The 6076A is a ceramic and metal version of the 6076. It is an external anode tetrode for R.F. power amplifier service.

The 6076A is particularly suited for use in broadcast transmitters including VHF television.

The external anode of this tube is capable of dissipating 3.0 kW. The maximum frequency rating is 220 MHz.

¹ Both pins must be used to make connection to the control grid at frequencies above 30 MHz.

² To keep the temperature of the seals below this value, it may be necessary to direct an air flow of sufficient velocity to the seals.

³ Represents maximum usable cathode current for any condition of operation.
