NOTE:

1. *Visual extinction of focused raster. Extinction of stationary focused spot will require that these values be about 5 volts more negative.*

WARNING:

X-ray radiation shielding may be necessary to protect against possible danger of personal injury from prolonged exposure at close range if this tube is operated at higher than the manufacturer's Maximum Rated Anode Voltage or 16,000 volts, whichever is less.

DIAGRAM NOTES:

1. Reference line is determined by the plane C-C' of JEDEC No. 116 reference line gauge when the gauge is seated against the bulb.
2. Base Pine No. 6 aligns with horizontal centerline within 30° and is on same side as anode contact (J1-21).
