CURSO DE RADIO

(32) ... Tabla del Comprobador de Lámparas 1

Las presentes tablas contienen los datos necesarios para llevar a cabo la comprobación de cualquier lámpara.

Contienen una lista de más de 4.000 lámparas diferentes para efectuar 4.700 comprobaciones. Las lámparas están colocadas por orden alfabético y numérico, sin distinción de características ni marcas, así es que basta buscar en la lista la que se desee para encontrar a la derecha de la misma la forma de comprobarla.

Cuando aparece al final de una página alguna lámpara doble o triple y por tal motivo no ha sido posible terminar de indicar en ésta las conexiones a efectuar para las diferentes comprobaciones, hay un (1) a su derecha, lo cual quiere decir que en la línea en cuestión se indica solamente una parte de las pruebas y el resto está en la siguiente hoja, en la que encontrará un (2).

La presente tabla contiene también las lámparas denominadas ojos mágicos, pudiendo ser comprobada tanto su parte triodo o pentodo, como el haz electrónico luminoso.

Las lámparas dobles o triples como la 75 han de comprobarse independientemente en sus diferentes partes. Con este fin, como podrá Vd. observar, se indica en las tablas una prueba para cada una de dichas partes, o sea dos o más pruebas para una sola lámpara.

SIGNIFICADO DE LAS DIFERENTES COLUMNAS DE LA TABLA

Primera columna - Tipo - En esta columna aparece el nombre de la lámpara, compuesto de letras, números, o ambas cosas a la vez.

Segunda columna - N - En esta columna está indicado el lugar que deben ocupar las dos manetas flechas. Así la primera cifra será la que indicará la posición de la primera maneta (la que está más cerca de los bornes de Pruebas) y la segunda cifra la posición de la otra maneta. Por ejemplo: si en ésta columna encuentra el 31, quiere decir que la primera maneta se colocará frente al 3 y la segunda frente al 1.

Tercera columna - Conexiones - En esta columna se indica el lugar en que deben colocarse las diferentes bananas de color.

Como ve, para cada lámpara corresponden en la tabla 8 signos, formados por letras (que representan las iniciales de los colores de las bananas) y por unos círculos así @. Estos signos representan la hembilla correspondiente sin contener banana alguna.

Así pues, los 8 signos (de letras y @), representan las 8 hembrillas por el mismo orden en que están colocadas,

de izquierda a derecha. Por consiguiente, si como primer signo hay una N, querrá decir, que en la primera hembrilla deberá colocarse una banana negra (cualquiera de las dos); si el segundo signo es O, quiere decir, que debe dejarse libre, o sea sin banana alguna y así sucesivamente.

Ejemplo: Supongamos la lámpara AC/Z página 1. A ésta le corresponden NN@RRV@A.

La prueba se hará así:

primera hembrilla	-banana negra
segunda	" -banana negra
tercera	" -nada
cuarta	" -banana roja
quinta	" -banana roja
sexta	" -banana verde
séptima	" -nada
octava	" -banana amarilla

Cuarta columna - E - En esta columna se indica la banana que debe ponerse en comunicación con el electrodo exterior de la lámpara, caso de que tenga alguno, ya sea en la parte superior, ya sea a un lado del casquillo.

Así, en una de las pruebas, de la AB1 se deberá colocar la conexión que sale por la parte superior, de la misma con una banana roja. Caso de no llegar la punta de la banana a la lámpara, se le añadirá a aquella el suplemento compuesto de una banana-hembrilla y terminal.

ORDEN A SEGUIR EN LAS COMPROBACIONES

- Primero** - Enchufar el comprobador y mantener el interruptor en **no** y colocando el puente en **pruebas**.
- Segundo** - Colocar la lámpara en el portalámparas correspondiente.
- Tercero** - Colocar las manetas flechas en sus números correspondientes (indicados en la columna **N**).
- Cuarto** - Colocar las bananas de colores en las hembrillas correspondientes (indicadas en la columna **Conexiones**).
- Quinto** - Colocar el interruptor en **sí**.
- y Sexto** - Esperar que se desvíe la aguja del instrumento, que será casi instantáneamente si la lámpara es de calefacción directa.

Referente a la banana verde, no es condición necesaria que mantenga un contacto continuo con la hembrilla correspondiente, o conexión exterior de la lámpara. Es preferible no conectarla de momento hasta esperar que la aguja esté desviada, y entonces establecer un simple contacto, observando si aumenta en algo la desviación, lo cual demostrará las propiedades amplificadoras de la lámpara.

PRUEBAS DE FUGA DE CATODO

Para poder dar por perfecta una lámpara de calefacción indirecta, hay que asegurarse de que el catodo de la misma no tenga comunicación con el filamento, sobre todo cuando la lámpara está

caliente. Para comprobar ésto, sáquese la banana amarilla de la hembrilla en que esté colocada (estando la lámpara en pruebas y con la aguja del instrumento desviada). En el momento de sacarla la aguja debe volver a cero. Ello demuestra que el catodo permanece aislado, y, por tanto, la lámpara está bien. Caso de que marcase algo, la lámpara sería defectuosa.

NORMAS PARA EL MANEJO DEL INSTRUMENTO DE MEDIDA COMO OHMETRO, VOLTIMETRO Y MILLAMPERIMETRO

Cuando se utilice el instrumento de medida sólo para comprobación de circuitos exteriores, deberá desenchufarse de la corriente el Comprobador, o bien mantener el interruptor en la posición no. La maneta flecha de la derecha será la única que deberá moverse colocándola en el lugar indicado a continuación. Es indiferente el lugar que ocupe la maneta de la izquierda.

COMO OHMETRO

Coloque la maneta frente el signo Ω . Sáquese la pieza metálica que establece el puente de pruebas y colocando dos hilos en los bornes podrá aplicar sus extremos a la resistencia o circuito cuyo valor o continuidad se desea averiguar. La aguja le indicará en la escala Ω el valor en ohmios de la resistencia.

COMO VOLTIMETRO

Como voltímetro de baja escala, se colocará la maneta flecha en 4'5 v. y aplicando los extremos de los hilos al aparato o accesorio cuya tensión se desea medir, la aguja indicará en la escala V los voltios.

Para medir altos voltajes (hasta 225 voltios) se colocara la maneta flecha en 225 v.

La lectura se hara en la escala V, pero a base de multiplicar por 50 lo que indique la aguja. Así si marcase 2, el voltaje verdadero seria $2 \times 50 = 100$ voltos

COMO MILIAMPERIMETRO

Para utilizar el instrumento como miliamperímetro, basta colocar la maneta en 4'5. La lectura se hara en la escala MA.

Importante: El instrumento de medida, debe ser utilizado sólo para corriente continua. En ningun caso debe hacerle trabajar en corriente alterna.

GRÁFICAS MAYMÓ - BARCELONA

A large grid of text, likely a crossword puzzle or word search, composed of numerous words containing the letters 'N', 'R', 'O', 'D', 'G', 'A', 'V', and 'E'. The words are arranged in a grid pattern, rotated at approximately a 45-degree angle. A prominent 'EA' logo is centered in the upper-middle portion of the grid.

Some specific words visible in the grid include:

- Row 1: NNROROGAA, NNODOGRA
- Row 2: NNORRGGAV, NNORRGOAV
- Row 3: NNORRGOAV, NNORRGOAV
- Row 4: NNORRGOAV, NNORRGOAV
- Row 5: NNORRGOAV, NNORRGOAV
- Row 6: NNORRGOAV, NNORRGOAV
- Row 7: NNORRGOAV, NNORRGOAV
- Row 8: NNORRGOAV, NNORRGOAV
- Row 9: NNORRGOAV, NNORRGOAV
- Row 10: NNORRGOAV, NNORRGOAV
- Row 11: NNORRGOAV, NNORRGOAV
- Row 12: NNORRGOAV, NNORRGOAV
- Row 13: NNORRGOAV, NNORRGOAV
- Row 14: NNORRGOAV, NNORRGOAV
- Row 15: NNORRGOAV, NNORRGOAV
- Row 16: NNORRGOAV, NNORRGOAV
- Row 17: NNORRGOAV, NNORRGOAV
- Row 18: NNORRGOAV, NNORRGOAV
- Row 19: NNORRGOAV, NNORRGOAV
- Row 20: NNORRGOAV, NNORRGOAV
- Row 21: NNORRGOAV, NNORRGOAV
- Row 22: NNORRGOAV, NNORRGOAV
- Row 23: NNORRGOAV, NNORRGOAV
- Row 24: NNORRGOAV, NNORRGOAV
- Row 25: NNORRGOAV, NNORRGOAV
- Row 26: NNORRGOAV, NNORRGOAV
- Row 27: NNORRGOAV, NNORRGOAV
- Row 28: NNORRGOAV, NNORRGOAV
- Row 29: NNORRGOAV, NNORRGOAV
