Stereo Pre Main Amplifier

MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ Company has created the ultimate in stereo sound. Only original MARANTZ parts can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ stereo are generally available within 72 hours throughout the nation via a toll-free line to our National Parts Depot in California. The sales professionals who take your call immediately refer to their own desk top computer terminal and can quickly determine the availability and price information you require. If, for some reason, your order should exceed our available stock, we usually can instantly provide an alternate replacement part or current delivery information. When the order is placed and confirmed, the computer simultaneously generates "hard copy" orders at the distribution center. As hard copies come directly from the computer to the national parts depot, your requested stock is assembled and prepared for shipment and placed on the first available carrier for delivery to you.

ORDERING PARTS

Phone orders will eliminate mail delays, and we encourage the use of this method. If you order by mail, use MARANTZ parts order forms which are available from our National Parts Depot located at the following address:

SUPERSCOPE NATIONAL PARTS DEPARTMENT
20525 Nordhoff Street
Chatsworth, California 91311
Phone: 1-800-423-5108
1-213-998-9333

The following information must be supplied to eliminate delays in processing your order:

1. Complete address.
2. Complete part numbers.
3. Complete description of parts.
4. Model number for which part is required (indicate MARANTZ).
5. Account number (for account customers only).

Direct consumers will be provided with the current retail price quotation on available parts in order to advise them of the cost of the parts and shipping.

OVERSEAS PARTS ORDERING

Parts may also be ordered from the following overseas addresses:

| U.S.A. | CANADA | AUSTRALIA | JAPAN |
|--|---|---|--|
| MARANTZ COMPANY, INC. National Service Dept. P.O. Box 577 Chatsworth, CA 91311 U.S.A. | SUPERSCOPE CANADA, LTD. 3710 Nashua Drive Mississauga Ontario, Canada L4V1M5 | MARANTZ AUSTRALIA 32 Cross Street Brookvale, NSW 2100 Australia | MARANTZ JAPAN, INC. 3622 Kamitsuruma Sagamihara-shi Kanagawa, Japan |
| EUROPE | | | |
| MARANTZ S.A. 326 Avenue Louise Bte 32 1050 Brussels Belgium | MARANTZ AUDIO U.K. LTD. Unit 15/16 Saxon Way Industrial Estate Motor Lane Harmondsworth UB7 OLW Great Britain | MARANTZ BELGIUM 45 Rue Auguste Van Zande 1080 Brussels Belgium | MARANTZ SVENSKA A.B. | | MARANTZ NORSKE A.S. Refstadalleen 13 Oslo 5 Norway | MARANTZ DENMARK Bregnerødvej 132b 3460 BIRKERØD DENMARK | |

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please contact the nearest facility for the necessary assistance.

MODEL PM520DC STEREOPHONIC AMPLIFIER

INTRODUCTION

This service manual was prepared for use by Authorized Warranty Stations and contains service information for the Marantz Model PM520DC Stereo Console Amplifier. Servicing information and voltage data included in this manual are intended for use by knowledgeable and experienced personnel only. All instructions should be read carefully. No attempt should be made to proceed without a good understanding of circuitry operation.

The parts list furnishes complete ordering information. Most replacement parts should be ordered from the Marantz Company. However, a simple description is included for parts which can be obtained locally.

1. SHOCK, FIRE HAZARD SERVICE TEST

CAUTION: After servicing this appliance and prior to returning to customer, either primary AC cord connector pins (with unit NOT connected to AC mains and its Power switch ON), and the face or front Panel of product and controls and chassis bottom.

Any resistance measurement less than 1 Megohms should cause unit to be repaired or corrected before AC power is applied and verified before return to user/customer.

Ref. UL Standard NO. 1270. Para. 66. 3. D (Mandatory Test after servicing Electrical Appliances, effective 7-1-83).

2. FUNCTION SELECTOR

Each signal applied to the AUX, TUNER, and TAPE 2 signal enters the electronic switch (QS01). The phono signal applied to the PHONO jacks is also applied to the electronic switch (QS01) after the signal is amplified by 35dB and RIAA-equalized in the EQ amplifier.

The TAPE 1 IN signal first enters the electronic switch (QS02), then controlled with QS01 and supplied to the common output line.

The TAPE 1 OUT is supplied from the COMMON output (IC PIN No. 14, 15) of QS01.

The TAPE 2 OUT is sent to the TAPE 2 OUT jack after it is switched over with QS03 which in turn is controlled by TAPE COPY control (QS04, QS05).

The TAPE COPY control consists of latch circuits QS04, QS05, level shift transistors QS07, QS08, and the switching transistor (QS09) that functions not to send the TAPE 2 OUT when the SELECTOR switch is placed in the TAPE 2 position.

The memory system is of a capacitor back-up type consisting of CS10 and QS06, and functions as a last channel memory that maintains the selector position set before the power was just turned off.

3. PRE-AMPLIFIER

Signals developed at the common terminal of the FUNCTION switch are applied to the graphic equalizer amplifier in passing through the Volume control (RG01) and the Balance control (RG81).

The Volume control (RG01) is of a motor-driven type and the motor is controlled in NORMAL and FAST mode by means of the UP/DOWN switches (SG51 ~ SG54) which, in turn, control the volume control DC amplifier (QG01).

The signals applied to the graphic amplifier stage is first amplified by 17dB in the flat amplifier QE01 (1/2) provided on the graphic equalizer amplifier stage, then led to the following EQ amplifier QE01 (2/2) and divided into five frequency groups, then each of five is controlled by the PUSH VR corresponding to the frequency. Thus equalized signals are subject to DEFEAT/EQ ON operation by means of EQ Defeat switch (ST51), then applied to the main amplifier.

4. MAIN AMPLIFIER

The signals applied are amplified in the Voltage amplifier (Q701), then led to the Output Amplifier (Q702), and finally sent to the Speaker Terminals through the protector relay (LN51) and after selected by the speaker switch (SU01).

- Audio Muting Switch (ST02): attenuates signal level at the main amplifier input circuit.
- Subsonic Filter Switch (ST51): provides frequency response of 12dB/OCT by switching in CR filter (6dB/OCT) in the graphic EQ amplifier output circuit and the NF capacitor (6dB/OCT) in the main amplifier simultaneously.

5. POWER AMPLIFIER ALIGNMENT

DC OFFSET ADJUSTMENT

1. Speaker Load: Open, Input: Open, Volume: MIN
2. Connect a DC voltmeter between the plus and minus speaker terminals.
3. Turn R709 (L ch), and R710 (R ch) until the DC voltage across the speaker terminals reduces to zero.

NOTE: Place the Subsonic Filter switch in the OFF position during the alignment above.

6. TEST EQUIPMENT REQUIRED FOR SERVICING

Table 1 lists the test equipment required for servicing the Model PM520DC Stereo Console Amplifier. The wattmeter, AC voltmeter, and variable autotransformer may be assembled as a test fixture as shown schematically in Figure 1. The load resistors and AC ammeter may be assembled into a second test fixture as shown in Figure 2.

7. PERFORMANCE VERIFICATION

TEST PROCEDURE

A. TEST EQUIPMENT

Refer to Table 1 for required test equipment.

B. PRELIMINARY PROCEDURES

1. Make the test setup shown in Figure 1 with the instrument controls set in the following positions:

| | |
|--------------------------|---------------------|
| Line Switch | OFF |
| Variable-line Switch | Variable |
| Wattmeter Switch | ON |
| Variable Autotransformer | 0V (fully CCW) |
| Load | 8 ohms (0.5mfd-OFF) |
| Audio Generator | 1kHz |
| Output | 5V range |
| Gain | Minimum |
| AC Voltmeter | 30V range |

2. Make sure that connections between the resistive load and the system terminals of the Model PM520DC have negligible resistance when compared with the resistance of the load itself. Appreciable resistance in wiring adds to the total load, resulting in inaccurate measurements of output power.
3. Connect amplifier output to load and connect AC cord to line power. Connect shorting plugs to the Phone input jacks of the Model PM520DC.

Table 1. Test Equipment Required for Servicing

| Item | Manufacturer and Model No. | Use |
|---|--|---|
| Distortion Analyzer Audio Oscillator AC Voltmeter | Sound Technology Model 1700B | Distortion Measurements Sinewave and squarewave signal source voltage measurements (AC) |
| Oscilloscope | Tektronix Model T932 Philips Model 3232 | Waveform analysis and trouble shooting and ASO alignment |
| Circuit Tester | | Trouble shooting |
| DC Voltmeter | Fluke Model 8000 "Digital" Simpson Model 313, Triplet Model 801 | Voltage measurements (DC) |
| AC Wattmeter | Simpson Model 1379 | Monitors primary power to amplifier |
| AC Ammeter | Commercial Grade (1 ~ 10 A) | Monitors amplifier output under short circuit condition |
| Line Voltmeter | Simpson Model 1359 | Monitors potential of primary power to amplifier |
| Variable Autotransformer | Seperior Electronic Co., Powerstet Model 116B-10A | Adjust level of primary power to amplifier |
| Shorting Plug | Use phono plug with 600 ohm across center pin and shell | Shorts amplifier input to eliminate noise Pickup |
| Output Load (8 ohms, $\pm 0.5\%$ 100W) | Commercial Grade | Provides 8-ohm load for amplifier output termination |
| Output Load (4 ohms, $\pm 0.5\%$ 100W) | Commercial Grade | Provides 4-ohm load for amplifier output termination |
| Output Load Capacitor (0.5 mfd) | Mylar | Provides capacitive load for instability checks |
| AC Power Control Box | Optional Item. Fabricate in accordance with Figure 1 | Monitors and controls primary power for amplifier |
| Amplifier Output Load Box | Optional Item. Fabricate in accordance with Figure 2 | Provides various amplifier loads and can monitor shorted output |

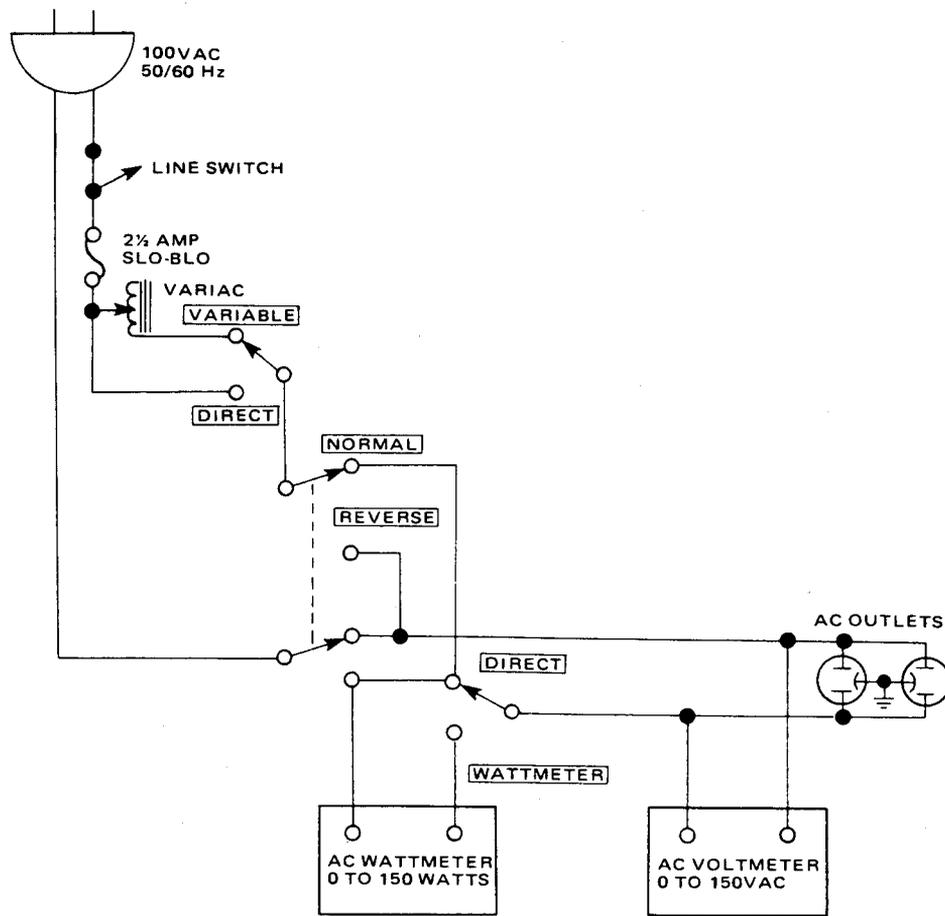

Figure1. AC Power Control Box Simplified Schematic

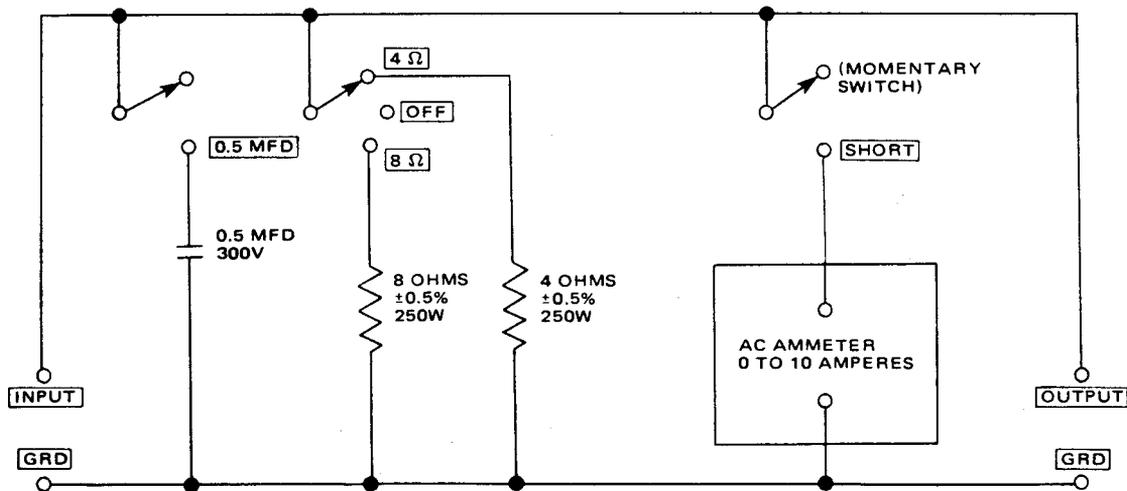

FIGURE 2. Amplifier Output Load Box Simplified Schematic

C. TOTAL HUM AND NOISE TEST

1. With shorting plugs connected to the Phono input jacks and an 8 ohm resistive load connected across the speaker system output terminals, connect a distortion analyzer across the load.

NOTE:

If the distortion analyzer does not contain a built-in voltmeter, an AC Voltmeter may be substituted.

2. Set the distortion analyzer controls for voltage measurements and apply power to the amplifier. Set the volume control fully CCW. Set the SELECTOR switch to PHONO.
3. If the distortion analyzer indicates more than 2.0mV refer to the trouble analysis section of this manual. Check capacitors, C801, C802, C803 and C804 and transistors, Q801, Q802, Q803 and Q804.
4. Set the volume control fully CW. If the distortion analyzer indicates more than 20mV, refer to the trouble analysis section of this manual. Check capacitors, C801, C802, C803 and C804 and transistors, Q801, Q802, Q803 and Q804.

D. MAXIMUM POWER OUTPUT

1. Connect the audio oscillator to the AUX input. Set audio oscillator frequency to 1 kHz. Set SELECTOR switch to AUX.
2. With the distortion analyzer connected across the output load (8-ohm), set the analyzer on the 30VAC scale.
3. Turn the analyzer on and increase the audio oscillator output to 150mV. The AC Voltmeter should read 18.9V AC or more.

Note on safety: Symbol \triangle Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol \triangle . Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.

E. HARMONIC DISTORTION TEST

1. Set the frequency of the audio oscillator and the distortion analyzer to 20kHz.
2. Set the controls of the analyzer for voltage measurement on the 30 volt scale.
3. Adjust the audio oscillator output level until the analyzer meter indicates 18.9VAC.
4. Switch the distortion analyzer to Set Level and adjust SENSITIVITY for full scale reading on 0 ~ 0.3% scale.
5. Measure the total harmonic distortion with the analyzer and verify it is less than 0.03%.

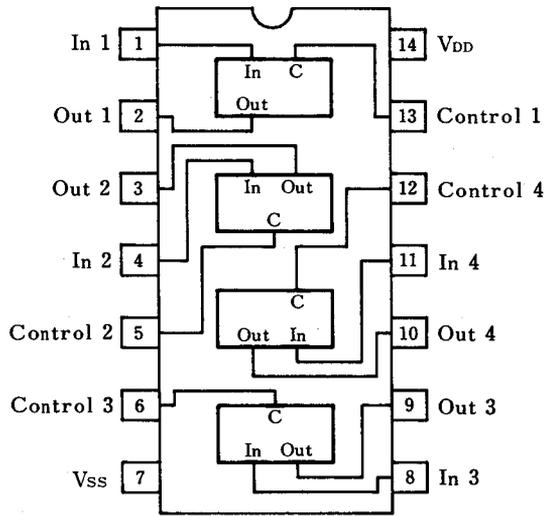

NOTE:

Any parasitic oscillation in the amplifier will be displayed on the oscilloscope when capacitance is switched into the load.

6. Switch the distortion analyzer back to SET LEVEL. (Do not readjust sensitivity of analyzer).
7. Change the frequency of the audio oscillator and distortion analyzer to 1 kHz. Adjust audio oscillator output for a full scale reading on the 0 ~ 1% scale.
8. Measure the distortion, verifying it is no greater than 0.03%.
9. Repeat steps 7 and 8, changing frequency to 20Hz. Distortion should be no more than 0.03%.
10. Check for parasitic oscillation; there should be none.

AUDIO SECTION

POWER OUTPUT PER CHANNEL

| | |
|---|-------|
| DIN 4 OHMS 1kHz | 85W |
| RMS 4 OHMS 1kHz | 79W |
| DIN 8 OHMS 1kHz | 62W |
| RMS 8 OHMS 1kHz | 75W |
| TOTAL HARMONIC DISTORTION AT RMS 8 OHMS | 0.03% |
| I. M. DISTORTION | 0.03% |
| DAMPING FACTOR 8 OHMS (1kHz) | 40 |

MM CARTRIDGE INPUT

| | |
|---------------------------|----------|
| Frequency Response (RIAA) | ±0.5dB |
| Signal-to-Noise Ratio | 80dB |
| Input Impedance | 47k ohms |
| Input Capacitance | 100pF |
| Input Sensitivity | 2.8mV |
| Equivalent Input Noise | 1.5µV |
| Dynamic Range | 100dB |

AUX. INPUT

| | |
|-----------------------|--------------|
| Input Impedance | 28k ohms |
| Input Sensitivity | 150mV |
| Frequency Response | 10Hz – 40kHz |
| Signal-to-Noise Ratio | 90dB |

OUTPUT VOLTAGE

| | |
|----------|-------|
| Tape Out | 400mV |
|----------|-------|

OUTPUT IMPEDANCE

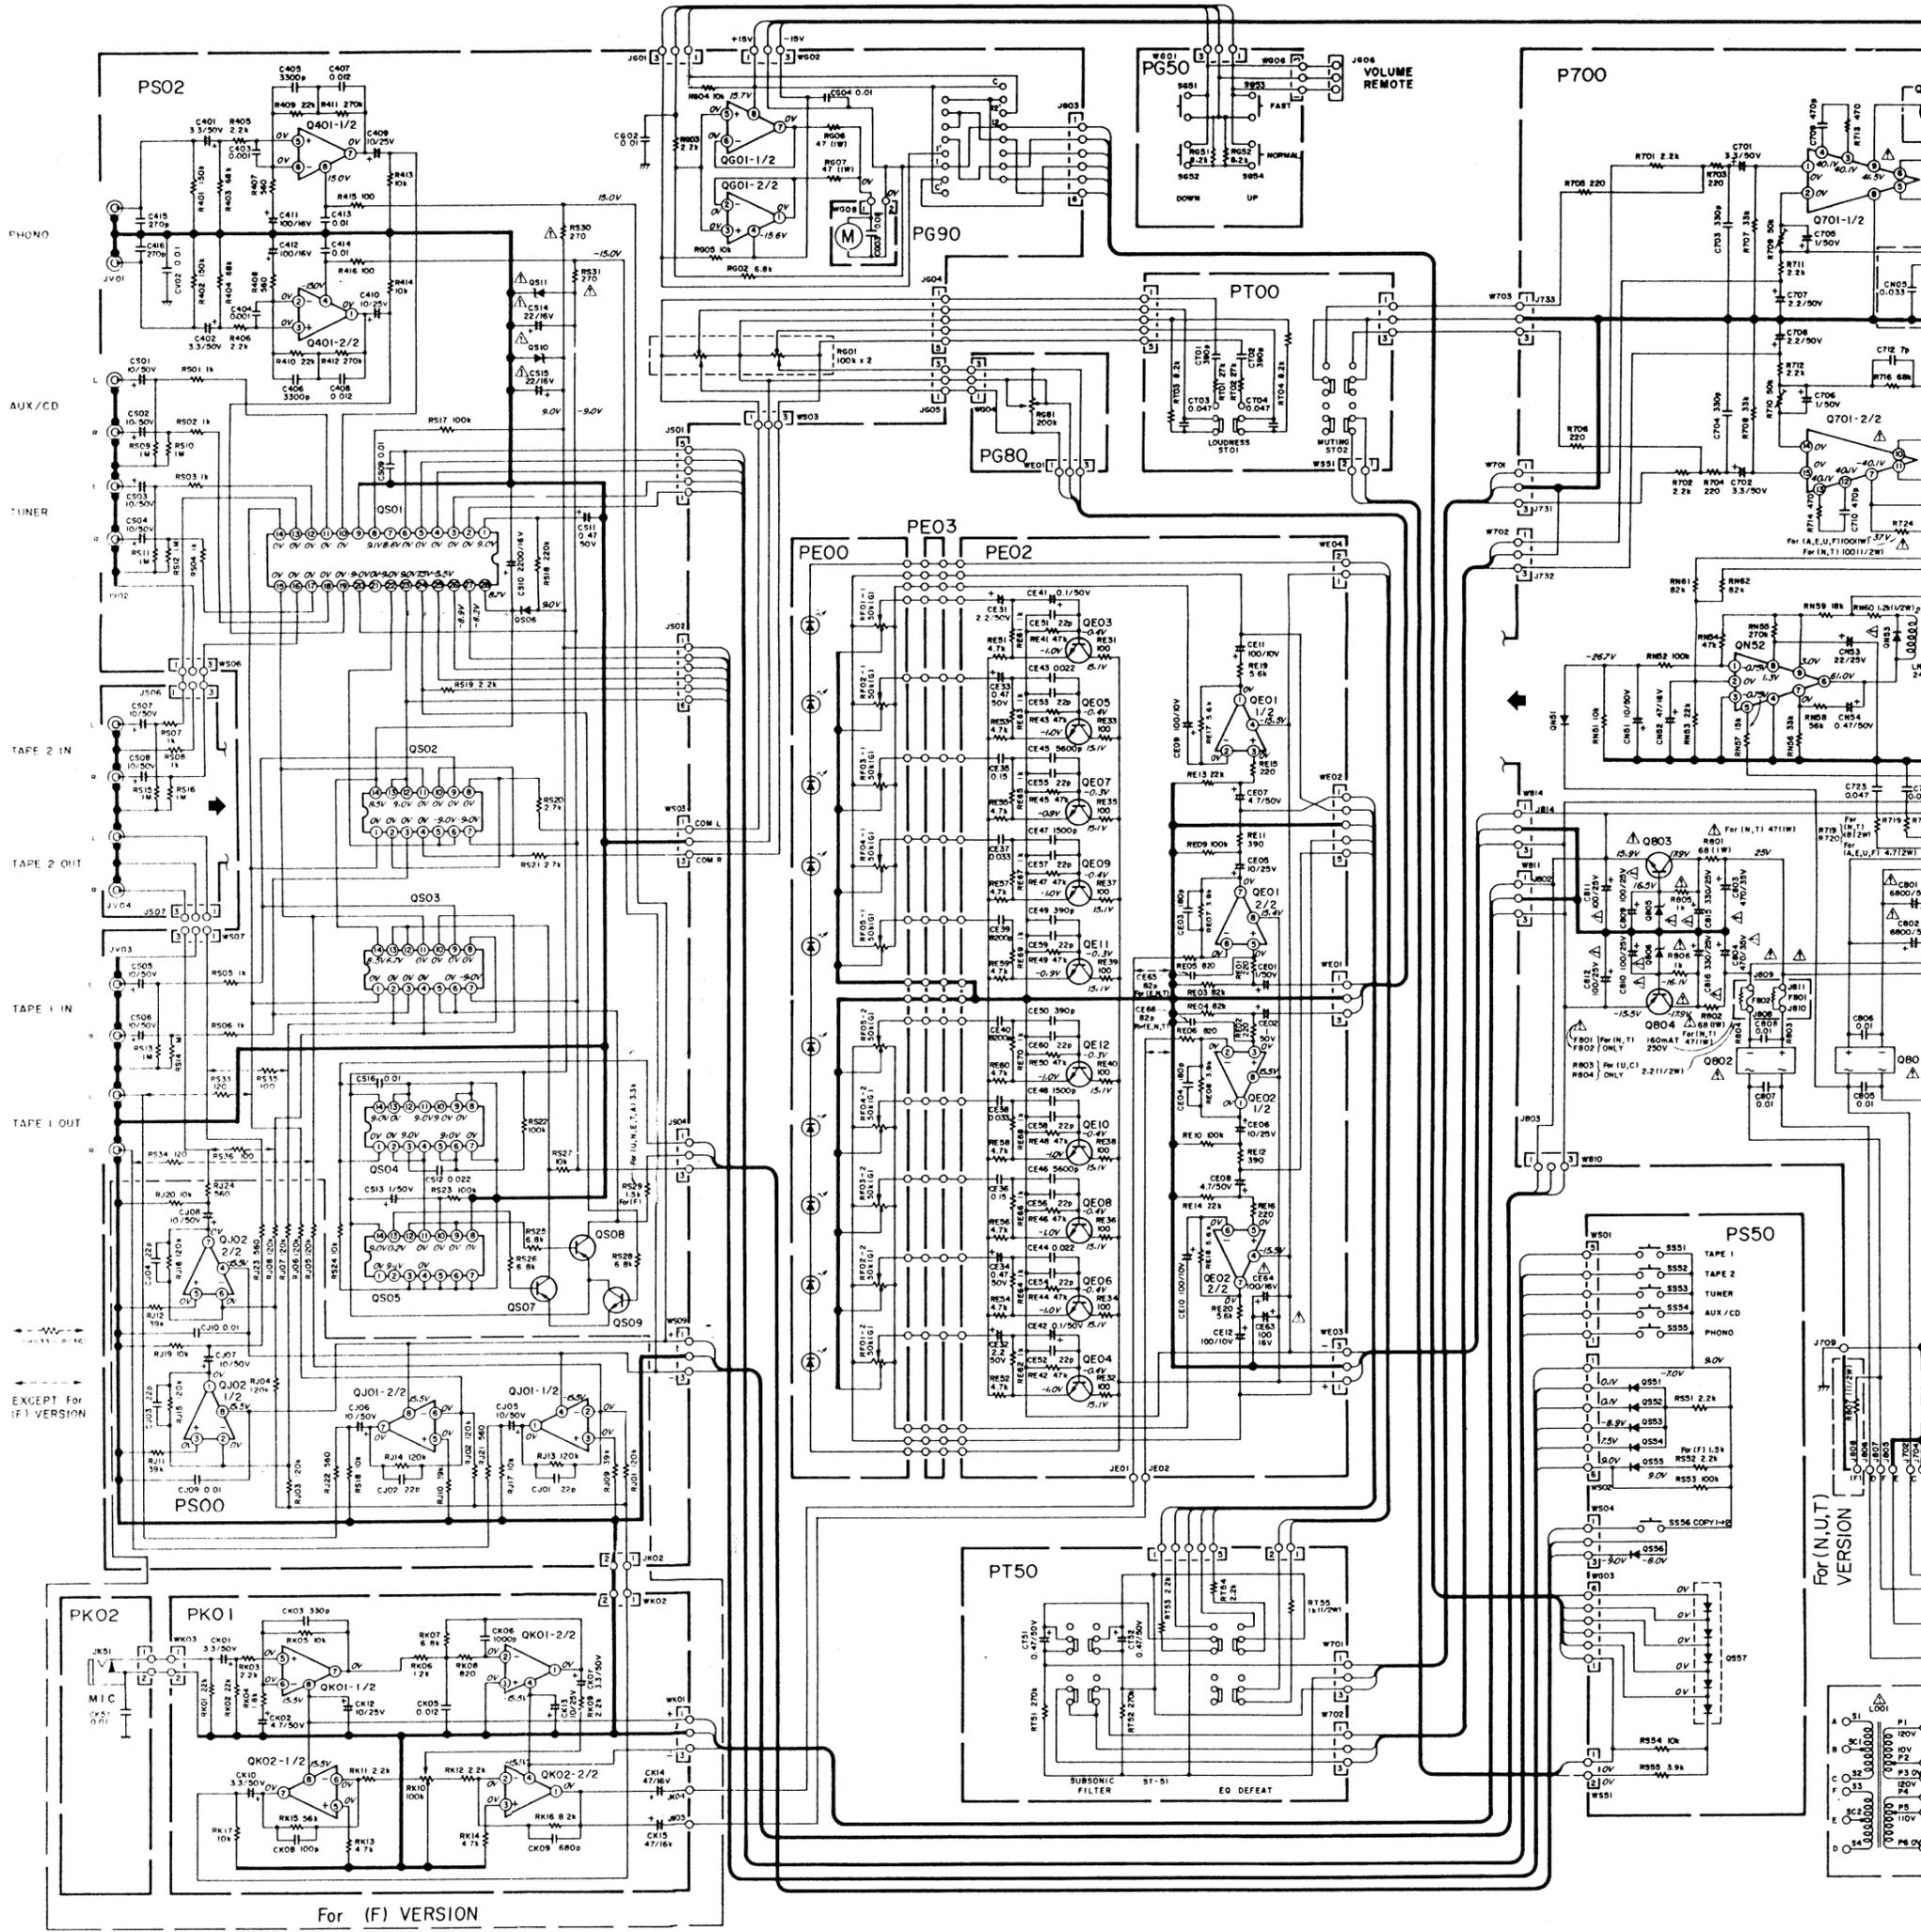

| | |
|----------|----------|
| Tape Out | 500 ohms |
|----------|----------|

GENERAL

| | |
|---|------------------------------|
| Power Requirement | |
| N version | 220/240V AC, 50/60Hz |
| T version | 220/240V AC, 50/60Hz |
| E version | 110/120/220/240V AC, 50/60Hz |
| Power Consumption at Rated Output, both Channels Driven | 390W |
| Dimensions | |
| Panel Width | 416mm |
| Panel Height | 100mm |
| Depth | 300mm |
| Weight | |
| Unit Alone | 7.5kg |
