

"SHADOW-GRID" BEAM PENTODE

DESCRIPTION AND RATING

FOR VHF RF AMPLIFIER APPLICATIONS

The 6FS5 is a miniature tube, similar in construction to a beam pentode, with an internally connected grid between the control grid and the screen grid, which serves to reduce the ratio of screen current to plate current. The tube is designed for use as a radio-frequency amplifier in VHF television receivers.

GENERAL

ELECTRICAL

Cathode—Coated Unipotential		
Heater Voltage, AC or DC*	6.3 $\pm$ 0.6	Volts
Heater Current†	0.2	Amperes

With
ShieldWithout
Shield‡

Direct Interelectrode Capacitances

Grid Number 1 to Plate: (g1 to p)	0.016	0.03	pf
Input: g1 to (h+k+g2+g3+b.p.)	4.8	4.8	pf
Output: p to (h+k+g2+g3+b.p.)	2.8	2.0	pf

MECHANICAL

Mounting Position—Any
Envelope—T-5½, Glass
Base—E7-1, Miniature Button 7-Pin

MAXIMUM RATINGS

DESIGN-MAXIMUM VALUES

Plate Voltage	300	Volts
Screen Voltage	150	Volts
Positive DC Grid-Number 1 Voltage	0	Volts
Negative DC Grid-Number 1 Voltage	50	Volts
Plate Dissipation	3.25	Watts
Screen Dissipation	0.15	Watts
DC Cathode Current	20	Milliamperes

Heater-Cathode Voltage

Heater Positive with Respect to Cathode

DC Component	100	Volts
Total DC and Peak	200	Volts

Heater Negative with Respect to Cathode

Total DC and Peak	200	Volts
-------------------	-----	-------

Grid-Number 1 Circuit Resistance

With Fixed Bias	0.5	Megohms
-----------------	-----	---------

CHARACTERISTICS AND TYPICAL OPERATION

AVERAGE CHARACTERISTICS

Plate Voltage.....	275	Volts
Screen Voltage.....	135	Volts
Grid-Number 1 Voltage.....	-0.2	Volts
Plate Resistance, approximate.....	0.24	Megohms

* The equipment designer should design the equipment so that heater voltage is centered at the specified bogey value, with heater supply variations restricted to maintain heater

Transconductance.....	10000	Micromhos
Plate Current.....	9.0	Milliamperes
Screen Current.....	0.17	Milliamperes
Grid-Number 1 Voltage, approximate		
Gm = 100 Micromhos.....	-5	Volts

voltage within the specified tolerance.

† Heater current of a bogey tube at $E_f = 6.3$ volts.

‡ With external shield (EIA 316) connected to pin 7.

Design-Maximum ratings are limiting values of operating and environmental conditions applicable to a bogey electron tube of a specified type as defined by its published data and should not be exceeded under the worst probable conditions.

The tube manufacturer chooses these values to provide acceptable serviceability of the tube, making allowance for the effects of changes in operating conditions due to variations in the characteristics of the tube under consideration.

The equipment manufacturer should design so that initially and throughout life no design-maximum value for the intended service is exceeded with a bogey tube under the worst probable operating conditions with respect to supply-voltage variation, equipment component variation, equipment control adjustment, load variation, signal variation, environmental conditions, and variations in the characteristics of all other electron devices in the equipment.

The tubes and arrangements disclosed herein may be covered by patents of General Electric Company or others. Neither the disclosure of any information herein nor the sale of tubes by General Electric Company conveys any license under patent claims covering combinations of tubes with other devices or

elements. In the absence of an express written agreement to the contrary, General Electric Company assumes no liability for patent infringement arising out of any use of the tubes with other devices or elements by any purchaser of tubes or others.
