# 1 SPECIFICATIONS AND SERVICE DATA

## SPECIFICATIONS

**Track System** 4-track, 2-channel stereo

**3 Heads** Erase, record and playback

**Type of Tape** Cassette tape, C-60 and C-90 (Phillips type)

**Tape Speed** 4.8 cm/s (1-7/8 ips)

**Input (Level and impedance)**

MIC: Specified input level; -57 dB (1.09 mV)/10 kohms  
Min. input level; -67 dB (346 µV)

LINE IN: Specified input level; -9 dB (275 mV)/50 kohms  
Min. input level; -19 dB (86.9 mV)

DIN\*: Min. input level; -45 dB (4.36 mV)

\*Pursuant to DIN standards (Europe model only)

**Output (level and load impedance)**

OUTPUT: Spec. output level; -5 dB (436 mV)/50 kohms  
Max. output level; -3.5 dB (518 mV)

PHONES: Spec. output level; -16 dB (123 mV)/8 ohms

**Equalization**

METAL: 3180 µs + 70 µs

Co (CrO<sub>2</sub>): 3180 µs + 70 µs

NORMAL: 3180 µs + 120 µs

**Head Configuration**

1/2-track, 1-channel erase head

1/4-track, 2-channel record head and playback head in a single housing

**Motor** 1 DC servo motor (for capstan drive)

1 DC motor (for reel drive)

**Bias Frequency** 100 kHz ±5 kHz

**Operation Position** Horizontal

**Power Requirements**

100/117/220/240V AC, 50/60 Hz, 21W (General Export Model)

117V AC, 60 Hz, 21W (U.S.A./Canada Model)

220V AC, 50 Hz, 21W (Europe Model)

240V AC, 50 Hz, 21W (U.K./Australia Model)

**Weight** 7.0 kg (15-7/16 lbs.) net

**Dimensions** See Fig. 1-3

## SERVICE DATA

### MECHANICAL

**Tape Speed Deviation** 3,000 Hz ±45 Hz

**Tape Speed Drift** 45 Hz

**Wow and Flutter**

Playback: 0.07% (WRMS)

Record/Playback: 0.20% (RMS)

**Pinch Roller Pressure** 350 g to 450 g (12.3 oz to 15.9 oz)

**Reel Torque**

Take-up: 40 to 65 g-cm (0.56 to 0.90 oz-inch)

Supply: 2 to 6 g-cm (0.028 to 0.083 oz-inch)

F.F.: 120 to 170 g-cm (1.7 to 2.4 oz-inch)

REW: 120 to 170 g-cm (1.7 to 2.4 oz-inch)

**Fast Wind Time**

95 sec. or less for MTT-501 (C-60)

**Auto End-stop Time** 2 sec. or less

**TIMER activate Time** 2.3 sec. ±1 sec.

### ELECTRICAL

#### Frequency Response

Playback - Co (CrO<sub>2</sub>), METAL

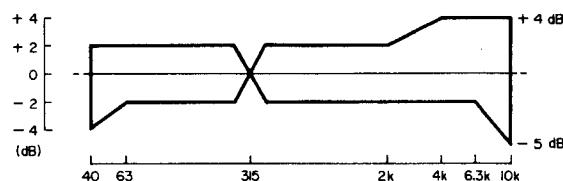

Fig. 1-1

#### Overall

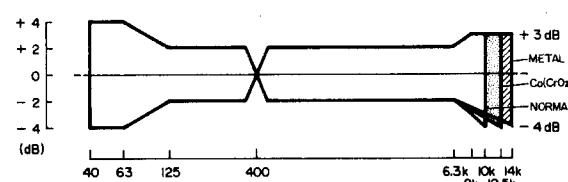

Fig. 1-2

#### Signal-to-noise Ratio

Playback NORMAL: 46 dB min.

Record/Playback

METAL, Co (CrO<sub>2</sub>): 45 dB min.

NORMAL: 43 dB min.

S/N is improved by 5 dB at 1 kHz and 10 dB above 5 kHz when Dolby NR\*\* is used.

**Erase Efficiency** 65 dB min. at 1 kHz (measured with input 10 dB higher than the specified input level).

**Channel Separation** 20 dB min. at 1 kHz

**Adjacent Track Crosstalk** 40 dB min. at 125 Hz

**Total Harmonic Distortion** 2.2% or less with METAL/Co (CrO<sub>2</sub>)  
2.5% or less with NORMAL

#### NOTES:

- Improvements may result in SPECIFICATIONS AND SERVICE DATA changes.

- Value of "dB" in the data refers to 0 dB (0.775 V), except where specified.

\*\* Noise Reduction System manufactured under license from Dolby Laboratories Licensing Corporation.

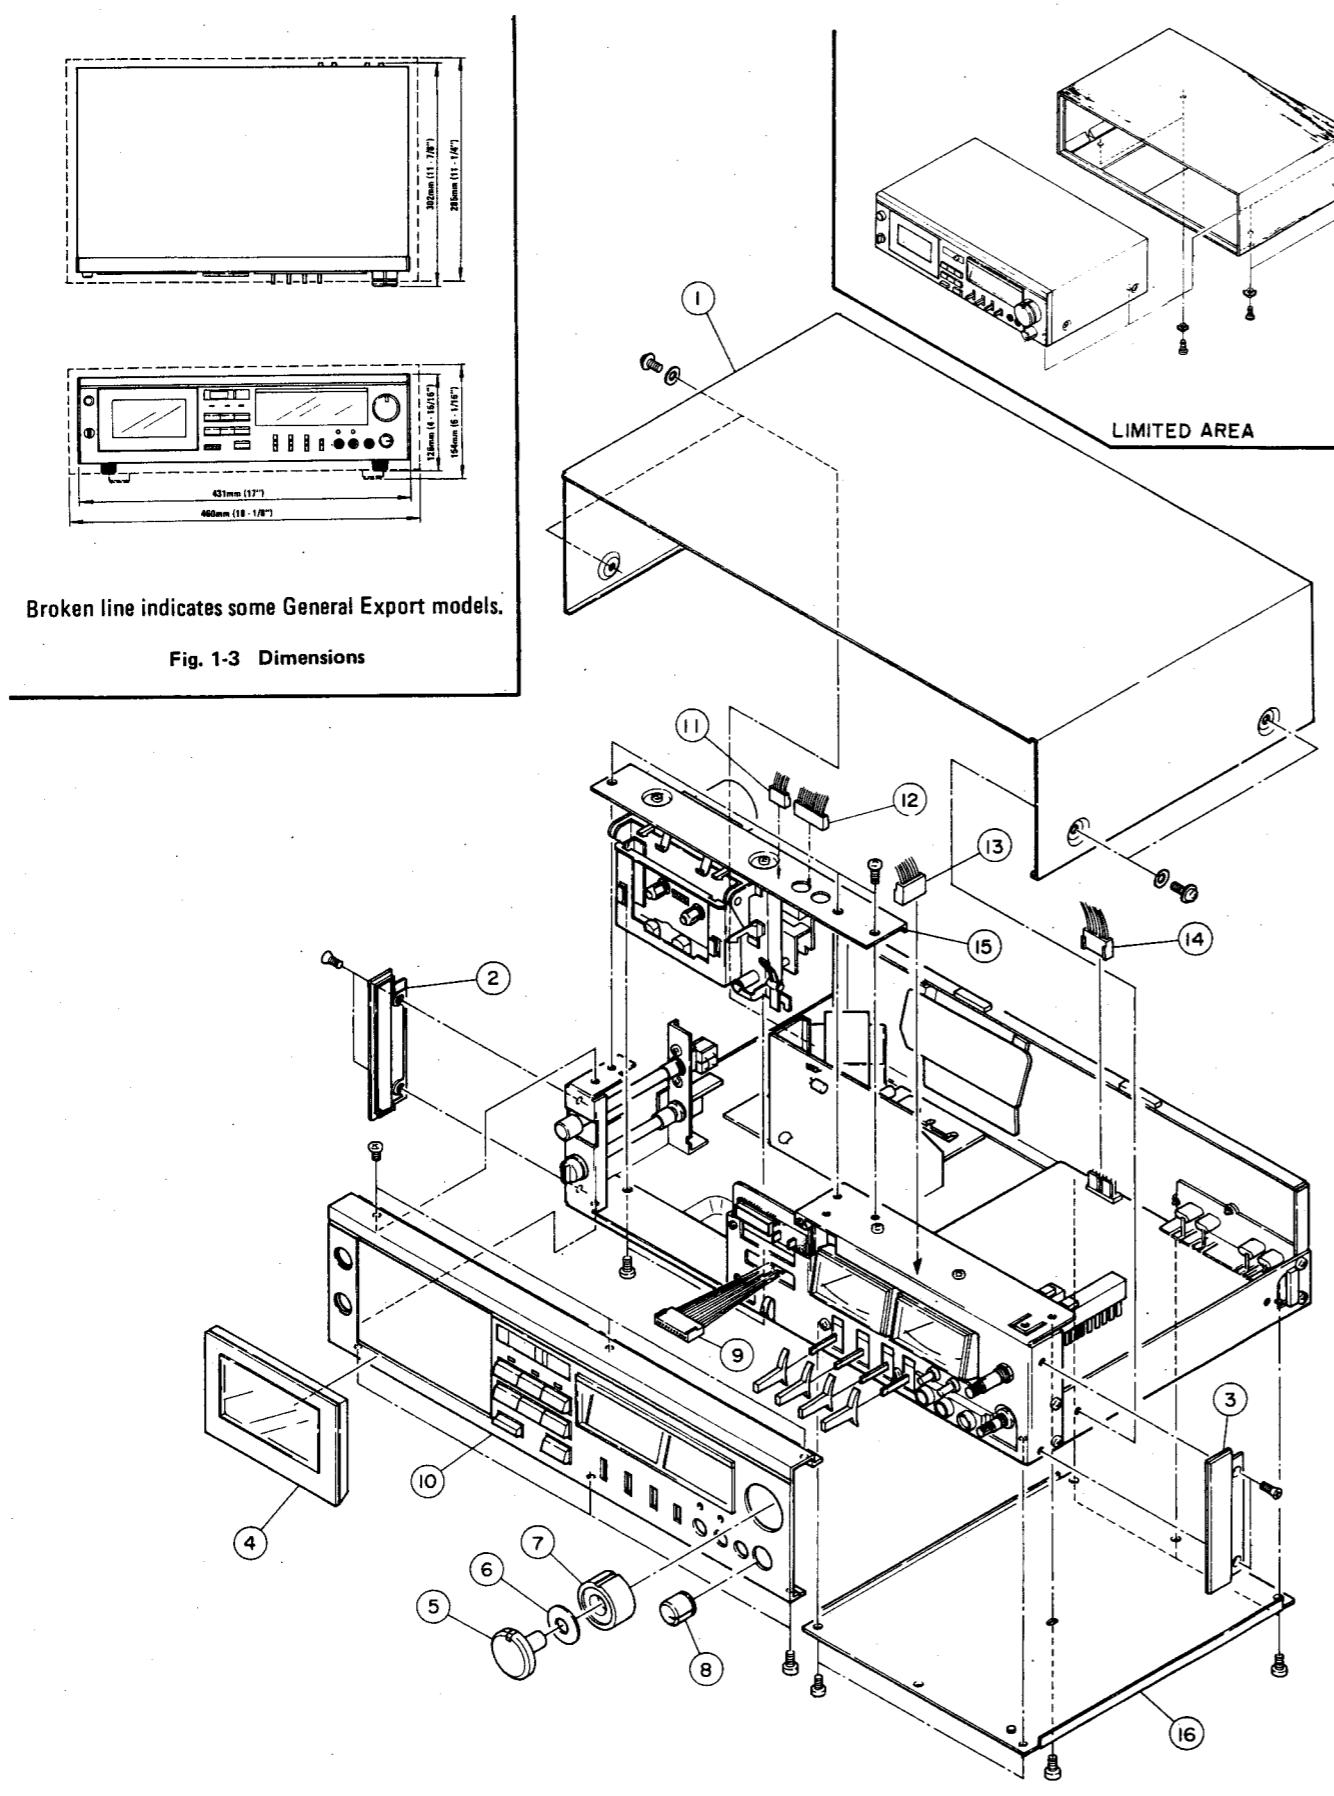

'Dolby' and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

#### CAUTION

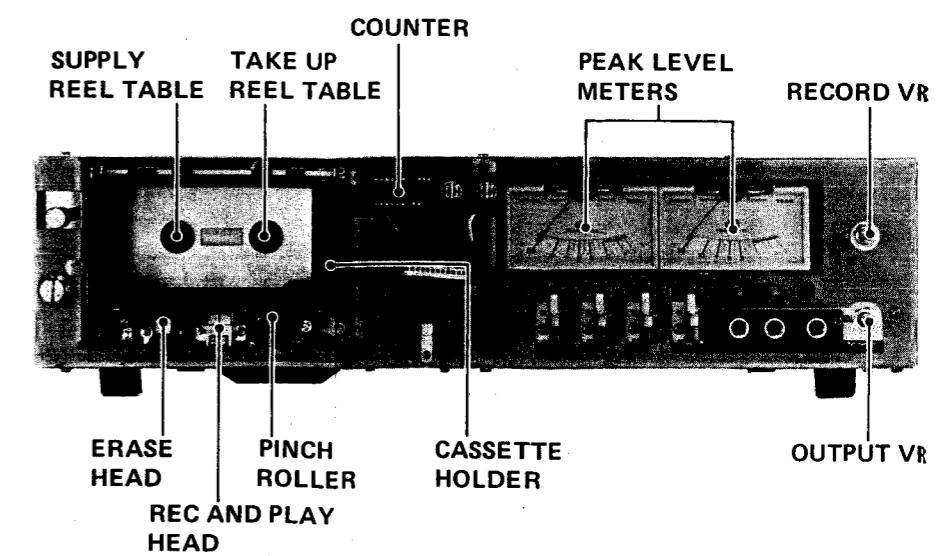

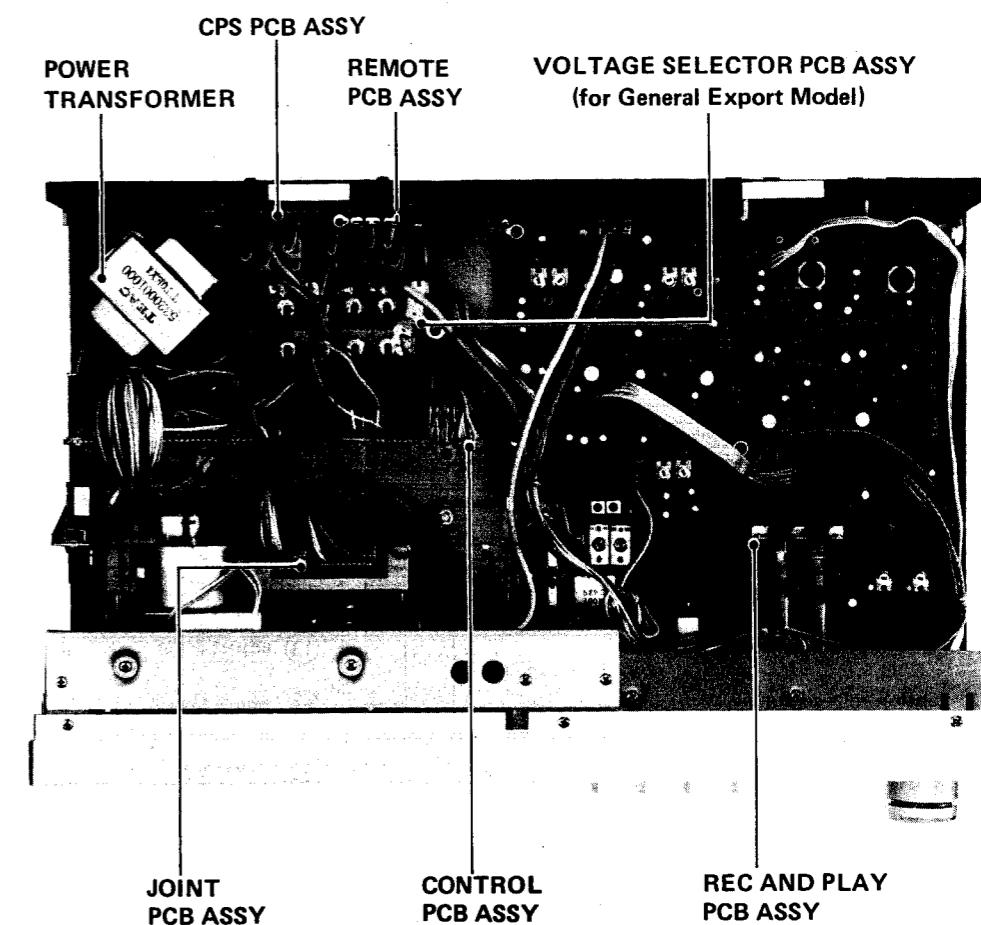

⚠ Parts marked with this sign are safety critical components. They must always be replaced with identical components – refer to the TEAC parts list and ensure exact replacement.

## 2 REMOVAL OF EXTERNAL COMPONENTS

Disassemble in number-order

## 3 PARTS LOCATION

## 4 MECHANICAL ADJUSTMENTS AND CHECKS

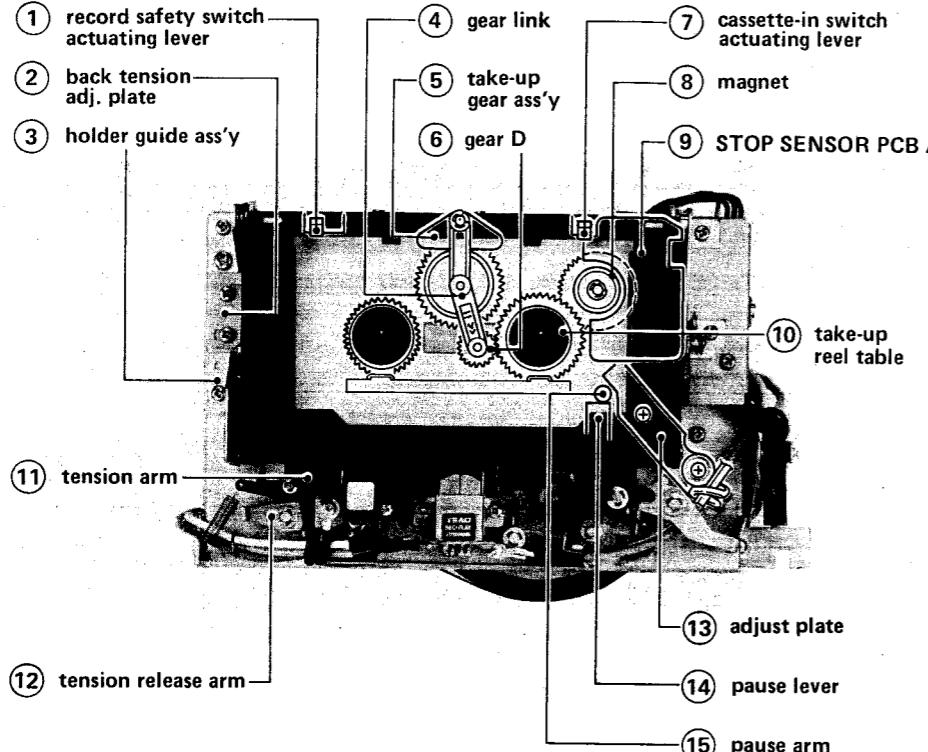

Fig. 4-1

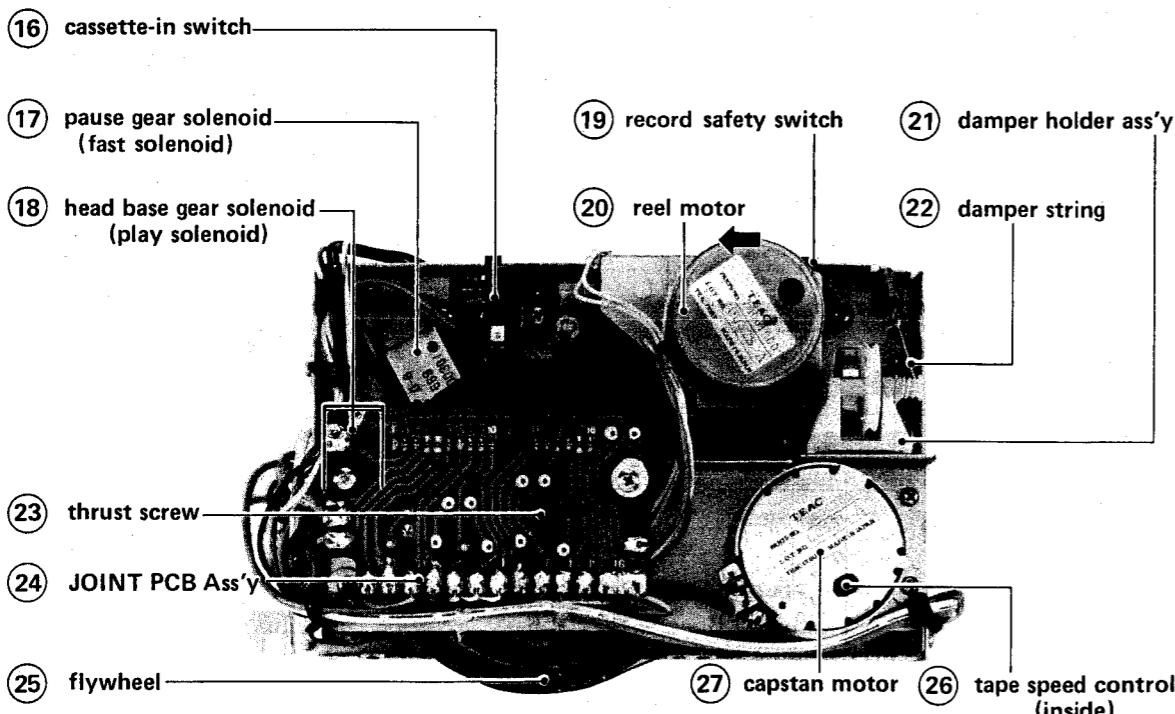

Fig. 4-2

Note: Numbers in brackets are references to corresponding items in Figs. 4-1 and 4-2.

### 4-1 CAPSTAN ASSEMBLY THRUST

Capstan shaft thrust value: 0.1 mm to 0.2 mm

1. Adjustment can be made by the thrust screw (23).
2. Secure the screw with locking paint.

### 4-2 PINCH ROLLER PRESSURE

1. With the cassette holder closed and no tape loaded, and while pushing the cassette-in switch's actuating lever (7) upwards, depress the PLAY button.

2. Measure the pinch roller pressure when the pinch roller just begins rotation after it is separated from the capstan shaft in a downward direction.

Pinch roller pressure: 350 g to 450 g (12.3 oz to 15.9 oz)

### 4-3 REEL TORQUE

1. Load a cassette torque meter and read the pointer indication on the dial scale for each tape movement operation.

Take-up: 40 to 65 g-cm (0.56 to 0.90 oz-inch)

Supply: 2 to 6 g-cm (0.028 to 0.083 oz-inch)\*

F.F. & REW: 120 to 170 g-cm (1.7 to 2.4 oz-inch)

\*Values within this range are acceptable; however, an ideal value would be from 3 to 4 g-cm (0.042 to 0.056 oz-inch). It may be possible to achieve this value by adjusting the screws on the back tension adjusting plate (2).

### 4-4 TAPE SPEED

1. Load and play a TEAC MTT-111 test tape.
2. Using a common slotted screwdriver with the handle completely insulated from the screwdriver blade, adjust the control (26) on the capstan motor (27) (as far as possible) for a reading of 3,000 Hz (Spec: 3,000 Hz  $\pm$  5 Hz).

Note: This tape speed setting should be made after about 20 seconds of operating time.

3. Check the followings at any portion of the tape run.

#### Specifications:

Tape speed deviation: 3,000 Hz  $\pm$  45 Hz

Tape speed drift: 45 Hz

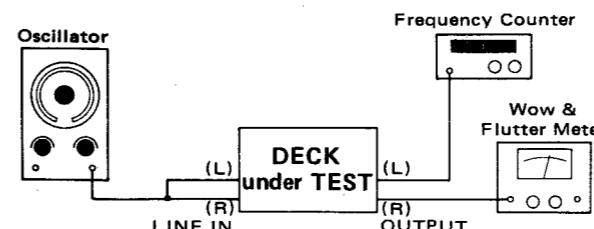

Fig. 4-3

### 4-5 WOW AND FLUTTER

Note: These measurement should be made at the beginning, middle and the end of the tape.

#### PLAYBACK METHOD

1. Play a TEAC MTT-111 test tape.
2. Check that the wow and flutter value is within 0.07% WRMS max.

### RECORD/PLAYBACK METHOD

Note: Use the maximum wow-and-flutter obtained from repeated measuring, each time stopping then replaying the tape.

3. Load a TEAC MTT-501 test tape (blank).
4. Apply and record a 3,000 Hz signal.
5. Rewind and play this recorded section.
6. Check that the wow and flutter value is within 0.20% RMS max.

### 4-6 SOLENOIDS

Mount both the pause gear solenoid (17) and head base gear solenoid (18) so that they are positioned as far as possible in the direction of their respective plungers. (For an illustration of the pause gear and the head base gear, see Fig. 4-4).

### 4-7 TENSION ARM

1. Load a fully erased TEAC MTT-501 test tape fully wound onto the left (or right) reel.
2. Press the PROGRAM count button so that counter indicates any number between 2 to 19.
3. Press the F. FORWARD (►) [or REWIND (◀)] button to engage the CPS search operation.
4. The clearance between the tension arm (11) and the moving tape should be 0 to 1 mm.
5. If not, adjust by bending the bent-tip portion of the tension release arm (12) to meet the required clearance value.

### 4-8 FLYWHEEL, HEAD BASE AND PAUSE GEARS

Position the capstan metal housing so that the flywheel gear (attached to the flywheel shaft) is positioned as far as possible towards the head base gear as shown in Fig. 4-4.

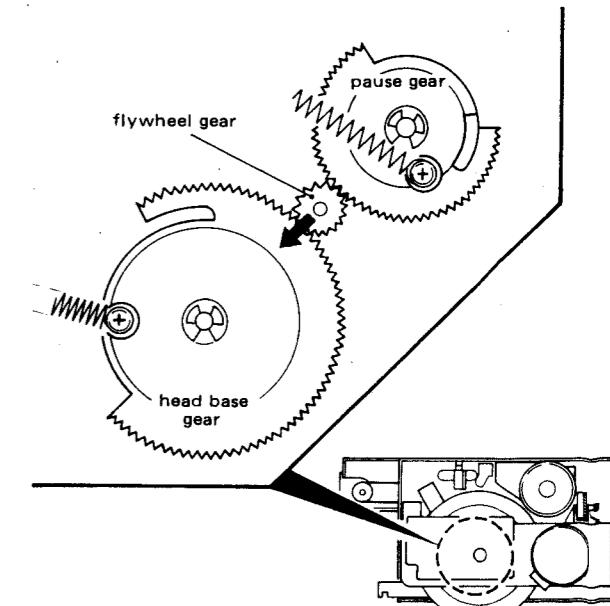

Fig. 4-4

#### 4-9 PINCH ROLLER POSITION

1. By bending the pause lever's bent-tip portion, adjust the pinch roller position to meet the following conditions:
  - a. In the pause mode, the pinch roller/capstan clearance should be about 0.5 mm to 1 mm.
  - b. In play mode, there should be proper clearance between the pinch roller arm pin and the head base's bent-tip portion.

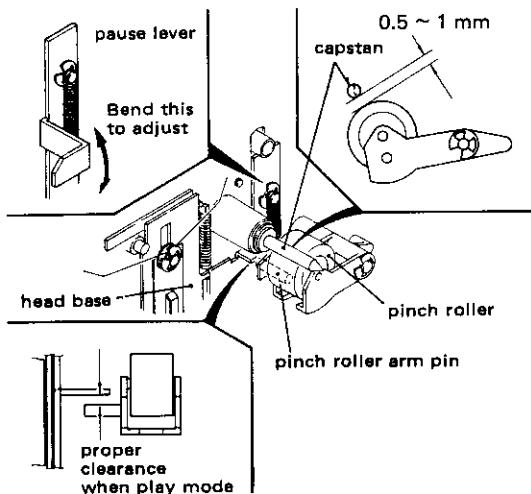

Fig. 4-5

#### 4-10 RECORD SAFETY SWITCH

1. Adjust the record safety switch (19) position to meet the following requirements:
  - a. When any cassette with the corresponding record-protect tab in place is loaded, the deck can go into record mode.
  - b. When any cassette is loaded with the corresponding record-protect tab removed, recording is inhibited.

#### 4-11 CASSETTE-IN SWITCH

1. Adjust the cassette-in switch (16) position to obtain a clearance as illustrated in Fig. 4-6 so that when a cassette is loaded, the transport mechanism is able to go into any tape motion mode.

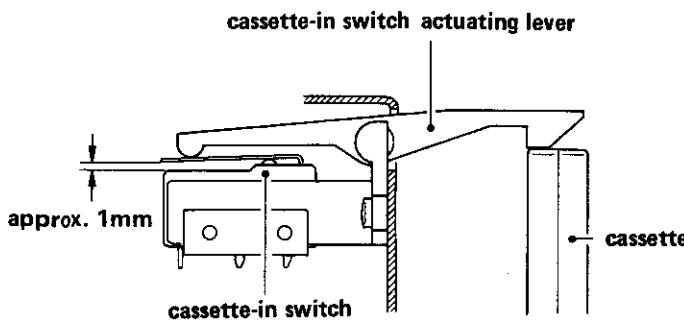

Fig. 4-6

#### 4-12 TAKE-UP GEAR ASSEMBLY

**Note:** When the pause gear (refer to Fig. 4-4), pause arm (15), adjust plate (13), reel motor (20) and/or take-up gear assembly (5) are reinstalled or replaced, this adjustment must be made.

1. Position the reel motor as far as possible in the direction shown by the arrow in Fig. 4-2.
2. Set the deck to play mode.
3. Check that when pushing the gear link (4) towards the take-up reel table (10), gear D (6) moves 0.1 mm to 0.2 mm towards the reel table.
4. If not, adjust by positioning the adjust plate (13).
5. Check that when securing the take-up reel table, gear D does not disengage from the take-up reel table gear.

#### 4-13 CASSETTE HOLDER

1. Adjust the holder guide assembly position so that when the cassette holder is closed, its back plate is parallel with the tape transport chassis.

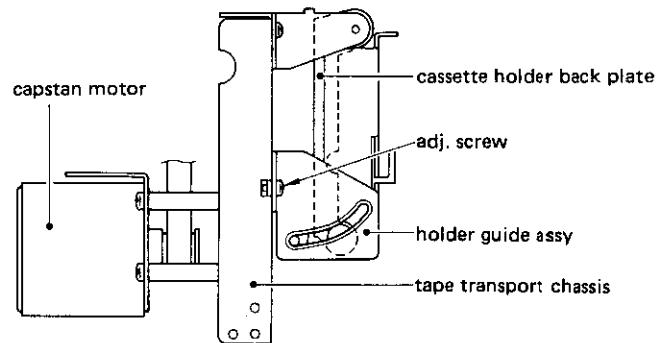

Fig. 4-7

#### 4-14 STOP SENSOR ASS'Y (HALL IC) POSITION

1. Adjust by moving the STOP SENSOR PCB ass'y (9) so that the clearance shown in Fig. 4-8 is approximately 1 mm.
2. Be careful not to change only the position of the HALL IC when making this adjustment.

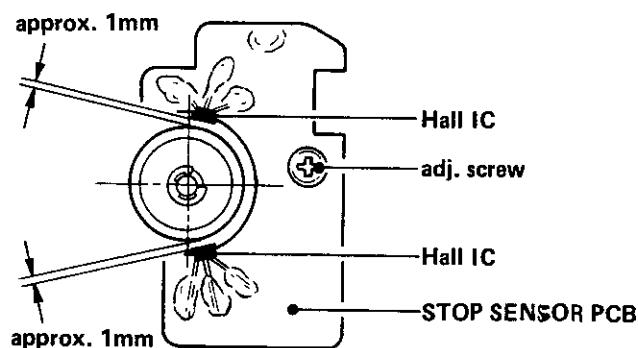

Fig. 4-8

#### 4-15 DAMPER STRING

1. Always wrap the damper string (22) around the drum of the damper holder assembly (21) without twisting it.

#### 4-16 LUBRICATION

Lubrication is only required when parts are replaced. For this purpose, use oil and grease specified below.

**Oil:** TEAC spindle oil (from TEAC TZ-255 oil kit), Mobil D.T.E. Oil Light, or equivalent.

**Grease:** ORE-LUBE G1/3 or equivalent

1. Apply a drop of oil with an oil applicator to a point about 1/3 the way down the shaft (from the free end) of the flywheel, then insert the shaft into the capstan housing.
2. Apply a suitable amount of light grease to the well of the flywheel bearing.

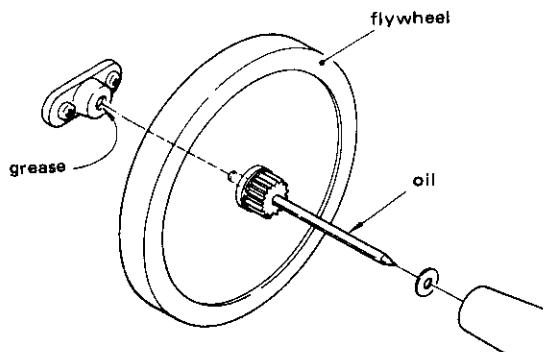

Fig. 4-9

#### 4-17 VOLTAGE CONVERSION (FOR GENERAL EXPORT MODELS)

1. Always disconnect the power line cord before making this adjustment.
  2. Remove the cover\* of the deck by removing the screws from the sides.
  3. Locate the voltage selector (See PARTS LOCATION).
  4. Loosen the two screws in the jumper bar and move the bar so that it jumpers the two terminals marked with the required voltage (100, 117, 220 or 240).
  5. Retighten the screws and replace the cover\*.
- \* Decks sold in certain areas have a wooden case which must be removed by removing the screws (not the feet) on the bottom of deck before adjusting the voltage.

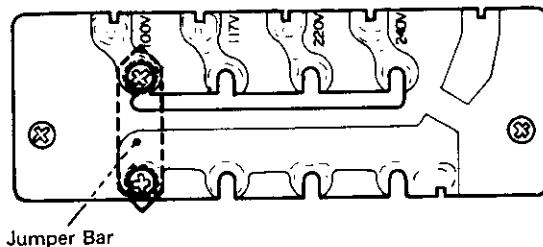

Fig. 4-10

## 5 ELECTRICAL ADJUSTMENTS AND CHECKS

#### PRECAUTIONS

1. Before performing adjustments and checks, clean and demagnetize the entire tape path.
2. Make sure the deck is properly set for the voltage in your locality.
3. In general, adjustments and checks are made in the order of L-ch then R-ch. Double REF. NOs. and test point designations indicate L-ch/R-ch. (Example: R11/R21)
4. 0 dB is referenced to 0.775 V. If an AC voltmeter that references 0 dB to 1 V is used, appropriate compensation should be made.
5. The AC voltmeter used in the procedures must have an input impedance of 1M-ohms or more.
6. Note the "Deck settings" at the top of each chart. The settings apply to all checks for a specific chart unless explicitly stated otherwise.

#### -70 dB or more ... What does it mean?

In reference to some specifications, you may come across an expression like: "-70 dB or more". This means that the lower the value of this specification, the greater the absolute value of the specification and the better the performance of the deck. For instance, a noise floor of -76 dB is better than -70 dB, because this means that the level of noise is lower. So in this case, "-70 dB or more" means at least as good a value as -70 dB and maybe even better, i.e., -71 dB.

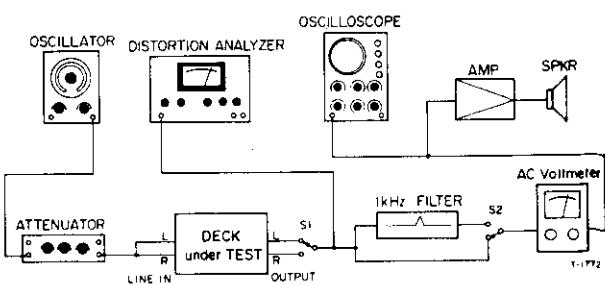

Fig. 5-1 Basic test setup

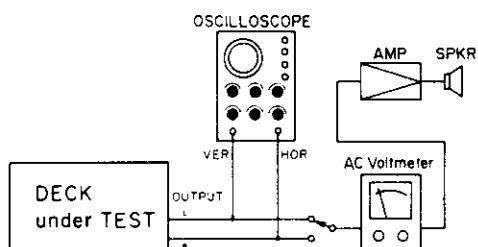

Deck settings:

## 7 PC BOARDS AND PARTS LIST

PC Boards shown viewed from foil side.

## REC/PLAY AMPL PCB ASSY

## **CONTROL PCB ASSY**

## NOTES

- 1. PC Boards shown viewed from foil side.**

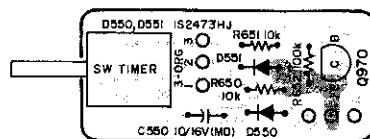

**2. The colors used on the PCB illustrations have the following significance:**

  -  : +B power supply circuit
  -  : GND
  -  : Other

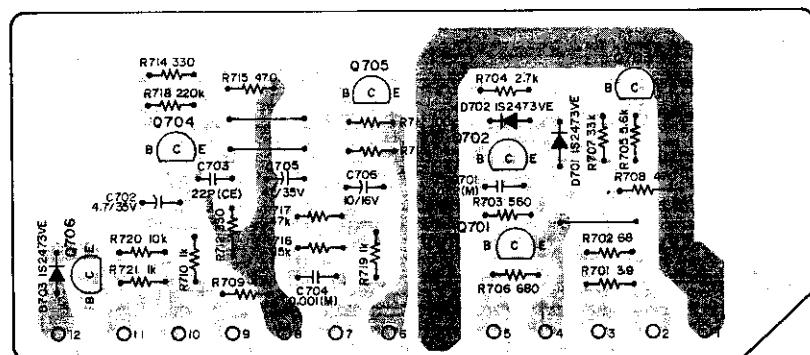

**3. Resistor values are in ohms ( $k = 1,000$  ohms).**

**4. All capacitor values are in microfarads ( $p = \text{picofarads}$ ).**

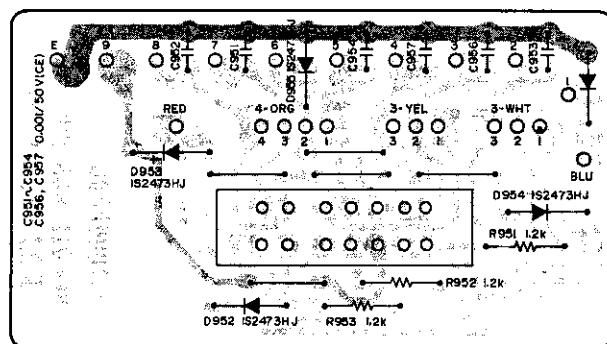

## **TIMER PCB ASSY**

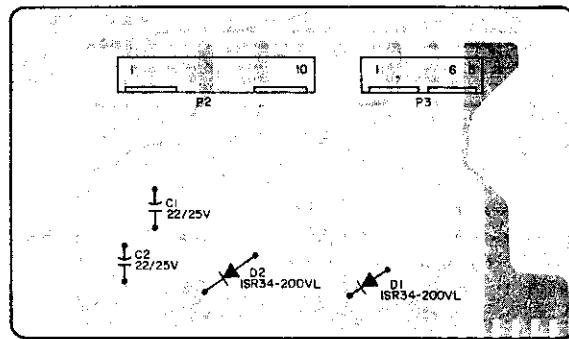

CPS PCB-102 ASSY

**REMOTE PCB ASSY**

## **JOINT PCB ASSY**

## REC/PLAY AMPL PCB ASSY

**TEAC****TECHNICAL INFORMATION**

A-770, Auto Stop

NO. 8213

DATE 7 July 1982

To improve the reliability of A-770 Cassette auto stop function, the circuits on PCB Assy Stop Sensor and Joint PCB Assy have been changed on the products serial numbered 21531 and after. In Fig 1 and Fig 2 are the diagrams of these former and new circuits. The former circuit can be changed into new circuit by making several modifications on the two PCB Assys as shown in Fig 3 and Fig 4.

Hereunder is the procedure to make this modification.

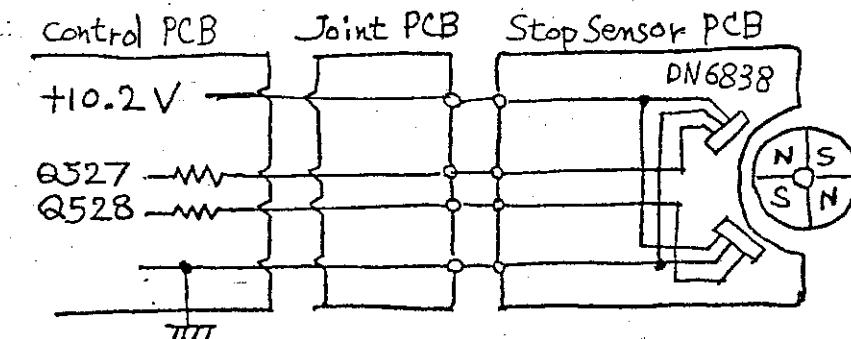

Fig 1

Former Circuit

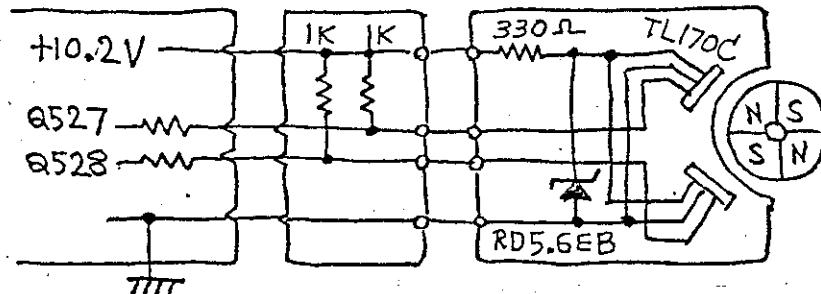

Fig 2

New Circuit

- 1.0 On Stop Sensor PCB
  - 1.1 Cut jumper wire at X1 point, and remove them from PCB.
  - 1.2 Cut foil pattern at X2 point.
  - 1.3 Connect points A and B by jumper wire.
  - 1.4 Connect points C and D by insulated jumper wire.
  - 1.5 Interchange the connections of Blue and brown wires at points E and F.
  - 1.6 Remove old Hole IC DN6838 (Parts No 52287001) from PCB, and mount new Hole IC TL170C (Parts No 52287001). On mounting this IC, care should be taken to keep the 18° angle as shown in Fig 4, as well as to face the flat side of IC against magnet rotor.
  
- 2.0 On Joint PCB
  - 2.1 Cut foil pattern at X3 point.
  - 2.2 Connect three resistors and one zener diode RD5.6EB on the foil side of PCB as shown in Fig 3.

RD5.6EB

#### NOTES

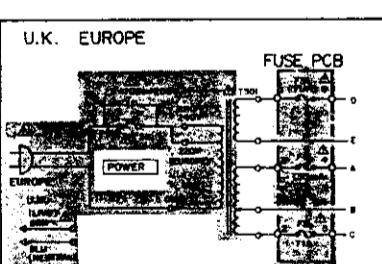

- Schematic diagram shown for left channel except for some of the components.
- All resistors are 1/4 watt, ±5%, unless marked otherwise.  
Resistor values are in ohms (k = 1,000 ohms).
- All capacitor values are in microfarads (p = picofarads).  
All non-polarized capacitors are ±5% mylar unless otherwise specified.
- Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC parts list and ensure exact replacement.
- Voltage and level values are for reference only.  
Indicated values are those existing when the peak level meter indicates 0 dB  
0 dB = 0.775V

- NOTES**

  1. All resistors are  $\frac{1}{4}$  watt,  $\pm 5\%$ , unless marked otherwise.  
Resistor values are in ohms ( $k = 1,000$  ohms).
  2. All capacitor values are in microfarads ( $p = \text{picofarads}$ ).
  3.  $\Delta$  Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the TEAC parts list and ensure exact replacement.
  4. The input impedance to the oscilloscope for waveform monitoring is  $10M\Omega/13pF$  with its frequency range of 200MHz in bandwidth. In waveform monitoring with any oscilloscope of a lower input impedance, longer cycle times can be anticipated in its waveforms with possible variation in voltage.
  5.  : front panel indication
  6.  : rear panel indication
  7.  +8 power supply circuit
