Peak heater cathode voltage

- Heater negative with respect to cathode :

during equipment warm-up periode not exceeding 15 seconds 450 max. volts

After equipment warm-up period 200 max. volts

- Heater positive with respect to cathode 200 max. volts

Grid n°1 circuit resistance 1.5 max. megohms

TYPICAL OPERATING CONDITIONS

Cathode drive Service

Anode to grid n°1 voltage 16 000 volts
Grid n°2 to grid n°1 voltage 400 volts
Grid n°2 current -15 to +15 ua
Grid n°4 to grid n°1 voltage (1) 0 to 400 volts
Grid n°4 current -25 to +25 ua
Cathode to grid n°1 voltage for visual extinction of focused
raster 42 to 72 volts
Field strength of adjustable centering magnet. 0 to 8 gauss

- (1) The grid n°4 voltage required for optimum focus of any individual tube may have a value anywhere between 0 and 400 volts. It is independent of anode current and will remain essentially constant for values of anode voltage or grid n°2 voltage within design ranges shown for these items.

It is necessary to provide means such a potentiometer for adjusting the focusing voltage.

NOTES for DIMENSIONAL OUTLINE

- Note 1 - The plane through the tube axis and pin 4 may vary from the plane through the tube axis and anode terminal by angular tolerance (measured about the axis) of $\pm 30^\circ$. Anode terminal is on same side as pin 4.
- Note 2 - Socket for this base should not be rigidly mounted; it should have flexible leads and be allowed to move freely. The design of the socket should be such that the circuit wiring cannot impress lateral strains through the socket contacts on the base pins. Bottom circumference of base wafer will fall within a circle concentric with bulb axis and having a diameter of $1 \frac{3}{4}$ ".
- Note 3 - Width of undisturbed region between mold-match line and splice line is $19/32$ " minimum. This should be the maximum width of tube support band.
- Note 4 - With tube neck inserted through flared end of the reference-line gauge JEDEC G.126 and with tube seated in gauge, the reference-line is determined by the intersection of the plane CC' of the gauge with the glass funnel.
- Note 5 - This surface has a radius of $48 \frac{1}{4}$ ".
