CD AUTOCHANGER

CAC-V3200 KUC

● **Refer to the service manual ARP2570 for CAC−V3000.**

● **This manual is applicable to CAC−V3200/KUC.**

CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

CAC−V3200 and CAC−V3000 have the same construction except for the following :

Mark	Symbol & Description	Part No.		Remarks
		CAC−V3000	CAC−V3200	
	Top panel	DNH1687	DNH1799	
	Side panel	DNH1693	DNH1800	
	Door sash	DNH1697	DNH1801	
	Door L	DNH1771	DNH1802	
	Door escutcheon (Upper)	DNK2419	DNK2439	
	Door escutcheon (Lower)	DNK2420	DNK2440	
	Decorative panel (Upper)	DNK2421	DNK2693	
	Decorative panel (Lower)	DNK2422	DNK2694	
	Door decorative panel	DNK2423	DNK2695	
	Door (R) assembly	DXB1436	DXB1439	
	Packing case	DHG1387	DHG1491	
	Operating instructions (English)	DRB1093	DRB1129

DFI JULY 1992 Printed in Japan

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.
Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).
When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE
(FOR CANADIAN MODEL ONLY)
Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE
(POUR MODÈLE CANADIEN SEULEMENT)
Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

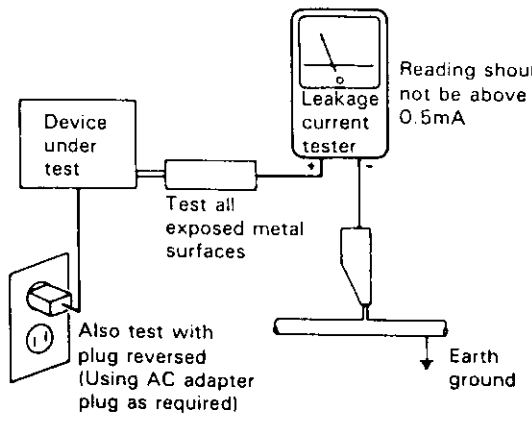
(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.



AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.
The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. LABEL CHECK

(FOR EUROPEAN MODEL ONLY)

VARO!
AVATTAESSA JA SUOJALUKITUS OHITETTAESSA OLET ALTTIINA NÄKYMÄTTÖMÄLLE LASERSÄTEILYLLE. ÄLÄ KATSO SÄTEESEEN.

ADVERSEL:
USYNLIG LASERSTRÅLING VED ÅBNING NÅR SIKKERHEDSAFBRYDERE ER UDE AF FUNKTION UNDGÅ UDSAETTELSE FOR STRÅLING.

VARNING!
OSYNLIG LASERSTRÅLNING NÄR DENNA DEL ÄR ÖPPNAD OCH SPÄRREN ÄR URKOPPLAD. BETRAKTA EJ STRÅLEN.

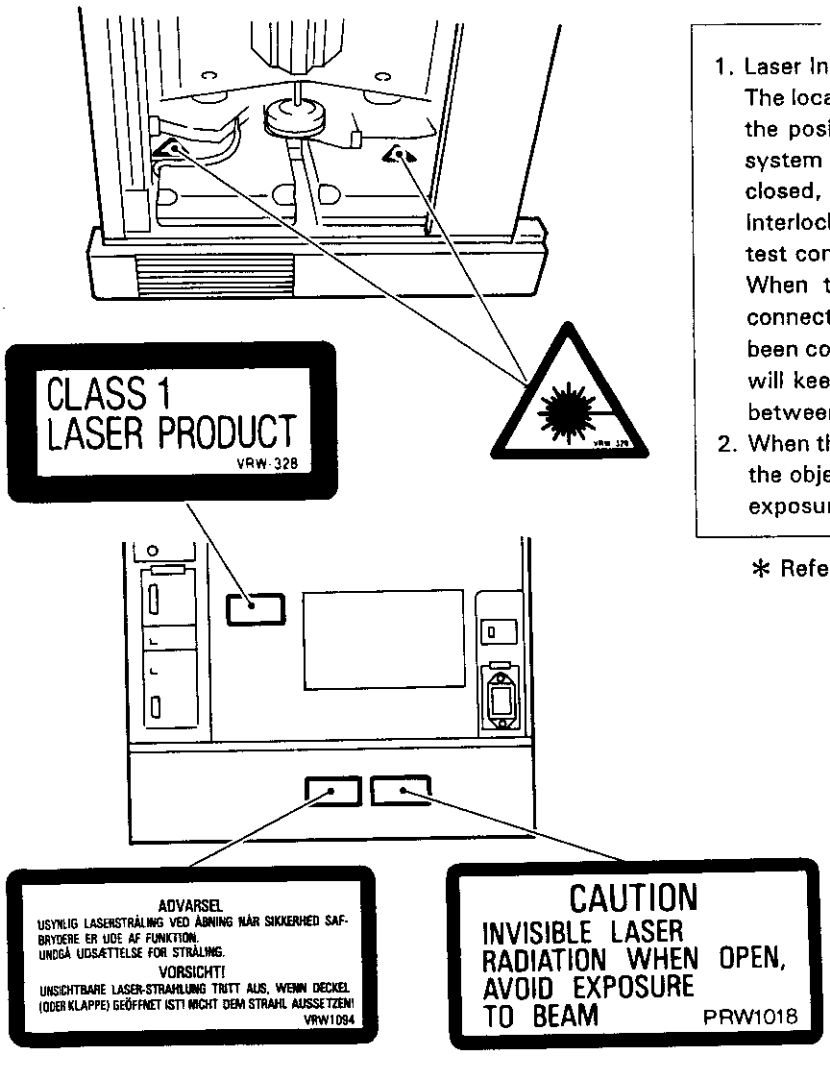
LASER
Kuva 1
Lasersateilyn varoitusmerkki

WARNING!
DEVICE INCLUDES LASER DIODE WHICH EMITS INVISIBLE INFRARED RADIATION WHICH IS DANGEROUS TO EYES. THERE IS A WARNING SIGN ACCORDING TO PICTURE 1 INSIDE THE DEVICE CLOSE TO THE LASER DIODE.

IMPORTANT
THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS
MAXIMUM OUTPUT POWER: 5 mw
WAVELENGTH: 780-785 nm

LASER
Picture 1
Warning sign for laser radiation



Additional Laser Caution

1. Laser Interlock Mechanism
   The location of the switch (S6 – 8) which examines the position of the clamp is detected by the main system micro-computer. When the clamp is not closed, the laser diode will stop oscillating. The Interlock Mechanism will not operate when in the test command*.
   When the 2, 3 pin of the CXA1471S (IC1) is connected to the GND, or when the 20 pin has been connected to High Level (ON), the laser diode will keep oscillating in the event of a short circuit between any of the Q1 terminals (fault condition).
2. When the CDP is being retrieved, looking directly at the objective lens from a short distance can lead to exposure to beams from the Class 1 laser.

* Refer to page 110.

3. PARTS LOCATION

Note:
When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".

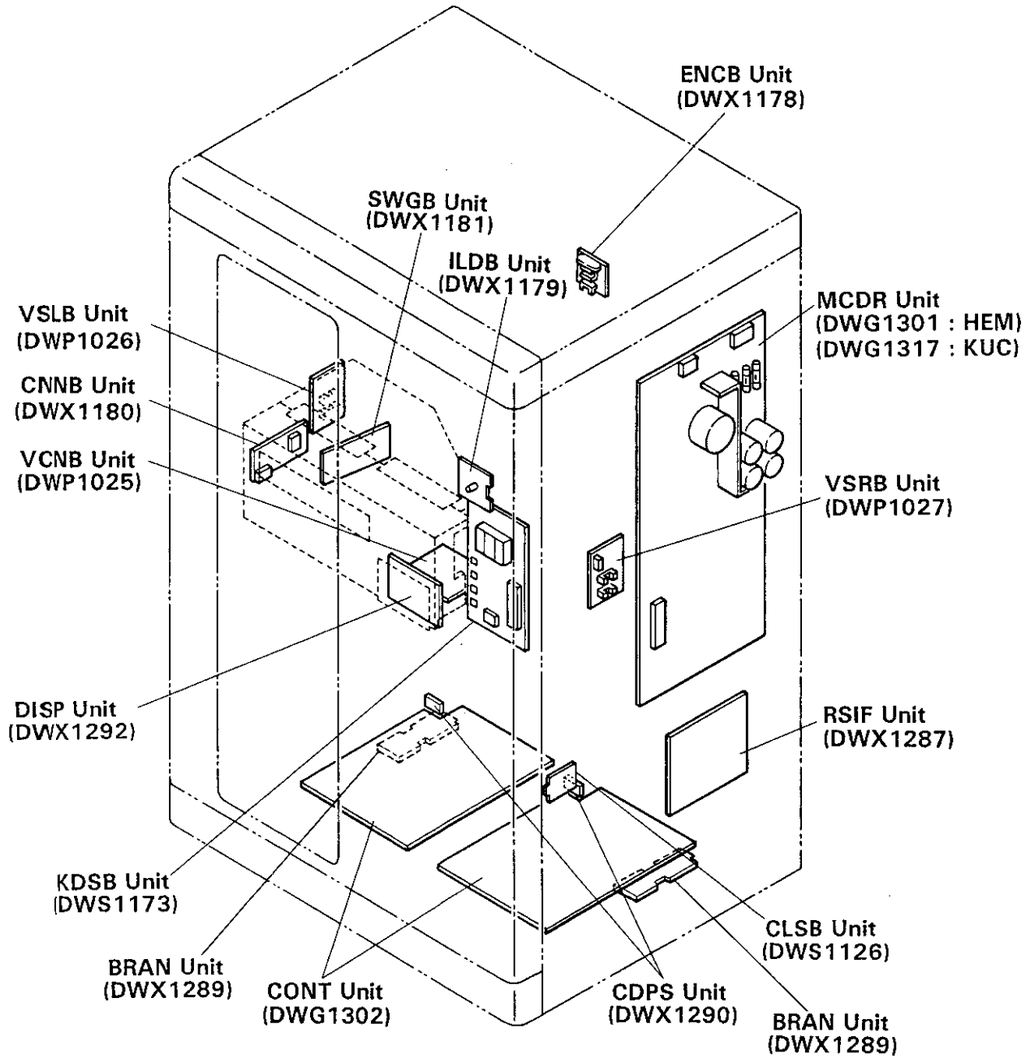
■ SEPARATE UNIT NAMES

This manual uses the following abbreviations for P. C. Board names :

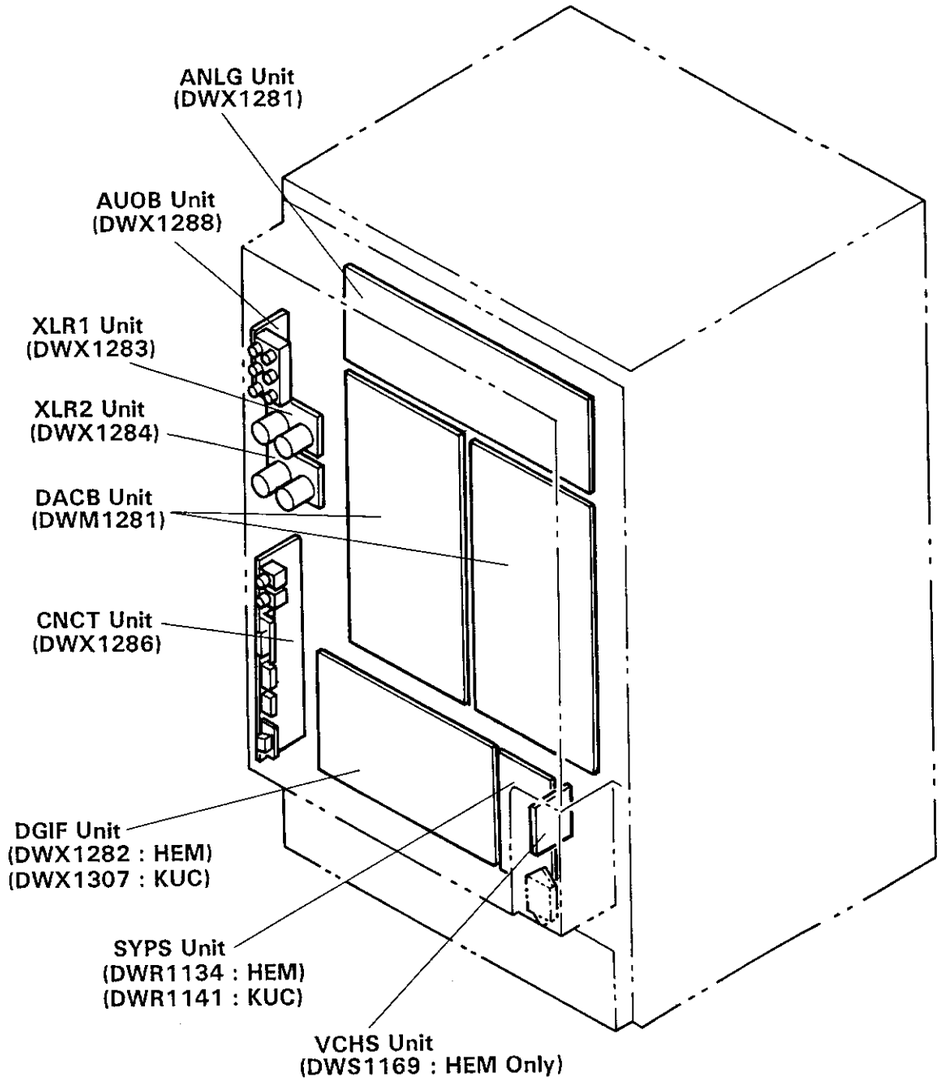
CAC-V3000

- DACB Unit (DWM1281) ..... D/A Converter Board Unit
- MOTHER Unit
  - SYPS Unit (DWR1134 : HEM) (DWR1141 : KUC) ..... System Power Supply Board Unit
  - VCHS Unit (DWS1169 : HEM Only) ..... Voltage Change Switch Board Unit
  - ANLG Unit (DWX1281) ..... Analog Audio Board Unit
  - DGIF Unit (DWX1282 : HEM) (DWX1307 : KUC) ..... Digital Interface Board Unit
  - XLR1 Unit (DWX1283) ..... XLR Connector 1 Board Unit
  - XLR2 Unit (DWX1284) ..... XLR Connector 2 Board Unit
  - CNCT Unit (DWX1286) ..... System Connector Board Unit
  - RSIF Unit (DWX1287) ..... RS-232C & 422A Interface Board Unit
  - AUOB Unit (DWX1288) ..... Audio Output Board Unit
- MAIN Unit
  - MCDR Unit (DWG1301 : HEM) (DWG1317 : KUC) ..... Main Control & Motor Drive Board Unit
  - CLSB Unit (DWS1126) ..... Clamp Switch Board Unit
  - KDSB Unit (DWS1173) ..... Key & Display Board Unit
  - ENCB Unit (DWX1178) ..... Encoder Board Unit
  - ILDB Unit (DWX1179) ..... Illumination LED Board Unit
- VHIF Unit
  - VCNB Unit (DWP1025) ..... Vertical Control Board Unit
  - VSLB Unit (DWP1026) ..... Vertical Sensor Left Board Unit
  - VSRB Unit (DWP1027) ..... Vertical Sensor Right Board Unit
  - CNNB Unit (DWX1180) ..... Connection Board Unit
  - SWGB Unit (DWX1181) ..... Swing Board Unit
  - DISP Unit (DWX1292) ..... Display Board Unit
- PD-CACV3000-L [CDP-1 (L)]
  - CDPM Unit
    - CONT Unit (DWG1302) ..... CD Control Board Unit
    - CDPS Unit (DWX1290) ..... CD Power Supply Board Unit
  - BRAN Unit (DWX1289) ..... Branch Board Unit
  - Servo Mechanism Assembly
    - Pick-up Assembly (PEA1030)
- PD-CACV3000-R [CDP-2 (R)]
  - CDPM Unit
    - CONT Unit (DWG1302) ..... CD Control Board Unit
    - CDPS Unit (DWX1290) ..... CD Power Supply Board Unit
  - BRAN Unit (DWX1289) ..... Branch Board Unit
  - Servo Mechanism Assembly
    - Pick-up Assembly (PEA1030)

■ FRONT SECTION



■ REAR SECTION



4. DISASSEMBLY

4.1 PANELS AND DOOR SECTION

1. Remove the screws attaching the top plate, side panels, etc.
2. To remove the door, unscrew the door hinge A assembly from the inside of the upper part of the door and lift the door.

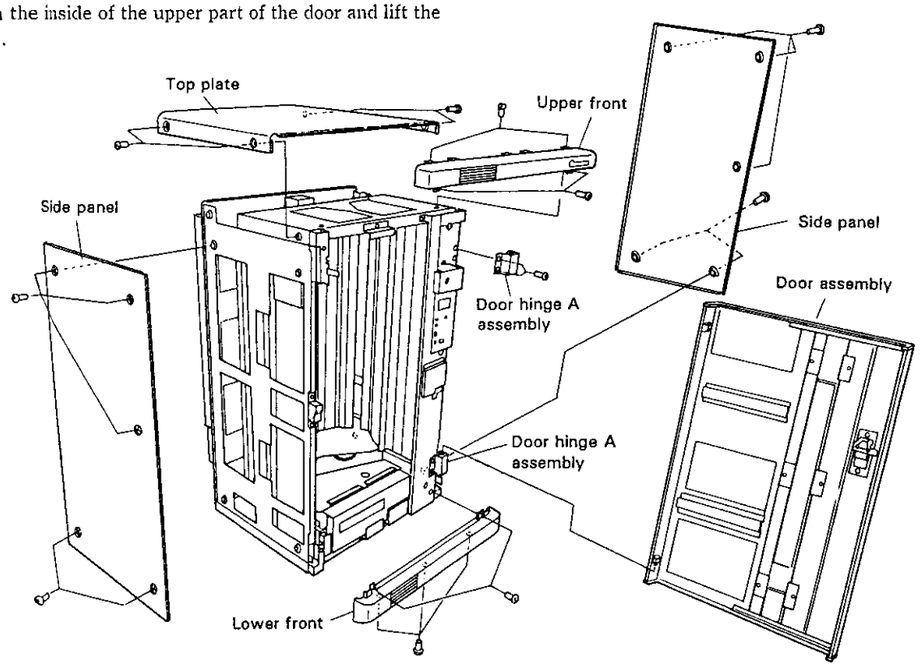


Fig. 4−1 Panels and Door Section

4.2 GEARBOX SECTION

1. Remove the screws. Unfasten the VD1 belt and spring of the VD pulley side.
2. Lift the gearbox assembly.

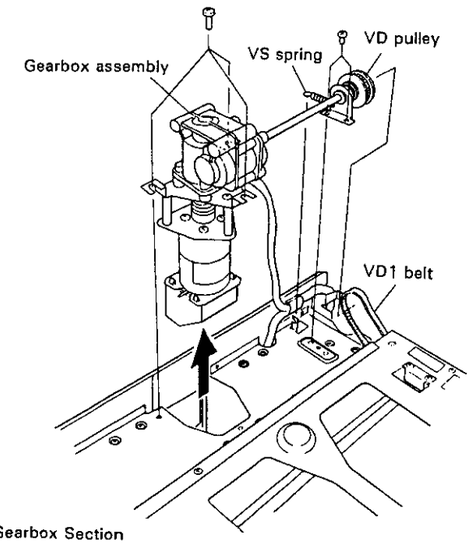

Fig. 4−2 Gearbox Section

4.3 CD PLAYER SECTION

1. Remove the CDP cover from the rear bottom.
2. Loosen the screw Ⓐ of the front bottom. (Do not remove it.)
3. Remove the screw Ⓑ in the lower center of the rear side and the ground terminal screw Ⓒ of the CD player to be removed.
4. Loosen the screw Ⓓ of the CD player to be removed.
5. Pull out the CD player.

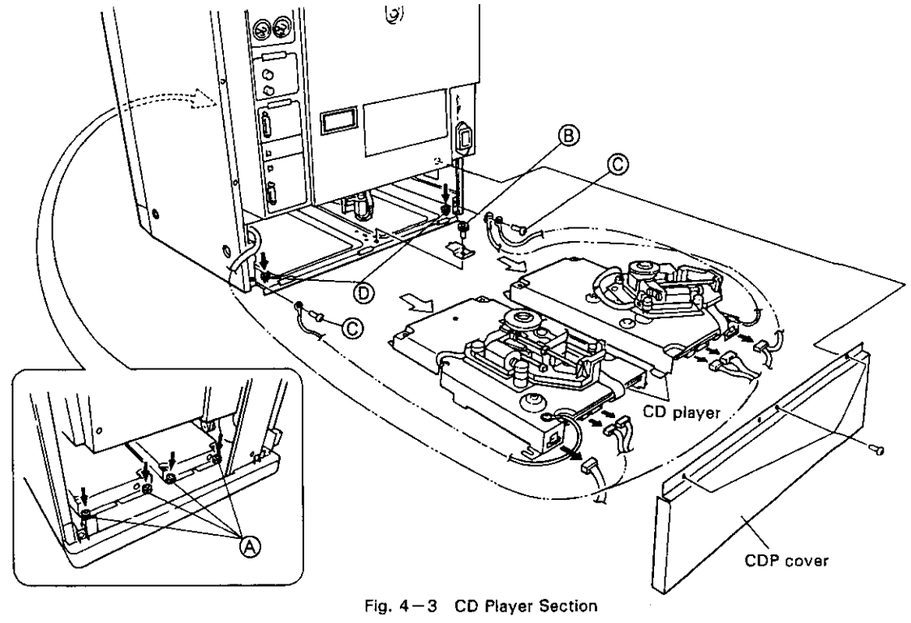

Fig. 4−3 CD Player Section

4.4 CLAMP SECTION

Perform the following steps after removing both CD players.

1. Remove the rear panel and loosen the wires.
2. Remove the screw Ⓔ of the front bottom.
3. Remove the screw Ⓕ of the rear bottom and the plate attaching screw Ⓖ. Pull out the clamp.

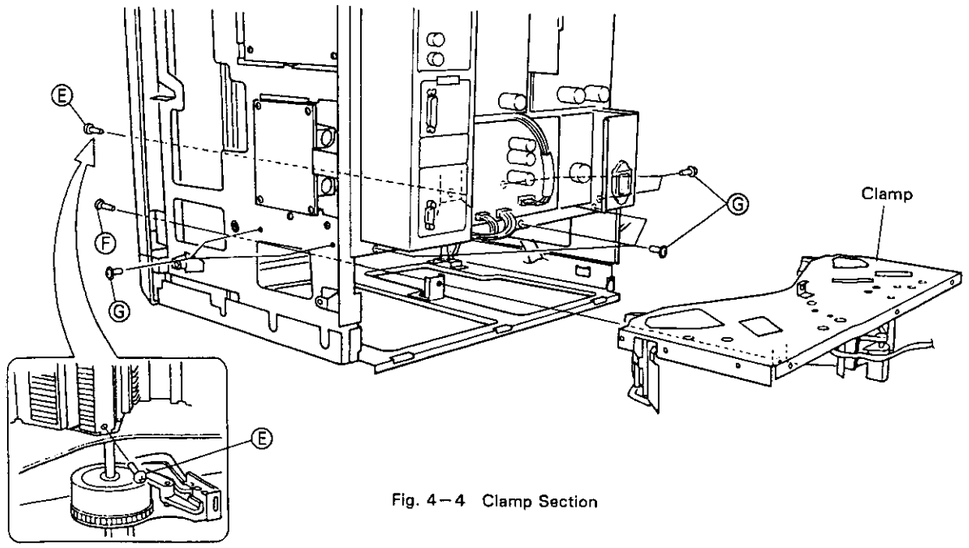

Fig. 4−4 Clamp Section

4.5 SWING ASSEMBLY SECTION

1. Remove the IL panel from the transfer mechanism assembly.
2. Remove the E washer from the swing assembly. Remove the harness from the transfer base and pull up the swing assembly.

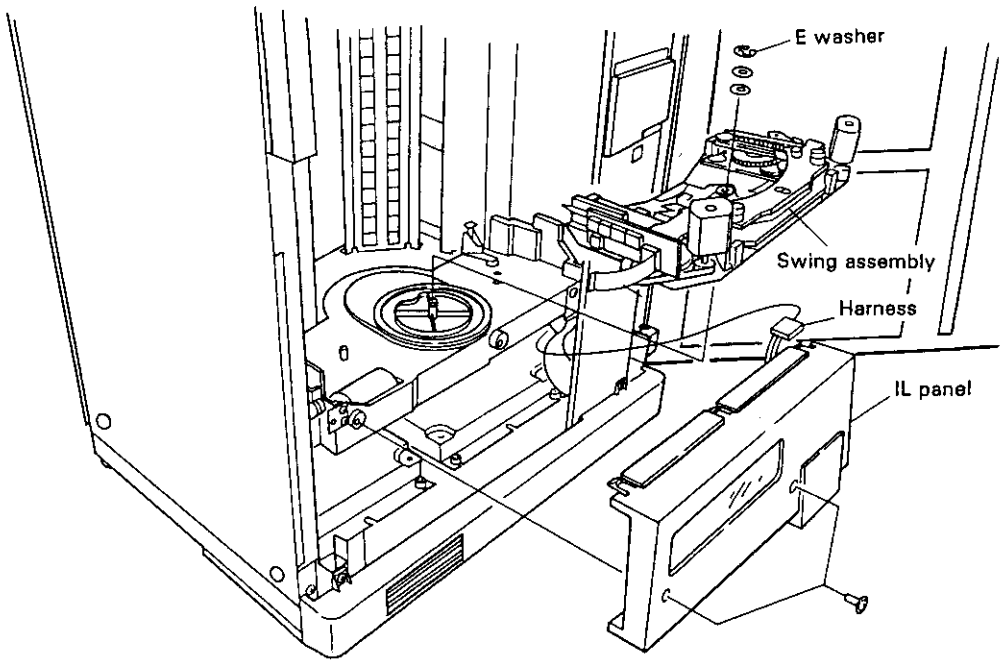

Fig. 4−5 Swing Assembly Section

4.6 SWING MOTOR ASSEMBLY (Attached under the transfer base assembly)

1. Pull out the cable from the harness guide under the transfer base assembly. Remove the supports of the harness guide from the transfer base assembly.
2. Remove the motor assembly attaching screw Ⓗ and pull out the motor assembly.

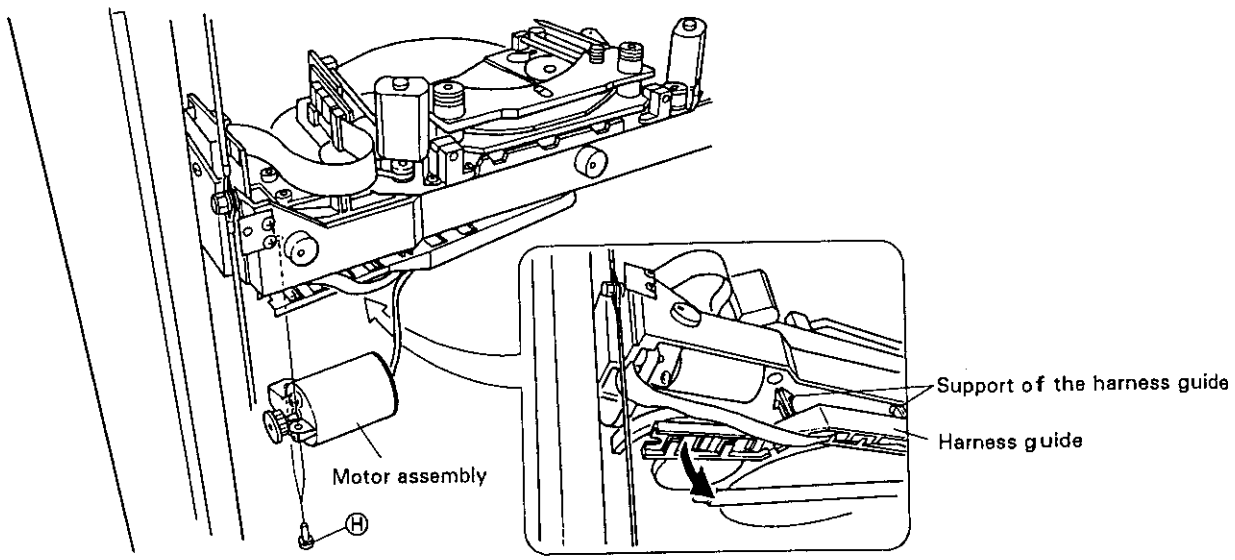

Fig. 4−6 Swing Motor Assembly

5. EXPLODED VIEWS, PACKING AND PARTS LIST

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

• How to install the disc table

1 Use nippers or other tool to cut the two sections marked Ⓐ in figure 1. Then remove the spacer.

2 While supporting the spindle motor shaft with the stopper, put spacer on top of the motor base (angled so it doesn't touch section Ⓑ), and stick the disc table on top (takes about 9kg pressure).

Note: (Type 2)

1. **When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".**
2. **Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.**
3. **RESISTORS:**
   Unit: k:kΩ, M:MΩ, or Ω unless otherwise noted.
   Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
   Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.
4. **CAPACITORS:**
   Unit: p:pF or μF unless otherwise noted.
   Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
   Rated voltage: 50V except for electrolytic capacitors.
5. **COILS:**
   Unit: m:mH or μH unless otherwise noted.
6. **VOLTAGE AND CURRENT:**
   ▭ : DC voltage (V) at no input signal unless otherwise noted.
   ⇨ mA or ← mA : DC current at no input signal unless otherwise noted.
7. **OTHERS:**
   - ➡ : Signal route.
   - ⊘ : Adjusting point.
   - ▼ (Red) : Measurement point.
   - The ⚠ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.
8. **SWITCHES** (Underline indicates switch position):

8. PCB PARTS LIST

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*
- *When ordering resistors, first convert resistance values into code form as shown in the following examples.*

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω → 56 × 10¹ → 561 ..... RD1/8PM 5 6 1 J
47kΩ → 47 × 10³ → 473 ..... RD1/4PS 4 7 3 J
0.5Ω → 0R5 ..... RN2H 0 R 5 K
1Ω → 010 ..... RS1P 0 1 0 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ → 562 × 10¹ → 5621 ..... RN1/4PC 5 6 2 1 F

9. ADJUSTMENTS

9.1 HORIZONTAL ADJUSTMENT OF THE TRANSFER BASE ASSEMBLY (Fig. 9−1)

1. Remove approximately 10 CDs from the bottom of the right and left rack assemblies.
2. Set the system to the Super Manual mode (see "11. ① Super Manual mode"), then move the transfer base assembly downwards.
3. Place a metal ruler on the left side Ⓐ of the D-stay (U). Adjust the height of the transfer base assembly to the D-stay (U).
4. Place the metal ruler on the right side Ⓑ of the D-stay (U). Modify the height of the transfer base assembly by adjusting the screw Ⓒ of the belt stopper (R). Height difference between the right and left transfer base assemblies must be within 0.1 mm.

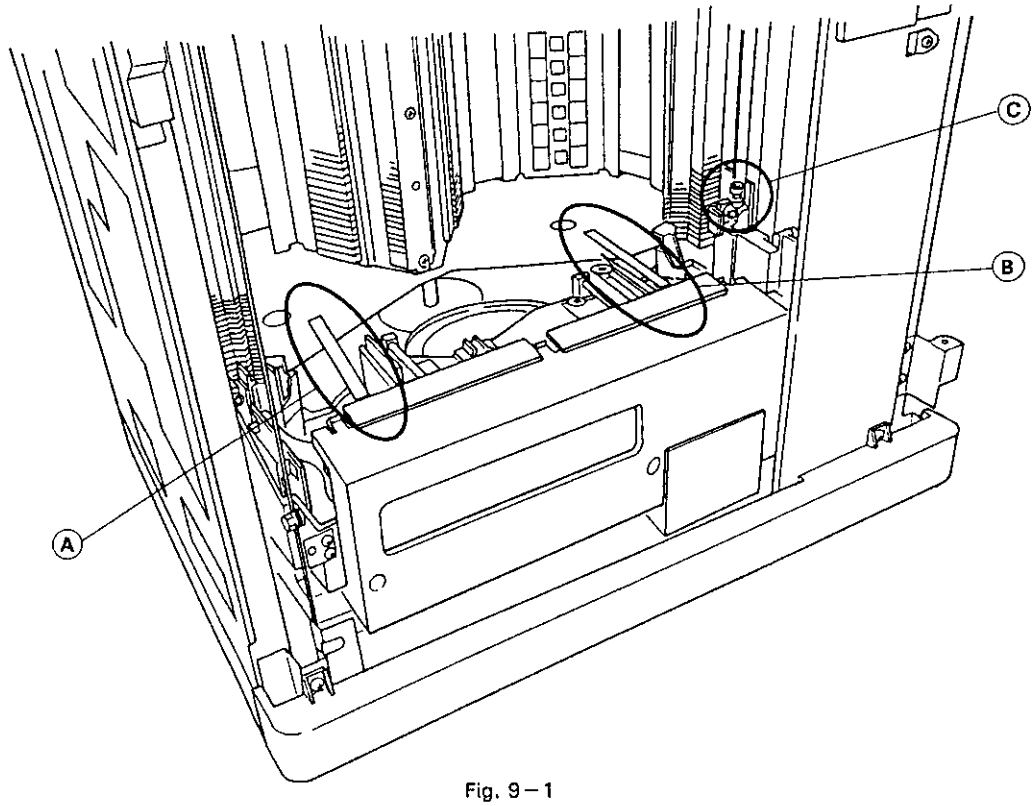

Fig. 9−1

9.2 ADJUSTING THE SPEED OF THE VD (VERTICAL) MOTOR

1. Make the connection as shown in Fig. 9−2.
2. Set the system to the Super Manual mode (see "11. ① Super Manual mode"), then turn all DIP switches (S5 on the KDSB unit) to OFF (VD motor will be selected).
3. Rotate the VD motor by pressing S1 or S2 of the KDSB unit.
4. Adjust VR1 so that the waveform of the oscilloscope becomes t = 17±0.5μsec (see Fig. 9−3).

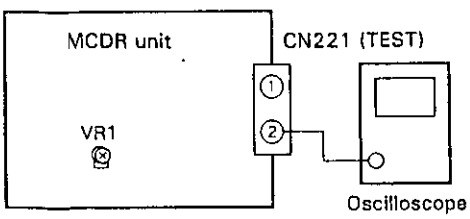

Fig. 9−2 Connection

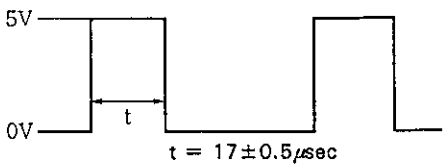

Fig. 9−3 Waveform

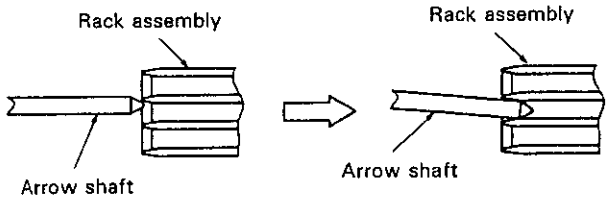
9.3 ADJUSTING THE HEIGHT OF THE ENCODER PLATE

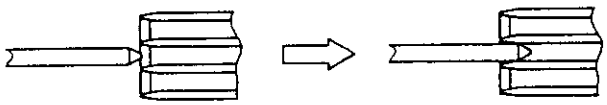
● Left Rack Assembly

1. Set the system to the Manual mode (see "11. ② Manual mode"), then move the transfer base assembly to the CD installation address #79.
2. Swing the assembly towards the left rack assembly.
3. Adjust the VD encoder 1 (left) so that the chuck stay, chuck 1 assembly and chuck spring 3 will be inoperative when the arrow shaft is activated. (See Fig. 9−4 and 9−5 and Table 9−1.)
4. After adjustment, move the transfer base assembly vertically and confirm the height at the address #79.
5. Repeat the same for confirming the height at the CD installation addresses #1, #12, #50 and #150.

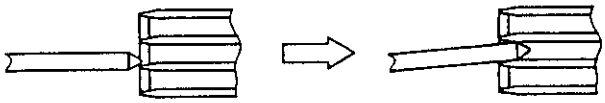
A : The VD encoder adjustment position is too high.
(→ Lower the VD encoder plate.)



B : Proper adjustment



C : The VD encoder adjustment position is too low.
(→ Raise the VD encoder plate.)



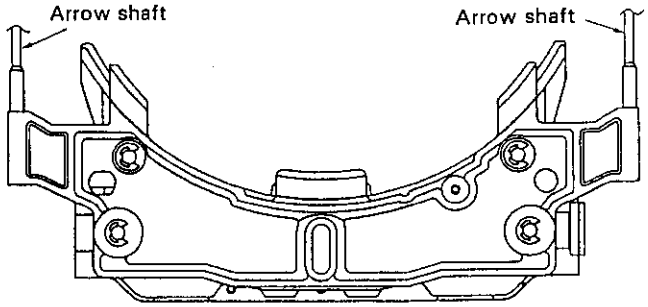
Adjust so that the arrow shaft and the rack assembly are positioned as shown in (B) above (see Fig. 9−5).

Fig. 9−4

● Right Rack Assembly

1. Make the adjustment in the same manner as with the left rack assembly, except that the CD installation address is #229.
2. Also confirm the height at the CD installation addresses #151, #200 and #300.

NOTE :
If the CD touches the partition of the rack assembly (A) even though the arrow shaft is in the center position, the chuck may defective, the arrow shaft may be bent or the disc is distorted.



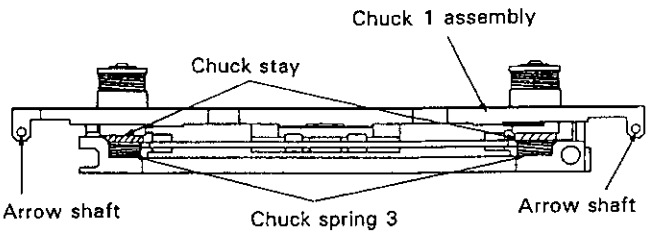


Fig. 9−5

The chuck stay and the chuck 1 assembly function as shown in the table below when the arrow shaft is inserted into the rack assembly.

Fig. 9−4 B	Does not operate.	Does not operate.	Does not operate.
Fig. 9−4 C	Does not operate.	Raises.	Does not operate.

Table 9−1

9.4 ADJUSTMENT OF THE CD PLAYER

CD players may operate improperly or do not operate at all if they are improperly or inadequately adjusted, even though no defect can be found in the pick-up and circuitry. Be sure to adjust correctly according to the adjustment procedure.

1. Adjustment Items / Check Points and Sequence

Sequence	Item	Test Point	Adjustment Point
1	Focus offset adjustment	CN109, Pin 6 (FOER)	VR2 (FO. OFS)
2	Grating adjustment	CN109, Pin 2 (TRER)	Grating adjusting slit
3	Tracking error balance adjustment	CN109, Pin 2 (TRER)	VR1 (TR. BAL)
4	Pick-up radial/tangential tilt adjustment	CN109, Pin 1 (RF)	Radial tilt adjusting screw, tangential tilt adjusting screw
5	RF level adjustment	CN109, Pin 1 (RF)	VR5 (RF level)
6	Focus servo loop gain adjustment	CN109, Pin 5 (FOIN) CN109, Pin 6 (FOER)	VR3 (FO. GAN)
7	Tracking servo loop gain adjustment	CN109, Pin 3 (TRIN) CN109, Pin 2 (TRER)	VR4 (TR. GAN)
8	Focus error signal confirmation	CN109, Pin 6 (FOER)	———

- Abbreviation Table

FOER : Focus Error
FOIN : Focus In
TRIN : Tracking In
TRER : Tracking Error

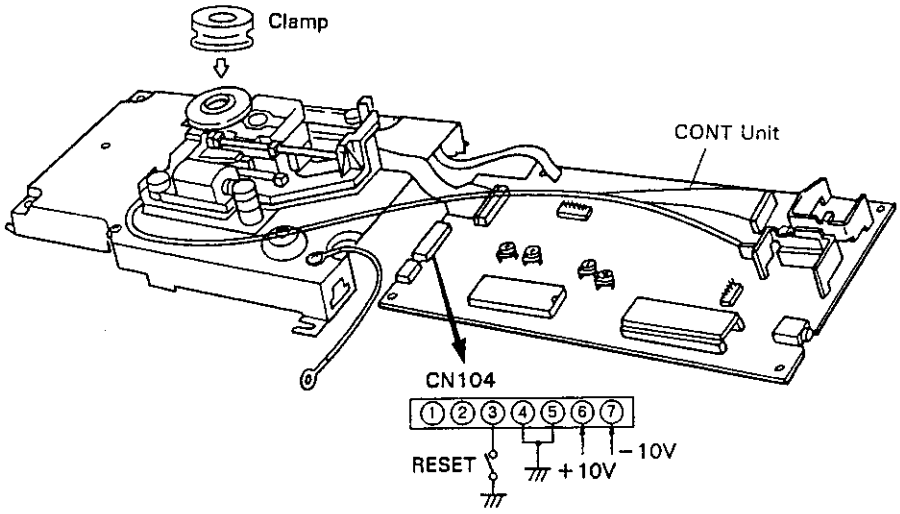
FO. OFS : Focus Offset
TR. BAL : Tracking Balance
FO. GAN : Focus Servo Loop Gain
TR. GAN : Tracking Servo Loop Gain

2. Instruments and Tools

Use the following instruments and tools for adjustment :

1. Dual trace oscilloscope (10 : 1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS-7)
4. Low-pass filter (39 kΩ + 0.001 μF)
5. Resistor (100 kΩ)
6. Standard tools

3. CD Player Setting



4. Positions of the Test Points and Adjusting VR

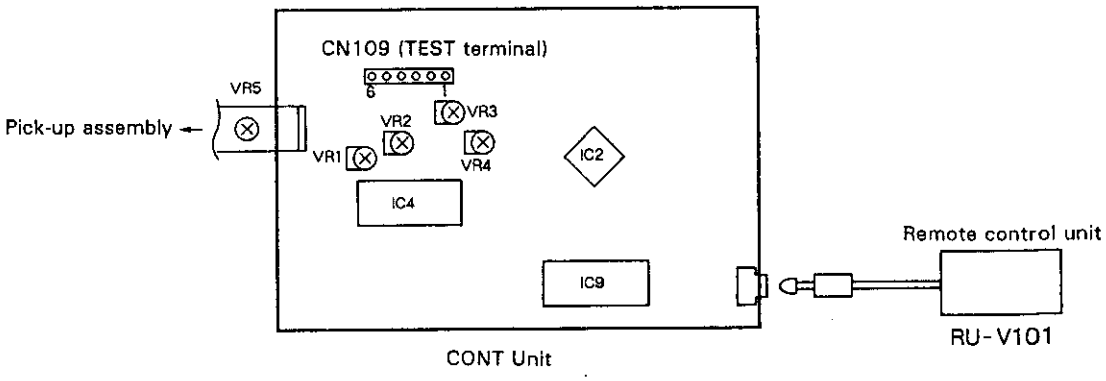


Fig. 1 Adjustment Points

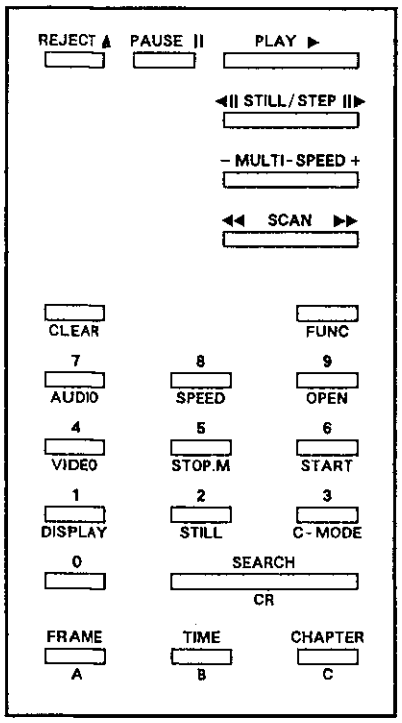
5. Notes

1. Use an oscilloscope with a probe ratio of 10 : 1.
2. All control knob positions (set values) of the oscilloscope shown in this adjustment procedure are based on the condition using an oscilloscope with a probe ratio of 10 : 1.

● FUNCTION OF THE SERVICE REMOTE CONTROL UNIT

The CD player (PD – CACV3000) of the CD Auto Changer (CAC – V3000) can be directly operated by using the remote control unit (RU – V101). The remote control unit has the following functions :



RU – V101

REJECT		: Spindle stop
PAUSE		: Pause
PLAY		: Play
STILL/STEP ▮▮ ▶		: Disc select
STILL/STEP ◀ ▮▮		: Disc return
MULTI-SPEED +		: ┐ Test command
MULTI-SPEED –		: ┘
SCAN ▶▶		: Scan FWD
SCAN ◀◀		: Scan REV
CLEAR		: Clear
FRAME		: Specifies a block.
TIME		: Specifies the time.
CHAPTER		: Specifies a track.
SEARCH		: Search
10 key		: To enter numbers.
DISPLAY	(FUNC + 1)	: No entry
STILL	(FUNC + 2)	: No entry
C-MODE	(FUNC + 3)	: No entry
VIDEO	(FUNC + 4)	: Volume set
STOP. M	(FUNC + 5)	: Stop marker
START	(FUNC + 6)	: Start
AUDIO	(FUNC + 7)	: Fade IN/OUT Start
SPEED	(FUNC + 8)	: Speed control
OPEN	(FUNC + 9)	: No entry
B	(FUNC + TIME)	: Fade time set

● Test Command

0 + MULTI-SPEED (+, –) key : Laser diode (LD) ON
1 + MULTI-SPEED (+, –) key : Focus servo close
2 + MULTI-SPEED (+, –) key : Spindle kick
3 + MULTI-SPEED (+, –) key : Tracking, slider servo ON
4 + MULTI-SPEED (+, –) key : Slider FWD key ┐ Pressing the Slider FWD key once will move the pickup by approximately half of the full stroke.
5 + MULTI-SPEED (+, –) key : Slider REV key ┐ Pressing the Slider REV key once will move the pickup by approximately half of the full stroke.
6 + MULTI-SPEED (+, –) key : Tracking, slider servo OFF
7 + MULTI-SPEED (+, –) key : ┐
8 + MULTI-SPEED (+, –) key : ┘ Slider stop, spindle stop
9 + MULTI-SPEED (+, –) key : Focus servo open

● Usage of the SPEED Command

Based on the assumption that normal speed equals 100, the speed rate of 90 to 110 is expressed as –10 to +10%.

Example : Changing the speed by –10%

[9] + [0] + [FUNC] + [8]

Note :

- *The changed speed will not return to normal by pressing the REJECT button. To resume normal speed, press the Disc Select key.*
- *Always press the Disc Select key after pressing the Disc Return key. Otherwise the system will not accept commands.*

● To Check the Digital Attenuator

Attenuation level and Fade time are able to set. Fade In/Out function is also excuted by this remote controler.

Example 1 : Set the fade time to 10 seconds.

[1] + [0] + [FUNC] + [TIME]

Example 2 : Attenuation level maximum. (mute)

[0] + [FUNC] + [4]

Example 3 : Start the Fade-in.

[2] + [5] + [5] + [FUNC] + [7]

Note :

The digital attenuation is valid for the built-in D/A convertor. So use the analog output to check this function.

1. Focus Offset Adjustment

- Purpose : To adjust the DC offset voltage of the focus error amplifier to −50mV.
- Symptom of improper adjustment : The player does not focus in. RF signal is dirty.

• Instrument connection	• Connect the oscilloscope to Pin 6 (FOER) of CN109.
• Setting	• 5mV/div, 10mS/div, DC mode
• Player condition	• Stop (only the power supply is ON)
• Adjustment point	• VR2 (FO. OFS)
• Disc	• Not necessary

- Connection

- Procedure

Adjust VR2 (FO. OFS) to set the voltage of Pin 6 (FOER) of CN109 to −50 ±50mV.

2. Grating Adjustment

- Purpose : To adjust the two laser beam spots for tracking error generation to the optimum angle on the track.
- Symptom of improper adjustment : The player does not start playback. Does not perform track search. Skips track(s).

• Instrument connection	• Connect the oscilloscope to Pin 2 (TRER) of CN109 via the low-pass filter. (see Fig. 2)
• Setting	• 50 mV/div, 5 mS/div, DC mode
• Player condition	• Focus and spindle servos closed. Tracking servo open.
• Adjustment point	• Grating adjusting slit of the pickup.
• Disc	• YEDS-7

- Connection

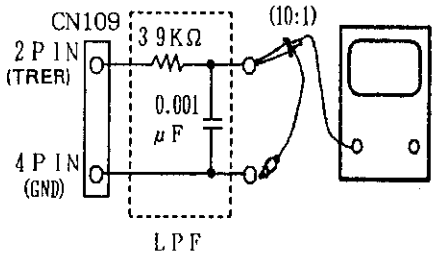


Fig. 2

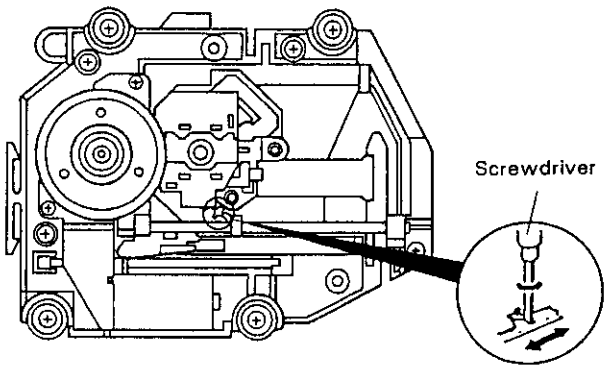

Adjustment Point

- Procedure

1. Move the pickup to the proximity of the outer edge of the disc by using the "4 + MULTI-SPEED" or "5 + MULTI-SPEED" key.
2. Press the "1 + MULTI-SPEED" key, then "2 + MULTI-SPEED" key to close the focus and spindle servos.
3. Insert a screwdriver into the grating adjusting slit. Adjust grating and find the null point. See the next page for more details.
4. Slowly turning the screwdriver counterclockwise from the null point will gradually increase the amplitude of the waveform. Continued turning of the screwdriver will decrease the waveform amplitude again. Turn the screwdriver counterclockwise from the null point to find the first maximum point of waveform amplitude.

(Reference)
Fig. 3 shows the relationship between the tracking beam angle to the track and the waveform.

• How to find the null point

Insert a screwdriver into the grating adjusting slit and change the grating angle. By this method, the tracking error signal amplitude of Pin 2 of CN109 can be changed. There are several points where the waveform amplitude decreases within the variable range of grating. Among these points, only one point allows the envelope to be smooth. This means that the three laser beams divided by the grating are on the same track (see Fig. 3).

This point is called null point. Adjust the grating to find the null point and use it as the reference position for grating adjustment.

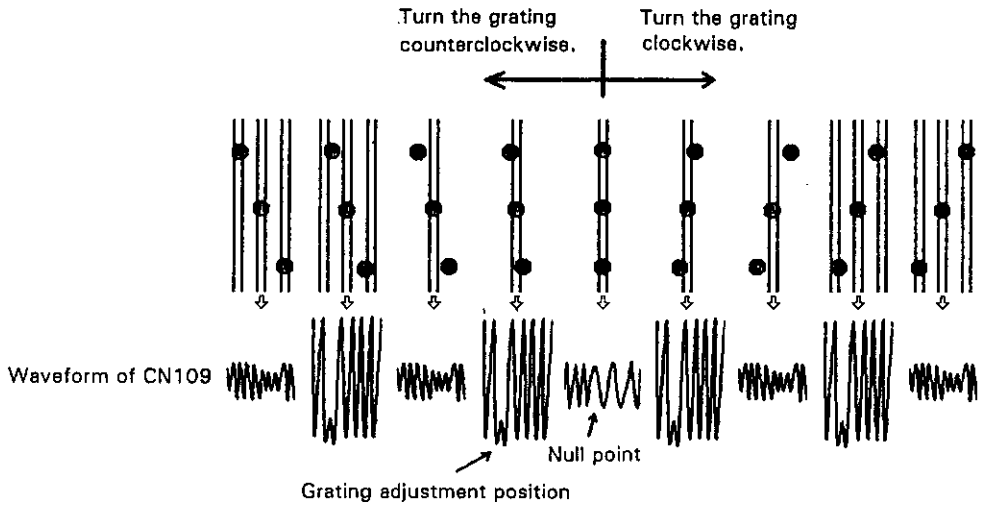

Fig. 3

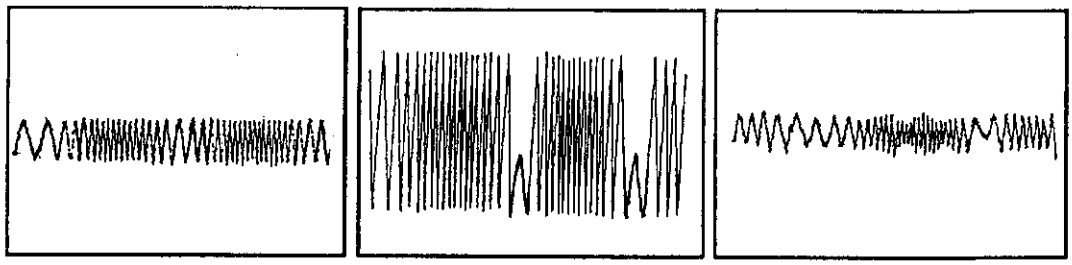


Waveform of the null point

Waveform of the maximum amplitude

Waveform of a point other than null point

Note :

The amplitude of the tracking error signal is approximately 3 Vp-p. If the amplitude is extremely small (2 Vp-p) (using LPF of 39 kΩ + 0.001 μF), the lens may be not clean or the pickup is mulfunctioning.

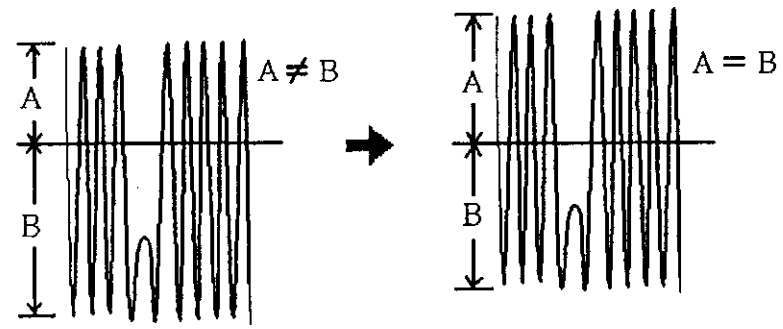
If the amplitude of the error signal fluctuates more than 10% between the inner most edge and outer most edge of a disc, the grating is not adjusted to the optimum point. Adjust the grating correctly.

3. Tracking Error Balance Adjustment

- Purpose : To correct the sensitivity levels of the tracking photodiode to the same level.
- Symptom of improper adjustment : The player does not start playback. Does not perform track search.

• Instrument connection • Setting • Player condition • Adjustment point • Disc	• Connect the oscilloscope to Pin 2 (TRER) of CN109 (the low-pass filter may be used). • 50 mV/div, 5 mS/div, DC mode • Focus and spindle servos closed. Tracking servo open. • VR1 (TR. BAL) • YEDS-7

- Connection



With direct current component　　Without direct current component

- Procedure

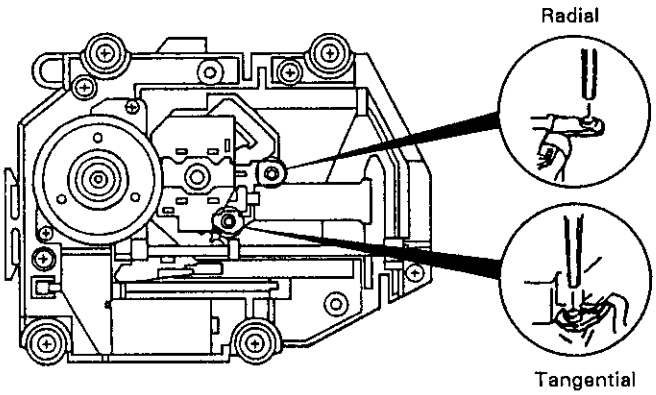
1. Move the pickup to the center between the inner and outer edges of the disc (R = 35 mm) by using the "4 + MULTI-SPEED" or "5 + MULTI-SPEED" key.
2. Press the "1 + MULTI-SPEED" key, then "2 + MULTI-SPEED" key to close the focus and spindle servos.
3. Align the bright line (GND) of the oscilloscope with the center of the oscilloscope screen, and change to the DC mode.
4. Adjust VR1 (TR. BAL) to make the amplitude of the positive side the same as the negative side of the tracking error signal of Pin 2 (TRER) of CN109 (so that there is no DC component).

4. Pick-up Radial/Tangential Tilt Adjustment

- Purpose : To adjust the angle of the pickup to the disc, and optimize the RF signal to be read by irradiating the laser beam vertically to the disc.
- Symptom of improper adjustment : Skipping sound. Some discs cannot be played back.

• Instrument connection	• Connect the oscilloscope to Pin 1 (RF) of CN109.
• Setting	• 20 mV/div, 200 nS/div, AC mode
• Player condition	• Play
• Adjustment point	• The radial tilt adjusting screw and the tangential tilt adjusting screw of the pickup.
• Disc	• YEDS-7

- Connection



Adjustment Point

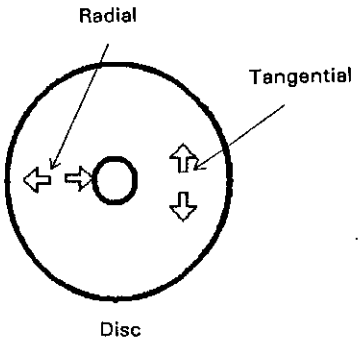


Fig. 4

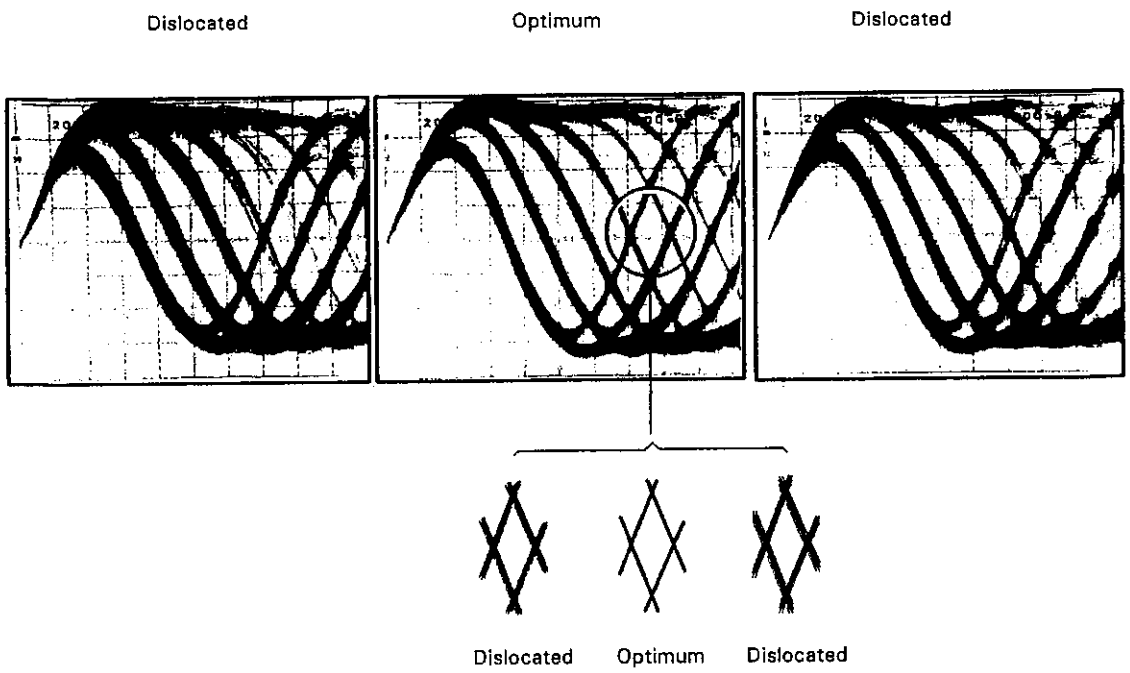
- Procedure

1. Move the pickup to the proximity of the outer edge of the disc by using the "4 + MULTI-SPEED" key. Press the "1 + MULTI-SPEED", "2 + MULTI-SPEED" and "3 + MULTI-SPEED" keys in sequence to close the focus, spindle and tracking servos and set the player to the play mode.
2. Use a hexagon wrench (3 mm) to adjust the radial tilt adjusting screw so that the eye pattern (diamond-shaped waveform that appears in the center of the RF signal) is shown most clearly.
3. Use the hexagon wrench to adjust the tangential tilt adjusting screw so that the eye pattern is shown most clearly (see Fig. 5).
4. Adjust again the radial tilt adjusting screw, then the tangential tilt adjusting screw so that the eye pattern is shown most clearly. If necessary, adjust the two adjusting screws alternately so that the eye pattern is shown most clearly.

Note :
Radial and tangential refer to the directions in relation to the discs, as shown in Fig. 4.



Dislocated
Optimum
Dislocated
Dislocated
Optimum
Dislocated

Fig. 5

5. RF Level Adjustment

- Purpose : To optimize the amplitude of the playback RF signal.
- Symptom of improper adjustment : The player does not play back. Does not perform search.

• Instrument connection • Setting • Player condition • Adjustment point • Disc	• Connect the oscilloscope to Pin 1 (RF) of CN109. • 50 mV/div, 10 mS/div, AC mode • Play • VR5 (laser power) • YEDS-7

- Connection

- Procedure

1. Move the pickup to the center between the inner and outer edges of the disc (R = 35 mm) by using the "4 + MULTI-SPEED" or "5 + MULTI-SPEED" key. Press the "1 + MULTI-SPEED", "2 + MULTI-SPEED" and "3 + MULTI-SPEED" keys in sequence to close the servos and set the player to the play mode.
2. Adjust VR5 to set the amplitude of the RF signal to 1.2 Vp-p +0.3/-0.1 V.

6. Focus Servo Loop Gain Adjustment

- Purpose : To adjust the loop gain of the focus servo to the optimum value.
- Symptom of improper adjustment : The player does not start playback. The focus actuator sound is high.

● Instrument connection	● See Fig. 6.
● Setting	● CH1 : 20 mV/div, X−Y mode CH2 : 5 mV/div
● Player condition	● Play
● Adjustment point	● VR3 (FO. GAN)
● Disc	● YEDS−7

● Connection

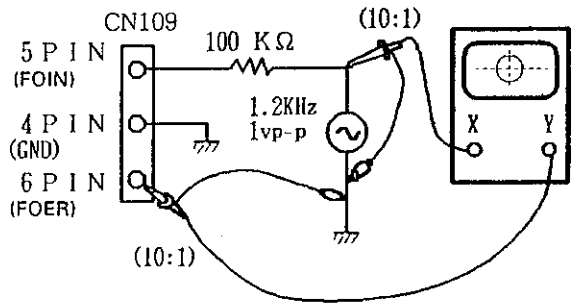


Fig. 6

Gain is too large.

Optimum gain

Gain is too small.

● Procedure

1. Set the output of the AF oscillator to 1.2 kHz and 1 Vp-p.
2. Move the pickup to the center between the inner and outer edges of the disc (R = 35 mm) by using the "4 + MULTI-SPEED" or "5 + MULTI-SPEED" key. Press the "1 + MULTI-SPEED", "2 + MULTI-SPEED" and "3 + MULTI-SPEED" keys in sequence to close the servos and set the player to the play mode.
3. Adjust VR3 (FO. GAN) so that the Lissajous's waveforms become symmetric to the X and Y axes, respectively.

7. Tracking Servo Loop Gain Adjustment

- Purpose : To adjust the loop gain of the tracking servo to the optimum value.
- Symptom of improper adjustment : The player does not start playback. The actuator sound is high during searching. Skips track(s).

• Instrument connection	• See Fig. 7.
• Setting	• CH1 : 50 mV/div, X−Y mode CH2 : 5 mV/div
• Player condition	• Play
• Adjustment point	• VR4 (TR. GAN)
• Disc	• YEDS−7

- Connection

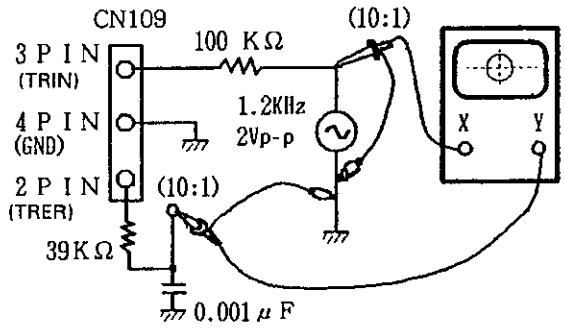

Fig. 7

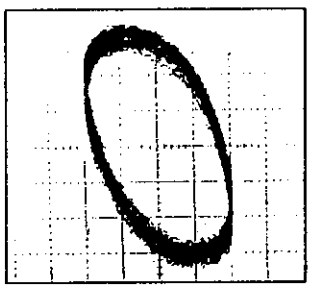
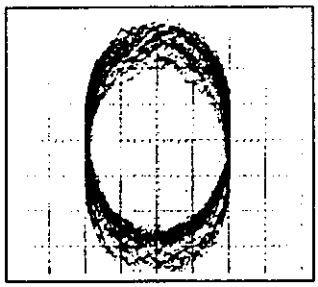
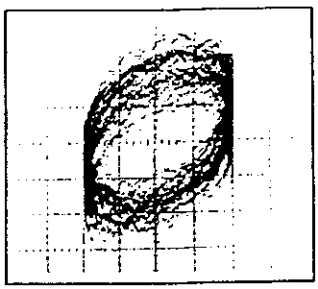


Gain is too large.



Optimum gain



Gain is too small.

- Procedure

1. Set output of the AF oscillator to 1.2 kHz and 2 Vp−p.
2. Move the pickup to the center between the inner and outer edges of the disc (R = 35 mm) by using the "4 + MULTI-SPEED" or "5 + MULTI-SPEED" key. Press the "1 + MULTI-SPEED", "2 + MULTI-SPEED" and "3 + MULTI-SPEED" keys in sequence to close the servos and set the player to the play mode.
3. Adjust VR4 (TR. GAN) so that the Lissajous's waveforms become symmetric to the X and Y axes, respectively.

8. Focus Error Signal Confirmation

- Purpose : To evaluate the pickup by observing the focus error signal. Whether the pickup is faulty or not faulty can be decided from the level of amplitude of the tracking error signal (see "Tracking error balance adjustment") and by confirming the waveform of the focus error signal.
- Symptom of improper adjustment :

● Instrument connection	● Connect the oscilloscope to Pin 6 (FOER) of CN109.
● Setting	● 100 mV/div, 5 mS/div, DC mode
● Player condition	● Stop
● Adjustment point	● None
● Disc	● YEDS-7

- Connection

- Procedure

1. Connect Pin 5 of CN109 to GND.
2. Insert a disc.
3. Pressing the "1 + MULTI-SPEED" key while watching the oscilloscope screen allows you to observe for an instant the waveform shown in Fig. 8. Confirm that the amplitude is 2.5 Vp-p or larger and the amplitude of the positive side is approximately the same as the negative side. Note that the waveform is displayed only for an instant when the "1 + MULTI-SPEED" key is pressed. Press the key as many times as needed until the waveform can be confirmed.

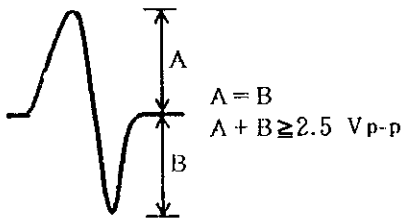


Fig. 8

[Evaluation of the pickup]
Evaluate the pickup after all adjustments are made correctly. If the evaluation result is as listed below, the pickup may be defective.

① The amplitude of the tracking error signal is extremely small (2 Vp-p or smaller).
② The amplitude of the focus error signal is extremely small (2.5 Vp-p or smaller).
③ The amplitude of the positive side of the focus error signal is excessively asymmetric from the negative side (more than 2 : 1).
④ RF signal is too small (0.8 Vp-p or smaller). The signal does not reach the specified value even after adjusting VR 5 (laser power).

9. REGLAGES

9.1 REGLAGE HORIZONTAL DE L'ENSEMBLE DE BASE DE TRANSFERT (Fig. 9−1)

1. Retirer environ 10 CD du bas des ensembles de support droit et gauche.
2. Régler le système au mode Super Manuel (voir "11. ① Mode Super Manuel"), puis abaisser l'ensemble de base de transfert.
3. Placer une règle métallique sur le côté gauche Ⓐ de l'armature en forme de D (U). Régler la hauteur de l'ensemble de base de transfert d'après l'armature en forme de D (U).
4. Placer la règle métallique sur le côté droit Ⓑ de l'armature en forme de D (U). Modifier la hauteur de l'ensemble de base de transfert en ajustant la vis Ⓒ de la butée de courroie (R). La différence de hauteur entre les ensembles de base de transfert droit et gauche doit être dans les 0,1 mm.

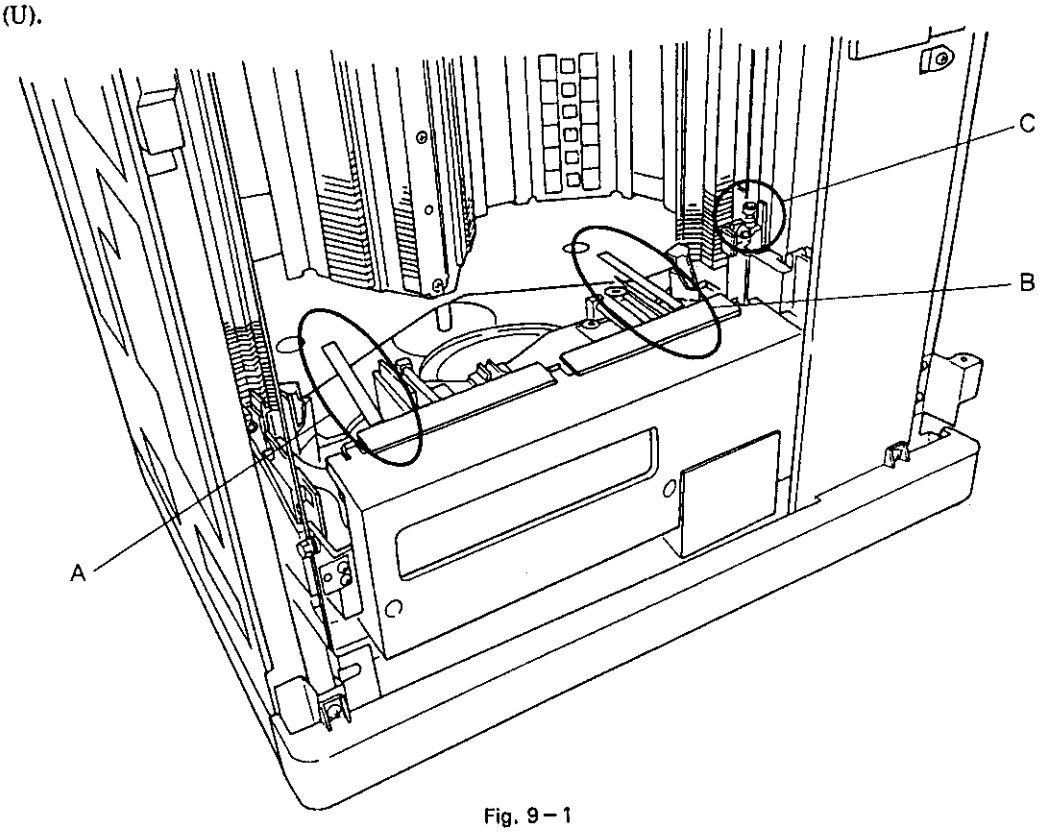

Fig. 9−1

9.2 REGLAGE DE LA VITESSE DU MOTEUR VD (VERTICAL)

1. Procéder à la connexion de la manière indiquée à la Fig. 9−2.
2. Régler le système au mode Super Manuel (voir "11. ① Mode Super Manuel"), puis désenclencher tous les commutateurs DIP (S5 l'unité KDSB) (le moteur VD sera sélectionné).
3. Faire tourner le moteur VD en mainten ant S1 ou S2 de l'unité KDSB enfoncé.
4. Ajuster VR1 pour que la forme d'onde de l'oscilloscope devienne t = 17 ±0,5 μsec. (voir Fig. 9−3).

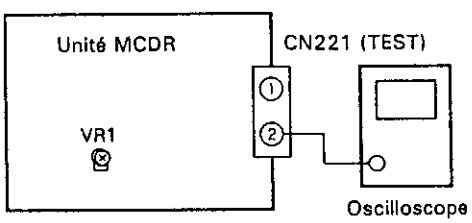

Fig. 9−2 Connexion

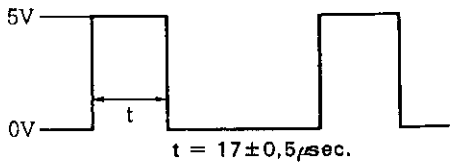

Fig. 9−3 Forme d'onde

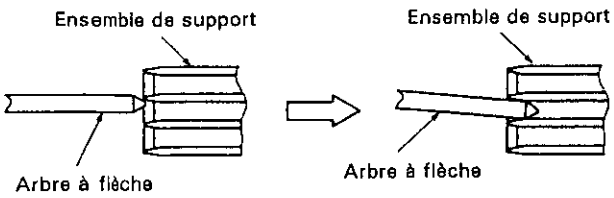
9.3 REGLAGE DE LA HAUTEUR DE LA PLAQUE D'ENCODEUR VD

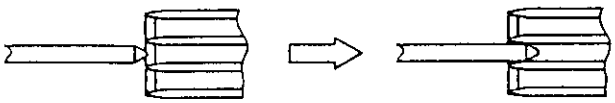
● Ensemble de Support Gauche

1. Régler le système au mode Manuel (voir "11. ② Mode Manuel"), puis déplacer l'ensemble de base de transfert à l'adresse d'installation de CD #79.
2. Faire basculer l'ensemble vers l'ensemble de support gauche.
3. Ajuster l'encodeur VD 1 (gauche) pour que l'armature à mandrin, l'ensemble 1 de mandrin et le ressort de mandrin 3 ne soient pas fonctionnels lorsque l'arbre à flèche est activé. (Voir les Fig. 9−4 et 9−5 et le Tableau 9−1.)
4. Après le réglage, déplacer verticalement l'ensemble de base de transfert et confirmer la hauteur au niveau de l'adresse #79.
5. Répéter la même procédure pour confirmer la hauteur au niveau des adresses d'installation de CD #1, #12, #50 et #150.

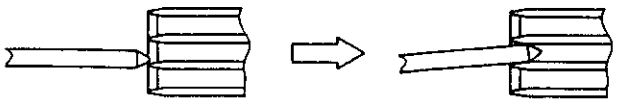
A : La position de réglage de l'encodeur VD est trop élevée. (→ Abaisser la plaque de l'encodeur VD.)



B : Réglage correct



C : La position de réglage de l'encodeur VD est trop basse. (→ Relever la plaque de l'encodeur VD.)



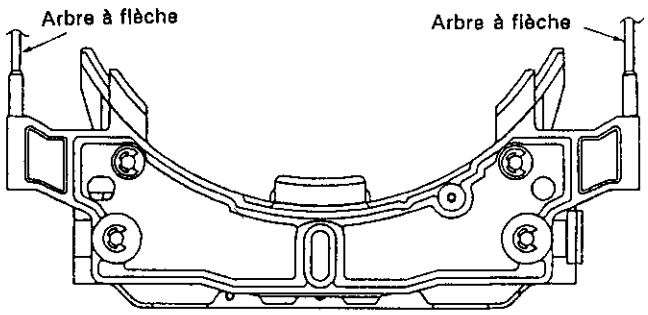
Ajuster pour que l'arbre à flèche et l'ensemble de support soient placés de la manière indiquée dans (B) ci-dessus (voir Fig. 9−5).

Fig. 9−4

● Ensemble de Support Droit

1. Procéder au réglage de la même manière qu'avec l'ensemble de support gauche, sauf que l'adresse d'installation de CD est #229.
2. Confirmer également la hauteur au niveau des adresses d'installation de CD #151, #200 et #300.

REMARQUE :
Si le CD touche la partie de l'ensemble de support (A), même avec l'arbre à flèche en position centrale, le mandrin peut être défectueux, l'arbre à flèche tordu ou le disque déformé.



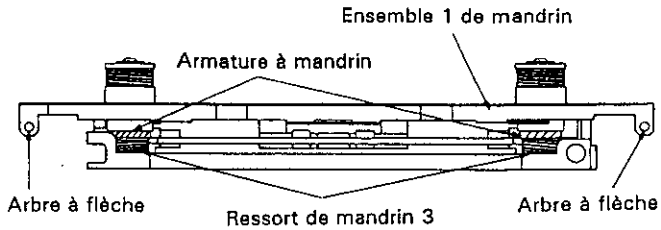


Fig. 9−5

L'armature à mandrin et l'ensemble 1 de mandrin fonctionnent de la manière indiquée dans le tableau ci-dessous lorsque l'arbre à flèche est inséré dans l'ensemble de support.

	Armature à Mandrin	Ensemble 1 de Mandrin	Ressort de Mandrin 3
Fig. 9−4 A	Abaisse.	Abaisse.	Contracte.
Fig. 9−4 B	Ne fonctionne pas.	Ne fonctionne pas.	Ne fonctionne pas.
Fig. 9−4 C	Ne fonctionne pas.	Relève.	Ne fonctionne pas.

Tableau 9−1

9.4 REGLAGE DU LECTEUR DE CD

Les lecteurs de CD peuvent mal fonctionner ou ne pas fonctionner du tout s'ils sont mal ou incorrectement ajustés, bien qu'aucun défaut ne puisse être trouvé dans le capteur et les circuits électriques. Toujours ajuster correctement en fonction de la procédure d'ajustement.

1. Articles de Réglage/Points de Contrôle et Séquence

Séquence	Article	Point d'essai	Point de réglage
1	Réglage du décalage de mise au point	CN109, Broche 6 (FOER)	VR2 (FO. OFS)
2	Réglage de la grille	CN109, Broche 2 (TRER)	Fente de réglage de la grille
3	Réglage de l'équilibre d'erreur d'alignement	CN109, Broche 2 (TRER)	VR1 (TR. BAL)
4	Réglage de l'inclinaison radiale/tangentielle du capteur	CN109, Broche 1 (RF)	Vis de réglage d'inclinaison radiale, vis de réglage d'inclinaison tangentielle
5	Réglage du niveau HF	CN109, Broche 1 (RF)	VR5 (niveau HF)

8	Confirmation du signal d'erreur de mise au point	CN109, Broche 6 (FOER)	———

- Table des abréviations

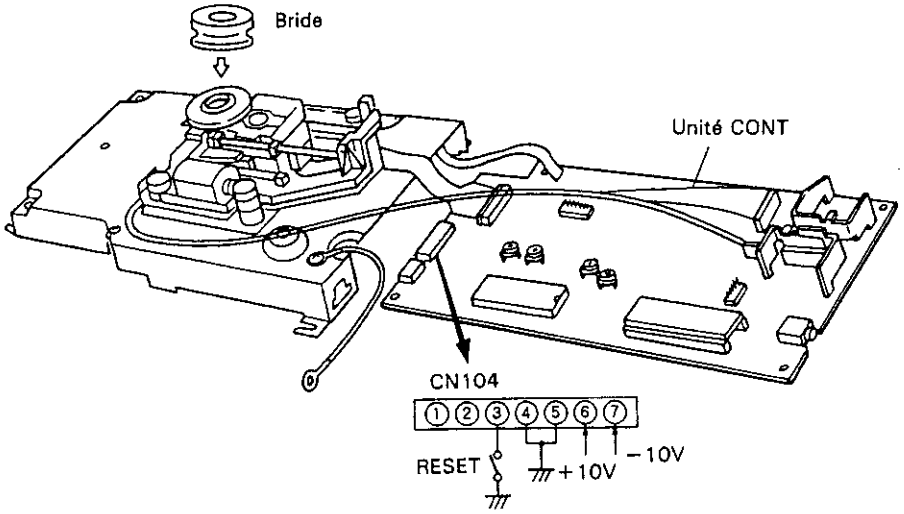
FOER	: Erreur de Mise au Point	FO. OFS	: Décalage de Mise au Point
FOIN	: Entrée Mise au Point	TR. BAL	: Equilibre D'alignement
TRIN	: Entrée Alignement	FO. GAN	: Gain de Boucle Servo de Mise au Point
TRER	: Erreur D'alignement	TR. GAN	: Gain de Boucle Servo D'alignement

2. Instruments et Outils

Utiliser les instruments et outils suivants pour le réglage.

1. Oscilloscope à double tracé (sonde 10 : 1)
2. Oscilloscope à basse fréquence
3. Disque d'essai (YEDS-7)
4. Filtre passe-bas (39 kΩ + 0,001 μF)
5. Résistance (100 kΩ)
6. Outils standard

3. Réglage du Lecteur de CD



4. Positions des Points D'essai et Réglage de VR

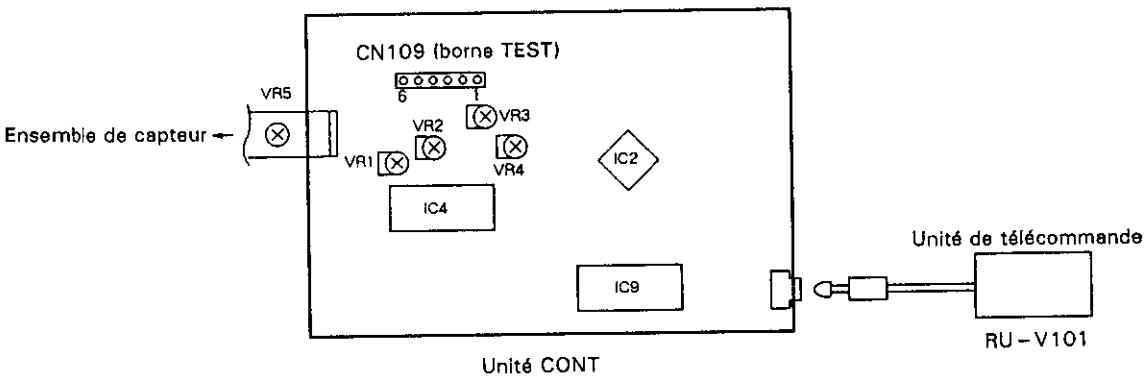


Fig. 1 Points de réglage

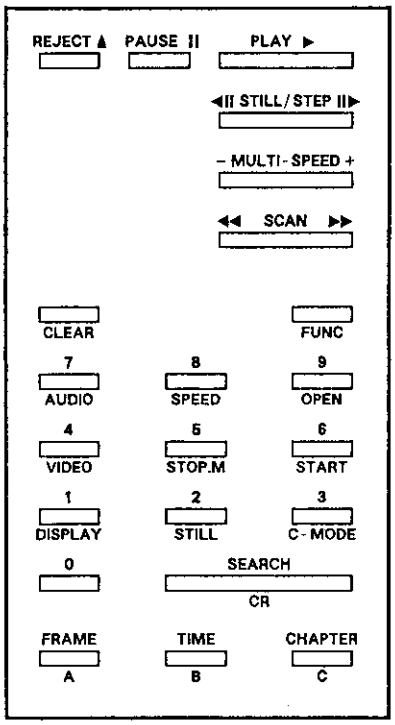
5. Remarques

1. Utiliser un oscilloscope ayant un rapport de sonde de 10 : 1.
2. Toutes les positions du bouton de commande (valeurs réglées) de l'oscilloscope indiquées dans cette procédure de réglage sont basées sur les conditions d'utilisation d'un oscilloscope ayant un rapport de sonde de 10 : 1.

● FONCTIONS DE L'UNITÉ DE TÉLÉCOMMANDE DE SERVICE

Le lecteur de CD (PD-CACV3000) du changeur automatique de CD (CAC-V3000) peut être directement actionné en utilisant l'unité de télécommande (RU-V101). L'unité de télécommande possède les fonctions suivantes :



RU-V101

REJECT		: Arrêt de l'axe
PAUSE		: Pause
PLAY		: Reproduction
STILL/SEPT ▮▮▶		: Sélection de disque
STILL/SEPT ◀▮▮		: Retour de disque
MULTI-SPEED +		: ┐ Commande d'essai
MULTI-SPEED −		: ┘
SCAN ▶▶		: Balayage en avant
SCAN ◀◀		: Balayage en arrière
CLEAR		: Effacement
FRAME		: Spécifie un bloc.
TIME		: Spécifie l'heure.
CHAPTER		: Spécifie une piste.
SEARCH		: Recherche
10 key		: Pour entrer des chiffres.
DISPLAY	(FUNC + 1)	: Pas d'entrée
STILL	(FUNC + 2)	: Pas d'entrée
C-MODE	(FUNC + 3)	: Pas d'entrée
VIDEO	(FUNC + 4)	: Réglage du volume
STOP. M	(FUNC + 5)	: Marqueur d'arrêt
START	(FUNC + 6)	: Démarrage
AUDIO	(FUNC + 7)	: Lacement du fondu de début et de fin
SPEED	(FUNC + 8)	: Contrôle de vitesse
OPEN	(FUNC + 9)	: Pas d'entrée
B	(FUNC + TIME)	: Réglage de la durée du fondu

● Commande D'essai

Touche 0 + MULTI-SPEED (+, −) : Diode laser (LD) allumée
Touche 1 + MULTI-SPEED (+, −) : Fermeture de servo de mise au point
Touche 2 + MULTI-SPEED (+, −) : Secousse d'axe
Touche 3 + MULTI-SPEED (+, −) : Alignement, servo curseur activé
Touche 4 + MULTI-SPEED (+, −) : Une pression sur la touche d'avance de curseur déplace le capteur d'environ la moitié de la pleine course.
Touche 5 + MULTI-SPEED (+, −) : Une pression sur la touche de recul de curseur déplace le capteur d'environ la moitié de la pleine course.
Touche 6 + MULTI-SPEED (+, −) : Alignement, servo curseur désactivé
Touche 7 + MULTI-SPEED (+, −) : ┐
Touche 8 + MULTI-SPEED (+, −) : ┘ Arrêt de curseur, arrêt d'axe
Touche 9 + MULTI-SPEED (+, −) : Ouverture de servo de mise au point

● Utilisation de la Commande SPEED

En se basant sur la supposition que la vitesse normale est égale à 100, le rapport de vitesse de 90 à 110 est exprimé avec −10% à +10%.

Exemple : Changement de la vitesse de −10%

[9] + [0] + [FUNC] + [8]

Remarque :

- *La vitesse changée ne revient pas à la normale en appuyant sur la touche REJECT. Pour revenir à la vitesse normale, appuyer sur la touche de sélection de disque.*
- *Toujours appuyer sur la touche de sélection de disque après une pression sur la touche de retour de disque. Sinon, le système n'accepte pas les commandes.*

● Contrôle de L'atténuateur de Signal

Le niveau d'atténuation et la durée de fondu peuvent être réglés. La fonction de fondu peut également être commadée à l'aide de cette télécommande.

Exemple 1 : Règle la durée de fondu à 10 secondes.

[1] + [0] + [FUNC] + [TIME]

Exemple 2 : Niveau d'atténuation maximal. (sourdine)

[0] + [FUNC] + [4]

Exemple 3 : Lance le fondu de début.

[2] + [5] + [5] + [FUNC] + [7]

Remarque :

L'atténuation numérique est valable pour le convertisseur N/A intégré. Utiliser la sortie analogique pour contrôler cette fonction.

1. Réglage du Décalage de Mise au Point

- But : Régler la tension de décalage c.c. de l'amplificateur d'erreur de mise au point à −50 mV.
- Symptômes en cas de mauvais ajustement : Le lecteur ne met pas au point. Le signal HF est trouble.

● Connexion de l'instrument	● Connecter l'oscilloscope à la Broche 6 (FOER) de CN109.
● Réglage	● 5 mV/div., 10 mS/div., mode c.c.
● Etat du lecteur	● Arrêt (seule l'alimentation est mise)
● Point de réglage	● VR2 (FO. OFS)
● Disque	● Pas nécessaire

● Connexion

● Procédure

Ajuster VR2 (FO. OFS) pour régler la tension de la Broche 6 (FOER) de CN109 à −50 ±50 mV.

2. Réglage de la Grille

- But : Régler les deux points du faisceau laser de génération d'erreur d'alignement à un angle optimum sur la piste.
- Symptômes en cas de mauvais ajustement : Le lecteur ne commence pas la reproduction. N'effectue pas la recherche de piste. Saute une(des) piste(s).

• Connexion de l'instrument	• Connecter l'oscilloscope à la Broche 2 (TRER) de CN109 via le filtre passe-bas (voir Fig. 2)
• Réglage	• 50 mV/div., 5 mS/div., mode c.c.
• Etat du lecteur	• Servos de mise au point et d'axe fermés. Servo d'alignement ouvert.
• Point de réglage	• Fente de réglage de grille du capteur.
• Disque	• YEDS-7

- Connexion

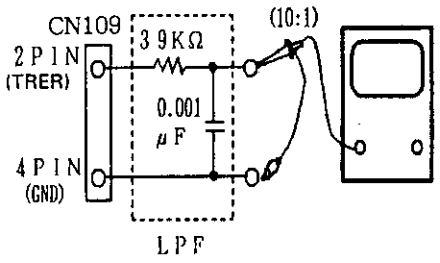


Fig. 2

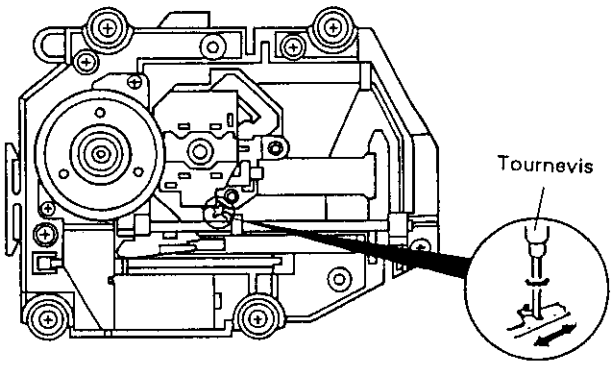

Point de réglage

- Procédure

1. Déplacer le capteur à proximité du bord externe du disque en utilisant la touche "4 + MULTI-SPEED" ou "5 + MULTI-SPEED".
2. Appuyer sur la touche "1 + MULTI-SPEED", puis sur la touche "2 + MULTI-SPEED" pour fermer les servos de mise au point et d'axe.
3. Introduire un tournevis dans la fente de réglage de grille.
   Ajuster la grille et trouver le point nul. Voir à la page suivante pour plus de détails.
4. Une rotation lente du tournevis dans le sens inverse des aiguilles d'une montre à partir du point nul augmente progressivement l'amplitude de la forme d'onde. Une rotation continue du tournevis rediminue l'amplitude de la forme d'onde. Tourner le tournevis dans le sens inverse des aiguilles d'une montre à partir du point nul pour trouver le premier point maximum d'amplitude de forme d'onde.

(Référence)
La Fig. 3 indique la relation entre l'angle de faisceau d'alignement à la piste et la forme d'onde.

● Comment trouver le point nul

Introduire un tournevis dans la fente de réglage de grille et changer l'angle de grille. Avec cette méthode, l'amplitude du signal d'erreur d'alignement de la Broche 2 de CN109 peut être changée. Il y a plusieurs points où l'amplitude de la forme d'onde diminue dans la gamme de grille variable. Parmi ces points, un seul permet à l'enveloppe d'être régulière. Ceci signifie que les trois faisceaux laser divisés par la grille sont sur la même piste (voir Fig. 3).

Ce point est appelé le point nul. Régler la grille pour trouver le point nul et l'utiliser comme position de référence pour le réglage de la grille.

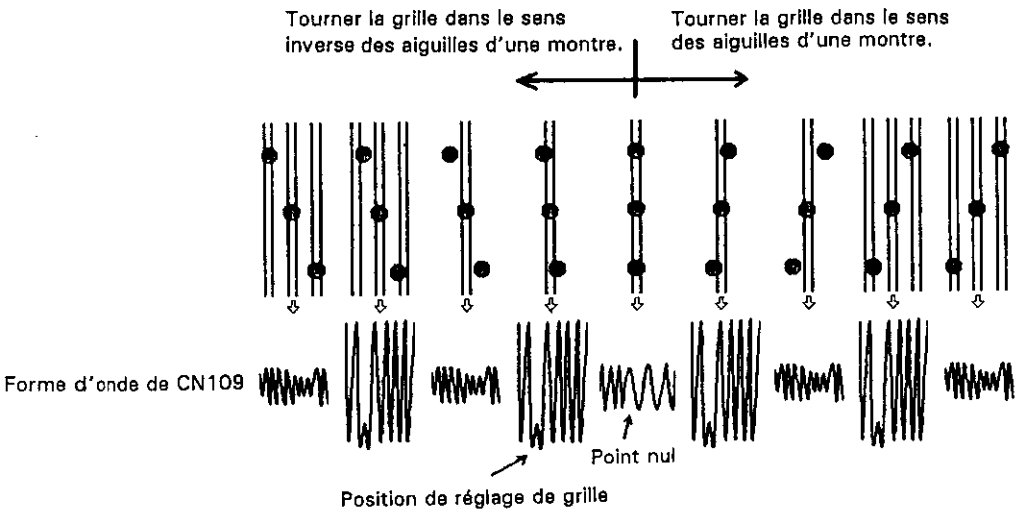

Fig. 3

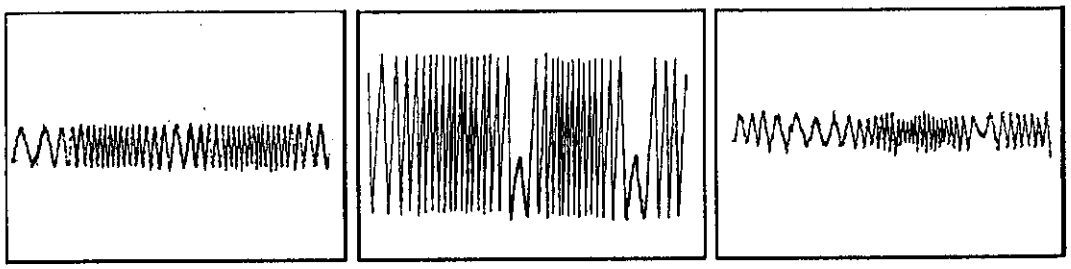


Remarque :

L'amplitude du signal d'erreur d'alignement est d'approximativement 3 Vc-c. Si l'amplitude est très petite (2 Vc-c) (en utilisant un LPF (filtre passe-bas) de 39 kΩ + 0,001 μF), la lentille peut ne pas être propre ou le capteur peut ne pas fonetionner.

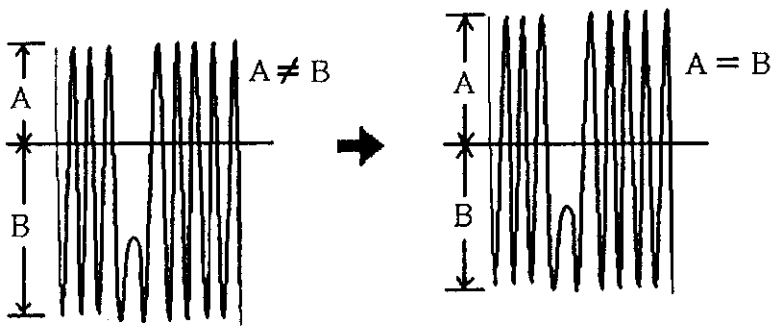
Si l'amplitude du signal d'erreur fluctue de plus de 10% entre les bords interne et externe d'un disque, la grille n'est pas ajustée au point maximum. Ajuster correctement la grille.

3. Réglage D'équilibre D'erreur D'alignement

- But : Corriger les niveaux de sensibilité de la photodiode d'alignement au même niveau.
- Symptômes en cas de mauvais ajustement : Le lecteur ne commence pas la reproduction. N'effectue pas la recherche de piste.

● Connexion de l'instrument	● Connecter l'oscilloscope à la Broche 2 (TRER) de CN109 (le filtre passe-bas peut être utilisé).
● Réglage	● 50 mV/div., 5 mS/div., mode c.c.
● Etat du lecteur	● Servos de mise au point et d'axe fermés. Servo d'alignement ouvert.
● Point de réglage	● VR1 (TR. BAL)
● Disque	● YEDS-7

● Connexion



Avec composante de courant continu

Sans composante de courant continu

● Procédure

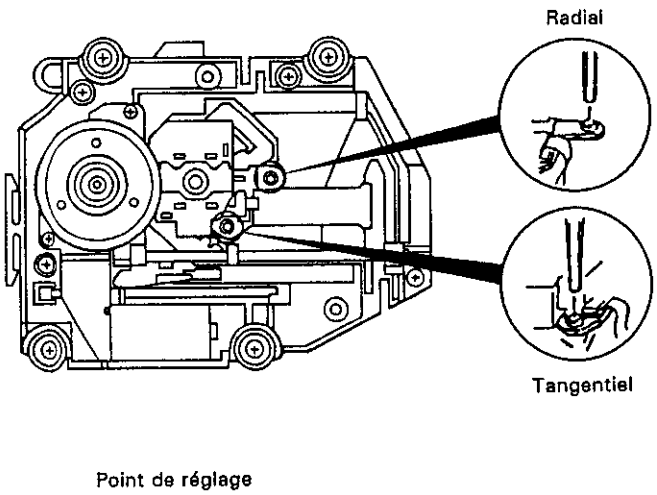
1. Déplacer le capteur au centre entre les bords interne et externe du disque (R = 35 mm) en utilisant la touche "4 + MULTI-SPEED" ou "5 + MULTI-SPEED".
2. Appuyer sur la touche "1 + MULTI-SPEED", puis sur la touche "2 + MULTI-SPEED" pour fermer les servos de mise au point et d'axe.
3. Aligner la ligne claire (GND) de l'oscilloscope sur le centre de l'écran de l'oscilloscope, et passer au mode c.c..
4. Ajuster VR1 (TR. BAL) pour rendre l'amplitude du côté positif identique au côté négatif du signal d'erreur d'alignement de la Broche 2 (TRER) de CN109 (pour qu'il n'y ait pas de composante CC).

4. Réglage de L'inclinaison Radiale/Tangentielle du Capteur

- But : Ajuster l'angle du capteur par rapport au disque, et optimiser le signal HF à lire en irradiant verticalement le faisceau laser par rapport au disque.
- Symptômes en cas de mauvais ajustement : Saut du son. Certains disques ne peuvent pas être reproduits.

● Connexion de l'instrument	● Connecter l'oscilloscope à la Broche 1 (RF) de CN109.
● Réglage	● 20 mV/div., 200 nS/div., mode c.a.
● Etat du lecteur	● Reproduction
● Point de réglage	● Vis de réglage d'inclinaison radiale et vis de réglage d'inclinaison tangentielle du capteur.
● Disque	● YEDS-7

● Connexion



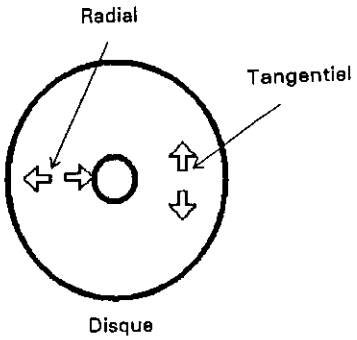


Fig. 4

● Procédure

1. Déplacer le capteur à proximité du bord externe du disque en utilisant la touche "4 + MULTI-SPEED". Appuyer en séquence sur les touches "1 + MULTI-SPEED", "2 + MULTI-SPEED" et "3 + MULTI-SPEED" pour fermer les servos de mise au point, d'axe et d'alignement et régler le lecteur au mode de reproduction.
2. Utiliser une clé hexagonale (3 mm) pour régler la vis de réglage d'inclinaison radiale de manière à ce que le modèle d'oeil (forme d'onde en forme de diamant qui apparaît au centre du signal HF) soit le mieux indiqué.
3. Utiliser la clé hexagonale pour régler la vis de réglage d'inclinaison tangentielle de manière à ce que le modèle d'oeil soit le mieux indiqué (voir Fig. 5).
4. Ajuster de nouveau la vis de réglage d'inclinaison radiale, puis la vis de réglage d'inclinaison tangentielle de manière à ce que le modèle d'oeil soit le mieux indiqué. Si nécessaire, ajuster alternativement les deux vis de réglage de manière à ce que le modèle d'oeil soit le mieux indiqué.

Remarque :
Radial et tangentiel se rapportent aux directions en relation avec les disques, de la manière indiquée dans la Fig. 4.

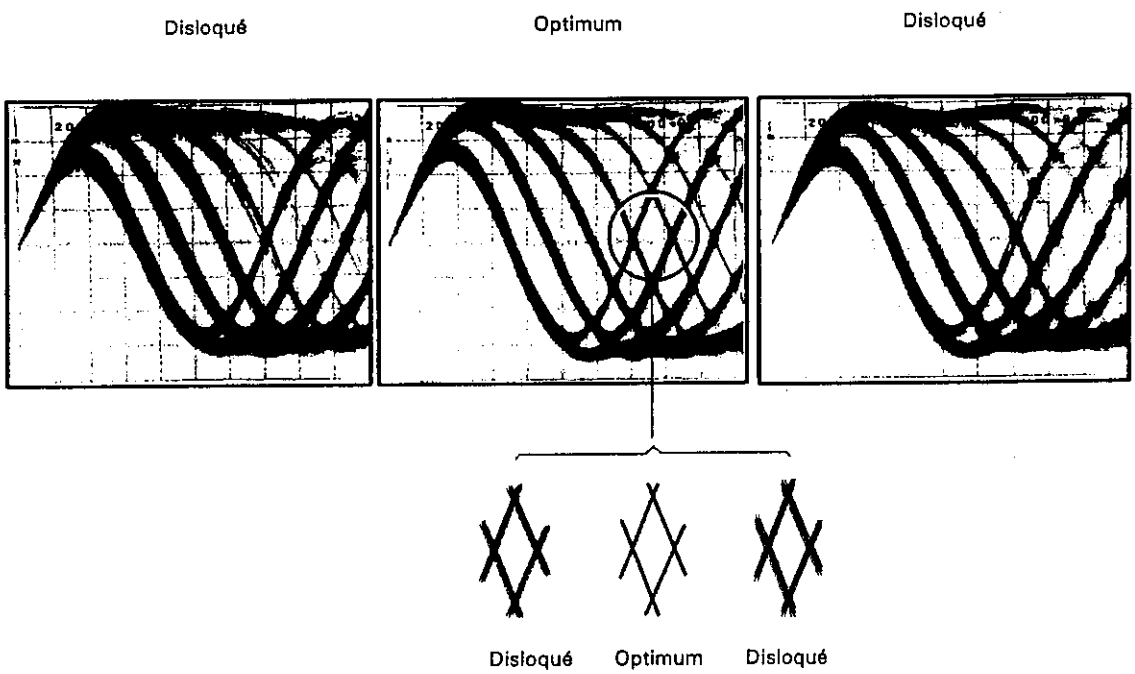

Fig. 5

5. Réglage du niveau HF

- But : Optimiser l'amplitude du signal HF de reproduction.
- Symptômes en cas de mauvais ajustement : Le lecteur ne reproduit pas. N'effectue pas la recherche.

● Connexion de l'instrument ● Réglage ● Etat du lecteur ● Point de réglage ● Disque	● Connecter l'oscilloscope à la Broche 1 (RF) de CN109. ● 50 mV/div., 10 mS/div., mode c.a. ● Reproduction ● VR5 (puissance laser) ● YEDS-7

● Connexion

● Procédure

1. Déplacer le capteur au centre entre les bords interne et externe du disque (R = 35 mm) en utilisant la touche "4 + MULTI-SPEED" ou "5 + MULTI-SPEED". Appuyer en séquence sur les touches "1 + MULTI-SPEED", "2 + MULTI-SPEED" et "3 + MULTI-SPEED" pour fermer les servos et régler le lecteur au mode de reproduction.
2. Ajuster VR5 pour régler l'amplitude du signal HF à 1,2 Vc-c +0,3/−0,1 V.

6. Réglage du Gain de Boucle du Servo de Mise au Point

- But : Régler le gain de boucle du servo de mise au point à la valeur optimum.
- Symptômes en cas de mauvais ajustement : Le lecteur ne commence pas la reproduction. Le son du dispositif de commande de mise au point est haut.

• Connexion de l'instrument	• Voir Fig. 6.
• Réglage	• CH1 : 20 mV/div., mode X−Y CH2 : 5 mV/div.
• Etat du lecteur	• Reproduction
• Point de réglage	• VR3 (FO. GAN)
• Disque	• YEDS−7

- Connexion

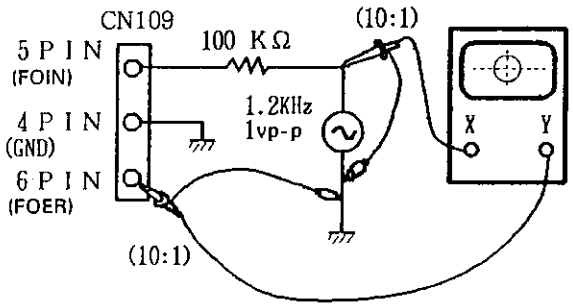

Fig. 6

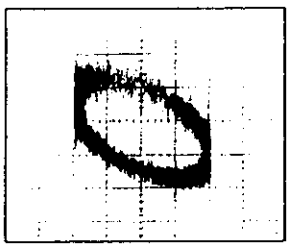
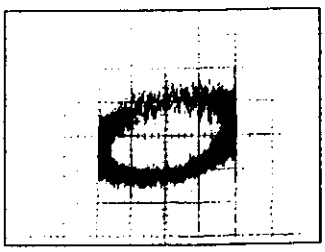


Le gain est trop important.

Gain optimum



Le gain est trop petit.

- Procédure

1. Régler la sortie de l'oscillateur AF à 1,2 kHz et 1 Vc-c.
2. Déplacer le capteur au centre entre les bords interne et externe du disque (R = 35 mm) en utilisant la touche "4 + MULTI-SPEED" ou "5 + MULTI-SPEED". Appuyer en séquence sur les touches "1 + MULTI-SPEED", "2 + MULTI-SPEED" et "3 + MULTI-SPEED" pour fermer les servos et régler le lecteur au mode de reproduction.
3. Ajuster VR3 (FO. GAN) pour que les formes d'onde de Lissajou deviennent respectivement symétriques aux axes X et Y.

7. Réglage du Gain de Boucle du Servo D'alignement

- But : Régler le gain de boucle du servo d'alignement à la valeur optimum.
- Symptômes en cas de mauvais ajustement : Le lecteur ne commence pas la reproduction. Le son du dispositif de commande de mise au point est haut pendant la recherche. Saute une(des) piste(s).

● Connexion de l'instrument	● Voir Fig. 7.
● Réglage	● CH1 : 50 mV/div., mode X−Y CH2 : 5 mV/div.
● Etat du lecteur	● Reproduction
● Point de réglage	● VR4 (TR. GAN)
● Disque	● YEDS-7

● Connexion

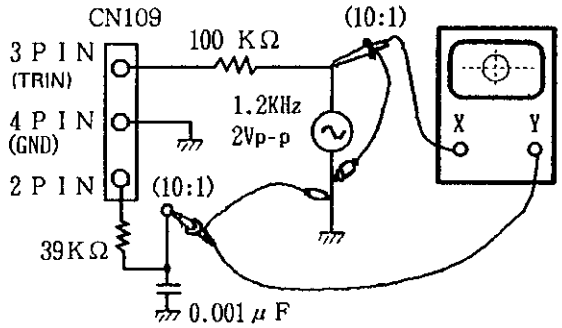


Fig. 7

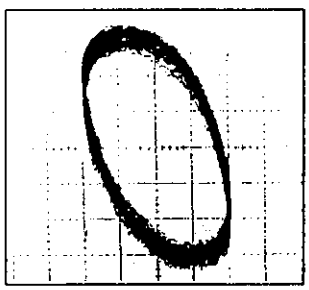
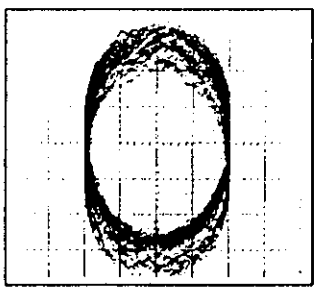
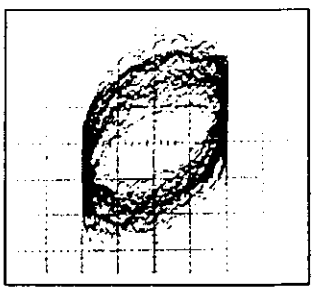


Le gain est trop important.



Gain optimum



Le gain est trop petit.

● Procédure

1. Régler la sortie de l'oscillateur AF à 1,2 kHz et 2 Vc-c.
2. Déplacer le capteur au centre entre les bords interne et externe du disque (R = 35 mm) en utilisant la touche "4 + MULTI-SPEED" ou "5 + MULTI-SPEED". Appuyer en séquence sur les touches "1 + MULTI-SPEED", "2 + MULTI-SPEED" et "3 + MULTI-SPEED" pour fermer les servos et régler le lecteur au mode de reproduction.
3. Ajuster VR4 (TR. GAN) pour que les formes d'onde de Lissajou deviennent respectivement symétriques aux axes X et Y.

8. Confirmation du Signal D'erreur de Mise au Point

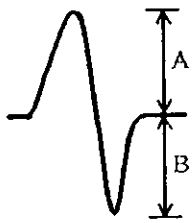
- But : Evaluer le capteur en observant le signal d'erreur de mise au point. Que le capteur soit défectueux ou non peut être décidé à partir du niveau d'amplitude du signal d'erreur d'alignement (Voir "Réglage de l'équilibre d'erreur d'alignement") et en confirmant la forme d'onde du signal d'erreur de mise au point.
- Symptômes en cas de mauvais ajustement :

• Connexion de l'instrument	• Connecter l'oscilloscope à la Broche 6 (FCS ERR) de CN109.
• Réglage	• 100 mV/div., 5 mS/div., mode c.c.
• Etat du lecteur	• Arrêt
• Point de réglage	• Aucun
• Disque	• YEDS-7

- Connexion

- Procédure

1. Connecter la broche 5 de CN109 à GND.
2. Insérer un disque.
3. Une pression sur la touche "1 + MULTI-SPEED" tout en observant l'écran de l'oscilloscope vous permet d'observer pendant un instant la forme d'onde indiquée à la Fig. 8. Confirmer que l'amplitude est de 2,5 Vc-c ou plus et que l'amplitude du côté positif est approximativement la même que du côté négatif. Remarquer que la forme d'onde n'est affichée que pendant un instant lorsque la touche "1 + MULTI-SPEED" est enfoncée. Appuyer autant de fois que nécessaire sur la touche jusqu'à ce que la forme d'onde puisse être confirmée.



$A = B$
$A + B \geq 2.5\ V_{p\text{-}p}$

Fig. 8

[Evaluation du capteur]
Evaluer le capteur après avoir procédé correctement à tous les réglages. Si le résultat de l'évaluation est comme indiqué ci-dessous, le capteur peut être défectueux.

① L'amplitude du signal d'erreur d'alignement est extrêmement petite (2 Vc-c ou moins).
② L'amplitude du signal d'erreur de mise au point est extrêmement petite (2,5 Vc-c ou moins).
③ L'amplitude du côté positif du signal d'erreur de mise au point est extrêmement asymétrique du côté négatif (plus de 2 : 1).
④ Le signal HF est trop petit (0,8 Vc-c ou moins). Le signal n'atteint pas la valeur spécifiée, même après le réglage de VR5 (puissance laser).

9. AJUSTES

9.1 AJUSTE HORIZONTAL DEL CONJUNTO DE LA BASE DE TRANSFERENCIA (Fig. 9−1)

1. Extraiga aproximadamente 10 discos compactos de los conjuntos de bastidor derecho e izquierdo.
2. Ajuste el sistema al modo Super Manual (vea el apartado "11. ① Modo Super Manual"), y mueva entonces el conjunto de la base de transferencia hacia abajo.
3. Coloque una regla metálica en el lado izquierdo Ⓐ del soporte D (U). Ajuste la altura del conjunto de la base de transferencia al soporte D (U).
4. Coloque la regla metálica en el lado derecho Ⓑ del soporte D (U). Modifique la altura del conjunto de la base de transferencia ajustando el tornillo Ⓒ del tope de la correa (R). La diferencia de altura entre los conjuntos de base de transferencia derecho e izquierdo debe estar dentro de 0,1 mm.

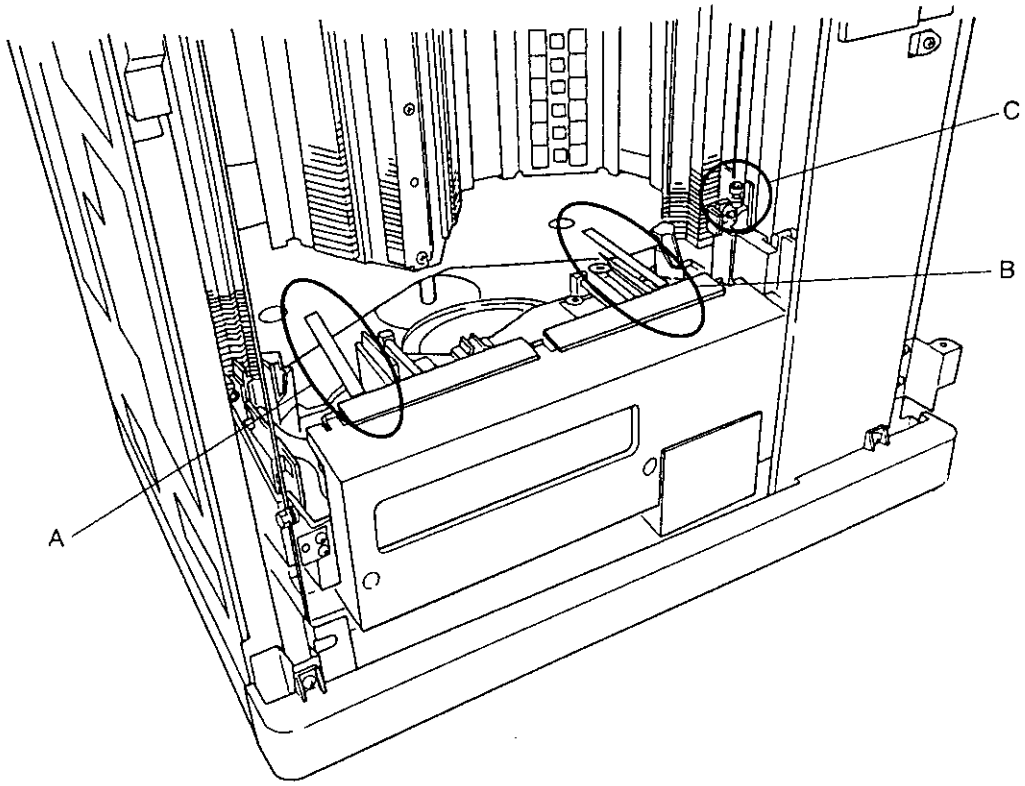


Fig. 9−1

9.2 AJUSTE DE LA VELOCIDAD DEL MOTOR VD (VERTICAL)

1. Haga la conexión como se muestra en la Fig. 9−2.
2. Ajuste el sistema al modo Super Manual (vea el apartado "11. ① modo Super Manual"), y ponga todos los interruptores DIP (S5 de la unidad KDSB) en la posición OFF (se seleccionará el motor VD).
3. Gire el motor VD presionado S1 ó S2 de la unidad KDSB.
4. Ajuste VR1 de modo que la forma de onda del osciloscopio pase a ser t = 17±0,5 μseg. (vea la Fig. 9−3).

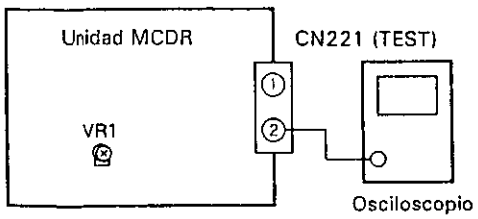

Fig. 9−2 Conexión

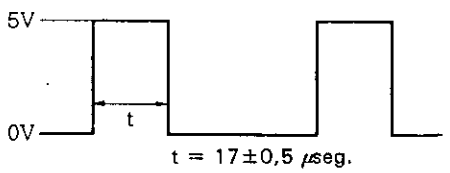

Fig. 9−3 Forma de onda

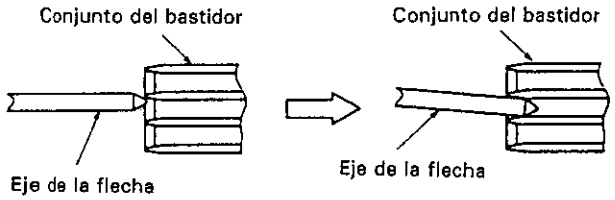
9.3 AJUSTE DE LA ALTURA DE LA PLACA DEL CODIFICADOR VD

● Conjunto del Bastidor Izquierdo

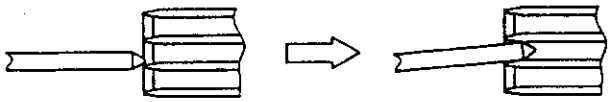
1. Ajuste el sistema al modo Manual (vea el apartado "11. ② modo Manual"), y entonces mueva el conjunto de la base de transferencia a la dirección N.° 79 de instalación de CD.
2. Oscile el conjunto hacia el conjunto del bastidor izquierdo.
3. Ajuste el codificador VD 1 (izquierdo) de modo que el soporte del plato, conjunto del plato 1 y resorte del plato 3 queden inoperativos cuando se active el eje de la flecha. (Vea las Fig. 9−4 y 9−5 y la Tabla 9−1.)
4. Después de ajustar, mueva el conjunto de la base de transferencia verticalmente y confirme la altura en la dirección N.° 79.
5. Repita lo mismo para confirmar la altura en las direcciones de instalación de CD N.° 1, 12, 50, y 150.

A : La posición de ajuste del codificador VD es demasiado alta (→ Baje la placa del codificador VD.)



B : Ajuste correcto

C : La posición de ajuste del codificador VD es demasiado baja (→ Suba la placa del codificador VD.)



Ajuste de modo que el eje de la flecha y el conjunto del bastidor queden situados como se muestra en (B) de arriba (vea la Fig. 9−5).

Fig. 9−4

● Conjunto del Bastidor Derecho

1. Haga el ajuste del mismo modo que con el conjunto del bastidor izquierdo, a excepción de que la dirección de instalación de CD es la N.° 229.
2. Confirme también la altura en las direcciones de instalación de CD N.° 151, 200, y 300.

NOTA :
Si el CD toca la división del conjunto del bastidor (A) aunque el eje de la flecha esté en la posición central, el plato puede estar defectuoso, el eje de la flecha puede estar doblado o el disco deformado.

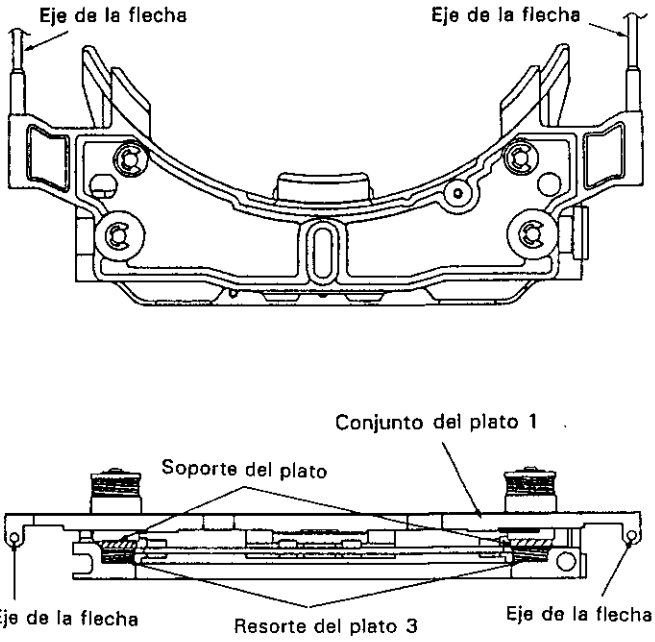


Fig. 9−5

El soporte de plato y el conjunto del plato 1 funcionan como se muestra en la tabla siguiente cuando se inserta el eje de flecha en el conjunto del bastidor.

	Soporte del Plato	Conjunto del Plato 1	Resorte del Plato 3

Fig. 9−4 C	No opera	Sube	No opera

Tabla 9−1

9.4 AJUSTE DEL REPRODUCTOR DE CD

Los reproductores de CD pueden operar incorrectamente o no operar en absoluto si se ajustan incorrectamente, aunque no pueda encontrarse ningún defecto en el fonocaptor y circuitos. Asegúrese de ajustar correctamente de acuerdo con el procedimiento de ajuste.

1. Ítemes de Ajuste / Puntos de Comprobación y Secuencia

Secuencia	Ítem	Punto de prueba	Punto de ajuste
1	Ajuste de descentramiento de enfoque	CN109, Patilla 6 (FOER)	VR2 (FO. OFS)
2	Ajuste de reticulado	CN109, Patilla 2 (TRER)	Ranura de ajuste de reticulado
3	Ajuste del balance de error de seguimiento	CN109, Patilla 2 (TRER)	VR1 (TR. BAL)
4	Ajuste de la inclinación radial/tangencial del fonocaptor	CN109, Patilla 1 (RF)	Tornillo de ajuste de inclinación radial, tornillo de ajuste de inclinación tangencial
5	Ajuste del nivel de RF	CN109, Patilla 1 (RF)	VR5 (nivel de RF)
6	Ajuste de la ganancia del bucle servo de enfoque	CN109, Patilla 5 (FOIN) CN109, Patilla 6 (FOER)	VR3 (FO. GAN)
7	Ajuste de la ganancia del bucle servo de seguimiento	CN109, Patilla 3 (TRIN) CN109, Patilla 2 (TRER)	VR4 (TR. GAN)
8	Confirmación de la señal de error de enfoque	CN109, Patilla 6 (FOER)	———

- Tabla de Abreviaturas

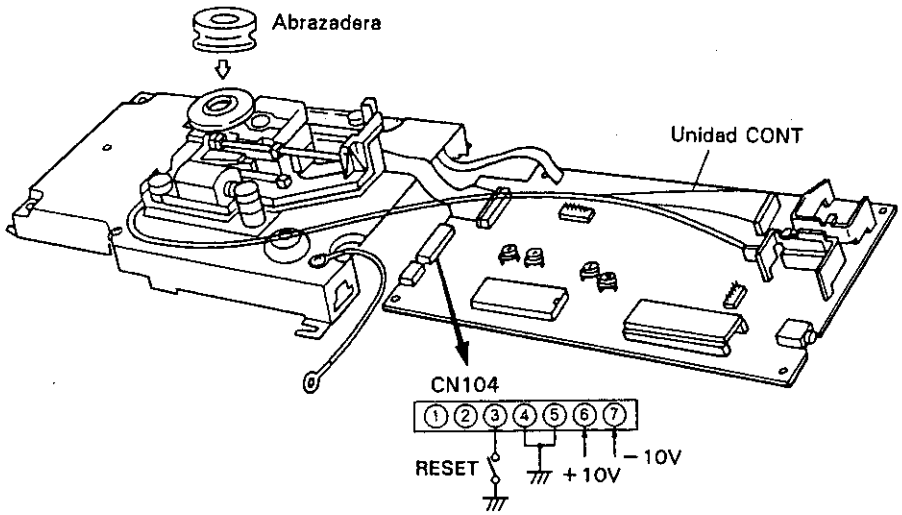
FOER	: Error de Enfoque	FO. OFS	: Descentramiento de Enfoque
FOIN	: Entrada de Enfoque	TR. BAL	: Balance de Seguimiento
TRIN	: Entrada de Seguimiento	FO. GAN	: Ganancia del Servobucle de Enfoque
TRER	: Error de Seguimiento	TR. GAN	: Ganancia del Servobucle de Seguimiento

2. Instrumentos y Herramientas

Emplee los instrumentos y herramientas siguientes para el ajuste :

1. Osciloscopio de trazado doble (sonda de 10 : 1)
2. Oscilador de baja frecuencia
3. Disco de prueba (YEDS-7)
4. Filtro de paso bajo (39 kΩ + 0,001 μF)
5. Resistor (100 kΩ)
6. Herramientas estándar

3. Ajuste del Reproductor de CD



4. Posiciones de Los Puntos de Prueba y VR de Ajuste

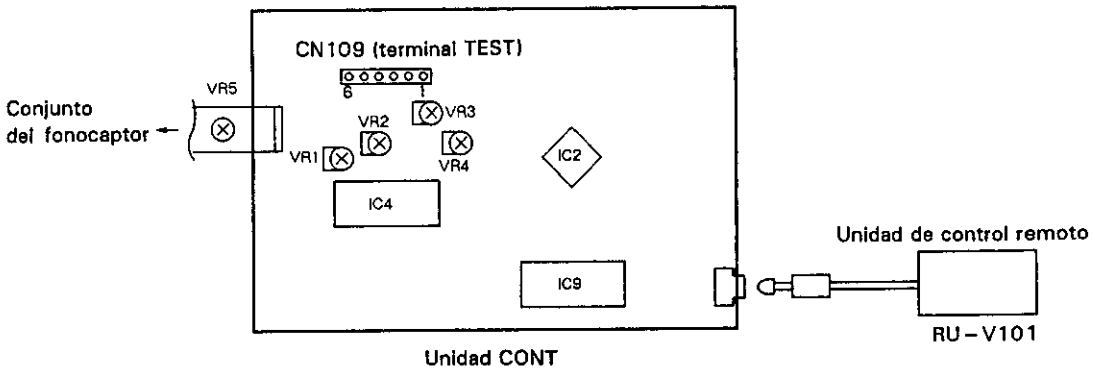


Fig. 1 Puntos de Ajuste

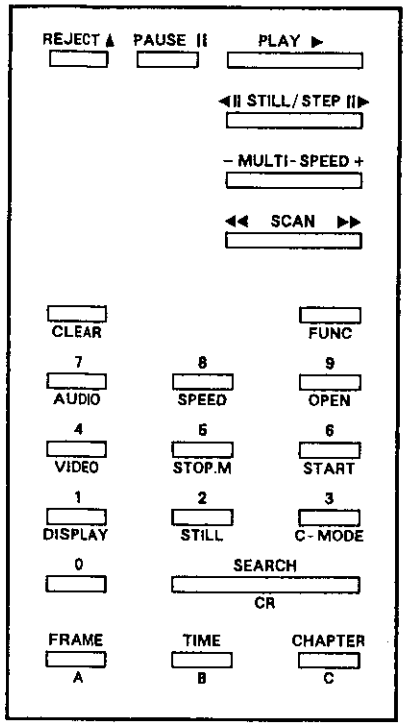
5. Notas

1. Emplee un osciloscopio con una relación de sonda de 10 : 1.
2. Todas las posiciones de los mandos de control (valores ajustados) del osciloscopio mostrado en este procedimiento de ajuste se basan en la condición del empleo de un osciloscopio con una relación de sonda de 10 : 1.

● FUNCIONES DE LA UNIDAD DE CONTROL REMOTO DE SERVICIO

El reproductor de CD (PD-CACV3000) del Cargador automático de CD (CAC-V3000) puede operarse directamente empleando la unidad de control remoto (RU-V101). La unidad de control remoto tiene las funciones siguientes :



RU-V101

REJET		: Parada del pivote
PAUSE		: Pausa
PLAY		: Reproducción
STILL/STEP II▶		: Selección de disco
STILL/STEP ◀II		: Retorno de disco
MULTI-SPEED +		: Comando de prueba
MULTI-SPEED −		: Comando de prueba
SCAN ▶▶		: Exploración en avance
SCAN ◀◀		: Exploración en inversión
CLEAR		: Borrado
FRAME		: Especifica un bloque
TIME		: Especifica el tiempo
CHAPTER		: Especifica una canción
SEARCH		: Búsqueda
10 teclas		: Para introducir números
DISPLAY	(FUNC + 1)	: Sin entrada
STILL	(FUNC + 2)	: Sin entrada
C-MODE	(FUNC + 3)	: Sin entrada
VIDEO	(FUNC + 4)	: Volumen ajustado
STOP. M	(FUNC + 5)	: Marcador de parada
START	(FUNC + 6)	: Inicio
AUDIO	(FUNC + 7)	: Inicio de Entrada/Salida de fundido
SPEED	(FUNC + 8)	: Control de velocidad
OPEN	(FUNC + 9)	: Sin entrada
B	(FUNC + TIME)	: Ajuste del tiempo de fundido

● Comando de Prueba

Tecla 0 + MULTI-SPEED (+, −) : Diodo láser (LD) activado
Tecla 1 + MULTI-SPEED (+, −) : Cierre de servoenfoque
Tecla 2 + MULTI-SPEED (+, −) : Golpe de pivote
Tecla 3 + MULTI-SPEED (+, −) : Seguimiento, servo de deslizador activado
Tecla 4 + MULTI-SPEED (+, −) : Al presionar la tecla FWD del deslizador una vez se moverá el fonocaptor aproximadamente la mitad de una carrera completa.
Tecla 5 + MULTI-SPEED (+, −) : Al presionar la tecla REV del deslizador una vez se moverá el fonocaptor aproximadamente la mitad de una carrera completa.
Tecla 6 + MULTI-SPEED (+, −) : Seguimiento, servo de deslizador desactivado
Tecla 7 + MULTI-SPEED (+, −) : Parada de deslizador, parada de pivote
Tecla 8 + MULTI-SPEED (+, −) : Parada de deslizador, parada de pivote
Tecla 9 + MULTI-SPEED (+, −) : Abertura de servoenfoque

● Empleo del Comando SPEED

Suponiendo que la velocidad normal es igual a 100, la velocidad de 90 a 110 se expresa como −10 a +10%.

Ejemplo : Cambio de la velocidad en −10%

[9] + [0] + [FUNC] + [8]

Nota :

- *La velocidad cambiada no retornará a la normal al presionar el botón REJECT. Para reanudar la velocidad normal, presione la tecla de selección de disco.*
- *Presione siempre la tecla de selección de disco después de haber presionado la tecla de retorno de disco. De lo contrario, el sistema no aceptará los comandos.*

● Para Comprobar el Atenuador Digital

Pueden ajustarse el nivel de atenuación y el tiempo de fundido. La función de fundido de aparición/desaparición gradual también se ejecuta con este controlador remoto.

Ejemplo 1 : Ajuste el tiempo de funido a 10 segundos.

[1] + [0] + [FUNC] + [TIME]

Ejemplo 2 : Nivel maximo de atenuación. (silenciamiento)

[0] + [FUNC] + [4]

Ejemplo 3 : Inicie la aparición gradual.

[2] + [5] + [5] + [FUNC] + [7]

Nota :

La atenuación digital es válida para el convertidor D/A incorporado. Por lo tanto, emplee la salida analógica para comprobar esta función.

1. Ajuste del Descentramiento de Enfoque

- Propósito : Para ajustar la tensión de descentramiento de CC del amplificador de error de enfoque a = 50 mV.
- Síntoma de ajuste incorrecto : El reproductor no enfoca. La señal de RF no es clara.

• Conexión del instrumento • Ajuste • Condición del reproductor • Punto de ajuste • Disco	• Conecte el osciloscopio a la patilla 6 (FOER) de CN109. • 5 mV/div, 10 mS/div, modo de CC • Parada (sólo la alimentación está conectada) • VR2 (FO. OFS) • No es necesario

- Conexión

- Procedimiento

Ajuste VR2 (FO. OFS) para ajustar la tensión de la patilla 6 (FOER) de CN109 a −50 ±50 mV.

2. Ajuste de Reticulado

- Propósito : Ajustar los dos puntos del haz de láser para seguimiento de la generación de errores al ángulo óptimo en la pista.
- Síntoma de ajuste incorrecto : El reproductor no inicia la reproducción. No efectúa la búsqueda de canciones. Salta canciones.

● Conexión del instrumento	● Conecte el osciloscopio a la patilla 2 (TRER) de CN109 a través del filtro de paso bajo (vea la Fig. 2).
● Ajuste	● 50 mV/div, 5 mS/div, modo de CC
● Condición del reproductor	● Servos de enfoque y de pivote cerrados. Servo de seguimiento abierto.
● Punto de ajuste	● Ranura de ajuste de reticulado del fonocaptor.
● Disco	● YEDS-7

● Conexión

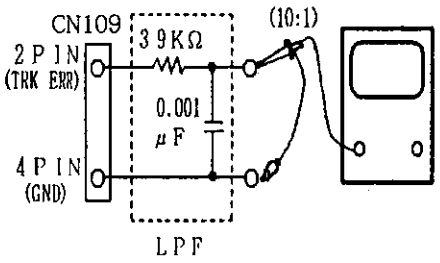


Fig. 2

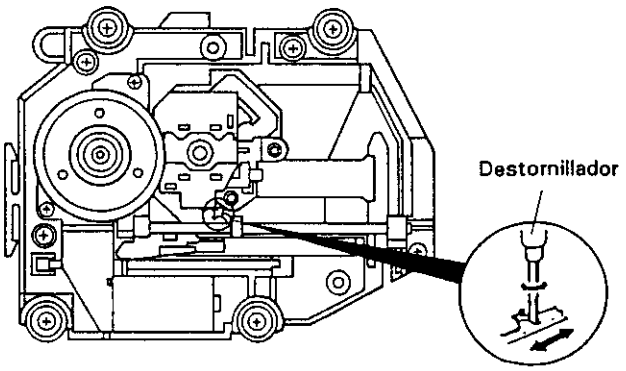

Punto de ajuste

● Procedimiento

1. Mueva el fonocaptor cerca del borde del disco empleando la tecla "4 + MULTI-SPEED" ó "5 + MULTI-SPEED".
2. Presione tecla "1 + MULTI-SPEED", y luego la tecla "2 + MULTI-SPEED" para cerrar los servos de enfoque y del pivote.
3. Inserte el destornillador en la ranura de ajuste del reticulado. Ajuste el reticulado y encuentre el punto nulo. Para más detalles, vea la página siguiente.
4. Girando lentamente el destornillador hacia la izquierda desde el punto nulo se incrementará gradualmente la amplitud de la forma de onda. Si se sigue girando el destornillador, se reducirá de nuevo la amplitud de la forma de onda.
   Gire el destornillador hacia la izquierda desde el punto nulo para encontrar el primer punto máximo de amplitud de forma de onda.

(Referencia)
La Fig. 3 muestra la relación entre el ángulo del haz de seguimiento con la pista y la forma de onda.

● Cómo encontrar el punto nulo

Inserte el destornillador en la ranura de ajuste del reticulado y cambie el ángulo del reticulado. Con este método, puede cambiarse la amplitud de la señal de error de seguimiento de la patilla 2 de CN109, Hay varios puntos donde la amplitud de forma de onda se reduce con el margen variable del reticulado. Entre estos puntos, sólo un punto permite que la envolvente sea uniforme. Esto significa que los tres haces de láser divididos por el reticulado están en la misma pista (vea la Fig. 3).

Este punto se denomina punto nulo. Ajuste el reticulado para encontrar el punto nulo y empléelo como posición de referencia para el ajuste del reticulado.

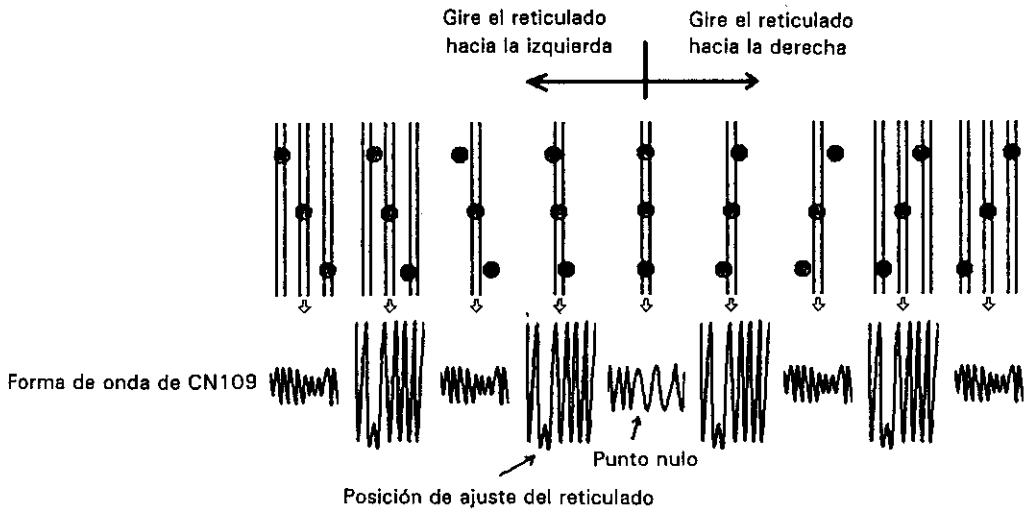

Fig. 3

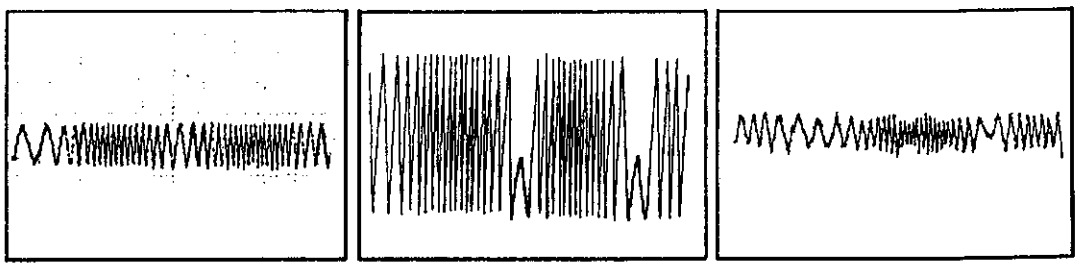


Forma de onda del punto nulo | Forma de onda de la amplitud máxima | Forma de onda de un punto que no es el punto nulo

Nota :

La amplitud de la señal de error de seguimiento es aproximadamente de 3 Vp-p. Si la amplitud es muy pequeña (2 Vp-p) (empleando LPF de 39 kΩ + 0,001 μF), la lente puede no estar limpia o el fonocaptor puede funcionar mal.

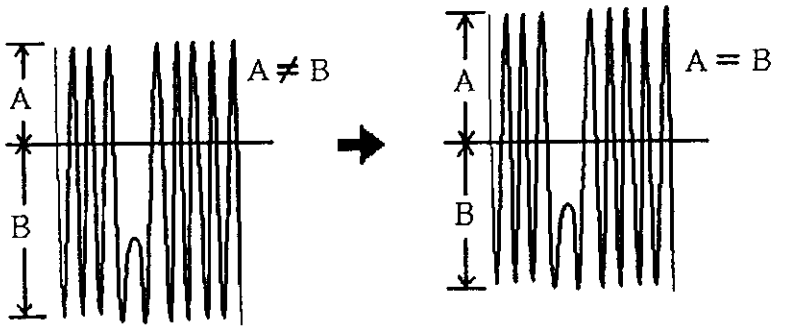
Si la amplitud de la señal de error fluctúa más del 10% entre los bordes interior y exterior de un disco, significa que el reticulado no está ajustado en el punto óptimo. Ajuste el reticulado correctamente.

3. Ajuste del Balance de Error de Seguimiento

- Propósito : Corregir los niveles de sensibilidad del fotodiodo de seguimiento al mismo nivel.
- Síntoma de ajuste incorrecto : El reproductor no inicia la reproducción. No efectúa la búsqueda de canciones.

• Conexión del instrumento	• Conecte el osciloscopio a la patilla 2 (TRER) de CN109 (puede usarse el filtro de paso bajo).
• Ajuste	• 50 mV/div, 5 mS/div, modo de CC
• Condición del reproductor	• Servos de enfoque y de pivote cerrados. Servo de seguimiento abierto.
• Punto de ajuste	• VR1 (TR. BAL)
• Disco	• YEDS-7

- Conexión



Con componente de corriente continua

Sin componente de corriente continua

- Procedimiento

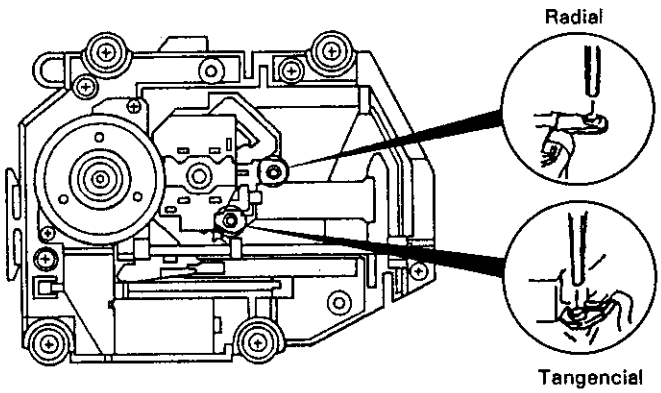
1. Mueva el fonocaptor al centro entre la circunferencia interior y los bordes exteriores del disco (R = 35 mm) empleando la tecla "4 + MULTI-SPEED" ó "5 + MULTI-SPEED".
2. Presione tecla "1 + MULTI-SPEED", y luego la tecla "2 + MULTI-SPEED" para cerrar los servos de enfoque y del pivote.
3. Alinee la línea brillante (GND) del osciloscopio con el centro de la pantalla del osciloscopio, y cambie al modo de CC.
4. Ajuste VR1 (TR. BAL) para hacer la amplitud del lado positivo igual que la del lado negativo de la señal de error de seguimiento de la patilla 2 (TRER) de CN109 (de modo que no haya componente de CC).

4. Ajuste de la Inclinación Radial/Tangencial del Fonocaptor

- Propósito : Ajustar el ángulo del fonocaptor con el disco, y optimizar la señal de RF a leerse irradiando verticalmente el haz de láser al disco.
- Síntoma de ajuste incorrecto : Se salta sonido. Algunos discos no pueden reproducirse.

● Conexión del instrumento	● Conecte el osciloscopio a la patilla 1 (RF) de CN109.
● Ajuste	● 20 mV/div, 200 nS/div, modo de CA
● Condición del reproductor	● Reproducción
● Punto de ajuste	● El tornillo de ajuste de la inclinación radial y tornillo de ajuste de la inclinación tangencial del fonocaptor.
● Disco	● YEDS-7

● Conexión



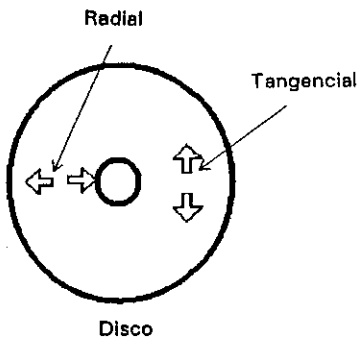


Fig. 4

● Procedimiento

1. Mueva el fonocaptor cerca del borde exterior del disco empleando la tecla "4 + MULTI-SPEED". Presione tecla "1 + MULTI-SPEED", la tecla "2 + MULTI-SPEED", y "3 + MULTI-SPEED" en secuencia para cerrar los servos de enfoque, del pivote y de seguimiento y ajustar el reproductor al modo de reproducción.
2. Emplee una llave hexagonal (3 mm) para ajustar el tornillo de ajuste de inclinación radial de modo que el patrón de ojo (forma de onda en forma de diamante que aparece en el centro de la señal de RF) se vea con la mayor claridad.
3. Emplee la llave hexagonal para ajustar el tornillo de ajuste de inclinación tangencial de modo que el patrón de ojo se muestre con la mayor claridad (vea la Fig. 5).
4. Ajuste de nuevo el tornillo de ajuste de inclinación radial, y luego el tornillo de ajuste de inclinación tangencial de modo que el patrón de ojo se muestre con la mayor claridad. Si es necesario, ajuste los dos tornillos de ajuste de forma alternada de modo que el patrón del ojo se muestre con la mayor claridad.

Nota :
Radial y tangencial se refieren a las direcciones con relación a los discos, como se muestra en la Fig. 4.

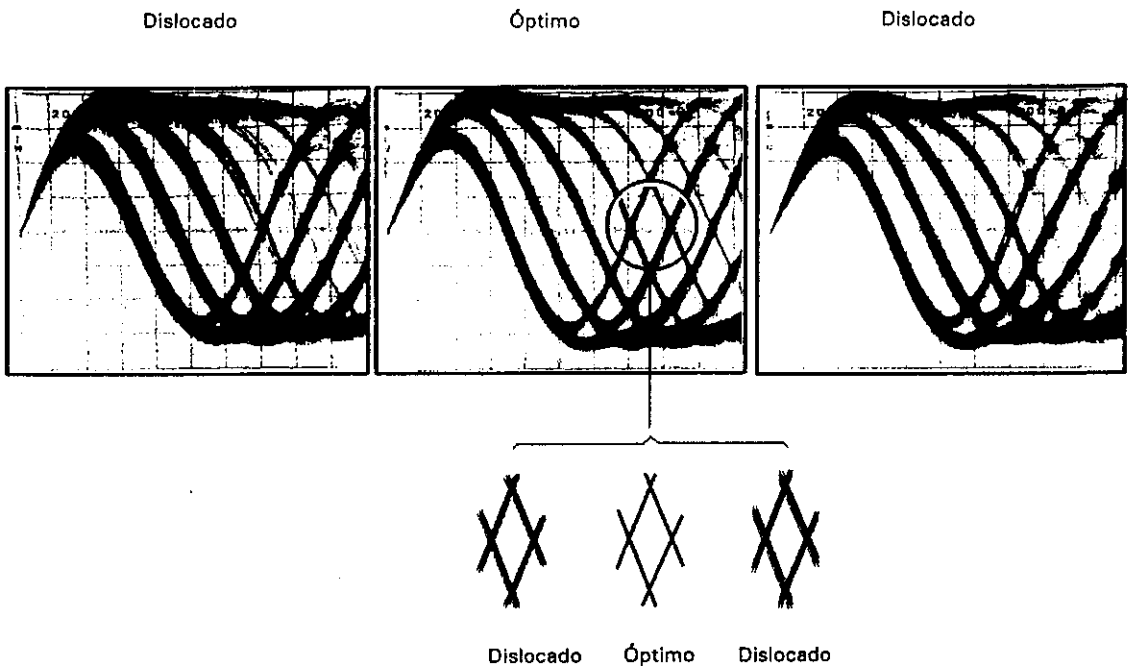

Fig. 5

5. Ajuste del Nivel de RF

- Propósito : Optimizar la amplitud de la señal de RF reproducida.
- Síntoma de ajuste incorrecto : El reproductor no inicia la reproducción. No efectúa la búsqueda de canciones.

• Conexión del instrumento	• Conecte el osciloscopio a la patilla 1 (RF) de CN109.
• Ajuste	• 50 mV/div, 10 mS/div, modo de CA
• Condición del reproductor	• Reproducción
• Punto de ajuste	• VR5 (alimentación de láser)
• Disco	• YEDS-7

- Conexión

- Procedimiento

1. Mueva el fonocaptor al centro entre los bordes interior y exterior del disco (R = 35 mm) empleando la tecla "4 + MULTI-SPEED" ó "5 + MULTI-SPEED". Presione tecla "1 + MULTI-SPEED", la tecla "2 + MULTI-SPEED", y "3 + MULTI-SPEED" en secuencia para cerrar los servos y ajustar el reproductor al modo de reproducción.
2. Ajuste VR5 para ajustar la amplitud de la señal RF a 1,2 Vp-p +0,3/−0,1 V.

6. Ajuste de la Ganancia del Bucle del Servo de Enfoque

- Propósito : Ajustar la ganancia del bucle del servo de enfoque al valor óptimo.
- Síntoma de ajuste incorrecto : El reproductor no inicia la reproducción. El sonido del activador de enfoque es alto.

● Conexión del instrumento	● Vea la Fig. 6.
● Ajuste	● CH1 : 20 mV/div, modo X−Y CH2 : 5 mV/div
● Condición del reproductor	● Reproducción
● Punto de ajuste	● VR3 (FO. GAN)
● Disco	● YEDS-7

● Conexión

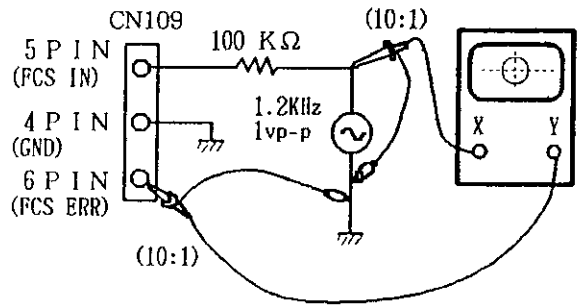

Fig. 6

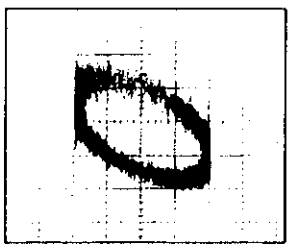
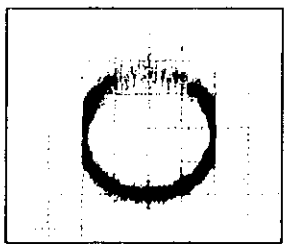
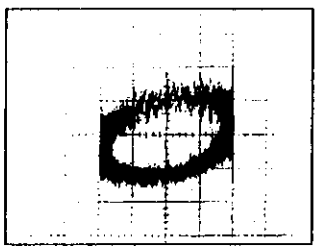


Ganancia excesiva



Ganancia óptima



Ganancia insuficiente

● Procedimiento

1. Ajuste la salida del oscilador de AF a 1,2 kHz y 1 Vp-p.
2. Mueva el fonocaptor al centro entre los bordes interior y exterior del disco (R = 35 mm) empleando la tecla "4 + MULTI-SPEED" ó "5 + MULTI-SPEED". Presione tecla "1 + MULTI-SPEED", la tecla "2 + MULTI-SPEED", y "3 + MULTI-SPEED" en secuencia para cerrar los servos y ajustar el reproductor al modo de reproducción.
3. Ajuste VR3 (FO. GAN) de modo que las formas de onda de Lissajous sean simétricas a los ejes X y Y, respectivamente.

7. Ajuste de la Ganancia del Bucle del Servo de Seguimiento

- Propósito : Ajustar la ganancia del bucle del servo de seguimiento al valor óptimo.
- Síntoma de ajuste incorrecto : El reproductor no inicia la reproducción. El sonido del activador es alto durante la búsqueda. Se saltas pistas.

• Conexión del instrumento	• Vea la Fig. 7.
• Ajuste	• CH1 : 50 mV/div, modo X−Y CH2 : 5 mV/div
• Condición del reproductor	• Reproducción
• Punto de ajuste	• VR4 (TR. GAN)
• Disco	• YEDS−7

- Conexión

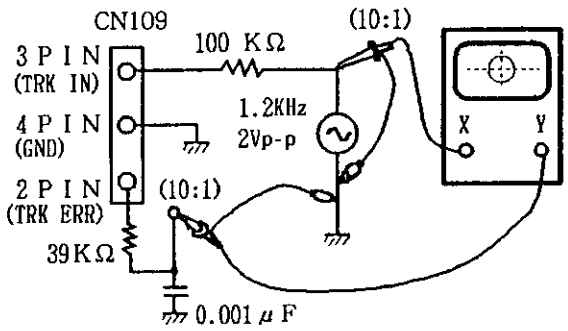


Fig. 7

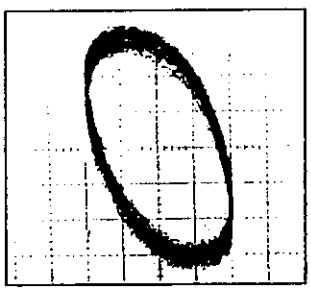
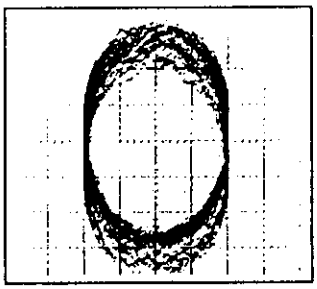
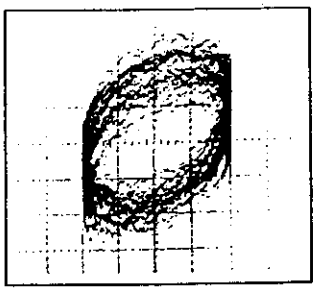


Ganancia excesiva



Ganancia óptima



Ganancia insuficiente

- Procedimiento

1. Ajuste la salida del oscilador de AF a 1,2 kHz y 2 Vp−p.
2. Mueva el fonocaptor al centro entre los bordes interior y exterior del disco (R = 35 mm) empleando la tecla "4 + MULTI-SPEED" ó "5 + MULTI-SPEED". Presione tecla "1 + MULTI-SPEED", la tecla "2 + MULTI-SPEED", y "3 + MULTI-SPEED" en secuencia para cerrar los servos y ajustar el reproductor al modo de reproducción.
3. Ajuste VR4 (TR. GAN) de modo que las formas de onda de Lissajous sean simétricas a los ejes X y Y, respectivamente.

8. Confirmación de la Señal de Error de Enfoque

- Propósito : Evaluar el fonocaptor observando la señal de error de enfoque. Podrá decidirse si el fonocaptor está o no defectuoso partiendo del nivel de amplitud de la señal de error de seguimiento (vea "Ajuste del balance de la forma de onda de seguimiento") y confirmando la forma de onda de la señal de error de enfoque.
- Síntoma de ajuste incorrecto :

● Conexión del instrumento	● Conecte el osciloscopio a la patilla 6 (FOER) de CN109.
● Ajuste	● 100 mV/div, 5 mS/div, modo de CC
● Condición del reproductor	● Parada
● Punto de ajuste	● Ninguno
● Disco	● YEDS-7

- Conexión

- Procedimiento

1. Conecte la patilla 5 de CN109 a GND.
2. Inserte un disco.
3. Presionando la tecla "1 + MULTI-SPEED" mientras mira la pantalla del osciloscopio le permitirá observar durante un instante la forma de onda mostrada en la Fig. 8. Confirme que la amplitud sea de 2,5 Vp-p o mayor y que la amplitud del lado positivo sea aproximadamente igual que la del lado negativo. Tenga presente que la forma de onda se visualiza sólo durante un instante cuando se presiona la tecla "1 + MULTI-SPEED". Presione la tecla tantas veces como sea necesario hasta poder confirmar la forma de onda.

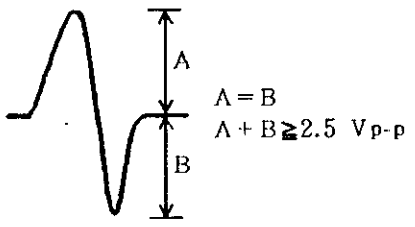


Fig. 8

[Evaluación del fonocaptor]
Evalúe el fonocaptor después de haber efectuado correctamente todos los ajustes. Si el resultado de la evaluación es como se indica abajo, el fonocaptor puede estar defectuoso.

① La amplitud de la señal de error de seguimiento es muy pequeña (2 Vp-p o menor).
② La amplitud de la señal de error de enfoque es muy pequeña (2,5 Vp-p o menor).
③ La amplitud del lado positivo de la señal de error de enfoque es excesivamente asimétrica desde el lado negativo (más de 2 : 1).
④ La señal de RF es demasiado pequeña (0,8 Vp-p o menor). La señal no llega al valor especificado ni después del ajuste de VR5 (alimentación de láser).

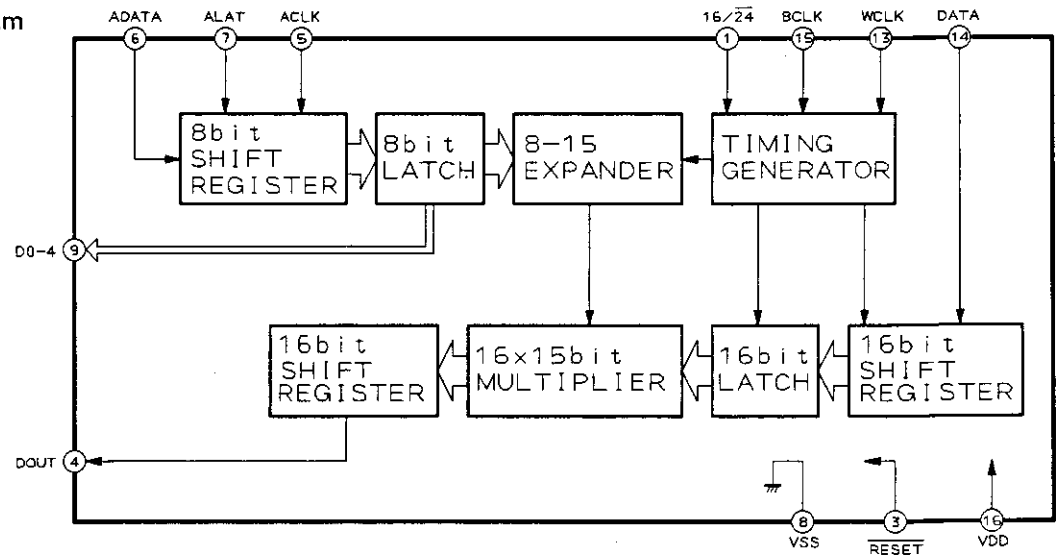
10. IC INFORMATION

- *The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.*

10.1 PD0026A (DGIF UNIT : IC406, IC407)

● Digital Attenuator IC

● Block Diagram



● Pin Function

No.	Symbol	Terminal Name	I/O	Description
1	16/$\overline{24}$	16/$\overline{24}$	I	Changes the DATA format.
2	D4	ATTENUATION DATA 4	O	Displays the attenuation level (0 to −36 dB). Open drain output.
3	$\overline{\text{RESET}}$	$\overline{\text{RESET}}$	I	Resets the inside of IC (attenuation level = 0dB).
4	DOUT	DATA OUT	O	Outputs 16-bit serial data (complement of 2, MSB fast).
5	ACLK	ATTENUATION CLOCK	I	Clock signal for writing the attenuation level.
6	ADATA	ATTENUATION DATA	I	Inputs the attenuation level data (binary, MSB fast).
7	ALAT	ATTENUATION LATCH PULSE	I	Inputs the attenuation level latch pulse.
8	VSS			Ground terminal.
9	D0	ATTENUATION DATA 0	O	Displays the attenuation level (0dB). Open drain output.
10	D1	ATTENUATION DATA 1	O	Displays the attenuation level (0 to −6dB). Open drain output.
11	D2	ATTENUATION DATA 2	O	Displays the attenuation level (0 to −12dB). Open drain output.
12	D3	ATTENUATION DATA 3	O	Displays the attenuation level (0 to −24dB). Open drain output.
13	WCLK	WORD CLOCK	I	Word clock input.
14	DATA	DATA	I	Inputs 16-bit serial data (complement of 2, MSB fast).
15	BCLK	BIT CLOCK	I	Bit clock input.
16	VDD			Power supply.

● Pin Function

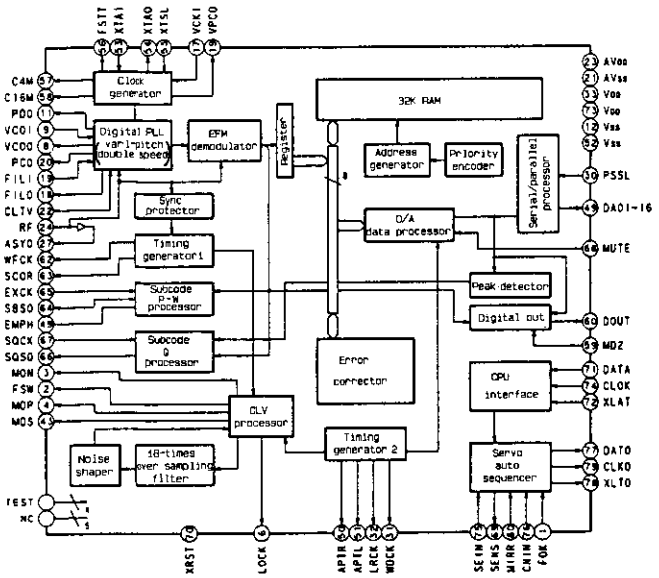
No.	Terminal Name	I/O	Description
1	XSEL		Crystal frequency select. This pin is used to select the master crystal frequency as follows : XSEL HIGH = 384fs XSEL LOW = 256fs This pin defaults to XSEL HIGH when not connected.
2	TEST6		Test 6 : This pin should be left open circuit.
3	IDF3	I	Input data format. These three pins determine the input format the device is to operate in (see functional description). If unconnected these pins will default HIGH (i. e. burst clock mode).
4	IDF2	I	
5	IDF1	I	
6	TEST4	—	Test 4 : This pin should be left open circuit
7	SDI2	I	Serial Data Input. Used in simultaneous mode only (for the right channel signal). When not used, this pin will be internally pulled high.
8	SDI1	I	Serial Data Input. This should be a 16, 18 or 20-bit linear 2's complement PCM signal. In simultaneous mode this pin is used for the left channel signal.
9	WSI	I	Serial input Word Select signal. Signifies whether data word is for the left or right channel. Can be either fs, 2fs, 4fs or 8fs where fs is the system sampling frequency. fs can lie between 16kHz and 53kHz.
10	SCKI	I	Bit clock input for the serial input interface.
11	TEST1	—	Test 1. This pin shouled be left open circuit.
12	VDD	—	+5V power supply for the digital section.
13	VSS	—	Ground connection for the digital section.

No.	Terminal Name	I/O	Description
14	XIN	I	Crystal Oscillator Input.
15	XOUT	O	Crystal Oscillator Output.
16	XSYS1	O	Buffered Oscillator Output.
17	TEST5	–	Test 5. In normal operation this pin should be tied LOW.
18	VDDAR		Analogue 5V supply for right channel.
19	INTR +	O	Output from the Right Positive switched-capacitor integrator. Input to differential op-amp.
20	FBR +		Feedback connection for the Right positive switched-capacitor integrator.
21	VSSAR		0V supply for right channel.
22	FBR –		Feedback connection for the Right Negative switched-capacitor integrator.
23	INTR –	O	Output from the Right Negative switched-capacitor integrator. Input to differential op-amp.
24	VRCR	I	High impedance voltage refernce for right channel inputs. Typically VDDAR/2.
25	VDACR		Reference Voltage Supply for Right channel DAC's. Normally this will be connected to VSS.
26	VROR	O	Right channel Voltage Reference Output. Typically VDDAR/2.
27	VDDATR		5V supply for right channel analogue timing.
28	VSSAT		0V supply for left and right channel analogue.
29	VDDATL		5V supply for left channel analogue timing.
30	IRR		24kΩ bias resistor connection for the reference current generator circuit.
31	VROL	O	Left channel Voltage Reference Output. Typically VDDAL/2.
32	VDACL		Reference Voltage Supply for Left channel DAC. Normally this will be connected to VSS.
33	VRCL	I	High impedance voltage reference for left channel inputs and for bias current generator. Typically VDDAL/2.
34	INTL –	O	Output from the Left Negative switched-capacitor integrator. Inpuf to differential op-amp.
35	FBL –		Feedback connection for the Left Negative switched-capacitor integrator.
36	VSSAL		0V supply for left channel.
37	FBL +		Feedback connection for the Left Positive switched-capacitor integrator.
38	INTL +	O	Output from the Left Positive switched-capacitor integrator. Input to differential op-amp.
39	VDDAL		Analogue 5V supply for left channel.
40	TEST2	–	Test 2 : This pin should be left open circuit.
41	TEST3	–	Test 3 : This pin should be left open circuit.
42	TEST7	–	Test 7 : This pin should be left open circuit.
43	XSYS2	O	Output clock at a frequency of half the master clock frequency.
44	TEST8	–	Test 8 : This pin should be left open circuit.

10.4 CXD2500AQ (CONT UNIT : IC2)

● Decoder

● Block Diagram



● Pin Function

No.	Terminal Name	I/O	Description
1	FOK	I	Focus OK input terminal. Used for SENS output and the servo auto sequencer.
2	FSW	O	Output to switch the spindle motor output filter.
3	MON	O	ON/OFF control output of the spindle motor.
4	MDP	O	Servo control of the spindle motor.
5	MDS	O	Servo control of the spindle motor.
6	LOCK	O	Samples GFS at 460Hz and outputs "H" when GFS is in the H mode. Outputs "L" when receiving the L signal continuously eight times.
7	NC	–	——
8	VCO0	O	Oscillation circuit output for analog EFM PLL.
9	VCOI	I	Oscillation circuit input for analog EFM PLL. f_{LOCK} = 8.6436MHz
10	TEST	I	TEST terminal normal GND.
11	PDO	O	Charge pump output for analog EFM PLL.
12	Vss	–	GND
13	NC	–	——
14			
15			
16	VPCO	O	PLL charge pump output for variable pitch.
17	VCKI	I	Clock input from external VCO for variable pitch. $f_{Ccenter}$ = 16.9344MHz
18	FILO	O	Master PLL (slave = digital PLL) filter output
19	FILI	I	Master PLL filter input
20	PCO	O	Master PLL charge pump output
21	AVss	–	Analog GND
22	CLTV	I	Master VCO control voltage input
23	AVDD	–	Analog power supply (+5V)
24	RF	I	EFM signal input
25	TEST2	I	Connect to GND.
26	TEST3		
27	ASYO	O	EFM full swing output (L = Vss, H = V_{DD})
28	TEST4	I	Connect to GND.
29	NC	–	——
30	PSSL	I	Audio data output mode switching input. Serial output by the L mode. Parallel output by the H mode.
31	WDCK	O	D/A interface for 48-bit slot. Word clock f = 2Fs.
32	LRCK	O	D/A interface for 48-bit slot. LR clock f = Fs.
33	V_{DD}	–	Power supply (+5V)
34	DA16	O	DA16 (MSB) output when PSSL = 1. Serial data (2s'COMP, MSB fast) of the 48-bit slot when PSSL = 0.
35	DA15	O	DA15 output when PSSL = 1. Bit clock of the 48-bit slot when PSSL = 0.
36	DA14	O	DA14 output when PSSL = 1. Serial data (2s'COMP, LSB fast) of the 64-bit slot when PSSL = 0.
37	DA13	O	DA13 output when PSSL = 1. Bit clock of the 64-bit slot when PSSL = 0.
38	DA12	O	DA12 output when PSSL = 1. LR clock of the 64-bit slot when PSSL = 0.

No.	Terminal Name	I/O	Description
39	DA11	O	DA11 output when PSSL = 1. GTOP output when PSSL = 0.
40	DA10	O	DA10 output when PSSL = 1. XUGF output when PSSL = 0.
41	DA09	O	DA09 output when PSSL = 1. XPLCK output when PSSL = 0.
42	DA08	O	DA08 output when PSSL = 1. GFS output when PSSL = 0.
43	DA07	O	DA07 output when PSSL = 1. RFCK output when PSSL = 0.
44	DA06	O	DA06 output when PSSL = 1. C2P0 output when PSSL = 0.
45	DA05	O	DA05 output when PSSL = 1. XRAOF output when PSSL = 0.
46	DA04	O	DA04 output when PSSL = 1. MNT3 output when PSSL = 0.
47	DA03	0	DA03 output when PSSL = 1. MNT2 output when PSSL = 0.
48	DA02	O	DA02 output when PSSL = 1. MNT1 output when PSSL = 0.
49	DA01	O	DA01 output when PSSL = 1. MNT0 output when PSSL = 0.
50	APTR	O	Aperture compensation control output. H mode when Rch.
51	APTL	O	Aperture compensation control output. H mode when Lch.
52	Vss	–	GND
53	XTAI	I	16.9344MHz Xtal oscillation circuit input or 33.8688MHz.
54	XTAO	O	16.9344MHz Xtal oscillation circuit output.
55	XTSL	I	Xtal select input terminal. Changes to the L mode when Xtal is 16.9344MHz. Changes to the H mode when Xtal is 33.8688MHz.
56	FSTT	O	2/3 divider output of terminals 53 and 54. Does not change with the variable pitch.
57	C4M	O	4.2336MHz output. Changes simultaneously with the variable pitch.
58	C16M	O	16.9344MHz output. Changes simultaneously with the variable pitch.

No.	Terminal Name	I/O	Description
59	MD2	I	Digital-out ON/OFF control. Is turned ON by the H signal. Is turned OFF by the L signal.
60	DOUT	O	Digital-out output terminal.
61	EMPH	O	Outputs "H" when emphasis exists in the playback disc. Outputs "L" when no emphasis exists in the playback disc.
62	WFCK	O	WFCK (Write Frame Clock) output.
63	SCOR	O	Outputs "H" when the system detects either subcode synchro S0 or S1.
64	SBSO	O	Sub P ~ W serial output.
65	EXCK	I	Clock input for SBSO lead out.
66	SQSO	O	SubQ 80-bit and PCM peak. Level data 16-bit output.
67	SQCK	I	Clock input for SQSO lead out.
68	MUTE	I	Is muted by the H signal. Muting is canceled by the L signal.
69	SENS	–	SENS output. Outputs to CPU.
70	XRST	I	System reset. Resets by the L signal.
71	DATA	I	Serial data input from CPU.
72	XLAT	I	Latch input from CPU. Latches serial data at the trailing edge.
73	VDD	–	Power supply (+5V)
74	CLOK	I	Serial data transfer clock input from CPU.
75	SEIN	I	SENSE input from SSP.
76	CNIN	I	Track jumps counting signal input
77	DATO	O	Serial data output to SSP.
78	XLTO	O	Serial data latch output to SSP. Latches serial data at the trailing edge.
79	CLKO	O	Serial data transfer clock output to SSP.
80	MIRR	I	Mirror signal input. For a jump more than 128 tracks using the auto sequencer.

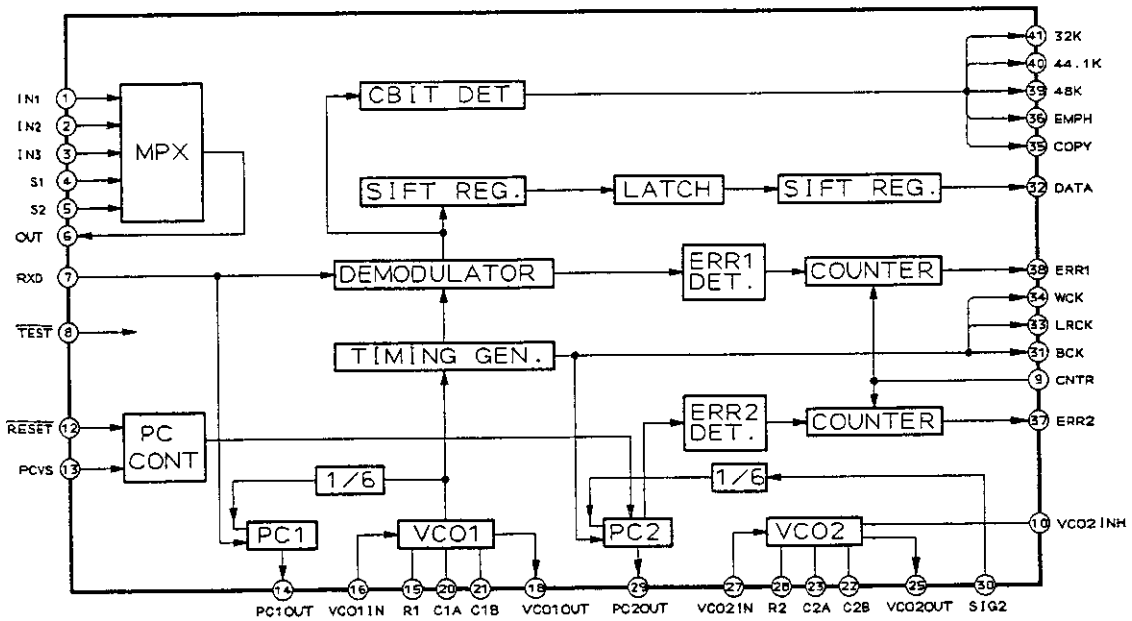
● Digital Interface Receiver

● Block Diagram



● Pin Function

No.	Terminal Name	I/O	Description	
1	IN1	I	Data input 1	Digital audio data input in the EIAJ format. (TTL level)
2	IN2	I	Data input 2	
3	IN3	I	Data input 3	
4	S1	I	Input selector 1 (TTL level)	
5	S2	I	Input selector 2 (TTL level)	
6	OUT	O	MPX output of data.	
7	RXD	I	Data input. Normally connect to OUT. (CMOS level)	
8	$\overline{\text{TEST}}$	I	Test mode input. Normally fixed to "H." Contains pull-up resistance. (TTL level)	
9	CNTR	I	Counter clock input for setting output time for ERR1 and ERR2. (CMOS level)	
10	VCO2 INH	I	For stopping VCO2 oscillation. Stops oscillation by the "H" signal. (TTL level)	
11	VSS	–	Logic VSS.	
12	$\overline{\text{RESET}}$	I	Power ON reset input. (CMOS level)	
13	PCVS	I	Input for setting VCO1 and VCO2 free-running frequency.	

No.	Terminal Name	I/O	Description
14	PC1 OUT	O	Phase comparator 1 output.
15	R1	–	Terminal to connect the VCO1 adjusting resistance.
16	VCO1IN	I	VCO1 control voltage input.
17	VDD1	–	VCO1 VDD
18	VCO1 OUT	O	VCO1 output (384fs)
19	VSS1	–	VCO1 VSS
20	C1 A	–	VCO1 adjusting capacity connection terminal.
21	C1 B	–	
22	C2 B	–	VCO2 adjusting capacity connection terminal.
23	C2 A	–	
24	VSS2	–	VCO2 VSS
25	VCO2 OUT	O	VCO2 output (384fs)
26	VDD2	–	VCO2 VDD
27	VCO2 IN	I	VCO2 control voltage input.

No.	Terminal Name	I/O	Description
28	R2	–	Terminal to connect the VCO2 adjusting resistance.
29	PC2 OUT	O	Phase comparator 2 output.
30	SIG2	I	V input of the phase comparator 2. Normally connect to VCO2 OUT. (CMOS level)
31	BCK	O	Demodulation data bit clock output.
32	DATA	O	Demodulation audio data output.
33	LRCK	O	Demodulation data L/R channel output. (H = L channel)
34	WCK	O	Demodulation data word clock output.
35	COPY	O	COPY information output. Enables copy by the "H" signal.
36	EMPH	O	Emphasis information output. (H = Emphasis exists.)
37	ERR2	O	2nd PLL UNLOCK output. (H = UNLOCK)

No.	Terminal Name	I/O	Description
38	ERR1	O	1st PLL data reading error output. (H = Error detected.)
39	48K	O	Sampling frequency information output. Open drain for the LED driver. "L" active.
40	44.1K		
41	32K		
42	VDD	–	Logic VDD.

● Input Selector

S2	S1	OUT
L	L	L
L	H	IN1
H	L	IN2
H	H	IN3

Terminals not used for IN1 to IN3 are fixed either in the "H" or "L" mode.

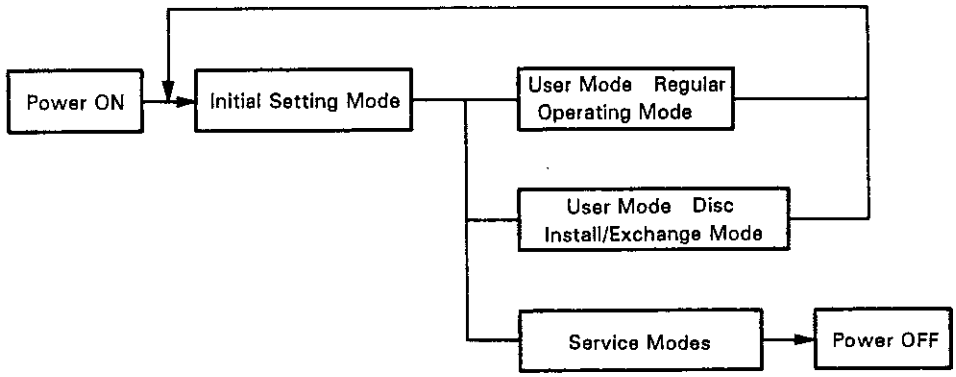
11. SERVICE MODE

1. OPERATION MODE

The operation mode is devided into two types, User mode and Service mode.
Mode switching process is in the Initial setting mode, where the set reads which buttons are pressed and which bits of a DIP switch are set.



The user mode has the regular operation mode, which is controlled by the host computer, and the disc install and disc exchange modes. A restart can be performed from the initial setting mode by opening the door, switching the DIP switch setting, and closing the door because the mode settings are determined by the DIP switch setting.
For details, see the instruction manual.

■ Indicator

In addition to the ON and OFF conditions, the lamp can also flash rapidly or slowly. Always observe the indicator during operation. Because the meaning of the indicator is very important.

- Fast Flashing

The lamp flashes quickly when the door is open to indicate that it must be closed. For example, when the manual mode is entered, a request to close the door is indicated when the initialization is not completed. When this occurs, a start up operation must be performed after the completing the initialization. In the disc install/exchange mode, a request is issued to close the door because the mechanism operation cannot be performed when the door is open.

When the door is closed, a request is made to open the door. When a series of operation is completed in the disc install/exchange mode and the next operation is necessary, a request is made to open the door. If an error occurs, a request is made to open the door and display the error message. And in that case, the lamp continues to flash rapidly after the door is closed.

- Slow Flashing

The lamp flashes slowly to indicate that the mechanism is operating. Be careful not to open the door by mistake when the mechanism is operating. This condition is also seen while the initial setting mode is executed.

- OFF Condition

This lamp indicates that the door is closed. (User mode)

- ON Condition

This lamp lights to indicate that the door is open (User mode). If the service mode is entered, the indicator lamp stays ON even when the door is closed. This enables external verification that the door was closed by mistake when the service mode is entered.

2. SERVICE MODE

The following eight modes compose the service mode.

① SUPER MANUAL MODE
② MANUAL MODE
③ ERROR HISTORY REFERENCE MODE
④ PLAYER ADDRESS SETTING MODE
⑤ COUNTER READ MODE
⑥ LOOP BACK TEST MODE
⑦ SOFTWARE VERSION REFERENCE MODE
⑧ SCREENING MODE

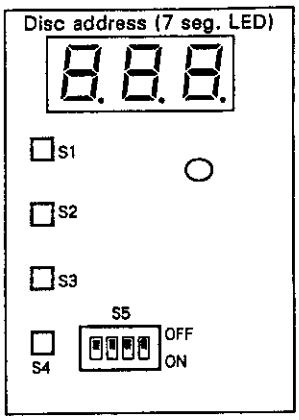


Fig. 1 KDSB unit

The tactile switches (S1 to S4) in the KDSB unit, the dip switches (S5) and the power switch are used to enter the service mode. Turn on the power while pressing some tactile switches. The various independent operations are performed depending on the combined pattern of switches that are pressed (except in the screening mode). When shifting to other modes, turn the power switch OFF one time and then turn it ON again. The operation will not shift to another mode if the power switch is not turned ON again. (Refer to Fig. 1 and 2.)

No.	Mode	How to Enter Each Service Mode.
1	SUPER MANUAL MODE	Press S1 S2 S3 S4 + Power Switch ON.
2	MANUAL MODE	Press S1 S2 + Power Switch ON.
3	ERROR HISTORY REFERENCE MODE	Press S3 S4 + Power Switch ON.
4	PLAYER ADDRESS SETTING MODE	Press S1 S3 + Power Switch ON.
5	COUNTER READ MODE	Press S2 S4 + Power Switch ON.
6	LOOP BACK TEST MODE	Press S2 S3 + Power Switch ON.
7	SOFTWARE VERSION REFERENCE MODE	Press S1 S4 + Power Switch ON.
8	SCREENING MODE	OPEN 1 2 3 4 OFF ON + Power Switch ON.

Fig. 2

Precaution

The user mode of the CAC – V3000 is designed so the mechanism operation cannot be performed when the door is opened to ensure user safety. However, in the service mode, the mechanism operates when the door is opened because the mechanism control is operated by the operation buttons inside the door. Read this manual adequately to understand the operations and perform them correctly.

The screening mode can only operate if the door is opened or closed when DIP switch number 4 is ON.

The screening mode is a provisional function that is used in manufacturing processing and should not be used by the regular user.

The mechanism operates in the following service modes.

- Manual mode
- Super manual mode
- Screening mode

① Super Manual Mode

It is possible to monitor the whole sensors on the operating mechanism. Those are seen on the LEDs. And also each motor that drives the mechanism is able to control individually.

1) Start-up Operation

While pressing all switches S1 to S4, turn the power switch ON.

2) Sensor ON/OFF Verification

Each segment of the seven-segment LED are assigned to each sensor. See Fig. 3 and Table 2 to 8.

※ The logical levels of each segment are as follows.

Segment lights : 1
Segment goes off : 0
LED brightness decreases : CLS3 = 0
LED brightness increases : CLS3 = 1

3) Drive Motor Select

Select the drive motor by setting the DIP switch's bit. (Refer to Table 1)

Switches S1 and S2 are used to drive the motor. The motor is driven while the switch is pressed without any relation to the sensor value.

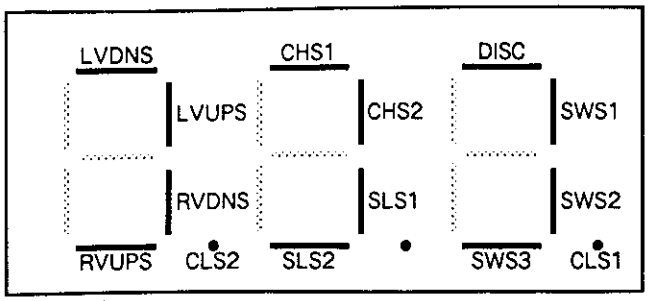
Switch	Motor and Direction of the Operation				
	Vertical Motor	Clamp Motor	Swing Motor	Chuck Motor	Slide Motor
S1	Upward	Clockwise direction	Right	Close	Forward
S2	Downward	Counterclockwise direction	Left	Open	Backward
S5	 All switches : OFF	 S5-1 only : ON	 S5-2 only : ON	 S5-3 only : ON	 S5-4 only : ON

Note :

To protect the mechanism, the motor does not operate under the following conditions.

- *Chuck operation is not possible if the slide mechanism is in the middle position.*
- *The slide mechanism cannot extend if the swing arm is not stopped in the right or left position.*
- *Swing operation is not possible if the slide mechanism has not retracted.*

Table 1



Note : CLS3 determines the brightness of the entire LEDs.

LVDNS, LVUPS) Left vertical position detection sensor (See Table 2)
RVDNS, RVUPS) Right vertical position detection sensor (See Table 3)
CHS1, CHS2) Chuck motor end detection switch (See Table 5)
SLS1, SLS2) Slide motor end detection switch (See Table 4)
DISC : Disc presence detection switch (See Table 6)
SWS1, SWS2, SWS3) Swing motor stop position detection switch (See Table 7)
CLS1, CLS2, CLS3) Clamp motor stop position detection switch

Clamper (right)	OPEN		OPEN		CLOSE		CLOSE		OPEN
Motor rotation direction	⇦ Counterclockwise direction						Clockwise direction ⇨		

Table 8

② Manual Mode

1) Start-up Operation

While pressing both S1 and S2, turn the power switch ON.

If the manual mode is entered, the LED usualy displays [n1]. However, a sequence number is displayed when the set starts just after a malfunction has occurred.

※ In some cases, a request is made for the initial setting to ensure safe operation. Close the door if the indicator flashes rapidly. The lamp will flash slowly and operation will be executed same as the initial settings. The indicator lamp goes off when the initial setting is completed. After the power is shut off, open the door, and turn the power on while pressing switches S1 and S2 again.

2) Usage

- The disc setup operations can be executed for each step from n1 to n14 for S3 (Refer to Tables 9 and 10). The transfer base vertical operation is performed by switches S1 and S2.
- The disc return operation is executed for each step from r14 to r1 for switch S4. (Refer to Tables 9 and 10).
  The transfer base vertical operation is performed by switches S1 and S2. If switch S4 is pressed to return the CD to the incorrect rack in [r7], the correct address is displayed on the LED.
- S1, S2 can directly control the drive motor at each step. (see Table 10)
- The selection of the CD player and the side of the rack can be performed by bit 1 of S5 (DIP switches). If the right side is selected the period next to the numeral LED lights. (Refer to Fig. 4.) But this selection is only possible at sequence numbers [1], [7] and [14].

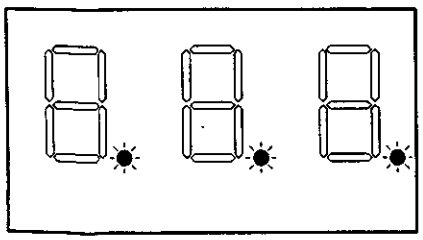

Fig. 4 The period lights.

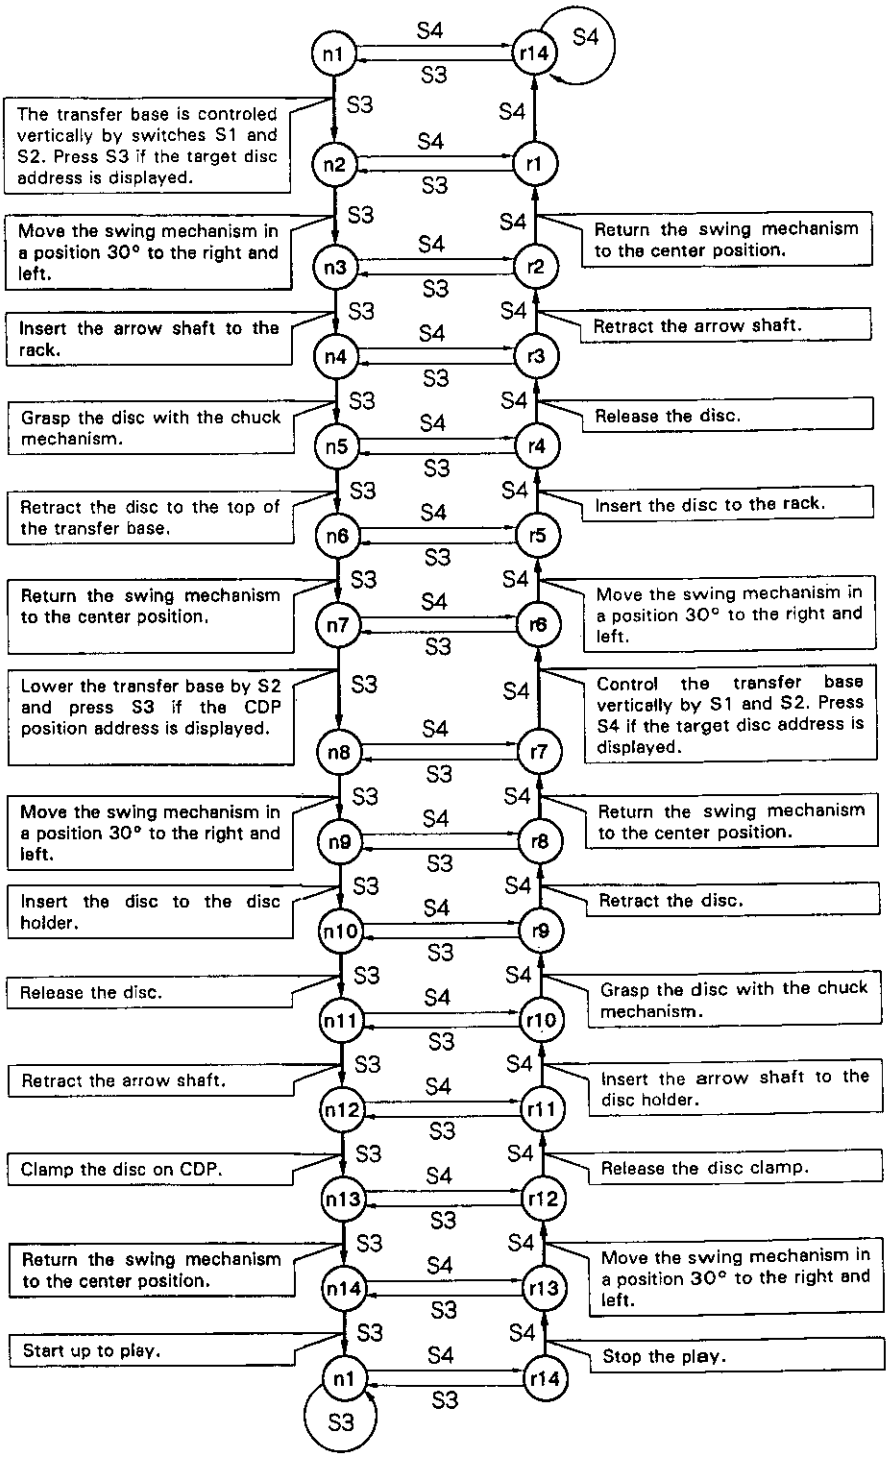

Note : CDP is an abbreviation for CD player.

Table 9 Manual Mode Operation sequences

Operation	S1−ON	S2−ON	LED Displays
Vertical	Shift to upper direction.	Shift to lower direction.	The current address
Swing	Shift to right direction.	Shift to left direction.	Flash when the mechanism is not on the correct position.
Slide	Forward	Backward	
Chuck	Close	Open	
Clamp	* Clockwise turn	* Counterclockwise turn	

* Refer to Table 8.

Table 10−1 Tactile Switch Functions

Operation	S3−ON	S4−ON
Disc setup	After the step operation is completed, a value of one is added to the sequence number.	A value of one is subtracted from the sequence number and the operation condition is changed to [Disc Return].
Disc return	A value of one is added to the sequence number and the operation condition is changed to [Disc Setup].	After the step operation is completed, a value of one is subtracted from the sequence number.

Table 10−2 Tactile Switch Functions

Operation	Sequence	Operation Contents	Explanation
Disc setup	n 1	Vertical	The transfer base is controled vertically by switches S1 and S2. Press S3 if the target disc address is displayed.
	n 2	Swing	Move the swing mechanism in a position 30° to the right and left.
	n 3	Slide	Insert the arrow shaft.
	n 4	Chuck	Grasp the disc with the chuck mechanism.
	n 5	Slide	Retract the disc to the top of the transfer base.
	n 6	Swing	Return the swing mechanism to the center position.
	n 7	Vertical	Lower the transfer base by S2 and press S3 if the CDP position address is displayed.
	n 8	Swing	Move the swing mechanism in a position 30° to the right and left.
	n 9	Slide	Insert the disc to the disc holder.
	n10	Chuck	Release the disc.
	n11	Slide	Retract the arrow shaft.
	n12	Clamp	Clamp the disc on CDP.
	n13	Swing	Return the swing mechanism to the center position.
Disc return	r14	Vertical	Stop the play.
	r13	Swing	Move the swing mechanism in a position 30° to the right and left.
	r12	Clamp	Release the disc clamp.
	r11	Slide	Insert the arrow shaft to the disc holder.
	r10	Chuck	Grasp the disc with the chuck mechanism.
	r 9	Slide	Retract the disc.
	r 8	Swing	Return the swing mechanism to the center position.
	r 7	Vertical	Control the transfer base vertically by S1 and S2. Press S4 if the target disc address is displayed.
	r 6	Swing	Move the swing mechanism in a position 30° to the right and left.
	r 5	Slide	Insert the disc to the rack.
	r 4	Chuck	Release the disc.
	r 3	Slide	Retract the arrow shaft.
	r 2	Swing	Return the swing mechanism to the center position.

Table 11 Operation Sequence Chart

③ Error History Reference Mode

Up to eight error events can be recorded. The most recent event is recorded as number one. When the number of events exceeds eight, the oldest one is shifted out (deleted.)

1) Start-up Operation

While pressing switches S3 and S4, turn the power switch ON. The LED display flashes [E −−] slowly.

2) Usage

Operations are performed according to the functions shown in Table 12.

Switch	Function	Contents
S1	One is added to the error history pointer.	The error history pointer (1 to 8) is displayed when the switch is pressed. The error number (Table 13) is displayed when the switch is released.
S2	One is subtracted from the error history pointer.	The error history pointer (1 to 8) is displayed when the switch is pressed. The error number (Table 13) is displayed when the switch is released.
S3	Call the detailed error data. (Invalid when detailed error data was not recorded.)	The vertical address where the error occurred is displayed while the switch is pressed. (The disc address is displayed if a CDP error occurs.) When the switch is released, the sequence number when the error occurred is displayed. (The CD player error message is displayed if a CDP error occurs.) * If switch S3 is pressed again, the error history pointer and the error number display returns.
S4	Clear the error history.	Press this switch more than four seconds, then the flash cycle speed increases and the entire error history is cleared.

Note : CDP is an abbreviation for CD player.

Table 12

Error No.	Error Name	Contents
E71	PLAYER STATUS ERROR ※ Only detected in screening mode.	The CDP does not enter the correct operation status. ● An error occurs when the anticipated operation status is not set even after waiting approximately five minutes.
E72	TOC READ ERROR ※ Only detected in screening mode.	The TOC data of the disc was not be able to read. ● The disc is abnormal or the CDP is malfunctioning.
E81	NO PLAYER AVAILABLE	There is no CDP available. ● Both CDPs are checked in the initial setting mode. If both represent E89, then it turns to E81.
E82	BUFFER OVERFLOW	The data from the CDP was not processed. ● The decoding process of the data from the CDP was not completed quickly enough. ● But receive buffer is auto maticaly cleared communicates and the set continues to work.
E83 E84	PLAYER ERROR PROTOCOL ERROR ※ Only detected in screening mode.	The disc cannot be played normally. The CDP communication is not operating normally. ● This error does not in the normal mode because the host computer communicates directly with the CDP. ● The error code from the CDP is recorded as the detailed error data. (Refer to Table 14.)
E85	BUFFER OVERFLOW	The data from the host was not processed. ● The decoding process of the data from the host was not completed in time or the length of the command line was too long. ● A value of E00 is returned to the host.

Error No.	Error Name	Contents
E86	NOT SAFE TO SWING	The condition for the swing operation is not ensured. ● An attempt was made to perform a swing operation in [n8], but the clamper was not open completely.
E87	NOT SAFE TO SLIDE	The condition for the slide operation is not ensured. ● An attempt was made to perform a slide operation in [n9] or [r11], but the clamper was not open completely. ● The swing operation is not performed correctly.
E88	VERSION MISMATCH	The CDP microprocessor program did not match the expected version. ● Load the correct version.
E89	NO RESPONSE	A transmission was performed for the CDP but an answer was not returned within 250 ms. ● The CDP unit is not installed. ● The communication line is not connected correctly. ● Control was performed by the incorrect communication mode.
E90	BACKUP DATA IS INCORRECT.	The contents of the backup memory are corrupted. ● Special bytes of memory are checked during the initial setting. If the contents have been changed, clear all backed up data. The error was recorded after this processing was completed. ● The super capacitor is faulty. ● The microprocessor was not inserted correctly. ● The player is not powered for a long period of time (more than a month).
E91	MECHANICAL TIMEOUT ※ The sequence number is recorded as detailed error data.	The operation was not completed even if the maximum permissive time was exceeded. ● The maximum permissive times for each mechanism are as follows. Vertical operation : 20.0 seconds Swing operation : 3.0 seconds Slide operation : 3.0 seconds Chuck operation : 1.5 seconds Clamp operation : 2.0 seconds ● Suspected causes Motor or Driver is faulty. Position sensors are faulty. Overload due to faulty operation position. ● If it occurs in [n3], it returns to [r1] and tries this step again. The value E91 remains in the error history. If an error occurs again, operation stops.
E92	THE DISC CANNOT CHUCK.	The disc was not be able to pick up. ● If it occurs in [n5], operation does not stop, because the disc may not enter the rack correctly. ● If it occurs in [r9], a retry operation is attempted up to a maximum of four times. If the operation fails five times consecutively, this is regarded as an error and operation stops. This is recorded as only one error.
E93	RETURN ADDRESS IS LOST.	The address of the disc on the transfer base is not known. ● The contents of memory are faulty. (An error code of E90 is recorded also.) ● The disc presence sensor is faulty.
E94	VERTICAL MOVING NG.	The vertical motor locks for more than 10 seconds. ● The mechanism sticks into the top or bottom end because the vertical address was not read correctly. ● The motor control circuit is faulty. ※ The address in the detailed error data was the address currently read by the microprocessor. Compare the actual address.

Error No.	Error Name	Contents
E95	SOFTWARE TROUBLE	It was determined that a dangerous condition occurred because the program malfunctioned. ● A stack overflow occurred when there were numerous errors.

※ When an error occurred in the screening mode, it does not reset in the initial setting mode even when the power is turned on again (error lock). In that case, enter to the error history mode, after removing or repairing the cause of the error. Press switch S4. The error number that is displayed is cleared.

Note : CDP is an abbreviation for CD player.

Table 13 Error Number Chart

Error No.	Error Name	Contents
00E	COMMUNICATION ERROR	Communication line error ● Framing error ● Buffer overflow
04E	FEATURE NOT AVAILABLE	Attempt was made to execute unavailable feature. ● Incorrect command mnemonic. ● Not available in this mode.
06E	MISSING ARGUMENT	Required parameter is not specified.
11E	DISC NOT EXIST	No disc is mounted.
12E	ADDRESS ERROR	Search address cannot be found.
13E	DEFOCUSSING ERROR	Defocus occurred.
14E	SPINDLE UNLOCK	Spindle is unlocked.
96E	START-UP ERROR	Start-up operation cannot be performed.
99E	PLAYER PANIC	Unrecoverable error occurred in the player. ● Disc play cannot be continued. ● Player is not correctly connected.

Table 14 Player Error Messages

④ Player Address Setting Mode

When the unit is shipped from the factory, player address [1] is assigned to the left player and player address [2] is assigned to the right player. When a system is designed using two or more changers, the addresses of these players must differ. In this case, enter the player address setting mode and change the player addresses.

1. While pressing S1 and S3 simultaneously, turn the power switch ON. The left players address will be displayed in the following format. The address of the right player cannot be displayed. The address of the right player is set by adding one to the value of the left player.

   [1] This is the factory setting. The setting can be changed to a maximum value of 98.

2. The numeric value can be changed by pressing switch S3 for the one's value and switch S2 for the 10's value. The brightness of the display decreases when the change operation starts.

   [13] Left player [13], Right player [14]

3. If S4 (ENTER) is pressed, the player address that is displayed is recorded and the display brightness returns to the original level. When the number was 00 or 99, the brightness stays at the low level to indicate that the player address setting was not accepted.

⑤ Counter Read Mode

The number of mechanism operations is recorded in order to perform periodic maintenance of the mechanisms. The count corresponds to the number of times a disc was picked up from the disc rack. This is regarded as equivalent to the number of selections that were performed. Multiply the average performance time and calculate the player operation time. The operation time of both players cannot be calculated separately. The display is represented in the following formats.

The high-order unit are displayed.
[– –3] The unit represents the number of 1,000's and the maximum value is 999.

The lower-order units are displayed.
[020] The unit represents the number of ones and the maximum value is 999.
Three digits are always displayed.

1. If the power switch is turned ON while pressing switches S2 and S4 simultaneously, this mode is entered and the value of the high order digits is displayed.
2. If the buttons for S1 to S4 are pressed in any order, the low-order digits are displayed as long as the buttons are pressed. The high-order digits are displayed when the buttons are released.

⑥ Loop-back Test Mode

This mode is used to perform a hardware test of the communication interface. The RX and TX are looped at the external control terminal.

1. If the power switch is turned ON while pressing switches S2 and S3 simultaneously, this mode is entered and the following is displayed.

The left digit of the display represents the low-order four bits of the ASCII code that is transmitted.
[0 –] A value of 30H is transmitted in the initial condition.

2. The right digit displays the low order 4 bits of the ASCII code that is input to RX. As a result, [0 – 0] is displayed if a serial control terminal is connected to produce a loop-back using the special short-circuited connector.
3. A value of one is added to the left digit if S1 is pressed. When the switch is released, a value of one is added to the ASCII code and then it is transmitted. The transmission and reception can be checked by performing this procedure from values of [0 – 0], [1 – 1], [2 – 2] to [F – F]. Data that is transmitted can be in the range from 30H to 5FH. When the host is connected, the corresponding ASCII code is transmitted to it.

※ Short-circuited connection for the loop-back.
Short pins 2 and 3 in the RS–232C cable. Short pins 2 and 3, 7 and 8 in the RS422A cable.

Note :
Check the RS422A and RS232C separately. If both connection terminals are short-circuited simultaneously, the display will not be correct.

⑦ Software Version Reference Mode

The software version of the programed system microprocessor can be verified in this mode.

1. If the power switch is turned ON while pressing switches S2 and S3 simultaneously, this mode is entered and the system microprocessor version is displayed as shown in the following format.

[4.13]

2. If small changes are performed, a separate revision number is assigned to that version. When there is a revision number, the version number is displayed only while any button is being pressed and the revision number appears when the button is released.

⑧ Screening Mode

There is a special service mode called the screening mode. The mechanism can be operated automatically for a long period of time in a previously determined sequence in this mode. And there are four different types of disc accessing depending on the DIP switch-patterns.

So it is very important that the initial disc installing before entering this mode matches the DIP switch-patterns as shown in the following table and explanation. Otherwise, it may cause the mechanical mulfunctions. Be especially careful to use this mode.

DIP Switch Bit Pattern (S5)				The number of required CDs.	8	4	300	4
The addresses to install them	#1 to #4 and #151 to #154	#1, #2 and #151, #152	#1 to #300 (All racks)	#3, #148 and #153, #298
Other disc racks	must be clear.	must be clear.	———	may be OK as they are.
After each play, the disc is returned to	another rack.	another rack.	original rack.	original rack.

Note :

- *During the screening operation, the number of screening operations is displayed on the LED. Numbers greater than 1,000 are indicated by the lighting patterns of the periods in the LED display as shown below.*

  [0 0 0.] : 1,000
  [0 0. 0] : 2,000

- *When the number of operations reaches 2048, it stops. The LED displays [End] when the performance is completed and the transfer base assembly stops at the shipping position. All errors are cleared at this time. The player address returns to the value that was set when the player was shipped from the factory.*
- *If an error occurs during screening, the LED alternately displays the error number, screening number and operation sequence when the error occurred.*

12. FOR KUC TYPE

NOTES:

- *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
- *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
- *Parts marked by "◉" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.*

CONTRAST OF MISCELLANEOUS PARTS

CAC – V3000/KUC and CAC – V3000/HEM have the same construction except for the following :

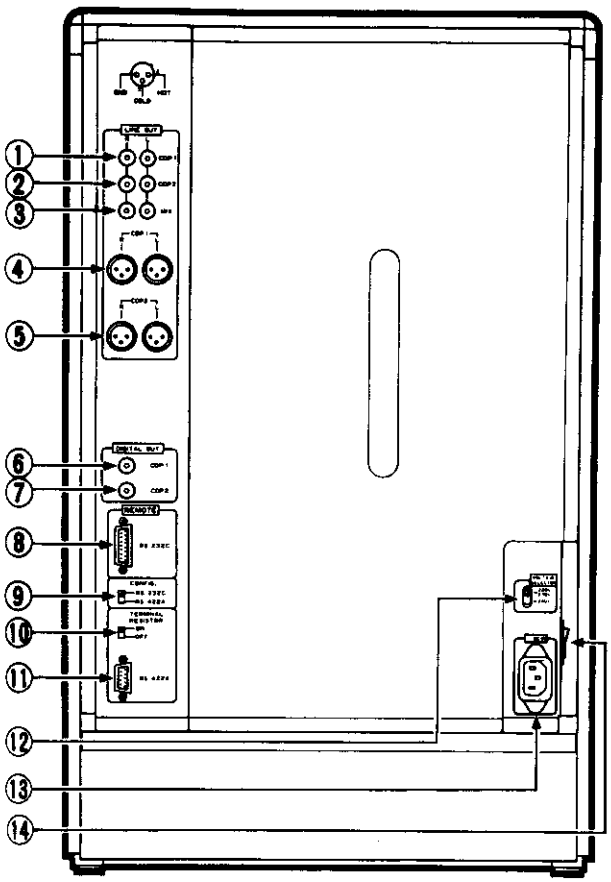
REAR VIEW



① LINE OUT CDP1 jacks (RCA pin-jack, unbalanced)
Outputs analog audio signals from CD player 1

② LINE OUT CDP2 jacks (RCA pin-jack, unbalanced)
Outputs analog audio signals from CD player 2

③ LINE OUT MIX jacks (RCA pin-jack, unbalanced)
Outputs analog signals by mixing audio signals from CD players 1 and 2

④ LINE OUT CDP1 jacks (XLR-3•32, balanced)
Outputs analog audio signals from CD player 1

⑤ LINE OUT CDP2 jacks (XLR-3•32, balanced)
Outputs analog audio signals from CD player 2

⑥ DIGITAL OUT CDP1 jack (RCA pin-jack, unbalanced)
Outputs digital audio signals from CD player 1

⑦ DIGITAL OUT CDP2 jack (RCA pin-jack, unbalanced)
Outputs digital audio signals from CD player 2

⑧ RS-232C connector
RS-232C interface for connection to a computer or controller. See page 10 for more details.

⑨ RS-232C/RS-422A switch
Switches the interface from RS-232C to RS-422A and vice versa

⑩ RS-422A TERMINAL RESISTOR switch
Switches input impedance. Turn to ON when you use RS-422A interface.

⑪ RS-422A connector
RS-422A interface for connection to a computer or controller. See page 10 for more details.

⑫ VOLTAGE SELECTOR switch
Switches the voltage from 220-230 V to 240 V and vice versa

⑬ ~ AC inlet

⑭ Power switch

14. SPECIFICATIONS

FOR HEM TYPE

General

System ..... CD auto changer
Power supply ..... AC 220 – 230/240 V, 50/60 Hz
Power consumption ..... 64 W
Weight ..... 28.5 kg
Dimensions ..... 360 (W) x 360 (D) x 590 (H) mm
Allowable operating temperature range ... +5 to +35°C
Allowable operating humidity range ..... 5 to 90% (no condensation)
Storage temperature ..... −40 to +60°C

Discs

..... 12 cm CDs

Connection terminals

Players 1 and 2 unbalanced output
Output level ..... 2.2 ±0.5 Vrms
Output impedance ..... 1 kΩ or lower
Signal-to-noise ratio ..... 110 dB
Frequency response ..... 20 Hz to 20 kHz ±0.5 dB
Distortion ..... 0.007% at 1 kHz
Channel separation ..... 103 dB
Remained noise ..... 100 μVrms or less
Level difference between right and left ... 1.5 dB or less
Players 1 and 2 balanced output
Output level ..... +4 $^{+1.8}_{-2.2}$ dBm
Players 1 and 2 mix unbalanced output
Output level ..... 2.2 ±0.5 Vrms
Output impedance ..... 1 kΩ or lower

Function

Disc storage ..... Max. 300 discs

Accessories

Audio cable (4 m) 2
Door key (for locking the front door) 2
Electrostatic charge removal sheet 1
Power cord 1
Operating Instructions 1

NOTE:
Specifications and design subject to possible modifications without notice, due to improvements.

FOR KUC TYPE

General

System ..... CD auto changer
Power supply ..... AC 120 V, 60 Hz
Power consumption ..... 60 W
Weight ..... 28.5 kg (62 lb 13oz)
Dimensions ..... 360 (W) x 360 (D) x 590 (H) mm
14-3/16 (W) x 14-3/16 (D) x 23-1/4 (H) in
Allowable operating temperature range ... +5 to +35°C (41 to 95°F)
Allowable operating humidity range ..... 5 to 90% (no condensation)
Storage temperature ..... −40 to +60°C (−40 to 140°F)

Discs

..... CD (5-inch only)

Connection terminals

Players 1 and 2 unbalanced output
