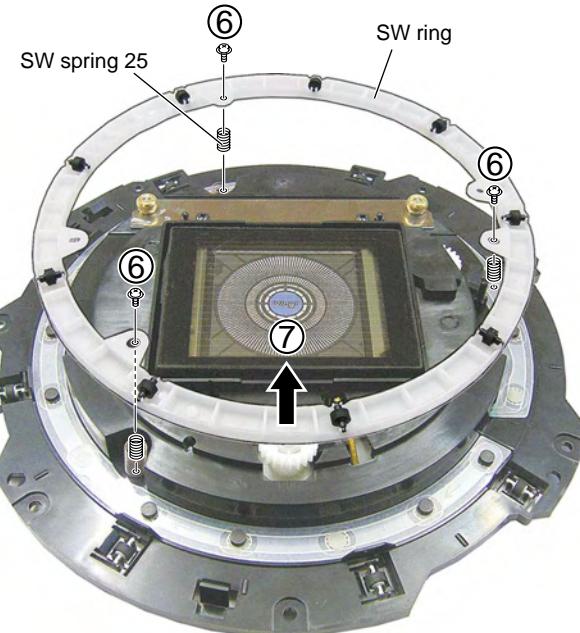

⑥ Remove the three screws.

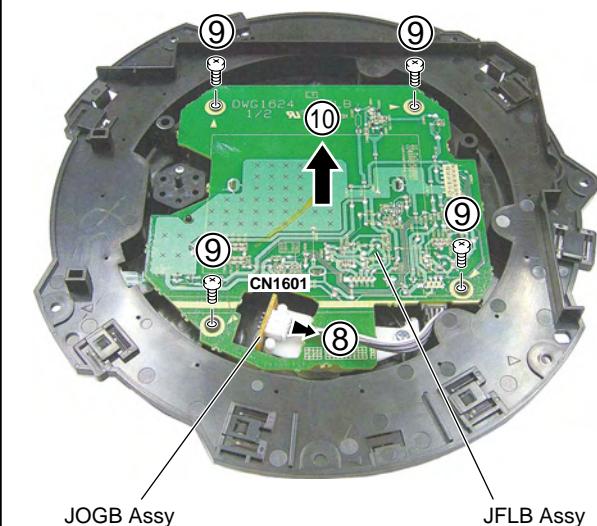

⑦ Remove the SW ring.

## **Caution:**

Be careful not to lost SW spring 25.

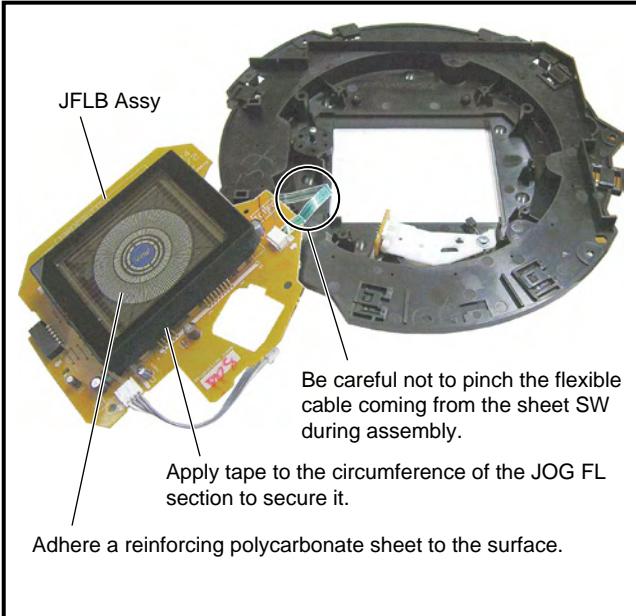

- ⑧ Disconnect the connector.
  - ⑨ Remove the four screws.
  - ⑩ Remove the JFLB Assy.

## Notes on Replacement

### Notes on replacing the JFLB Assy

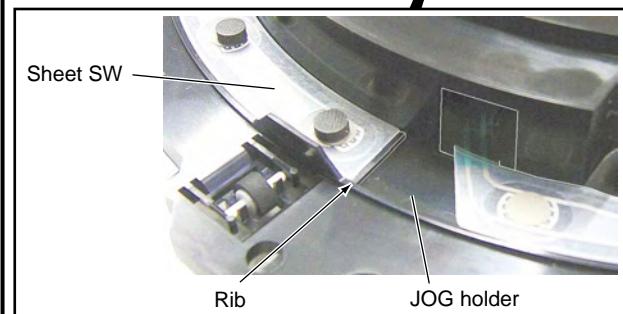

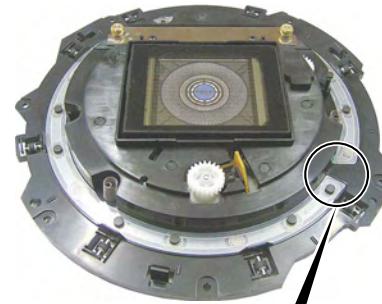

### Notes on replacing the Sheet SW

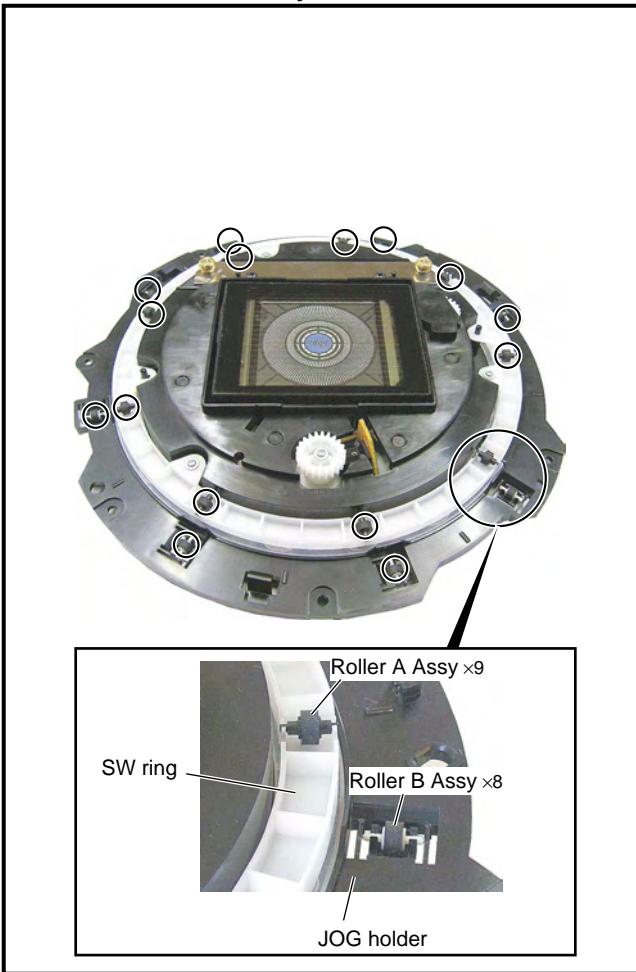

#### ● Place to adhere the Sheet SW

##### Notes:

1. Be careful not to warp the sheet SW.
2. Remove any dirt on the JOG holder to which the sheet SW is to be adhered. If some adhesive for the old sheet SW remains on the JOG holder, completely remove it with a cloth moistened with alcohol.
3. Do NOT place the sheet SW so that it is mounted on the rib of JOG holder.
4. When adhering the sheet SW, be careful not to trap air bubbles in it. If air bubbles are formed, remove the sheet SW and adhere a new sheet SW.  
Do NOT reuse the removed sheet SW.
5. When making a connection, be sure to first release the lock of the connector then securely relock the connector after making the connection.

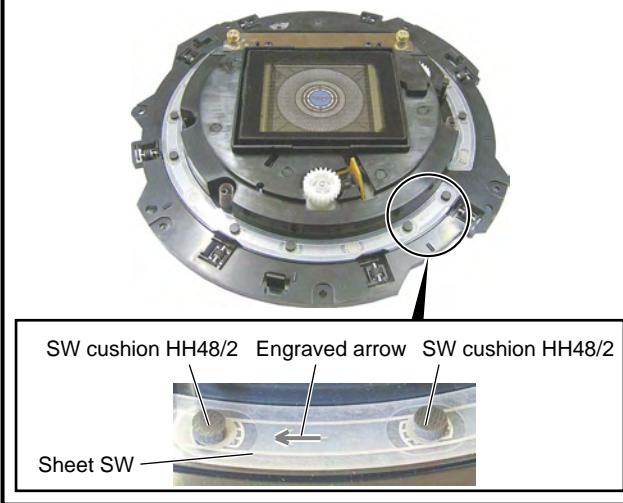

### Places to Roller Assys A and B

#### ● Place to adhere the SW cushions HH48/2

Adhere the cushions to the right and left of the engraved arrows (←) (12 positions in total) on the sheet SW.

## ● Pin Function

No.	Pin Name	I/O	Pin Function
1	IPF	O	Correction flag output. "H" if the AOUT output is an uncorrectable symbol in C2 correction.
2	SBOK	O	CRCC check result output for subcode Q data. "H" if the check result is OK.
3	CLCK	I/O	Clock input/output for reading subcode P to W data. The polarity of the input/output can be selected with a command.
4	VDD3	-	Power supply for 3.3V digital circuits.
5	VSS3	-	Grounding for digital circuits.
6	DATA	O	Subcode P to W data output.
7	SFSY	O	Playback section frame sync signal output.
8	SBSY	I/O	Subcode block sync output. "H" in the S1 position when a subcode sync is detected.
9	IO0A (RW)	O	"H" when the CD-RW is detected (usually "L"), and switch the OEIC gain.
10	IO1A	O	Unsetting. Always "L"
11	ARSEL	I	Usually fixed at "H" level.
12	AWRC	O	VCO control for active wide-range PLL.
13	PVDD3	-	3.3V power supply dedicated to the PLL section.
14	PDO	O	Signal output for phase difference between EFM and PLCK signals.
15	TMAXS	O	TMAX detection result output. The same signal is output from the TMAX and TMAXS pins.
16	TMAX	O	TMAX detection result output. The same signal is output from the TMAX and TMAXS pins.
17	LPFN	I	Inversion input for PLL section low-pass filter amplifier.
18	LPFO	O	Output for PLL section low-pass filter amplifier.
19	PVREF	-	1.65V reference voltage dedicated to the PLL section.
20	VCOF	O	VCO filter pin.
21	VCOREF	I	Input for VCO center frequency reference level.
22	DTCN	O	Analog slicer filter.
23	DTCP	O	Analog slicer filter.
24	PVSS3	-	Grounding dedicated to the PLL section.
25	SLCO	I	EFM slice level output.
26	RFI	I	RF signal input. An input resistance can be selected using a command.
27	RFRPI	I	RF ripple signal input.
28	RFEQO	O	RF equalizer circuit output.
29	AVDD3	-	Power supply for 3.3V analog circuits.
30	RESIN	I	Pin for connecting a resistor for reference current generation.
31	VRO	O	1.65V reference voltage output.
32	VMDIR	-	1.533V reference voltage output.
33	TESTR	O	Pin for connecting filter for RFEQO offset correction.
34	INVSEL	I	Test pin, usually fixed at "L" level.
35	AGCI	I	Input for RF signal amplitude adjustment amp.
36	RFDCI	I	Input for RF signal peak detection.
37	RFO	O	Output for RF signal generation amp.
38	PNSEL	I	Test pin, usually fixed at "H" level.
39	EQSET	O	External-connection for RF signal equalizer.
40	RVDD3	-	Power supply for 3.3V RF amp. core section.
41	LDO	O	Laser diode amp. output.
42	MDI	I	Monitor photodiode amp. input.
43	RVSS3	-	Grounding for 3.3V RF amp. core section.
44	FNI2	I	Main beam input. To be connected to PIN diode C.
45	FNI1	I	Main beam input. To be connected to PIN diode A.
46	FPI2	I	Main beam input. To be connected to PIN diode D.
47	FPI1	I	Main beam input. To be connected to PIN diode B.
48	TPI	I	Subbeam input. To be connected to PIN diode F.
49	FNI	I	Subbeam input. To be connected to PIN diode E.

A

B

C

D

E

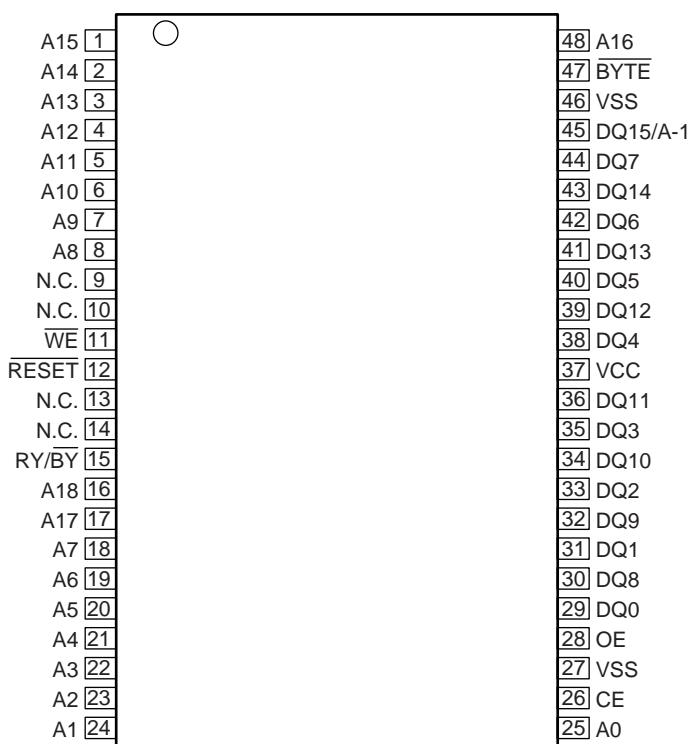

F

No.	Pin Name	I/O	Pin Function
50	FTE	O	Focus/tracking signal output. (Test pin for servo characteristic measurement.)
51	RFZI	I	Input for RF ripple zero-cross signal.
52	AVSS3	-	Grounding for analog circuits.
53	RFRP	O	RF ripple signal output.
54	RFDC	O	Pin for the RF peak detection signal supporting hologram.
55	FEI	O	Focus error signal pin.
56	SBAD	O	Subbeam addition signal pin.
57	TEI	O	Tracking error signal pin.
58	TEZI	I	Input for tracking error signal zero-cross.
59	AVDD3	-	Power supply for 3.3V analog circuits.
60	FOO	O	Focus equalizer output.
61	TRO	O	Tracking equalizer output.
62	VREF	O	Reference voltage for analog circuits.
63	FMO	O	Speed error/feed equalizer output.
64	DMO	O	Disc equalizer output.
65	IO2A	O	Unsetting. Always "L"
66	IO3A	O	Unsetting. Always "L"
67	MONIT	O	Pin for monitoring signals in the DSP.
68	FGIN	I	FG signal input for CAV. CLV: "L", CAV: FG input
69	VSS3	-	Grounding for digital circuits.
70	VDD3	-	Power supply for 3.3V digital circuits.
71	TESIN	I	Test input pin, usually fixed at "L" level.
72	XVSS3	-	Grounding for system clock oscillator circuit.
73	XI	I	Input for system clock oscillator circuit.
74	XO	O	Output for system clock oscillator circuit.
75	XVDD3	-	Power supply for 3.3V system clock oscillator circuit.
76	DVSS3	-	Grounding for 1-bit DAC.
77	RO	O	R channel data normal output for 1-bit DAC.
78	DVDD3	-	3.3V power supply for 1-bit DAC.
79	DVR	O	Reference voltage for 1-bit DAC.
80	LO	O	L channel data normal output for 1-bit DAC.
81	DVSS3	-	Grounding for 1-bit DAC.
82	ZDET	O	Zero detection flag output for 1-bit DAC.
83	VSS5	-	Grounding for interface.
84	BUS0	I/O	Data input/output for the microcomputer interface
85	BUS1	I/O	Data input/output for the microcomputer interface
86	BUS2	I/O	Data input/output for the microcomputer interface
87	BUS3	I/O	Data input/output for the microcomputer interface
88	BUCK	I	Clock input for the microcomputer interface
89	/CCE	I	Chip enable signal input for the microcontroller interface. BUS3 to BUS0 are active if this pin is "L".
90	/RST	I	Reset signal input. The internal registers and servo section registers are reset, respectively, when the reset signal is "L" and on the rising edge of the reset signal.
91	VDD5	-	Power supply for the interface,
92	IO0B (TEZC)	O	The signal that inverts H/L with TE zero-cross.
93	IO1B (DFCT)	O	Defect signal. Normally "H", but it becomes "L" when detecting dirts on the disc.
94	IO2B (TRSR)	O	It becomes "L" during tracking close or search.
95	IO3B (HYS)	O	It becomes "L" in the hysteresis operation.
96	EMPH	O	Emphasis flag output. EMPH ON: "H", EMPH OFF: "L" The output polarity is switched, using a command.
97	BCK	O	Bit clock output. 32fs, 48fs and 64fs are selected, using a command.
98	AOUT	O	Audio data output. Which bit is first (MSB first or LSB first) can be selected, using a command.
99	LRCK	O	LR channel clock output. L ch: "L", R ch: "H" The output polarity can be inverted, using a command.
100	DOUT	O	Digital-out output

N3	SDWE	O	SDRAM write enable
P3	SDLQDM	O	SDRAM LDQM
N4	GPIO5	I/O	General purpose i/o
P4	QSPI_CS0/GPIO29	I/O	QSPI chip select 0
N5	QSPI_DOUT/GPIO26	I/O	Qspi data out

## IC301 : SCF5249VM140\_No.2/4

No.	Pin Name	I/O	Pin Function
L5	GPIO6	I/O	General purpose i/o
P5	DATA21	I/O	Data bus bit 21
N6	DATA19	I/O	Data bus bit 19
L6	QSPI_CS2/GPIO21	I/O	QSPI chip select 2
P6	DATA20	I/O	Data bus bit 20
L7	DATA22	I/O	Data bus bit 22
P7	DATA18	I/O	Data bus bit 18
K7	DATA23	I/O	Data bus bit 23
N7	DATA17	I/O	Data bus bit 17
L8	QSPI_CS3/GPIO22	IO	QSPI Chip Select 3
K8	PAD-VDD	-	PAD-VDD
K8	PAD-VDD	-	PAD-VDD
P8	DATA16	I/O	data bus bit 16
N8	SDRAM_CS2/GPIO7	I/O	SDRAM chip select out 2 gpo
P9	EBUOUT2/GPO37	O	Audio interfaces EBU out 2
L9	CFLG/GPIO18	IO	CFLG input
N9	EBUOUT1/GPO36	O	Audio interfaces EBU out 1
K9	CORE-GND	-	CORE-GND
K9	CORE-GND	-	CORE-GND
P10	EBUIN3/ADIN0/GPI38	I	Audio interfaces EBU in 3 A/D convertor input 0
N10	EBUIN2/GPI37	I	Audio interfaces EBU in 2
L10	CORE-VDD	-	CORE-VDD
L10	CORE-VDD	-	CORE-VDD
P11	SCL2/GPIO3	I/O	IIC clock
P12	RSTI	I	Reset input
N11	TOUT1/ADOUT/GPO35	O	Timer output 1/ad output
P13	LRCK2/GPIO44	IO	Audio interfaces serial word clock 2
N12	OE	O	Output Enable
M11	SDA2/GPIO55	I/O	IIC 2 data line
P14	SDATAO2/GPO41	O	Audio interfaces serial data 2 out
N13	SCLK2/GPIO48	IO	Audio interfaces serial clock 2
K10	PAD-GND	-	PAD-GND
K10	PAD-GND	-	PAD-GND
K11	BUFENB2/GPIO17	IO	External buffer 2 enable
M12	TEST3	I	Structural test
L12	SDATAO1/GPIO25	IO	Audio interfaces serial data 1 out
N14	LRCK1	IO	Audio interfaces serial word clock 1
M13	LRCK4/GPIO46	IO	Audio interfaces serial word clock 4
M14	SDATAI4/GPI42	I	Audio interfaces serial data 4 in
L13	SCLK1	IO	Audio interfaces serial clock 1
L14	SCLK4/GPIO50	IO	Audio interfaces serial clock 4
L11	TA/GPIO20	I/O	Transfer Acknowledge
K13	SDATAI1	I	Audio interfaces serial data 1 in
K12	EBUIN1/GPI36	I	Audio interfaces EBU in 1
K14	PLLGRDVDD	IO	PLL guard supply (1.8V)
J11	PLLGRDGND	-	PLL guard supply GND
J13	PLLPADGND	-	3.3 Volt PLL GND
J12	PLLPADVDD	-	3.3 Volt PLL VDD
J14	PLLREGND	-	1.8 Volt PLL analog supply-GND
H11	PLLCoreVDD	-	1.8 Volt PLL analog supply-VDD
H12	IDE-DIOW/GPIO14	IO	ide diow
H14	CRIN	I	crystal
H13	IDE-DIOR(GPIO13)	IO	IDE DIOR
G11	IDE-IORDY(GPIO16)	I/O	IDE IORDY

## IC301 : SCF5249VM140\_No.3/4

No.	Pin Name	I/O	Pin Function
A	G11 IDE-IORDY/GPIO16	I/O	IDE IORDY
	G14 MCLK1/GPO39	O	Audio master clock output 1
	G12 SUBR/GPIO53	IO	Subcode data
	G13 MCLK2/GPO42	O	Audio master clock output 2
	F14 XTRIM/GPO38	O	Audio interfaces X-tal trim
	F11 TRST/DSCLK	I	Jtag
	F13 SFSY/GPIO52	IO	Subcode sync
	E9 CORE-VDD	-	CORE-VDD
	E9 CORE-VDD	-	CORE-VDD
	E14 RW_B	O	Bus write enable
B	F12 RCK/GPIO 51	IO	Subcode clock

## ● Pin Function

No.	Pin Name	I/O	Pin Function
1	-	I	Not used (ground)
2	TCH/REL	I	Volume input (A/D conversion port) For VINYL SPEED ADJUST
3	MODEL2	I	Model setting 2 Distinguish between CDJ-800MK2, CDJ-1000MK3 and DVJ-1000.
4	MODEL1	I	Model setting 1
5	-	O	Not used (non connection)
6	JOG1	I	Pulse period measurement processing
7	-	O	Not used (non connection)
8	-	-	Not used (ground)
9	CNVss	-	For built-in flash memory updating (not used)
10	-	I	Not used (ground)
11	-	I	Not used (ground)
12	XRST	-	Reset input
13	XOUT	-	16 MHz clock input
14	Vss	-	Ground
15	XIN	-	16MHz clock input
16	Vcc	-	Power supply 5 V
17	XNMI	I	
18	-	I	Not used (power supply 5 V)
19	-	I	Not used (power supply 5 V)
20	-	I	Not used (power supply 5 V)
21	-	I	Not used (power supply 5 V)
22	-	I	Not used (power supply 5 V)
23	-	I	Not used (power supply 5 V)
24	-	I	Not used (power supply 5 V)
25	JOG2	I	Two-phase pulse signal input Input signal of a TA2OUT terminal is a period of "H", up count (clockwise) at rising edge of TA2IN terminal and down count (counterclockwise) at falling edge.
26	JOG1	I	
27	TOUCH	I	JOG touch sensor
28	JSCLK	O	Serial clock signal for JOG-FL
29	-	O	Not used (non connection)
30	J_SDO	O	Communication Serial data signal for JOG-FL
31	FLSDO	O	Communication Serial data signal for DATA-FL
32	-	I	Not used (non connection) For built-in flash memory updating
33	FLSCLK	O	Communication Serial clock signal for DATA-FL
34	-	I	Not used (non connection) For built-in flash memory updating
35	SDO	O	Communication Data out signal for MPU (MAIN ASSY)
36	SDI	I	Communication Data in signal for MPU (MAIN ASSY)
37	CLK	O	Communication Clock signal for MPU (MAIN ASSY)
38	XCS	O	Communication Chip select signal for MPU (MAIN ASSY)
39	-	O	Not used (non connection)
40	-	O	Not used (non connection)
41	-	I	Not used (pull up)
42	FLLAT	O	Communication Latch signal for DATA-FL
43	FLBK	O	Communication Blank signal for DATA-FL
44	JXSTB	O	Communication Latch signal for JOG-FL
45	JBK	O	Communication Blank signal for JOG-FL
46	XCE	I	Not used (pull up)
47	LED24	O	LED control for RELOOP/EXIT button 0 : Lights-out
48	LED23	O	LED control for REALTIME CUE OUT button 0 : Lights-out
49	LED22	O	LED control for PLAY/PAUSE button 0 : Lights-out
50	LED21	O	LED control for CUE button 0 : Lights-out

### ● Pin Function

22	I/O: Unrestricted, general-purpose user I/O	12	DUAL: Configuration pin, then possible user I/O	7	VREF: User I/O or input voltage reference for bank
14	DCI: User I/O or reference resistor input for bank	8	GCLK: User I/O or global clock buffer input	8	VCCO: Output voltage supply for bank
7	CONFIG: Dedicated configuration pins	4	JTAG: Dedicated JTAG port pins	4	VCCINT: Internal core voltage supply (+1.2V)
0	N.C.: No unconnected pins in this package	10	GND: Ground	4	VCCAUX: Auxiliary voltage supply (+2.5V)

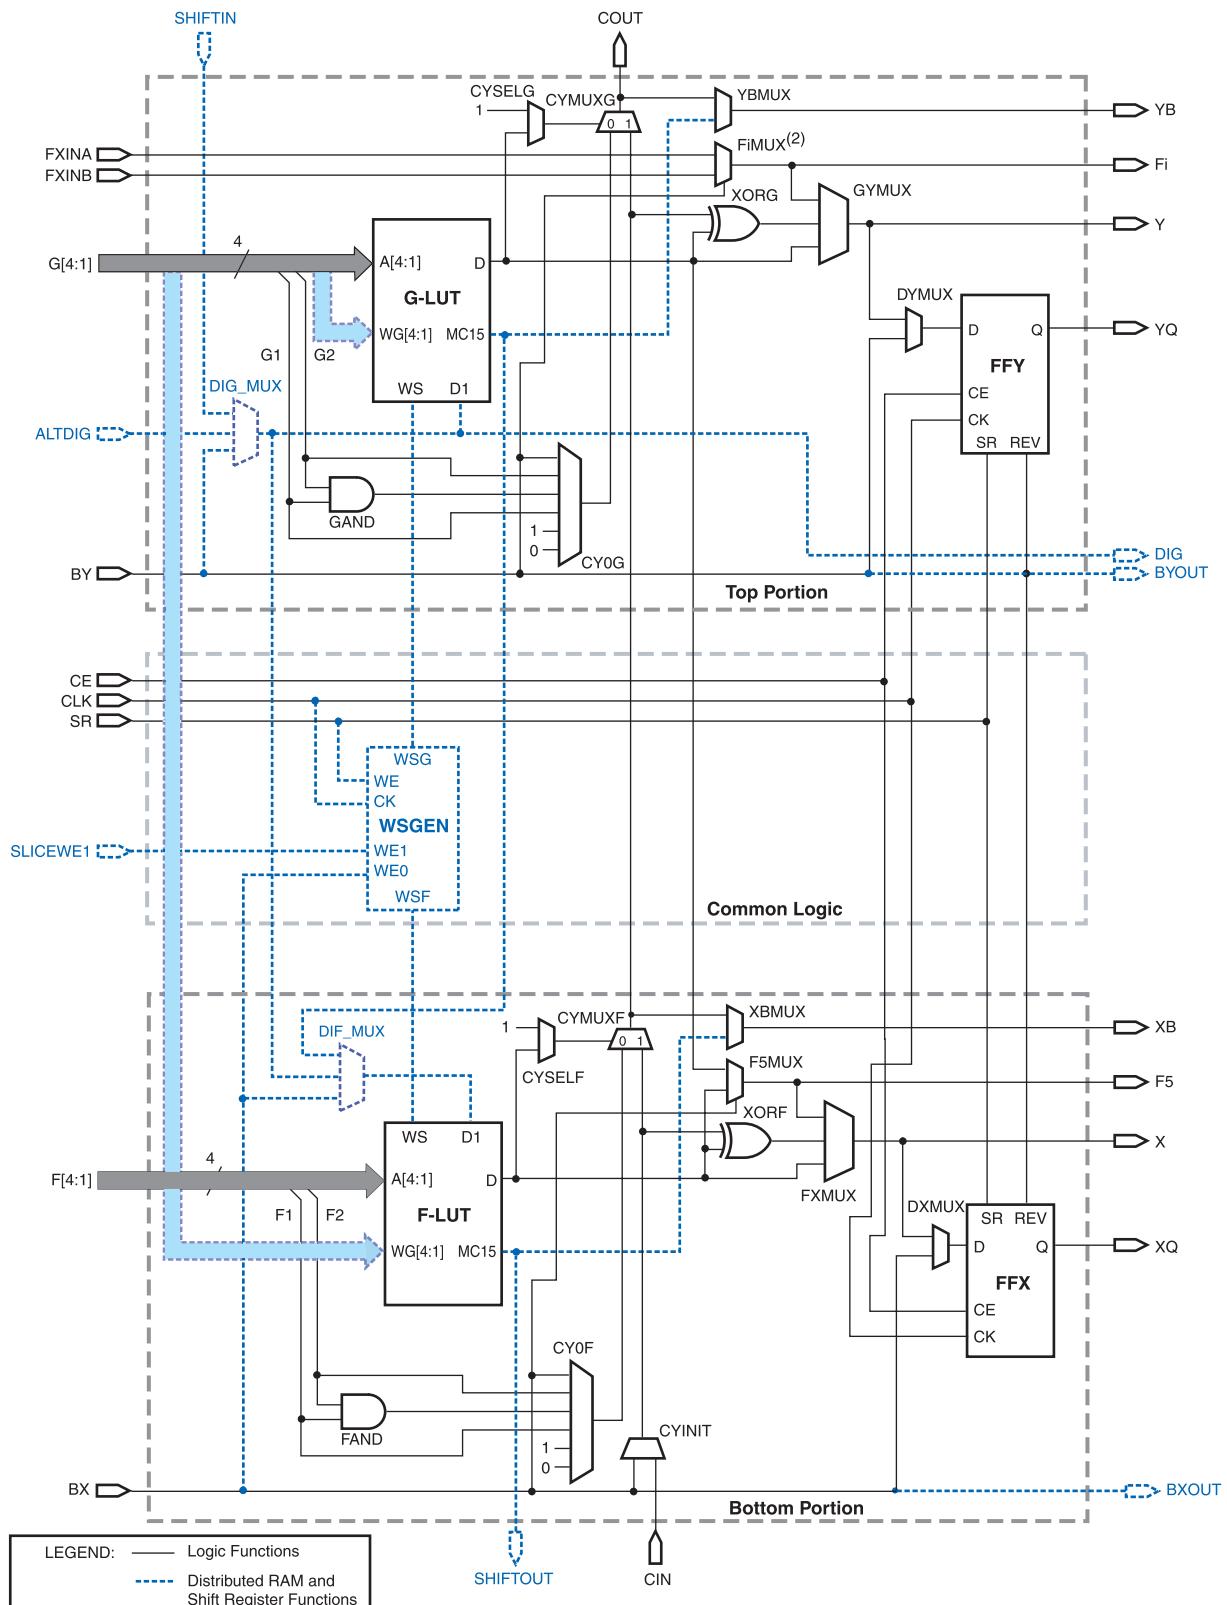

● Block Diagram

Note : All IOB signals communicating with the FPGA's internal logic have the option of inverting polarity.

Figure 1: Simplified IOB Diagram

## ● Block Diagram

### Notes:

- Options to invert signal polarity as well as other options that enable lines for various functions are not shown.
- The index  $i$  can be 6, 7, or 8, depending on the slice. In this position, the upper right-hand slice has an F8MUX, and the upper left-hand slice has an F7MUX. The lower right-hand and left-hand slices both have an F6MUX.

Figure 6 : Simplified Diagram of the Left-Hand SLICEM

## ● Pin Function

Pin	Name	Input Function
CLK	<i>System clock</i>	Active on the positive going edge to sample all inputs.
CS	<i>Chip select</i>	Disables or enables device operation by masking or enabling all inputs except CLK, CKE and DQM
CKE	<i>Clock enable</i>	Masks system clock to freeze operation from the next clock cycle. CKE should be enabled at least one cycle prior to new command. Disable input buffers for power down in standby.
A <sub>0</sub> ~ A <sub>11</sub>	<i>Address</i>	Row/column addresses are multiplexed on the same pins. Row address : RA <sub>0</sub> ~ RA <sub>11</sub> , Column address : CA <sub>0</sub> ~ CA <sub>9</sub>
BA <sub>0</sub> ~ BA <sub>1</sub>	<i>Bank select address</i>	Selects bank to be activated during row address latch time. Selects bank for read/write during column address latch time.
RAS	<i>Row address strobe</i>	Latches row addresses on the positive going edge of the CLK with RAS low. Enables row access & precharge.
CAS	<i>Column address strobe</i>	Latches column addresses on the positive going edge of the CLK with CAS low. Enables column access.
WE	<i>Write enable</i>	Enables write operation and row precharge. Latches data in starting from CAS, WE active.
DQM	<i>Data input/output mask</i>	Makes data output Hi-Z, tSHZ after the clock and masks the output. Blocks data input when DQM active.
DQ <sub>0</sub> ~ x <sub>15</sub>	<i>Data input/output</i>	Data inputs/outputs are multiplexed on the same pins.
V <sub>DD</sub> /V <sub>SS</sub>	<i>Power supply/ground</i>	Power and ground for the input buffers and the core logic.
V <sub>DDQ</sub> /V <sub>SSQ</sub>	<i>Data output power/ground</i>	Isolated power supply and ground for the output buffers to provide improved noise immunity.
N.C/RFU	<i>No connection /reserved for future use</i>	This pin is recommended to be left No Connection on the device.

### • Block Diagram

## ● Pin Function

PIN	NAME	I/O	DESCRIPTIONS
1	LRCK	IN	LRCK Clock Input ( $f_S$ ). (1)
2	DATA	IN	Serial Audio Data Input. (1)
3	BCK	IN	Bit Clock Input for Serial Audio Data. (1)
4	CLKO	OUT	Buffered Output of System Clock.
5	XTI	IN	Oscillator Input / External Clock Input.
6	XTO	OUT	Oscillator Output.
7	DGND	-	Digital Ground.
8	V <sub>DD</sub>	-	Digital Power. + 5 V
9	V <sub>cc2R</sub>	-	Analog Power. + 5 V
10	AGND2R	-	Analog Ground.
11	EXTR	OUT	Rch, Common Pin of Analog Output Amp.
12	NC	-	Non Connection.
13	V <sub>outR</sub>	OUT	Rch, Analog Voltage Output of Audio signal.
14	AGND1	-	Analog Ground.
15	V <sub>cc1</sub>	-	Analog Power. + 5 V
16	V <sub>outL</sub>	OUT	Lch, Analog Voltage Output of Audio signal.
17	NC	-	Non Connection.
18	EXTL	OUT	Lch, Common Pin of Analog Output Amp
19	AGND2L	-	Analog Ground.
20	V <sub>cc2L</sub>	-	Analog Power. + 5V
21	ZERO	OUT	Zero Data Flag.
22	RST	IN	Reset. When this pin is LOW, the DF & modulators are held in reset. (2)
23	CS / IWO	IN	Chip Select / Input format selection. (3)
24	MODE	IN	Mode Control Select. (H: Software, L: Hardware) (2)
25	MUTE	IN	Mute Control. (2)
26	MD / DM0	IN	Mode Control, Data / De-emphasis selection 1. (2)
27	MC / DM1	IN	Mode Control, BCK / De-emphasis selection 2. (2)
28	ML / IIS	IN	Mode Control, WDCK / Input format selection. (2)

8pt:

- (1) Pins 1, 2, 3: Schmitt-trigger input.
- (2) Pins 22, 24, 25, 26, 27, 28: Schmitt-trigger input with internal pull-up.
- (3) Pin 23: Schmitt-trigger input with internal pull-down.

# 8. PANEL FACILITIES

## 8.1 PANEL FACILITIES

A

B

C

D

E

F

### 8. CUE/LOOP DELETE button

Use to delete cue points and loop points from internal memory.

### 9. POWER OFF ■/ON □ switch

This switch is located on the rear panel of the unit.

### 10. CUE/LOOP MEMORY button

Use to record cue points and loop points to internal memory.

### 11. CUE/LOOP CALL buttons (◀, ▶)

Use to call cue points and loop points recorded in internal memory.

### 12. EJECT button (▲)

When button is pressed, disc rotation stops and disc is ejected from port.

### 13. QUICK RETURN button/indicator

If this switch is set to ON when the JOG MODE is set to [VINYL], pressing the surface of the Jog dial will cause play to return quickly to the cue point.

### 14. VINYL SPEED ADJUST TOUCH/RELEASE dial

This dial control is used to adjust the deceleration speed from play to full stop when the JOG MODE is set to [VINYL] and the jog dial surface is pressed, and also the acceleration speed from full stop to play when the user's finger is removed from the surface of the jog dial.

### 15. JOG MODE VINYL button/indicator

**VINYL mode:** The button indicator lights. When the surface of the jog dial is pressed during playback, play stops, and if the jog dial is then rotated, sound is produced in accordance with the degree of rotation.

- The currently set jog mode is stored in memory even when power is turned off.

**CDJ mode:** The above action does not occur when the jog dial is pressed.

### 16. TEMPO control range selector button/indicator (TEMPO ±10/WIDE)

Each time the button is pressed, the variable range of the TEMPO adjust slider alternates ( $\pm 10\%$ /WIDE). The button lights when [WIDE] is selected.

- When playing CDs, the variable during [WIDE] selection is  $\pm 100\%$ ; when playing MP3, the variable range with [WIDE] is  $\pm 16\%$ .

### 17. MASTER TEMPO button/indicator

When pressed, the master tempo function alternates ON/OFF.

### 18. TEMPO adjust slider

When moved toward the user (+ front), the track tempo increases, and when moved away from the user (- rear), the tempo decreases.

### 19. Jog dial display

### 20. Jog dial (+FWD/-REV)

### 21. Disc loading slot

### 22. Forced eject hole

### 23. Play/pause indicator (▶/■)

Lights during playback, and flashes during pause mode.

### 24. PLAY/PAUSE button (▶/■)

### 25. CUE indicator

Lights when a Cue point is set. Flashes in pause mode.

### 26. CUE button

Cue point setting

Back cue

Cue point sampler

### 27. SEARCH buttons (◀◀, ▶▶)

### 1. LOOP IN/REALTIME CUE button/indicator

Realtime cue

Loop-in point input

### 2. LOOP OUT (OUT ADJUST) button/indicator

Loop-out point input

Loop-out point adjust

### 3. RELOOP/EXIT button/indicator

### 4. TIME MODE/AUTO CUE button

#### TIME MODE:

Eachtime the button is pressed, the display's time display alternates between the current elapsed play time and the remaining play time (REMAIN).

When playing MP3, the REMAIN time may not display immediately, depending on the track.

- The current TIME MODE setting is retained in memory even when the power is turned off.

#### AUTO CUE:

When the button is held depressed for 1 second or more, the AUTO CUE mode is alternately enabled and disabled.

When the button is held depressed for 5 seconds or more, the AUTO CUE level is toggled.

- The current AUTO CUE on/off and AUTO CUE level settings are retained in memory even when power is turned off.

### 5. TEXT MODE button

When this button is pressed, the TEXT display mode is enabled, and each additional time the button is pressed, the display alternates between track name, album name, and artist name.

- To set to time display, press the TIME MODE/AUTO CUE button.

### 6. Display

### 7. FOLDER SEARCH buttons (←, →)

During MP3 playback, layered CD-ROM folder search will be performed in the designated direction.

**28. TRACK SEARCH buttons (◀◀, ▶▶)****29. Reverse button / indicator (REV)**

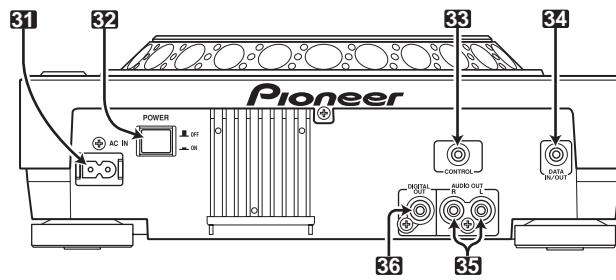

When this button is pressed, its indicator lights and the unit is set to reverse play.

**30. AUTO BEAT LOOP buttons / indicators (1, 2, 4, 8)**

(1/8, 1/4, 1/2, 1/1)

When this button is pressed, auto loop play is performed based on the track's BPM (1 beat, 2 beats, 4 beats or 8 beats).

When a loop has been set manually, the button operates as a loop shortening button. (1=1/8, 2=1/4, 4=1/2, 8=1/1).

**Rear Panel****31. AC inlet (AC IN)**

Use the accessory power cord to connect this inlet to a standard AC power outlet.

**32. POWER ■OFF/-■ON switch****33. CONTROL connector**

When the accessory control cord is used to connect this connector to the corresponding CONTROL connector on a Pioneer DJ mixer, the DJ mixer can be used to control the CD player for fader start play and back cue.

Also, by connecting this connector to the CONTROL connector on another Pioneer DJ CD player, automatic relay play can be performed.

**34. DATA IN/OUT connector**

When a commercially available miniplug cord (or the accessory control cord) is used to connect this jack to the same jack on another CDJ-800MK2, recorded data such as cue points and loop points can be copied from one player to the other.

**35. AUDIO OUT L, R connectors**

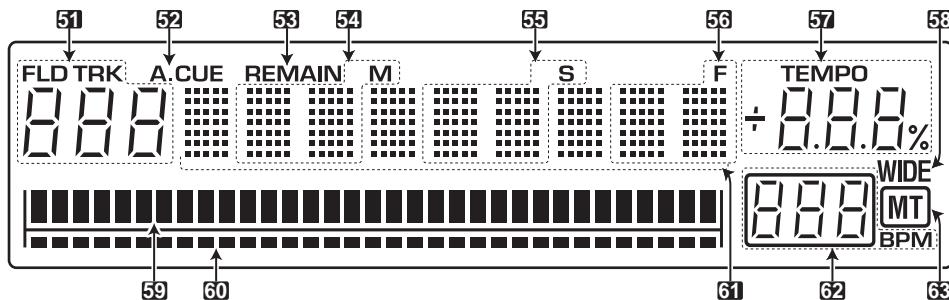

RCA-type analog audio output jacks.

**36. DIGITAL OUT connector**

RCA type coaxial digital output connectors used to connect a DJ mixer or AV amplifier, CD player, etc., equipped with digital input connectors. The digital outputs here support all DJ and other functions, but only audio data is output (without subcodes; CD graphics are not supported).

## Display Section

A

B

### 51. Track number/folder number display (TRK/FLD)

When playing an audio CD, the [TRK] indicator lights, and the two-digit track number appears (01 to 99).

When playing MP3, [TRK] lights and the track number is displayed in three digits (01 to 999). During folder search, the [FLD] indicator lights, and a two-digit folder number is displayed (00 to 99).

### 52. Auto cue indicator (A.CUE)

Lights when auto cue is ON.

### 53. REMAIN indicator

This indicator lights to indicate that track's remaining time is being displayed.

### 54. Time (minutes) display (M)

### 55. Time (seconds) display (S)

### 56. Frame display (F)

Seventy-five frames equal one second.

### 57. TEMPO display

Displays change in playing speed (tempo) caused by movement of the TEMPO adjust slider.

### 58. Tempo control range display (WIDE)

Lights when TEMPO ±10/WIDE button is set to [WIDE].

### 59. Playing address display

To provide a quick grasp of the current track's elapsed time and remaining playing time, the entire track is shown as a bar graph scaled over the entire width of the display.

- During elapsed time display, the bar graph's indicator segments turn on from left to right.
- During remaining time display, the bar graph indicator segments turn off from left to right.
- When a track has less than 30 seconds of remaining play time, the graph flashes slowly; when less than 15 seconds remain, the flashing becomes quicker.

### 60. Memory point display

If cue memory or loop memory has been recorded in the currently playing track, its relative starting position is displayed here.

### 61. Dot matrix display (7x5 dots by 9 segments)

The dot matrix is used to display TEXT, guides and other information. Text up to 48 characters can be displayed (text longer than 8 characters is scrolled).

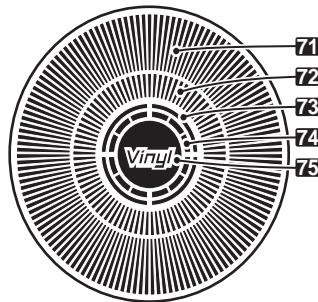

### 62. BPM display (0 to 360 BPM)

This display shows the Beats-Per-Minute (BPM) of the currently playing track (detection range 70 to 180 BPM). The automatic BPM counter may be unable to compute the correct BPM for some tracks.

### 63. Master tempo indicator (MT)

Lights when the master tempo function is ON.

## Jog dial display

### 71. Operation display

This display shows the relative playing position, with one revolution equivalent to 135 frames. During playback, the display rotates, and it stops during pause mode.

### 72. Cue point position indicator

Indicates position of cue points.

### 73. Audio memory status indicator

This indicator flashes during audio memory write, and lights when writing has been sufficiently completed. When the indicator is flashing, it may not be possible to record real time cue points. The indicator also flashes when memory insufficiency occurs due to scratch operation.

### 74. Jog touch detection indicator

In VINYL mode, this indicator lights to indicate that the jog dial surface has been touched.

### 75. VINYL mode indicator

Lights during VINYL mode.
