Turntable System

/ SL-5310

(E), (XG)

- The model SL-5300 (X) is available in Asia, Latin America, Middle East and Africa only.
- The model SL-5300 (XAL) is available in Australia only.
- The model SL-5300 (XGE) is available in United Kingdom only.
- The model SL-5300 (E) is available in Scandinavia only.
- The model SL-5300 (XG) is available in European only.
- The model SL-5300 (XGF) is available in France only.
- The model SL-5310 (E) is available in Scandinavia only.
- The model SL-5310 (XG) is available in European only.
- SL-5300 is of silver finish.
- SL-5310 is of black finish.

SPECIFICATIONS (Specifications are subject to change without notice for further improvement)

General

Power supply:	~ 110–120/220–240V, 50 or 60 Hz
Power consumption:	12 W
Dimensions:	43.0 x 13.0 x 37.5 cm (16-59/64x5-7/64x14-49/64 inches)
Weight:	7.1 kg (15.7 lb)

Turntable section

Type:	Direct Drive Automatic Turntable System (Auto-start, Auto-return, Auto-stop Repeat play and Manual play)
Drive method:	Direct drive
Motor:	Brushless DC motor
Turntable platter:	Aluminum die-cast, 30.4 cm (12")
Turntable speeds:	33-1/3 and 45 rpm.
Pitch controls:	Individual adjustment controls, ±6% adjustment range
Starting torque:	1 kg·cm (0.87 lb·in)
Build-up characteristics:	90° or 1/4 rotation to 33;1/3
Speed fluctuation due to load torque:	0% within 0.9 kg·cm (0.78 lb·in) (even at a stylus pressure of 180 g) Within ±0.002%
Speed drift:	0.025% WRMS (JIS C5521)
Wow and flutter:	±0.035% peak (IEC 98A Weighted)
Rumble:	-56 dB (IEC 98A Unweighted) -78 dB (IEC 98A Weighted)

Tonearm section

Type:	Universal tubular arm, static-balanced type
Effective length:	230 mm (9-1/16")

Overhang:

15 mm (19-32")

Friction:

Within 7 mg (horizontally and vertically)

Effective mass:

12 g (without cartridge)

Tracking error angle:

Within 2°32' (at the outer groove of 30 cm (12") record)

Offset angle:

Within 0°32' (at the inner groove of 30 cm (12") record)

22°

Adjustable stylus

pressure range:

0 to 2.5 g (stylus pressure direct reading type)

Cartridge weight range:

6 to 9.5 g

(with shellweight):

13.5 to 17 g (including headshell)

Headshell weight:

3 to 6.5 g

10.5 to 14 g (including headshell)

7.5 g

Cartridge section (for set with cartridge)

Type:

Moving magnet

Frequency response:

20 Hz to 25 kHz

Output voltage:

3.5 mV at 1 kHz

Channel separation:

5 cm/sec. zero to peak lateral velocity
(10 mV at 1 kHz, 10 cm/sec. zero to peak
45° velocity [DIN 45500])

25 dB at 1 kHz

Channel balance:

Within 2 dB at 1 kHz

Compliance (dynamic):

12×10^{-6} cm/dyne at 100 Hz

Stylus pressure:

1.25 ± 0.25 g (12.5 ± 2.5 mN)

Load impedance:

$47 k\Omega$ to $100 k\Omega$

Weight:

6.0 (cartridge only)

Replacement stylus:

EPS-206D

Technics

Matsushita Electric Trading Co., Ltd.
P.O. Box 288, Central Osaka Japan

TECHNISCHE DATEN (Änderungen der technischen Daten vorbehalten.)**Allgemeine Daten**

Netzspannung:	~110–120/220–240 V, 50/60 Hz

■ DISASSEMBLY PROCEDURE

How to remove bottom board

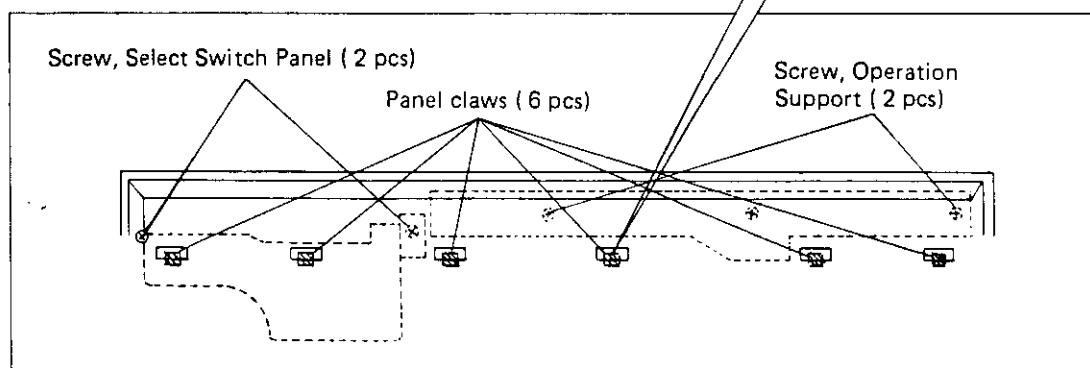

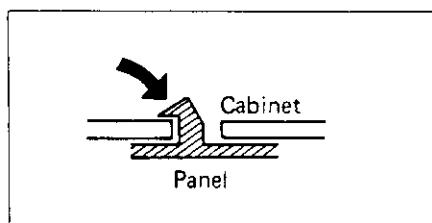

1. Remove head shell and turntable.
2. Secure arm with arm clamp.
3. Turn the set upside-down taking care not to damage dust cover.
4. Remove bottom board set-screws (7 pcs).

How to remove panel

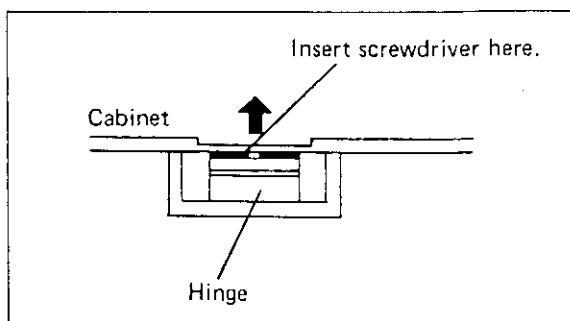

1. Remove 6 front knobs.
2. Remove bottom board as shown above.
Note. Be careful not to drop washers attached to operation knobs and cueing knobs.
3. Remove panel and select switch plate.
4. Remove 6 claws of panel as illustrated.

Push in the direction of the arrow.

How to remove hinge

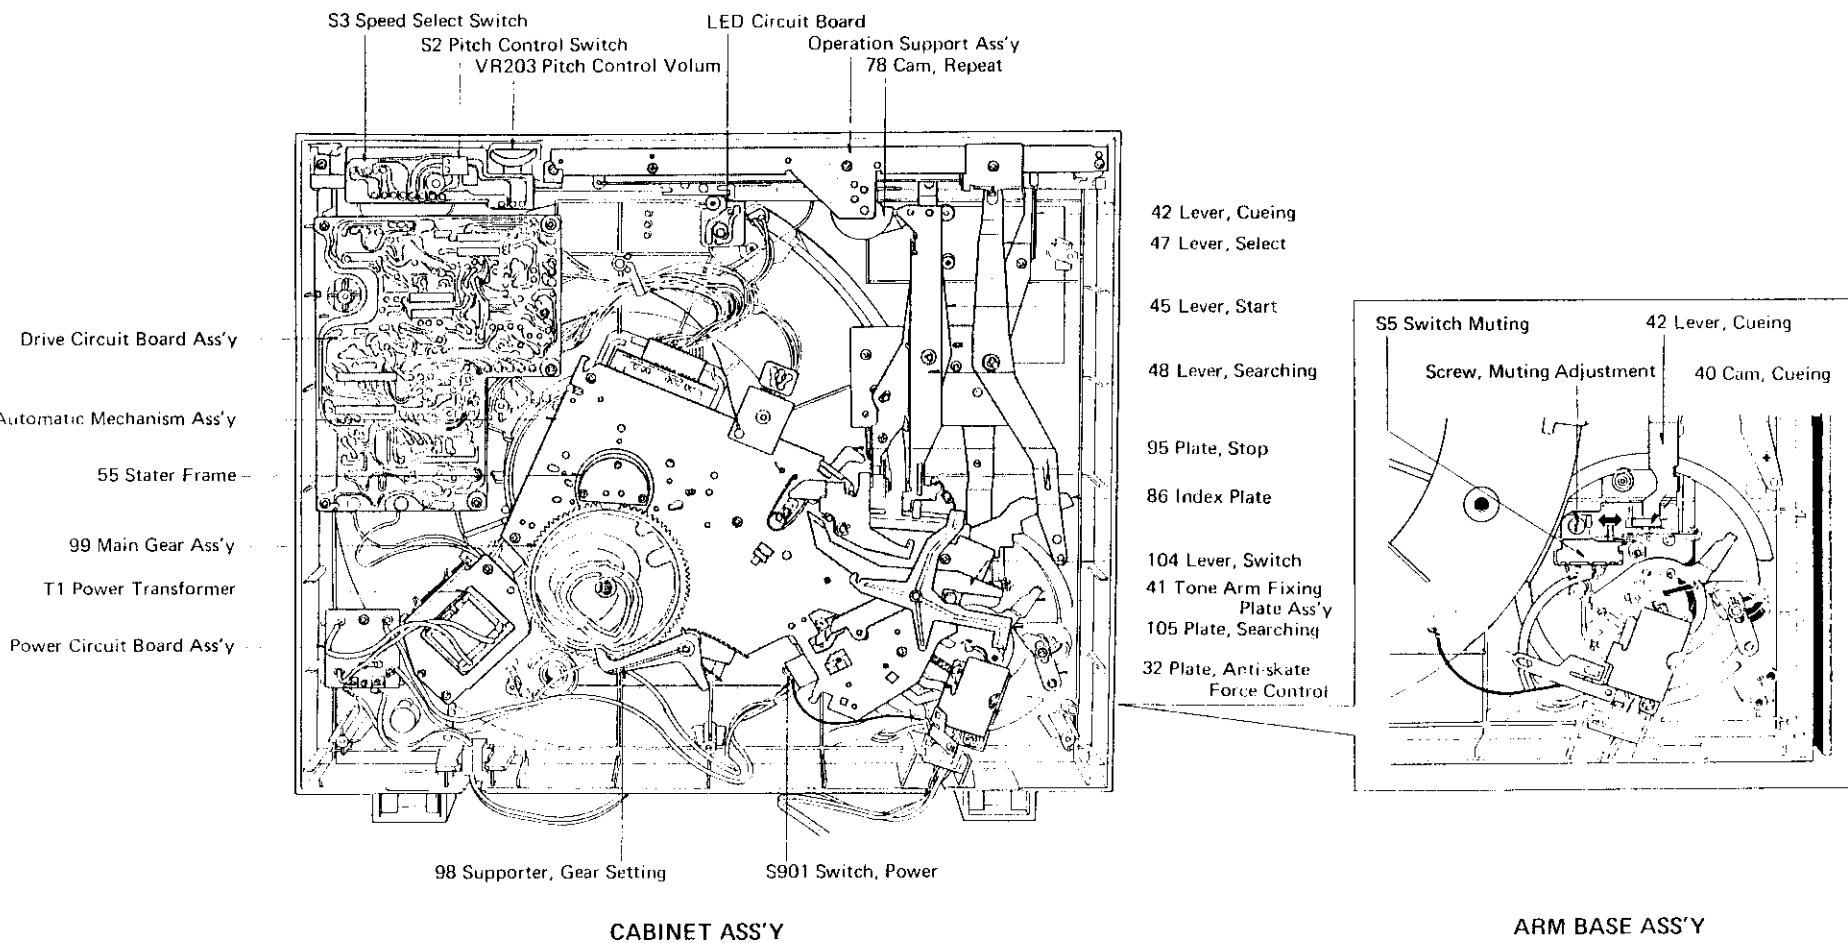

Turn the set upside-down and then insert screwdriver between hinge and cabinet. Deform the cabinet as shown by the arrow in the illustration.

Remarks:

For the disassembly of parts (mechanical board, circuit board, etc.) other than the above, refer to the parts arrangement and development diagrams provided in this manual.

PARTS ARRANGEMENT DIAGRAM

■ PARTS IDENTIFICATION

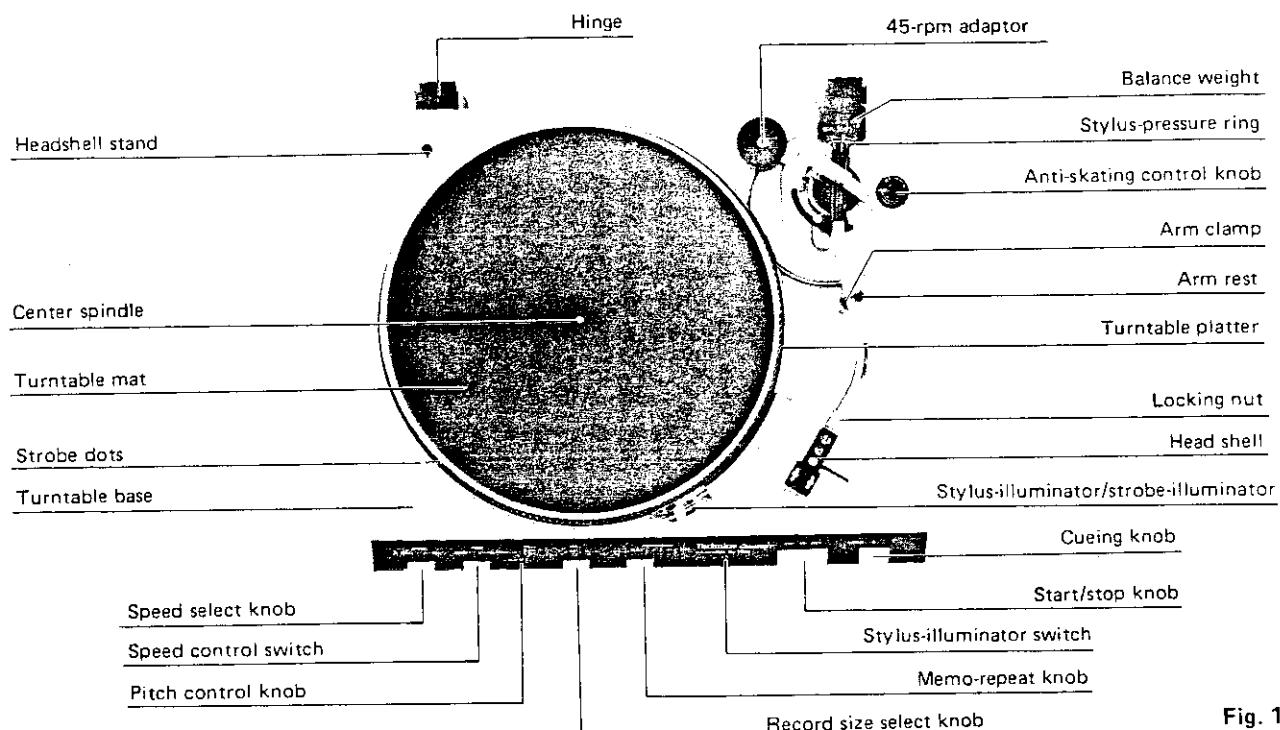

Fig. 1

■ FEATURES

High performance electronic circuit and full-cycle detection FG for quartz phase-locked control of integral structure superior in rotational characteristics

Based on an electronic circuit composed of 3 kinds of highly integrated ICs developed for the SL-1300MK2 series and the full-cycle (360°) detection FG, the quartz phase locked control system with a crystal oscillator as its standard oscillator has been adopted. For utilization of high accuracy crystal oscillation, the detection range is effected through 360° by means of the full-cycle detection FG of the motor stator for detection of revolutions, with a consequent extremely stable rotational accuracy.

Due to the employment of the integral structure, high torque DD motor, the starting time is practically instantaneous at 0.7 second (1/4) revolution. Moreover, through the quartz phase locked control system employed, speed deviation is 0 up to a stylus pressure of 180 g, while a pitch control of ±6% is possible.

Double-TNRC vibration-damping construction

The newly developed acoustic material* TNRC, which is high in vibration damping and superior in attenuation characteristics has been employed in the cabinet, while the base has another thick and heavy TNRC base which has been adopted for the SL-1300MK2 series.

Double TNRC construction is designed based on Technics non-resonance concept.

*TNRC – Technics Non-Resonance Compound

Equipped with a stylus illuminator (stylus tip lighting) that facilitates selection of music even in a dark place

3 row strobe dots capable of fine adjustments of +3.3% and -3.3%

Low-mass, gimbal-suspension tonearm with an arm friction of 7 mg and a muting circuit incorporated

The gimbal-suspension tonearm unique to Technics has descended from the tonearms for the SL-1300MK2 series and is extremely sensitive with an arm friction of 7 mg (horizontal and vertical) and is of a low mass design having an effective mass of only 12 g. For using a high compliance cartridge, the low range resonance frequency is set in the vicinity of 10 Hz. Furthermore, since a muting mechanism is adopted for eliminating noises during the descent or ascent stylus tip to and from the record.

All Front-Panel Controls

The advancement to complete front-panel control marks a big step forward in turntable operation, not only because of the greater convenience, but also because of the greater protection from dust, as the dust cover can stay closed.

Tonearm Cueing Controlled from Front Panel

The tonearm is raised and lowered softly by a viscous-damped cueing lifter. Even with the dust cover closed, a cueing can be easily performed as the control is located on the front panel.

Fully-Automatic Operation

All operations in the SL-5300 are completely automatic, yet mechanical movements are accurate and silent. Full protection to records and stylus tip is assured. With the memo-repeat feature, favorite records may be repeated up to six times, or indefinitely.

Light, Aluminum Diecast Headshell

■ HOW TO OPERATE

Manual play of record

1. Place a record on the turntable mat.
2. Set the speed select knob to the desired record speed. (See Fig. 2)

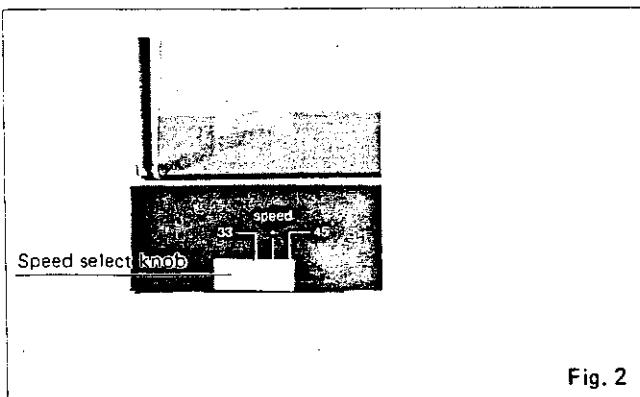

Fig. 2

3. Remove the stylus protector, if your cartridge has a detachable one.
4. Release the arm clamp.
5. Set the cueing knob to the "▼" position. (See Fig. 3)
6. Move the tonearm over the record and set the cueing knob to the "▲" position. (See Fig. 4)

The tonearm will descend slowly onto the record and play will begin. When the tonearm is moved toward the record, the power is turned on and the turntable platter will start rotating.

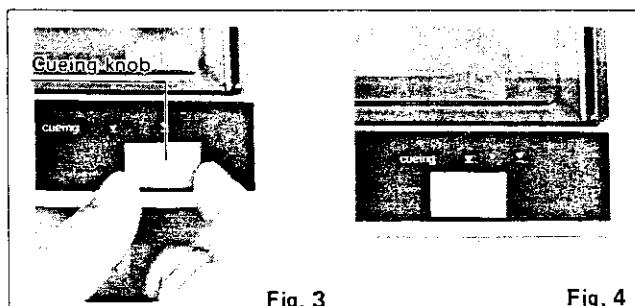

Fig. 3

Fig. 4

7. When play is finished, the tonearm will automatically return to the arm rest (auto-return), and the turntable platter will stop rotation. The turntable platter will continue to rotate briefly due to its own inertia.

If the unit is not to be used for some time, set the speed select knob to the neutral "•" position.

Attach the stylus protector again, if you have one, to guard the stylus tip from damage.

When you play a 45-rpm record with a large center hole

Place the 45-rpm adaptor on the center spindle. Set the speed select knob to the "45" position.

Automatic play

1. Set the speed select knob in the same manner as in manual play and release the arm clamp.
2. Set the record size select knob to the diameter of the record (7" [17 cm], 10" [25 cm], or 12" [30 cm]) you wish to play. (See Fig. 5)

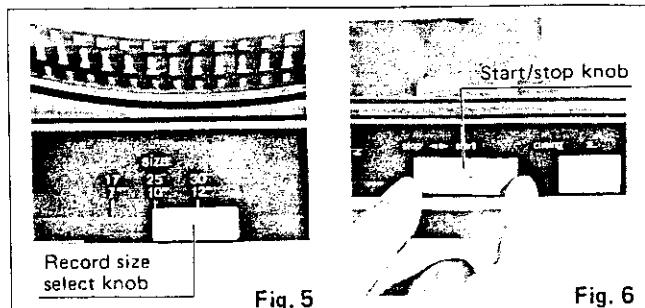

Fig. 5

Fig. 6

3. Set the start/stop knob to the "start" position. (See Fig. 6). (In this case, the "memo-repeat" knob will move to "1" first, but it will automatically return to the "0" position after play has begun.) The tonearm will move automatically over the lead-in groove and descend slowly onto the record (auto-start). Play will begin.
4. When play has finished, the tonearm will automatically return to the arm rest (auto-return).

Repeat play of a record

1. Set the "memo-repeat" knob to the desired number of times you wish to play.

"R" position enables you to repeat play continuously.

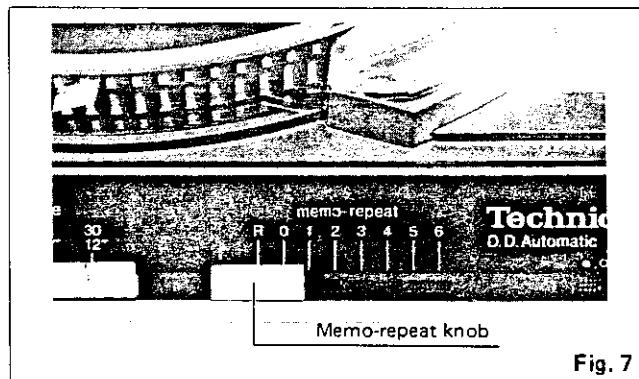

Fig. 7

Note:

The "memo-repeat" knob may be set to a desired number, except during automatic start or automatic return cycle.

If you start play manually while the "memo-repeat" knob is set to a number, there will be an additional repeat play.

2. Start play in the same way as for automatic play.

How to stop play

Set the start/stop knob to the "stop" position.

The tonearm automatically returns to the arm rest, and the turntable stops rotating.

Of course, the unit will automatically shut off even when the tonearm is manually returned to its arm rest directly.

Note:

Before you operate the start/stop knob, make sure that the "memo-repeat knob is set at the "0" position.

If this knob is set at any position other than "0", the repeat play is continued by the number of times indicated, even if you set the start/stop knob to the "stop" position.

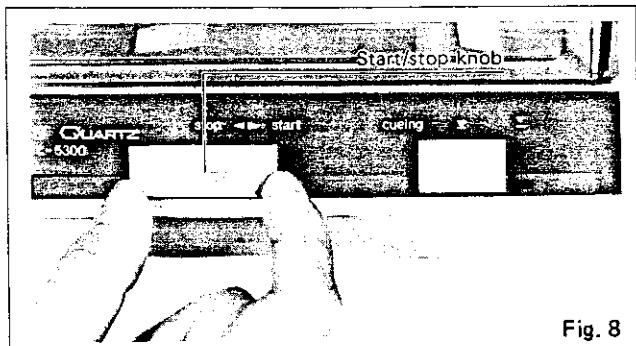

Fig. 8

How to suspend play

Set the cueing knob to the "▼" position.

The stylus tip of the cartridge will be lifted from the record.

If the unit is not to be used for some time

Secure the tonearm with the arm clamp.

Attach the stylus protector, if your cartridge has one, to guard the stylus from damage.

Close the dust cover.

About on/off of the stylus illuminator (See Fig. 9)

The unit is equipped with a stylus illuminator for lighting the stylus tip during performance as well as a strobe illuminator (LED).

When the switch for the stylus illuminator is set to the "•" position, the stylus illuminator and strobe illuminator are lit upon rotation of the turntable.

If the stylus illuminator is not required, turn the stylus illuminator switch to the "O" position.

Then, the lamp for stylus tip illumination goes out and only the LED for the strobe illuminator is lit.

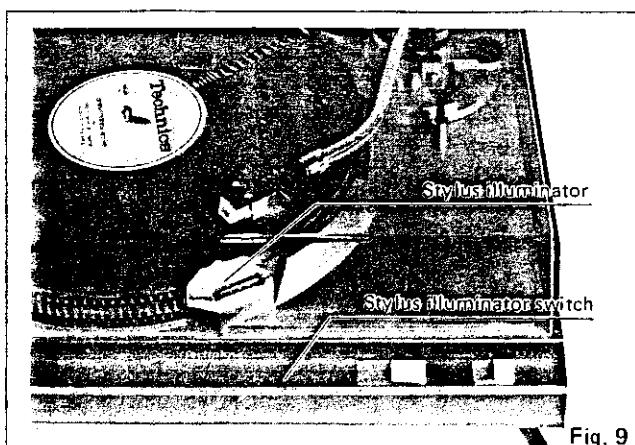

Fig. 9

■ ADJUSTMENTS

Adjustments of horizontal zero (0) balance and stylus pressure

1. Before adjusting horizontal zero (0) balance, check the following:

Make sure that the speed select knob is in the "•" (neutral) position.

Make sure that the cueing knob is in the "▼" position.

Make sure that the anti-skating control knob is at "0" position.

Make sure that the "memo-repeat" knob is in the "0" position.

2. Remove the stylus protector, if your cartridge has a detachable one. Be careful not to touch your fingers to the stylus tip.

3. Release the arm clamp and lift the tonearm from the arm rest to free it.

Turn the entire balance weight clockwise (indicated by the arrow "A") or counterclockwise (indicated by the arrow "B") until the tonearm is approximately balanced horizontally (floats freely). (See Figs. 10 and 11.)

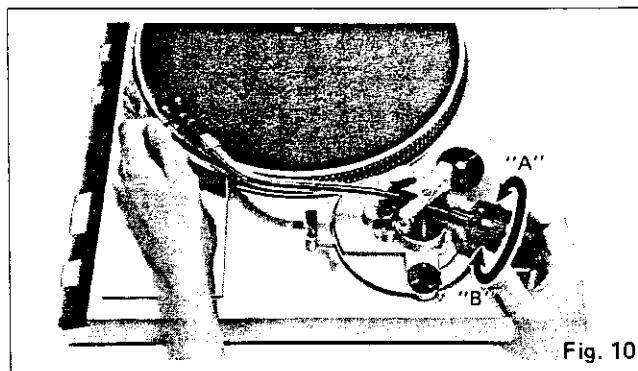

Fig. 10

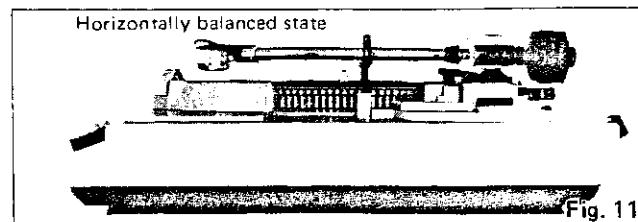

Fig. 11

Note:

During the adjustment of the horizontal zero (0) balance, be careful that the stylus tip of the cartridge does not contact the turntable mat or turntable base.

4. After the tonearm is horizontally zero (0) balanced, temporarily refasten the tonearm with the arm clamp.

5. Hold the balance weight stationary with one hand as shown in the picture, and rotate only the stylus-pressure ring to bring the numeral "0" of the ring into alignment with the center line on the tonearm rear shaft.

The adjustment of the horizontal zero (0) balance is now completed.

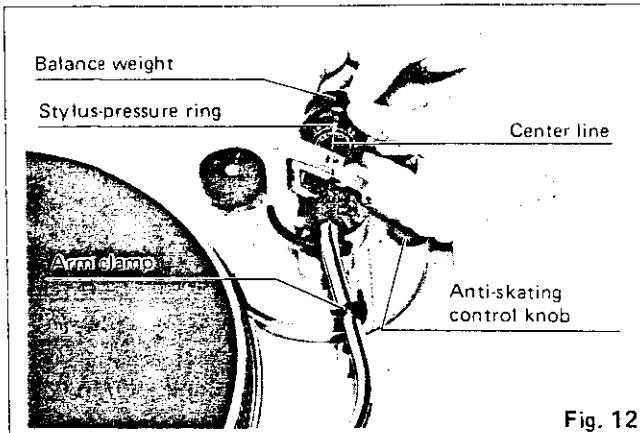

Fig. 12

6. After adjusting the horizontal zero (0) balance, turn the balance weight clockwise in the direction of the arrow and align to the correct stylus pressure. (See Fig. 13.) (Follow the cartridge manufacturer's recommendation.) As the stylus-pressure ring moves in step with the balance weight proper stylus pressure can be selected by directly reading the graduated ring.

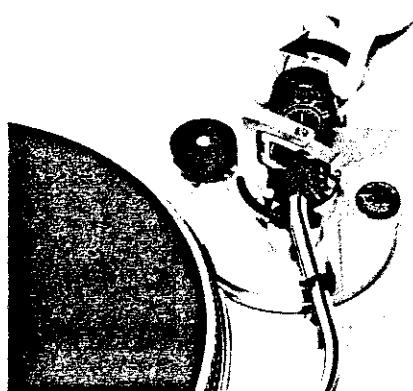

Fig. 13

Note:

Set the stylus pressure to the maximum recommended value for your cartridge in cases where the record has an extremely high recording level or where the unit is operated in a room at low temperature, or in places in which the unit is subjected to vibrations.

Adjustment of anti-skating control

Set the anti-skating control knob to the same value as the stylus pressure. (See Fig. 14.)

Note:

When a cartridge with integral dust brush is used, follow the cartridge manufacturer's recommendation for adjusting both stylus pressure and anti-skating force.

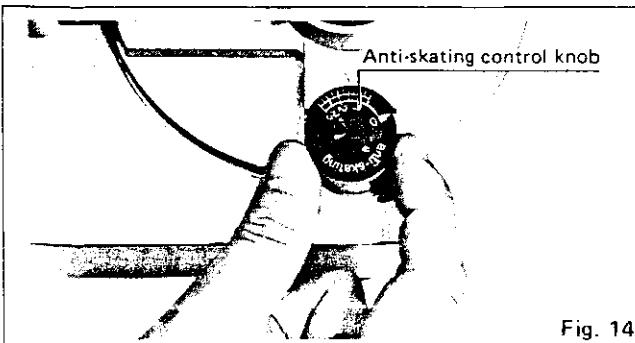

Fig. 14

Adjustment of arm-lift height (See Figs. 15 and 16)

The arm-lift height (distance between the stylus tip and record surface when queing knob is at the "▼" position) has been adjusted at the factory before shipment to approximately 5 to 10 mm.

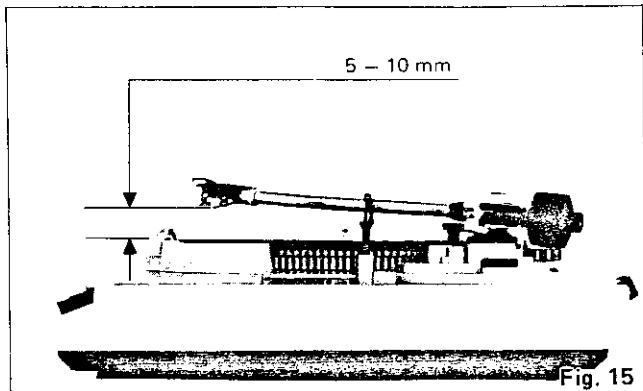

Fig. 15

For using different cartridges available on the market or when further adjustments are particularly necessary, make adjustment as follows:

1. Set the speed select knob to the "•" position to prevent rotation of the turntable platter.
2. Move the tonearm toward the center spindle.
Attach the stylus protector, if available, to guard the stylus tip from damage.
3. Turn the adjustment screw clockwise or counterclockwise, while pushing the arm lift down.
Clockwise rotation
—distance between the record and stylus tip is reduced.
Counterclockwise rotation
—distance between the record and stylus tip is increased.

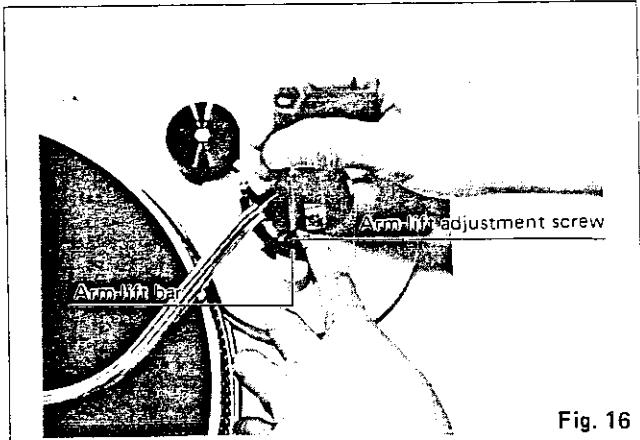

Fig. 16

Note:

As the adjusting screw has a hexagonal head, be sure to make the adjustment while depressing the arm lift, or the screw will not move freely.

Also be sure that the hexagonal head retracts correctly into the arm lift when the latter is released.

Adjustment for automatic start position (See Fig. 18)

(remove the rubber cap.)

In cases where the stylus tip sets down outside of the record

—rotate clockwise.

In cases where the stylus tip sets down too far in the recorded groove

—rotate counterclockwise.

Adjustment for automatic return position (See Fig. 18)

(Remove the turntable mat.)

In cases where the tonearm tends to return before the playing has finished.

—rotate clockwise.

In cases where the tonearm fails to return after the last groove of the record has been played.

—rotate counterclockwise.

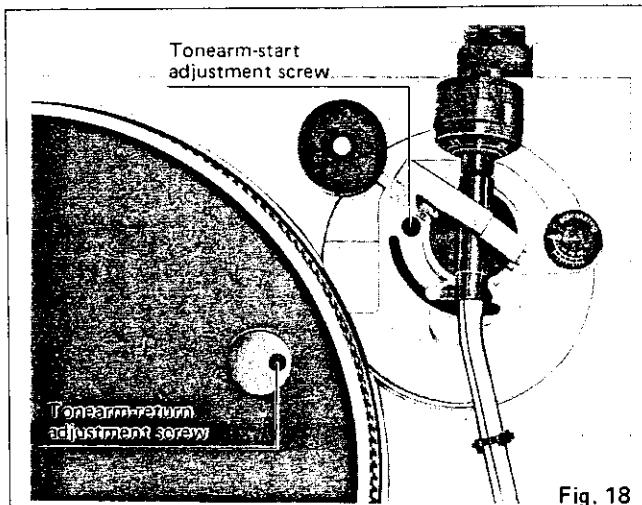

Fig. 18

Fine speed adjustment (See Fig. 19 and 20)

The strobe dots on the outer periphery of the turntable enable you to make a fine speed adjustment of +3.3% or -3.3%.

1. Set the speed control switch to the position "adj."
2. While turning the pitch control knob to the "+" side (or the "-" side), adjust to the degree at which the strobe dots on the upper stage (or lower stage) look as if they were stationary to obtain a pitch of +3.3% (or -3.3%).
3. Upon setting the speed control switch to the position "quartz", regular revolutions are available.

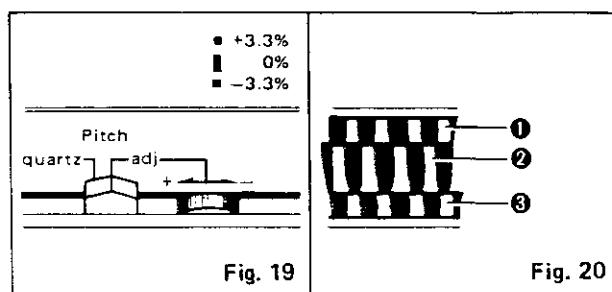

Fig. 19

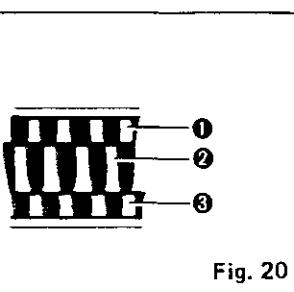

Fig. 20

① When the strobe dots at the upper stage appear stationary, the revolution is set at +3.3%.

② At the quartz position, regular revolutions are available.

③ When the strobe dot at the lower stage appear stationary, the revolution is set at -3.3%.

Muting adjustment (See Fig. 21)

This unit employs a muting mechanism for eliminating the unpleasant noise produced when the stylus tip descends to or leaves the record. In cases where adjustments for the muting time are required, for example, after the arm lift height adjustment, etc., follow the procedures as given below.

If the signal of a record is not heard immediately after descent of the stylus tip onto the record, —turn the screw clockwise.

If any unpleasant noise is heard upon descent of the stylus tip onto the record, —turn the screw counterclockwise

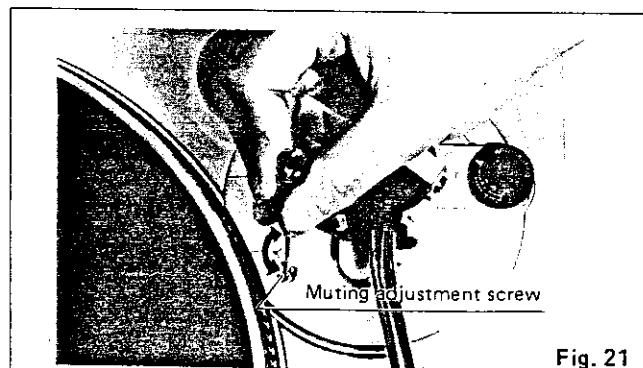

Fig. 21

■ JUSTIERUNGEN

Justierung der Tonarmlift Höhe

Die Tonarmlift Höhe, d.h. der Abstand zwischen Nadelspitze und Schallplattenoberfläche wenn der Lift-Schieber in der "▼"-Position steht, ist werkseitig auf 5–10 mm eingestellt worden. (Vgl. Abb. 15.)

Wenn Sie einen anderen Tonabnehmertyp verwenden, oder, wenn weitere Justierungen unbedingt nötig sind, nehmen Sie die Justierungen auf folgende Weise vor:

1. Stellen Sie den Drehzahl-Wahlschieber in die "•"-Position, um zu verhindern, daß sich der Plattenteller dreht.
2. Schwenken Sie den Tonarm gegen die Plattentellerachse.
3. Setzen Sie den Nadelschutz auf, damit die Nadelspitze vor Beschädigung geschützt wird.
3. Drehen Sie die Justierschraube im Uhrzeigersinn, während Sie die Tonarmliftführung nach unten drücken. (Vgl. Abb. 16.)

Drehung im Uhrzeigersinn

—Der Abstand wird kleiner.

Drehung im Gegenuhrzeigersinn

—Der Abstand wird größer.

Anmerkung:

Da die Justierschraube einen Sechskantkopf hat, muß die Tonarmliftführung während dem Justieren unbedingt gedrückt gehalten werden, damit sich die Schraube leicht drehen läßt.

Vergewissern Sie sich, daß Sechskantkopf in die Tonarmliftführung zurückkehrt, wenn diese losgelassen wird.

Justierung des Tonarmaufsetzpunktes der Automatik (Vgl. Abb. 18).

(Die Gummikappe abnehmen)

Falls der Aufsetzpunkt außerhalb der Platte liegt.

—Im Uhrzeigersinn drehen.

Falls der Aufsetzpunkt im Wiedergabeteil der Schallplatte liegt.

—Im Gegenuhrzeigersinn drehen.

Justierung des Abschaltpunktes der Automatik (Vgl. Abb. 18.)

(Plattentellerauflage abnehmen.)

Falls der Tonarm zu früh zurückkehrt.

—Im Uhrzeigersinn drehen.

Falls der Tonarm nach Erreichen der Auslaufrille nicht zurückkehrt.

—Im Gegenuhrzeigersinn drehen.

Geschwindigkeits-Feineinstellung (Vgl. Abbs. 19, 20)

Die Stroboskoppunkte am Plattentellerrand ermöglichen die Feinregulierung der Drehzahl um +3,3% oder -3,3%.

1. Stellen Sie den Quarzergelung-Schalter in die "Adj." Position.

2. Regulieren Sie durch Drehen des Feineinstellknopfes in die "+"-Richtung (oder "-"-Richtung), bis die oberen (oder unteren) Stroboskoppunkte stillzustehen scheinen, und somit eine Drehzahl von +3,3% (oder -3,3%) erreicht ist.
3. Nach Umstellen des Quarzergelung-Schalter in die "quartz"-Position ist die genaue Drehzahl eingestellt.

Dämpfungjustierung (Vgl. Abb. 21.)

Dieses Gerät ist mit einem Dämpfungsmechanismus zur Ausscheidung der unerwünschten Geräusche beim Absenken und Abheben der Nadelspitze ausgestattet.

In Fällen, wo eine Justierung der Dämpfungsdauer erforderlich ist, z.B. nach erfolgter Justierung der Tonarmlift Höhe usw., nehmen Sie die Justierung auf folgende Weise vor:

Falls die Wiedergabe nicht sofort nach erfolgtem Absenken der Nadelspitze auf die Schallplatte erfolgt: —die Schraube im Uhrzeigersinn drehen.

Falls störende Geräusche beim Absenken der Nadelspitze auf die Schallplatte gehört werden: —die Schraube im Gegenuhrzeigersinn drehen.

■ REGLAGES

Mise au point de la hauteur de l'élévateur du bras

La hauteur de l'élévateur du bras (distance entre l'extrémité de la pointe de lecture et la surface du disque, lorsque la manette de pose et de relevage du bras est à la position "▼") a été réglée en usine avant son départ sur approximativement 5 à 10 mm. (Voir Fig. 15.)

Pour l'utilisation des diverses cellules pick-up disponibles sur le marché ou lorsque des mises au point ultérieures sont particulièrement nécessaires, faire les réglages d'après ce qui suit:

1. Placer la manette sélectrice de vitesse sur la position "+" pour éviter la rotation du plateau.
2. Déplacer le bras de lecture vers le pivot central.

Fixer le capot protecteur de la pointe de lecture, s'il en existe un, pour protéger l'extrémité de la pointe d'une éventuelle détérioration.

3. Tourner la vis de réglage dans le sens des aiguilles d'une montre ou dans le sens inverse, tout en abaissant l'élévateur du bras. (Voir Fig. 16.)

Rotation dans le sens des aiguilles d'une montre.

— La distance entre la surface du disque et l'extrémité de la pointe de lecture diminue.

Rotation dans le sens contraire des aiguilles d'une montre.

— La distance entre la surface du disque et l'extrémité de la pointe de lecture augmente.

Nota:

Comme la vis de réglage possède une tête hexagonale, s'assurer d'effectuer la mise au point tout en abaissant l'élévateur du bras, sinon la vis ne bougera pas librement.

Vérifier que la tête hexagonale se retire correctement dans l'élévateur du bras quand ce dernier est libéré.

Mise au point pour une position de retour automatique (Voir Fig. 18.)

(Retirer le tapis du plateau de lecture.)

Dans le cas où le bras de lecture tend à revenir avant que l'audition ne soit terminée.

—Déplacer dans le sens des aiguilles d'une montre.

Dans le cas où le bras de lecture ne peut revenir en arrière après le dernier sillon du disque.

—Déplacer dans le sens contraire des aiguilles d'une montre.

Mise au point pour une position de marche automatique. (Voir Fig. 18.)

(Retirer le capuchon en caoutchouc.)

Dans le cas où la tête de la pointe de lecture s'abaisse en dehors du disque.

—Déplacer dans le sens des aiguilles d'une montre.

Dans le cas où la tête de la pointe de lecture s'abaisse trop loin du sillon enregistre.

—Déplacer dans le sens contraire des aiguilles d'une montre.

Réglage précis de la vitesse (Voir Figs. 19, 20)

Les points stroboscopiques sur la circonférence extérieure du plateau de lecture permettent un réglage précis de la vitesse de +3,3% ou de -3,3%.

1. Régler l'interrupteur de réglage de la vitesse sur la position "adj".
(mise au point).
2. Tout en tournant la manette de réglage de précision de la vitesse du côté "+" (ou du côté "-"), mettre au point less points stroboscopiques sur l'étage supérieur (ou sur l'étage inférieur) qui ont l'air d'être stationnaires, pour obtenir une précision de la vitesse de +3,3% (ou -3,3%).
3. En réglant l'interrupteur de réglage de la vitesse sur la position "quartz", des rotations uniformes sont possibles.

Réglage de l'amortissement (Voir Fig. 21.)

Cet appareil utilise un mécanisme d'amortissement pour l'élimination des bruits déplaisants produits lorsque l'extrémité de la pointe de lecture s'abaisse sur le disque ou s'en relève.

Dans le cas où des mises au point seraient nécessaires, par exemple, après le réglage de la hauteur du souleveur du bras, etc., suivre les procédures données ci-dessous.

Si l'exécution du disque ne se fait pas entendre immédiatement après la descente de l'extrémité de la pointe de lecture sur le disque,—tourner la vis dans le sens des aiguilles d'une montre.

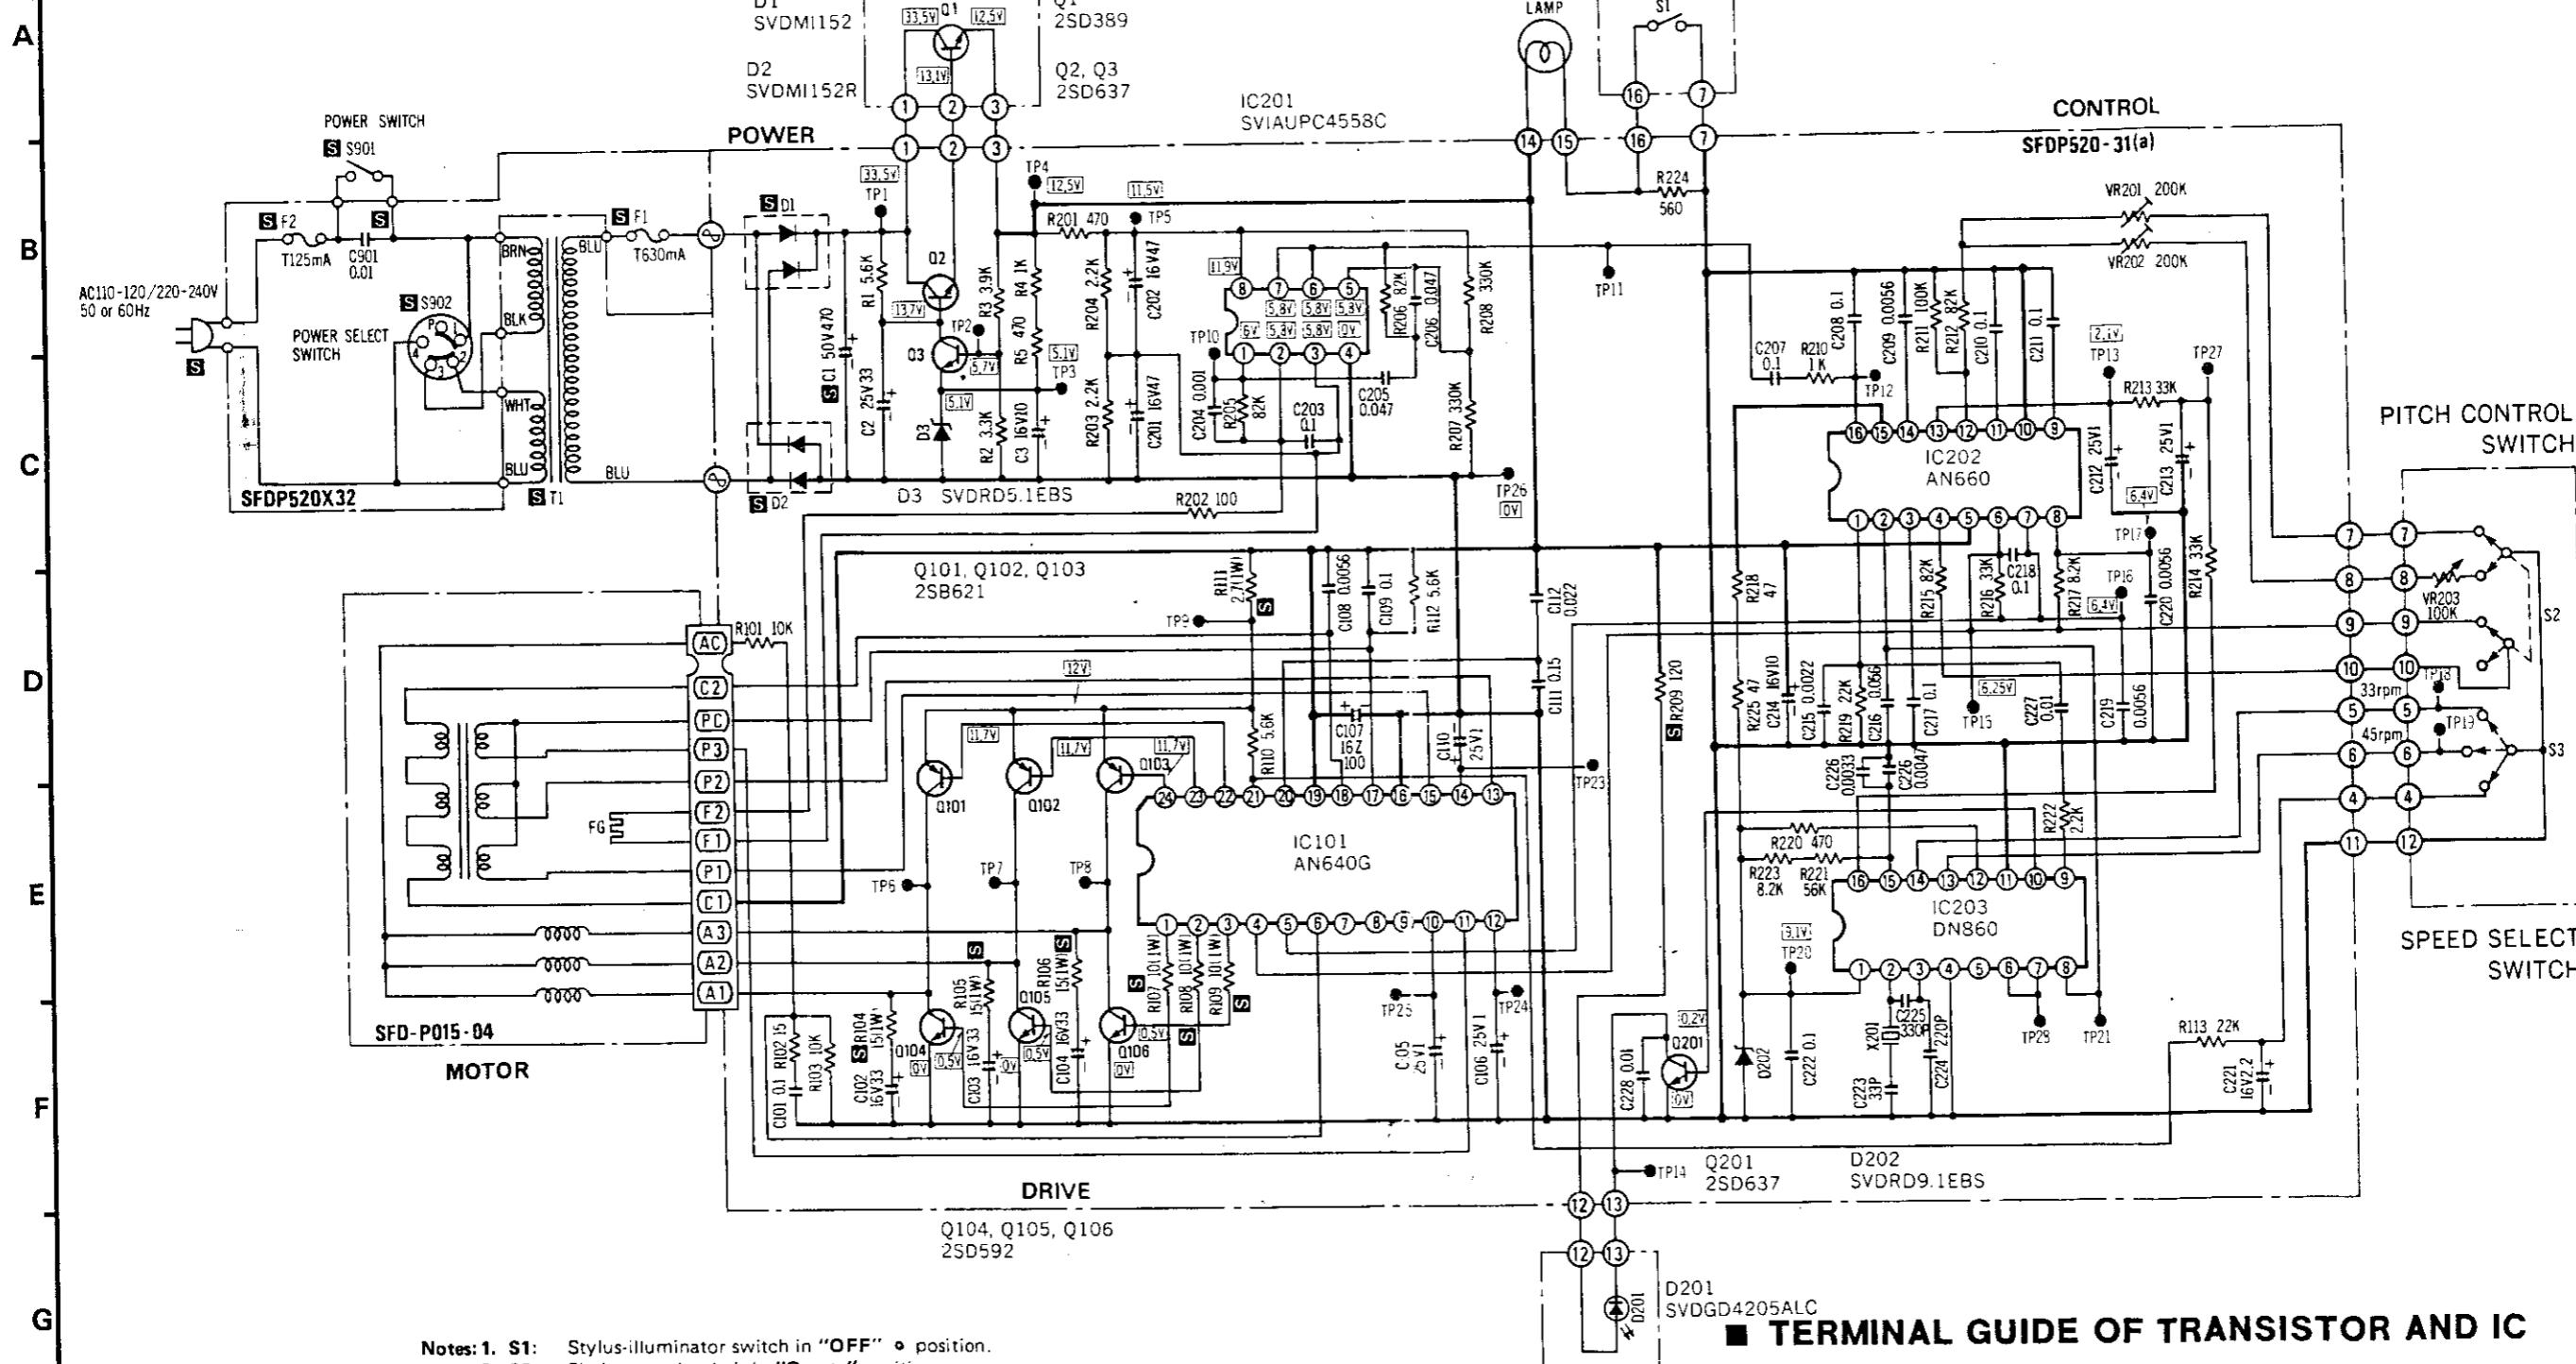

Si un bruit déplaisant est entendu lors de la descente de la tête de la pointe de lecture sur le disque,—tourner la vis dans le sens inverse des aiguilles d'une montre.

Schematic Diagram

(This schematic diagram may be modified at any time with the development of new technology.)

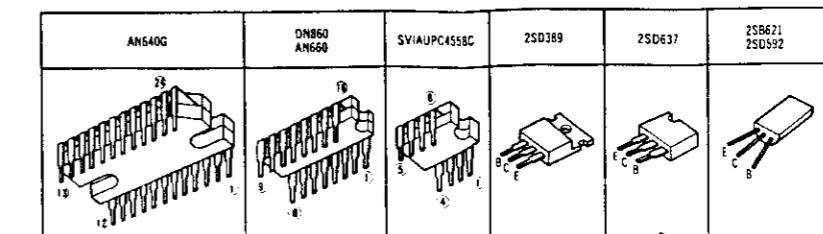

1 2 3 4 5 6 7 8 9 10 11 12

UV...2k, 24-29 volt leert.

- Notes:
1. S1: Stylus-illuminator switch in "OFF" position.
 2. S2: Pitch control switch in "Quartz" position.
 3. S3: Speed select switch in "OFF" position.
 4. S901: Power switch in "OFF" position.
 5. The voltage values are those measured on DC voltmeter at 33-1/3 r.p.m. For the voltage and waveform at each IC pin, refer to page 17.
 6. To represent transistors, Q is used instead of TR. (Ex. TR1 > Q1)
 7. S indicates that only parts specified by the manufacturer be used for safety.

Adjustment Points of Electrical System

NOTE: Make the following adjustments after replacing parts such as IC's, transistors, diodes, etc.

No.	Adjustment	Connection for measurement	Part adjusted	Adjusting procedure
1.	(TRACKING)	(Oscilloscope) ①-TP26 ②-Earth ③ TP 24	VR201	 Set power switch ON to rotate the turntable. Then adjust VR201 so that To is 6 ~ 7 msec. at 33 r.p.m. Anm.: dabei soll Quarz ON sein.
2.	(SPEED)		VR202	 Set speed volume (VR203) to the central point, and then adjust VR202 so that turntable is stationary in stroboscope light. Note: At that time, quartz should be OFF.

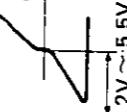

Justierungspunkte des elektrischen Systems

BEMERKUNG: Nehmen Sie die folgenden Justierungen nach erfolgtem Austausch von Teilen, wie IC's, Transistoren, Dioden, usw. vor.

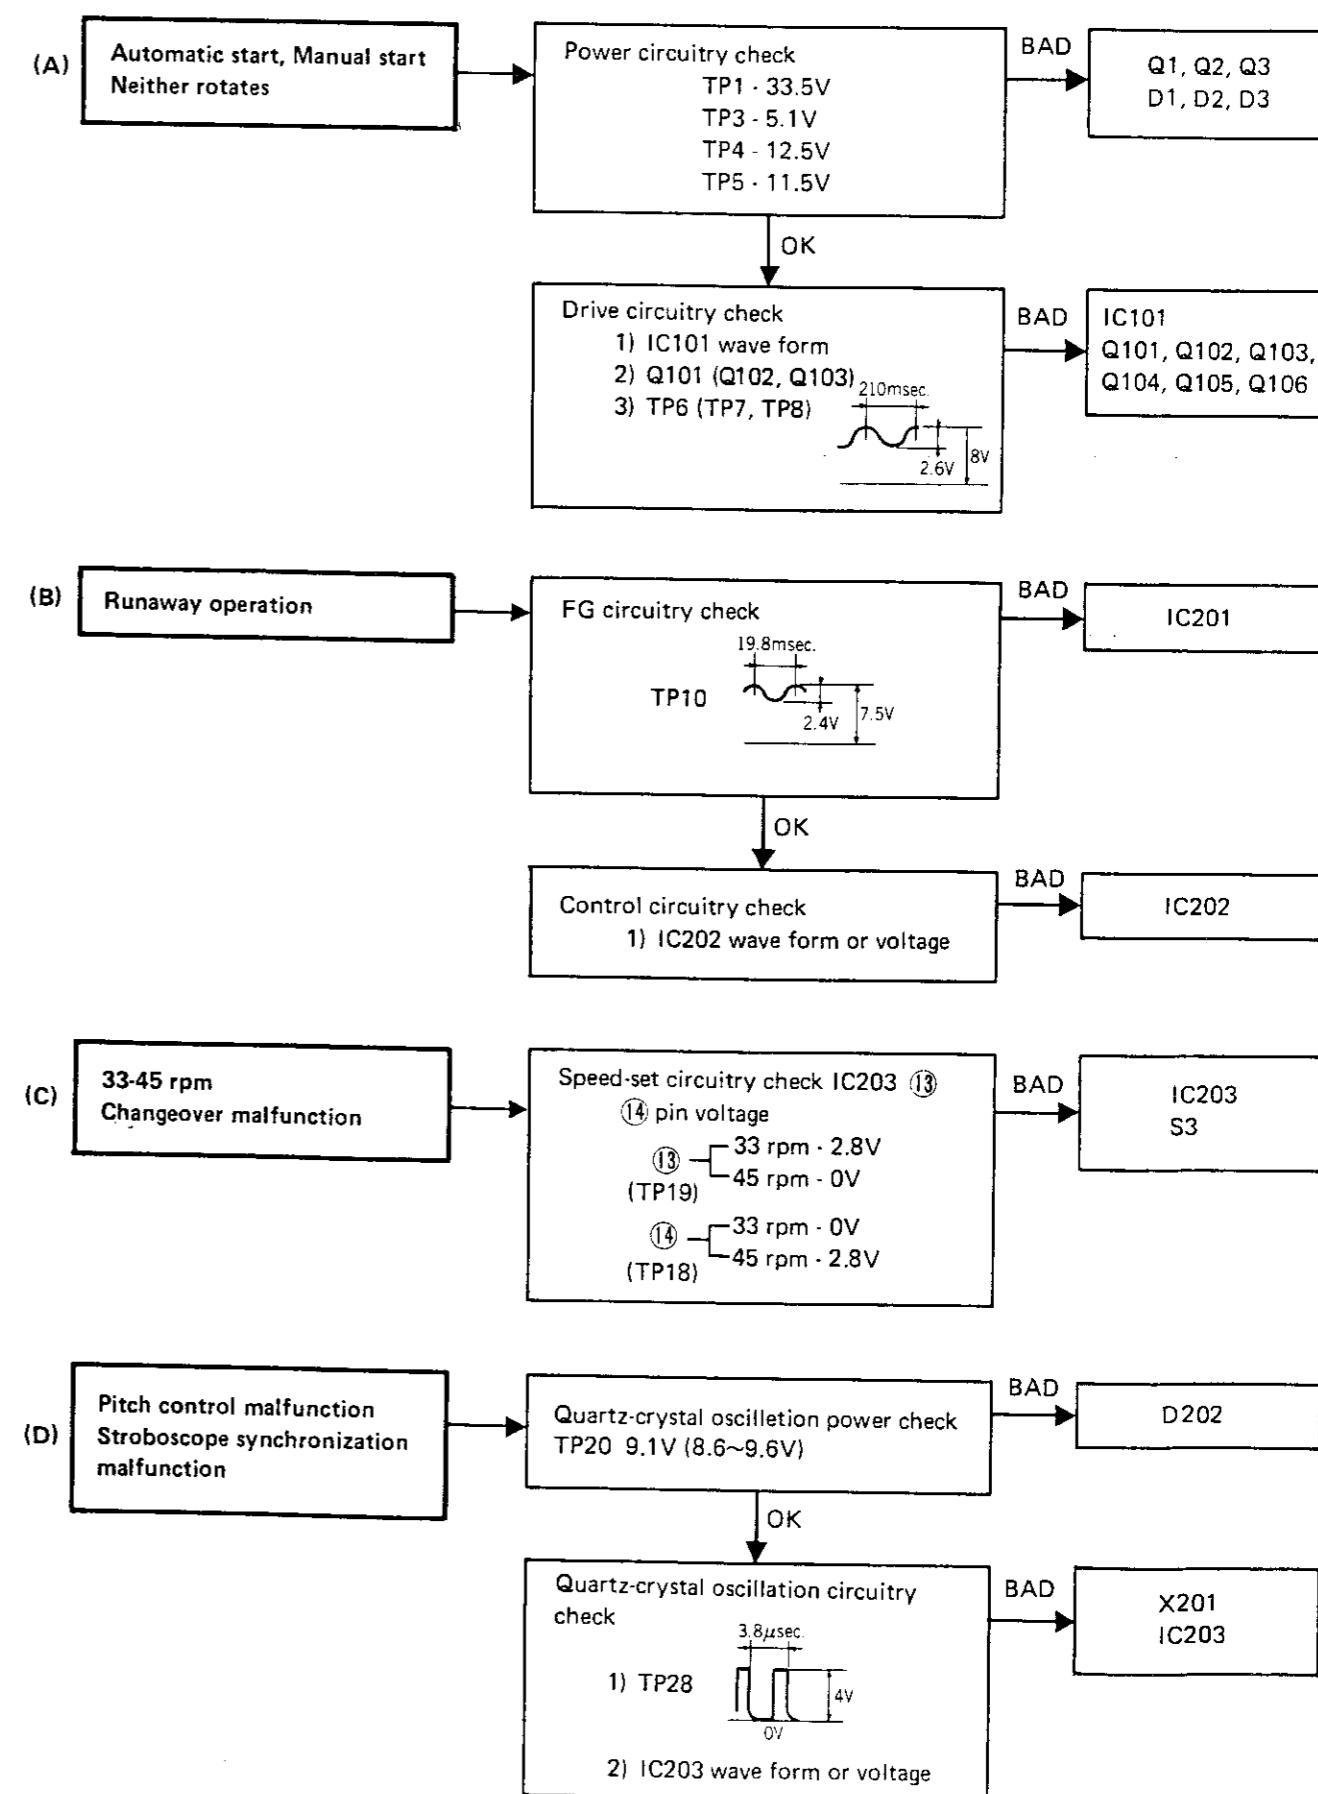

Nr.	Justierung	Anschluß für Messung	Teil zu justieren	Justierungsverfahren
1.	Abgleich (TRACKING)	(Oszillograph) ①-TP26 ②-Erdung ③ TP 24	VR201	 Hauptschalter auf ON stellen, um Plattenteller zu drehen. Dann VR201 so justieren, daß To unnerhalb von 6-7 msec. bei 33 U/m bleibt. Anm.: dabei soll Quarz ON sein.
2.	Geschwindigkeit (SPEED)		VR202	 Geschwindigkeitsregler (VR203) auf die Mitte stellen, dann VR202 so einstellen, daß Stroboskop am Plattenteller stehenbleibt. Anm.: Dabei soll Quarz Off sein.

Points de réglage du système électrique.

NOTA: Réaliser les mises au point suivantes après le remplacement de certains éléments tels que circuits intégrés, transistors, diodes, etc.

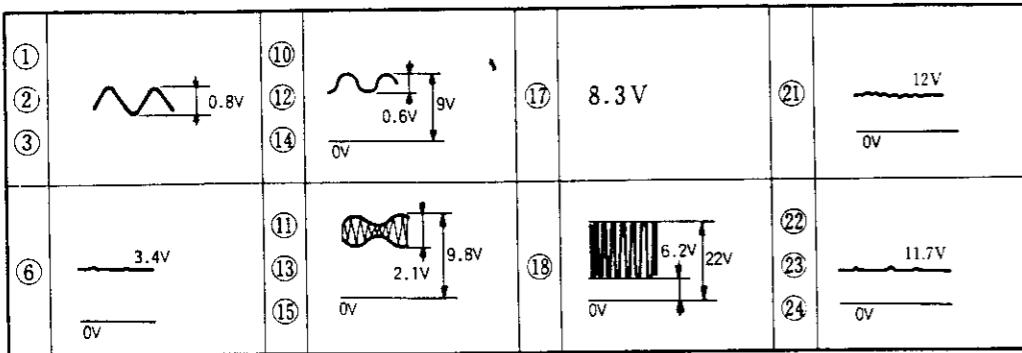

No.	Réglage	Branchemnt pour la mesure	Elément à régler	Procédé de réglage
1.	Réglage exact (TRACKING)	(Oscilloscope) ①-TP26 ②-Terre ③ TP 24	VR201	 Placer le commutateur d'alimentation sur ON (marche) pour faire tourner le plateau du tourne-disque. Puis régler VR201 de telle sorte que To soit de 6 à 7 msec.
2.	Vitesse (SPEED)		VR202	 Placer le volume de la vitesse (VR203) en position centrale et régler VR202 de telle sorte que le plateau du tourne-disque apparaisse stationnaire dans la faisceau du stroboscope. Note: A cette étape, le quartz doit être sur OFF (arrêt)

How to Inject Silicon Oil

After prolonged use the tone arm set down time may become too rapid in such rare case cueing oil should be added.

Please follow these instructions for applying the silicon oil:

1. Remove the arm height adjust screw to detach the arm lift
2. Insert the needle of the injector into the cylinder of the arm lift shaft and inject a small amount of silicon oil.
3. Slowly remove the injector.
4. Re-install arm lift bar and attach the arm height adjust screw.
5. Adjust the arm lift height.
(Refer to the adjustment procedure)
