

3C27 – UHF Transmitting Triode

UHF transmitting triode rated for pulsed operation. Similar to British [CV55](#) and E1458, but with a coaxial filament plug that replaces the flying leads available on the British types.

2.5A at 6.3V filament.

Unknown production, partially updated to [3C27B](#), with added finned radiator for improved grid dissipation when operating at high duty cycle. Photos of 3C27 samples and of 3C27 factory updated to 3C27B are available below.
