

AMPEREX TUBE TYPE 4EH7/YF183

TENTATIVE DATA

The Amperex 4EH7/YF183 is a frame grid remote cut-off pentode designed for use as an IF amplifier in television receivers. Its high variable transconductance, with low interelectrode and low feed back capacitance, enables the construction of simplified broad band amplifiers with high stability. The higher gain per stage in many instances reduces the number of tubes required in the television IF strip. The 4EH7/YF183 is designed for 450 mA controlled warm-up series string operation.
