## Vintage Radio Auction

**Saturday, July 21, 2012 - 10AM EST**

At the Expo Auction Center  
8157 Garman Rd., Burbank Ohio

From I-71 Exit #204 turn south on SR #83 then turn left at  
the Love's gas station onto Garman Rd., follow it ¾ mile to the auction.

Featuring radios of all types and includes a nice selection of amateur radio equipment listed on a separate flyer. This auction will offer a group of console style radios from a collection out of New York and they are all in very nice condition. Different makes of cathedral and tombstone radios with several Atwater-Kents, many battery sets, horn type speakers with a beautiful Burns petal style speaker. Magnavox, Atwater-Kent, Radiola and more. Lots of cone type speakers, Atwater-Kent, Crosley, several Western Electric needing reconditioned. Many headphones, different brands, lots of table radios to sell - wood type and bakelite types. There are table top wind-up phonographs, console phonographs, a large quantity of 78 RPM disc records, an Edison standard phonograph, Ediston cylinder records, Edison diamond disc records. We will offer a great selection of tubes including Western Electric tennis ball type and others. Lots of 201A, 301A, UX-199 - UV-199, Blue Arcturus, 112, 200, WD-11, WD12, 45, 47, 80, 6L6, 2A3, ST style 50, 26, 27, 30, and many amateur transmitting tubes. A big selection of radio test equipment, several tube checkers, signal generators, capacitor checkers, scope, volt meters, and more. Books and magazines - reference types, price guides, radio news, radio craft, Beitman radio repair manuals Riders, citizens radio call book, several early wireless age magazines, lots of radio parts - capacitors, resistors, knobs, tuning capacitors. We have several telegraph sounders, parts bins, utility cabinets and other radio related items. There are audio pieces, tuners, amps, reel to reel tape recorders, some audio tubes. This will be another good auction and we look forward to seeing you there and the week before at the Marc Extravaganza in Lansing. We will be auctioning a **RARE Spartan Nocturne** radio at the meet. This is the RAREST and most highly prized and sought after radio of the wonderful Art Deco period of the 1930's. Hope to see you there!

***Don't forget the Early Sale from 8:30 AM until 10 AM***

**Terms: Cash/Check/Visa/MasterCard; 5% Gallery Fee**

## THE HISTORY OF RADIO ON CD-ROM

Radio Era Archives produced the *QST-VIEW* series of CD's for the American Radio Relay League (ARRL) and over 1/2 million CD's have been sold. *QST* Magazine has been continuously published since 1915. We are now proud to announce that this small mountain of CD's (about 35) is now available exclusively from REA (All Sets) ! Every magazine published from 1915 to 1994, front cover to back cover, every article and column, all accessible with our database search engine.

**QST-VIEW CD Edition** truly captures the history of radio in 11 volumes. All CD's warranted to work on all Windows platforms from Windows 95 through XP. Each set is \$ 39.95 and we have all sets in stock. The sets are: 1915-1929, 1930-1939, 1940-1949, 1950-1959, 1960-1964, 1965-1969, 1970-1974, 1975-1979, 1980-1984, 1985-1989, 1990-1994. Each set of years is a self-contained set so you can operate one or all sets together. Now that large capacity hard drives are so inexpensive, the 36 CD's can be loaded on about 20Gb of hard disc space for instant searching and viewing without having to swap discs! Full information is provided with each purchase and *QST-VIEW* has on-line instructional help for operating the *QST-VIEW* browser!

**EACH SET \$ 39.95 (specify the years)**

**ALL 11 SETS \$ 379**

**S&H USA for first set is \$ 5.00, add \$ 1.00 each set thereafter**

**S&H Export first set is \$ 15.00, add \$ 2.00 for each set thereafter**

### 2009 1/2 PRICE SPECIAL (while supply lasts)

Don't forget, we have the entire John Rider's Perpetual Troubleshooters Manuals on a single DVD. All 23 Volumes of the Riders available at the click of a mouse! Over 120,000 different model radio schematics and related service information in an easy to use DVD. **Thousands sold at \$ 199. SPECIAL \$ 99 + \$ 6.00 S&H in the USA, add \$12 for worldwide delivery. Order Now while supply lasts !**

**We now have a small mountain of vacuum tubes at very competitive prices - Thousands sold since our first posting of these tubes. All types including receiving and transmitting types. Tube price listings on the web:**  
<http://www.radioera.com/tubes.asp>

### **SCHEMATIC DIAGRAM & MANUAL SERVICE**

Over a Million schematics & 100,000 manuals and growing! Schematics and most manuals may be emailed instantly via the internet

Unfortunately, A.R.C. is not staffed to answer all letters with questions about antique radios or requests for advice. However A.R.C. does solicit letters of interest from its readers and publishes them as space permits.

**ADVERTISING.** Display and Classified advertising rates and artwork specifications are available on the web site.

**CHANGE OF ADDRESS.** Please notify us in advance of a change of address. Send your new address, your old address, your SUB# and the effective date of the change.

**PUBLISHING RIGHTS.** Unless other arrangements are made: (1) All received materials (ads, articles, letters, correspondence, email, photos, artwork, etc.) become the property of A.R.C., may be edited, combined with other material, published, and will not be returned. (2) For all received materials, A.R.C. is granted publishing and reprint rights in all forms of media including the monthly printed magazine, internet, etc. (3) Publication is subject to approval by A.R.C. and to time and space constraints.

**DISCLAIMER.** The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

**NOTICE.** Subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.

**ATTENTION SUBSCRIBERS:** All paid subscribers receive a **FREE** classified ad of up to 50 words in each issue.

## Publisher's Comments

Over the past couple of years I've noticed a decrease in television receivers at many meets. It also seems that the number of TV-related auctions has gone down. If true, this is a real shame. Televisions represent another fascinating part of broadcasting history, one that *A.R.C.* certainly values. But while the number of TVs may have dropped a bit, the amount of vintage audio equipment has increased. I'm not sure if this is a trend that will continue or is just temporary, but it's worthy of notice. Other venues like eBay reflect what's happening at our meets. The number of vintage audio equipment auctions is huge. Even the audio vacuum tube auctions have taken off—not only in quantity but also in prices realized. Just recently I noticed an auction of used JAN 6SN7 tubes that garnered prices of \$100 each!

Let us know if you have made similar observations at the events and meets you attend or on the auction websites. We'd like to publish your findings.

But proudly bucking this maybe-trend this month, we're delighted to feature a nice television restoration article by Lou Tramontozzi. Lou brought back to life a rare 1948 Raytheon 10DX24 porthole-style TV. Restoring TVs has never been easy—every bad capacitor in the video circuits is always visible on the screen! It makes for an interesting challenge for any serious hobbyist.

If you live in or find yourself visiting eastern Ohio this summer, we suggest you stop in at the Early Television Museum in the town of Hilliard, near Columbus. This month we have an article on the history of the museum that also highlights some items in its impressive collection. Whether you collect TVs or not, it's a fantastic place to visit. The collection is nicely displayed and contains examples from the early mechanical to the electronic receivers we're all familiar with. Every May the museum also hosts an excellent television convention. Be sure to check it out.

In this issue *A.R.C.* also welcomes back Mike Adams, who shares an article on Lee de Forest. We all know de Forest and his radio contributions, but here Mike concentrates on de Forest's film and television work. And Mike really knows his stuff: he's the author of the recently published *Lee de Forest – King of Radio, TV, and Film*.

Finally, this month's "Photo Review" takes on a different format. Recently a box containing original photographic slides from the Philco Corporation were found in a murky basement (what could be better?!). There were some 80 color slides that were used in late 1954 by Philco salespeople to promote the upcoming 1955 line of radios, televisions, and phonographs. While some readers may feel this covers items that are "almost modern," it's fascinating to get a glimpse at how Philco marketed them, including using in-store merchandising displays. You can see the photographs in color on the *A.R.C.* website.

On a side note, we haven't been receiving many submissions for the "Photo Review," and we really need those to keep running the section. All you have to do is take a photo and send it in by mail or email with a short description. How about it?

As always, I would like to wish everyone happy collecting and a great summer!

Jon Kummer  
Publisher

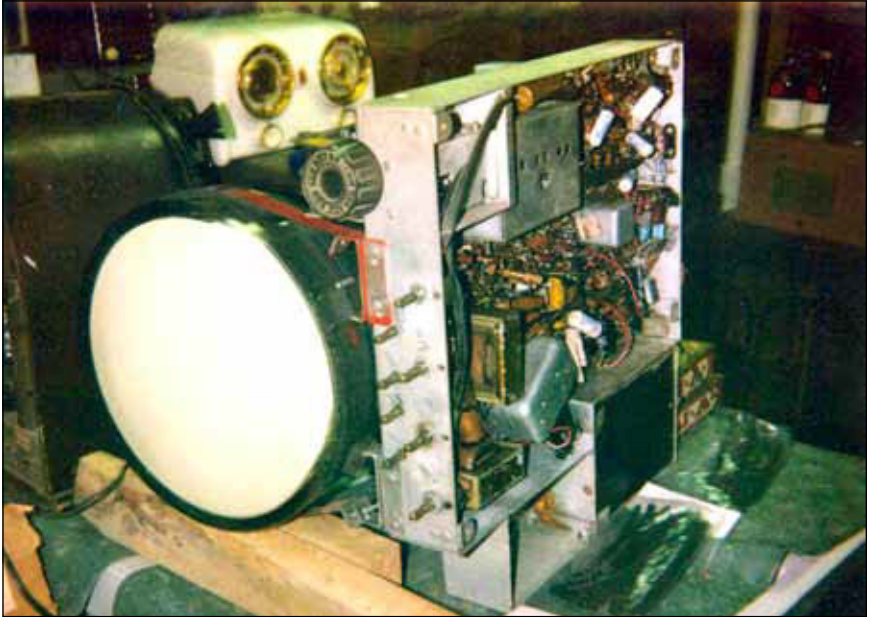

### On The Cover

This month's cover features one of the 1955 Philco photographic slides from a recent basement "rediscovery" (see "Photo Review" starting on page 14). Philco called this merchandising display the "Finger Tip Wrap." It promoted the easy fingertip-tuning of the company's television receivers.

# TELEVISION RESTORATION

## Restoration of a Raytheon 10DX24 Television Set

BY LOU TRAMONTOZZI, KA1HIH

*Figure 1. Raytheon 10DX24 front view.*

I have restored a good number of old black & white television sets in my day, but I have to say that my restoration of a Raytheon 10DX24 was difficult! I acquired this TV in fairly decent shape from an owner advertising it on Craigslist.

It's a fairly rare TV, built in 1948. Officially, it is a Raytheon-Belmont TV; that is, it was marketed under the Belmont label, a Raytheon subsidiary for radio and television products. At that time, Raytheon had a brief flirtation with the marketing of commercial radio and television sets. Unfortunately, it was out of the commercial business by the 1960s. I obtained a SAMS Photofact schematic for this unit from a former Raytheon employee.

The set is transformerless, meaning that the AC line is brought directly in, is rectified, filtered, and sent on to provide various B+ supplies in the chassis. Manufacturers wanted to get rid of the heavy, bulky, and expensive power transformer. There were *no* fuses or circuit breakers in this unit, and a component failure could easily cause a fire or open a fuse or circuit breaker in the house power panel. It uses 25 tubes, including a 10BP4 CRT, which was a fairly common 10-inch round CRT in its day. While to this day some designs remain transformerless, the chassis of the newer sets are better isolated from the outside world. Yet, I see that manufacturers are still omitting any type of line protection!

## Getting Started

**Warning:** Television receivers operate at voltages as high as 20,000 volts. Unless you have experience and knowledge of electronic devices, do not attempt to work on them due to the possibility of electric shock. Make sure to have all the necessary test equipment. These voltages are lethal!

The first thing I noticed in this chassis was that the selenium rectifiers used to create the B+ in the power supply were bad, a common occurrence in transformerless designs. After many years of sustaining a surge current from TV turn-on the rectifiers become lossy, overheat, and can no longer provide sufficient B+. I replaced each of these units with silicon diodes (600 PIV, 1 amp) and 10 ohm, 10 watt resistors in series with each diode. The power resistor is there to more closely simulate the loss provided by the original selenium unit(s) in operation. Without it—in other words, blindly replacing a selenium unit with a silicon diode and *no* series resistor—the B+ is way too high and could result in damage to other components, such as the filter capacitors, and/or improper chassis operation.

Only *after* replacing the rectifiers *and* the electrolytic filter capacitors in the chassis did I turn the unit on. All tubes should also be tested on a quality tube tester before applying power.

(NOTE: Power should *NEVER* be applied to a chassis that hasn't been checked for bad rectifiers and electrolytic capacitors in the power supply because of the danger or damage and/or fire!) I measured the resulting B+ value at various points and found it to be within specifications. I obtained a raster by feeding the TV with test video on Channel 3 from a VCR and using a balun into the chassis input 300 ohm twin-lead terminals. The resulting raster was rolling, out of sync, and had poor focus. I did note, however, that the distorted screen raster was very bright, indicating a healthy CRT after 60-plus years!

I then replaced every wax capacitor in the unit. Interestingly, some wax capacitors were in the oscillator-type HV unit (two 35L6 tubes in an oscillator unit to drive a HV rectifier) and not a more modern, common flyback type unit. I left these wax capacitors alone only because the HV unit oscillated at a low frequency, meaning that the capacitors were not required to do critical service. This is *not* true for other wax capacitors in this chassis; some are called upon to pass critical horizontal and vertical timing pulses. If these are distorted by poor capacitor function, the picture will suffer. After I replaced all the capacitors the unit functioned properly.

An interesting note here is that the schematic of the unit did not agree with the as-built TV

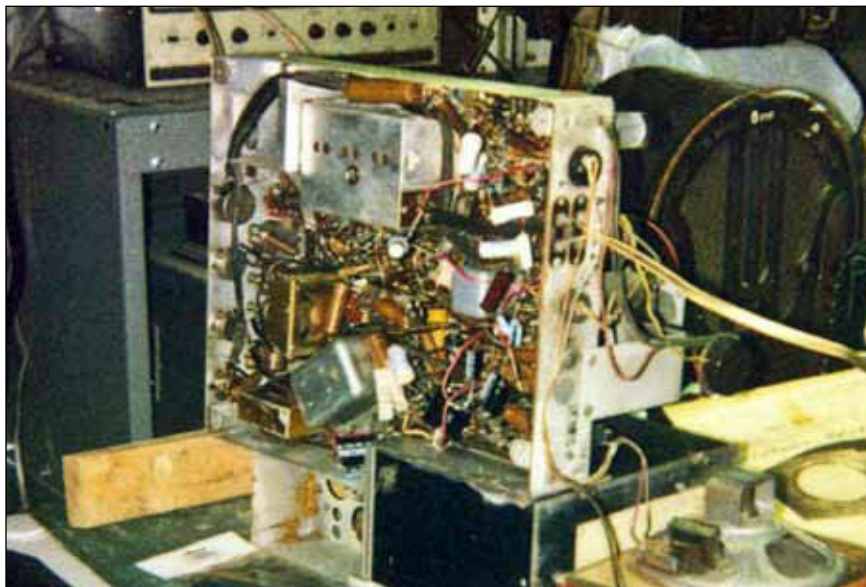

Figure 2. Raytheon 10DX24 bottom view.

in the area of the horizontal and vertical sweep drive circuitry. Perhaps there were changes in manufacturing being done “on the fly” for various lots of TVs being produced that did not get into the documentation, but it did cause me to scratch my head more than once!

## Restoration in Progress

**Figure 1** shows the Raytheon TV on the bench. Note the white ceramic capacitors (small, cylindrical units) that replaced the wax units previously used. An alternate view of the chassis is shown in **Figure 2**. The large black box shown attached to the chassis and sitting on the bench is the oscillator driven high voltage unit.

Not shown in these views is the RF tuner assembly, which employs several slug tuned coils attached to a moving carriage assembly. In the original design, the coils were attached to the carriage with retaining clips (see **Figure 3**).

As the carriage moved up and down in response to movement of the front rotary tuning dial, the tuning slugs moved up and down in concert with the carriage assembly. Most of the retaining clips for the slugs were either broken or missing. In an attempt to find a replacement for the clips, I discovered that plastic retaining clips with nails, as used to secure telephone wire to walls, had the proper

Figure 5. The restored TV in my guest room.

hole size to permit threading onto the slugs threaded rods. The nails that came with these clips were removed and the clips were threaded onto the slug rods and then secured to the moving carriage assembly using miniature tie wraps (see **Figure 4**).

With this arrangement, the tuner worked perfectly, once the slugs were aligned properly for channel tuning. Mechanical dimensions for alignment of the slugs were referenced in the SAMS Photofact.

Finally I sanded the cabinet for the unit and gave it several coats of lacquer for preservation. The end result is the completed 10DX24 with period rabbit ears and a digital converter box, which I keep in my guest room (see **Figure 5**).

With the clean signal provided by the box (no ghosts!) and the wide bandwidth provided by the TV, the picture detail is outstanding. Unfortunately, the tuning knob on the unit is not original, and I am currently searching for one. I have deliberately not added a reproduction back panel (which is available for sale, believe it or not) so that a visitor can easily look into the set from the rear and see it in operation.

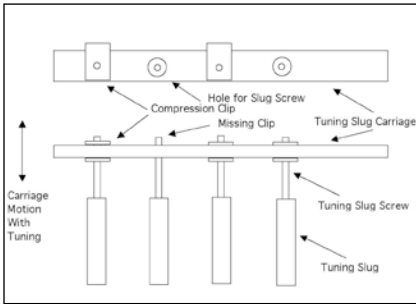

Figure 3. Slug tuned assembly.

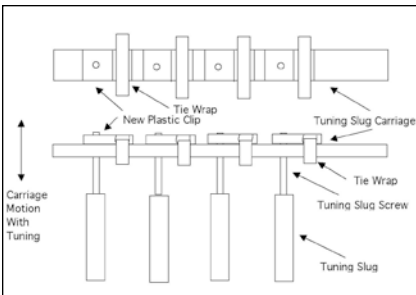

Figure 4. Slug tuned assembly with new clips.

*Lou Tramontozzi, KAIHIIH, an engineer for Raytheon Co. for 31 years specializing in RF and Microwave design, has been collecting and restoring vintage radio and television equipment since he was 12 years old. He is a long-time subscriber to A.R.C. and a member of the Antique Wireless Association and the American Radio Relay League (call). He is also the proprietor of the Retro Radio Shop, an antique radio restoration business. He may be reached by e-mail at louis226@juno.com, business phone 1-508-733-7778.*

# BROADCASTING HISTORY

## The Visual Lee de Forest

BY MIKE ADAMS

*Artist's rendering of Lee de Forest, inventor and visionary during broadcasting's infancy.*

As longtime radio fans and A.R.C. readers, you already know that Lee de Forest invented the triode radio tube and a sound film technology. But what you may *not* know is that he also participated in the invention of television, described in the 1920s as “radio with pictures” and “radio movies.” For a good part of the last century, de Forest developed technology, received patents, and even created content for popular media that we still consume today. It’s a fascinating story so let’s take a look at the life and inventing career of the scientist most responsible for the early devices that led to radio, film, and television.

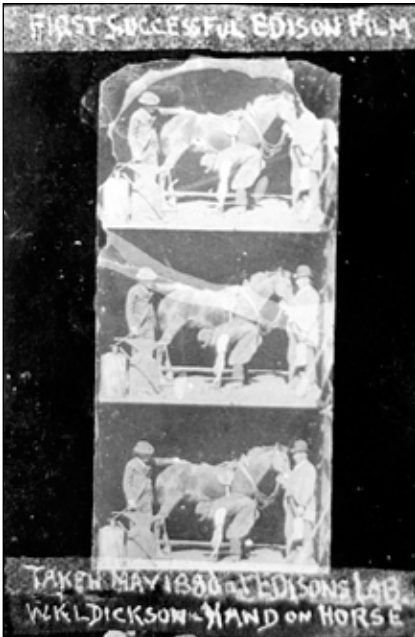

Lee de Forest received his Ph.D. in physics and electricity from Yale in 1899, just as the new century was about to dawn on a world that was still silent, the world of the soundless film of Edison and others as depicted in the film *Hugo*, and of the voiceless key clicks of Marconi’s wireless telegraph. De Forest had studied and learned from those inventors, and by 1906, had patented his signature invention, a vacuum tube he called the “audion.” Because of his tube, radios, and later film and television, would be able to “speak.” De Forest turned the science of the 19th Century into the media technology and art of the 20th Century, supplying the missing voice.

## It Begins with Radio

In March 1907, a story in the *New York Times* describes how de Forest sent music from a location in New York to the Times building: “The perfection of the wireless telephone will also mean that houses will not have to be wired to receive music.” A few years later, working in a Palo Alto, California, lab he further developed his tube as an amplifier of audio. This would be his most important contribution to the media of the 20th Century. With amplification, radio technology

*The audion, de Forest's signature invention.*

*Rough beginnings: an early Edison film.*

moved from being the province of amateurs with headphones to that of families listening to loudspeakers. He started several pre-1920 radio stations, in New York and in San Francisco at the California Theatre.

He turned to the cinema in 1918 and filed a patent for his sound-on-film system. By the early 1920s he had made a number of short movies and was showing them publicly. The tube he developed in Palo Alto was the key to this technological advance as it allowed playback of sound using loudspeakers, making it possible for mid-1920s audiences to experience for the first time both radio and talking pictures. For his tremendous contribution to the industry, de Forest received an Oscar in 1960. Film's transition from a silent media is well told in the movie *The Artist*.

A 1919 *Radio News* story suggested combining silent film and radio for “radio movies.” In New York opera singers would perform live while watching their filmed performance and try to remain in sync. A microphone would pick up the sound and send it over radio. In San Francisco a print of the film would be screened and the sound track picked up using a radio receiver. Practical amplifiers and loudspeakers were not available this early, but it was a prediction of how television might look.

Unlike the clear vision behind his major successes in radio and film, de Forest's early ideas about television technology were not fully formed. He told the *Los Angeles Herald* in 1923: “Moving pictures can be sent by radio just as still photographs are now sent. But it will be many years—I'm not afraid to

*Progress is evident in these phonofilm frames.*

*A DeForest phonofilm featuring President Calvin Coolidge.*

predict centuries—before radio movies will be practical. Modern science today is absolutely in the dark as to any discovery which would make the broadcasting of motion pictures anything as practical as the broadcasting of sounds.” Although he was being interviewed about his sound movie invention, he had not really thought about television, other than as an extension of radio and the movies, stating, “Broadcasting moving pictures by radio will be impossible during this generation due to prohibitive costs and other impractical considerations.” He understood bandwidth, a problem faced by his contemporaries Philo Farnsworth, working in San Francisco, and Charles Jenkins, in Los Angeles. De Forest himself filed several 1931 patents for the soon-to-be-doomed mechanical television. Those first electronic and mechanical systems for television were limited to a tiny picture of 40 or 50 lines of resolution, and the pictures were

broadcast using AM shortwave. Although the television resolution problem had been solved by the end of the 1930s, World War II delayed its development until the middle 1940s.

### Peering into the Future

But de Forest redeemed himself from that mistaken prediction with some other, very prescient ideas about television. In a series of articles in the *Hollywood Reporter* between 1943 and 1945, de Forest sounded a warning to the film industry about television: “For this new unknown stands in the minds capable of vague and mystical powers to rule or wreck what they have been earnestly building for the past three decades.” De Forest continued to frame the coming media war as a survival of the fittest: “It cannot be questioned, therefore, that television is certain to eat hungrily into the very vitals of the cine-theatre. Television is on the march, or will be after VE Day. It

*De Forest at the California Theatre.*

*With Charles Jenkins.*

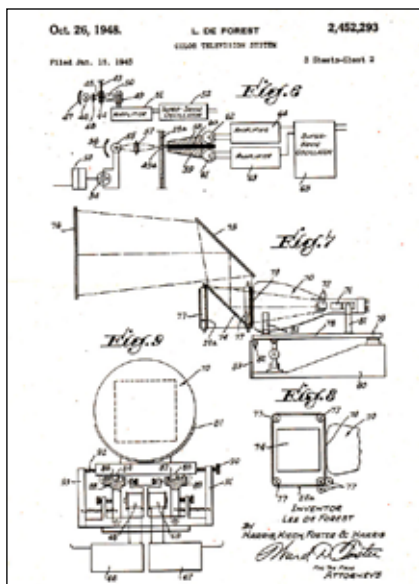

*An early TV disc.*

is inevitable.” He warned about the ruinous effect of advertising on television: “Television advertisers must not attempt to blackjack the watching public with offensive television commercials. The surest way to smother television in its cradle is to expect to pour on the screen the same sort of vulgar bombast as now darkens millions of our radio dials except when news is on the air.”

De Forest correctly saw the new media evolving out of the old, stating, “Television will not create a radically new art, but a thousand new stars, new writers, new directors—a new industry, yet based chiefly on what the motion picture and the radio have taught us—with much of Hollywood’s lost motion and budget extravaganza deleted.” He also saw opportunity: “Let it be understood by the film fraternity that, in this younger branch of their art, lie immeasurable opportunities for developing new techniques, new modes of audience approach, opportunities vastly more varied than any the theatre can afford them, then the progressive, far-sighted leaders among them will eagerly grasp the new vehicle, ride along with it, have a friendly controlling hand in directing its course.”

In 1945 de Forest applied for a patent for a mechanical color television system, which he considered superior to the CBS color wheel. “I place before any kinescope face, even of a 16 inch diameter, a three-color mosaic screen,” he explained. “It oscillates in an orbital, circular movement.” Neither de Forest’s nor the CBS system was accepted, the winner instead being the compatible RCA all-electronic system. He did receive a patent for a videotape recorder, likely similar enough to the Ampex Quad sys-

*DeForest's color TV patent.*

tem of 1956 to lose a patent challenge.

I’ll leave you with this interesting head scratcher from a 1957 article in the *Los Angeles Examiner* headlined: “De Forest Files for Patent on 4-Inch Thick Wall TV Set.” You may be saying to yourself, “well, I have one of those,” but in 1957 even the smallest television set was several feet thick. According to the inventor: “The new flat set...is made possible by the use of printed circuitry to condense the bulky TV tube into a flat picture-like package.” Prescient, indeed.

*Editor’s Note: You can read more about the topic in Mike Adams’ book, Lee de Forest, King of Radio, Television, and Film, Springer Science, New York, 2012, available through the A.R.C. Bookstore.*

*Mike Adams has been a radio personality and a filmmaker, and is currently a professor of radio, television, and film at San Jose State University, where he has been a department chair and an associate dean. He also created the Emmy-nominated PBS series “Radio Collector” and “Broadcasting’s Forgotten Father, the Charles Herrold Story.” Mike is a longtime contributing writer for A.R.C.*

# A.R.C. RECOMMENDS...

## A Visit to the Early Television Museum, Hilliard, Ohio

BY JON KUMMER

*The Early Television Museum is a "must stop" for those interested in television history.*

Recently I had the opportunity to visit the Early Television Museum, located in the town of Hilliard, Ohio, near Columbus. I'm so glad I did—the museum is a "must stop" for historians and collectors of vintage televisions as well as anyone else interested in early communications.

While I was there, I also had the privilege of speaking with Steve McVoy, president of the museum, who gave me the museum's history first hand. The facility opened its doors in 2000 in what was a former warehouse in Hilliard. Steve's immersion in television goes back to his youth. As a teenager he had worked in a TV repair shop, and then later became a principle in a cable television business. After he sold the company in 1999 he was looking for a new challenge. He found his challenge in collecting vintage televisions. At first, all the televisions were located in his home and relegated to the basement. When his collection became too large he created the Early Television Museum. Lucky for us!

Initially occupying approximately 3,000 square feet of display space, the museum later expanded to 10,000 square feet, and today

there are over 150 televisions on display from the 1920s through the 1970s. The exhibits are well organized into different areas, and you'll find interesting examples of mechanical televisions, British televisions, pre-war electronic, post-war electronic, and more.

### Exhibits

The museum's collection consists of many early televisions made by companies such as Baird, Western Empire State, Daven, Dumont,

*The 1946 RCA TS630 was the first TV model mass produced in the United States.*

National, RCA, Muntz, and Admiral. British manufacturers represented include HMV, RGD, and Cossor.

Each item on display has a full description of the piece with dates and important technical information. Most of the televisions are black & white sets, but you'll also find a nice collection of early color TVs, such as the RCA CT100.

I asked Steve which is his favorite television. He told me that many hold a special place in his collector's heart, but admitted that as far as style goes, his favorite is the 1938 British RGD 382-RG. The WGSF mobile truck also takes a pride of place.

1939 RCA TRK-5 pre-war receiver.

A 1954 RCA CT-100, one of the first color sets.

1938 HMV 904 and HMV 905 British Receivers

1930/1931 Hollis Baird 60 Line Receiver - R-7-T receiver and C-3-5 television adapter chassis.

## Early Television Convention

Since 2002, the museum has sponsored the annual Early Television Convention. Attendees from all over the world attend the gathering, which is held for three days during the month of May. Highlights of the convention include presentations on early television, a television auction of items from the museum, a swap meet, workshops, and a Saturday night banquet.

This year the convention was held on May 4 through 6 and A.R.C. plans to have a report on it in an upcoming issue. Perhaps you'll want to mark your calendar for 2013's event!

1949 WGSF remote van.

A handsome example of the 1931 Western Empire State 45 line disk receiver.

Various TV receivers from the 1940s.

## Visiting

The museum is a 501 C 3 non-profit foundation. There is no official admission charge to visit the museum but there is a small suggested donation.

TV fans and others interested in early broadcasting can visit on Saturday from 10 a.m. to 6 p.m. and Sunday from noon to 5 p.m.

If you're ever in the area we recommend a visit. You won't be disappointed!

## PHOTO REVIEW

This month we present a very special “Photo Review.” This unique pictorial reminiscence all started about three months ago when my friend Pat came by to “browse” through my basement. During that visit, I discovered that I had a few items I’d purchased a long time ago for some project or other—and then immediately forgot about them. They just ended up underneath, on top of, or behind a different item. I think you all can sympathize.

My friend asked, “What’s in that green box?” The box in question measured 10 x 5 x 2 inches, and I really had no idea. I figured it had to be “valuable parts.” Upon opening it I was delighted to find 80 photographic color slides. Inside was a description of the rediscovered treasure trove: “Philco Radio and Television Line – Presentation Slides – Mid Summer 1954.” This was visual accompaniment for the “dog and pony show” a Philco salesperson would perform as he traveled from dealer to dealer, presenting the upcoming 1955 radio and television models.

I had the slides digitized to share with our readers. Here, then, is a selection of 1955 Philco radio, television, and phonograph product shots, as well as in-store merchandise displays.

Look for more in the future. And, remember, you can see these in full color on the A.R.C. website. Coming up, we hope to have the entire slide show on the site.

**Radio Title Slide**

**Model 720** – Transitone series clock radio combination. Tuning range: 540 to 1630kc; power supply: AC; Tubes: five.

**Radio Merchandiser** – Point of sale display showing 12 of the latest Philco radios.

**Model 660** – Tuning range: 540 to 1630kc. Power supply: battery, 1.5 volts and 75 volts; tubes: four.

*Attention Subscribers: You can access a color version of this article on the A.R.C. website...*

## PHOTO REVIEW

**Model 4412** – TV with 21-inch CRT, three-speed record changer, and AM radio. Record changer is concealed in a pull-out drawer and the radio is hidden under a panel on the top.

**UHF Tuner** – Close up of the optional new UHF frequency tuner.

**Television Title Slide**

**Inserting UHF Tuner** – A service tech installing the optional UHF frequency tuner.

*...find out how by visiting us today at [www.antiqueradio.com](http://www.antiqueradio.com).*

---

## PHOTO REVIEW

---

**Finger Tip Wrap** – Point of sale display illustrates the “exclusive” new finger tip tuning system.

---

**Model 6112** – TV with 24-inch CRT and new “Finger Tip Tuning System.”

---

**TV Window Kit** – How a store window display should be set up to promote TV sales.

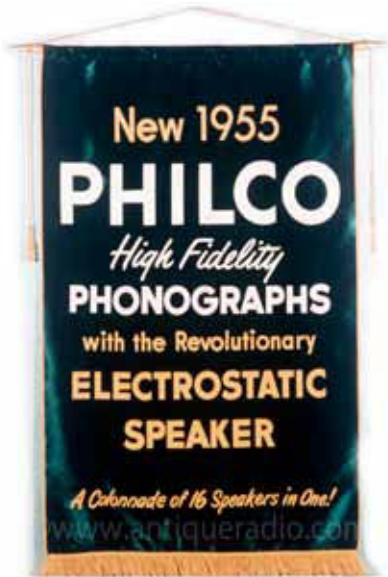

---

*Attention Subscribers: You can access a color version of this article on the A.R.C. website...*

---

## PHOTO REVIEW

---

**Hi-Fi Banner**

**Model 1755 Open** – Hi-Fi system consisting of three-speed record changer and a three-tube, 6 watt audio amplifier.

**Model 1755 Closed** – Hi-Fi system's attractive cabinetry.

**Original Philco Slide Box** – Where it all started.

**Model 1332 Turntable Display** – How to set up in-store display, explaining the three-speed feature and \$29.95 price. Amplifier consists of one tube.

*...find out how by visiting us today at [www.antiqueradio.com](http://www.antiqueradio.com).*

# ELECTRIC RADIO

Are you tired of plastic modern radios that you can't work on and are hard to understand? Are you looking for information on restoration of quality vintage receivers and transmitters? Electric Radio is the magazine for you! In print since May, 1989, we also have the largest vintage-only Ham classified section available. Please send \$1 for a sample copy to:

ER, PO Box 242, Bailey CO, 80421  
720-924-0171 email: [1editor2@indra.com](mailto:1editor2@indra.com)

## Join the **AWA** ANTIQUÉ WIRELESS ASSOCIATION

THE ORIGINAL AND LARGEST HISTORICAL RADIO-COLLECTOR GROUP

- Publishes *AWA Journal* with:
  - Battery and AC receiver restoration
  - Vacuum-tube history and collecting
  - Old-time amateur-radio contests
  - Communications receivers
  - Free want-sell-swap ads
  - Early television
  - Horn loudspeakers
  - Reviews of current books
  - Keys and land-line telegraphy
  - News of U. S. and foreign clubs
  - Information on public radio museums.
- Maintains unique radio-TV museum.
- Produces the annual Rochester meet.
- Co-sponsors local meets.
- Publishes the annual *AWA Review*.

Membership is only \$25 per year U.S.A. (\$30 per year elsewhere). Write to:

AWA Membership Director  
PO Box 421, Bloomfield, NY 14469-0421  
[www.antiquewireless.org](http://www.antiquewireless.org)

## OLD TECH BOOKS & THINGS

A 2,000 sq. ft. museum is not enough space for my 1000+ set collection. And, hundreds of boxes await either space in the museum or sale. Some things must go! Choices must be made. As the late Dr. Muchow said, "As collectors, we truly are temporary caretakers of these historical artifacts."

Items for sale are either duplicates or the result of fine-tuning the scope of my collection.

For details on these items and much more, visit:

[www.oldtech.com](http://www.oldtech.com)

or contact:

Most orders shipped by next business day. If using credit card, include name on card, card number and expiration date. Send payment with order. New York residents must add sales tax.*

## DO YOU KNOW YOUR A.R.C. SUBSCRIBER BENEFITS?

Since becoming publisher I've asked many of our subscribers about the benefits that come with a subscription to *Antique Radio Classified*.

These have included both our print subscribers as well as our online edition subscribers. The only difference between the print and online subscribers is that the online subscribers pay a reduced subscription rate and don't receive the print magazine.

Many of the people I spoke with didn't know about our subscription benefits.

Let's take a look at them:

### ABILITY TO LOOK AT THE MAGAZINE ONLINE

As a print or online subscriber you can look at the latest issue of the magazine online on our web site. This is the entire issue of the magazine and not an abbreviated edition. Subscribers can look at the last four issues of the magazine. Non-subscribers can look at earlier editions of the magazine at no cost.

One advantage of the online edition is that any photograph sent to us in color is posted in color!

### ABILITY TO LOOK AT PAST AUCTION RESULTS

Almost every month we publish auction results in the magazine. Did you know that we have a database of the auction prices online on our web

site? Subscribers can look at the auction results and they are SEARCHABLE! If you want to see if a specific radio, piece of equipment, tube, magazine, etc. that has been sold, all you have to do is enter the item and see every time the item has been sold as well as the price, auction house, and date!

### ABILITY TO LOOK AT ONLY THE CLASSIFIED ADS

Subscribers can also look only at the classified ads without downloading the entire magazine. This is very useful for readers who just want to read the classified ads. Readers with dial up Internet service will save a lot of downloading time.

### FREE MONTHLY CLASSIFIED AD

Each month a paid subscriber is entitled to place a free classified ad in the magazine. The classified ad can be up to 50 words. Additional words are 10 cents each. Classified ads can be submitted by email, fax, or mail. Typewritten preferred to reduce possible errors. Name, address and telephone number count as 6 words. Full name and address are required in all classified ads.

Of course the most important benefit to the subscribers of *Antique Radio Classified* are the articles containing information that will help you in increasing your knowledge of our hobby.

## HOW DO I ACCESS THESE BENEFITS?
