RATINGS (Design Center Values)

Plate Voltage.....	250 Volts Max.
Plate Dissipation.....	2.5 Watts Max.
D C Cathode Current.....	25 Ma Max.
Grid Circuit Resistance.....	0.5 Megohms Max.

CHARACTERISTICS AND TYPICAL OPERATION

Class A1 Amplifier

Plate Voltage.....	200 Volts
Grid Voltage.....	-1.0 Volts
Plate Current.....	15 Ma
Transconductance.....	9500 μmhos
Amplification Factor.....	70
Plate Resistance (approx.).....	7400 Ohms
E_c for $I_b = 100 \mu\text{a}$ (approx.).....	-9 Volts

NOTE:

1. Heater warm-up time is defined as the time required for the voltage across the heater to reach 80 % of its rated value after applying four (4) times rated heater voltage to a circuit consisting of the tube heater in series with a resistance equal to three (3) times rated heater voltage divided by rated heater current.

APPLICATION

The Sylvania Types 2ES5, 3ES5 and 6ES5 are semi-remote cutoff triodes designed for use as VHF RF amplifiers. Features of the design include: A partial shield between the grid and plate which lowers the capacitance between these two elements and promotes ease of neutralization; low input capacitance; and higher input impedance by virtue of dual cathode leads.
