

## Test & Settings Data For Use With Tube Testers TV-7/U, TV-7A/U, TV-7B/U,

Copyright © 2000, 2001, 2002 by Nolan E. Lee (nlee@acadiacc  
beta 0.97 July 5, 2002

This is a freely available file and my contribution to the hobby. If you paid for it, you got burned trying to SELL my free product or parts of it, I'll nuke their ass good. I've got enough hidden info worth their time. This is a FREE product, period!

There are errors in the original Govt. manuals and the supplements that I compiled. I may or may not have made a few errors myself. As a result, I take NO responsibility for any data or omitted data contained within or missing from this file. Use this file at your own risk.

This file is divided into 6 sections. The first is the *Cover* which you are now reading. Second is *General Information* which gives a brief rundown on the operation of the tester. It is NOT a substitute for the *TM*. Third is *Basing Chart* which explains the tube basing of subminiature tubes. *US Set* contains the tester settings data for "American" tubes. Next is *GM Chart* which contains a cross reference from the old military readings to Micromhos. Lastly, the *VT Chart* is a cross reference from the old military readings to commercially numbered equivalent.

I have drawn on the following documentation as the basis for this project:

TM 11-6625-274-12 dated June 14th of 1960 with changes thru C7 dated January 15th of 1965  
TM 11-6625-274-35 dated June 30th of 1960 with changes thru C5 dated March 1st of 1965  
TB 11-5083 (T.O. 33AA21-5-1) dated October 9th of 1957 with changes thru C4 dated November 5th of 1965  
TB 11-6625-274-12/1 (T.O. 33AA21-5-31) dated January 17th of 1962 revised with T.O. 33AA21-5-31C dated January 15th of 1965

The following supplements (commonly known as "Air Force" supplements to TB 11-6625-274-12/1) are included:

T.O. 33AA21-5-31C dated January 15th of 1965  
T.O. 33AA21-5-31E dated December 1st of 1965  
T.O. 33AA21-5-31G dated February 15th of 1967  
T.O. 33AA21-5-31H dated October 20th of 1969  
T.O. 33AA21-5-31J dated November 5th of 1970

T.O. 33AA21-5-31P dated March 1st of 1975  
T.O. 33AA21-5-31Q dated September 5th of 1975  
T.O. 33AA21-5-31R dated June 15th of 1983  
T.O. 33AA21-5-31S dated May 31st of 1985  
T.O. 33AA21-5-31T dated December 15th of 1986

The following materials were used for adding listings for tube numbers not listed in any of the other

Aero Electronics Limited (England) Valve Guide 10CV  
Assorted settings data for the I-177 and TV-2 series testers in military put  
AVO Valve Data Edition 14 for the CT-160 and VT-160  
C.V. Register of Electronic Valves by the Technical Valve Committee 1963 with adm  
Dan (TV-7 Guru) Nelson's notes and settings for non listed tubes  
General Electric Tube Manual 14

beta 0.97 July 5, 2002

This is NOT a substitute for the operators manual TM 11-6625-274-12 which you should read before using the tester.

## Starting Procedure

Before operating the test set, perform the starting procedure below to check the general operation of the equipment.

If the results obtained from the procedures in b through e below are satisfactory, the test set is ready for operation.

**Note:** If an abnormal indication is obtained during the starting procedure, refer to the equipment performance check list (paragraph 35 of TM 11-6625-274-12) for corrective measures.

- a: Connect the test set to a 115-volt ac, 50 to 1000-cycle per second (cps), power source.
- b: Set the POWER switch to the ON position; the PILOT lamp should light.
- c: Press pushbutton 1 - LINE ADJ. Rotate the LINE ADJUST control knob until the meter pointer rests over the LINE TEST mark on the meter face.
- d: Release pushbutton 1 - LINE ADJ.
- e: Check the short test circuit.
  - (1) Set the left FILAMENT selector at A, the right FILAMENT selector at P, and the GRID, PLATE, SCREEN, CATHODE, and SUPPRESSOR selectors at 0, 0, 0, 2, and 2, respectively.
  - (2) Rotate the FUNCTION SWITCH through the five SHORTS positions. The neon SHORTS lamp should glow in both positions 2 and 3 of the FUNCTION SWITCH to indicate that the short test circuit is functioning properly.
- f: Set the POWER switch to the OFF position.

## Operating procedure

The procedures below apply to single section and multipurpose tubes which have more than one set of elements in the same envelope. Test each section or group of elements of a multipurpose tube separately. Test data for the multipurpose tube types are listed by sections (pentode section, triode section, diode section, etc.) on the settings page of this file.

**Caution: Do not insert a tube into a test socket until all of the controls have been set in accordance with the instructions listed below!**

a: **Selectors.** The FILAMENT (left and right), GRID, PLATE, SCREEN, CATHODE, and SUPPRESSOR selector switches select the test socket connections so that correct test voltages are supplied to the elements of the tube under test. for clarity, these selector switches will, in some instances, be referred to collectively as "the selectors". When referred to collectively, they are considered in the same order as above.

b: **Setting Controls.**

- (1) Locate the type number of the tube to be tested in the "**Tube Type**" column on the settings page.
- (2) Turn the FILAMENT VOLTAGE knob to the position shown in the "**Fil. Voltage**" column on the settings page for that specific number tube.
- (3) Set the selectors to the letters and the numbers indicated in the "**Selectors Positions**" column on the settings page. Be sure that the numbers indicated by the selector knobs are the same, if read left to right, as the numbers in the column for that specific tube number in the settings data.
- (4) Set the BIAS control to the number indicated in the "**Bias**" column of the settings data for that tube number.
- (5) Set the SHUNT control to the number indicated in the "**Shunt**" column for that tube. If there is no settings number listed in that column, then disregard this step and proceed with the steps below.

- (6) Set the FUNCTION SWITCH knob to 1.
- (7) Insert the tube to be tested in the proper socket and, if the instructions in the "Notations" column require it, connect panel jacks G or P to the tube caps with the test leads.
- (8) Set the POWER switch to the ON position. The PILOT lamp should light..  
**Note:** For tubes of the heater cathode type, allow approximately 10 to 15 seconds for the cathode to reach operating temperature before you test the tube.
- (9) Adjust the meter pointer to the LINE TEST mark on the meter scale as outlined in the Starting Procedure above.  
**Note:** Some tubes, such as the 17DE4 and the 32ET5, require that the meter pointer be set at a position other than the LINE TEST mark. Refer to the "Notations" column of the settings data before testing the tube.

**c: Shorts Test.**

- (1) Turn the FUNCTION SWITCH knob from position 1 to position 5; meanwhile tap the tube lightly and watch the neon SHORTS lamp on each switch position. Tubes with shorted elements will cause the lamp to glow.  
**Note:** Some tubes can be permanently damaged by tapping on them while testing. Check the "Notations" column.
- (2) A short is indicated by a steady glow of both halves of the SHORTS lamp. A flash when the switch is turned from one position to another does not indicate a defective tube. Intermittent flashing when the tube is tapped is an indication of the existence of loose elements which can cause noisy or erratic operation.
- (3) Tubes that have more than one section, such as the 25D8, must be tested for shorts on each section.
- (4) Discard a shorted tube without further tests. Ignoring this can damage the tester meter or other parts.  
**Note:** Some tubes will show a shorted condition on certain positions of the FUNCTION SWITCH even though they are good tubes. Check the "Notations" column in the settings data for that tube to remarks.
- (5) If the tube is not shorted, other tests may be performed as required.

**d: Selection of Range.** Turn the FUNCTION SWITCH knob from the SHORTS side of the switch to the RANGES position indicated in the "Range" column of the settings data for that tube. This automatically sets the sensitivity of the meter circuit to the proper level for the tube under test.

**e: Operating Pushbuttons.**

**Caution! DO NOT press pushbutton 3 - MUT.COND. While testing rectifier tubes!**

- (1) Press the pushbutton indicated in the "Press to Test" column of the settings data for the tube being tested.  
**Caution: Release the pushbutton as soon as the meter pointer comes to rest and the meter indication is read.**  
**If the pushbutton is held depressed too long, the tube under test may be damaged.**
- (2) Refer to the "Notations" column for specific information pertaining to specific tube types.
- (3) When the correct pushbutton is depressed, the meter will indicate the condition of the tube. Compare the meter reading to the value indicated in the "Minimum Value" column of the settings data for that tube.

**Gas Test**

Pushbutton 4 - GAS 1 and pushbutton 5 - GAS 2 are used when testing amplifier tubes for gas content. Multipurpose tubes are tested for gas content only on the amplifier sections. The gas test Does Not apply to diode sections or to rectifier tubes. Allow tubes of the filament type to warm up before testing the tube for gas content.

- a:** Perform steps **a** through **d** and step **f** in the **Starting Procedure** section above.
- b:** Set the controls as indicated in the settings data for the tube under test.
- c:** Insert the tube in the proper test socket and set the POWER switch to the ON position.
- d:** Hold down pushbutton 4 - GAS 1 and adjust the BIAS control until the meter pointer reads 10 on the scale.  
**Note:** If the meter pointer cannot be adjusted down to 10, turn the BIAS control knob until the meter reading is 100.
- e:** Hold down pushbutton 4 - GAS 1 and press pushbutton 5 - GAS 2.
- f:** If the tube contains gas, the meter pointer will move upwards on the scale. A movement of more than 1 division of the scale indicates a gassy tube.
- g:** Turn off the test set.

**End of Sheet!**

## Basing Data for use with TV-7/U, TV-7A/U, TV-7B/U, TV-7C/U, and TV-7D/U Tube

beta 0.97 July 5, 2002

This is NOT a substitute for the operators manual TM 11-6625-274-12 which you should read before using this test equipment.

Subminiature tubes are tested in the SUB. MIN. sockets X109 and X110. See Figure 9 below.

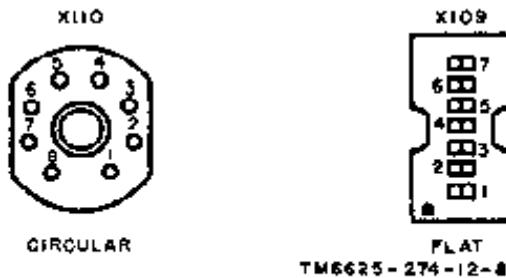

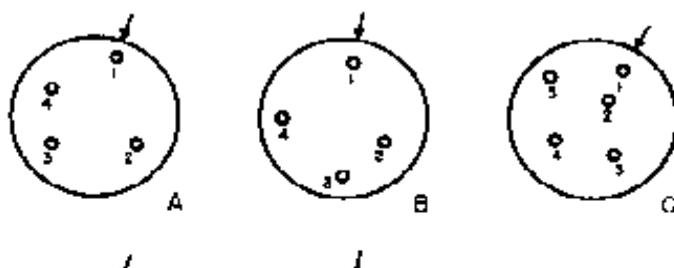

Figure 9. Top view of sockets X109 (flat) and X110 (circular).

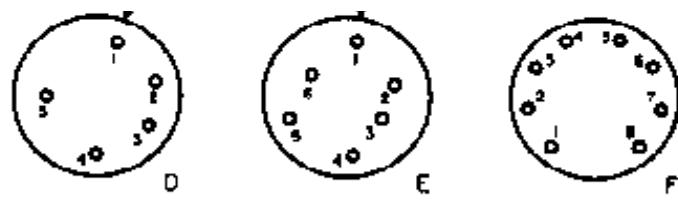

Subminiature tubes of the round type with short wire leads or pins are tested in special socket X110. The eight contacts. Several basing arrangements (Figure 10 below) are used with these tubes. The arrow of the tube bases in figure 10 indicate the location of the dot on the base of the tube. Check the NOTATI test data settings and then examine the tube and identify the correct basing to use.

Use octal socket adapter E104 when the subminiature tube has long leads. Insert the leads or pins into contacts of socket X110. If the leads are long enough, set the POWER switch to the OFF position and then about one eighth of an inch from its end with the tips of a pair of long nosed pliers and insert the leads in contacts. Then set the POWER switch to the ON position and test the tube.

Subminiature tubes of the flat on in-line contact type are tested in flat socket X109 (Figure 9). The tube pin inserted so that the dot on the tube base is directly in line with the small moulded dot on the

Subminiature type tubes are identified in the test data settings by a star next to the tube number. The application of the various round types is indicated in the NOTATIONS column for that tube number. The basing designations correspond to the diagram shown in Figure 10 below:

TM6620-2T4-1E-9

*Figure 10. Basing diagrams for subminiature tubes (letters, A, B, C, D, E, and F identify basing for use with test data book).*

Notes:

- 1: Disregard shorts test after GM test is completed. Allow 60 seconds for heater warmup.
- 2: If the # symbol is listed in the Press column, it means that you hold down DIODE
- 3: If the \* symbol is listed after the tube number, it indicates that the basing of the tube is different than the standard.
- 4: If any of the columns contain " See Note>" you need to check the notations column.

## '-7B/U, TV-7C/U, and TV-7D/U Tube Testers

an E. Lee (nlee@acadiacom.net)

May 5, 2002

arm up. allow 5 seconds to obtain GM reading.

Press E and then press the MUT.COND. button.

The tube listed in the notations column needs to be used.

See the column for specific instructions for that tube.

|--|---------------------------|
| Plate #1. Use Hickok adapter Code # 1050-107. Connect the negative (-) end of a 30-volt battery to pin #2 of the large 7-pin socket; connect the positive end (+) of the battery to pin 4 of the large 7-pin socket. Connect the plate jack connector to the cap over pin-6 of the octal socket. <b>Caution: Disconnect the battery (Everyready #413) before changing selector settings!</b> | T.O. 33AA21-5-31P         |
| Plate #2. Use Hickok adapter Code # 1050-107. Connect the negative (-) end of a 30-volt battery to pin #6 of the large 7-pin socket; connect the positive end (+) of the battery to pin 4 of the large 7-pin socket. Connect the plate jack connector to the cap over pin-3 of the octal socket. <b>Caution: Disconnect the battery (Everyready #413) before changing selector settings!</b> | T.O. 33AA21-5-31P         |

### -7B/U, TV-7C/U, and TV-7D/U Tube Testers

an E. Lee (nlee@acadiacom.net)

heet!

## "CV" Tube Data for use with TV-7/U, TV-7A/U,

Copyright © 2000, 2001, 2002 by No

beta 0.97 Ju

### Notes:

- 1: Some of these tubes require special adapters to be used to test the tube. I
- 2: If the # symbol is listed in the Press column, it means that you hold down

| Tube Type | Fil. Voltage | Selector Positions | Bias | Shunt | Range | Press to Test | Minimum Value |
|-----------|--------------|--------------------|------|-------|-------|---------------|---------------|
| CV32      | 3,0          | ER0-0000           | 0    | 67    | A     | 7             | 40            |
