

# PHILIPS

## SERVICE NOTES

for the receiver

**BX514A**

R14920

1953

For a.c. mains supply

### GENERAL

#### WAVE RANGES

S.W. : 16.3 - 49.2 m ( 18.5 - 6.1 Mc/s )  
 M.W. : 182 - 548 m ( 1650 - 547.5 kc/s )  
 L.W. : 706 - 1948 m ( 425 - 154 kc/s )

I.F.: 470 kc/s

#### CONTROLS

From left to right:

1. Radio-P.U. and Quality switch
2. Mains switch + volume control
3. Waverange switch
4. Tuning

#### MAINS VOLTAGES

110, 125, 145, 200, 220,  
245 V (50 ~)

#### POWER CONSUMPTION

45 W (220 V ~)

#### VALVE COMBINATION

B1 : ECH42  
 B2 : EF 41  
 B3 : EBC41  
 B4 : EL 41  
 B5 : EZ 40  
 B6 : EM 34

#### DIALLAMPS

L1 : 8028D-00  
 L2 : 8028D-00

#### LOUDSPEAKER

Type : 9636 (repairable)  
 Z = 5 Ω

#### DIMENSIONS

Width : 52 cm) knobs  
 Height : 37 cm) in-  
 Depth : 21 cm) cluded

WEIGHT : 9 kg

#### BANDWIDTH

The I.F. bandwidth (1:10) measured from g1 of B1 is about 10.5 kc/s.  
 The overall bandwidth (1:10) measured from the aerial socket is about 10 kc/s at 1000 kc/s and about 9.5 kc/s at 250 kc/s.

ILLUSTRATIONS

- Fig. 1 Circuit diagram.
- Fig. 2 Position of coils and trimmers.
- Fig. 3 Coil connections.
- Fig. 4 Switch wafers.
- Fig. 5 Trimming points on the dial.
- Fig. 6 Cable drive for pointer and variable capacitor.
- Fig. 7 Replacement of the power transformer.

TRIMMING THE RECEIVER

A. I. F. BANDFILTERS

- 1. Waverange switch to M.W.
- 2. Variable capacitor to minimum.
- 3. Volume control to maximum.
- 4. Radio-P.U. switch to Radio.
- 5. Set the Quality switch to "mellow".
- 6. Connect a voltmeter via a trimming transformer to the extension loud-speaker sockets.
- 7. Screw the cores of the I.F. coils nearly full out.
- 8. Apply to g1 of B1 a modulated signal of 470 kc/s via a capacitor of 33.000 pF.
- 9. Trim the I.F. circuits for maximum output voltage in the following order
  - 4th circuit S25-S26-C30
  - 3rd circuit S23-S24-C29
  - 1st circuit S19-S20-C27
  - 2nd circuit S21-S22-C28

After the last circuit has been trimmed no further I.F. adjustments should be made.

- 10. Seal the cores.

B. I.F. FILTER CIRCUIT

- 1. Waverange switch to M.W.
- 2. Variable capacitor to minimum.
- 3. Volume control to maximum.
- 4. Radio-P.U. switch to Radio.
- 5. Set the Quality switch to "mellow".
- 6. Connect a voltmeter via a trimming transformer to the extension loud-speaker sockets.
- 7. Apply a modulated signal of 470 kc/s to the aerial socket via a normal dummy aerial.
- 8. Trim C7 for minimum output voltage.
- 9. Seal C7.

C. R.F. AND OCILLATOR CIRCUITS

Trimming is done with the aid of the trimming points on the dial (fig.5). Before starting to trim, turn the variable capacitor to minimum and set the pointer on the extreme left trimming point of the dial (point A). For all waveranges the following applies:

- 1. Volume control to maximum.
- 2. Radio-P.U. switch to Radio.
- 3. Set the Quality switch to "quality".
- 4. Connect a voltmeter via a trimming transformer to the extension loud-speaker sockets.
- 5. Apply all signals via a normal dummy aerial to the aerial socket.

Trim as indicated in the following table, strictly observing the order given.

		S.W.	M.W.	L.W.
1	Turn range switch to			
2	The pointer on the trimming point . . . by means of the tuning knob	A	A	B
3	Apply a modulated signal of	18.5 Mc/s	1547.5 kc/s	154 kc/s
4	Trim for maximum output voltage	C19	C20 C12	unscrew C23 trim C22 to beyond maximum output voltage
5	The pointer on the trimming point . . . by means of the tuning knob	B	B	A
6	Apply a modulated signal of	6.1 Mc/s	547.5 kc/s	425 kc/s
7	Trim for maximum output voltage	C17	C21	C23
8	Repeat the points	2-8	2-5	-
9	The pointer on the trimming point . . . by means of the tuning knob	A	-	B
10	Apply a modulated signal of	18.5 Mc/s	-	154 kc/s
11	Trim for maximum output voltage	C11	-	C22
12	Repeat the points	-	-	5-11
13	The pointer on the trimming point . . . by means of the tuning knob	-	-	A
14	Apply a modulated signal of	-	-	425 kc/s
15	Trim for maximum output voltage	-	-	C13
16	Deal the trimmers	C19 C17 C11	C20 C21 C12	C23 C22 C13

#### REPAIRS AND REPLACEMENT OF PARTS

##### REMOVING THE CHASSIS FROM THE CABINET

1. Remove the rear panel.
2. Set the variable capacitor to maximum.
3. Remove the knobs.
4. Detach the diallamp holders.
5. Disconnect the earth lead at the back of the chassis.
6. Release the scale pointer from the cable.
7. Release the tuning indicator.
8. Remove the four chassis-fixing bolts and take the chassis carefully out of the cabinet.

POINTER AND CAPACITOR DRIVE

The paths and lengths of the cables are indicated in fig.6, the variable capacitor being set to maximum.

A. VARIABLE CAPACITOR DRIVE

1. Remove the chassis from the cabinet.
2. Remove the large "Philite" drum (3 screws).
3. Remove the broken cord.
4. Assemble the new cord "A-B".
5. Push the nipple "C" of the cord "A-B" in the slit "C" of the small drum.
6. Turn the drum till the slit "C" is underneath.
7. Fasten the drum with a nail.
8. Pass the end "A" twice in a clockwise direction around the drum and 3 times in an anti-clockwise direction around the tuning spindle.
9. Place the cable guide in position.
10. Pass the cord in an anti-clockwise direction around the capacitor drum and fix it with a crocodile clip.
11. Pass the end "B"  $\frac{3}{4}$  turn in an anti-clockwise direction around the drum and  $2\frac{1}{2}$  turns in a clockwise direction around the tuning spindle.
12. Place the cable guide in position.
13. Pass the cord around the pulley and the capacitor drum.
14. Hook the spring in the cord loops, push the ends through the opening in the drum and lay the ends in the right direction around the pin in the drum.
15. Fix the spring on its bracket and remove the crocodile clip.
16. Remove the nail and replace the large "Philite" drum.

B. POINTER DRIVE

1. Remove the chassis from the cabinet.
2. Remove the broken cable(s).
3. Assemble the new cable(s).
4. Push the nipple "a" of the cable "D" in the slit "a" of the large "Philite" drum.
5. Pass the cable "D" 3 times in a clockwise direction around the "Philite" drum and over the pulley. Hook the end on the spring and fix it with a crocodile clip to a convenient point.
6. Push the nipple "b" of the cable "C" in the slit "b" of the large "Philite" drum.
7. Pass the cable "C"  $1\frac{1}{2}$  turns in an anti-clockwise direction around the "Philite" drum and the pulleys.
8. Connect the both cable ends by means of the spring and remove the crocodile clip.

CURRENTS AND VOLTAGES

Valves			V <sub>a</sub>	V <sub>g2(+4)</sub>	I <sub>a</sub>	I <sub>g2(+4)</sub>
B1	6CH42	Hexode	230	85	5.3	3.2
		Triode	65		5	
B2	EF 41	Pentode	230	85	5.5	1.8
B3	EBC41	Double diode triode	100	-	0.65	-
B4	EL 41	Pentode	239	230	30	4.8
B6	EM 34	Tuning indicator	V <sub>a1</sub> =40 V <sub>1</sub> =230 V <sub>a2</sub> =22	-	-	I <sub>1</sub> =1.7
			Volts	Volts	mA	mA

VC1 = 255 V

VC2 = 230 V

These measurements are made with the Universal Measuring Apparatus GM 4257. Waverange switch to M.W., no signal on the serial socket.

BK 514 A  
LIST OF PARTS AND TOOLS  
 (see also General Spare Parts List)

When ordering always quote:

1. Code number
2. Description and colour code
3. Type number of the receiver

		Description	Code number
		Wooden cabinet	MK 952 97.0
		Rear panel	MK 398 28.0
		Dial	MK 703 21.0
		Knob (4x)	A3 366 33.0
		Strip for waverange switch	A3 617 66.0
		Strip for quality switch	A3 618 42.0
		Valve holder (EM 34)	B1 505 26.1
		Lens for EM 34	P5 310 00.0
