Technical Information

Subject: How to make easier servicing

We are pleased to inform you how to make easier servicing of NV-G10/G7.

1. How to make easier servicing of a packed circuit

In the case of checking for such a packed circuit as Luminance and Chrominance Pack, Audio Pack, TV Demodulator Pack and so on, you may install them on the other side of the circuit board; the foil side.
At that time, remove the packed circuit board carefully not to damage anything and reinstall on the foil side keeping the relation of each connection correctly.

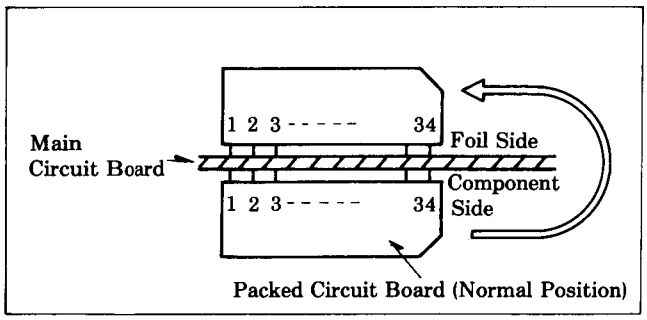

Fig. 1

2. How to remove the Main Circuit Board

In the case of checking for the servo circuit, you can remove the main circuit board from its frame.
At that time unlock the 2 hinges and lift up paying attention not to touch any other portion.

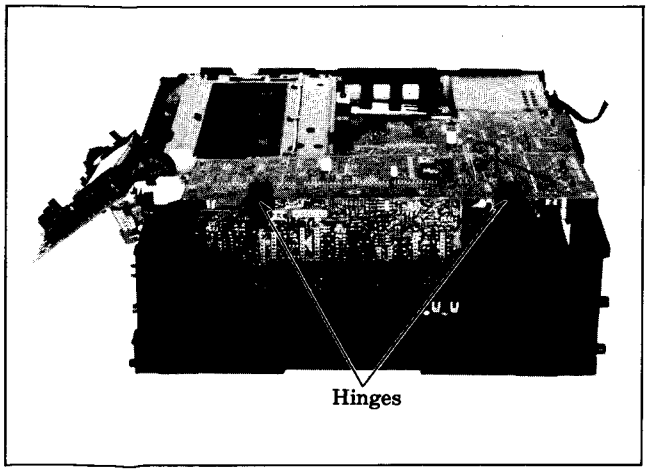

Fig. 2

3. How to remove the FIP Holder

In the case of removal of the FIP Holder (the display tube unit), it might be hard to take out from the Timer & CH Select C.B.A. At that time cut the 2 projections out from the FIP Holder by a nipper or something.
Then remove it carefully.

CONTENTS

REMARKS: NV-G10, G7EG West Germany model only

1. It is possible to receive, record and play back colour broadcasts from East Germany (DDR) on this video recorder.
2. When a video tape that was recorded with a colour TV broadcast from East Germany on this VTR is played back on a SECAM (France) or on a PAL VTR, the picture may be in black and white.
3. When a video tape recorded on a SECAM (France) VTR or a SECAM (France) Pre-recorded video tape is played back on this VTR, the picture is in black and white.

SECTION 1

GENERAL DESCRIPTION

1-1. FEATURES

1. Auto Operation

This VTR automatically turns itself on when a video cassette is inserted even if it was turned off. When the tab of the inserted cassette is broken out, playback will start automatically. Also, even if the VTR is off when the Eject Button is pressed, it automatically turns itself on to eject the cassette tape and it turns itself off again.
When a video cassette tape with a broken out tab is inserted and the VTR is switched over to recording, OTR or timer recording, the cassette tape will be automatically ejected.
When the tape reaches its end (except during OTR and timer recording), it will automatically rewind to the beginning.

2. Super Still, Super Still Advance and Super Fine Slow Playback (NV-G10)

Super Still, Super Still Advance and Super Fine Slow Playback are possible with superb picture quality with minimum noise and jitter.

3. Super OTR Function (One-Touch Timer Recording)

This convenient function makes it possible to easily programme the VTR for recording of TV programmes with immediate start or with start within 24 hours and with the starting time and ending time precisely set to the desired minute. When the recording ends, the VTR will automatically turn itself off.

4. 14-Day, 4-Programme Timer

The built-in timer allows automatic absentee recording of up to 4 TV programmes within 14 days. It is also possible to record a programme which is broadcast at the same time every day.

5. Infra-red Remote Controller (NV-G10, NV-G7B)

The Infra-red Remote Controller unit allows operation of various functions from the comfort of your favourite viewing position.

6. HQ (High Quality) Picture System

Video recorders carrying the HQ symbol mark feature the new VHS High Quality Picture System. This system assures complete compatibility with VTRs that use the conventional VHS system.

5 Colour Mode/Test Signal Switch
In the TEST position, a black-and-white test pattern is generated, which allows easy tuning of your TV set to the video playback channel of the VTR. For normal recording and playback operation, this switch must be in the middle AUTO position.
Only if the colour reception of a station is particularily weak, setting this switch to the COLOUR position can improve the recording quality.

6 Picture Detail Enhanser Selector
For recording of TV programmes, this switch can be set to the HIGH position to enhance overall picture crispness and detail as well as to improve the legibility of characters and figures. When the reception signal is weak and when recording (dubbing) from another VTR, this switch must be set to the NORMAL position.
The position of this selector has no influence on the playback.

7 RF Signal Level Switch (NV-G10, G7B/EO)
Used to attenuate the reception of the VHF and/or UHF aerial signals.
If the reception is normal, set to "HIGH". If the signal strong (stripes appear in the upper part of the picture), set to "LOW".

8 RF Input Socket
Connect the external aerial, which is now connected to the TV set, to this socket.

9 RF Output Socket

10 AC Mains Cord

11 EURO AV Socket (NV-G10, G7EG/EO)
Connect the AV Socket on the VTR to the AV Socket on the TV set.
- The AV Socket allows recording and playback of picture and sound. This connection can be used for TV sets which are also equipped with an AV Socket. Via this socket, TV programmes can be recorded, too. Such a connection improves the picture and sound quality during playback.

12 VPS Socket (NV-G10, G7EG)
Connect a VPS Adaptor (optional) to the VPS Adaptor Socket, if VPS-controlled timer recording is desired.

Power Source for the Infra-red Remote Controller

■ The Infra-red Remote Controller is powered by two IEC "R6" size batteries. The life of the batteries is about one year, however, it depends on the frequency of use. Inspect and if necessary, replace the batteries once a year.

CAUTION FOR BATTERY REPLACEMENT

- Load the new batteries with their polarities (⊕ and ⊖) aligned correctly.
- Do not apply heat to batteries, or internal short-circuit may occur.
- If you do not intend to use the Remote Controller for a long period of time, remove the batteries and store them in a cool and dry place.
- Remove spent batteries immediately and dispose of them.
- Do not use an old and a new batteries together. (Also never use an alkaline battery with a manganese battery.)

Note:
- The infra-red beam should be transmitted directly at the Infra-red Remote Control Receiver on the front of the VTR.
- Direct sunlight may interfere with the beam.
- The lightsensing angle of the Infra-red Remote Control Receiver window in the VTR is about 40°.
- The unit should be used within a range of about 7 meters from the front of the VTR.

10. Adjust T705 that the (fp') trap becomes minimum (NV-G10, G7EO).
11. Adjust T701-(B) so that the (fp') trap becomes minimum (NV-G10, G7EG).
12. Adjust T705 so that the (fN) trap becomes minimum (NV-G10, G7EG).
13. Readjust the (fp') trap and (fN) trap mutually several times (NV-G10, G7EG)
14. Adjust VR1 of the JIG. so that the sweep wave becomes 1.0Vp-p.
15. Adjust the tuner converter coil and T701-(C) so that the sweep output waveform becomes as shown in Fig. 35.

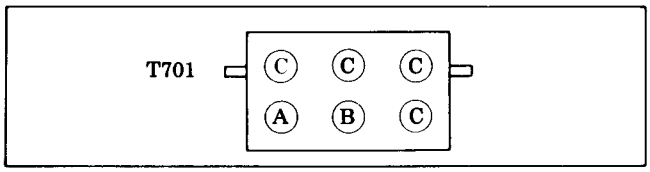

Fig. 32

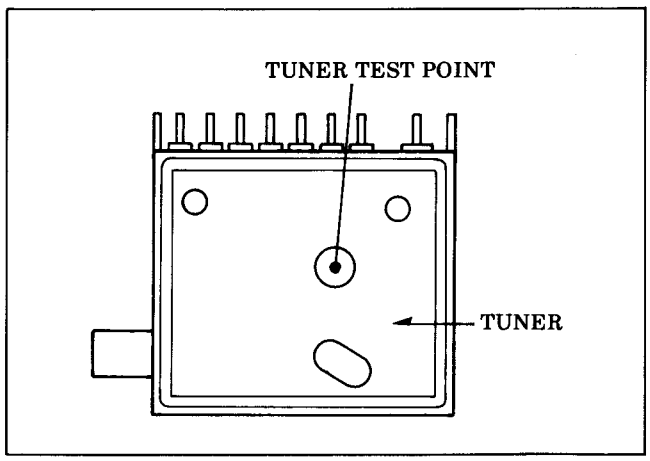

Fig. 33

16. In the case of NV-G10, G7EG, adjust the VR1 of the JIG. so that the voltage at TP709 becomes 10V, and set the sweep output to 2Vp-p. Then, confirm the fp', fN, fs and fs' markers are less than 700mV. If those markers are not in the specification, readjust the fp', fN, fs and fs' traps.

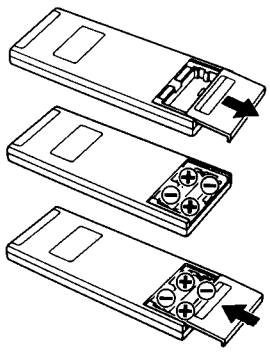
Power Source of the Infra-red Remote Controller

■ The Infra-red Remote Controller is powered by two IEC "R03" size batteries. The life of the batteries is about one year, however, it depends on the frequency of use. Inspect and if necessary, replace the batteries once a year.

CAUTION FOR BATTERY REPLACEMENT
- Load the new batteries with their polarities (⊕ and ⊖) aligned correctly.
- Do not apply heat to batteries, or internal shortcircuit may occur.
- If you do not intend to use the Remote Controller for a long period of time, remove the batteries and store them in a cool and dry place.
- Remove spent batteries immediately and dispose of them.
- Do not use an old and a new battery together. (Also never use an alkaline battery with a manganese battery.)

Load the batteries as follows:



1. Remove the battery compartment lid.
2. Place two batteries in the battery compartment as indicated inside the battery compartment.
3. Replace the lid.

Note:
- The infrared beam should be transmitted directly at the Infrared Remote Control Receiver on the front of the VTR.
- Direct sunlight may interfere with the beam.
- The lightsensing angle of the Infra-red Remote Control Receiver window in the VTR is about 40°.
- The unit should be used within a range of about 7 meters from the front to the VTR.
