1. Technical specifications

1.1 Specifications

Mains voltage	:	220V - 240V (± 10%); 50-60Hz (± 5%)
Aerial input impedance	:	coaxial 75 Ω
Minimal aerial voltage	:	30µV (VHF), 40µV (UHF)
Maximum aerial voltage	:	180 mV
Programmes	:	0-99
VCR programmes	:	0, 90-99

1.2 Specification of the terminal sockets

2. Safety instructions, Maintenance instruction, Warnings and Notes

2.1 Safety instructions for repairs ⚠

1. Safety regulations require that during a repair:
   - The set should be connected to the mains via an isolating transformer;
   - Safety components, indicated by the symbol ⚠, should be replaced by components identical to the original ones;
   - When replacing the CRT, safety goggles must be worn.
2. Safety regulations require that after a repair the set must be returned in its original condition. In particular attention should be paid to the following points.
   - As a strict precaution, we advise you to resolder the solder joints through which the horizontal deflection current is flowing, in particular ('general repair instruction'):
     - All pins of the line output transformer (LOT);
     - Fly-back capacitor(s);
     - S-correction capacitor(s);
     - Line output transistor;
     - Pins of the connector with wires to the deflection coil;
     - Other components through which the deflection current flows.
     - Note:
     - This resoldering is advised to prevent bad connections due to metal fatigue in solder joints and is therefore only necessary for television sets older than 2 years.
   - The wire trees and EHT cable should be routed correctly and fixed with the mounted cable clamps.
   - The insulation of the mains lead should be checked for external damage.
   - The mains lead strain relief should be checked for its function in order to avoid touching the CRT, hot components or heat sinks.
   - The electrical DC resistance between the mains plug and the secondary side should be checked (only for sets which have a mains isolated power supply). This check can be done as follows:
     - Unplug the mains cord and connect a wire between the two pins of the mains plug;
     - Set the mains switch to the "on" position (keep the mains cord unplugged!);
     - Measure the resistance value between the pins of the mains plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be between 4.5 MΩ and 12 MΩ
     - Switch off the TV and remove the wire between the two pins of the mains plug.
   - The cabinet should be checked for defects to avoid touching of any inner parts by the customer.

2.2 Maintenance instruction

It is recommended to have a maintenance inspection carried out by a qualified service employee. The interval depends on the usage conditions:

- When the set is used under normal circumstances, for example in a living room, the recommended interval is 3 to 5 years.
- When the set is used in circumstances with higher dust, grease or moisture levels, for example in a kitchen, the recommended interval is 1 year.
- The maintenance inspection contains the following actions:
  - Execute the above mentioned 'general repair instruction'.
  - Clean the power supply and deflection circuitry on the chassis.
  - Clean the picture tube panel and the neck of the picture tube.

2.3 Warnings

1. ESD
2. All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, make sure that you are connected with the same potential as the mass of the set by a wristband with resistance. Keep components and tools also at this same potential.
3. Available ESD protection equipment:
   - Complete kit ESD3 (small table mat, Wristband, Connection box, Extension cable and Earth cable) 4822 310 10671
   - Wristband tester 4822 344 13999
4. In order to prevent damage to ICs and transistors, all high-voltage flashovers must be avoided. In order to prevent damage to the picture tube, the method shown in Fig. 2-4 should be used to discharge the picture tube. Use a high-voltage probe and a multimeter (position DC-V). Discharge until the meter reading is 0V (after approx. 30s).
5. Together with the deflection unit and any multipole unit, the flat square picture tubes used form an integrated unit. The deflection and the multipole units are set optimally at the factory. Adjustment of this unit during repair is therefore not recommended.
6. Be careful during measurements in the high-voltage section and on the picture tube.
7. Never replace modules or other components while the unit is switched on.
8. When making settings, use plastic rather than metal tools. This will prevent any short circuits and the danger of a circuit becoming unstable.
9. Wear safety goggles during replacement of the picture tube.

2.4 Notes

The direct voltages and oscillograms should be measured with regard to the tuner earth (⊥), or hot earth (⊥ϟ) as this is called. The direct voltages and oscillograms shown in the diagrams are indicative and should be measured in the Service Default Mode (see chapter 5) with a colour bar signal and stereo sound (L:3 kHz, R:1 kHz unless stated otherwise) and picture carrier at 475.25 MHz.
Where necessary, the oscillograms and direct voltages are measured with (⊓) and without aerial signal (⊼). Voltages in the power supply section are measured both for normal operation (Φ) and in standby (⏻). These values are indicated by means of the appropriate symbols.
The picture tube PWB has printed spark gaps. Each spark gap is connected between an electrode of the picture tube and the Aquadag coating.
The semiconductors indicated in the circuit diagram and in the parts lists are completely interchangeable per position with the semiconductors in the unit, irrespective of the type indication on these semiconductors.

4. Disassembly procedure

4.1 To remove the rear cover

1. Remove the 10 screws located on the sides and bottom of the lower center rear cover (1).
2. Remove the 3 screws on the bottom of the plastic upper rear cover (2). Remove the lower center rear cover (1).

Note: If you are only servicing a PWB or loudspeaker, you do not have to remove the plastic upper rear cover.

1. Remove the remaining 11 screws located in the upper rear cover (2). Lift cover up to dislodge from pegs and remove the cover.
2. Remove the 6 screws located in the mirror mounting board (18) and remove the board.

Note: care should be taken NOT to place fingerprints or smudges on the mirror.

1. Remove the 2 screws located in the plastic light barrier (16) and remove the barrier.
2. Remove the 12 screws located in the end rear covers (3(, 6 per cover, and remove each cover.

4.2 To remove the optical assembly or individual light box assemblies

1. Separate CRT boards from assemblies to be removed.
2. To remove the optical assembly, loosen the 4 screws located in the assembly and lift assembly up and out.
3. To remove individual assemblies, loosen the 4 screws located in the assembly you wish to remove and lift the assembly up and out.

4.3 To remove the digital convergence panel

1. Remove the 2 screws located in the digital convergence panel frame. Lift the frame and panel to remove.

4.4 To remove the 25W amplifier panel

1. Remove the 2 screws located at the top of the 25W amplifier panel frame. Lift the frame and panel to remove.

4.5 To remove the rear switch panel

1. Remove the 2 screws located on the bottom of the rear switch panel. Press 2 tabs on the right side, slide back and remove the panel.

4.6 To remove the power supply

1. Remove the 3 screws located in the power supply panel. Press 3 tabs on the left side and remove the panel.

4.7 To remove the interface panel

1. Pull 2 tabs in the front of the interface panel. Lift the panel and slide forward to remove.

4.8 To remove the side jack panel

1. Remove 2 screws from the side jack panel frame. Slide the panel out to remove.

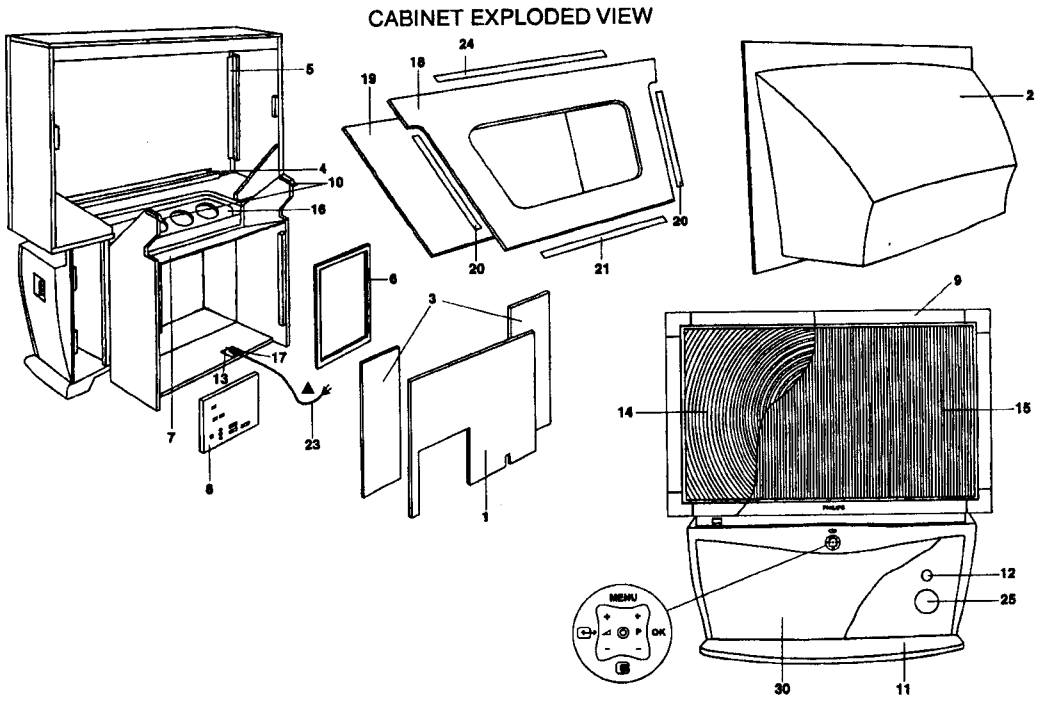

Figure 4-1

5. Service modes, error codes and protections

In this chapter the following paragraphs are included:
5.1Test points
5.2Service modes and Dealer Service Tool and ComPair (including fault finding tips related to CSM-mode)
5.3Error codes
5.4Fault find tree

5.1 Test points

The MG5.1E chassis is equipped with test points in the service printing. These test points are referring to the functional blocks:

- P1-P2-P3, etc.: Test points for the power supply.
- L1-L2-L3, etc.: Test points for the line drive and line output circuitry.
- F1K-F2K-F3K, etc on Small Signal Panel: Test points for the frame drive.
- F1F-F2F-F3F, etc. on CRT/Scavem Panel: Test points for the CRT-panel circuitry.
- F1-F2-F3, etc. on Large Small Signal Panel: Test points for the frame output circuitry.
- S1-S2-S3, etc: Test points for the synchronisation circuitry.
- V1-V2-V3, etc: Test points for the video processing circuitry.
- I1-I2-I3, etc: Test points for the Tuner/IF part.
- A1-A2-A3, etc. on Small Signal Panel: Test points for the audio processing circuitry.
- A1-A2-A3, etc. on Large Signal Panel: Test points for the audio amplifiers.
- C1-C2-C3, etc: Test points for the control circuitry.
- T1-T2-T3, etc: Testpoints for the teletext circuitry.
- SC1-SC2-SC3, etc: Test points for the Scavem circuitry.

The numbering is done in a for diagnostics logical sequence; always start diagnosing within a functional block in the sequence of the relevant test points for that functional block.

5.2 Service modes, Dealer Service Tool and ComPair

For easy installation and diagnosis the dealer remote control RC7150 is introduced. The RC7150 can be used for all new TV sets, including all set of the MG5.1E chassis. The RC7150 is also called Dealer Service Tool or DST. The ordering number of the DST (RC7150) is 4822 218 21232.

5.2.1 Installation features for the dealer

The dealer can use the RC7150 for programming the TV-set with presets. 10 Different program tables can be programmed into the DST via a TV-set (downloading from the GFL, MD2 or MG2.1 to the DST; see GFL, MD2 and MG2.1 service manuals) or by the DST-I (DST interface; ordering code 4822 218 21277).
For explanation of the installation features of the DST, the directions for use of the DST (4822 727 20073) are recommended (for the MG5.1E chassis, download code 4 should be used).

5.2.2 Diagnose features for the servicer

The MG5.1E sets can be put in the two service modes via the DST RC7150. These are the Service Default Mode (SDM) and the Service Alignment Mode (SAM). The SDM and SAM can also be entered by short circuiting the relevant pins on the SSP.

Service Default Mode (SDM)
Specification of the SDM:
- Tuning frequency 475.25 MHz.
- TV-system for BGLM sets set to BG, for BGLL'I sets to LL'.
- All picture settings at 50% (brightness, colour, contrast, HUE).
- All sound settings at 50% except volume at 25% (so bass, treble, balance at 50%, volume at 25%).
- All service-unfriendly modes are disabled (like sleep timer, child lock, blue mute).

Entering the SDM can be done in 2 ways:
- By the "DEFAULT" key on the DST while the set is in the normal operation mode.
- By short-circuiting for a moment the two pins (pin 2 and 3 of connector 0356) on the component side of the SSP with the indication "SDM" (activation can be performed in all modes except when the set has a problem with the main-processor).

Note: If the SDM is entered via the pins, all the protections are de-activated.
Exiting the SDM can only be done via the STANDBY command. By switching off-on the set with the mains switch the MG5.1E will come up again in the SDM.

Service Alignment Mode (SAM)
Specification of the SAM:
- Software alignments (see chapter 8).
- Option settings (see chapter 8).
- Error buffer reading and erasing. The most recent error code is displayed on the left side.
- Operation counter.
- Software version.

Entering the SAM can be done in 2 ways:
- By the button on the DST while the set is in the normal operation mode (or SDM). Enter the password '3-1-4-0' and press OK.
- By short-circuiting for a moment the two pins (pin 1 and 2 of connector 0356) on the component side of the SSP with the indication "SAM" (activation can be performed in all modes except when the set has a problem with the microprocessor).

Note: If the SAM is entered via the pins, all protections are de-activated.
Exiting the SAM can be done via the MENU command or via switching off-on the set with the mains switch.

Customer Service Mode (CSM)
All MG5.1E sets are equipped with the 'Customer Service Mode' (CSM). This 'Customer Service Mode' is a special service mode which can be activated and deactivated by the customer upon request of the service technician/dealer during a telephone conversation in order to identify the status of the set. This CSM is a 'read only' mode, therefore modifications in this mode are not possible.

Switching-on of the Customer Service Mode
The Customer Service Mode will switch-on after pressing simultaneously the "MUTE" knob on the remote control handset and the "MENU" button on the TV for at least 4 seconds. This activation only works if there is no menu on the screen.

Switching-off the Customer Service Mode
The Customer Service Mode will switch-off after pressing any key of the remote control handset (with exception of the "cursor-up" and "cursor-down" keys), or the buttons on the TV or by switching off the TV set with the mains switch.

Detailed explanation of the Customer service Mode
After switching on the Customer Service Menu the following screen will appear:

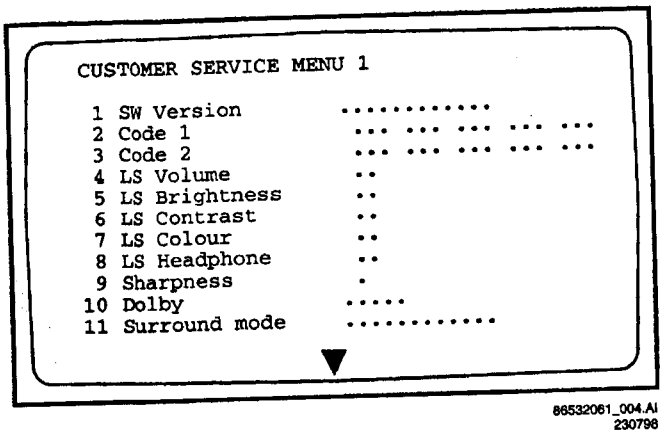

Figure 5-1 Customer Service Menu 1

Line 1: Software version; the build in software version (AAAABCX.Y)
- AAAA= MG21(chassis name)
- B = E (Europe)
- C = 1 (language cluster)
- X = main version number
- Y = sub version number

Details on the software version can be found in the chapter "Software Survey" of the publication "Product Survey - Colour Television".

Line 2: Code 1; gives the last 5 errors of the error buffer. As soon as the built-in diagnose software has detected an error the buffer is adapted.

Line 3: Code 2; gives the first 5 errors of the error buffer. As soon as the built-in diagnose software has detected an error the buffer is adapted.
The last occurred error is displayed on the leftmost position of code 2. Each error code is displayed as a 3 digit number. When less than 10 errors occur, the rest of the line(s) is(are) empty. In case of no errors the text "No Errors" is displayed. See paragraph 5.3 of this chapter for a description of the error codes.

Line 4: LS Volume; gives the Last Status of the volume as set by the customer for this selected transmitter.
The value can vary from 0 (volume is minimum) to 24 (volume is maximum). Volume values can be changed via the volume key on the remote control handset.

Line 5: LS Brightness; gives the Last Status of the brightness as set by the customer for this selected transmitter.
The value can vary from 0 (brightness is minimum) to 63 (brightness is maximum). Brightness values can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the red button for picture menu and selecting "brightness".

Line 6: LS Contrast; gives the Last Status of the contrast as set by the customer.
The value can vary from 0 (contrast is minimum) to 63 (contrast is maximum). Contrast values can be changed via "cursor left" and "cursor right" keys on the remote control handset after pressing the red button for picture menu and selecting "contrast".

Line 7: LS Colour; gives the Last Status of the colour saturation, as set by the customer.
The value can vary from 0 (colour is minimum) to 63 (colour is maximum). Colour values can be changed via "cursor left" and "cursor right" keys on the remote control handset after pressing the red button for picture menu and selecting "colour".

Line 8: LS Headphone; gives the Last Status of the headphone volume, as set by the customer.
The value can vary from 0 (volume is minimum) to 24 (volume is maximum). Headphone volume values can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the green button for sound menu and selecting "headphone".

Line 9: Sharpness; gives the sharpness value. The value can vary from 0 (sharpness is minimum) to 7 (sharpness is maximum).
In case of bad antenna signals a too high value of the sharpness can result in a noisy picture. Sharpness values can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the red button for picture menu and selecting "sharpness".

Line 10: Dolby; indicates whether the received transmitter transmits Dolby sound (present) or not (not present).
Attention: The presence of Dolby can only be tested by the software on the Dolby Signalling bit. If a Dolby transmission is therefore received without a Dolby Signalling bit, then this indicator will show "not present" even though such a Dolby transmission is received.

Line 11: Surround Mode; indicates the by the customer selected surround mode.
In case the set is a Non-Dolby set there will be displayed "0". If it is a Dolby-set then is displayed: "Pro Logic", "Dolby 3 Stereo", "Hall" or "Off". For Dolby-set surround mode can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the green button for sound menu and selecting "Surround settings".

By means of the "cursor-down" knob on the remote control handset the Customer Service Menu 2 will appear. By means of the "cursor-up" knob on the remote control handset the Customer Service Menu 1 will appear again.

Customer Service Menu 2 represents following information:

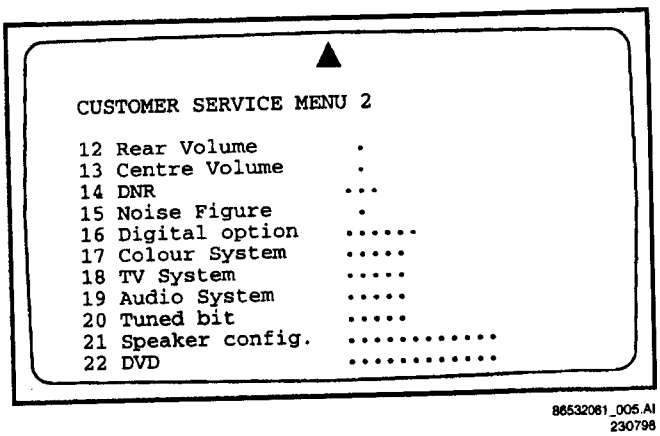

Figure 5-2 Customer Service Menu 2

Line 12: Rear Volume; gives the volume value of the surround sound loudspeakers.
This value can vary from 0 (minimum volume) to 63 (maximum volume). Rear volume can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing

the green button for sound menu, selecting "Surround settings" and selecting "Rear volume". This feature is only available when surround mode is in "Dolby Pro Logic" or "Hall".

Line 13: Centre Volume; gives the volume value of the centre loudspeakers. This value can vary from 0 (minimum volume) to 63 (maximum volume). Centre volume can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the green button for sound menu, selecting 'Dolby Pro Logic' and selecting "centre volume". This feature is only available when surround mode is in "Dolby Pro Logic" or "Dolby 3 Stereo".

Line 14: DNR (Dynamic Noise Reduction); gives the setting of the DNR for the selected transmitter. The following selections are possible:
- "off", "min", "med" or "max"
- "off" or "automatic" (MG5.1E with "Automatic Noise Reduction").

The DNR can be changed via the "DNR" key on the remote control handset.

Line 15: Noise Figure; gives the selected noise ratio for this selected transmitter.
This value can vary from 0 (good signal) to 127 (average signal) and to 255 (bad signal). This only works in case the DNR selection is "off/automatic".

Line 16: Digital Option; gives the selected digital mode, "100Hz", Digital Scan" or "Natural Motion". Digital option can be changed via the "cursor left" and "cursor right" keys on the remote control handset after pressing the red button for picture menu and selecting "digital options".

Line 17: Colour System; gives information about the colour system of the selected transmitter.
- Black and white: No colour carrier received
- PAL: PAL signal received
- SECAM: SECAM signal received
- NTSC: NTSC signal received

Line 18: TV System; gives information about the video system of the selected transmitter.
- BG: BG signal received
- DK: DK signal received
- I: PAL I signal received
- L: SECAM L signals received
- M38.9: NTSC M signal received with video carrier on 38.9 MHz
- MN: NTSC M signal received

Line 19: Audio System; gives information about the audio system of the selected transmitter.
- Sound Muted: No sound
- Dolby Pro Logic: Dolby Pro Logic sound received
- Mono: Mono sound received
- Stereo: Stereo sound received
- Dual I: Language I received
- Dual II: Language II received
- Digital Mono: Digital mono sound is received
- Digital Stereo: Digital stereo sound is received
- Digital Dual I: Digital language I is received
- Digital Dual II: Digital language II is received

Line20: Tuned Bit; gives information about the tuning method of the stored preset.
If the value is "Yes" the preset is stored via manual entry of the frequency when a transmitter was not present on that frequency. In that case the TV will attempt to perform a micro-search every time the preset number is selected. Once the micro-search has been successful the Tuned Bit will be set to "No".

Line 21: Speaker configuration; gives the configuration setting for the speakers.
In case the set is a Non-Dolby set there will be displayed "0". If it is a Dolby-set then is displayed: "Full internal", "L/R external", "Surround external" or "Full external". For the Dolby-set the speaker configuration can be changed via the "cursor left" and "cursor right" keys on the remote control handset after opening the installation menu and selecting "set-up". The installation menu can be opened by pressing "timer" and "enlarge" at the same time. This feature is only available when the set has virtual Dolby.

Line 22: DVD; gives the configuration setting for DVD. This can be "Present" or "Not Present".
If "Present" is selected the starting point is a top quality signal and a number of settings are therefore changed automatically. DVD can be changed via the "cursor left" and "cursor right" keys on the remote control handset after opening the installation menu and selecting "set-up". The installation menu can be opened by pressing "timer" and "enlarge" at the same time.

Problems and solving tips
The procedures to change the value or the status of the different settings is described in the paragraph 'Detailed explanation of the Customer Service Mode'.

Picture problems
Worse picture quality in case of DVD pictures Check line 22 "DVD". In case line 22 gives the indication "Not Present" change the setting into "Present".

Snowy/noisy picture
1. Check line 15 "Noise Figure". In case the value is 127 or higher and the value is also high on other programs check the aerial cable/aerial system.
2. Check lines 9 "Sharpness", 14 "DNR" and 15 "Noise Figure". In case the value of line 9 is 3 or 4 and the value of line 15 is high (127 or higher), lower the value of line 9 "sharpness" and switch DNR (line 14) to "automatic", "on" or to a higher value.

Picture too dark
1. Press "Smart Picture" button on the Remote Control handset. In case picture improves, raise the brightness value or raise the contrast value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the picture is OK. Raise the brightness value or raise the contrast value. The new value(s) are automatically stored for all TV channels.
3. Check lines 6 "LS Brightness" and 7 "LS Contrast". The value of line 6 is low (<10) or the value of line 7 is low ((10). Raise the brightness value or raise the contrast value.

Picture too bright
1. Press "Smart Picture" button on the Remote Control handset. In case picture improves, reduce the brightness value or reduce the contrast value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the picture is OK. Reduce the brightness value or reduce the contrast value. The new value(s) are automatically stored for all TV channels.
3. Check lines 6 "LS Brightness" and 7 "LS Contrast". The value of line 6 is high (>40) or the value of line 7 is high ((50). Reduce the brightness value or raise the contrast value.

Fading picture
Digital scan effect. Check line 14 "DNR". The status of "DNR" is 'med' or 'max'. Reduce "DNR" to 'min' or switch off the digital scan.

White line around picture elements and text
1. Press "Smart Picture" button on the Remote Control handset. In case picture improves, reduce the sharpness value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the picture is OK. Reduce the sharpness value. The new value(s) are automatically stored for all TV channels.
3. Check line 8 "Sharpness". Reduce the sharpness value. The new value(s) are automatically stored for all TV channels

No picture.
Check line 20 "Tuned bit". In case the value is 'Yes', install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation.

Blue picture. No proper signal is received.
Check the aerial cable/aerial system.

Blue picture and/or unstable picture.
A scrambled or decoded signal is received.

Black and white picture.
Check line 5 "LS colour". In case the value is low ((10) raise the value of colour. The new value(s) are automatically stored for all TV channels.

No colours/colour lines around picture elements.
1. Check lines 17 "Colour System" and 18 "TV System". In case line 17 is 'PAL' and line 18 is 'M 38,9', the installed system for this preset is 'USA', while 'West Europe' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; West Europe'.
2. In case line 17 is 'PAL' and line 18 is 'L', the installed system for this preset is 'France', while 'West Europe' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; West Europe'.

No colours/noise in picture
1. Check lines 17 "Colour System" and 18 "TV System". In case line 17 is 'Black and White' and line 18 is 'BG', the installed system for this preset is 'West Europe', while 'USA' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; USA'.
2. In case line 17 is 'Black and White' and line 18 is 'L', the installed system for this preset is 'France', while 'USA' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; USA'

Colours not correct.
Check lines 17 "Colour System" and 18 "TV System". In case line 17 is 'PAL' and line 18 is 'L', the installed system for this preset is 'France', while 'West Europe' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; West Europe'.

Colours not correct/unstable picture.
Check lines 17 "Colour System" and 18 "TV System". In case line 17 is 'SECAM' and line 18 is 'BG', the installed system for this preset is 'USA', while 'France' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; France'.

Unstable picture.
Check lines 17 "Colour System" and 18 "TV System". In case line 17 is 'SECAM' and line 18 is 'M 38,9', the installed system for this preset is 'West Europe', while 'France' is required. Install the required program again. Open the installation menu by pressing "timer" and "enlarge" at the same time and perform manual installation. Select 'System; France'.

Menu text not sharp enough.
1. Press "Smart Picture" button on the Remote Control handset. In case picture improves, reduce the contrast value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the picture is OK. Reduce the contrast value. The new value(s) are automatically stored for all TV channels.
3. Check line 7 "LS Contrast". The value of line 7 is high (>50). Reduce the contrast value.

Sound problems

No sound from left and right speaker.
1. Press "Smart Sound" button on the Remote Control handset. In case sound improves, raise the volume value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the volume is OK. Raise the volume value. The new value(s) are automatically stored for all TV channels.
3. Check line 4 "LS Volume". The value is low. Raise the value of "Volume". The new value(s) are automatically stored for all TV channels.

Sound too loud for left and right speaker.
1. Press "Smart Sound" button on the Remote Control handset. In case sound improves, reduce the volume value. The new value(s) are automatically stored for all TV channels.
2. After switching on the Customer Service Mode the volume is OK. Reduce the volume value. The new value(s) are automatically stored for all TV channels.
3. Check line 4 "LS Volume". The value is high. Reduce the value of "LS Volume". The new value(s) are automatically stored for all TV channels.

No sound from "centre" speaker.
Check line 12 "Centre Volume". The value is low. Raise the value of the "Centre Volume"

Sound too loud from "centre" speaker.
Check line 12 "Centre Volume". The value is high. Reduce the value of the "Centre Volume"

Diagnose Mode (only active during transmission of error codes and diagnose 99)
This mode is activated by the DIAGNOSE command on the DST for reading the error codes and erasing the error buffer by the DST even when the set is in protection and so there is no picture (assuming that the power supply and the control part are working). For activation see paragraph 5.3. The diagnose Mode is only a temporarily mode (the set will go back to the previous mode), and can not be switched on permanently.
Note: The diagnose mode can not be entered if the SAM is activated.

ComPair

ComPair (Computer Aided Repair) is a service tool for Philips Consumer Electronics products. ComPair is a further development on the DST service remote control allowing faster and more accurate diagnostics. ComPair has three big advantages:

- ComPair helps you to quickly get an understanding how to repair the MG5.1E in short time by guiding you step by step through the repair procedures.
- ComPair allows very detailed diagnostics (on I2C level) and is therefore capable of accurately indicating problem areas. You do not have to know anything about I2C commands yourself; ComPair takes care of this.
- ComPair speeds up the repair time since it can automatically communicate with the MG5.1E (when the micro processor is working) and all repair information is directly available. When ComPair is installed together with the SearchMan MG5.1E electronic manual, schematics and PCBs are only a mouse-click away.

ComPair consists of a Windows based fault finding program and an interface box between PC and the (defective) product. The ComPair interface box is connected to the PC via a serial or RS232 cable. In case of the MG5.1E chassis, the ComPair interface box and the television communicate with each other via bi-directional infrared signal.

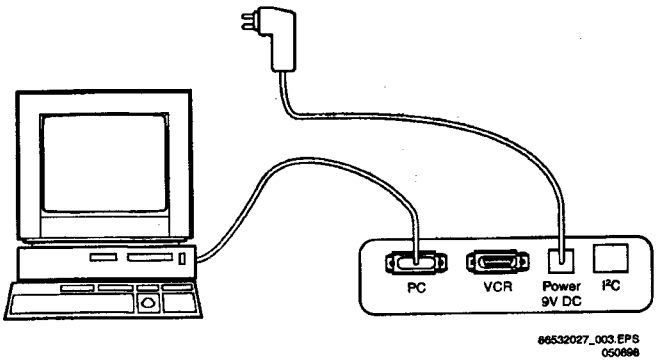

Figure 5-3

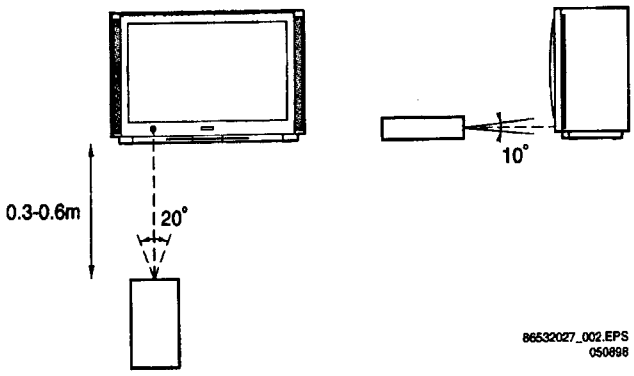

Figure 5-4

The ComPair fault finding program is able to determine the problem of the defective television. ComPair can gather diagnostic information in 2 ways:

1. Communication to the television (automatic)
2. Asking questions to you (manually)

ComPair combines this information with the repair information in its database to find out how to repair the MG5.1E.

Automatic information gathering

Step-by-step start up. Under normal circumstances, a fault in the power supply or an error during start-up will switch the television to protection-mode. ComPair can take over the initialisation of the television. In this way it is possible to distinguish which part of the start-up routine (hence which circuitry) is causing the problem.

Reading out the error buffer, ComPair can automatically read out the contents of the entire error buffer.

Diagnosis on I2C level. ComPair can access the I2C bus of the television without a physical connection. ComPair can send and receive infrared commands to the micro controller of the television. These commands are translated by the controller to I2C commands and vice versa. In this way it is possible for ComPair to communicate (read and write) to devices on the I2C busses of the MG5.1E.

Manual information gathering

Automatic diagnosis is only possible if the micro controller of the television is working correctly and only to a certain extend. When this is not the case, ComPair will guide you through the fault finding tree by asking you questions and showing you examples. You can answer by clicking on a link (e.g. text or an oscillogram) that will bring you to the next step in the faultfinding process.

A question could be: Do you see snow? (Click on the correct answer)

YES / NO

An example can be: Measure testpoint I7 and click on the correct oscillogram you see on the oscilloscope

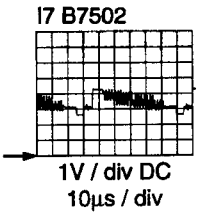

Figure 5-5

By a combination of automatic diagnostics and an interactive question/answer procedure, ComPair will enable you to find most problems in a fast and effective way.

Additional features

Beside fault finding, ComPair provides some additional features like:

- Uploading/downloading of presets
- Managing of preset lists
- Emulation of the Dealer Service Tool

SearchMan (electronic service manual)

When ComPair is installed in combination with SearchMan, all schematics and PCBs will be directly available while you repair a television if you click on a PCB or schematic link.

Example: Measure the DC voltage on C2568 (PCB/schematic) on the small signal level.

Clicking on PCB will automatically pop-up a picture of the PCB with the location of C2568 marked. Clicking on schematic will automatically pop-up the schematic with the location of C2568 marked.

5.3 Error codes

5.3.1 Reading error codes from the error buffer

The error buffer can be read in 2 ways:

1. On the screen via the Service Alignment Mode (SAM). In case picture is OK, the error buffer can be read easiest via

the SAM. In the main menu of the SAM the last 10 different error codes occurred are displayed. The most recent detected error code is displayed on the left side, so e.g.:
0 0 0 0 0 means no error codes present in the buffer
3 0 0 0 0 means one error code present in the buffer; error code 3
2 3 0 0 0 means two error codes present in the buffer; error code 2 is the most recent, error code 3 is detected before 2

2. On the display of the DST. If an error has been detected by the MG5.1E chassis, the set might go into protection. Without the presence of a picture the errors can be read by the DST, as long as the main-processor is still active (green LED continuous and red LED blinking fast (5Hz); in case of red LED is blinking slow (1,25Hz) there is a main-processor problem). To transmit the errors from the TV to the DST:
   1. Press the "DIAGNOSE" key (in all modes except the SAM).
   2. Press "1" to view the last error detected.
   3. Hold the DST 5 to 10 cm in front of the stand-by LED of the set (the IR-sending LED of MG5.1E is located near the stand-by LED).
   4. Press the "OK" key.

The error is represented by a 2 digit number. The 2 digits on the DST are displayed sequentially, with a pause before it is repeated. The digit after the pause is the 1st digit. If the display reads 4 - 7, the error code is 47. To read other error codes, press "DIAGNOSE" and one of the other digit keys. Note:
- If the DST cannot communicate to the MG5.1E in a proper way, ERROR 2 is shown in the display of the DST. Trying again by changing the DST position a little bit might help.
- If the error buffer of MG5.1E is empty, no errors are displayed by the DST; the display remains blank.

5.3.2 Clearing the error buffer

The error buffer can be cleared in 2 ways:
1. In the SAM by selecting the item RESET ERROR BUFFER in the main menu.
2. By the "DIAGNOSE 99" command of the DST (in all modes except the SAM). Press the DIAGNOSE key on the DST, followed by 9 and 9 and then .

Note: When error buffer is full (10 codes), no new error can be stored anymore. However of every error raised is monitored how long it exists in the error buffer. When for any reason a false raised error exists in the buffer, it will be deleted after 50 hours. If this error still is actual after 50 hours, it will be raised again. In this way is safeguarded that history of error codes is stored. Sometimes it is an option to first write down the error buffer content, reset the buffer, and look again which error codes are generated by the set.

5.3.3 Error code table

Error messages (see table)

8. Electrical alignments

8.1 General alignment conditions

All electrical alignments should be made under the following conditions:
- Power supply voltage: 220-240V 10%; 50-60 Hz 5%.
- Warm-up time >15 minutes.
- Voltages and oscillograms are measured in relation to tuner earth (with exception to the voltages on the primary side of the power supply). Never use the cooling fins/plates as ground.
- Test probe: Ri > 10 MOHM, Ci < 20 pF.

8.2 Alignments on the Power supply panel

8.2.1 +130Vdc supply voltage

- Connect the positive lead of a voltmeter to the 130Vdc source (at the junction of 5304 and 5305).
- Connect the negative lead to the isolated "cold" ground.
- Using potentiometer R3322 adjust the 130Vdc supply voltage to +130Vdc 0V5.

8.3 Alignments on the Large Signal Panel

8.3.1 High Voltage Adjustment

Exercise extreme cautionwhen adjusting high voltage.
Note:The following test equipment must be used:
High voltage probe
Digital multimeter with 1% (or better) dc accuracy and an input impedance of 10 Megohms 10%.
Initial settings:
- Turn the PTV on.
- Confirm that the 130V source (at the junction of 5304 and 5305) is 130V 0V5.
- Perform the 130Vdc adjustment if the voltage is not within specified limits.
- Select a non-used AUX input for a black picture.
- Turn the PTV off.

With the PTV off and unplugged, connect a Fluke Model 80K-40 (or equivalent) high voltage probe as follows and adjust the high voltage.
1. Connect the ground lead to the chassis ground.
2. Connect the high voltage probe to the digital multimeter.
3. Set the digital multimeter to measure dc volts.
4. Remove one of the CRT anode connections from the high voltage splitter.

Note:Make sure that 3973 is turned fully clockwise.
1. Insert the probe tip into the open CRT anode connection of the high voltage splitter
2. Turn the set on.
3. Adjust 3973, High Voltage Adjust, on the Large Signal Panel for a reading of 30kV 200V.
4. Turn the set off.
5. Remove the high voltage probe.
6. Reinstall the CRT anode connector.
7. Turn the set on and confirm proper operation.

8.3.2 High Voltage Frequency Adjustment

1. Turn the set off and disconnect the ac-input power.
2. Disable the high voltage by shorting the collector of 7952 to ground.
3. Disable the sync input to 7900 by shorting the base of 7952 to ground.
4. Connect a frequency counter to pin 1 of 7900.
5. Turn the set on and adjust 3902 to obtain a reading of 31.25kHz on the frequency counter.
6. Turn the set off and remove the short circuits and the frequency counter.

Note:Some frequency counters may be too sensitive at one attenuation level and not sensitive enough at another. In this case, an oscilloscope may be used. Adjust 3902 to obtain a delay of 63.5S from the leading edge of the first main pulse to the leading edge of the second main pulse.

8.4 Alignments on the small signal panel (SSP)

8.4.1 40.4 MHz neighbour-channel sound trap

- Tune to a checker board test-pattern (system BG - and with a carrier frequency of 475.25 MHz).
- Connect an oscilloscope (trigger line frequent) to pin 19 (CVBS out) of the scart1 connection.
- Align the coil L5103 (diagram K1) completely downwards (see Fig. 8.1).
- Align the coil upwards till under- and overshoot arise at the black/white and white/black transitions in the video signal (Fig. 8.2).
- Align the coil downwards again till above mentioned under- and overshoot is just disappeared.

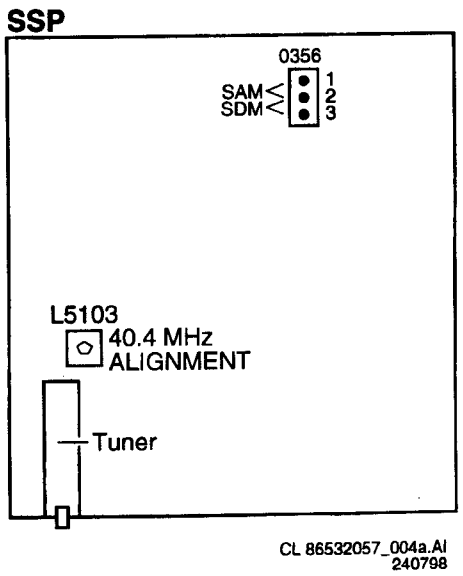

Figure 8-1

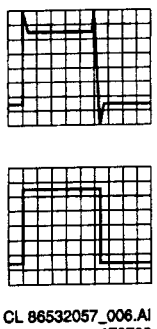

Figure 8-2

8.5 Alignments needing SAM-mode + measuring equipment

(These alignments could be of interest when ICs (7501, TDA9320H), or the EAROM (7008, ST24E16) are exchanged on the SSP.)

8.5.1 'IF AFC' (navigation to this menu item via Alignment --> General --> IF AFC)

- During the 'IF AFC'-parameter adjustment one can see OSD feedback on the screen.
- The OSD feedback can give 4 kind of messages:

AFC-window	AFC-frequency versus reference
Out	High
In	High
In	Low
Out	Low

The first item (in or out) informs you whether you are in or out the AFC-window
The second item (high/low) informs you about whether the AFC-frequency is to high or to low

- First you must align the 'IF AFC'-parameter such that you come into the AFC-window (= 'in')
- Then you must look for the point where the 'IF AFC'-parameter influences the high/low message. This level is the value you are looking for.

Service-tip: If you do not trust the accuracy of the frequency of your Service-generator, first 'measure' with 'Fine tune'-line (manual install-menu) of a good set your Service generator.

8.5.2 'Tuner AGC'

Supply a TV-signal, with a frequency of 475.25 MHz and a signal-strength of about 2 mV. Measure the DC-voltage on pin 1 of the Tuner (position 1102). With the 'Tuner AGC'-alignment in the SAM-menu, this voltage can be aligned. Alignment is correct when DC-voltage is just below 3.8 V

8.6 Alignments and settings in the Service Alignment Menu

8.6.1 General

Entering the SAM can be done in 2 ways:

- Briefly shorting the service pins 'SERVICE ALIGNMENT MODE' on the front side of the SSP (pins 1 and 2 of connector 0356) or:
- Pressing the key on the Dealer Service Tool (DST) (RC7150), followed by keying in the password "3140" and then pressing the key.

The Service Alignment Mode menu will now appear on the screen. The following information is now displayed:

1. The software date ('Date') and version ('ID.') of the ROM (Example: MG51E11.0_01501). (This software-code stands for MG51 (chassis), E for Europe, 1-language, 1.0 software version, xxxxx latest 5 digits of 12nc code software.)
2. The accumulated total of operation hours ('Operation Hours').
3. ('Errors') followed by maximal 10 errors. The most recent error is displayed at the upper left. For explanation errors see chapter 5 (table 5.1).
4. ('Defect. Module'). Here the module that generates the error is displayed. (If there are multiple errors in the buffer that have not all been generated by a single module, there is probably another defect. The message 'Unknown' will then be displayed here).
5. ('Reset Error Buffer'). The error buffer can be reset by pressing the key.
6. ('Functional Test'). All devices are tested via the key. Eventual errors are displayed in the error buffer. The error buffer is not erased, the contents return when the Functional Test is terminated.
7. ('Alignments'). This enables the Alignments sub-menu to be called up.

The following alignments can be selected:
'General':

- 'Drive'
- 'Luminance Delays'
- 'EHT Compensation'
- 'Soft Clipper'
- 'Luma Gain'
- 'IF AFC'
- 'Tuner AGC'
- 'Blend Intensity'
- 'Adjust Peak White Limiter'
- 'Vg2 Test Pattern'
- 'G2 Setup'
- 'AKB'

'Normal Geometry':

- General geometry alignments.

'Super wide geometry': (only valid for widescreen sets)

- Geometry alignments for the 'Super Wide' position in 16:9 sets (only valid for wide screen sets; alignments can be performed, however, it is better to set values as mentioned below).

'Options':

- Setting the initialisation codes in the set via text.

'Option number':

- All options together, expressed in two long numbers. The original factory setting for these numbers can be found on the picture tube sticker on the inside of the set.

'Store':

- Store all alignments.

The alignments are explained now in the sequence of the sub-menu:

8.6.2 General alignments in Service Alignment Menu:

- Once all alignments/settings have been completed the item 'Store' must be selected to record all the values in the permanent memory of the set.
- If the option codes have been changed and stored, the set has to be switched on and off using the mains switch to activate the new settings (when switching on and off via Standby, the option code settings are NOT read by the microprocessor).
- If an empty EAROM (permanent memory) is detected, all settings are set to pre-programmed default (standard) values.
- A built-in test pattern can be called up in various sub-menus. The test pattern generator can be switched on using the item 'Test pattern on/off'. The test pattern only appears AFTER the specific alignment has been selected. The test patterns are generated by the teletext-IC.

'Drive'

1. Remove the Light Barrier in order to view the Main Lens Output from each tube.

Note:Any dust should be removed from the Output Lenses, Mirror and backside of the Screen with a soft cloth.

1. Apply a Black Level video pattern to the antenna input.
2. Turn all the G2 controls counterclockwise.
3. While looking directly into the tubes, set each G2 control to produce a barely visible picture on the CRT.
4. Set "Cathode" to 6.
5. Select "Green" and set the value to 32.

6. Select "Tint" and switch this to normal.
7. Apply a Gray scale pattern to the antenna input.
8. Adjust the Red and Blue drives to obtain the correct Gray scale.
9. Reset the "Tint" to Warm.
10. Add 4 to the value of the "Red" and subtract 7 from the value of the "Blue".
11. Reset "Tint" to Cool.
12. Subtract 3 from the value of the "Red" and add 3 to the value of the "Blue".
13. Return to the "Alignments" menu and "Store" the new settings.

Tint-settings:
In table below an indication of the three tint settings 'Normal',. 'Warm' and 'Cool' is given.

	Cool	Normal	Warm
R	10	13	17
G	32	32	32
B	17	14	7

'Luminance delays'
With the 'Luminance delays' alignment the luminance information is placed on the chrominance information (brightness is pushed onto the colour). Use a colour bar/grey scale pattern as test signal.

- Lum. Delay Pal: Apply a PAL colour bar/grey scale pattern as a test signal. Adjust 'Lum. Delay Pal' until the transients of the colour part and black and white part of the test pattern are at the same position.
- Lum. Delay Secam: Apply a SECAM colour bar/grey scale pattern as a test signal. Adjust 'Lum. Delay Pal' until the transients of the colour part and black and white part of the test pattern are at the same position.
- Lum. Delay Bypass: Apply a NTSC colour bar/grey scale pattern as a test signal. Adjust 'Lum. Delay Bypass' until the transients of the colour part and black and white part of the test pattern are at the same position.

'EHT compensation'
Fixed value: 0

'Soft clipper"
Fixed setting: 'Pwl+0%'

'Luma gain'
Fixed value: 1

'IF AFC'
See chapter 8.5.1. The SAM-mode is needed to make alignment, a test generator to make signal, an oscilloscope to measure at SCART-output and the Install-menu to check fine-tuning-value.

'Tuner AGC'
See chapter 8.5.2. The SAM-mode is needed to make alignment, a test generator to make signal, a DC-Voltmeter to measure at pin 1 of Tuner.

'Blend intensity'
(This alignment could be used when micro controller or HOP-IC has been replaced).
It aligns the level of transparency of the menu-picture blended into the main-picture.

- Position the brightness-, contrast- and colour-setting in the middle-position. (picture-menu).
- Apply a signal with a 100 % white video-pattern
- Connect an oscilloscope to pin 3 of connector 0340 of the CRT panel and measure the Red output level
- Align 'blending intensity'-parameter such that the blended signal is 65 % of the black-white amplitude. Practically this will be about 1.3 V (blended signal) versus 2 V(full white signal).
- The parameter can be adjusted in between 0 and 31.

'Peak White Limiter'
The next value for 'Peak White Limiter' must be entered: 10

'VG2 Test Pattern'
Not aplicable

'G2 Setup'
Not aplicable

'AKB'
Select AKB and switch to "ON".

8.6.3 Geometry alignments 'Normal Geometry' in the Service Alignment Menu

Warning:
At this moment the INTERNAL test pattern of the set will lead to a misaligned geometry of the picture. Please do not use internal test pattern. When using a service generator with a geometry-pattern (e.g. a crosshatch-pattern), the set can be aligned without problems.
Note: First defeat the Convergence drive by shorting the two pins on connector 1033 on the Convergence Panel.
Typical values for the Normal Geometry alignments are:
V Slope36
V. Shift32
V. Amplitude46
V S-Correction12
H. Shift24
H. Amplitude20
East/West Parabola40
East/West Corner13
East/West Trapezium24
Horizontal Parallelogram30

Vertical amplitude and centring
Select 'Test Pattern ON' and set the begin conditions:

- Vertical S-correction value on 12.

The boundary-stripes of the test pattern should be positioned on the edge of the picture tube.

1. Align 'V slope' (when aligning the below half of the picture is blanked). The middle line of the test pattern must be matched with the edge of this blanking/picture transient in the middle of the picture. Pushing button again, gives you previous menu again. (This alignment is meant to align the zero-crossing of the frame-deflection to the mechanical middle of the picture tube.)
2. Align the vertical amplitude using 'V amplitude' so that the test pattern is fully visible.
3. Align the vertical centring using 'V shift' so that the test pattern is located vertically in the middle.
4. If necessary repeat the alignment of 'V amplitude', in order to get 'V shift' OK.

Vertical S correction
Select 'Test pattern on'.
Align the vertical S correction using 'V S-correction' so that the vertical amplitude at the top of the picture is equal to the amplitude in the middle of the picture.

Horizontal centring and amplitude
Select 'Test pattern on'.

1. Using 'H amplitude' align the horizontal amplitude so that the entire test pattern is visible.

2. Use an external test signal, with a centre-reference from a service-generator. Use 'H shift' to align the picture horizontally in the middle.
3. Repeat the 'H amplitude' alignment if necessary.

East/west alignment

Select 'Test pattern on'.

1. Use 'East/West Parabola' to align the vertical lines until straight.
2. Use 'East/West Corner' to align the vertical lines in the corners until straight.
3. Use 'East/West Trapezium' to align for a rectangular.
4. Use 'Horizontal Parallelogram' to align for straight vertical lines if necessary.
5. If necessary select 'East/West Corner' and align as required.
6. Repeat steps 1 to 4 if necessary.

8.6.4 Geometry alignments 'Super wide geometry' in the Service Alignment Menu

Only applicable to 16:9 sets.
Typical values for the Super Wide Geometry alignments are:
V. Shift 32
V. Amplitude 28
V S-Correction 12
H. Correction 18
East/West Prabola 40
The header of this paragraph and also the menu's are misleading. We only need to set the following values, if the normal geometry alignment has been performed correctly.

- Vertical S correction: enter value here of normal geometry.
- East/west parabola: enter value here or normal geometry.

8.7 Option menu

Introduction:
The microprocessor communicates with a large number of I2C-ICs in the set. To ensure good communication and make digital diagnosis possible, the microprocessor has to know which ICs have to be addressed. The presence of specific ICs or functions is made known by means of the option codes.
All options codes can be manipulated using both the option numbers and/or the Option menu.
All hardware related options are incorporated under the heading 'Options' of the 'Alignments' sub-menu of the 'Service Alignment Mode'. All software related options that are incorporated under the heading 'Dealer Options' of the 'Service Alignment Mode", can also be reached directly via the 'button of the DST.

8.8 Options in the Service Alignment Mode

Menu-item	Subjects	Options	Physically in the set
Dual screen/PIP	Aux type	None	
		Video Dual Screen	
		PIP	
	Text dual screen	Yes	Text dual screen present (only valid for 16:9 sets)
		No	Text dual screen not present
Teletext/EPG	TXT	Yes	Teletext present
		No	Teletext not present
	NextView present	Yes	NextView set
		No	NextView not set
	NextView type	Flashram	IC7013 present on SSP (diagram K7)
		No Flashram	IC 7013 not present on SSP (diagram K7)
Communication	Easylink Plus	Yes	Easylink Plus set
		No	Easylink Plus not set
Picture tube	CRT Type	4:3	4:3 picture tube
		16:9	16:9 picture tube
	Picture Rotation (only for 16:9)	Yes	Frame rotation circuitry present on LSP (IC7440 diagram A3)
		No	Frame rotation circuitry not present (IC7440 diagram A3)
	Dynamic Focus	Yes	Dynamic focus picture tube present
		No	Dynamic focus picture tube not present
Video Repro	Feature box type	Eco	IC7606 present on SSP (diagram K5)
		Prozonic	IC7606 and IC7607 present on SSP (diagram K5)
		Falconic	
	Field memories (only with falconic)	2	
		3	
	Lightsensor	Yes	
		No	

Menu-item	Subjects	Options	Physically in the set
	PALplus	Yes	
		No	
	Combfilter	Yes	IC7560 present on SSP (diagram K1)
		No	IC7560 not present on SSP (diagram K1)
	Picture improvement	Yes	
		No	
	Picnic AGC	Yes	In normal operation: Yes
		No	During 'Drive' alignments: No
	Signalling bits	Yes	
		No	
Source Selection	External 3	Yes	3rd EURO connector present
		No	No 3rd EURO connector present
	External 4	Yes	4th EURO connector present
		No	No 4th EURO connector present
Audio Repro	Dolby	None	
		Pro Logic	
		Digital	MCS-module present
	Rear speakers	Corded	
		Virtual	
		Cordless	Active surroundbox present
	Acoustic system	FL7	Applicable for sets with subwoofer
		FL8	Applicable for sets without subwoofer
		FL9	Monitor look
Miscellaneous	Heatsink Present	Yes	Heatsinks present on CRT/Scavem panel (diagram F)
		No	Heatsinks not present on CRT/Scavem panel (diagram F)

8.9 Dealer Options in the Service Alignment Mode

Menu name	Subjects	Options	Physically in set
Picture options	CTI	Yes	CTI enabled
		No	CTI disabled
Personal	Blue Mute	Yes	Blue mute active in case no picture detected
		No	Noise in case of no picture detected
	Virgin Mode	Yes	TV starts up once with language selection menu after mains switch on for the first time (virgin mode)
		No	TV does not starts up once with language selection menu after mains switch on for the first time (virgin mode)
	Auto store mode	None	Autostore mode disabled (not in installation menu)
		PDC-VPS	Autostore mode via ATS (PDC/VPS) enabled
		TXT page	Autostore mode via ACI enabled
		PDC-VPS-TXT	Autostore mode via ACI or ATS enabled
	Demo Mode Enable	Yes	Demo mode enable
		No	Demo mode disable
	Auto TV	Yes	Auto TV mode enabled
		No	Auto TV mode disabled
Teletext	TXT Preference	TOP	Preference to TOP teletext
		FLOF	Preference to FLOF teletext
	East/West TXT	West	TXT characters for non -/58 sets
		East	TXT characters for -/58 sets

- After the option(s) have been changed, they must be stored via the STORE command.
- The new option is only active after the TV is switched off and then back on again using the mains switch (the EAROM is then read out again).

8.10 'Option number'

In case the EAROM has to be replaced, all the options will also require resetting. To be certain that the factory settings are reproduced exactly, both option numbers have to be set. These numbers can be found on a sticker on the picture tube.
Option number 46PP9105 and 55PP9105 is:
00713 12678 04545 00016
12343 00001 00000 00000

8.11 Convergence Alignment

Warm the set up for at least 20 minutes prior to making any Geometry or Convergence adjustments.
Sit directly in front of and at least 2 to 3 meter away from the front of the screen while performing convergence alignments. Also ensure that you are always at eye level with the area of the screen you are adjusting.
Digital Convergence alignments are interactive. A change in one quadrant will affect adjacent areas of the screen. Several passes through the convergence sequence may be necessary.
When performing convergence alignments, it is advised to always follow the sequence pattern when going from one adjustment location to another. Pressing the Cursor Right key will sequence the Icon through the preloaded pattern.
A convergence board severely out of convergence will not necessarily have perfect Icon shapes.
A Complete in-depth Convergence will be required if the Convergence module or Convergence Memory IC has been replaced.
The correct signal for the mode being adjusted must be applied to the set when performing Geometry or Convergence alignments. Convergence alignments must be performed twice, one time for an NTSC signal, and then for PAL or SECAM. The NTSC signal can only be applied through the External inputs.

8.11.1 Screen centering

1. Apply a PAL, SECAM, or NTSC signal to the set (NTSC Signal can only be applied to the External inputs).
2. Put the picture in the 16:9 mode.
3. Selesct the "Convergence Mode" in the alignment menu.
4. Select "Convergence Selection" in the Convergence menu.
5. Select "Green" in the Convergence Selection Menu.
6. Defeat the Convergence drive by shorting the two Pins on connector 1033 located on the Convergence panel.
7. Place the Convergence Template over the screen.
   - 46": 3122 785 90002
   - 55": 3122 785 90003
8. Using the Centering rings on the Green CRT, center the convergence pattern onto the center point of the Convergence Template.
9. Return to the Convergence Selection menu.
10. Select "Red to Green" in the service menu.
11. Center the Red pattern onto the Green pattern for each quadrant of the screen.
12. Return to the Convergence Select Menu.
13. Select "Blue to Green" in the service menu.
14. Center the Blue pattern onto the Green pattern.
15. Remove the jumper from connector 1033.
16. Return to the Convergence Selection
17. Menu.

8.11.2 Green Geometry

Green Geometry
1. Make sure the set is placed in 16:9 mode. Ensure that the proper signal (PAL, SECAM, or NTSC) for the mode being tested is applied to the set.
2. Perform the procedure for PAL or SECAM, repeating the convergence procedure for NTSC will then be required.

Note: Do not repeat Screen Centering. It is necessary to perform Screen Centering for one mode only.
1. Select "Convergence Selection" in the Convergence Mode Menu.
2. Select "Green" in the "Convergence Selection" Menu.
3. Press the "OK" button on the DST or the Menu Select button on the consumer remote to adjust the Icon.

Note:Move the Icon toward the adjustment point on the Template for no more than 4 seconds in any direction.
1. When you are satisfied with the current location of the Icon, press the "OK" button or the Menu Select button.
2. Then press the Cursor Right Button or Outer Menu Ring to the right to move the Icon to the next adjustment point.

Note:This adjustment is highly interactive. Therefore it is advised to follow the pattern programmed into the set by pressing the Outer Menu Ring toward the right. However when performing minor touch up adjustments, it is possible to move the Icon up, down, right or left by pressing the Outer Menu Ring in that direction, until the Icon is positioned in the area requiring adjustment.
1. Follow the pattern and make corrections until the Convergence Crosshatch pattern matches the pattern on the screen template.
2. Remove the screen template.

8.11.3 Red Convergence

Red Convergence
1. Select "Red to Green" in the Convergence Selection menu.
2. Adjust the Red crosshatch pattern onto the green pattern in the same manner that the Green was adjusted to the template.

8.11.4 Blue Convergenge

Blue Convergence
Select "Blue to Green in the Convergence Serlection menu. Adjust the Blue crosshatch pattern onto the green pattern in the same manner that the Red was adjusted to the Green.

8.11.5 Focus/White balance

Focus/White Balance
1. Set the Picture, Sharpness, Brightness and Tint (NTSC) to their midrange position.
2. Set Color to minimum.

8.11.6 Electrical Focus

Electrical Focus
1. Connect a crosshatch pattern to the antenna input.
2. Cover the screen with a dark cloth.
3. Cover two of the CRT's Output Lenses with an 18-cm x 18-cm piece of cardboard.
4. Observe the magnified reflections of the individual picture tubes on the backside of the viewing screen.
5. Adjust the respective Focus control (top row of the HV/ Focus distribution block) for optimum mid-screen focus.
6. Confirm the correct focus by viewing the screen from the front of the unit.
7. Repeat steps 2 through 6 to focus the remaining two CRT's.

8.11.7 Mechanical Focus

Mechanical Focus
1. As with Electrical Focus, connect a crosshatch pattern to the antenna input.
2. Cover the screen with a dark cloth.

3. Cover two of the CRT's Output Lenses with an 18-cm x 18-cm piece of cardboard.
4. Carefully loosen the lens retaining wing nuts on the CRT output lens.
5. Move the Wing nut post in the slot to obtain optimum focus while viewing the screen from the rear of the set.
6. Tighten the wing nut.
7. Confirm correct focus by viewing the screen from the front of the unit.
8. Repeat steps 2 through 7 for the two remaining Output Lenses.

9. Circuit description

For the circuit description see Training Manual MG5.1E (3122 785 10053)

9.1 List of abbreviations

uC	Micro Computer
2CS	Two Carrier System stereo
2fcs	2 x colour subcarrier frequency
3,58	Colour subcarrier frequency (3.58 MHz)
4,43	Colour subcarrier frequency (4.43 MHz)
AF	Sound IF signal from sound IF detector
AFC	Automatic Frequency Control
AFT	Automatic Fine Tuning
AGC	Automatic Gain Control
Aquadag	Earth from the CRT-tube
Audio/CVBS	Sound IF signal (Intercarrier sound)
AV	Audio/Video
AVS	Automatic Voltage Switching
BCI	Beam Current Info
BG/I/DK/MN	IF Sound systems BG/I/DK/MN
BL	Beam Current limitation
BS	Broadcasting satellite
BTSC	Broadcast Television System Committee (L-R and L+R)
C	Chrominance
C-out	Chroma out
CRT	Picture Tube
CTI	Colour Transient Improvement
CVBS	Colour Video Blanking Sync
CVBS-PIP	CVBS for PIP panel
CVBS-Y	CVBS for luminance signal
DAC	Digital Analogue Converter
DC	Direct Current
East/west	East/west Correction signal
EEPROM	Electrical Erasable and Programmable Read Only Memory
EHT	Extra High Tension (25kV)
EN	Enable
EXT	External inputs (audio and video cinches)
FB	Fast blanking
Flyback	Flyback signal
FM	Frequency Modulation
Frame drive	Frame drive
Geometry	Geometry signal for 60Hz frame
H-shift	Horizontal-shift
Heater	Heater current for filement
HOR	Horizontal
HUE	Tint adjustment for NTSC system
I/O-expander	Input/Output expander
I-deg	Degaussing current
I2C	Inter IC data bus
IDENT	Identification signal from synchronisation IC
IF	Intermediate Frequency
Int-CVBS	Internal CVBS signal
INT-L	Internal audio L
INT-R	Internal audio R
L-in	Left audio in
L-out	Left audio out
LED	Light Emitting Diode
Line drive	Line drive
Line prot	Line protection signal
LOT	Line Output Transformer
LSP	Large Signal Panel
MHz	Mega Hertz
MPX	Multiplexed BTSC signal
NICAM	Near Instantaneous Companding Audio Multiplex
NIL	Non Interlace
NILS	Non Interlace Signal
NTSC	National Television System Committee
OSD	On Screen Display (in diagrams Display On Screen)
PAL	Phase Alternating Line
PIP	Picture In Picture
PLL	Phase Locked Loop
POR	Power On Reset
PP	Personal Preference
Prot	Protection signal
PTC	Positive Temperature Coefficient (increasing resistance at increasing temperature)
PWM	Pulse Width Modulation
QPSK	Quadrature Phase Shift Keying
R-in	Right audio in
R-out	Right audio out
RAM	Random Access Memory
RC5	Remote Control 5 system
REF	Reference
RGB	Red Green Blue
ROM	Read Only Memory
SAP	Second Audio Program
SAP_AVAIL	Status signal; pulled "low" by BTSC panel, SAP is available
SAW	Surface Acoustic Wave
SC	Sand Castle signal
SCL	Clock of the I2C-bus
SDA	Data if the I2C-bus
SDM	Service Default Mode
SECAM	Sequential Couleur a Memoire
Sif	Sound IF signal front end tuner
SM	Service Mode
SMPS	Switched Mode Power Supply (frequency and duty cycle controlled)
SQ	Squeeze mode
SSP	Small Signal Panel
Std-by	Stand by
SVHS	Super Video Home System
SYNC	Synchronisation
TINT	PWM control signal for hue control
TP1	Test Point 1
TRANS_ID	Status signal
TXT	Teletext
U	R-Y

V	B-Y	4:3	Aspect Ratio of Picture Tube (4 equals height, 3 equals width)
VERT	Vertical		
Vfb	Vertical feedback voltage	16:9	Aspect Ratio of Picture Tube (16 equals height, 9 equals width)
VG1	VG1 Voltage		
VG2	VG2 Voltage	14:9	Aspect Ratio of Picture Tube (14 equals height, 9 equals width)
Vref	V-Reference		
Y	Luminance part of the video signal		

9.2 Optical assembly replacement

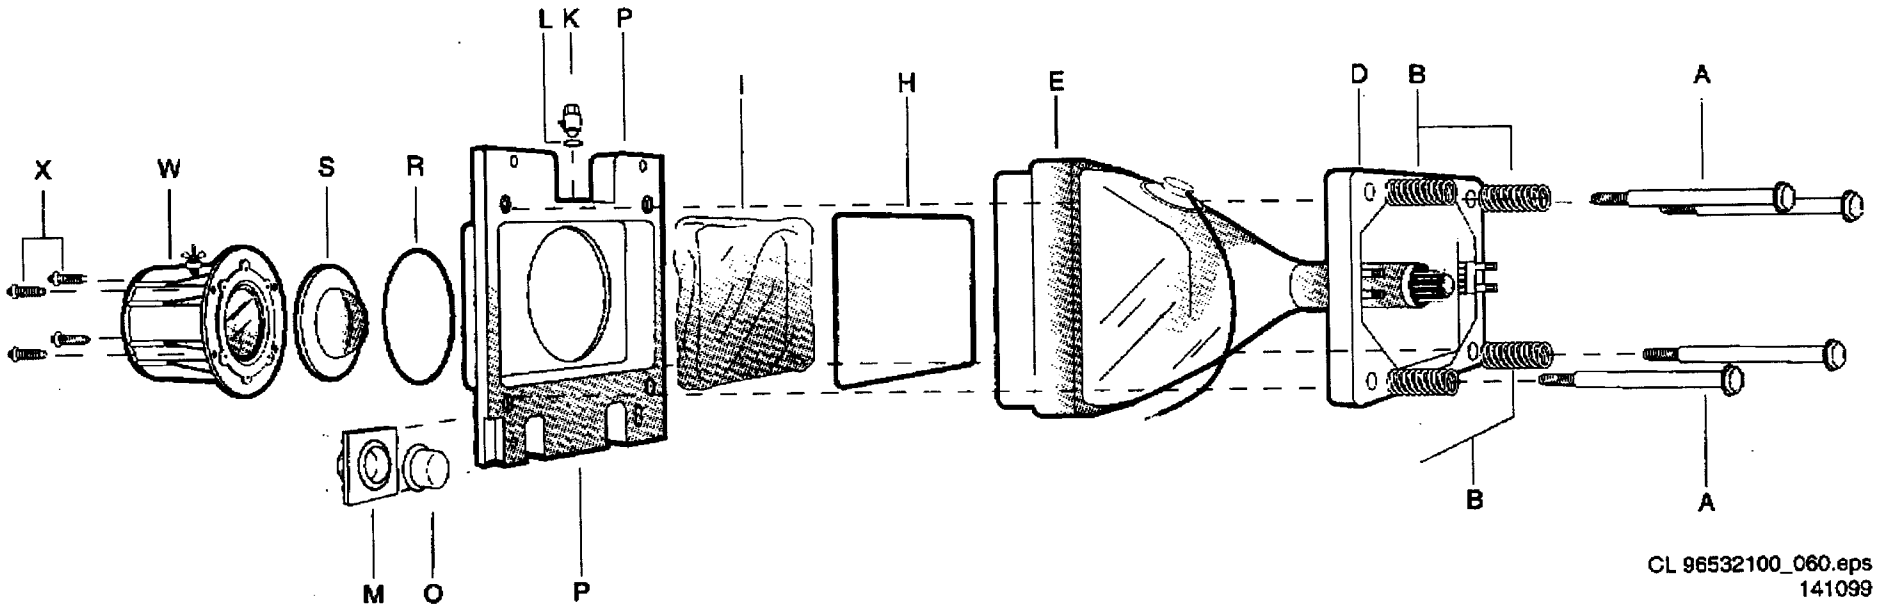

Figure 9-1

For optical assembly replacement parts see Spare parts list at the end of this manual.

10. Spare parts list

Power Supply Panel
