## Allgemeine Technische Angaben

### Netzteil

Energieversorgung:

- 1) 3 x 1,5 V Mignonzellen
- 2) 5 V durch Ext. Netzteil

Geringste zulässige Batteriespannung: 3,2 V

Max Stromaufnahme: 130 mA (DC)  
30 mA (230V, AC)

### Tuner

Wellenbereiche:

UKW 87,5...108 MHz  
MW 522...1710 kHz  
LW 153...513 kHz  
KW 1715...29995 kHz

Abstimmsschritte:

| Wellenbereiche | Elektronisch und Handabstimmung |
|----------------|---------------------------------|
| UKW            | 50 kHz                          |
| MW             | 9 kHz                           |
| LW             | 9 kHz                           |
| KW             | 5 kHz                           |

Empfindlichkeit:

UKW (S/R = 30 db)  $\leq 15,9 \mu\text{V}$  (EMK)  
MW (S/R = 20 db)  $\leq 2 \text{ mV/m}$   
LW (S/R = 20 db)  $\leq 5,01 \text{ mV/m}$   
KW (S/R = 20 db)  $\leq 25,1 \mu\text{V}$  (EMK)

Stop-Pegel:

UKW 15,9  $\mu\text{V}$  (EMK)  
MW 1,26 mV/m  
LW 3,16 mV/m  
KW 20  $\mu\text{V}$  (EMK)

Zwischenfrequenzen:

FM 10,7 MHz  
MW/LW 450 kHz  
KW 55,845 MHz und 450 kHz

Signal/Rauschabstand:

UKW > 44 db  
MW > 30 db  
KW (1nV) > 36 db

Min. Ausgangspg. (NF):

FM 3 mV

### Verstärker:

NF-Ausgangsleistung ( $K_{\text{ges}} = 10\%$ )  $\geq 160 \text{ mW}$

### Anschlüsse

| Buchse       | Eingang/ Ausgang/ Typ | Impedanz    | Pegel |
|--------------|-----------------------|-------------|-------|
| Ext. Ant. AM | E/3,5                 | (RZ600G6)   |       |
| Kopfhörer    | A/3,5                 | 32 $\Omega$ |       |
| Netz         | E                     |             | 5 V   |

## General Technical Data

### Power supply unit

Power supply:

- 1) 3 x 1.5 V cells IEC R6/AA
- 2) 5 V via AC/DC adapter

Lowest battery voltage: 3.2 V

Current consumption: 130 mA (DC)  
30 mA (230V, AC)

### Tuner

Range:

FM 87.5...108 MHz  
MW 522...1710 kHz  
LW 153...513 kHz  
KW 1715...29995 kHz

Tuning steps:

| Range | Automatical and electronic alignment |
|-------|--------------------------------------|
| FM    | 50 kHz                               |
| MW    | 9 kHz                                |
| LW    | 9 kHz                                |
| SW    | 5 kHz                                |

Sensitivity:

FM (S/N = 30 db)  $\leq 15.9 \mu\text{V}$  (emf)  
MW (S/N = 20 db)  $\leq 2 \text{ mV/m}$   
LW (S/N = 20 db)  $\leq 5.01 \text{ mV/m}$   
SW (S/N = 20 db)  $\leq 25.1 \mu\text{V}$  (emf)

Stop-level:

FM 15.9  $\mu\text{V}$  (emf)  
MW 1.26 mV/m  
LW 3.16 mV/m  
SW 20  $\mu\text{V}$  (emf)

Intermediate frequencies:

FM 10.7 MHz  
MW/LW 450 kHz  
SW 55.845 MHz and 450 kHz

Signal-to-noise ratio:

FM > 44 db  
MW > 30 db  
SW (1nV) > 36 db

Min. output (AF):

FM 3 mV

### Amplifier

Power output (T.H.D = 10%)  $\geq 160 \text{ mW}$

### Connection

| Socket       | Input/ Output/ Type | Impedance   | Level |
|--------------|---------------------|-------------|-------|
| Ext. Ant. AM | I/3.5               | (RZ600G6)   |       |
| Phones       | O/3.5               | 32 $\Omega$ |       |
| Power        | I                   |             | 5 V   |

# Einbau – Ausbau/Assembly – Disassembly

## Gehäusefront u. Rückwand

### Frontpanel a. back lid

Die Schraube bei A berücksichtigen.  
Have regart to screw on position A

Die Gehäuseschalen sind durch die Haken, Position 2...9  
miteinander verbunden.

Frontpanel and backlid hold together with hooks  
position 2...9.

## Tuner-Verstärkerplatine/

### Tuner-Amplifier p.c.b.

Die Schrauben bei B und C berücksichtigen.  
Have regart to screws on positions B and C.

Die Haken Position 10...13 berücksichtigen.  
Have regart to hooks, position 10...13.

## PLL-Platine/Control p.c.b.

Die Haken Position 14...18 berücksichtigen.  
Have regart to hooks positions 14...18.

Verdrahtungsplan  
Wiring diagram

## Abgleich

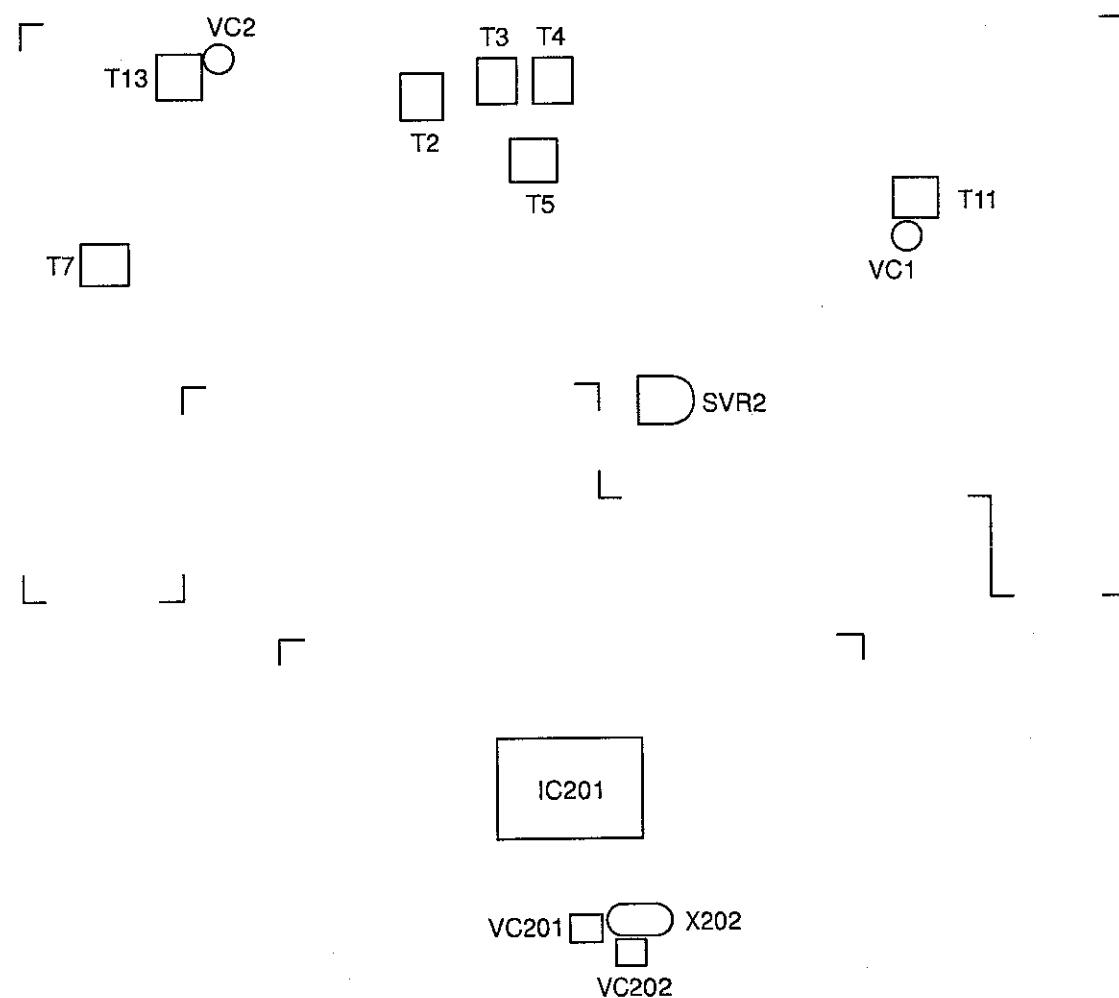

| Schritt | Funktion  | Vorbereitung   | Signaleingang                           | Einstell-Element   | Meßwert                                       |
|---------|---|--|---|--------------------|---|
| 1       | Uhrentakt   | Gerät verriegeln über „Lock“.  | –                                       | VC201              | 32,768 kHz                                    |
| 2       | PLL-Referenzfrequenz                              | Das Radio einschalten. Das Gerätedisplay auf 108 MHz stellen. Einen Frequenzzähler am TP7 und Masse anschließen.   | –                                       | VC202              | 118,69975 + 0,0005 MHz                        |
| 3       | 2. AM Oszillator                                  | Das Radio einschalten. KW-Bereich einstellen. AM-Frequenz so einstellen, daß keine Station vorhanden ist. Frequenzzähler an TP8 und Masse anschließen.   | –                                       | T4                 | 55,39485 + 0,0003 MHz                         |
| 4       | 2. AM-ZF  | Das Radio einschalten. Den Wobbelgeneratoreingang in Serie mit 10 µF-Kondensator an TP5 und Masse anschließen. Den Wobbelgeneratoreingang in Serie mit 0,1 µF-Kondensator an TP8 und Masse anschließen.  | Um 450 kHz wobbeln                      | T5                 | Maximum                                       |
| 5       | AM-Empfindlichkeit. Abgleich mehrmals wiederholen | Das Radio einschalten. Den „AM-Sens-Schalter“ auf DX stellen. Das RK759-Display auf 15,100 MHz stellen. Abgleichsender an TP2 und Masse anschließen. Voltmeter (10M) an TP14 und Masse anschließen. Frequenzzähler am TP4 und Masse anschließen. | 15,100 MHz (1kHz) 30%                   | T2/T3              | Max 1 kHz-Pegel                               |
|         |   |  | –                                       | T4                 | 450 kHz ± 0,15 kHz                            |
| 6       | FM-Eckfrequenz                                    | Das Radio einschalten. Das RK759-Display auf 108 MHz stellen. Voltmeter an TP9 und Masse anschließen.  | –                                       | T10                | 10,5 ± 0,5 V                                  |
| 7       | FM-Empfindlichkeit. Abgleich mehrmals wiederholen | Das Radio einschalten. Voltmeter am TP14 (Lautspr.) und Masse anschließen. Abgleichsender an TP2 (Ant) und Masse anschließen. RK759-Display auf 90 MHz stellen. RK759-Display auf 106 MHz stellen.   | 90 MHz/40kHz/1kHz<br>106 MHz/40kHz/1kHz | T11/T13<br>VC1/VC2 | Max. 1 kHz-Pegel<br>Max. 1 kHz-Pegel          |
| 8       | FM-Feldstärker                                    | Das Radio einschalten. Abgleichsender am TP2 (Ant) und Masse anschließen. RK759-Display auf 98 MHz stellen.  | 1 mV<br>97,975 oder<br>98,025 MHz       | SVR2               | Die „Tuning“ Diode soll zu leuchten beginnen. |
| 9       | AM-ZF-Falle                                       | Das Radio einschalten. Den „AM-Sens-Schalter“ auf DX stellen. RK759-Display auf 450 kHz stellen. Abgleichsender an die Ferritantenne ankoppeln. Voltmeter an TP14 und Masse anschließen.   | 450 kHz/30%/1kHz                        | T7                 | Min. 1kHz-Pegel                               |

## Alignment

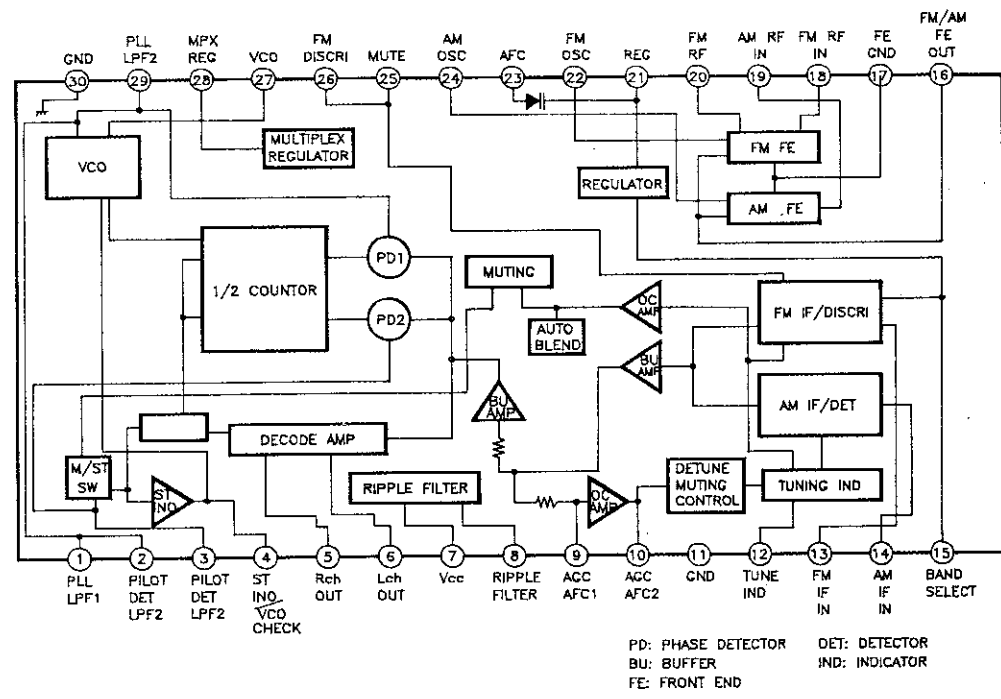

| Step | Function  | Preparation   | Signal input                            | Adjusting element  | Indicated value                    |
|------|---|---|---|--------------------|------------------------------------|
| 1    | Clocktime accuracy                              | Set to lock on position.  | –                                       | VC201              | 32.768 kHz                         |
| 2    | PLLfrequency                                    | Set power switch to on. Set RK759-display to 108 MHz. Connect frequency counter to TP7 and ground.  | –                                       | VC202              | 118.69975 + 0.0005 MHz             |
| 3    | 2nd AM oscillator                               | Set power switch to on. Push to SW-button. Set RK759-display far away from any station to avoid interference. Connect frequency counter to TP8 and ground.  | –                                       | T4                 | 55.39485 + 0.0003 MHz              |
| 4    | 2nd AM-IF                                       | Set power switch to on. Connect sweep generator input in series with 10 µF-capacitor to TP5 and ground. Connect sweep generator output in series with 0.1 µF-capacitor to TP8 and ground.   | Wobble at 450 kHz                       | T5                 | Maximum                            |
| 5    | AM-Sensitivity. Repeat adjustment several times | Set the power switch to on. Set AM-Sens-Switch to DX position. Set RK759-display to 15.100 MHz. Connect RF-generator to TP2 and ground. Connect voltmeter (10 M) to TP14 and ground. Connect frequency counter to TP4 and ground. | 15.100 MHz (1kHz) 30%                   | T2/T3              | Max 1 kHz-level                    |
|      |   |   | –                                       | T4                 | 450 kHz ± 0.15 Hz                  |
| 6    | FM-Corner-frequency                             | Set the power switch to on. Set RK759-display to 108 MHz. Connect voltmeter to TP9 and ground.  | –                                       | T10                | 10.5 ± 0.5 V                       |
| 7    | FM-Sensitivity. Repeat adjustment several times | Set the power switch to on. Connect voltmeter to TP14 (Speaker) and ground. Connect RF-generator to TP2 (ant) and ground. Testbedingungen für IC- und  
Transistorspannungen:

1. Signallos und Lautstärke auf Minimum.
2. Lautsprecherbetrieb.
3. Es ist keine externe Antenne eingesteckt.
4. AM wurde auf 1710 kHz eingestellt.
5. FM wurde auf 98 MHz eingestellt und Mono/Stereo-Schalter stand auf Stereo.
6. Es wurden frische Batterien im Gerät verwendet.
7. Die Spannungen in den Tabellen sind in Volt angegeben.

Testing Condition:

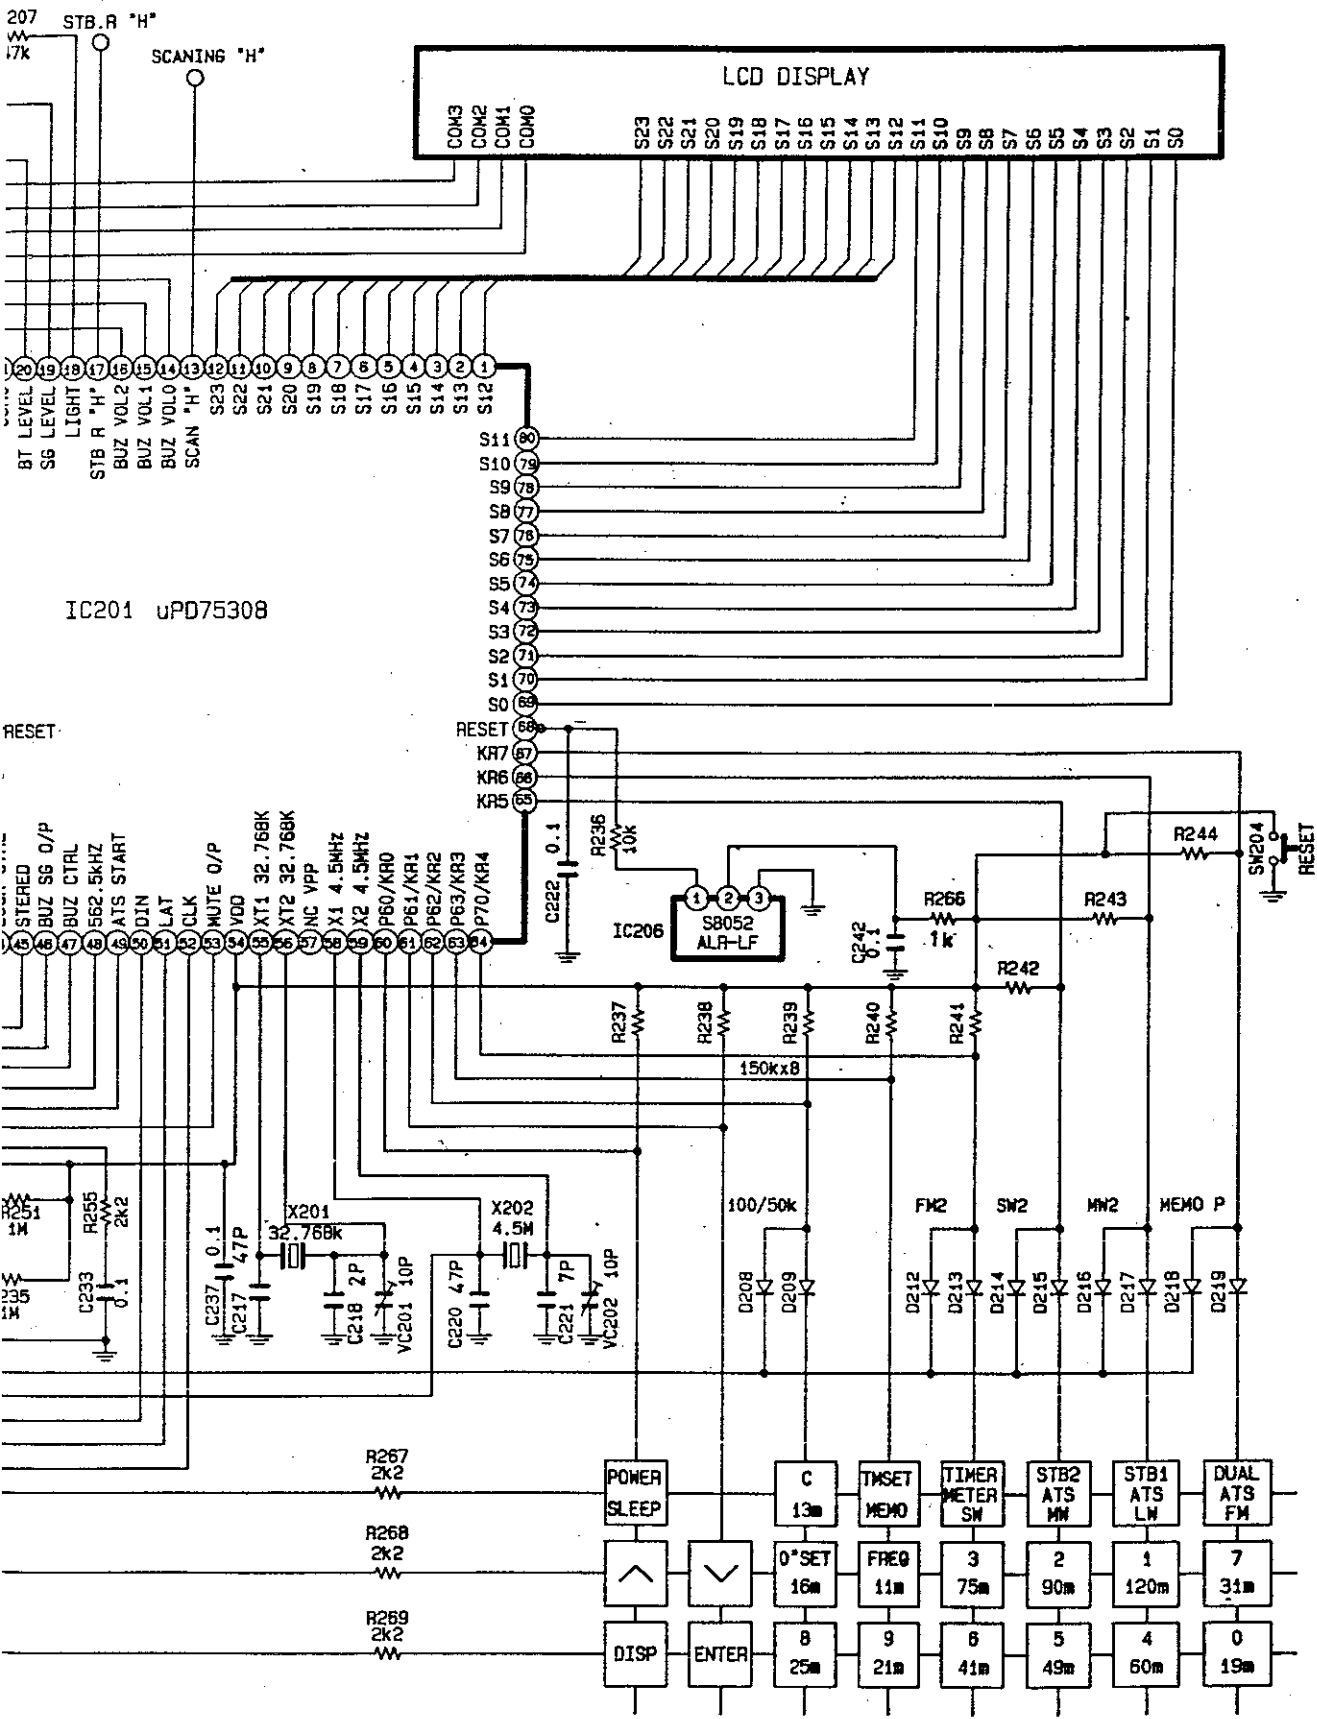

1. No INP Signal and volume is min.
2. Speaker is using.
3. Extension ant. is not using.
4. AM is received by 1710 kHz.
5. FM is received by 98 MHz and put on the stereo.
6. Load in main battery 4.5 V DC.
7. Unit of voltage: V DC

PS : ALL DIODES ARE RLS4148

RLS4148: D201-D205, D207-D219

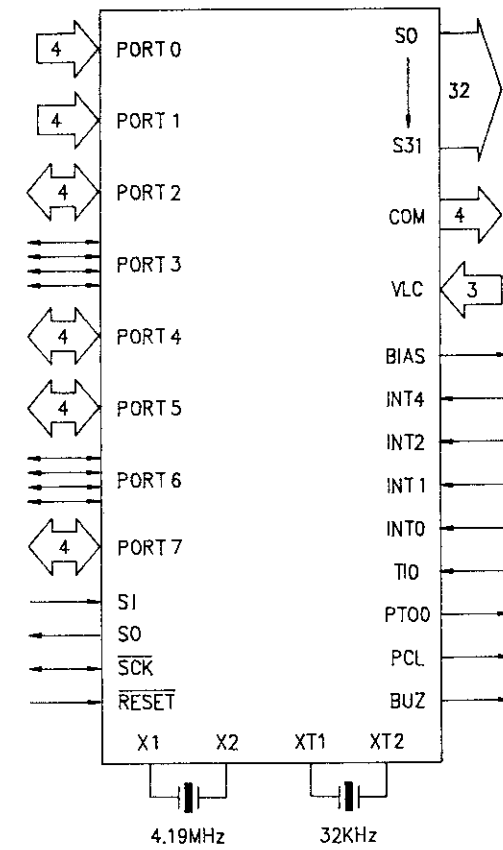

PLS4148: D201-D205, D207-D219

Hinweis:  
Die folgenden Dioden sind im Gerät nicht vorhanden:  
D208, D212, D214, D216

Hint:  
Following diodes are deleted on p.c.b.:  
D208, D212, D214, D216

## Audio-Komponente

### Abstimmschrittänderung, Hinweis Weltempfänger RK759G6 / RK659G6

#### Hinweis:

Es werden nur Geräte mit 100 kHz UKW-Abstimmritten gebaut. Andersartige Angaben in der Kundendienstschrift und der Bedienungsanleitung sind falsch.

Es ist möglich auf 50 kHz UKW-Abstimmritte umzurüsten, dabei verlangsamt sich die ATS-Funktion

#### Umbau:

1. Sicherstellen, daß kein Steckernetzteil an der externen Gleichspannungsbuchse angeschlossen ist.
2. Eine Diode RLS4148, Mat-Nr. 79 1159 bei Pos. D208 nachrüsten.
3. Reset-Knopf im Batteriefach drücken.

#### Lagerhaltung:

Diode RLS4148, Mat-Nr. 79 1159

## Audio-Kleingerät

### LW/MW-Empfang mit externer KW-Antenne Weltempfänger RK759G6/RK659G6

#### Beanstandung:

Der LW/MW-Empfang verschlechtert sich erheblich mit dem Anschluß der KW-Antenne RZ600G6 an die externe Antennenbuchse.

#### Ursache:

Fehlangabe in der Bedienungsanleitung. Die Antenne RZ600G6 führt nur zur Verbesserung im KW-Bereich. Bei LW- und MW-Betrieb erfolgt die Umschaltung auf LW- bzw. MW-Betrieb im Antennenkreis; die RZ600G6 ist aber hinsichtlich Pegel und Impedanz völlig unangepaßt.

#### Abhilfe:

Verbesserungen lassen sich für LW- und MW durch Anschluß einer 50 Ohm Aktivantenne mit entsprechender LW/MW-Kanalvertärkern erzielen.

### Tastenfeldblockade durch Reset, Hinweis Weltempfänger RK759G6 (RK659G6)

#### Hinweis:

Die Reset-Funktion nur mit eingestecktem Steckernetzteil verwenden. Reset-Taste für mehr als 1 Sekunde drücken.

Bei Tastendruck auf Reset ohne Steckernetzteil werden alle Bedienfunktionen blockiert und es erscheint die Uhrenanzeige auf dem Display.

### Weckzeiteinstellung in der 2. Zeitzone Weltempfänger RK759G6 (RK659G6)

#### Beanstandung:

Es läßt sich keine 2. Weckzeit, wie in der Bedienungsanleitung S17 (Mat-Nr. 53 0912) beschrieben, in die 2. Zeitzone einprogrammieren.

#### Ursache:

Die Angabe in der Bedienungsanleitung ist nur bedingt richtig. Mit Eingabe einer 2. Weckzeit in die 2. Zeitzone ("Dual time") wird die 1. Weckzeit überschrieben.

#### Abhilfe:

Eine 2. Weckzeit läßt sich nur erzielen, wenn auf die andere Weckart, HWS oder Radio, gegenüber der 1. Weckzeit umgestellt wird.
