THE D.A.T.A.BOOKS

. . . give you all the answers you need to the Sources, Electrical and Mechanical Specifications, and technical trade-offs . . . for all Industrial, Commercial, Government and JEDEC devices.

TRANSISTORS: Twelve (12) technical sections listing over 17,000 type numbers from 116 manufacturers, arranged for immediate comparison. . .plus, outline drawings, more than 455 MIL Spec type numbers, and the two most popular replacement series. Two (2) completely revised editions per yearly subscription.

DISCONTINUED TRANSISTORS: Facilitates substitutions when used with the Transistor D.A.T.A.BOOK. Lists over 10,565 types which have become obsolete since 1956. A "must" for complete replacement data. Published annually.

SEMICONDUCTOR DIODES: Gives detailed information on over 45,600 diodes from 152 manufacturers, including the two most popular replacement series. Dimensioned outline drawings and military types with their QPL manufacturers complete this valuable reference source. Published semi-annually.

MSI-LSI MEMORIES: Covers 2,700 types from 50 manufacturers in six major categories: ROMs, RAMs, character generators, code converters, CAMs, and shift registers with logic and outline drawings. Now includes military types with their QPL manufacturers and specification references. Published semi-annually.

THYRISTORS: Covers SCR's, TRIAC's, Schockley Diodes, Gate Turn-off devices, SCS's, Triggers, etc. The world's only comprehensive source of technical information from 76 worldwide manufacturers of Thyristors. Contains 15,800 types with lead designation and 440 outline drawings. Published semi-annually.

DISCONTINUED THYRISTORS: Describes more than 5,800 manufacturer-discontinued types. The format matches corresponding sections in the Thyristor D.A.T.A. BOOK, making this a "must" when looking for replacements. All ex-manufacturers identified. Published annually.

NEW

POWER SEMICONDUCTORS:
Power semiconductor applications information in a single volume. Electrical and physical characteristics of over 24,500 power devices. Standard and fast recovery rectifiers (10 Amps and up), power zeners (10 Watts and up), power transistors (5 Amps and up), general purpose and inverter SCRs (10 Amps and up), triacs and miscellaneous thyristors (10 Amps and up). . . from worldwide manufacturers, plus. . .380 package outline drawings with leads identified, plus. . .1N, 2N and 3N JEDEC devices and types with U.S. Military specifications.

NEW

LINEAR INTEGRATED CIRCUITS: Provides characteristics for over 6,700 types from 83 manufacturers in the following categories: operational, differential, audio, wideband, and RF/IF amplifiers; voltage regulators and comparators. Includes schematic and outline drawings, military types with associated military information and the two well-known replacement series. Two updated editions per year.

DIGITAL INTEGRATED CIRCUITS: More than 16,000 type numbers from 80 worldwide manufacturers are tabulated by characteristic in standardized format for easy reference. Includes logic and outline drawings, 800 military types with QPL manufacturers and applicable MIL Spec references. Now also contains the two best-known replacement series. Subscription includes two (2) semi-annual editions.

DISCONTINUED INTEGRATED CIRCUITS: The only all-inclusive source of data on ICs that have become obsolete since 1965. Follows format of current IC D.A.T.A.BOOKS to facilitate substitution and replacement. Contains over 14,600types, including major series no longer manufactured. Identifies all ex-manufacturers and is updated with each annual edition.

SEMICONDUCTOR APPLICATION NOTES: Offers easy access to the application notes on over 3,800 circuits from 60 manufacturers. Notes are tabulated in Analog and Digital circuit categories, plus Discrete and IC Device Categories, with sub-categories providing application details. Principal device types referenced for each circuit application. Subscribers can order notes published by these manufacturers from a single source. . .D.A.T.A. . . by using the "Request Cards" bound in the book. Listing of notes revised semi-annually.

SEMICONDUCTOR HEAT SINK, SOCKET & ASSOCIATED HARDWARE: Perfect design companion to the Transistor, Semiconductor Diode, Linear & Digital IC, and MSI-LSI Memory D.A.T.A. BOOKS. Lets you know what is available in all types of heat sinks, sockets, retaining clips and other devices for mechanically mounting semi-conductors. Supplies outline drawings, hole patterns and references to standard JEDEC semiconductor outlines for mounting capability. Covers 8,600 devices and is published annually.

MICROWAVE TUBES: Indexes 4,500 types from 34 manufacturers for military and commercial application. Includes BWTs, TWTs, Crossed-Field Amplifiers, Noise Generators, Helitrons, Klystrons, Magnetrons and Platinontrons, TRs and ATRs. Arranged in order of tube type, center frequency, power output and type number. Identifies QPL manufacturers and military specifications. Now includes 2,300 discontinued types. Published semi-annually.

RELAYS: Makes it possible to review, compare and select from the more than 8,100 devices approximately one (1) cubic inch or less in volume and compatible with semiconductor packaging requirements. Covers: Miniature Armature — Subminiature Armature — Dry Reed — Mercury-wetted Reed — Solid State — Hybrid and Time-delay relays. Shows pin connections and dimensioned outlines. Updated and published annually.

TABLE OF CONTENTS

HOW-TO-USE INFORMATION

How To Make Maximum Use Of This D.A.T.A.BOOK v
Use Of Powers-Of-Ten Multipliers and Symbols & Codes In The Technical Sections vi
How Type Numbers Are Sequenced In The Type Number Cross-Index vi
How Type Numbers Are Arranged In The Technical Sections—Sequencing Parameters vii

TYPE NO. CROSS-INDEX

1. All Types ..... 2 - 77

TECHNICAL SECTIONS

Low-Power Transistors: Normally under 1 watt dissipation in free air
2. Germanium PNP ..... 78 - 90
3. Germanium NPN ..... 91 - 93
4. Silicon PNP ..... 94 - 111
5. Silicon NPN ..... 112 - 149

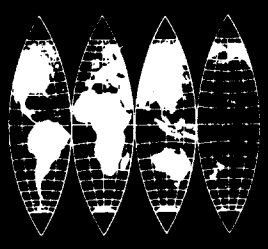

Silicon Field-Effect Transistors (FETs)
6. P-Channel ..... 150 - 152
7. N-Channel ..... 153 - 163

High-Power Transistors: Normally over 1 watt dissipation in free air
8. Germanium PNP ..... 164 - 172
9. Germanium NPN 173
10. Silicon PNP ..... 174 - 185
11. Silicon NPN ..... 186 - 232

Special Types
12. Switching Transistors ..... 233 - 267
Note: These types are also listed in other sections. This section includes additional switching data.
13. Miscellaneous Transistors ..... 268 - 285
For categories see cards at back of book.

SUPPLEMENTARY SECTIONS

14. Types with U.S. Military Specifications ..... 286 - 288
15. Outline Drawings ..... 289 - 349
JEDEC Gauge Designations 350
Lead Code Identification Guide 351
16. Transistor Manufacturers' Local Offices ..... 352 - 380
17. Transistor Manufacturer Codes, Names & Addresses ..... 381 - 382
SYMBOLS & CODES EXPLAINED ..... See cards at back of book

TRANSISTOR D.A.T.A.BOOK is published semi-annually in February and August by DERIVATION AND TABULATION ASSOCIATES, INC., a Cordura Company.

SUBSCRIPTION RATES: Current rates on Order Card.

CHANGE OF ADDRESS: When sending in change of address, please include old address; preferably the label from the latest edition.

ADVERTISING INQUIRIES: Please address all inquiries to Advertising Sales Manager. For prompt action, call special advertising Hot Line (201)673-2466.

DISCONTINUED SERIES

TRANSISTOR

Lists All Devices Obsoleted From The TRANSISTOR D.A.T.A.BOOK

THYRISTOR

Lists All Thyristors (SCRs, TRIACs, DIACs, etc.) Obsoleted From The THYRISTOR D.A.T.A.BOOK

INTEGRATED CIRCUIT

Lists All Integrated Circuits Obsoleted From The LINEAR IC, DIGITAL IC And MSI-LSI MEMORY D.A.T.A.BOOKs.

APPLICATION NOTE D.A.T.A.BOOK

Lists Available Application Notes by Specific Analog and Digital Circuit, plus Descriptive Notes on Discrete and IC Devices: Notes Classified by Major and Subcategories for Easy Reference.

EDITORIAL POLICY & PROCEDURES

Purpose

This D.A.T.A.BOOK is designed to report comprehensively on what is presently being produced throughout the free world in the field of Transistor devices. While a book such as this can not provide 100% of the information you might need, its primary aims are those of facilitating the selection of types suitable to your technical requirements, and of directing you to the sources of their manufacture.

Technical Data Acquisition

D.A.T.A. acquires and processes the information presented in this D.A.T.A.BOOK with the cooperation of the participating manufacturers who supply us with their latest technical information. Manufacturers are not charged for the listing of their products.

JEDEC Outlines

The electrical, mechanical and environmental characteristics tabulated for the standard 2N and 3N type numbers are derived directly from the JEDEC registration releases. The particular manufacturer or manufacturers for whom such types are registered are so indicated by the use of a symbol next to their manufacturer codes in the Type No. Cross-Index. In general, the JEDEC-designated types produced by the various manufacturers, whether registered or not, do conform with the registered specifications; however, there may be exceptions, and it is recommended that the individual manufacturers be consulted.

Military Type Numbers

The electrical, mechanical and environmental information tabulated for the military types in the technical sections is derived directly from the applicable military specifications and standards. The source information, showing the particular manufacturers qualified for each type, is derived from the QPL (Qualified Parts List) associated with the governing specification, or from the manufacturers Qualification Test Letters.

Substitute Types And Compatibility

This D.A.T.A.BOOK can not truly claim to be an interchangeability chart; however, because of the sequencing arrangement of selected characteristics in the technical sections, types with the same or similar characteristics are grouped together. For purposes of replacement, this means of thorough, convenient technical comparison should prove superior to, and safer than, a mere listing of possible substitute type numbers.

Price And Availability

Because of the rapidly-changing and complex nature of this field, current price and delivery information should be obtained direct from the manufacturers. The list of manufacturers and the Local Offices Section in back of the book will assist you in this.

Manufacturers' Specifications

This book includes currently-manufactured devices with their major characteristics, drawings and manufacturers. Every effort is made to ensure the accuracy of the entries herein; however, the publisher can not be held responsible nor guarantee against the possibility of error or omission. Only the manufacturers or their authorized representatives can provide you with complete technical details and current prices.

HOW TO MAKE MAXIMUM USE OF THIS D.A.T.A.BOOK

To make maximum use of this D.A.T.A.BOOK, select the particular known-unknown situation below that defines your problem, and follow the instructions as indicated.

1	KNOWN: Electrical and Mechanical Requirements UNKNOWN: Suitable Type Numbers a. Turn to the Table of Contents (first page) and select the technical data section corresponding to the subject device type. b. Turn to any page in the selected section. Note the sequencing parameters (those characteristics for which the data is sequenced) indicated at the top corner of the page. c. Using the sequencing parameters, locate the type numbers that are in general agreement with your requirements. (Because of the sequencing arrangement, these types will appear together, in groups and sub-groups.) From among these, select the one or ones most suitable. d. To identify the manufacturer of the selected type number(s), follow the instructions in Block 2 below.
2	KNOWN: Type Number UNKNOWN: Manufacturer(s), Address, Local Offices a. Turn to Type No. Cross-Index (Section 1) and locate the subject type number. (Refer to 'HOW TYPE NUMBERS ARE SEQUENCED IN THE TYPE NUMBER CROSS-INDEX'.) b. Note the 3- or 4-letter manufacturer's code(s), e.g., GESY, TII, indicated for each of the subject types. c. Use the listing of 'MANUFACTURERS & THEIR CODES' in back of the book to identify the codes. (Note: Local offices for manufacturers shown in bold print on this listing are identified in a special section in back of the book.)
3.	KNOWN: Type Number UNKNOWN: Its Electrical Characteristics, and/Or Outline Drawing a. Turn to Type No. Cross-Index and locate the subject type number. b. Note the page and line number, e.g., 70-104, alongside the type number. c. Locate the type number as noted, in the technical sections. Note: Along with the electrical and performance characteristics listed for each type number is a reference to the outline drawing, located in Section 15.
4	KNOWN: Type Number UNKNOWN: Equivalent Types for Replacement a. Follow the instructions in Block 3 above. b. Survey the type numbers surrounding the subject number to determine the suitable alternatives.
5	KNOWN: Military Requirements UNKNOWN: Suitable Type Number(s) a. Follow the instructions in Block 1, to determine the general type numbers that meet the military requirements. From among these, select the military types by means of the identifying prefix (MIL) b. To identify the manufacturers, follow the instructions in Block 6.
6	KNOWN: Military Type Number UNKNOWN: Qualified Manufacturers And/Or Applicable Military Specification a. Turn to Section 14 (TYPES WITH U.S. MILITARY SPECIFICATIONS), and locate the subject type number. (Type numbers are arranged in alpha-numeric order.) b. Note the manufacturer's code(s) and detail specification listed next to the type number. (The detail specification added to the general specification indicated in the column heading for the detail specification, makes up the complete military specification for the subject device.) c. Use the listing of MANUFACTURERS & THEIR CODES in back of the book to identify the manufacturer code(s).
7	KNOWN: Type Number Not Included In Book UNKNOWN: What Happened To It? a. Consult D.A.T.A.BOOK OF DISCONTINUED TRANSISTORS.

USE OF POWERS-OF-TEN MULTIPLIERS AND SYMBOLS & CODES IN THE TECHNICAL SECTIONS

To present a maximum amount of information in a minimum amount of space, use is made in this book of the following data modifiers:

POWERS-OF-TEN MULTIPLIERS

The powers-of-ten multipliers shown below are used in numeric columns when the value being entered is many times greater or smaller than the units of measure indicated in the column heading. Usually, the latter are the so-called 'basic' units; such as V (volts), A (amperes) and s (seconds). The multipliers and an explanation of their use are given below:

MULTIPLIERS

PREFIXES & SYMBOLS Indicating Powers of Ten — Recommended by International Committee on Weights and Measures Adopted by National Bureau of Standards

Power	Prefix	Symbol	Power	Prefix	Symbol	Power	Prefix	Symbol
10^{12}	tera	T	10	deka	da	10^{-9}	nano	n
10^{9}	giga	G	10^{-1}	deci	d	10^{-12}	pico	p
10^{6}	mega	M	10^{-2}	centi	c	10^{-15}	femto	f
10^{3}	kilo	k	10^{-3}	milli	m	10^{-18}	atto	a
10^{2}	hecto	h	10^{-6}	micro	μ			

EXPLANATION

Value of Data To Be Entered	Basic Unit In Column Heading	Actual Entry
3 milliamperes	A (amperes)	3.0m
9 megaohms	Ω (ohms)	9.0M
0.5 volt	V (volts)	500m *
10 amperes	A (amperes)	10

* May also be written as 0.5 with no multiplier

SYMBOLS & CODES

Symbols – Symbols such as #, ^, and $ are used in all columns, numeric or otherwise, whenever the data entries differ in some way from the entity defined in the column heading. For instance, if a given heading specifies Max. Power (in Watts) and the numeric value being entered for a given type represents the minimum power instead, the variance is denoted by the appearance of a special symbol alongside the numeric entry.

NOTE: The symbols and codes used herein are explained on the cards in back of the book.

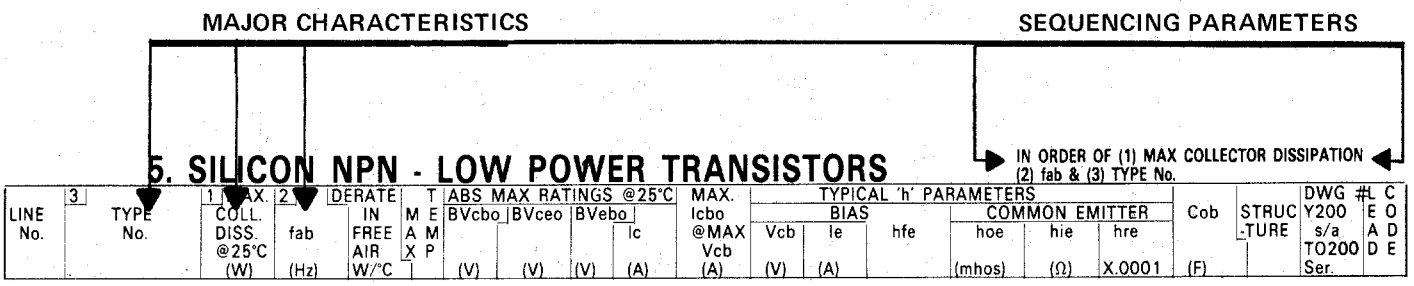

Codes – Codes are used in some columns as means to abbreviate the data being entered. The codes may be alphabetic (A,B,C, etc.) numeric (1,2,3, etc.) or some combination of both.

HOW TYPE NUMBERS ARE SEQUENCED IN THE TYPE NUMBER CROSS-INDEX

Sequencing of type numbers in the Type Number Cross-Index is governed by the following rules:

Rules:	EXAMPLES
1) Type numbers are listed in numeric-alphabetic sequence; i.e., type numbers beginning with a number (decimal, fraction, or whole) precede type numbers beginning with a letter.	13A01 143 1202 A147 AN127 B2000
2) Decimals and fractions precede whole numbers. An equivalent decimal precedes the fraction when the remainder of type number is identical.	25Z150 1/4Z150 3/4M12Z 1T3
3) Zeros are ignored in sequencing except when the zero is the only basis for distinguishing one type number from another. In this case the type number containing the zero is listed first.	0112 112 0113 00115 AP01 AP1 AP02
4) Number and/or letter groupings preceding hyphens or slashes are the controlling factors in sequencing. The hyphens and slashes themselves precede any identically positioned letters also having the same beginning number/letter groupings.	66-0706 66M1 70/10 70A9
5) Military prefix (JAN) is ignored in the numeric-alphabetic sequencing of type numbers. A military type number directly follows its equivalent JEDEC type number.	2N645 JAN2N645

The arrangement of types in the technical sections is keyed to a set of special characteristics selected for their importance from among the general group of characteristics tabulated in each section. These selected characteristics, or sequencing parameters, differ from one section to another, and are identified at the top corner of each page, as shown in the sample below.

The different types within a section are first arranged in ascending numeric (or alphabetic) order of the first such parameter. Groups of types having a common value for the first parameter are then arranged in ascending order of the second parameter. This process continues for each parameter in turn, up to and including the last parameter which, in every instance, is the type number itself. The final arrangement, by type number, is done in accordance with the sequencing of type numbers in the cross-index, as explained on the preceding page.

A simplified model of the arrangement as described is shown below.

Type Number	Characteristics A	B	C	D
A13	100		325	
A4	100		1000	20
A9	100	A	20	25
A10	100	A	200	25
A3	100	B	40	15
A1	100	C	80	10
A8	100	C	900	15
A7	100	D	35	30
A11	110	A	60	25
A2	120	A	300	15
A5	120	B	150	20
A6	120	B	200	20
A12	120	B	475	25
	Last Seq. Par.	1st Seq. Par.	2nd Seq. Par.	(Not Seq.)	3rd Seq. Par.

Note that the absence of an entry for any sequencing parameter is regarded as a zero, and precedes any actual entries in the sequencing.
