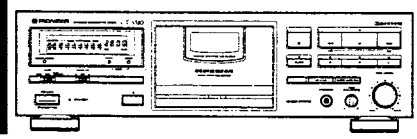
Service Manual



ORDER NO.
ARP2751

STEREO CASSETTE DECK

CT-S320

CT-S320 HAS THE FOLLOWING:

Type	Power Requirement	Remarks
HEM	AC220 – 230V, 230 – 240V (switchable) *	
HB	AC220 – 230V, 230 – 240V (switchable) *	
HPW	AC220 – 230V, 230 – 240V (switchable) *	
SD	AC110V, 120 – 127V, 220V, 240V (switchable)	
SL	AC110V, 120 – 127V, 220V, 240V (switchable)	

* Change the connection of the power transformer's primary wiring.

- **This manual is applicable to CT-S320/HEM, HB, HPW, SD and SL.**
- **For HB, HPW, SD and SL types, refer to page 27.**

1. EXPLODED VIEWS, PACKING AND PARTS LIST

1.1 EXTERIOR AND PACKING

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

2. PCB PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10^1 → 561 ····· RD1/8PM 5 6 1 J
47k Ω → 47 × 10^3 → 473 ····· RD1/4PS 4 7 3 J
0.5 Ω → 0R5 ····· RN2H 0 R 5 K
1 Ω → 010 ····· RS1P 0 1 0 K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω → 562 × 10^1 → 5621 ····· RN1/4PC 5 6 2 1 F

Mark	No.	Description	Part No.

Line Voltage Selection

Line voltage can be changed with the follows:
1. Disconnect the AC power cord.
2. Remove the cover
3. Change the connection of TRN 1 UNIT primary pins.
4. Stick the line voltage label on the rear panel

5. ADJUSTMENTS

5.1 MECHANICAL ADJUSTMENT

1. Tape speed Adjustment			
Mode	Test tape	Adjustment position	Specification rating (playback frequency)
PLAY	Play the STD-301 tape (3kHz)	VR852	3020Hz ± 5Hz

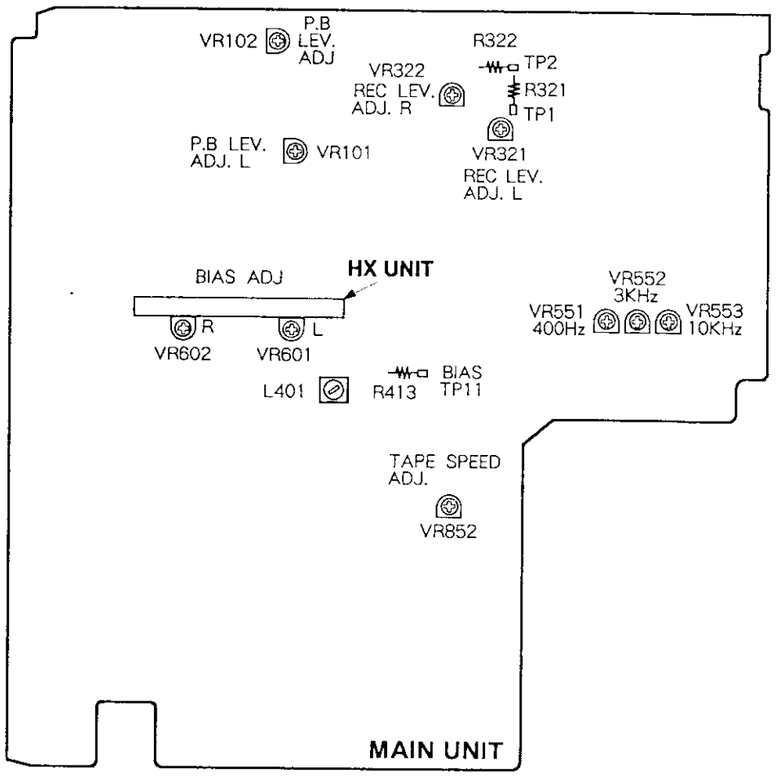

Fig. 5–1 Adjusting points

5.2 ELECTRICAL ADJUSTMENTS

Adjustment Conditions

1. The mechanical adjustments must be completed first.
2. The head must be cleaned and demagnetized.
3. Turn power on allow the deck to warm up for at least a few minutes before commencing any electrical adjustments.
4. The reference signal is 0 dBV=1 Vrms.
5. Connect a 50 kΩ (or between 47k to 52 kΩ) load resistance to the OUTPUT terminals.
6. Unless otherwise specified, the switches listed below are left in the positions indicated.
   DOLBY NR : OFF
   TAPE SELECTOR : NORM

Test Tapes

STD–331E : Playback adjustments (See Fig. 5–2)
STD–631 : NORMAL blank tape
STD–621 : CrO_2 blank tape
STD–610 : METAL blank tape

* As the reference recording level is 250 nwb/m for STD–331E, the recording level will be higher by 4 dB for STD–331B (160 nwb/m). When adjusting, pay carefull attention to the type of tape used.

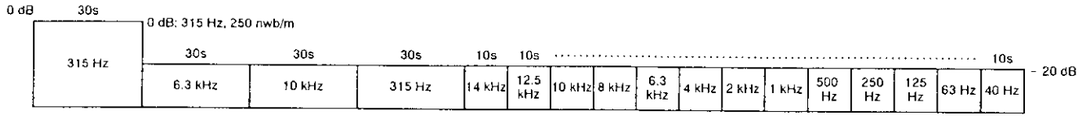

Fig. 5–2 Constants of the test tape STD–331E

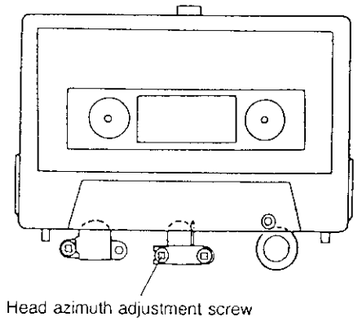

Fig. 5–3 Head azimuth adjustment

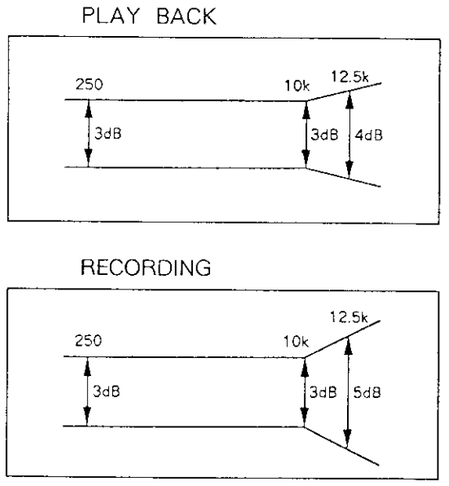

Fig. 5–4 Frequency response zone

List of Adjustments

Playback sections

1. Head azimuth adjustment.
2. Playback level adjustment.

Recording sections

1. Bias oscillator adjustment.
2. Recording bias adjustment.
3. Recording level adjustment.
4. Level meter check
5. AUTO BLE adjustment.

NOTE: This unit has an automatic tape selection feature.

PLAYBACK SECTION

1. Head Azimuth Adjustment

- Turn VR101, 102 to mechanical center positions.

No.	Mode	Input signal & test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1.	PLAY	Play the 10 kHz/-20 dB section of STD-331E test tape.	Head azimuth adjustment screw. (See Fig. 5-3)	LINE OUT	Maximum playback signal level.	
2.	STOP	Lock the screw with screw lock after completing adjustment.				

2. Playback Level Adjustment

- This adjustment determines the DOLBY NR level, and must be performed with great care.

No.	Mode	Input signal & test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1.	PLAY	Play the 315 Hz/0 dB section of the STD-331E test tape.	Deck	VR101 (Lch) VR102 (Rch)	TP. 1 (Lch) TP. 2 (Rch)	- 6.7 dBV	This adjustment must be performed accurately for proper Dolby level setting.

RECORDING SECTION

1. Bias Oscillator Adjustment

No.	Mode	Input signal & test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1.	REC	Load the STD-610 test tape with no input signal.	Deck	L401	TP. 11	105 kHz ± 0.3 kHz	

2. Recording Bias Adjustment

- After the adjustment, caution should be exercised so as not to become under bias by checking the distortion rate.

No.	Mode	Input signal & test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1.	REC	Load the STD-631 test tape. Record the 315 Hz and 6.3 kHz signals at -20 dBV input level and playback.	Deck	VR601 (Lch) VR602 (Rch)	LINE OUT	Repeatedly record, playback and adjust so that the playback level of 6.3 kHz signal becomes + 0.5dB ± 0.5 dB when compared with the 315 Hz signal.	

3. Recording Level Adjustment

No.	Mode	Input signal & test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1.	REC/ PAUSE	Apply a 315 Hz signal to the line input terminals, load the STD-631 test tape.	Volume of the output level of the oscillator		TP. 1 (Lch) TP. 2 (Rch)	-11.2 dBV	
2.	REC/ PLAY	Record the above signal onto the STD-631 test tape, and playback.	Deck	VR321 (Lch) VR322 (Rch)		Repeatedly record, playback and adjust so that the playback signal level becomes -11.2dBV.	
3.	REC/ PLAY	Record the above signal onto the STD-621 test tape, and playback.	Check			-11.2 dBV ± 1.5 dB	
4.	REC/ PLAY	Record the above signal onto the STD-610 test tape, and playback.	Check			-11.2 dBV ± 1.5 dB	

Note for Schematic Diagram (Type 6)

1. **When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".**

2. **Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.**

3. **RESISTORS:**
   Unit: k:kΩ, M:MΩ, or Ω unless otherwise noted.
   Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
   Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.

4. **CAPACITORS:**
   Unit: p:pF or μF unless otherwise noted.
   Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
   Rated voltage: 50V except for electrolytic capacitors.

5. **COILS:**
   Unit: m:mH or μH unless otherwise noted.

6. **VOLTAGE AND CURRENT:**
   [ ] : DC voltage (V) in STOP mode unless otherwise noted.
   ⇨ mA or ← mA : DC current in STOP mode unless otherwise noted.

7. **OTHERS:**
   - ➡ : Signal route.
   - ⊘ : Adjusting point.
   - ▼ (Red) : Measurement point.
   - The ⚠ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. **SWITCHES** (Underline indicates switch position):

OPERATE UNIT
S1401 : REW
S1402 : REC
S1403 : BLE
S1404 : STOP
S1405 : REV
S1406 : 1/F
S1407 : FF
S1409 : CD SYNC
S1410 : PAUSE
S1411 : MUTE

FL UNIT
S1501 : RESET
S1502 : MODE
S1503 : METER LANGE

4. Level Meter Check

No.	Mode	Input signal & test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1.	REC/ PAUSE	Apply a 315 Hz signal to the line input terminals.	Volume of the output level of the oscillator	TP. 1 (Lch) TP. 2 (Rch)	Check that the level meters "0 dB" light up within −7.2 dBV ± 2 dB of the signal output level.	

5. AUTO BLE Adjustment

- BLE adjustment should be performed after all other adjustments are completed.
- This adjustment should be performed in the test mode.
- Entering the Test Mode.
  Turn on the power, and after more than 4 seconds, press the "COUNTER RESET" button, "COUNTER MODE" button and ▮▮ (PAUSE) button simultaneously.
- Releasing the Test Mode.
  Press the "COUNTER RESET" button.

No.	Mode	Input signal & test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1.	–	Set to test mode.	–	–	–	
2.		Press the AUTO BLE key on the front panel.	Level meter Lch	VR551	Adjust the Lch segment which is lit until Rch is not lighting up. Lch ■→□ Rch ■■□■■ (■ : light up □ : not light up)	400 Hz adjustment (Test mode 1 FL indication 1)
3.		Press the AUTO BLE key on the front panel.		VR552		3 kHz adjustment (Test mode 2 FL indication 2)
4.		Press the AUTO BLE key on the front panel.		VR553		10 kHz adjustment (Test mode 3 FL indication 3)

TRN 1 UNIT

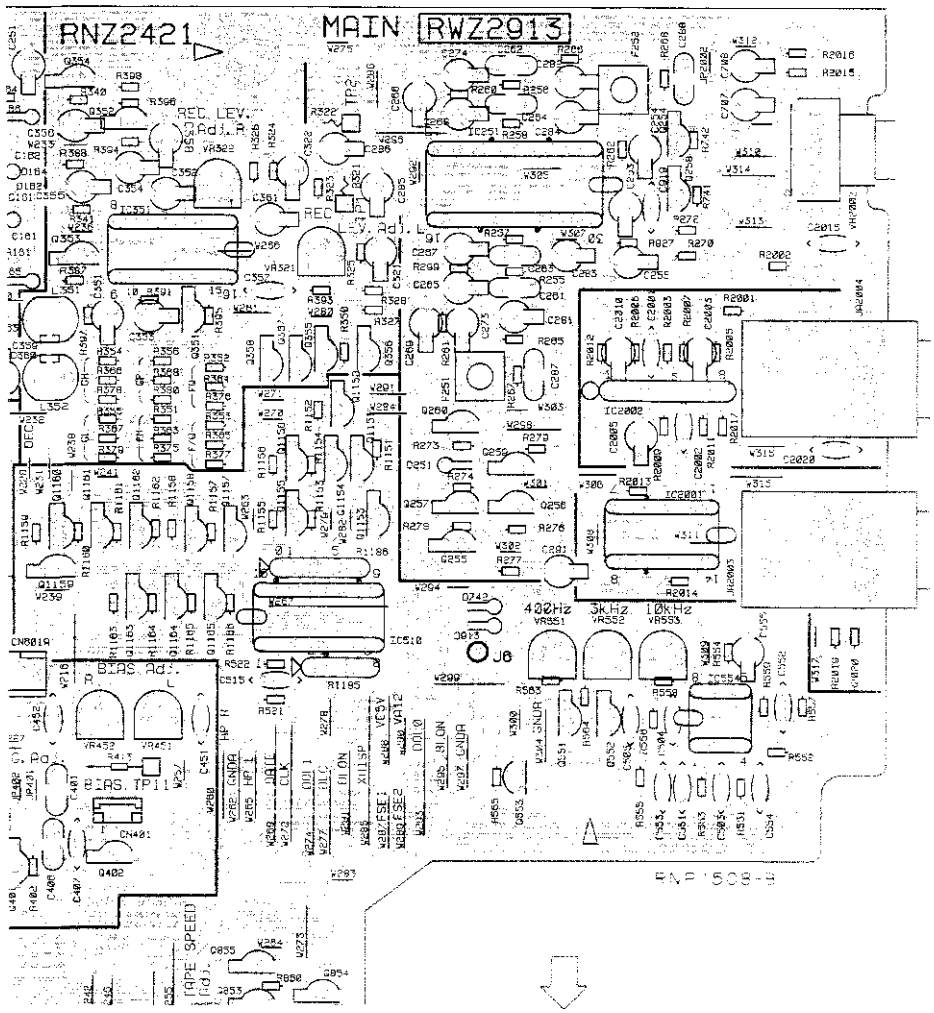
Although RWZ2915 and RWZ2875 are different in part number, they consist of the same components.

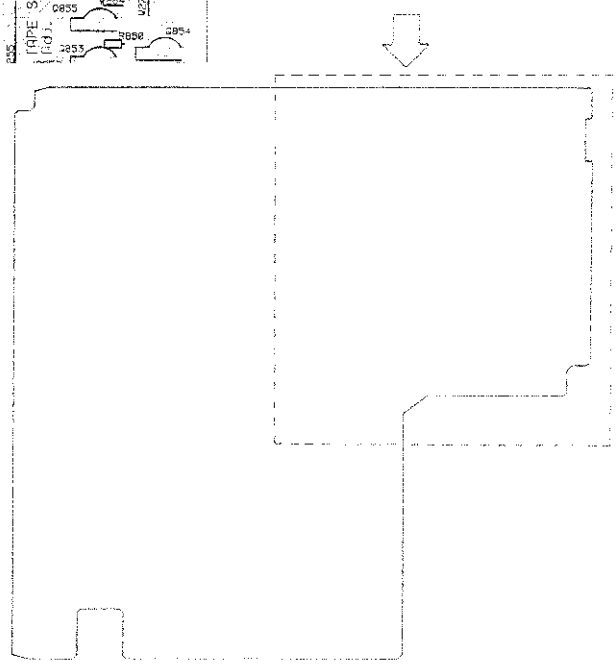
● PCB DIAGRAM (SD AND SL TYPES ONLY)

Note: Assembly which is different in CT-S320/SD, SL and CT-S320/HEM, the PCB diagram is shown below.
For schematic diagram, refer to page 21.

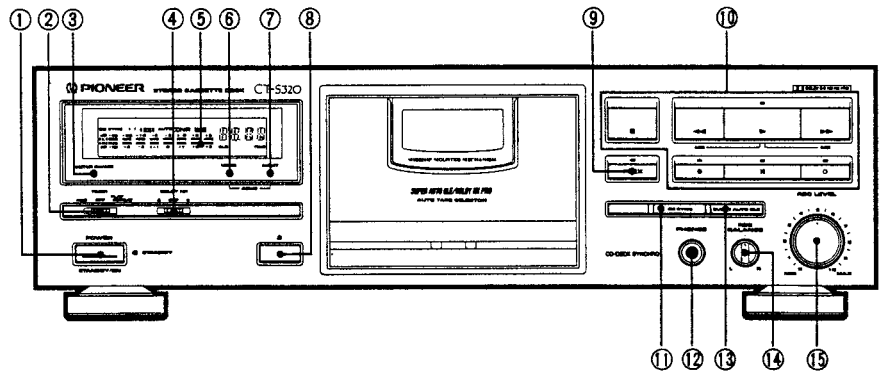
• View from component side

MAIN UNIT





8. PANEL FACILITIES



●Illustration shows U.K. and European model.

① POWER STANDBY/ON switch
The POWER switch activates the secondary transformer only. Even when the switch is in the STANDBY position, there will be a power flow to the deck's circuits as long as the power cord is connected to a power outlet.

② Timer mode/repeat play switch (TIMER REC/OFF/PLAY-REPEAT)

③ Level meter range selector button (METER RANGE)
Press to select wide or expanded range on the level meter.

④ Dolby* NR switch (DOLBY NR B/OFF/C)

*

- *Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang & Olufsen.*
- *"DOLBY", the double-D symbol ⊡⊡ and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.*

⑤ Function display

⑥ Tape counter mode button (COUNTER MODE)

⑦ Tape counter reset button (COUNTER RESET)

⑧ Eject button (⏏)
- If the tape is moving (recording, playback, tape winding, etc.), press the stop (■) button before pressing this button.

⑨ FLEX (1/f) button

⑩ Operation buttons

◀◀/MS : Rewind/music search
■ : Stop
▶ : Playback
▶▶/MS : Fast forward/music search
● : Recording
❚❚ : Pause
○ : Recording mute

⑪ CD · DECK SYNCHRO recording button (CD SYNCHRO)

⑫ Headphones jack (PHONES)

⑬ SUPER AUTO BLE button

⑭ Recording balance control (REC BALANCE) (U.K. and European models)

⑭ Microphone jack (MIC) (Multivoltage and Australian models)
When connecting a microphone to the jack, both the left and right channel line inputs will be cut and microphone recording will be performed.
Use the REC LEVEL control for microphone recording level adjustment.
- Microphone sound will distribute on both the left and right channel tracks.
- Disconnect the microphone from the jack when recording from both the left and right channel line inputs.

⑮ Recording level control (REC LEVEL)

FLEX (1/f) SYSTEM

- FLEX System: Frequency Level Expander System
  This system automatically compensates high and low frequency level balance above 1 kHz according to the 1/f curve during playback.
  Generally, envelope line of sound energy distribution of Hi-Fi sounds corresponds statistically with the 1/f curve.
  The 1/f curve indicates that if the frequency doubles, the level decreases by approx. half of the original frequency level.
- During playback, the FLEX system automatically compensates tapes with poor sound quality at high frequency levels of 1 kHz to 20 kHz, based on the appropriate auditory characteristics.
  The FLEX system is designed to improve high frequency reproduction in the 10 kHz renge be up to 12 dB, particularly in tapes with poor sound clarity and sound presence at high frequency levels. If the playback tape sound matches the 1/f curve, the FLEX system defeats compensation adjustment automatically.
- Press the FLEX (1/f) button to turning the FLEX system on.
  If the FLEX (1/f) button is pressed during playing back, the ⊠ indicator will flash in a programmed graphic sequence, then change to a steadily lit condition. The AUTO indicator stays lit.
  If the FLEX (1/f) button is pressed during a mode other than playback, only the ⊠ indicator will flash.
  After approximately 3 to 8 seconds, compensation adjustment is completed and the indicators' programmed graphic sequence changes from flashing to a steadily lit condition. Some music selections may take a little longer than 8 seconds.
- When the FLEX system is engaged, each music selection is automatically adjusted during playback. System operation status is indicated by whether the AUTO indicator is lit.
- Compensation data is memorized after the adjustment is completed. However, memorized data is cleared automatically when:
  the power cord is disconnected.
  the FLEX system is turned off.
  the unit set to recording mode (including AUTO BLE and CD · DECK SYNCHRO recording).
  the tape is ejected.

NOTE:

- *When a tape has been recorded at a high frequency level above the compensation level, FLEX system operation is automatically defeated during playback.*

REPEAT PLAYBACK

When the TIMER switch is set to the PLAY-REPEAT position for playback, the forward side of the tape is played back repeatedly until the stop (■) button is pressed, or until the tape has been played completely sixteen sides. When the tape reaches its end, it is rewound and starts automatically from the beginning.

- If any operation button is pressed, repeat playback is reset and repeat playback of all sixteen sides begins.

AUTO BLE TUNING SYSTEM

With commercially available cassette tapes, sensitivity and frequency characteristics might differ slightly from one another, even though the same sound adjustment is set for them. To utilize tape characteristics to the maximum possible and realize an ideal recording which reproduces the source exactly, optimum recording level (sensitivity) and equalizer values must be set accordingly for each tape. In many conventional tape decks, standard values are fixed for standard tapes, thus nullifying the subtle differences between individual tapes. Perfect tuning by ear through use of fine adjustment controllers for bias and sensitivity is difficult and requires a lot of effort. It is especially difficult with a 2-head deck where the recording sound cannot be monitored.
The AUTO BLE on this unit automatically adjusts bias, level and equalizer by using a microprocessor to set the optimum recording characteristics accordingly for each tape.

DOLBY NR & DOLBY HX PRO

■ Dolby NR Systems

Dolby NR systems are designed to reduce the amount of tape hiss, mainly in the treble components. During recording, the high-pitched pianissimo sounds which are most characteristic of audible noise are boosted, and during playback, only these boosted sections are attenuated, so that tape sound is returned to normal. As a result, the noise is attenuated by an amount equal to the boosting in the treble range. The Dolby B-type NR system reduces noise in the treble range, cutting tape hiss and expanding the dynamic range. The Dolby C-type NR system is even more effective in reducing noise, as it cuts the noise from the mid-range on.

NOTE:
When a tape has been recorded using the Dolby B-type or C-type NR system, make sure that the DOLBY NR switch is set to the same position during playback.

■ Dolby HX PRO Headroom Extension System

The Dolby HX PRO system controls the bias current during recording and always keeps it at an optimal level according to the level of the high frequency components of the music signal. If therefore provides excellent recording quality even when recording signals from digital sources which contain a large amount of high-frequency components. To guarantee optimal recording results, the HX PRO system is activated automatically when recording begins. The Dolby HX PRO system operates regardless of the setting of the Dolby NR System switch. Furthermore, since this system affects the recording quality itself, the clarity and high quality of the sound will be maintained even when the tapes are played back on another tape deck which does not contain the HX PRO Headroom Extension System.

9. SPECIFICATIONS

System ..... 4 track, 2-channel stereo
Heads ..... "Hard Permalloy" recording/playback head × 1
"Ferrite" erasing head × 1
Motor ..... DC servo motor × 1
Wow and Flutter ..... No more than 0.075% (WRMS, JIS)
No more than ±0.18% (DIN)
Fast Winding Time ..... Approx. 90 seconds (C-60 tape)
Frequency Response (at −20 dB recording level)
TYPE IV (Metal) tape ..... 25 to 18,000 Hz
TYPE II (High/CrO_2) Tape ..... 25 to 17,000 Hz
TYPE I (Normal) Tape ..... 25 to 17,000 Hz
Signal-to-Noise Ratio (Dolby NR OFF)
Dolby NR off ..... More than 57 dB
Noise Reduction Effect
Dolby B-type NR ON ..... More than 10 dB (at 5 kHz)
Dolby C-type NR ON ..... More than 19 dB (at 5 kHz)
Harmonic Distortion ..... No more than 1.0%
(at −4 dB: 160 nwb/m)
Input (Sensitivity)
LINE (INPUT) ..... 100 mV (Input impedance 67 kΩ)
MIC ..... 0.5 mV (Multivoltage and Australian models only)
Output (Reference level)
LINE (OUTPUT) ..... 0.5 V (Output impedance 3 kΩ)
Headphone (PHONES) ..... 0.63 mW (Load Impedence 8 Ω)

Miscellaneous

Power requirements
U.K., model ..... AC 230—240 Volts~, 50/60 Hz
European model ..... AC 220—230 Volts ~, 50/60 Hz
Multi-voltage models ..... AC 110V/120V—127V/220V/240V
(switchable), 50/60 Hz
Power consumption ..... 17 W
Dimensions
U.K. and European models ..... 420 (W)×125 (H)×280 (D) mm
Multi-voltage and Australian models
..... 420 (W)×120 (H)×280 (D) mm
Weight (without package)
European and Multivoltage model ..... 3.9 kg
U.K. and Australian models ..... 4.2 kg

Subfunctions

- Dolby B-type and C-type NR Systems
- DOLBY HX PRO system
- Auto tape selector (TYPE I, II, IV)
- Headphones jack
- 4-digit electronic tape/time counter
- Music search up to ±15 selections
- Automatic space recording mute
- AUTO BLE tuning system
- FL level meter 7 + 1 segments (with peak hold)
- SR System remote control available
- CD · DECK SYNCHRO function
- Timer Recording/Playback (Automatic repeat playback ON)
- MIC jack (Multivoltage and Australian models)

Accessories

Operating instructions 1
Connection cord with pin plugs 2
SR Remote control cord 1
CD · DECK SYNCHRO control cord 1

NOTE:
Specifications and design subject to possible modifications without notice, due to improvements.
