INSTALLATION AND APPLICATION

The base pins of the 112-A fit the standard four-contact socket which should be installed to hold the tube in a vertical position.

As a **detector**, the 112-A may be operated either with grid leak and condenser or with grid bias. For grid-bias detection, plate voltages up to the maximum value of 180 volts may be used with the corresponding negative grid-bias voltage (21 volts approximately, at 180 volts).

As an **amplifier**, the 112-A should be operated as shown under CHARACTERISTICS.
