- BU508AF <i>HORIZONTAL TRANSISTOR (110°)</i>	63

## TECHNICAL DATA

CRT PANEL	
Visible Picture	28" / 106° / 66 cm
Deflection Angle	110° 32" / 106° / 76 cm.
Vertical Frequency	50Hz
Horizontal Frequency	15.625Hz

## ELECTRONIC

Program Number	100+AV
Teletext	Flof text
Tuner	Cable tuner - 8 MHz spacing for Hyper Band
TV System	European CCIR system
Music Power	110° 2x8 Watt Rms 10% distortion

## CONNECTIONS

Euro AV Socket	Include
----------------	---------

## MAIN STAGE

Mains Voltage	165-260VAC
Mains Frequency	50Hz
Power Consumption	28", 32" 126 Watt
In Stby Mode	28", 32" 8 Watt

## RECOMMENDATION FOR SERVICE REPAIRS

- 1- Use only original spare parts. Only use components with the same specifications for replacement.
- 2- Original fuse value only should be used.
- 3- Main leads and connecting leads should be checked for external damage before connection.
- Check the insulation.
- 4- Parts contributing to the safety of the product must not be damaged or obviously unsuitable.  
This is valid especially for insulators and insulating parts.
- 5- Thermally loaded solder pads are to be sucked off and re-soldered.
- 6- Ensure that the ventilation slots are not obstructed.
- 7- Potentials as high as 25 KV are present when this receiver is operating. Operation of the receiver outside the cabinet or with back cover removed invol-

ve a shock hazard from the receiver.  
Servicing should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment. Perfectly discharge the high potential of the picture tube before handling the tube. The picture tube is highly evacuated and if broken. Glass fragments will be violently expelled.  
Always discharge the picture tube anode to the receiver chassis to keep of the shock hazard before removing the anode cap.

- 8- Keep wire away from the high voltage or high temperature components.
- 9- When replacing a wattage resistor in circuit board, keep the resistor 10 mm away from circuit board.

## HANDLING OF MOS CHIP COMPONENTS

MOS circuit requires special attention with regard to static charges. Static charges may occur with any highly insulating plastics and can be transferred to persons wearing clothes and shoes made of synthetic materials. Protective circuits on the inputs and outputs of mos circuits give protection to a limited extend only due to time of reaction.

Please observe the following instructions to protect the components against damage from static charges.

- 1- Keep mos components in conductive package until they are used. Most components must never be stored in styropor materials or plastic magazines.

- 2- Persons have to rid themselves of electrostatic charges by touching MOS components.
- 3- Hold the component by the body touching the terminals.
- 4- Use only grounded instruments for testing and processing purposes.
- 5- Remove or connect MOS ICs when operating voltage is disconnected.

## X-RAY RADIATION PRECAUTION

- 1- Excessive high voltage can be produce potentially hazardous X-RAY radiation. To avoid such hazard, the high voltage must not be above the specified limit. The nominal value of the high voltage of this receiver is 25KV at zero beam current (minimum brightness) under 220V AC power source. The high voltage must not under any circumstance, exceed 30KV. It is recommended the reading of the high vol-

- tage be recorded as a part of the service record. It is important to use an accurate and reliable high voltage meter.
- 2- The primary source of X-RAY radiation in this TV receiver is the picture tube. For continued X-RAY radiation protection, the replacement tube must be exactly the same type tube as specified in the part list.

# SERVICE MENU

The service menu is entered by pressing a special 4-digit code if the feature menu is displayed and TV is in FE -mode. While TV isn't in AV Mode and featura menu is displayed, pressing sequence of digits 1923 will enter the TV to service mode and service menu will be displayed.

PIF COARSE  
PIF FINE  
PIF COARSE L'  
PIF FINE L'

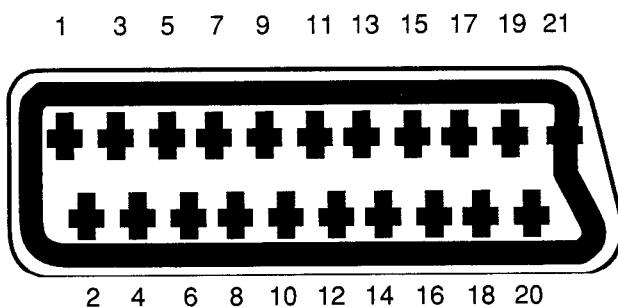

> < is the VCO status indicator for adjusting the PIF to 38.9Mhz for BGDKIL and 33.9 for L' standards thru bus controlled VCO.

The VCO status is read from the read register of STV224X and guides whether to Increase / Decrease the VCO registers to attain VCO OK Status. For doing VCO adjustment, Feed a 38.9MHz Carrier as IF input and adjust PIF Coarse and fine parameters to get VCO OK Status.

For doing VCO L1 adjustment, Feed a 33.9 MHz carrier as IF input and adjust PIF Coarse L' and PIF Fine L' to get VCO OK Status.

## SPECIFICATIONS OF THE CONNECTOR (EURO SCART)

- 1- Audio output 1. right channel 0.5 VRMS/<1 k 0
- 2- Audio input 1. right channel 0.5 VRMS (connected to No.6)
- 3- Audio output 2. left channel 0.5 VRMS (connected to No.1)
- 4- GND (audio)
- 5- GND
- 6- Audio input 2. left channel 0.5 VRMS/>10k 0
- 7- RGB input, blue (B)
- 8- Switch signal video (status)

# INTRODUCTION

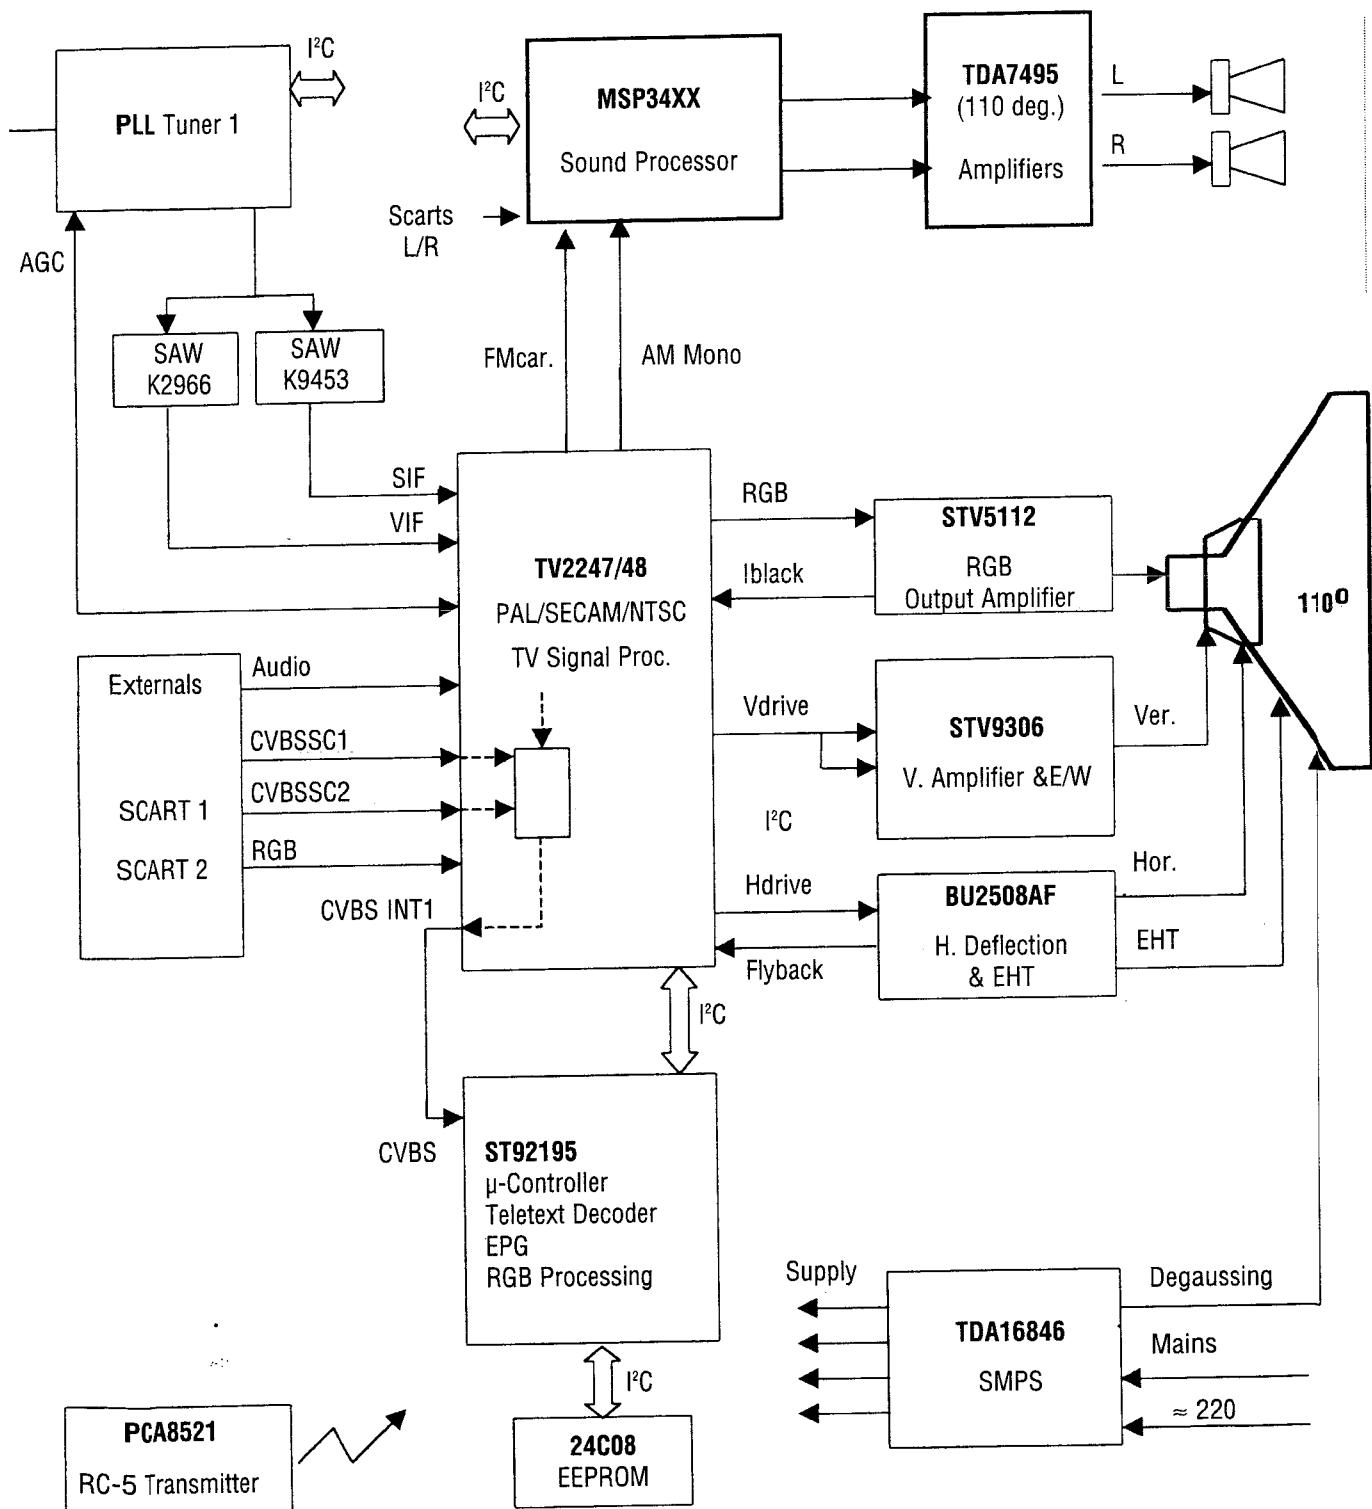

PT90A is a low-cost multi-standard television receiver control system based on ST921x5 microcontroller family. It is a frequency synthesis tuning (FST) system with on-screen display (OSD) for all necessary control functions. The system is based on the I<sup>2</sup>C-bus controlled one-chip video processor IC STV224x, which can support a Nicam and a German stereo sound system based on MSP as well as mono sound. PT90A has the ability to control two scart connections, and headphone inputs.

Teletext is handled by the microcontroller on-chip teletext interface. The user-interface is menu-controlled for easy access with remote control or local keyboard keys.

## 1.1 Definitions, acronyms and abbreviations.

- ADC Analogue to Digital Converter
- AFC Automatic Frequency Control
- AV Audio Video peripheral TV signal source
- DAC Digital to Analogue Converter
- FE Front End(=normai TV) mode
- FST (PLL) Frequency synthesis Tuning (Phase Locked Loop)
- I<sup>2</sup>C Inter Ic bus, 2-wire, bidirectional multimaster bus
- IDENT Horizontal coincidence signal, transmitter IDENTification
- LS Loud Speaker
- HP Headphone
- MS Multi Standard
- NV-Memory Non-Volatile Memory
- OSD On Screen Display
- PP Personal Preference
- RC-5 Remote Control System, complying with RC-5 world standard
- Video Proc. STV223x, integrated I<sup>2</sup>C bus controlled multisystem one chip TV-processor
- PIF Picture Intermediate Frequency.
- SIF Sound Intermediate Frequency.
- NICAM Near Instantaneous Companded Audio Multiplex

# PT90A 110° STEREO CHASSIS

## Basic Hardware Specification

The following are the components that a PT90A controlled system consists of;

- ST921x5 TV+OSD+(TXT) controller with PT90A software inside 24C08 1024\*8 bit NV-Memory (EEPROM) for storage of favourite programmes,
- preferred sound and picture controls, service menu settings.
- STV224x I<sup>2</sup>C bus controlled multi-standard one-chip TV-processor
- Pre-programmed RC-5 remote control transmitter
- Temic-Alps-Philips-Thomson-Orega PLL Tuners

- 110° Chasis
- STV9306 I<sup>2</sup>C bus controlled vertical deflection and E-W correction circuit

For stereo systems the following optional device is supported MSPXX(D/G) German and NICAM stereo sound decoder. Communication between the microcontroller (master) and all related devices (slaves) is carried out by means of the two-wire bidirectional I<sup>2</sup>C bus. This chapter describes all of the functions and hardware requirements of PT90A. The overall control of the system is handled by the microcontroller which performs the following;

- Decodes the serial data from the remote controller
- Scans the local keyboard
- Controls the OSD
- Exchanges information via the serial I<sup>2</sup>C bus
- Selects the proper tuner, tuner band
- Selects the proper IF and the sound demodulator
- Analogue picture controls
- Switches between internal and external audio and video signals

### 5.1 Interface Description

5.1.1 Remote Control Handset. The remote control handset which is compatible with RC-5 standard.

### 5.1.2 Remote Control Decoding

The infrared remote control pulses are modulated at the standard RC-5 frequency of 36 KHz. The remote control signal (active HIGH) from the IR-receiver (TFMK1380T) is fed to the external interrupt input (IR-INPUT) of the microcontroller. Finally the video identification in STV224x is checked to make sure that the search terminated on a video carrier. For SECAM L' (France VHF) channel search starts with the highest channel frequency and all steps are carried out in the reverse order. When micro search fails to find a signal in a channel, it will tune the standardised channel frequency.

## Sound Systems

PT90A supports stereo sound system as well as mono both controlled via I<sup>2</sup>C bus from the video processor (Sn/224x).

### Mono Sound System

The only available sound control is volume. In FE-mode, after tuning a programme, the system always selects the sound with the following priority.

### AM Sound

If a transmitter is tuned with colour standard SECAM L/L', the sound will be forced to AM.

The AM sound system is automatically forced via the STV224x when positive modulation (SECAM-L or SECAM-L') is selected.

### Stereo Sound System

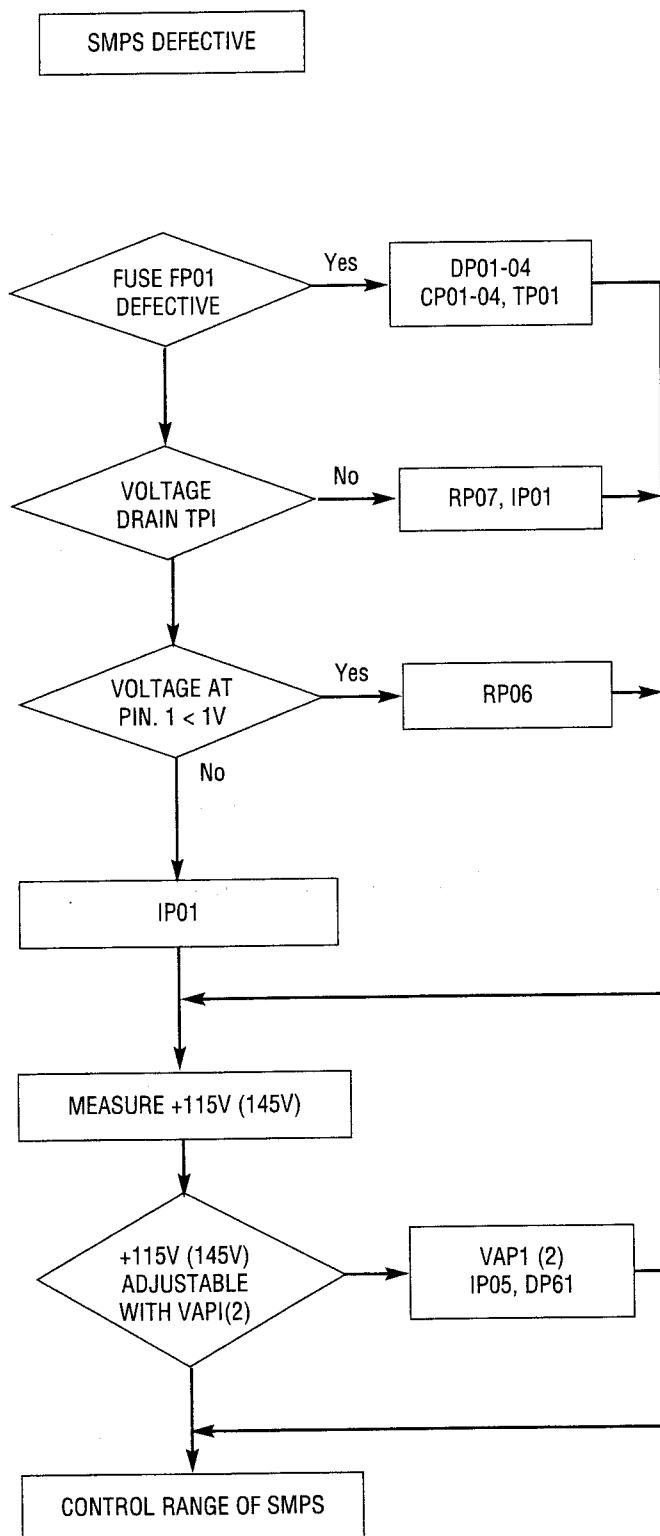

Direct control of the audio functions (on the remote transmitter as individual buttons) are;

personal preference function, volume, mute, mono/stereo/language

Automatic identification and decoding of German Stereo and NICAM sound systems

# ST921x5

## Microcontroller

Microcontroller + OSD + (Teletext decoder) + VPS/PDC/WSS decoder are embeded in one chip, where there are two types with the major difference;

ST92185 No-teletext

ST92195 With teletext

The ST92195 microcontroller is developed and manufactured by STMicroelectronics using a proprietary n-well HCMOS process. Its performance derives from the use of a flexible 256-register programming model for ultra-fast context switching and real-time event response. The intelligent on-chip peripherals offload the ST9 core from I/O and data management processing tasks allowing critical application tasks to get the maximum use of core resources. The ST92195 MCU supports low power consumption and low voltage operation for power-efficient and low-cost embedded systems.

The advanced ST9+ Core consists of the Central Processing Unit (CPU), the Register File and the Interrupt controller. The general-purpose registers can be used as accumulators, index registers, or address pointers. Adjacent register pairs make up 16-bit registers for addressing or 16-bit processing. Although the ST9 has an 8-bit ALU, the chip handles 16-bit operations, including arithmetic, loads/stores, and memory/register and memory / memory exchanges. Two basic addressable spaces are available: the Memory space and the Register File, which includes the control and status registers of the on-chip peripherals. Power consumption of the device can be reduced by more than 95% (Low power WFI).

Up to 28 I/O lines are dedicated to digital Input / Output. These lines are grouped into up to five I/O Ports and can be configured on a bit basis under software control to provide timing, status signals, timer and output, analogue inputs, external interrupts and serial or parallel I/O. A set of on-chip peripherals form a complete system for TV set and VCR applications:

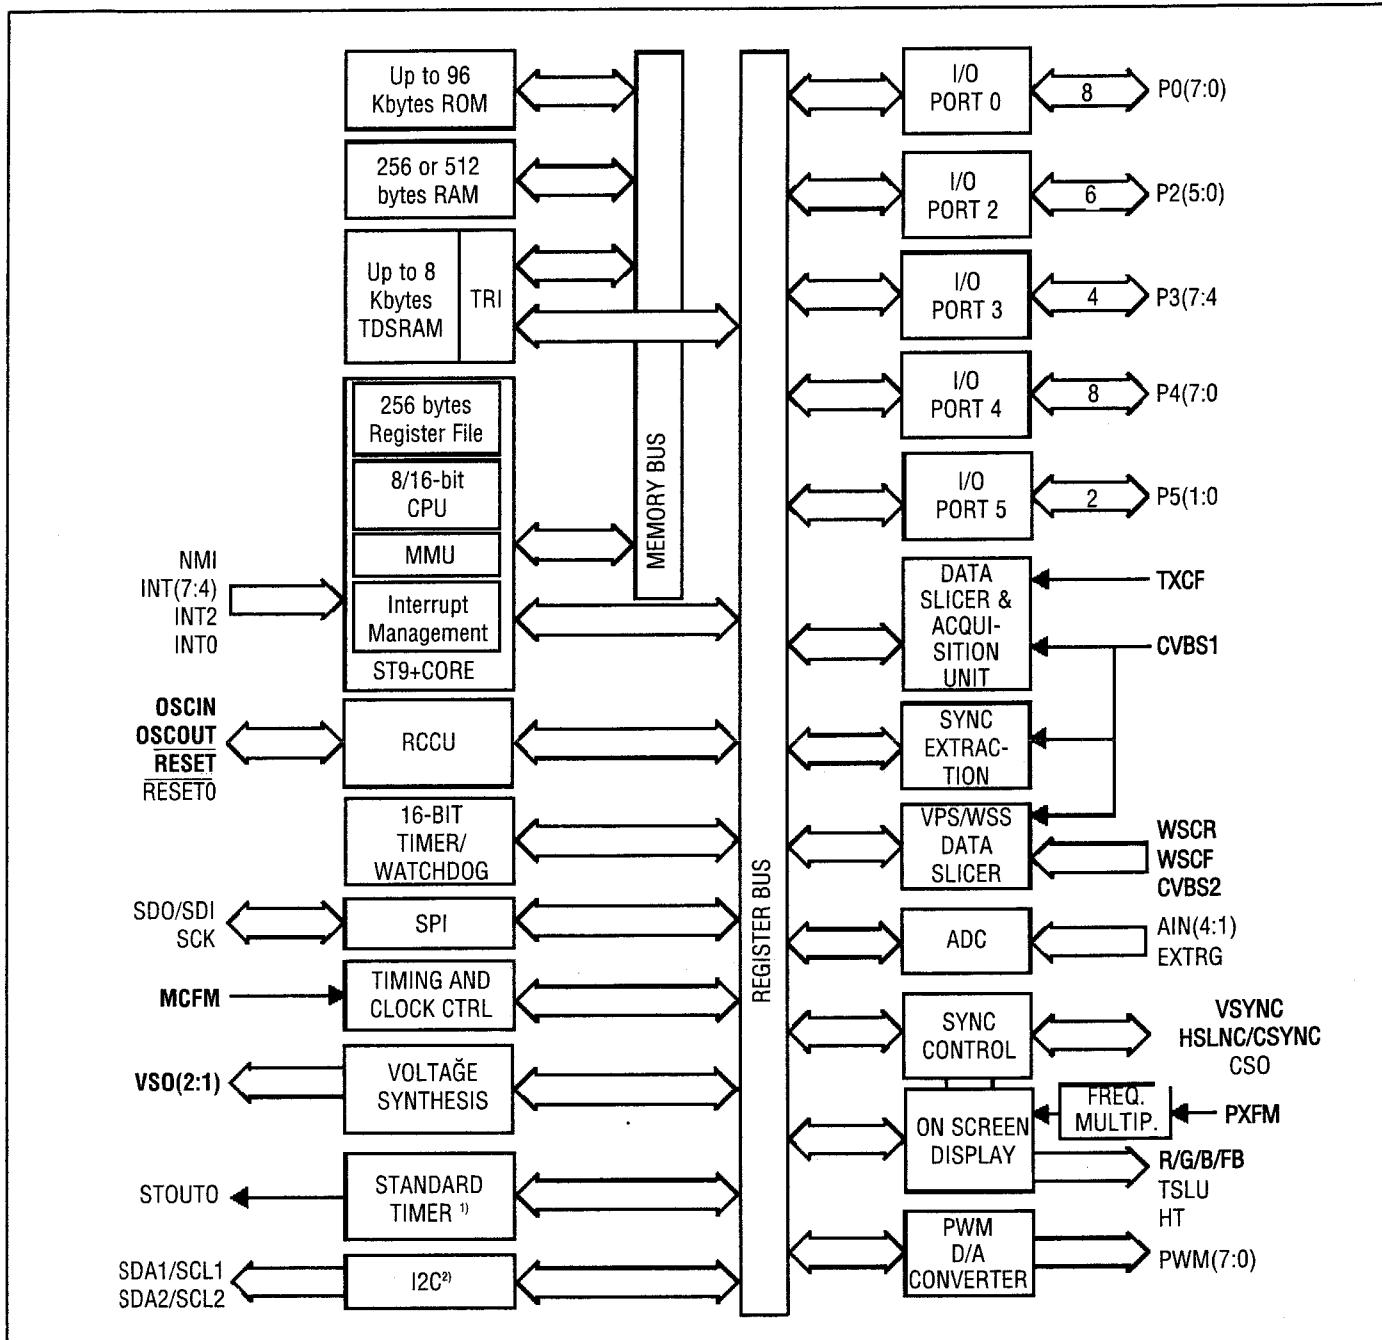

- Voltage Synthesis
- VPS / WSS Slicer
- Teletext Slicer
- Teletext Display RAM
- OSD

Pig. ST921x5 Microcontroller Block diagram

### GENERAL FEATURES

- Register File based 8/16 bit Core Architeture with RUN, WFI, SLOW and HALT modes
- 0°C to +700C Operating Temperature Range available
- Up to 24 MHz Operation @ 5V±10%
- Minimum instruction cycle time: 375nS at 16MHz internal clock
- 64K Bytes ROM
- 256 Bytes RAM of Register file (accumulators or index registers)
- 256 Bytes of on-chip static RAM
- 8K Bytes of TDSRAM (Teletext and Display RAM)
- 56-lead Shrink DIP package
- 28 fully programmable I/O pins
- Serial Peripheral Interface
- Flexible Clock controller for OSD, Data Slicer and Core clocks running from one single low frequency external crystal.
- Enhanced Display Controller with 26 rows of 40/80 characters
- Serial and Parallel attributes
- 10x10 dot Matrix, 512 ROM characters, definable by user
- 4/3 and 16/9 supported
- Rounding, fringe, double width, double height, scrolling, cursor, full background colour, semi-transparent mode and reduced intensity colour supported Teletext unit, including Data slicer, Acquisition Unit and up to 8K Bytes
- RAM for Data Storage
- VPS and Wide Screen Signalling slicer
- Integrated Sync Extractor and Sync Controller
- 14-bit Voltage Synthesis for tuning reference voltage
- Up to 6 External Interrupts plus 1 non-maskable interrupt
- 8 x 8-bit programmable PWM outputs with 5V open-drain or push-pull
- Capability
- 16-bit Watchdog timer with 8-bit prescaler
- 16-bit standard timer with 8-bit prescaler usable as a Watchdog timer
- 3-channel Analog-to-Digital converter; 6-bit guaranteed
- Rich instruction set and 14-Addressing modes

## RESET

Reset input is an active-low one. ST921x5 is initialized by the RESET signal.

When the RESET deactivated, programme execution starts from the 00H and 01H addressed programme memory locations.

### R/G/B/BLANK

The video colour analogue DAC outputs are Red / Green / Blue / Fast Blanking.

### XTAL

- These pins are used to connect parallel resonant crystals of 4 MHz

### AV Status

Logic Level Control (High or Low)

Pin 8 and Pin 52 monitor the status of the AV SCART connectors. The controller detects the transitions at these pins. When the signal goes from high to low, the TV set will automatically switch to AV mode. The signal going from low to high will lead the TV set to go back to the previous source. Voltage Level Control (0...12V)

Voltage measurement values are taken from these pins. 4:3 or 16:9 picture ratio from SCART or TV mode selection is dependent on the voltage values at these pins. User control always has a priority in both TV and AV mode. Following the change of source or the channel, 4:3 format is assumed by default. The voltage values stated below are divided by 3 at the microcontroller pins.

#### AV Status (Pin 8)Picture Ratio

- 0 - 2.0 VTV Mode
- 2.0 - 4.5V No change
- 4.5 - 7.0V 16:9 Scart
- 7.0 - 9.0V No change
- 9.0 - 12.0V 4:3 Scart

### Keyboard Scan Lines

The 4 keys of the local keyboard are scanned by an ADC used by the microcontroller.

### Table Local Keyboard

Name Code TV Mode TXT Sub mode

- Volume Down 0 Volume - Volume -
- Volume Up 1 Volume + Volume +
- Programme Down 2 Programme - Page -
- Programme Down 3 Programme + Page +

### Power Mode Control

The STDBY (pin 14) output specifies the mode which the set is in; Stand-by mode or Operating mode.

### Table Power Modes:

#### ST-BYMode

- 1-Stand-by
- 0-Operating

### I<sup>2</sup>C Lines

Pin 20 (SCL) and Pin 19 (SDA) accept inputs from the I<sup>2</sup>C bus. I<sup>2</sup>C is a 2-wire bi-directional bus. PT90A has an on-chip bit-level I<sup>2</sup>C interface. This means the bus arbitration, the reception and transmission of data bits and the generation of START and STOP are manipulated by the hardware. The software must be able to handle these bits (i.e. save a received bit and prepare the bits to be transmitted). If a transmission does not succeed, the software will retry for 5 times. If the bus is occupied for more than 1.18 ms. the microcontroller will attempt to free the bus. PT90A supports a 1K EEPROM (M24C08-BN6), used for storage of analogue controls, tuning data for 100 pre-selected programmes and options. The I<sup>2</sup>C addresses of the EEPROM is described in the following chapters. Furthermore the video-processor STV224x is controlled via I<sup>2</sup>C bus on address 8AH.

## 24C08

### Non-Volatile Memory

These I<sup>2</sup>C-compatible electrically erasable programmable memory (EEPROM) is organized as 1024 x 8 bit and operate with a power supply of 5 V. The memory behaves as a slave device in the I<sup>2</sup>C protocol, with all memory operations synchronized by the serial clock. Read and Write operations are initiated by a START condition, generated by the bus master. The START condition is followed by a Device Select Code and RW bit terminated by an acknowledg bit.

**Table 6. DC Characteristics**

(T<sub>A</sub> = 0 to 70°C, -20 to 85°C or - 40 to 85°C; V<sub>CC</sub> = 3V to 5.5V, 2.5V to 5.5V or 1.8V to 5.5V)

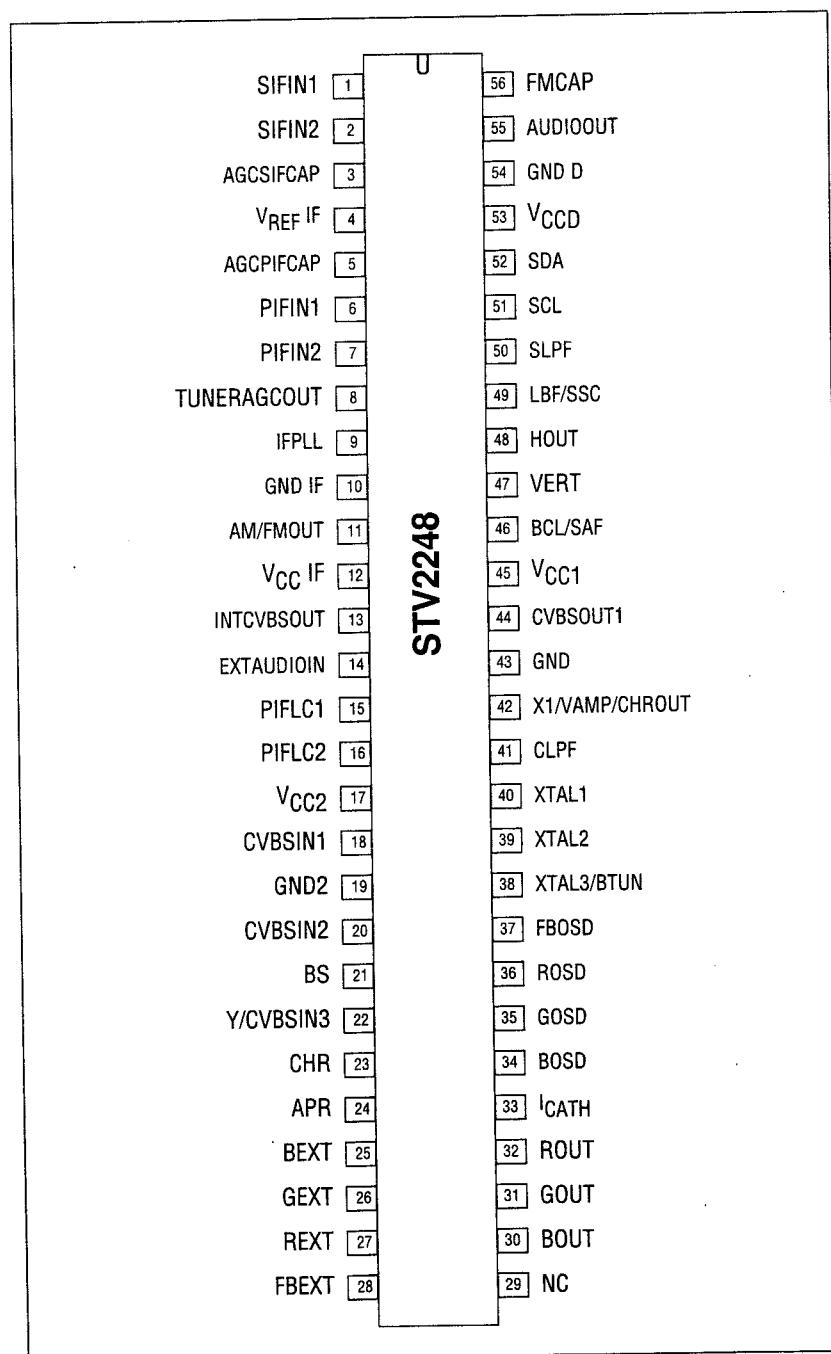

Symbol	Parameter	Test Condition	Min.	Max.	Unit

# STV224X

## Multistandard TV Processor

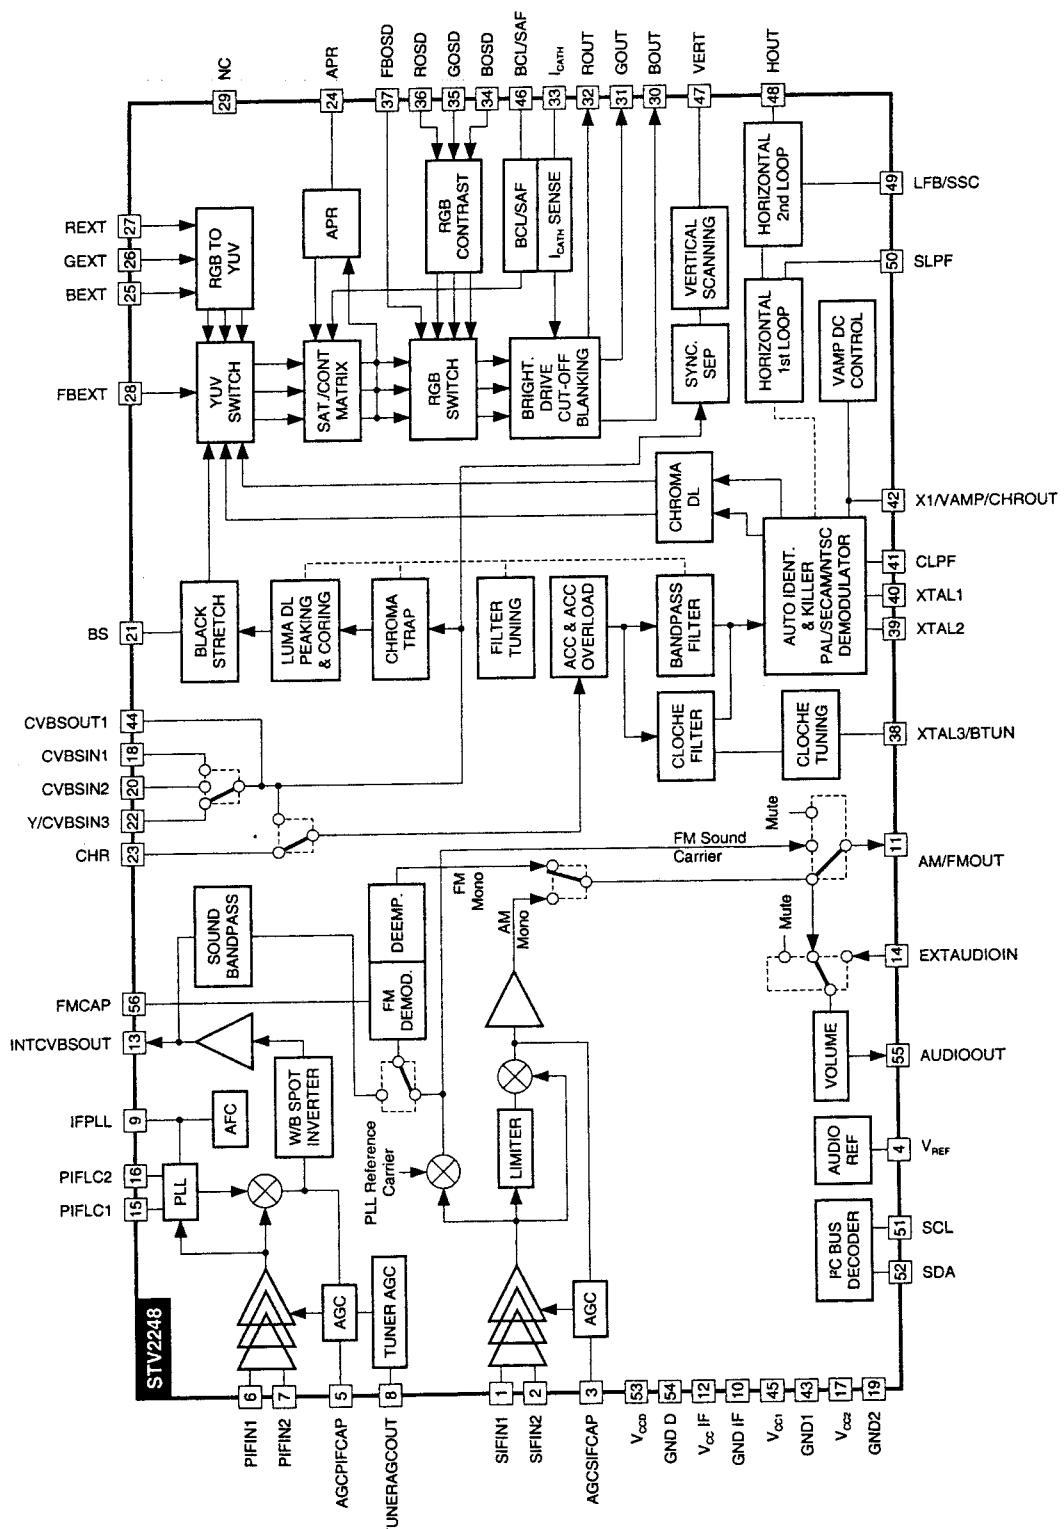

STV224X is a fully bus controlled IC for n/ including PIF, SIF, Luminance, Chrominance and deflection processing. It is a bus controlled PAL / SECAM / NTSC single chip TV Processor. For details of STV224X features please refer to the STV224X datasheet. 110°, 4:3 or 16:9 CRT application. It integrates both vertical deflection and E-W correction circuit necessary for design of 110°chassis it allows designing a PAL / NTSC (BGDKIMN) set with very few external components and no manual adjustment.

### Pin connections

Pin	Symbol	Function
1	SIFIN1	SIF Input
2	SIFIN2	SIF Input
3	AGCSIFCAP	AGC SIF Capacitor
4	VREF IF	Voltage Reference Filtering
5	AGCPIFCAP	AGC PIF Capacitor
6	PIFIN1	PIF Input
7	PIFIN2	PIF Input
8	TUNERAGCOUT	AGC Tuner Output
9	IFPLL	IF PLL Filter
10	GND IF	IF Ground
11	AM/FMOUT	AM/FM Mono Sound or Stereo Carriers Output
12	V <sub>CC</sub> IF	5V IF Supply
13	INTCVBSOUT	Internal CVBS Output
14	EXTAUDIOIN	Audio scart Input
15	PIFLC1	LC Input
16	PIFLC2	LC Input
17	V <sub>CC2</sub>	Video/Luma Supply Voltage (8V)
18	CVBSIN1	Internal Video Input
19	GND2	Video/luma Ground
20	CVBSIN2	External Video Input
21	BS	Black Stretch Capacitor
22	Y/CVBSIN3	Y(SVHS) or CVBS3 External Input
23	CHR	Chroma (SVHS) input
29	APR	Auto Peak Regulation
25	BEXT	External Blue Input
26	GEXT	External Green Input
27	REXT	External Red Input
28	FBEXT	External Fast Blanking Input
29	NC	Not to be connected
30	BOUT	Blue Output
31	GOUT	Green Output
32	ROUT	Red Output
33	I <sup>C</sup> AUTH	Cathode Current Measurement Input
34	BOSD	OSD Blue Input
35	GOSD	OSD Green Input
36	ROSD	OSD Red Input
37	FBOSD	OSD Fast Blanking
38	XTAL3/BTUN	3.5XMHz Crystal or Cloche Filter Tuning Capacitor
39	XTAL2	3.5XMHz Crystal
40	XTAL 1	4.43/3.5XMHz Crystal
41	CLPF	Chroma PLL Filter
42	X1/VAM/CHROUT	XTAL1 Control Pin Vertical Amplitude DAC Output and Chroma Reference Signal Output
43	GND 1	Chroma/Scanning Ground
44	CVBSOUT 1	Main Video Switch Output
45	V <sub>CC1</sub>	Chroma/Scanning Power Supply (8V)
46	BCL/SAF	Beam Current Limiter Control Voltage and Safety input (XRAY)
47	VERT	Vertical Output Pulse
48	HOUT	Horizontal Output Pulse
49	LFB/SSC	Line Flyback Input and Super-sandcastle Output
50	SLPF	Scanning PLL Filter
51	SCL	I <sup>C</sup> Bus Clock Input
52	SDA	I <sup>C</sup> Bus Data Input
53	V <sub>CCD</sub>	Digital Supply Voltage (5V)
54	GND D	Digital Ground
55	AUDIOOUT	Main Audio Output
56	FMCAP	FM Demodulation Capacitor

## Block Diagram

## MAIN FEATURES

- I<sup>2</sup>C bus control (readl and write modes),
- PIF PLL demodulator, Bus controlled VCO alignment,
- IF positive and negative modulation,
- Digital AFC,
- Tuner delayed AGC output,
- White and Black spot cancellation,
- SIF with QSS or intercarrier structure,
- Built in sound bandpass,
- Multistandard PLL FM demodulator (4.5, 5.5, 6.0, 6.5MHz),
- AM demodulator for France,
- FM sound carriers output for Stereo chassis,
- Audio switch for external audio input, Mono chassis,
- Digital volume control,
- Audio Mute,
- Video switch, 3 CVBS inputs, 1 CVBS output which can be used to drive teletext decoder,
- SVHS switch, Y input is combined with CVBS3 input,
- OSD RGB analog inputs, fast blanking detection on OSD fast blanking pin, contrast control capability, oversize blanking capability on OSD fast blanking input,
- External analog RGB inputs with contrast and saturation control (external RGB matrixed in YUV).
- Integrated chroma filters (trap, bandpass, cloche) with automatic alignment,
- Integrated luminance delay line,
- Adjustable peaking on the luminance signal with coring function,
- Black stretch circuit,
- PAL / SECAM / NTSC color decoder with automatic identification of standards,
- Integrated chroma delay line,
- Full integrated SECAM decoder,
- Hue control, two selectable matrixes in NTSC mode,
- Automatic flesh control circuit with two selectable characteristics (normal and wide),
- ACC overload circuit,
- Chroma subcarrier output which could be used to drive comb filter circuit,
- Automatic RGB peak regulation (APR).
- Automatic digital cut-off current loop with warm-up detection circuit,
- White point and cut-off point adjustments,
- Beam current limiter control stage,
- High performance synchronization pulses separator,
- Horizontal synchronization with two phase locked loops,
- Integrated VCO, auto-calibration using the chroma crystal reference frequency,
- Automatic time constant selection for the first PLL, 3 selectable time contants,
- Video identification circuit (independant from PLL1),
- Noise detector circuitry
- Vertical countdown circuit,
- Automatic 50/60Hz selection circuit,
- Blanking and inserted cut-off pulses position adapted to standard (50 or 60Hz),
- Long blanking mode capability in 60Hz (same blanking as 50Hz standard),
- Possibility to insert cut-off pulses after a vertical oversize blanking signal,
- De-interlace capability,
- Horizontal starting circuit with soft-start capability,
- Horizontal and vertical position adjustments, vertical amplitude control voltage (combined with chroma subcarrier output),
- 4/3, 16/9 selection voltage.

## MSP34XX (D/G) Multistandard Sound Processor

The MSP34xx (D/G) family of single-chip Multistandard Sound Processors covers the sound processing of all analog TV-Standards worldwide, as well as the NICAM digital sound standards. The full TV sound processing, starting with analog sound IF signal-in, down to processed analog AF-out, is performed on a single chip. It covers all European TV-Standards. The MSP 3400 1.0 m CMOS version is fully pin and soft-ware compatible to the MSP 3410, but is not able to de-code NICAM. It is also compatible to the MSP 3400C 0.8 m CMOS version.

The IC is produced in submicron CMOS technology, combined with high performance digital signal processing.

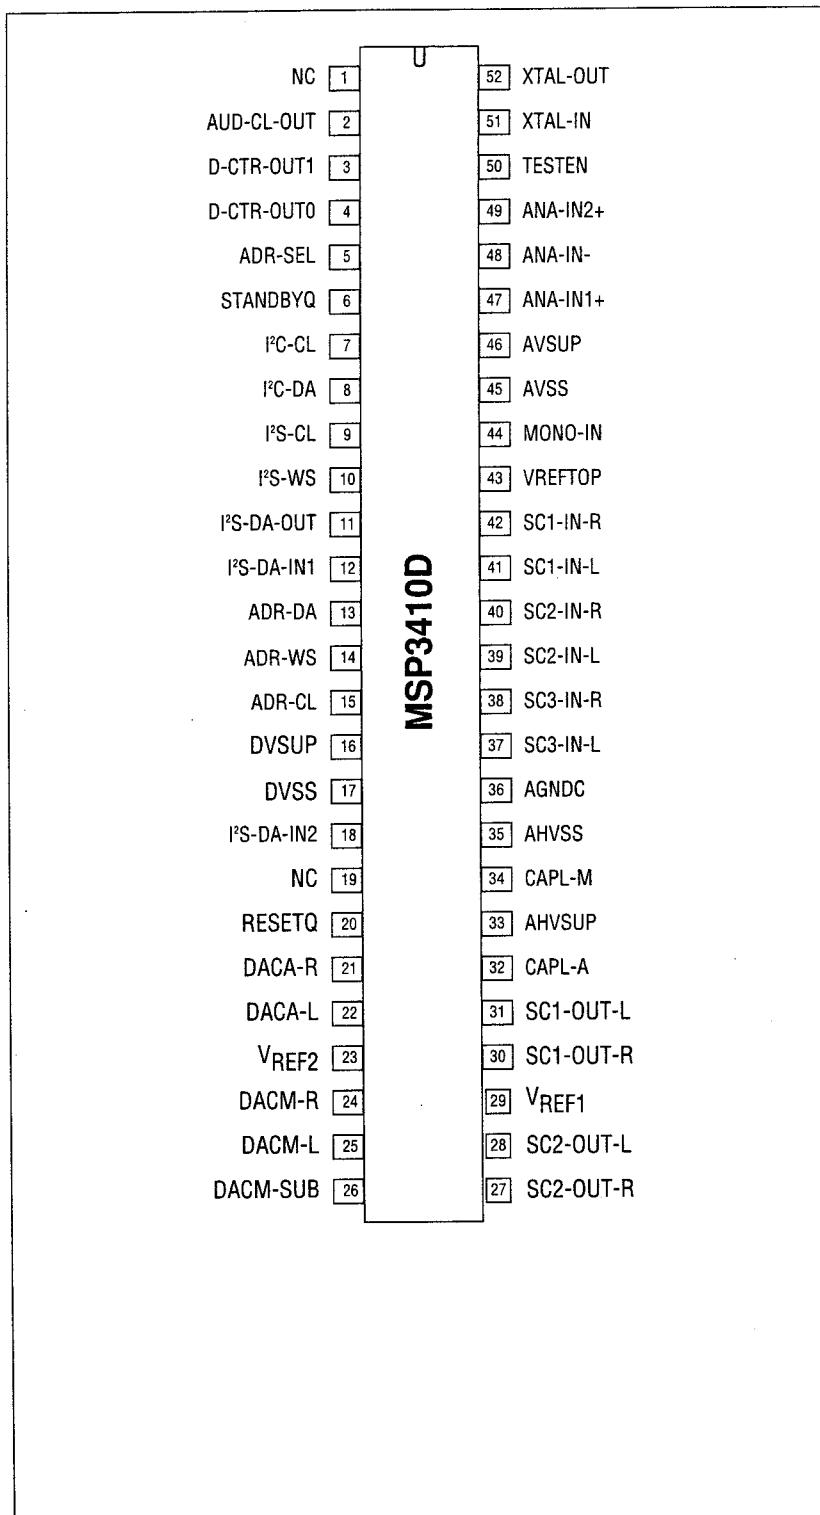

The MSP 3410D is available in a PLCC68, PSDIP64, PSDIP52, and in a PQFP80 package.

**Note:** The MSP3410D version is fully downward compatible to the MSP 3410B, the MSP 3400B, and the MSP3400C. To achieve full software compatibility with MSP3400C, MSP 3400B, and MSP 3410B, the demodulator part must be programmed as described in the data sheet of MSP 3410B.

### MSP 3410D Additional Features

- AVC: Automatic Volume Correction
- Subwoofer Output
- 5-band graphic equalizer (as in MSP 3400C)
- Enhanced spatial effect (pseudostereo/basewidth enlargement as in MSP 3400C)
- Headphone channel with balance, bass, treble, loud-ness
- Balance for loudspeaker and headphone channels in dB units (optional)
- Additional pair of D/A converters for SCART2 out
- Improved oversampling filters (as in MSP 3400C)
- Additional SCART input
- Full SCART In/out matrix without restrictions
- Scart volume in dB units (optional)
- Additional I2S input (as in MSP 3400C)
- New FM-identification (as in MSP 3400C)
- Demodulator- short programming
- Autodetection for- terrestrial TV-sound standards
- Precise bit-error rate indication
- Automatic switching from NICAM to FM/AM or vice versa
- Improved NICAM synchronization algorithm
- Improved carrier mute algorithm
- Improved AM-demodulation
- ADR together- with DRP 3510A
- Dolby Pro Logic together with DPL 35xx A
- Reduction of necessary controlling
- Less external components
- Significant reduction of radiation

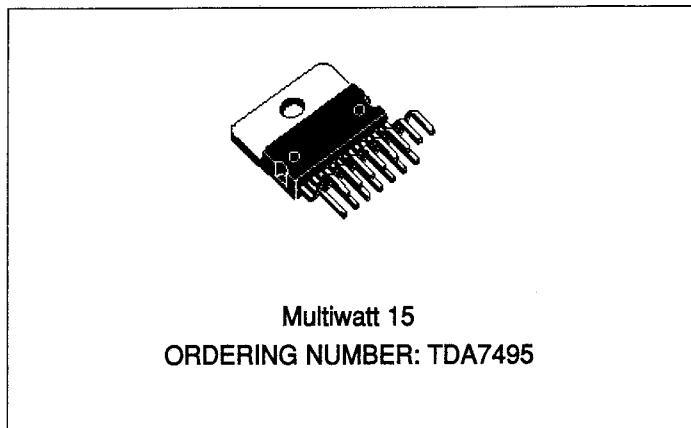

## Pin description

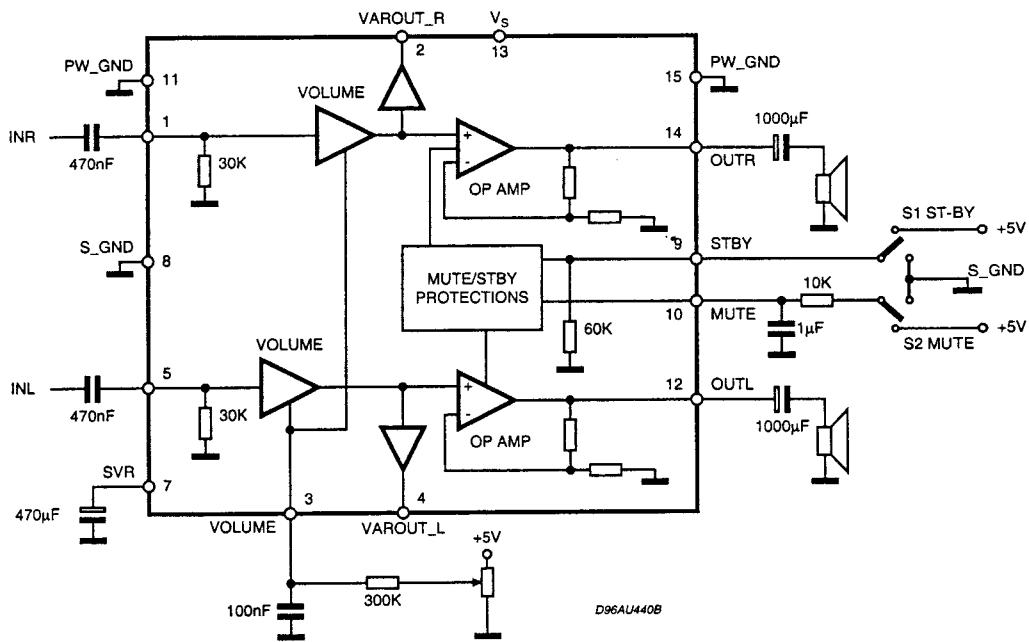

# TDA7495

## 11+11W Amplifier With DC Volume Control

- 11+11W Output Power
- RL = 8Ω @THD = 10% VCC = 28V
- ST-BY and mute functions
- Low turn-on turn-off pop noise
- Linear volume control DC coupled
- With Power Op. Amp.
- No Boucherot Cell
- No ST-BY RC input network
- Single supply ranging up to 35V
- Short circuit protection
- Thermal Overload protection
- Internally fixed gain
- Soft Clipping
- Variable output after volume control
- Circuit multiwatt 15 package

### Block and Application Diagram

# STV5112

## RGB High Voltage Video Amplifier

### DESCRIPTION

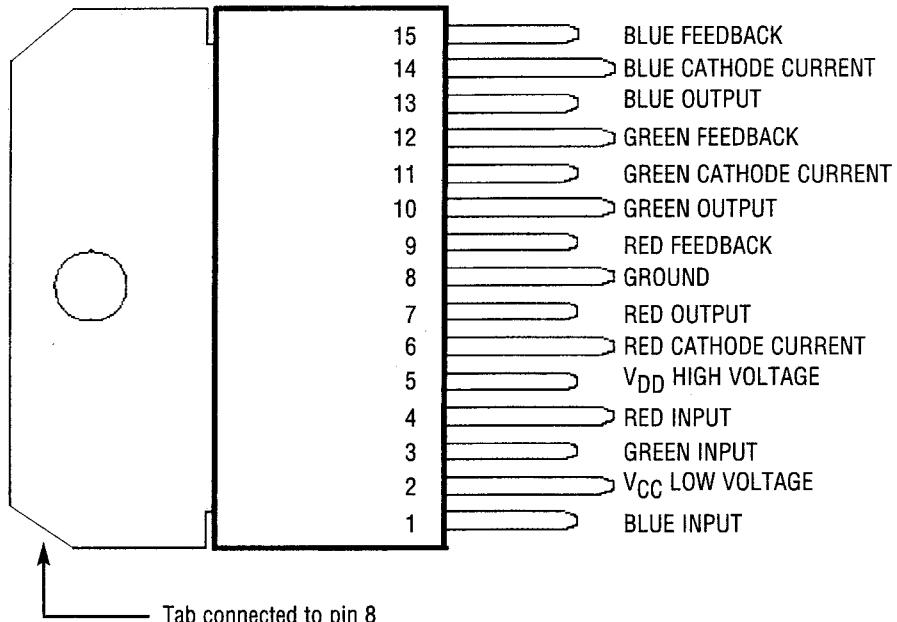

The STV5112 includes three video amplifiers designed with a high voltage bipolar / CMOS / DMOS technology (BCD). It drives directly the three cathodes and is protected against flashovers. Thanks to its three cathode current outputs, the STV5112 can be used with both parallel and sequential sampling applications.

- BANDWIDTH : 8MHz TYPICAL
- SUPPLY VOLTAGE : 220V TYPICAL
- RISE AND FALL TIME : 50ns TYPICAL
- CRT CATHODE CURRENT OUTPUTS FOR PARALLEL OR SEQUENTIAL CUT-OFF OR DRIVE ADJUSTMENT
- FLASHOVER PROTECTION
- POWER DISSIPATION : 3.6W

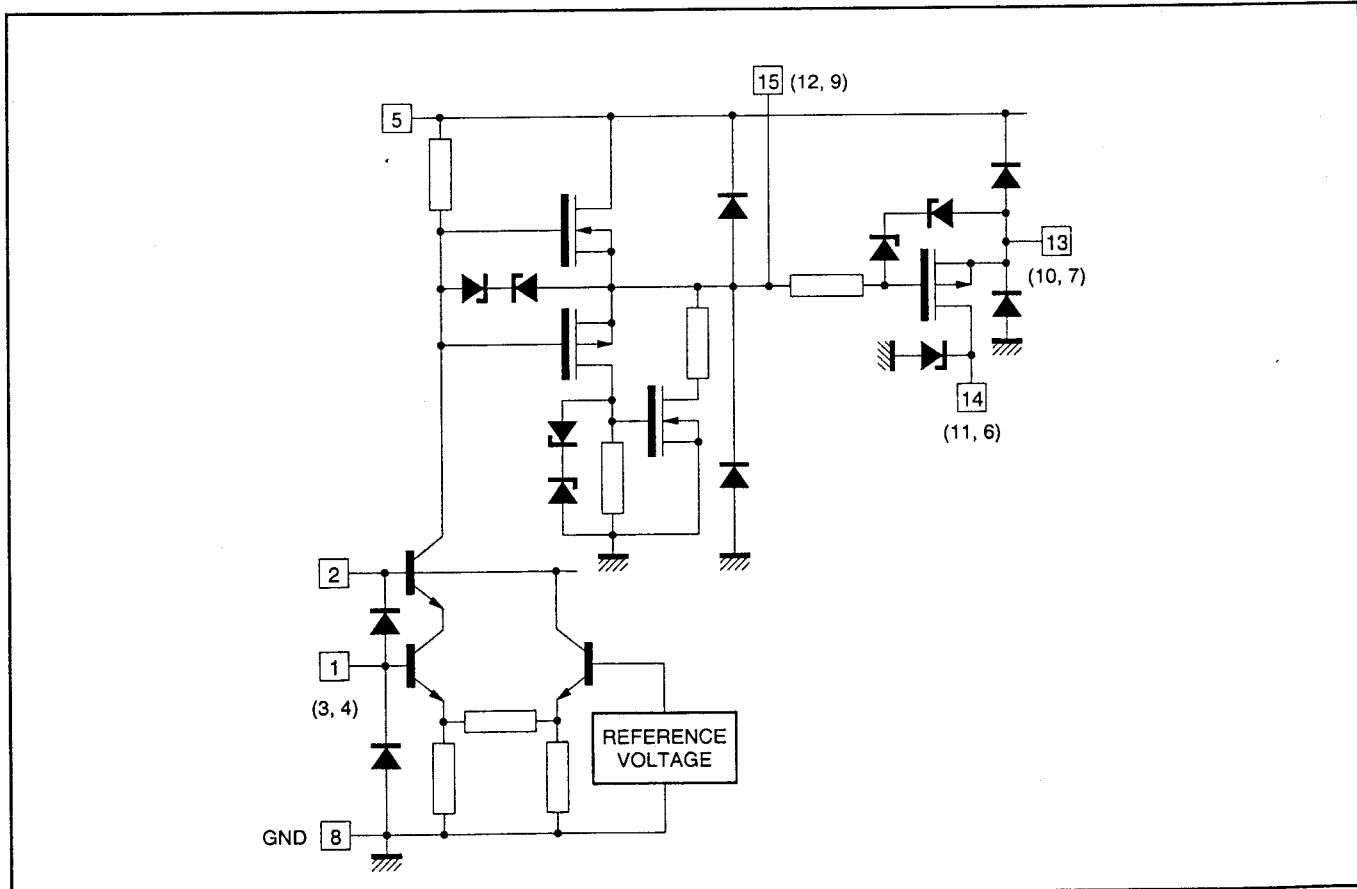

Multiwatt 15  
ORDERING NUMBER: TDA7495

### PIN CONNECTION (Top view)

**PIN FUNCTION**

Nº	Function	Description
1	Blue Input	Input of the "blue" amplifier. It is a virtual ground with 2.5V bias voltage and 75µA input bias current.
2	VCC	Low voltage power supply, typically 9V.
3	Green Input	Input of the "green" amplifier. It is a virtual ground with 2.5V bias voltage and 75µA input bias current.
4	Red Input	Input of the "red" amplifier. It is a virtual ground with 2.5V bias voltage and 75µA input bias current.
5	VDD	High voltage power Supply, typically 220V.
6	Red Cathode Current	Provides the video processor with a copy of the DC current flowing into the red cathode, for automatic cut-off or gain adjustment. If this control is not used. Pin 6 must be grounded.
7	Red Output	Output driving the red cathode. Pin 7 is internally protected against CRT arc discharges by a diode limiting the output voltage $V_{DD}$ .
8	Ground	Also connected to the heatsink.
9	Red Feedback	Output driving the feedback resistor network for the red amplifier
10	Green Output	Output driving the green cathode. Pin 10 is internally protected against CRT arc discharges by a diode limiting the output voltage $V_{DD}$ .
11	Green Cathode Current	Provides the video processor with a copy of the DC current flowing into the green cathode, for automatic cut-off or gain adjustment. If this control is not used. Pin 11 must be grounded.
12	Green Feedback	Output driving the feedback resistor network for the green amplifier
13	Blue Output	Output driving the blue cathode. Pin 13 is internally protected against CRT arc discharges by a diode limiting the output voltage $V_{DD}$ .
14	Blue Cathode Current	Provides the video processor with a copy of the DC current flowing into the blue cathode, for automatic cut-off or gain adjustment. If this control is not used. Pin 14 must be grounded.
15	Blue Feedback	Output driving the feedback resistor network for the blue amplifier.

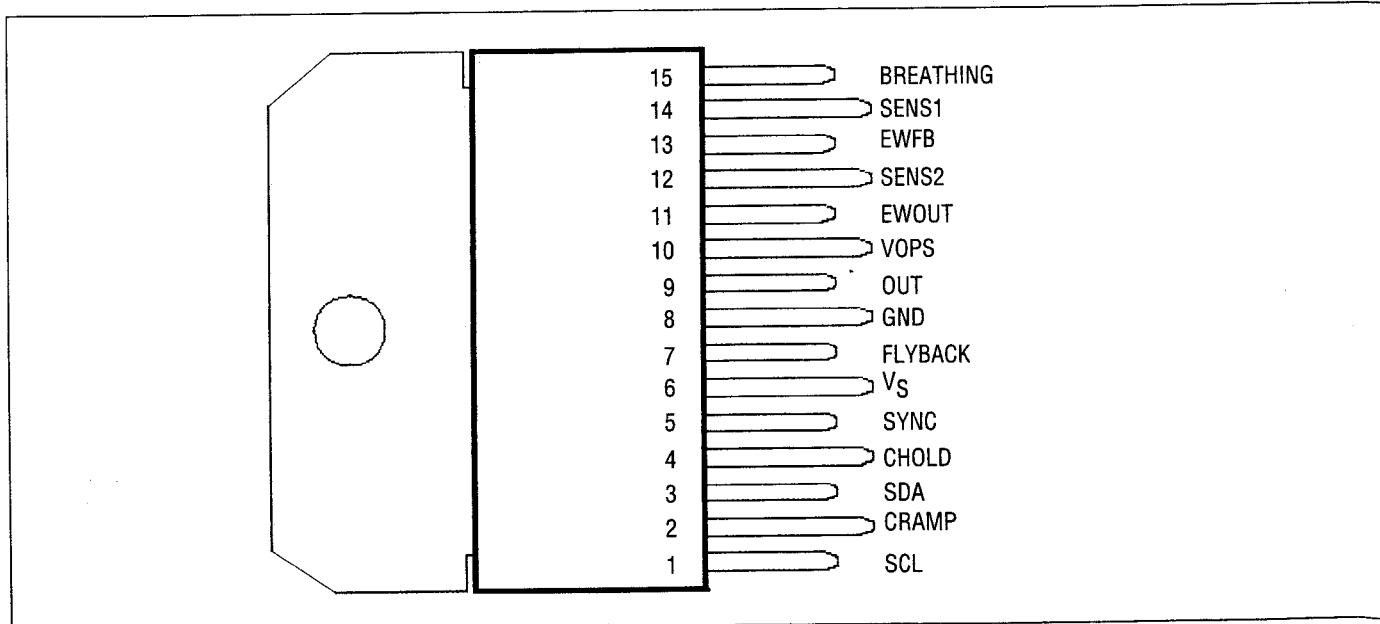

**BLOCK DIAGRAM OF EACH CHANNEL**

**STV9306****Bus controlled Vertical Deflection System  
With East/West Correction Output Circuit****DESCRIPTION**

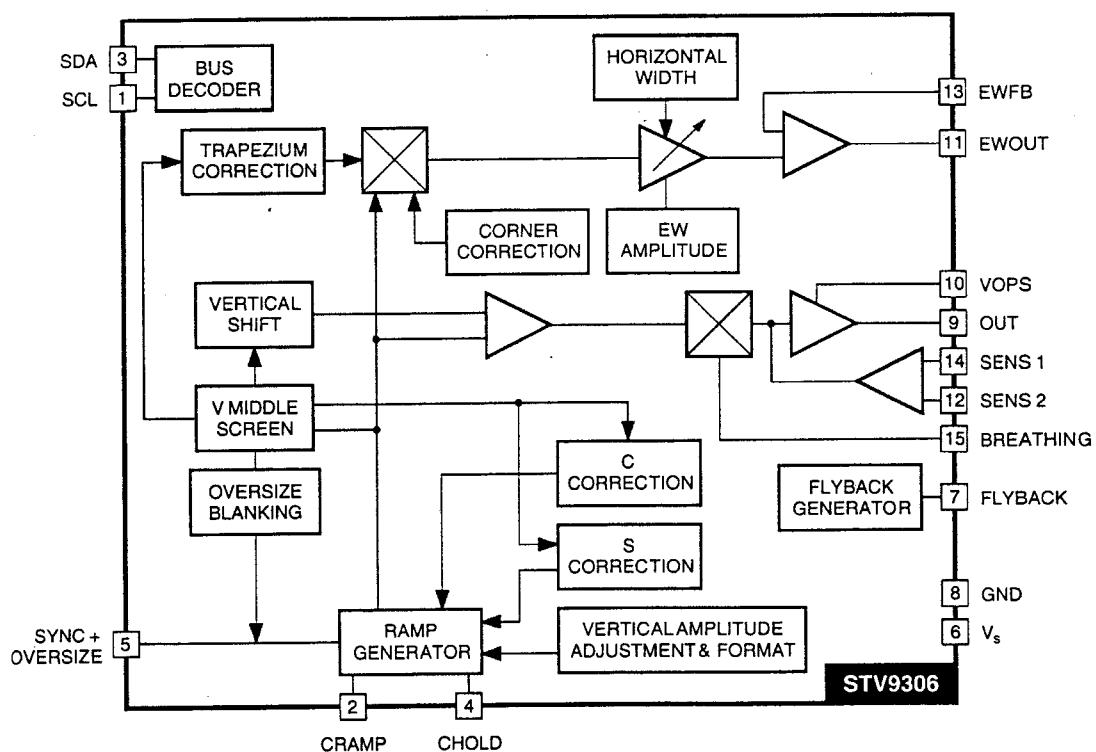

The STV9306 is a fully I<sup>2</sup>C controlled vertical deflection IC designed for use in 110°, 4/3 or 16/9 CRT applications. It integrates both the vertical deflection and E/W correction circuitries necessary in design of a 110° chassis.

- FULLY I<sup>2</sup>C CONTROLLED
- DMOSPOWER HALF-BRIDGE AMPLIFIER
- DC COUPLED OPERATION
- INTERNAL FLYBACK GENERATOR (UP TO 60V)
- SELF ADAPTED SAWTOOTH (50/60Hz)
- 100 Hz OPERATION
- VERTICAL LINEARITY, AMPLITUDE AND CENTERING ADJUSTMENTS
- HORIZONTAL WIDTH, PINCUSHION, TRAPEZOID AND CORNER ADJUSTMENTS
- BREATHING CORRECTION
- 4/3, 16/9 CRT APPLICATION
- THERMAL PROTECTION
- LINEAR VERTICAL ZOOM FUNCTION
- E/W CLASS AOUTPUT
- LOW EXTERNAL COMPONENTS

## Controller for Switch Mode Power Supplies Supporting Low Power Standby and Power Factor Correction

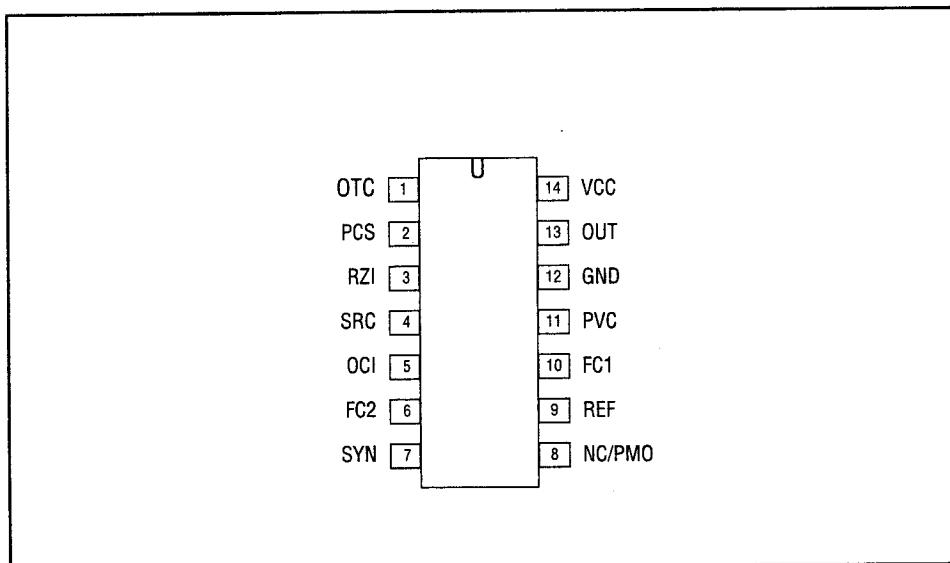

### FEATURES

- Line Current Consumption with PFC
- Low Power Consumption
- Stable and Adjustable Standby Frequency
- Very Low Start-up Current
- Soft-Start for Quiet Start-up
- Free usable Fault Comparators
- Synchronization and Fixed Frequency Facility
- Over- and Undervoltage Lockout
- Switch Off at Mains Undervoltage
- Temporary high power circuit (only TDA 16847)
- Mains Voltage Dependent Fold Back Point Correction
- Continuous Frequency Reduction with Decreasing Load
- Adjustable and Voltage Dependent Ringing Suppression Time

### DESCRIPTION

The TDA 16846 is optimized to control free running or fixed frequency flyback converters with or without Power Factor Correction (Current Pump). To provide low power consumption at light loads, this device reduces the switching frequency continuously with load, towards an adjustable minimum (e. g. 20 kHz in standby mode). Additionally, the start up current is very low. To avoid switching stresses of the power devices, the power transistor is always switched on at minimum voltage. A special circuit is implemented to avoid jitter. The device has several protection functions: VCC over- and undervoltage, mains undervoltage, current limiting and 2 free usable fault comparators. Regulation can be done by using the internal error amplifier or an opto coupler feedback (additional input). The output driver is ideally suited for driving a power MOSFET, but it can also be used for a bipolar transistor. Fixed frequency and synchronized operation are also possible. The TDA16846 is suited for TV-, VCR- sets and SAT receivers. It also can be good used in PC monitors. The TDA16847 is identical with TDA16846 but has an additional power measurement output (pin 8) which can be used for a Temporary High Power Circuit.

### Pin description

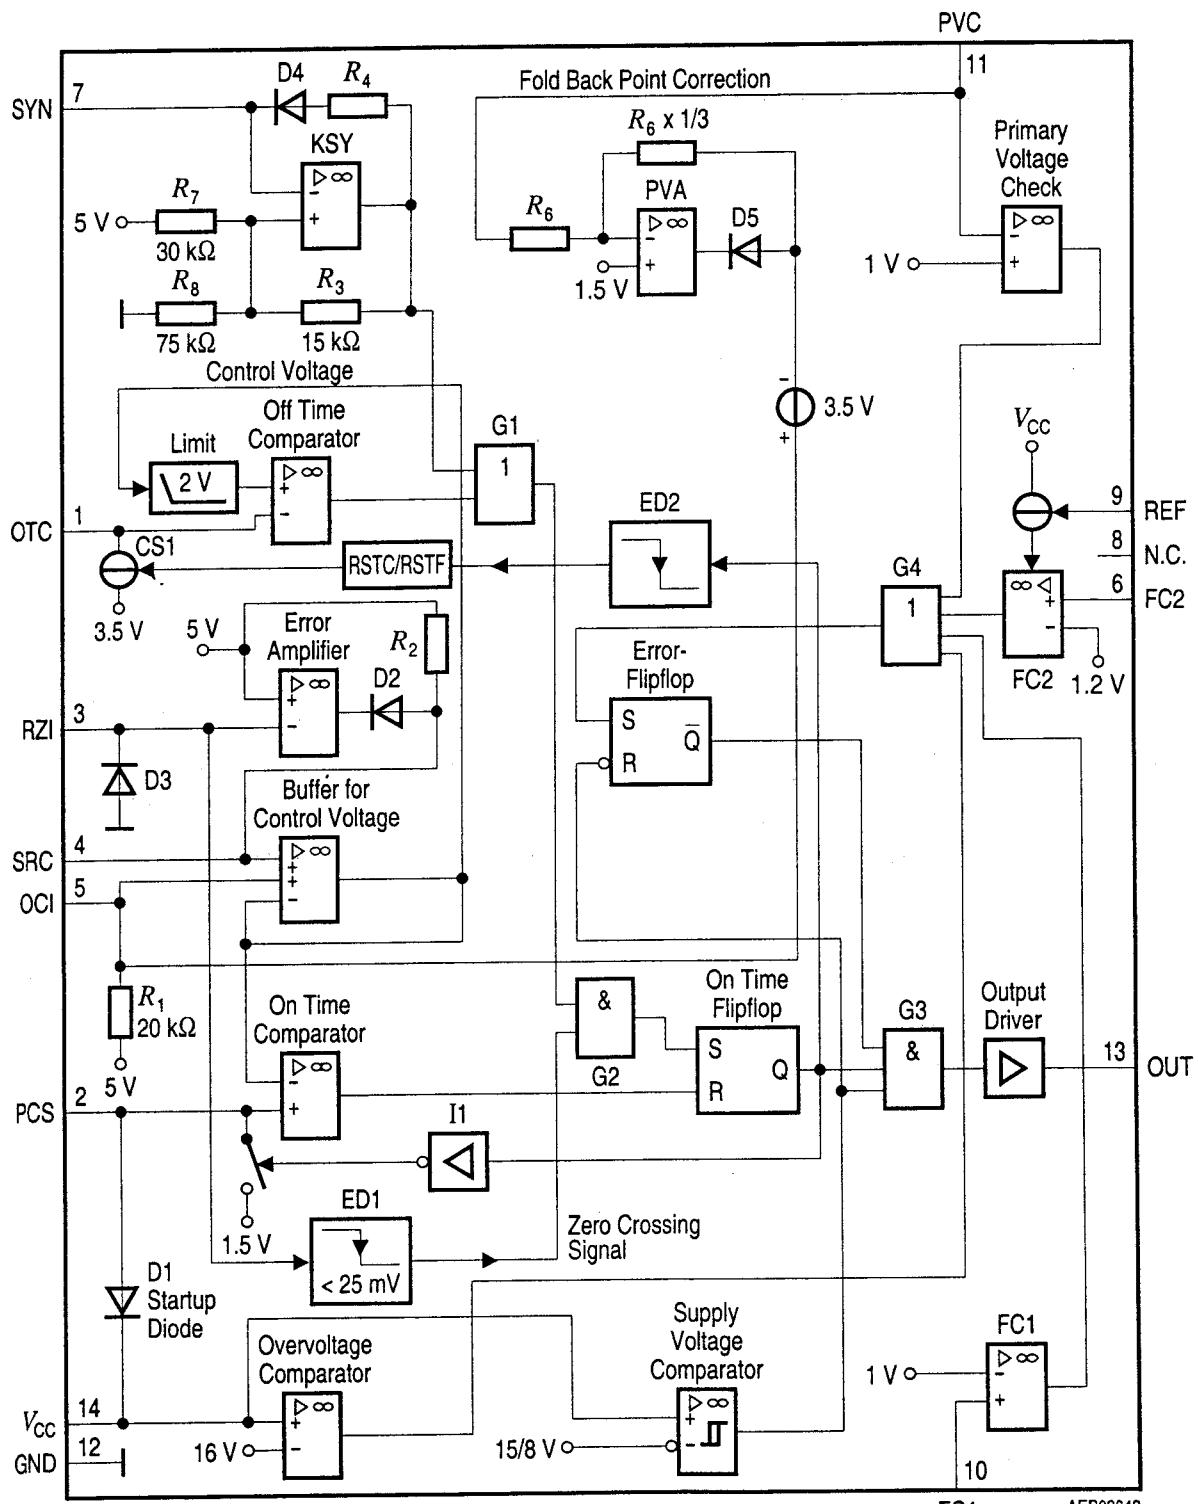

**PIN DEFINITIONS AND FUNCTIONS**

<b>Pin</b>	<b>Symbol</b>	<b>Function</b>
1	OTC	Off Time Circuit
2	PCS	Primary Current Simulation
3	RZI	Regulation and Zero Crossing Input
4	SRC	Soft-Start and Regulation Capacitor
5	OCI	Opto Coupler Input
6	FC2	Fault Comparator 2
7	SYN	Synchronization Input
8	NC/PMO	Not Connected (TDA16846)/PMO (TDA16847)
9	REF	Reference Voltage and Current
10	FC2	Fault Comparator 1
11	PVC	Primary Voltage Check
12	GND	Ground
13	OUT	Output
14	VCC	Supply Voltage

**SHORT DESCRIPTION OF THE PIN FUNCTIONS**

<b>N°</b>	<b>Function</b>	<b>Description</b>
1	OTC	A parallel RC-circuit between this pin and ground determines the ringing suppression time and the standby-frequency.
2	PCS	A capacitor between this pin and ground and a resistor between this pin and the positive terminal of the primary elcap quantifies the max. possible output power of the SMPS.
3	RZI	This is the input of the error amplifier and the zero crossing input. The output of a voltage divider between the control winding and ground is connected to this input. If the pulses at pin 3 exceed a 5V threshold, the control voltage at pin 4 is lowered.
4	SRC	This is the pin for the control voltage. A capacitor has to be connected between this pin and ground. The value of this capacitor determines the duration of the softstart and the speed of the control.
5	OCI	If an opto coupler for the control is used, it's output has to be connected between this pin and ground. The voltage divider at pin3 has then to be changed, so that the pulses at pin3 are below 5 V.
6	FC2	Fault comparator 2: If a voltage > 1.2 V is applied to this pin, the SMPS stops.
7	SYN	If fixed frequency mode is wanted, a parallel RC circuit has to be connected between this pin and ground. The RC-value determines the frequency. If synchronized mode is wanted, sync pulses have to be fed into this pin.
8	NC/PMO	Not connected (TDA16846). / This is the power measurement output of the Temporary High Power Circuit. A capacitor and a RC-circuit has to be connected between this pin and ground (TDA16847).
9	REF	Output for reference voltage (5 V). With a resistor between this pin and ground the fault comparator 2 (pin 6) is enabled.
10	FC2	Fault comparator 1: If a voltage > 1. V is applied to this pin, the SMPS stops.
11	PVC	This is the input of the primary voltage check. The voltage at the anode of the primary elcap has to be fed to this pin via a voltage divider. If the voltage of this pin falls below 1 V, the SMPS is switched off. A second function of this pin is the primary voltage dependent fold back point correction (only active in free running mode).
12	GND	Common ground.
13	OUT	Output signal. This pin has to be connected across a serial resistor with the gate of the power transistor.
14	VCC	Connection for supply voltage and startup capacitor. After startup the supply voltage is produced by the control winding of the transformer and rectified by an external diode.

# TCDT1100(G) Series

## Optocoupler with Phototransistor Output

### DESCRIPTION

The TCDT1100(G) series consists of a phototransistor optically coupled to a gallium arsenide infrared-emitting diode in a 6-lead plastic dual inline package. The elements are mounted on one leadframe using a coplanar technique, providing a fixed distance between input and output for highest safety requirements.

### APPLICATIONS

Circuits for safe protective separation against electrical shock according to safety class II(reinforced isolation):

- For application class I - IV at mains voltage 3 300V
- For application class I - III at mains voltage 3 600V according to VDE 0884, table 2, suitable for:

**Switch-mode power supplies, computer peripheral interface, microprocessor system interface, line**

receiver.

These couplers perform safety functions according to the following equipment standards:

- **VDE0884**

Optocoupler providing protective separation

- **VDE0804**

Telecommunication apparatus and data processing

- **VDE0805 / IEC950 / EN60950**

Office machines (applied for reinforced isolation for mains voltage 3 400 VRMS)

- **VDE0860 / IEC65**

Safety for mains-operated electronic and related household apparatus

### Input (Emitter)

Parameter	Test Conditions	Symbol	Value	Unit

## L7805 Positive Voltage Regulators

- Output current up to 1.5 A
- Output Voltages of 5V
- Thermal Overload Protection
- Shortcircuit protection
- Output transition soa protection

### DESCRIPTION

The L7800 series of three-terminal positive regulators is available in TO-220 ISOWATT220 TO-3 and D2 PAK packages and several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

## 1.2V to 37V Voltage Regulator

- Output Voltagerange : 1.2 to 37V
- Output Current in Excessof 1.5 A
- 0.1% Line and Load Regulation
- Floating Operation for High Voltages
- Complete Series of Protections: Current Limiting, Thermal Shutdown and Soa Control

### DESCRIPTION

The LM117 / LM217 / LM317 are monolithic integrated circuit in TO-220, ISOWATT220, TO-3 and D 2 PAK packages intended for use as positive adjustable voltage regulators. They are designed to supply more than 1.5A of load current with an output voltage adjustable over a 1.2 to 37V range. The nominal output voltage is selected by means of only a resistive divider, making the device exceptionally easy to use and eliminating the stocking of many fixed regulators.
