

AMPEREX ELECTRONIC CORPORATION

230 DUFFY AVENUE HICKSVILLE, L. I.

AMPEREX ELECTRON TUBE 6252/AX-9910

The 6252/AX-9910 is a double tetrode primarily intended for use as class C amplifier at frequencies up to 600 Mc. Each anode is capable of dissipating 10 watts. The cathode is indirectly heated, oxide coated.

GENERAL

ELECTRICAL DATA

Heater sections connected in series

	Min.	Nominal	Max.
Heater voltage	11.35	12.6	13.85 volts
Heater current	0.55	0.65	0.75 amp

Heater sections connected in parallel

Heater voltage	5.7	6.3	6.9 volts
Heater current	1.1	1.3	1.5 amps

Amplification factor

$G_2 - G_1$ Mu at $I_b = 20$ ma	6.5	8.0	9.5
Transconductance at $I_b = 20$ ma		2500	micromhos

DIRECT INTERELECTRODE CAPACITANCES

Input (each section)	5.9	6.5	7.1 uuf
Output (each section)	2.1	2.6	3.1 uuf
Input (push-pull)		4.4	uuf
Output (push-pull)		1.6	uuf

MECHANICAL DATA

Mounting position	any
Temperature of seals	max. 180 °C

Plate connectors providing a high degree of heat transfer by radiation or by conduction should be used. Generally natural cooling is sufficient with a plate voltage of

600 volts at frequencies up to 150 Mc
500 volts at frequencies up to 200 Mc
300 volts at frequencies up to 430 Mc

Above these limits or with high ambient temperatures it may be necessary to direct an airflow of about 0.5 cu. ft. per min. on top of the bulb to keep the seal temperature within the stated limit.

Net weight 2 Oz.
