# Specifications

Power Output (0.08% T.H.D, 8 ohm, 20~20kHz)	50W (☆) 60W (★)
Input Sensitivity (Ref. 1kHz, 50W/8 ohm)	Line: 150 ± 30mV Phone: 2.5 ± 0.5mV
Input Impedance (1kHz)	Line: 35k ohm Phone: 47k ohm
Frequency Response (Ref. 1kHz)	Line (10~65kHz): -3dB Phono/AUX-2 (10~40kHz): -3dB (☆) Phono/AUX (10~40kHz): -3dB (★)
Total Harmonic Distortion (20~20kHz, 8 ohm)	0.08%
S/N Ratio (Input 500mV, 1kHz)	86dB
Tone Controls	Bass (100Hz): ±10 ± 2dB Treble (10kHz): ±10 ± 2dB
Cross Talk (Ref. 1kHz)	58dB
Residual Noise	1mV
Separation (1kHz, Input Shorted)	60dB
Power Supply	AC120/220/240V, 50Hz
Semiconductors	8 IC's, 24 Transistors, 20 Diodes (☆) 10 IC's, 24 Transistors, 24 Diodes (★)
Dimensions (W×H×D)	438 × 125 × 363 mm
Weight	7.6kg (☆) 8.2kg (★)

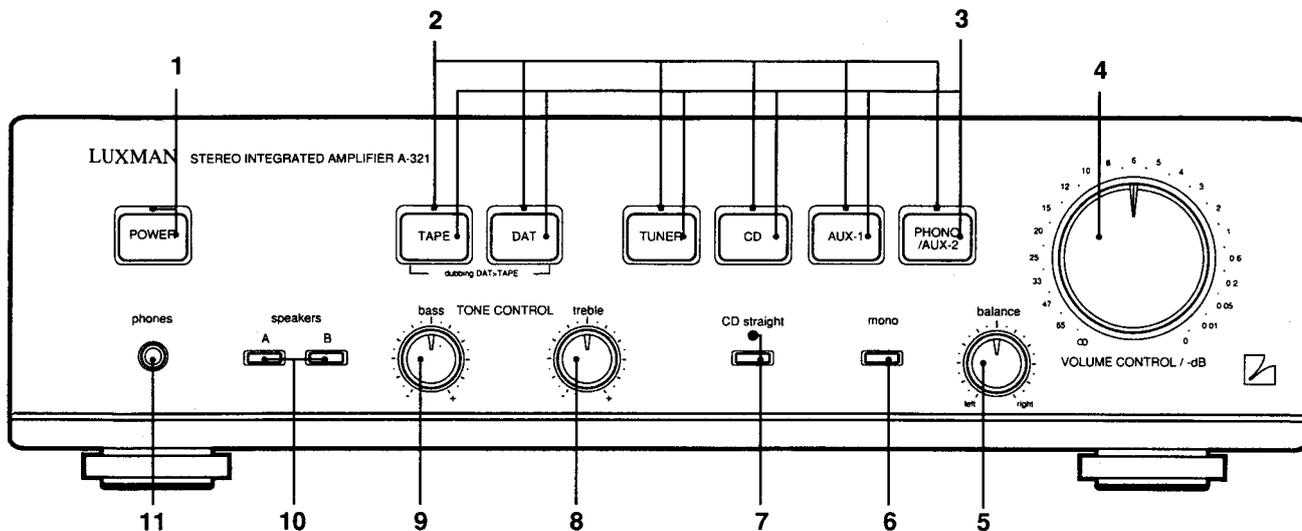

NOTE: Due to continuing product improvement, specifications and designs are subject to change without notice.

☆: For A-321 Model only, ★: For A-331 Model only, Others: Common.

## <A-321 Model>

# Names and Functions of Parts

### Front Panel

#### 1. "POWER" button and indicator

Pressing this button turns the unit on and off. First, the Operation indicator lights up when this button is depressed, and then the time delay muting circuit is turned on, putting the amplifier into perfect operational condition in about 5 seconds.

#### 2. Input Select indicators

The LED indicator for the selected input source will light up to tell which source is selected with the Input Select buttons (item #3).

#### 3. Input Select buttons

Press one of these buttons to select any one of six sources; TAPE, DAT, TUNER, CD, AUX-1, PHONO/AUX-2.

#### 4. "VOLUME CONTROL"

Allows precision, low noise adjustment of volume level. It is recommended that the volume control be set to a low position prior to power turn on and when switching between sources.

#### 5. "balance" control

Adjusts for unequal volume level between channels. Normally, with today's high quality sources, it is seldom necessary to move this control from its precision centre detent position.

#### 6. "mono" button

Place in the mono (in) position for mono sources, for balance control adjustment, for lower noise operation from high noise stereo source, or for checking speaker phasing. Otherwise, leave it in the stereo (out) position.

#### 7. "CD straight" button and indicator

For optimum sound quality in CD operation, press this button to bypass control and switching functions.

#### Note:

Be sure "CD straight" button is in the OFF (out) position when using sources other than CD.

#### 8. "treble" control

This control will increase or decrease high frequency content in the program material. At the centre detent position, a flat frequency response results.

**9. "bass" control**

This control will increase or decrease low frequency content in the program material. At the centre detent position, a flat frequency response results.

**10. "speakers A and B" buttons**

Two sets of stereo speaker systems may be used with the A-321/A-311; A and B buttons corresponding with "SPEAKERS A and B" terminals (item #12) on the rear panel. You may choose independent or simultaneous operation of the two systems by using these buttons.

---

**Note:**

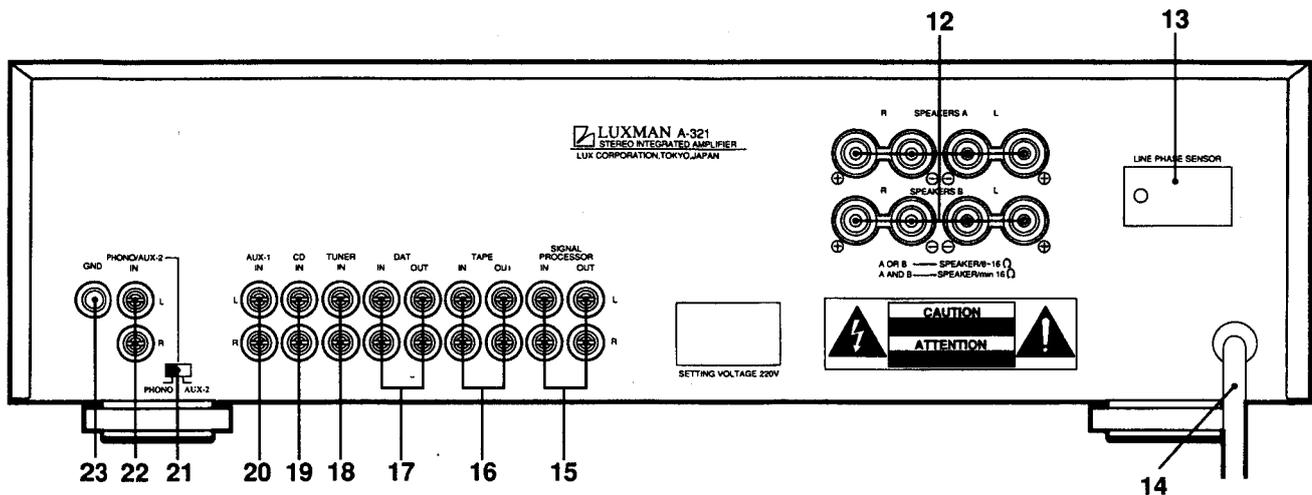

The impedance of each speaker system should equal or exceed 8 ohms when driving two sets at the same time.

---

**11. "phones" jack**

Connection of stereophonic headphones to this jack allows private listening. There is signal at the jack at all times. Placing the "speakers A and B" buttons (item #10) in the OUT position, will allow private listening.

**Rear Panel**

**12. "SPEAKERS A and B" terminals**

You may connect 2 pairs of stereo speaker systems to these terminals, one pair to the upper "A" terminals and a 2nd pair to the lower "B" terminals.

The speaker systems may be switched on and off by the front panel "speakers A and B" buttons (item #10).

**13. "LINE PHASE SENSOR" indicator**

When plugging the AC power cord into the wall outlet, check the polarity of the AC power cord at this sensor and indicator. When the sensor is touched after connecting the AC power cord, the polarity is correct if the indicator remains unlit. If the indicator lights up, unplug the AC power cord then plug its other side into the AC wall outlet.

**Note:**

Check the polarity before any other sources. If you live in a flat building where the power supply is floating, the indicator may not change status.

**14. AC Power Cord**

Insert the AC plug of the A-321/A-311 into an appropriate wall outlet.

**15. "SIGNAL PROCESSOR IN and OUT" jacks**

For connection of a surround sound processor, an equalizer or other signal processor as desired.

**Note:**

Jumper bars are factory installed in these jacks. They need to be removed only when connecting a processor. Retain for possible future reuse.

**16. "TAPE IN and OUT" jacks**

Connect the LINE IN and LINE OUT jacks of your audio tape deck to these OUT and IN jacks respectively.

**17. "DAT IN and OUT" jacks**

Connect the LINE IN and LINE OUT jacks of your DAT deck to these OUT and IN jacks respectively.

**18. "TUNER IN" jacks**

This set of jacks is for connection of a tuner. They may also be used for any other high level signal source as well.

**19. "CD IN" jacks**

This set of jacks is for connection of a CD (compact disc) player. They may also be used for any other high level signal source as well.

**20. "AUX-1 IN" jacks**

Connect the audio output of a VCR, Video Disc Player, CD Player, Cassette Deck, etc. to the "AUX-1 IN" jacks of the A-321/A-311.

**21. "PHONO/AUX-2" switch**

If a phono turntable is not required in the system, this switch allows the phono jacks (item #22) to be used as an additional set of high level inputs. Move it to the "AUX-2" position for connection of an additional CD player, Tape deck, etc.

**CAUTION:** Be sure the volume control is set to minimum when setting this switch.

**22. "PHONO/AUX-2 IN" jacks**

A moving magnet (MM) type phono cartridge may be connected to these inputs. Also, they may be used as an additional set of high level inputs (see item #21).

**CAUTION:** When these jacks are used for high level inputs, ensure that the "PHONO/AUX-2" switch (item #21) is set to "AUX-2" to prevent possible damage to the amplifier and speakers.

**23. "GND" terminal**

Connect the common (ground) lead of your phono turntable to this terminal.

## Operation Guidelines

The following guidelines assume that all connections have been made according to the "Reference Illustrations," page 4.

### Power and Source Switching

To prevent the possibility of excessive, sudden sound levels, it is recommended that the volume control be placed at a low level position each time the power button is turned on or when switching between sources by the INPUT SELECTOR.

### To Play Source Units

1. Turn the power on to all the components in use.
2. Choose your desired source with the Input Selector buttons (item #3).
3. Operate the source unit.

## Tape Recording Operation

### Tape Recording

1. Select the desired source to be recorded with the Input Selector buttons (item #3) and place the source unit into the play mode.
2. Operate the tape deck for recording.
3. If you have a 3 head deck or a DAT with monitoring function, you can monitor the actual recording by depressing the corresponding "TAPE" or "DAT" buttons (item #3) on the A321/A311.

### Tape Dubbing

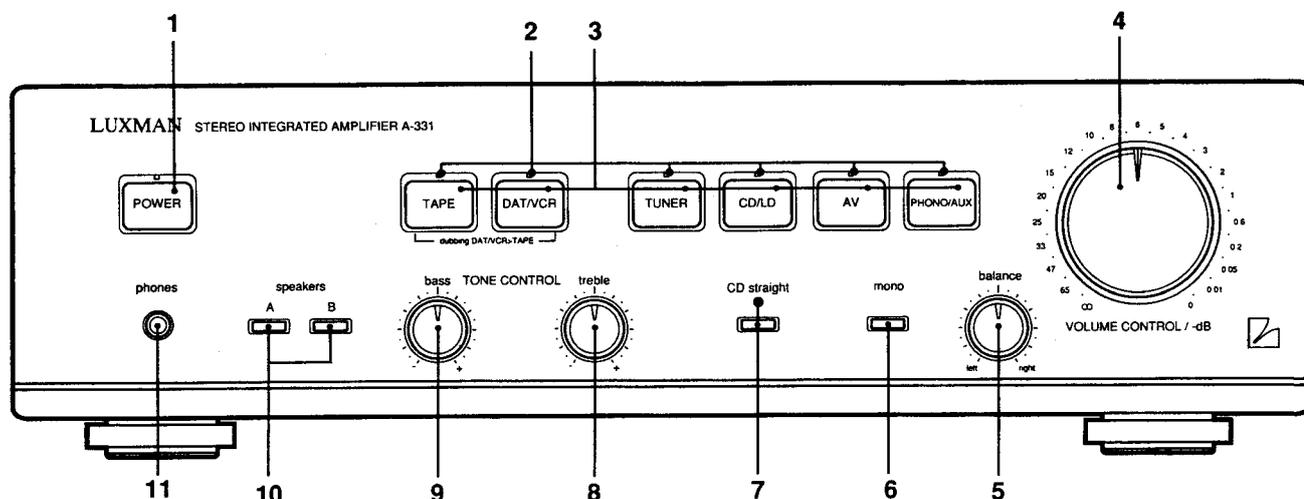

Tape dubbings from the DAT deck to the audio tape deck may be performed through the A-321/A-311.

1. Press both "DAT" and "TAPE" buttons (item #3) of the Input selector on the A-321/A-311.
2. Load a prerecorded tape into the DAT deck and a blank tape into the audio tape deck.
3. Place the DAT deck in the play mode and the audio tape deck in the recording mode. When audio tape decks are connected to the "DAT IN and OUT" jacks (item #17) on the A-321/A-311, dubbing operation can be performed from the audio tape deck connected to the DAT IN jacks to the audio tape deck connected to the DAT OUT jacks.

## <A-331 Model>

# Names and Functions of Parts

### Front Panel

#### 1. "POWER" button and indicator

Pressing this button turns the unit on and off. First, the Operation indicator lights up when this button is depressed, and then the time delay muting circuit is turned on, putting the amplifier into perfect operational condition in about 5 seconds.

#### 2. Input Select indicators

The LED indicator for the selected input source will light up to tell which source is selected with the Input Select buttons (item #3).

#### 3. Input Select buttons

Press one of these buttons to select any one of six sources; TAPE, DAT/VCR, TUNER, CD/LD, AV, PHONO/AUX.

#### 4. "VOLUME CONTROL"

Allows precision, low noise adjustment of volume level. It is recommended that the volume control be set to a low position prior to power turn on and when switching between sources.

#### 5. "balance" control

Adjusts for unequal volume level between channels. Normally, with today's high quality sources, it is seldom necessary to move this control from its precision centre detent position.

#### 6. "mono" button

Place in the mono (in) position for mono sources, for balance control adjustment, for lower noise operation from high noise stereo source, or for checking speaker phasing. Otherwise, leave it in the stereo (out) position.

#### 7. "CD straight" button and indicator

For optimum sound quality in CD operation, press this button to bypass control and switching functions.

#### Note:

Be sure "CD straight" button is in the OFF (out) position when using sources other than CD.

#### 8. "treble" control

This control will increase or decrease high frequency content in the program material. At the centre detent position, a flat frequency response results.

**9. "bass" control**

This control will increase or decrease low frequency content in the program material. At the centre detent position, a flat frequency response results.

**10. "speakers A and B" buttons**

Two sets of stereo speaker systems may be used with the A-331; A and B buttons corresponding with "SPEAKERS A and B" terminals (item #17) on the rear panel. You may choose independent or simultaneous operation of the two systems by using these buttons.

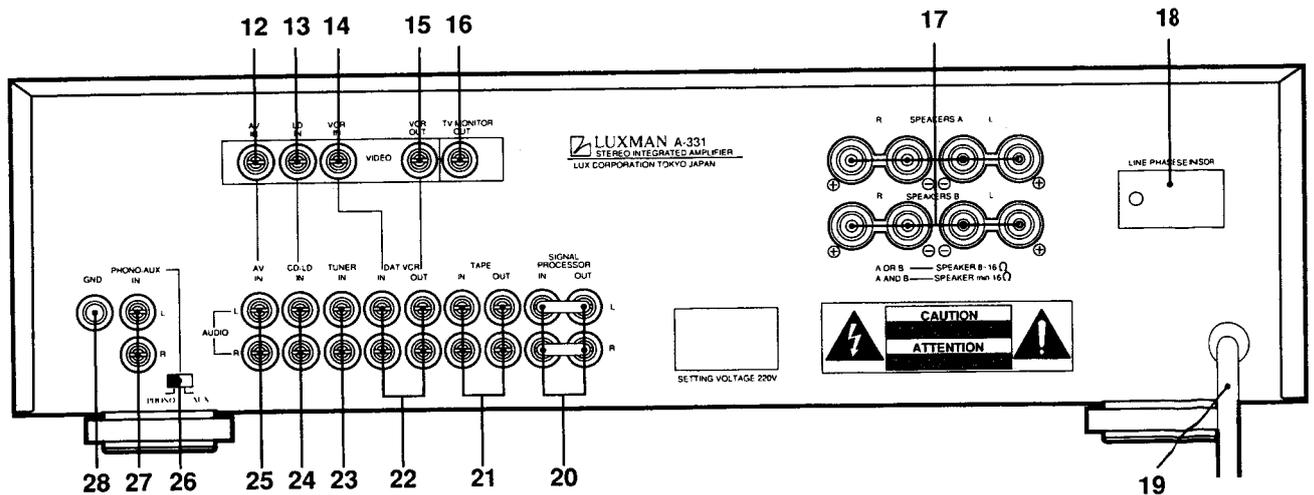

**Note:**

The impedance of each speaker system should equal or exceed 8 ohms when driving two sets at the same time.

**11. "phones" jack**

Connection of stereophonic headphones to this jack allows private listening. There is signal at the jack at all times. Placing the "speakers A and B" buttons (item #10) in the OUT position, will allow private listening.

**Rear Panel**

**12. "VIDEO AV IN" jack**

Connect the video output of a VCR, Laser Disc Player, etc. to the "VIDEO AV IN" jack of the A-331.

**13. "VIDEO LD IN" jack**

Connect the video output of a Laser Disc Player to the "VIDEO LD IN" jack of the A-331.

**14. "VIDEO VCR IN" jack**

Connect the video output of a VCR to the "VIDEO VCR IN" jack of the A-331.

**15. "VIDEO VCR OUT" jack**

Connect the video input of a VCR to the "VIDEO VCR OUT" jack of the A-331.

**16. "VIDEO TV MONITOR OUT" jack**

Connect the video input of a TV to the "VIDEO TV MONITOR OUT" jack of the A-331.

**17. "SPEAKERS A and B" terminals**

You may connect 2 pairs of stereo speaker systems to these terminals, one pair to the upper "A" terminals and a 2nd pair to the lower "B" terminals.

The speaker systems may be switched on and off by the front panel "speakers A and B" buttons (item #10).

**18. "LINE PHASE SENSOR" indicator**

When plugging the AC power cord into the wall outlet, check the polarity of the AC power cord at this sensor and indicator. When the sensor is touched after connecting the AC power cord, the polarity is correct if the indicator remains unlit. If the indicator lights up, unplug the AC power cord then plug its other side into the AC wall outlet.

**Note:**

Check the polarity before any other sources. If you live in a flat building where the power supply is floating, the indicator may not change status.

**19. AC Power Cord**

Insert the AC plug of the A-331 into an appropriate wall outlet.

**20. "SIGNAL PROCESSOR IN and OUT" jacks**

For connection of a surround sound processor, an equalizer or other signal processor as desired.

**Note:**

Jumper bars are factory installed in these jacks. They need to be removed only when connecting a processor. Retain for possible future reuse.

**21. "TAPE IN and OUT" jacks**

Connect the LINE IN and LINE OUT jacks of your audio tape deck to these OUT and IN jacks respectively.

**22. "DAT/VCR IN and OUT" jacks**

Connect the LINE IN and LINE OUT jacks of your DAT or VCR to these OUT and IN jacks respectively.

**23. "TUNER IN" jacks**

This set of jacks is for connection of a tuner. They may also be used for any other high level signal source as well.

**24. "CD/LD IN" jacks**

This set of jacks is for connection of a CD (compact disc) player or LD (laser disc) player. They may also be used for any other high level signal source as well.

**25. "AV IN" jacks**

Connect the audio output of a VCR, Laser Disc Player, etc. that is connected to the "VIDEO AV IN" jacks (item #12) of the A-331.

**26. "PHONO/AUX" switch**

If a phono turntable is not required in the system, this switch allows the phono jacks (item #27) to be used as an additional set of high level inputs. Move it to the "AUX" position for connection of an additional CD player, Tape deck, etc.

**CAUTION:** Be sure the volume control is set to minimum when setting this switch.

**27. "PHONO/AUX IN" jacks**

A moving magnet (MM) type phono cartridge may be connected to these inputs. Also, they may be used as an additional set of high level inputs (see item #26).

**CAUTION:** When these jacks are used for high level inputs, ensure that the "PHONO/AUX" switch (item #26) is set to "AUX" to prevent possible damage to the amplifier and speakers.

**28. "GND" terminal**

Connect the common (ground) lead of your phono turntable to this terminal.

## Operation Guidelines

The following guidelines assume that all connections have been made according to the "Reference Illustrations," page 4.

### Power and Source Switching

To prevent the possibility of excessive, sudden sound levels, it is recommended that the volume control be placed at a low level position each time the power button is turned on or when switching between sources by the INPUT SELECTOR.

### To Play Source Units

1. Turn the power on to all the components in use.
2. Choose your desired source with the Input Selector buttons (item #3).
3. Operate the source unit.

## Tape Recording Operation

### Tape Recording

1. Select the desired source to be recorded with the Input Selector buttons (item #3) and place the source unit into the play mode.
2. Operate the tape deck for recording.
3. If you have a 3 head deck or a DAT with monitoring function, you can monitor the actual recording by depressing the corresponding "TAPE" or "DAT/VCR" buttons (item #3) on the A-331.

### Tape Dubbing

Tape dubbings from the DAT/VCR deck to the audio tape deck may be performed through the A-331.

1. Press both "DAT/VCR" and "TAPE" buttons (item #3) of the Input selector on the A-331.
2. Load a prerecorded tape into the DAT deck and a blank tape into the audio tape deck.
3. Place the DAT deck in the play mode and the audio tape deck in the recording mode. When audio tape decks are connected to the "DAT/VCR IN and OUT" jacks (item #22) on the A-331, dubbing operation can be performed from the audio tape deck connected to the DAT/VCR IN jacks to the audio tape deck connected to the DAT/VCR OUT jacks.

# Disassembly Instructions

## 1. Removal of Front Panel

- (1) After removal of Top Cover, remove Volume Control Knob, Balance Volume Knob, Treble and Bass Volume Knobs and then remove Nut for that the Volume Knobs as shown in Figure 1.
- (2) Remove fourteen screws marked "○" as shown in Figures 2 and 3.
- (3) Front Panel with Function P.C.Board and LED P.C.Board can be removed completely.

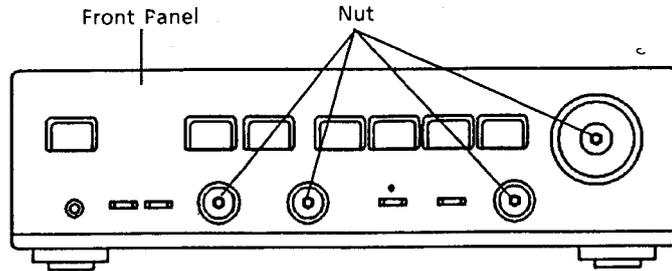

Figure 1

## 2. Removal of Function P.C.Board, LED P.C.Board

- (1) Remove six screws marked "△" and "▲" as shown in Figure 3.
- (2) Disconnect all wires from the Main P.C.Board, Sub P.C.Board and Main VR P.C.Board.

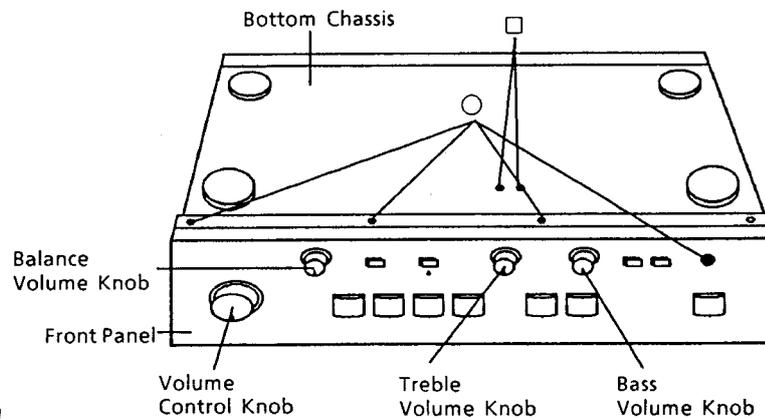

Figure 2

## 3. Removal of Power SW P.C.Board

- (1) Remove one screw marked "▽" as shown in Figure 3.
- (2) Disconnect all wires from the Power SW P.C.Board.

#### 4. Removal of Sub P.C.Board

- (1) After removal of Front Panel, remove one Support P.C.Board marked "■" from Sub P.C.Board as shown in Figure 4, by pushing the point "A" as shown in Figure 5.
- (2) Remove three screws marked "●" as shown in Figure 4.
- (3) Disconnect all wires from the Sub P.C.Board.

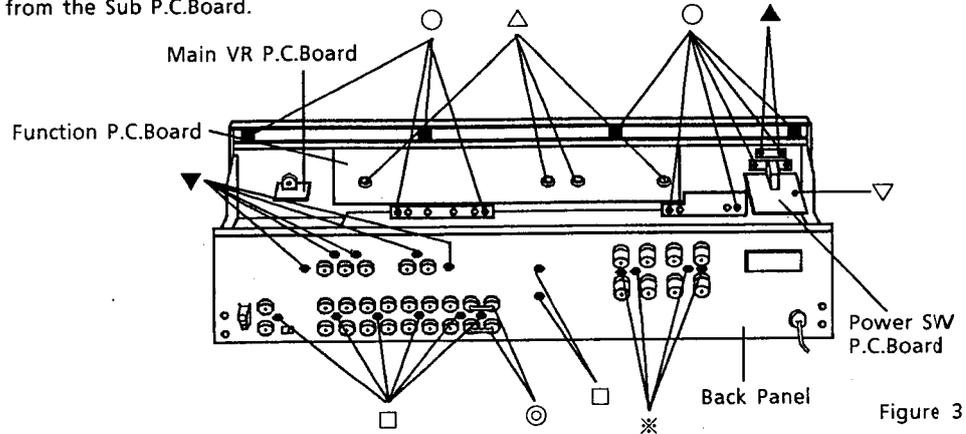

Figure 3

#### 5. Removal of SP Terminal P.C.Board

- (1) Remove four screws marked "※" as shown in Figure 3.
- (2) Disconnect all wires from the SP Terminal P.C.Board.

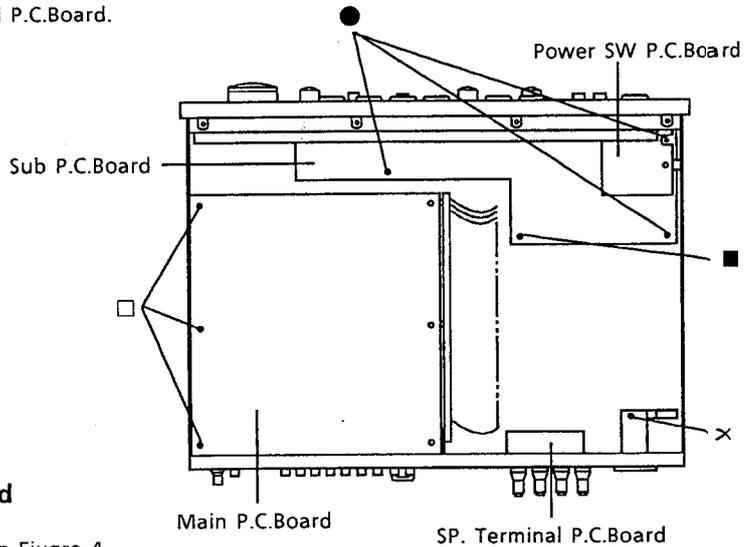

Figure 4

#### 6. Removal of Phase Sensor P.C.Board

- (1) Remove one screw marked "x" as shown in Figure 4.
- (2) Push rib in the Holder (B) and pull out as shown in Figure 6.
- (3) Disconnect all wires from the Phase Sensor P.C.Board.

### 7. Removal of Main P.C.Board

- (1) Remove two Jumper pins marked "⊙" as shown in Figure 3.
- (2) Remove thirteen screws marked "□" as shown in Figures 2, 3 and 4.
- (3) Disconnect all wires from the Main P.C.Board.

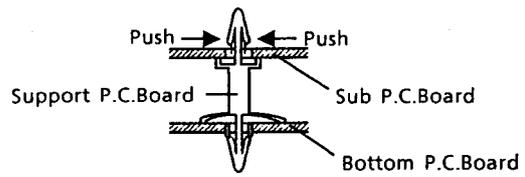

Figure 5

### 8. Removal of Video P.C.Board (A-331 Model only)

- (1) Remove five screws marked "▼" as shown in Figure 3.
- (2) Disconnect all wires from the Video P.C.Board.

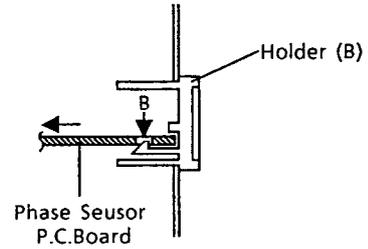

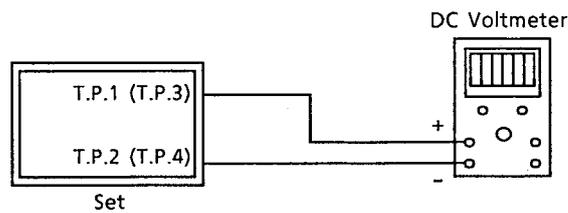

Figure 6

## Adjustment Procedures

### 1. Connection

<Figure 7>

### 2. Control Settings

Power Switch ..... ON  
Others ..... OFF

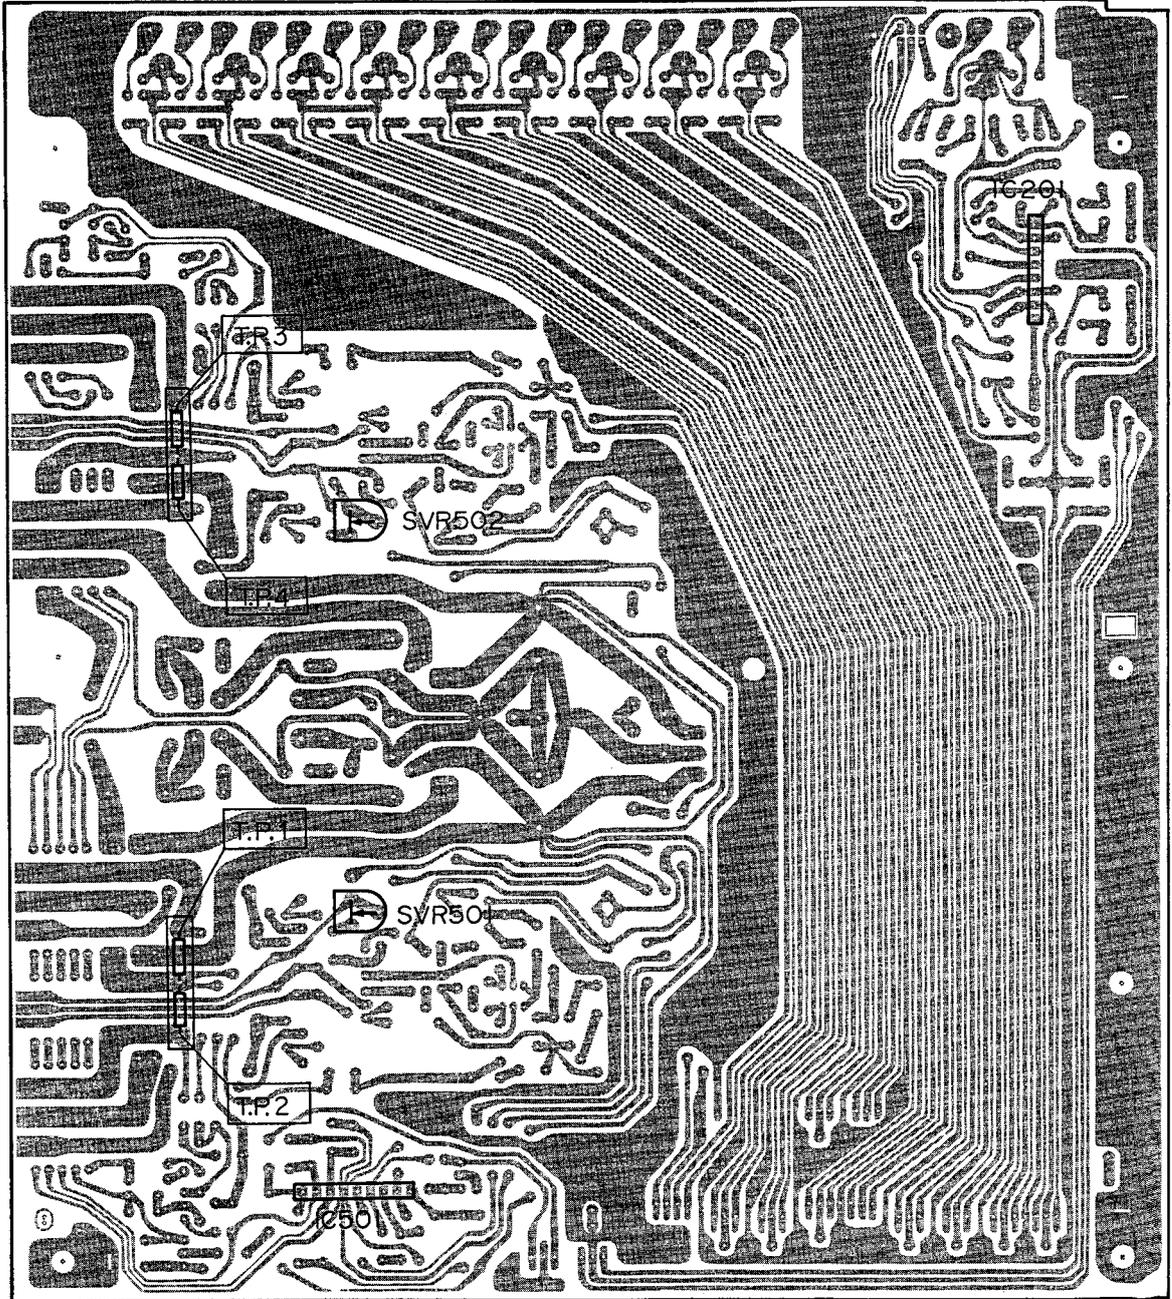

### 3. Adjustment Procedures

#### ● Idlin Adjustment

- (1) Set VR301 (main volume) to its minimum.
- (2) Adjust SVR501 (SVR502) so that the voltage between T.P.1 (T.P.3) and T.P.2 (T.P.4) is 3.3mV.

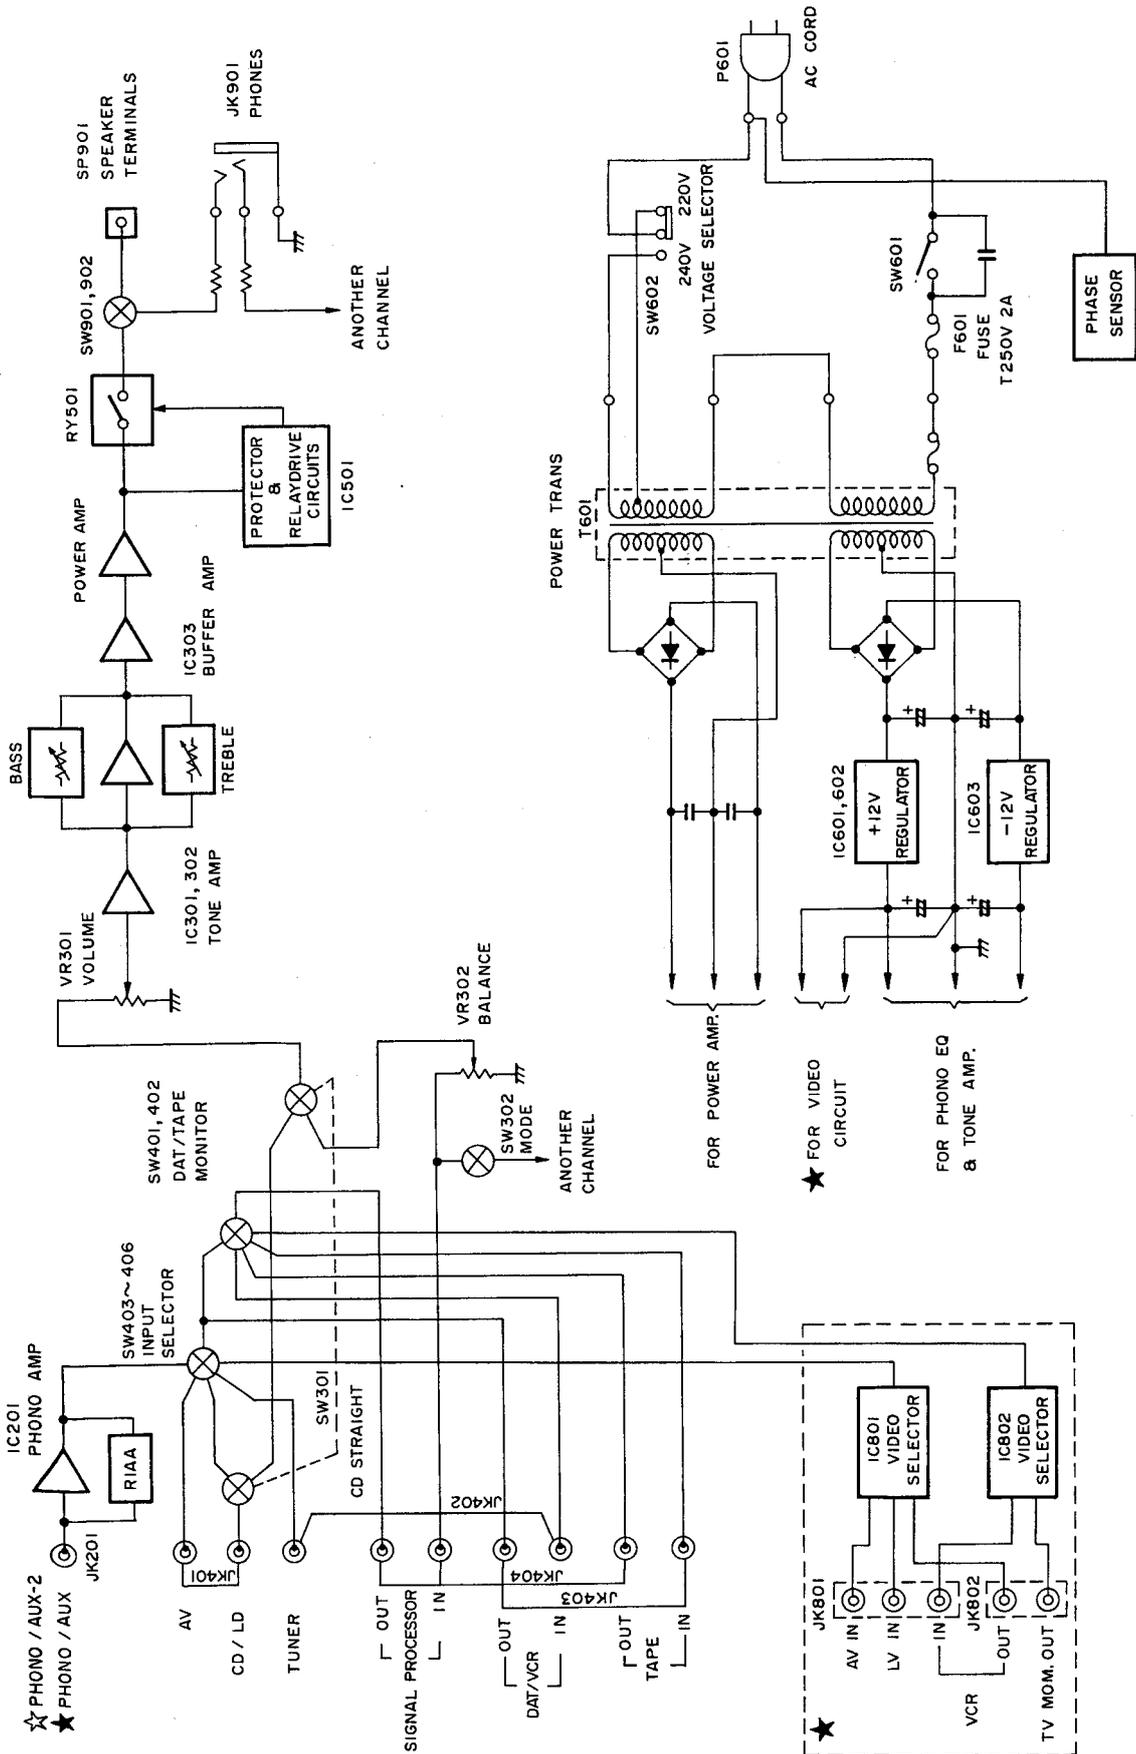

**Note:** Wait about 3 minutes after turning ON the power to make the above adjustment.
