FUSE REPLACEMENT

Symbol located near the fuse indicates fast operating type. For continued protection against fire hazard, replace with same type fuse. Refer to the symbol for fuse rating.

FUSIBLE REMPLACEMENT

Le symbole qui se trouve près du fusible indique un fusible à action rapide. Pour une protection continue contre les risques d'incendie, remplacer que des fusibles du même type. Se reporter au symbole pour la valeur des fusibles.

■ SCHEMATIC DIAGRAM

(This schematic diagram may be modified at any time with the development of new technology.)

Notes:

1. S201, 202 : Speed selector switch.
2. S203 : Start/stop switch.
3. S301 : Pitch control reset switch in "off" position.
4. S401 : Stylus illuminator switch in "off" position.
5. S601 : Power selector in "on" position.
6. S602 : Voltage selector in "220 - 240" position.
7. The voltage value and waveforms are the reference voltage values of this unit measured by DC electronic voltmeter (high-impedance) and oscilloscope on the basis of chassis. Therefore, the voltage value and waveform may include some error due to the internal impedance of the tester or the measuring set.
8. () : is the voltage when turntable is in rotation. (at 33 rpm)
9. — : +B voltage lines.
10. Important safety notice.
Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
The part No. of diodes mentioned in the schematic diagram stand for production part No. Regarding the part No. with $\odot$ mark, the production part No. are different from the replacement part No. Therefore, when placing an order for replacement part, please use the part No. in the replacement parts list.

IMPORTANT SAFETY NOTICE

The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for the critical components in the shaded areas of the schematic.

■ ARM BASE ASSEMBLING PROCEDURE

1. Attach the control ring to the arm base seat. (The control ring should be roated counterclockwise.)
2. Completely tighten the control ring, and then loosen it 1.5~2.5 turns to set the scale to "3". (See Fig. 11)

Fig. 11

3. Hold the arm base and set the red line mark on the arm base to the scale near "2", then turn the arm base clockwise. (See Fig. 12)

Note:

Take care not to allow deflection of the predetermined positions of the control-ring and arm base seat.

Fig. 12

4. Adjust the arm base so that the red line mark on the arm base is set to the scale "3" of the control ring. Next, secure the positioning base plate with two setscrews. (See Fig. 13)

Fig. 13

5. Rotate the control ring and make sure that the arm base shifts within the range of 0~6mm. (See Figs. 14 and 15) If it does not shift within the specified range, the arm base position is deflected. In that case, disassemble the parts and check as specified in step 3.

Fig. 14

Fig. 15

■ ADJUSTMENT OF CANCELLER SPRING POSITION

If the arm body or PU base plate is replaced, be sure to set the canceller knob to "0.5" and make sure that the canceller spring is in contact with the arm shaft. (See Fig. 16)

If the canceller spring is deflected, adjust it as follows:

1. Clamp the arm on the rest.
2. Set the canceller knob to "0.5".
3. Remove the PU base plate, adjust gear A so that the canceller spring is in the position of Fig. 16.
4. Mount the PU base plate onto the arm base and check the spring position.

Fig. 16

■ ADJUSTMENTS

Pitch control (fine adjustment of speed) (See Figs. 18 and 19.)

When the pitch control knob is located at the center of the position after turning on the power, the green LED indicator is lit showing the operating condition for the predetermined speed (either 33-1/3 or 45 rpm). The pitch control is variable in a range of about $\pm 8\%$

Adjustment should be done on the basis of indicator scale. Figures on the indicator show approximate percentages for variable pitch control.

When the strobe dots in 4 stages marked at the peripheral edge of the turntable appear to be stationary, variation of individual pitches is shown. (See Fig. 19.)

Note:

The strobe-illumination of this unit employs a strobe-illuminator LED synchronized with the precise quartz frequency.

For fine adjustment of the turntable speed, be sure to effect the adjustment according to the LED illumination.

The LED illumination is not synchronized with fluorescent lamps.

Adjustment of arm-lift height (See Figs. 20 and 21.)

The arm-lift height (distance between the stylus tip and record surface when cueing lever is raised) has been adjusted at the factory before shipping to approximately 8-13mm.

If the clearance becomes too narrow or too wide, turn the adjustment screw clockwise or counterclockwise, while pushing the arm lift down.

Clockwise rotation

—distance between the record and stylus tip is decreased.

Counterclockwise rotation

—distance between the record and stylus tip is increased.

Note:

As the adjusting screw has hexagonal head, be sure to make the adjustment while depressing the arm lift, or the screw will not move freely.

Also be sure that the hexagonal head retracts correctly into the arm lift when the latter is released.

Fig. 18

Fig. 19

Adjustment of the tonearm height (See Fig. 22.)

The height of the tonearm can be adjusted up to 6 mm, and a scale is provided on the adjust ring in 0.5 mm increments. Be sure to set the proper arm height using the adjust ring scale and referring to the table.

Height of cartridge (mm) (H)	Scale reading on the arm-height adjust ring
15	0
16	1
17	2
18	3
19	4
20	5
21	6

For example, if the cartridge height is 17.5 mm, the arm-height adjust ring should be positioned at the intermediate location between 2 and 3 on the scale. (See Fig. 22.)

Caution:

Be sure to lock the tonearm by turning the arm lock knob in the direction indicated by the arrow after finishing the height adjustment for the tonearm.

Lubrication (See Fig. 23.)

Apply 2 or 3 drops of oil once after every 2000 hours of operation.

The time interval is much longer than that for conventional type motors (200-500 hours).

Please purchase original oil. (Part number is SFWO 010.)

■ JUSTIERUNGEN

Drehzahl-Feineinstellung (Vgl. Abb. 18 und 19.)
Wenn der Drehzahl-Feineinsteller beim Einschalten der Stromzufuhr in seiner mittleren Stellung ist, leuchtet der grüne LED-Anzeiger auf und zeigt den Betriebszustand für die vorgewählte Drehzahl (entweder 33-1/3 oder 45 U/min) an. Die Drehzahl ist über einen Bereich von ca. ±8% regelbar.

Die Zahlen auf dem Anzeiger geben ungefähre Prozentzahlen für die Drehzahlregulierung an.
Wenn eine der vier Atroboskoppunktreihen am Plattenteller stationär zu bleiben scheint, so wird dadurch die entsprechende Drehzahlabweichung (bzw. Nennzahl) angezeigt. (Vgl. Abb. 19.)

Anmerkung:
Die Stroboskopbeleuchtung dieses Plattenspielers verwendet eine Stroboskop-LED-Lampe, die mit der präzisen Quarzfrequenz synchronisiert ist.
Die Drehzahl-Feineinstellung muß unter der Beleuchtung durch diese LED-Lampe durchgeführt werden. Die LED-Lampe ist nicht mit Leuchtstofflampen synchronisiert.

Justierung der Tonarmhöhe
(Vgl. Abb. 20 und 21.)

Die Tonarmhöhe, d.h. der Abstand zwischen Nadelspitze und Schallplattenoberfläche, wenn der Lift-Hebel angehoben ist, ist werkseitig auf ungefähr 8–13 mm eingestellt worden.
Falls der Abstand zu groß oder zu klein wird, drehen Sie die Justierschraube im Uhrzeigersinn oder Gegenuhzeigersinn während Sie die Tonarmführung nach unten drücken.
Drehung im Uhrzeigersinn
— Der Abstand wird kleiner.
Drehung im Gegenuhzeigersinn
— Der Abstand wird größer.

■ JUSTIERUNGEN (Elektrisch)

- Anmerkung:**
- Nach Teilenummerierung von z.B. IC, Transistor, Diode usw. die folgenden Abgleichungen vornehmen.
 - Einstellung des Gerätes:
 - 1. Netzschalter — ON
 - 2. Tonhöhe Kontrolle — Mittlere Stellung.

Abgleichung	Anschlußpunkte	Abgleichpunkte	Abgleichmethode
A Abgleich der Tonhöhe Kontrolle ±0% (PITCH)	Signalfrequenzmesser ⊕ — TP27 ⊖ — GROUND	VR301	1. Schalter für Tonhöhenkontrolle auf Mittlereinstellung. 2. VR301 auf 282,08 kHz ±0,05 kHz abgleichen.
B Abgleich des Tonhöhesteuergewinns	Prüfgerät TP31 und TP32	VR302	VR302 auf 2,7K ±0,1 des Widerstandswertes einstellen.
C Bremsen Justierung (BRAKE)	—	VR201	VR201 innerhalb 120° ~ 270° nach Halbleiterspannung auf Kompletten Halt Justieren. (Plattenteller wird ein paar Sekunden nach Halt frei.)

Anmerkung:
Da die Justierschraube einen Sechskantkopf hat, muß die Tonarmführung während des Justierens unbedingt gedrückt gehalten werden, damit sich die Schraube leicht drehen läßt.
Vergewissern Sie sich, daß der Sechskantkopf in die Tonarmführung zurückkehrt, wenn diese bsgelassen wird.

Justierung des Antiskating-Einstellers

Stellen Sie den Antiskating-Einstellknopf auf den gleichen Wert ein, wie den Auflegedruck. (Vgl. Abb. 13.)

Justierung der Tonarmhöhe (Vgl. Abb. 22.)

Die Tonarmhöhe kann mittels eines Justierings, dessen Skala in Stufen von 0,5 mm unterteilt ist, um bis zu 6mm reguliert werden. Nehmen Sie die Justierung gemäß nachstehender Tabelle vor.

Tonabnehmerhöhe (mm) (H)	Skaleneinstellung auf dem Tonarmhöhe-Justiering
15	0
16	1
17	2
18	3
19	4
20	5
21	6

Falls die Tonarmhöhe beispielsweise 17,5 mm beträgt, sollte der Justiering zwischen die Skaleneinstellungen 2 und 3 eingestellt werden. (Vgl. Abb. 22.)

Achtung:

Nach erfolgter Tonarmhöhe-Justierung muß der Tonarm unbedingt durch Drehen des Tonarmverriegelungskopfs in der Pfeilrichtung festgestellt werden.

- Anmerkung:**
- 3. Drehzahlwähler — 33 U/min.
 - Zu verwendende Instrumente
 - 1. Prüfgerät
 - 2. Signalfrequenzmesser

■ REGLAGES

Reglage d'écart (mise au point exacte de la vitesse)
(Voir Figs. 18 et 19.)

Lorsque la manette de réglage d'écart est située à la position centrale une fois l'alimentation mise en marche, l'indicateur à diode électro-luminescente (LED) verte s'éclaircit pour indiquer la condition de fonctionnement de la vitesse prédéterminée (soit 33-1/3 ou 45 t/p.m.). Le réglage d'écart est ajustable dans une plage d'à peu près 8%.

La mise au point devra être faite en se basant sur la graduation de l'indicateur. Les chiffres sur l'indicateur montrent les pourcentages approximatifs pour un réglage d'écart variable.

Lorsque les points stroboscopiques sur les quatre gradins du bord périphérique du plateau semblent être immobiles, la variation des écarts individuels est représentée. (Voir Fig. 19.)

Nota:

L'éclairage stroboscopique de cet appareil utilise un illuminomètre stroboscopique à diodes électro-luminescentes (LED) synchronisé avec une fréquence à quartz précise.
Pour une mise au point exacte de la vitesse du plateau, s'assurer d'effectuer le réglage selon l'éclairage de la diode électro-luminescente.

L'éclairage à diodes électro-luminescentes ne se synchronise pas avec l'utilisation de lampes fluorescentes.

Mise au point de la hauteur de l'élevateur du bras
(Voir Figs. 20 et 21.)

La hauteur de l'élevateur du bras (distance entre l'extrémité de la pointe de lecture et la surface du disque lorsque le levier de pose et de relevage du bras est soulevé) a été réglée en usine avant son départ sur une valeur approximative de 8 – 13 mm.

Si l'écartement devient trop étroit ou trop large, tourner la vis de réglage dans le sens des aiguilles d'une montre ou en sens inverse, tout en abaissant l'élevateur du bras.

Rotation dans le sens des aiguilles d'une montre.

— La distance entre la surface du disque et l'extrémité de la pointe de lecture diminue.

■ REGLAGES (Electricité)

- Notes:**
- Effectuer les réglages suivants après avoir remplacé des éléments tels que les IC, transistors, diodes, et autres.
 - Etat de l'appareil
 - 1. Commutateur d'alimentation — Marche
 - 2. Commande d'alignement de la vitesse — Position centrale

A	Reglage	Points de connexion	Points de réglage	Méthode de réglage
A	Reglage de la commande d'alignement de la vitesse, ±0% (PITCH)	Frequencemètre ⊕ — TP27 ⊖ — TERRE	VR301	1. Commutateur de commande d'alignement de la vitesse en position centrale. 2. Régler la VR301 sur la fréquence de 282,08 kHz ±0,05 kHz.
B	Reglage du gain de commande de la vitesse de rotation du plateau	Contrôleur TP31 et TP32	VR302	Régler la VR302 sur la valeur de la résistance de 2,7K ±0,1.
C	Reglage du frein (BRAKE)		VR201	Régler la VR201 sur l'envoi du signal d'arrêt. (Le plateau devient libre quelques secondes après l'arrêt.) Signal d'arrêt

Rotation dans le sens contraire des aiguilles d'une montre.
— La distance entre la surface du disque et l'extrémité de la pointe de lecture augmente.

Nota:

Comme le vis de réglage possède une tête hexagonale, s'assurer d'effectuer la mise au point tout en abaissant l'élevateur du bras, sinon la vis ne bougera pas librement. Vérifier aussi que la tête hexagonale se retire correctement dans l'élevateur du bras quand ce dernier est libre.

Mise au point de la hauteur du bras de lecture
(Voir Fig. 22.)

La hauteur du bras de lecture peut être réglée jusqu'à 6 mm et une graduation est disposée sur la bague de réglage par augmentation de 0,5 mm. S'assurer de régler convenablement la hauteur du bras en utilisant la graduation de la bague et en se référant au tableau ci-dessous.

Hauteur de la cellule de lecture (mm) (H)	Lecture de la graduation sur la bague de réglage de la hauteur du bras
15	0
16	1
17	2
18	3
19	4
20	5
21	6

Par exemple, si la hauteur de la cellule de lecture est de 17,5 mm, la bague de réglage de la hauteur du bras devra être positionnée à l'emplacement intermédiaire entre les lectures de la graduation 2 et 3 indiquées sur la graduation. (Voir Fig. 22.)

Avvertissement:

S'assurer de bloquer le bras de lecture en tournant la manette de blocage du bras dans la direction indiquée par la flèche, après avoir terminé la mise au point de la hauteur du bras de lecture.

■ FEATURES

Total quartz locked continuous pitch adjustment $\pm 8\%$

Quartz-phase-locked control means almost perfect accuracy of turntable rotation.

But with most quartz turntables, this accurate control circuit must be cut out when the pitch control is employed.

With the SL-1200MK2, however, pitch is variable continuously (analogically) by up to $\pm 8\%$ under total quartz-locked control. The pitch is controlled with a large sliding lever, located to the right of the turntable platter.

Four lines of platter markings are also provided indicating $+6\%$, $+3.3\%$, 0% (exact rated speed) and -3.3% change from rated speed.

Aluminum diecast cabinet and special heavy rubber base material provide acoustic isolation

The effects of external vibrations are dramatically reduced in the turntable by this new turntable construction.

The turntable base is precision-made aluminum diecast. And the underside of the main base is made of a heavy rubber material (special one-piece molding) which has excellent vibration resistance and absorbing characteristics. The turntable platter is also vibration-damped with specially fabricat rubber matting in the underside along with the thick turntable sheet (rubber mat). Four large-size insulating feet also help to absorb unwanted vibrations.

These features make SL-1200MK2 ideal for use with extra-high sound pressure levels.

High torque for fast starts

The integral rotor/platter motor delivers 1.5kg-cm (1.3lb-in) starting torque. This high torque gives very quick starts enabling the platter to reach 33-1/3 rpm within 0.7 s. (a quarter of a turn). This is a big advantage in many professional applications where fast cueing is a necessity.

Stylus illuminator for low-light conditions

You'll appreciate the stylus illuminator when you are using the turntable under low-light conditions. The illuminator can be hidden in the turntable base, should you need it, simply push a button and it will pop up gently and cast a beam of light across the disc in the area traversed by the tonearm.

You can then clearly see the spaces between the selections on the record, and cue the arm exactly where you want it. The illuminator can then be pushed back down into the base.

High sensitivity, low mass, gimbil suspension tonearm

The highly sensitive tonearm features a genuine gimbal suspension, the rotational center of which is precisely defined at one point. Bearings are finished to a tolerance of ± 0.5 microns. This and the extra-closeness of pivot center to the bearings, result in the minimal friction of 7 mg (0.007 g) for both horizontal and vertical movement. Add to this the low 12-gram effective tonearm mass (including headshell, without cartridge) and you have a tonearm compatible with the wide range of compliances found in today's cartridges. If you choose a popular high compliance MM cartridge, the low range resonance frequency will appear in the correct area to avoid warp frequencies of records, but without entering the low end of the audio spectrum. This tonearm is provided with a computer designed, light-weight, high-rigidity headshell made of single-piece diecast aluminum to resist partial vibration. The universal design allows headshell interchangeability. Contacts are gold-plated.

Helicoid tonearm height adjustment

Arm height is adjustable within a range of 6 mm to accommodate varying cartridge dimensions. Adjustments are done with a precision-made helicoid.

Other fine features

- Quick stops are achieved with a fully electronic braking system.
- A strobe illuminator is provided. The stroboscope is controlled by the extremely stable quartz oscillator, rather than potentially unstable AC line frequency.
- Power on/off control built into strobe illuminator for ease-of-operation.
- Soft-touch start-stop switch allowing precision control capability without the annoyance of accidental operation.
- Technics integral rotor/platter motor construction with full cycle detection FG.
