51ST AWA WORLD CONVENTION AUGUST 21-25

Five Days of Total Immersion in Radio Lore, Artifacts and Equipment

*Enjoy the Fellowship—Learn From the Programs—
Acquire or Sell Radio Treasures*

THIS YEAR'S DUAL THEME:

Collins Radio

100th Anniversary of the Titanic Disaster

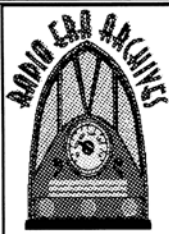

Keynote Speaker David Bart will present
Marconi, Wireless, and the Titanic: from Disaster to Triumph

- Spend Tuesday afternoon at the AWA Museum
- Expanded Old Equipment Contest includes special categories for Collins and Titanic gear
- Round-the-clock Flea Market
- International Dinner, Movie Night, Pizza Dance Party, Collins Banquet, Ladies' Luncheon, 51st Anniversary Banquet
- Special Event Station W2AN
- All New Forums and Presentations
- Saturday Auction Extravaganza

At the Rochester Institute of Technology Inn and Conference Center, Rochester, NY

From Exit 46 of the New York Thruway (I-90), take I-390 North to NY 253 West to NY15 South. Look for the RIT building about 0.7 miles on the right.

THE HISTORY OF RADIO ON CD-ROM

Radio Era Archives produced the *QST-VIEW* series of CD's for the American Radio Relay League (ARRL) and over 1/2 million CD's have been sold. *QST* Magazine has been continuously published since 1915. We are now proud to announce that this small mountain of CD's (about 35) is now available exclusively from REA (All Sets)! Every magazine published from 1915 to 1994, front cover to back cover, every article and column, all accessible with our database search engine.

QST-VIEW CD Edition truly captures the history of radio in 11 volumes. All CD's warranted to work on all Windows platforms from Windows 95 through XP. Each set is \$ 39.95 and we have all sets in stock. The sets are: 1915-1929, 1930-1939, 1940-1949, 1950-1959, 1960-1964, 1965-1969, 1970-1974, 1975-1979, 1980-1984, 1985-1989, 1990-1994. Each set of years is a self-contained set so you can operate one or all sets together. Now that large capacity hard drives are so inexpensive, the 36 CD's can be loaded on about 20Gb of hard disc space for instant searching and viewing without having to swap discs! Full information is provided with each purchase and *QST-VIEW* has on-line instructional help for operating the *QST-VIEW* browser!

EACH SET \$ 39.95 (specify the years)

ALL 11 SETS \$ 379

S&H USA for first set is \$ 5.00, add \$ 1.00 each set thereafter

S&H Export first set is \$ 15.00, add \$ 2.00 for each set thereafter

2009 1/2 PRICE SPECIAL (while supply lasts)

Don't forget, we have the entire John Rider's Perpetual Troubleshooters Manuals on a single DVD. All 23 Volumes of the Riders available at the click of a mouse! Over 120,000 different model radio schematics and related service information in an easy to use DVD. **Thousands sold at \$ 199. SPECIAL \$ 99 + \$ 6.00 S&H in the USA, add \$12 for worldwide delivery. Order Now while supply lasts !**

We now have a small mountain of vacuum tubes at very competitive prices - Thousands sold since our first posting of these tubes. All types including receiving and transmitting types. Tube price listings on the web:
<http://www.radioera.com/tubes.asp>

SCHEMATIC DIAGRAM & MANUAL SERVICE

Over a Million schematics & 100,000 manuals and growing! Schematics and most manuals may be emailed instantly via the internet

Check the web - On-line antique radio flea market - Radios for sale - Antique radio museum - Zenith Trans-Oceanic museum - thousands of old catalogs, manuals, literature, information, how-to data, reference, auction price section and much-much more! Visit antique radios largest web address today!

Publisher's Comments

Summer and antique collecting—it doesn't get better than this! And to help you plan your summer show travel itinerary, this month we have a report on the upcoming Antique Wireless Association Convention. It takes place from August 21 to 25, 2012, in Rochester, New York. Once again the AWA has an informative conference with many presentations and, of course, a flea market and book fair. An AWA Convention and the AWA Museum should be on the must-visit list for all radio collectors. If it's at all possible for you to attend, you owe it to yourself (and your collection!).

Speaking of collections, one of the best ways to add to one is by attending an auction. This issue also features a report on the Estes Auction of April 21, 2012. It was my first time sitting in on an Estes Auction, and I had a great time checking out all the items up for bids. Everything from antique radios to televisions to audio equipment was on display and ready for the gavel. Check out the auction results for the realized prices.

Also in this issue Dave Crocker takes a look at the Timmerman-Green radio company of Vermont. This 1920s company was the only one in Vermont to produce battery sets. Thanks Dave for another informative article!

Rounding out our features, Daniel Schoo reports on his restoration of a 1942 Knight E-10803/E table radio. It's a good article that covers almost everything that can be repaired, from the chassis to the speaker to the cabinet.

As I get ready for my next summer radio outing, I've been thinking that I'd like to start a "Letters to the Editor" column in the magazine. What do you think? Please write in your thoughts and we'll publish your comments.

As always I would like to wish everyone happy collecting and a great summer!

Jon Kummer

On The Cover

The annual Antique Wireless Association World Convention is a highlight of the year for the serious collector. This August marks the 51st such gathering, and A.R.C. will be there to celebrate with the AWA.

See the article starting on page 4 for details. (Cover photo by of a flea market table from the 2011 convention, courtesy of the AWA)

A.R.C. ANNOUNCES...

The 51st Antique Wireless Association World Convention

**Rochester, New York
August 21-25, 2012**

BY STAFF

Have you made your reservations for the largest convention of antique and vintage communication artifacts, equipment, and radio lore? If not, don't wait another minute! You don't want to miss out on this great yearly gathering.

The 51st Antique Wireless Association World Convention will be held on August 21-25, 2012, in Rochester, New York. This is the premier event for collectors and historians of antique wireless communications items.

This year the Convention has a dual theme: The World of Collins and the 100th Anniver-

A flotilla of contest ship radios greeted attendees in grand style.

AWA Bruce Mager of Waves LLC and friend at last year's convention's well-stocked flea market.

sary of the *Titanic* Disaster. It's the perfect opportunity to learn everything you have always wanted to know about Collins Radio and to reflect on a pivotal moment in history as you enjoy the fascinating presentations on the *Titanic* and its connection to wireless.

Of course, there's also an around-the-clock flea market, forums and presentations, an old equipment contest, special events station W2AN, the AWA Museum, and the Saturday Auction Extravaganza that's a must-see!

Here's the schedule so you can plan your visit to get the most out of it:

Schedule of Events

Tuesday August 21

9am: Registration Opens
2pm–5pm: An afternoon at the AWA Museum
7pm: AWA International Dinner

Wednesday August 22

8am: Registration Opens
8am–5pm: Book Fair
10am: Who Was The Hero of the *Titanic* Rescue? (presentation)
11:45am: Lunch Break
1pm: Modern Radio (presentation)
2:30pm: The Red Ear (presentation)
7:30pm–11pm: Annual Pizza Dinner/Dance

Thursday August 23

6am: Flea Market Opens (round-the-clock)
8am–5pm: Registration
8am–5pm: Book Fair
8:30am: What Did People Know about Wireless and How Did They Know It? (*Titanic* presentation)
10am: AWA Members' Forum
11:30am: Ladies Luncheon
12:30pm: Radio Club of America (presentation)
2pm: Wireless Comes of Age on the West Coast. Bart Lee (presentation)
3pm: Key & Telegraph Seminar (presentation)
6pm: Collins Collectors Assn Banquet Dinner
8pm: Moonlight Restoration Seminar
8pm – 11pm: Old Equipment Contest Check-in
10pm: Movie Night: A *Titanic* Film Festival

Friday August 24

8am–5pm: Book Fair
9am: Old Equipment Contest (judging)
9am: Collins Radio: A History of Collins Receivers (presentation)
9:45am: The Collins 51S-1 Receiver
10:45am: Lee de Forest and the Invention of the Talkies. Mike Adams (presentation)
11am: The *Titanic* Wireless Room (presentation)
1pm: RCA's Development of TV from 1929 to 1949. Richard Brewster (presentation)
2pm: The Collins Desk (presentation)
2pm – 5pm: Main Auction Check-in
3pm: Pre-1912 Wireless and Electrical Apparatus Seminar (presentation)
4pm: Review of Amateur Operations (presentation)
6pm: Social Hour – Banquet Dining Room
7pm: AWA Members' Banquet
Keynote: Marconi, Wireless, and the *Titanic*: From Disaster to Triumph. Dave Bart

Saturday August 25

7am – 8am: Auction Preview
8am – 2pm: Book Fair
8am – 3pm: General Auction

AUCTION REPORT

Estes Auction Burbank, Ohio, April 21, 2012

BY STAFF

Richard Estes auctioneer.

After many years of following Estes Auctions, this was the first one A.R.C. was able to attend. From our location on the East Coast, we headed west for a “radio road trip” to cover the auction, the Early Television Museum (see the June 2012 issue), and the Tri State Antique Radio Fest in Pittsburgh, Pennsylvania. It was a fabulous time, filled with unique collectables, fun bargain hunting, and friendly people, and we strongly recommend a radio-related trip like this to any of our readers who are able to make one.

It was especially nice to attend such an interesting and well-organized event as the Estes Auction. There was plenty of time to inspect the items and Richard Estes keep the auction moving at a quick rate.

Following is a list of the auction results for the major items, which included radios, televisions, ham gear, tubes, advertising, test

equipment, phonographs, audio equipment, and speakers. Among the day’s highlights were an Atwater Kent model 91 auto radio, which brought a bid of \$300; a RCA Radiotron tin sign, which sold for \$450; a Hallcrafters pushbutton TV, which went for \$225; a Regina music box, which sold for \$500; a Thorens 126 turntable that garnered \$475; an Atwater Kent model 10 breadboard that an attendee took home for \$675; and a Scott All Wave console that had reached \$1,300 at the sound of the gavel.

If you’re ever in eastern Ohio at the right time, be sure to visit one of the Estes Auctions. You’ll have a great time and might pick up some great additions to your collection.

We’ll be listing the results of more Estes Auctions in coming issues. If you have results from other radio auctions let us know, and we’ll publish that information, too.

Estes Auction Results

General Auction

Addison bakelite brown 2 tone w/ back	400	Hopalong Cassidy black	375
Admiral 4202 beetle plastic	100	Howard type A neutrodyne	95

RADIO HISTORY

The Timmerman-Greene— The Orphan of Vermont

BY DAVE CROCKER

For many of us, the word Vermont conjures visions of dairy farms, quaint bed & breakfasts, and Ben & Jerry's ice cream. Not many collectors realize, however, that there was also a radio produced there in the early 1920s that its manufacturer had hoped to make a real competitor in the rapidly growing radio market at the time. It was the Timmerman-Greene radio receiver.

Our story begins with the Morrisville foundry, a business in Morrisville, Vermont, operated by one Morris Greene. Looking for a new adventure, in 1921 Morris joined forces with Frederick Timmerman and his wife, Celema, to form the Timmerman-Greene Corporation. While Timmerman came up with the idea of manufacturing new products, Morris offered the machine skills he had developed in the foundry business.

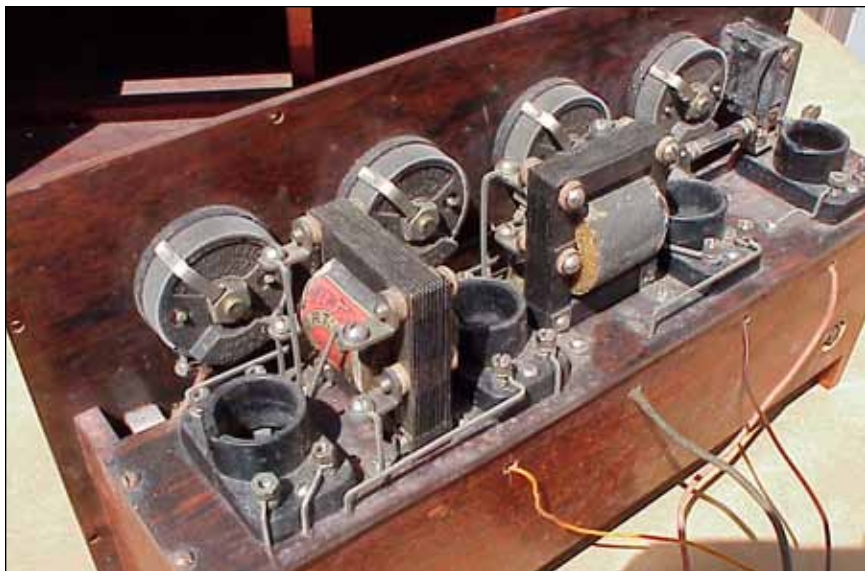

The new company was located in a barn behind the Timmerman home, now gone. Its first invention was an automotive tool called

the "Compress-It," which was to be used in the removal of valve springs in motor vehicles. But just as they were about to go into production, a major change in the automobile industry made the tool unnecessary, and the Compress-It proved a dead end. Undaunted, Timmerman searched around for another innovation to produce. This is where his idea for a radio receiver came in, and he soon designed a marvel of the airways called the "Timmerman Special."

The first of several different models was produced in 1923. It's interesting to note that no one in Morrisville owned a radio of any kind until 1922, when local resident A.L. Huntley finally went out and purchased one of these "new-fangled" wireless devices. When the radio industry turned to house current circuitry (AC), the little Timmerman-Greene company did not have the finances to compete with the larger manufacturers, and so in 1927, it quietly closed its doors for good.

The very first Timmerman-Greene "Special" receiver, as found, unrestored by the present owner. Note that the top lid has hinges halfway back so that the cover can either be opened part way to view the tubes, or so the whole top can be opened to get at the batteries.

Rear view of the Timmerman chassis showing the assembly of purchased parts from other manufacturers.

The front panel of the Timmerman removed from the cabinet. The dark, round spot in the center is probably from an attempt to polish the hard rubber material.

Two Timmermans Today

There is a surviving Timmerman-Greene radio, probably one of the first prototypes, which is now owned by Robert Kitchel of Danville, Vermont. This first Timmerman set is a battery-type receiver using four (1-1/2 volt) Type 199 tubes and operated on six dry-cell batteries and one 45 volt dry-cell. Just looking at the condition of the set makes me to clean it up and restore it to its original condition, but that decision is up to the owner. He may wish to leave it in its present condition, and sometimes that can be a good thing.

The 15-1/4 x 8-1/2-inch-thick panel is of hard, red-rubber material, which has turned

pinkish-white and is slightly warped. There is no identification on the front. The construction inside is indeed crude. It's obvious that all the receiver parts are purchased from other manufacturers. They consist of two (2) New York "distortion-less" audio transformers; four (4) Pacent Bakelite No. 8 type 199 tube sockets; one (1) grid-leak holder; one (1) GE Type 1299 on/off rocker switch; all Fahnestock anti-ground clips; one (1) DeJur fine-wound rheostat; two (2) unbranded phone jacks; one (1) variable tuning condenser with a vernier trimmer (bank-wound); and one (1) unnamed smaller variable condenser connected to a green, Freshman-type open coil with seven (7) taps. The wiring is primitive, at best.

Alan Douglas of Pocasset, Massachusetts, who wrote the three-volume set *Radio Manufacturers of the 1920's*, thinks the circuit consists of one RF stage, a detector, and two audio stages. There is a slight possibility that this circuit may have appeared in a radio newspaper article back then, but we don't know for sure.

I know of one more Timmerman-Green set in existence. It is a newer entry, probably of TRF design of 1925, and its five tubes are probably the 01-A type. It has three large dials engraved 100-0 and a panel-mounted meter. Under the meter is a nine-point tap switch, which seems outmoded for 1925. Along the bottom are three jacks for each stage of amplification. Inside everything is copper shielded,

*Front of the newer, 1925 Timmerman-Greene
"Special."*

Close up of the right side of the 1925 panel.

*Inside view showing the copper shielding and
primitive soldering.*

A Son's Shared Memory...

The following is from a 1979 letter to Frederick and Jane Greene of Morrisville:

One of my first memories (about 1923), was the scene during that year's World Series. My father (Frederick Timmerman), had built an amplifier and if the reception was unusually good, he hooked it up to a receiver with a separate speaker directed out the back window of his shop on Pleasant Street where relatively large numbers of mostly males gathered to listen to the game.

When reception was poor, either dad or Herb Strong would listen with headphones and repeat the commentary over what we now call a PA system, that is, using a microphone and the amplifier.

I distinctly recall fifty or more folks sitting around the back yard listening to the play-by-play of the game.

*Dr. Frederick W. Timmerman, Jr.
(Son of the Manufacturer)*

including the three tuning condensers along with their attached coils. Also there is what looks like a wooden thread spool wrapped with aluminum behind the meter. Similar to the 1923 set, there is an on/off rocker switch on the left side of the panel. This later set used a more common Bakelite panel material. Like the earlier Timmerman, there are no markings on the panel at all, probably because the company did not own an engraving machine.

This 1925 receiver was previously owned by Herbert A. Smalley of Morrisville. Its original purchase price of \$225 seems high for the times, especially for Vermont. It currently resides in the Noyes House Museum (<http://noyeshousemuseum.org>) in Morrisville. You can visit the museum on certain days from June through October. Check out their website or call 802-888-7617 for specifics.

I would like to give thanks to the Noyes House Museum and the Morrisville Historical Society staff for the many photos I asked them to take for me. I had to wait for these all winter as the museum is closed from the late fall to late spring due to the cold temperatures.

Dave Crocker, a graphic artist who retired from the Polaroid Corporation, is also a semi-retired member of the A.R.C. staff. Dave has been collecting radios for over 42 years, and many of those years have been spent researching and collecting radios made by the Crosley Radio Company.

RESTORATION REPORT

Restoring a Knight Model E-10803/E-10818 Table Radio

BY DANIEL SCHOO

I was in the post office one day mailing a package to *Antique Radio Classified* when the clerk asked me if I collected antique radios. He had seen quite a few of my packages addressed to A.R.C. and the Antique Radio Club of Illinois and wanted to know if I was involved with radios as a hobby. I told him I had a small collection but that I enjoyed restoration most of all. He explained that he had always wanted a nice old tube set after hearing stories his father told him about listening to the news about World War II on the radio and wondered if I could help him find one. I replied that I had several radios waiting to be restored and that he might like one of those. He wanted something in a wood case, which gave me a starting point, and I told him I'd see what I could come up with.

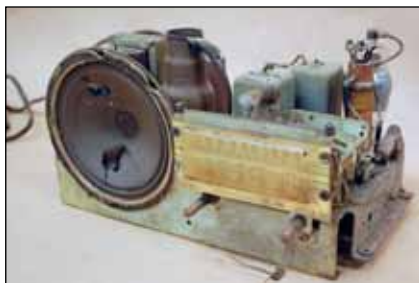

Several days later I discovered an old set I had almost forgotten about. It was given to me

some years ago and needed a lot of work. It was a small Broadcast-Shortwave wood table radio made by Knight, but the model was unknown. The chassis was filthy and rusted. The cabinet was dirty, the dial cover hazed and yellowed, and the finish was all but shot. The grille cloth was rotted and had holes poked in it all the way through the speaker cone in several places. Besides all the damage and dirt, however, it was mostly intact and no major parts were missing.

I took some photos of the candidate and showed the postal clerk what the set looked like. He was enthusiastic about it, even rough as it was. He was willing to take it as-is, but I refused and assured him that when he got the radio it would be in working condition. He was only hoping to get a display piece and was thrilled to think the old tubes would actually play again. His only stipulation was that

Knight Model E-10803/E-10818 in pretty rough condition.

Here's a view of the chassis. Note the torn speaker, broken dial cord, damaged dial cover, rusty control shafts, and filth.

Here's another view of the chassis showing a heavy incrustation of rust and dirt.

he did not want a full cosmetic restoration; he wanted the set to have character and look like it had been around for a long time. That part was easy.

First Steps with the Knight

The nameplate said "Knight," which was a brand name of Allied Radio in Chicago. I had no idea what the model was or whether I could get any service information. I could manage without a schematic, but things would go a lot faster and more easily with one. The tube lineup of 6A8G, 6Q7G, 6K7, 25L6G, and 25Z6G, all with registration dates in the mid 1930's¹, suggested late 1930s manufacture, so I started looking through the Allied Radio sections of the *Rider's Perpetual Troubleshooters* manuals, starting with 1935. I ruled out most based on the tube lineup and some based on chassis layout. Eventually I got to Volume 14 of the manuals, where a schematic and chassis layout for models E-10803 and E-10818 matched the set perfectly². This dated the set to about 1942. Compared to the tube lineups for the other sets in this volume

the tubes were rather obsolete, so I suppose that Allied was using up its old stock and getting rid of it.

There were several major problems that I had to address. Cleaning was the first. I pulled out the chassis and removed the speaker and dial assembly, both of which we will get back to later. Placing the chassis in the laundry sink I sprayed it with a mild cleaning solution and brushed the chassis and all the crannies with a soft bristle toothbrush. There were several rust spots that yielded to a wet scrubbing with a general-purpose purple Scotchbrite pad.

There's usually no danger to the chassis with a good cleaning and rinse as long as you don't drown it by dunking or direct spraying into the intermediate frequency transformers. This set had the old large footprint capacitor-tuned IF transformers with plenty of room inside and drainage space, and most of the parts, such as the tuning cap, switches, and volume control, could stand a splashing. After washing it, I set the chassis in front of an old squirrel cage furnace blower I use for restorations and let air blow on it for at least half an

This is the dial mechanism from the back after cleaning and re-stringing.

Applying Elmer's glue with a small artists brush to a tear in the cone.

Back of the speaker cone showing the patches.

hour (you can also use a canned air duster to blow the water out of the tube sockets, tuning capacitor, and other areas where water can get trapped). I then removed the cans from the IF transformers and verified that they had drained. I blew an air duster into the IF tuning capacitors to get out any trapped water. I also took the opportunity to replace the frayed grid cap wire from the first IF can to the 6K7 tube. The IF cans also needed some wet scrubbing with the Scotchbrite to remove corrosion and some dried up tape.

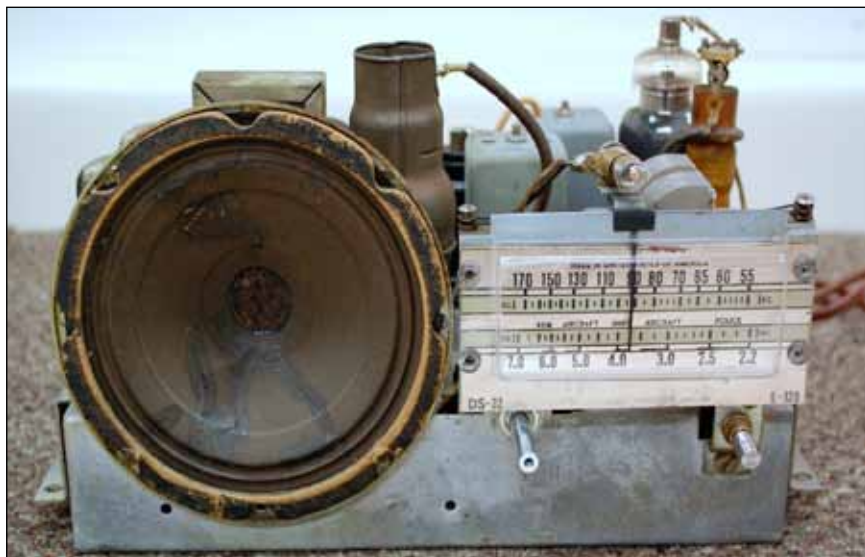

Restoration Details

After the cleaning I got into the details. I decided to start with the dial assembly. On many radios the dial assembly is part of the chassis. The main pulley is mounted on the shaft of the tuning capacitor and the dial cord routes around several small idler pulleys and loops around the tuning drive shaft. On this set the dial and cord drive was a separate assembly that could be removed completely from the radio. This made things a lot easier. I cleaned the assembly and lubricated the friction points. The old cotton dial cord was rotted and broken and lying loose, so I had to figure out how to re-string it. Fortunately the dial pointer was still hanging onto the cord. After several trial attempts I came up with a routing for the cord that worked without binding, moved the pointer the right direction to match the tuning frequency, and allowed more than the 180 degrees of rotation that was necessary for the tuning capacitor.

The dial cover had not shrunk too badly, but it was so yellowed and hazy you could not read the dial through it. The cover was a small rectangular window with an open slot in the top of it for the pointer to fit through from a

Here's the completed chassis cleaned up and ready for alignment.

A nice clean chassis ready to put into the cabinet.

track located above. This unusual cover would have been tricky to order out from a professional. I made a new dial cover using the method that I had learned from Bill Turner, a well-known collector and restorer, and from my own experience making a dial cover for a Templetone military morale radio, described in an *A.R.C.* December 2009 article³. I had to make a special mold with a stepped section for the slot for the pointer. Once I re-strung the cord and made the cover, I cleaned and spray-painted the rusty pointer. I set aside the completed dial assembly for later.

Re-capping the set went smoothly. I found only two moderately out of tolerance resistors, which I replaced. I cleaned the band switch with a cotton swab soaked in Silvo followed by a thorough alcohol rinse. Usually a thorough cleaning of the rotating contacts will suffice; the stationary ones tend to get burnished by the rotary ones.

The power switch was bad and showed open conductance in either the ON or OFF position. I took the power switch apart to clean and adjust the contacts. That was a trial, but I managed to get it to work after an hour of fiddling.

Moving on to the volume control I found that the conductive element inside was broken and not repairable. And I'd doing so well up to then! The control was a typical 1M ohm audio taper, and I just happened to have a modern one in my parts drawer. The replacement had a perfect 1/4-inch diameter round

shaft like the original, but it was about 3/4 of an inch too short. Not one to shrink from adversity in these matters, I decided to extend the shaft. I drilled and tapped a 4-40 threaded hole down the center axis of the control shaft and screwed in about half the length of a short 4-40 threaded rod. I got a 1/4-inch diameter by 3/4-inch long 4-40 threaded steel standoff and screwed it onto the rod, locking the threads with a tiny dab of polyurethane glue. The result was magnificent—OK, it was adequate and didn't look too goofy.

The Biggest Challenge

From the looks of it, the hardest job was going to be the speaker. It had several serious tears and holes in it. For several years I had casually looked for a replacement field coil speaker for this set, but I never found anything. The field coil was 2500 ohm and rather higher resistance than most. Looking at the schematic I discovered that the field coil was not part of the power supply filter, as is usually the case. It was simply an electromagnetic field coil powered by the power supply. I could have replaced it with a permanent magnet speaker and left it at that, but I decided instead to take up the challenge and see if I could repair the cone.

I started by cleaning off the accumulated dirt and gathering all the pieces of the cone together. Most of the pieces were still attached. I

made some patches out of the lightweight, non-woven waterproof material from Folger's one cup coffee bags. I sized them to cover the areas of the cone that were damaged. I watered down a little Elmer's glue and applied a coating to one side of the patches. I applied the patches to the back of the cone and maneuvered the loose flaps of cone paper into their original positions, filling in the tears and holes using the patch as a frame to hold them in place. After the glue dried I used a small paintbrush to apply more Elmer's glue to the remaining small tears and the seams between the torn shards of cone. This approach turned out surprisingly well and the speaker worked when I ran tests on it later. It probably is not working to original specs, but it sounded reasonable.

The other problems with the speaker were the audio and field coil leads. The cotton/rubber insulation was hard and breaking off. I cut the wires short and spliced on new cloth wire of the appropriate color and length. I then covered the splices with black heat shrink tubing.

Finishing Touches

It was now time to re-assemble and clean up small details. I put the dial back on and got it aligned. I reinstalled the speaker and wired it. This Knight set has a ballast resistor for the heater string that looks much like a typical metal tube and is installed in a standard octal socket. It was still functional but very

rusty, so I bead-blasted the rust and remaining paint down to bare metal and repainted it with a semi-gloss black metal paint. Checking the tubes I found that none of them were bad. A couple of them were weak but still functional.

About the last thing was to install a new line cord. Like many of these old transformer-less radios, the AC power line is connected directly to the chassis. In the days before polarized plugs it was just random chance which way the plug was inserted into the outlet, and it was possible to have the 120 volt AC line voltage on the chassis and knob shafts. This situation is called having a "hot" chassis. Back then folks didn't concern themselves with things like shock and electrocution hazards with exposed 120 volt power on a chassis with no back on the cabinet!

Some radios connect one conductor of the AC cord directly to the chassis while the other conductor goes through the power switch to the circuitry. This is the safest method, provided the chassis side of the line cord is plugged into the neutral side of the outlet. If not, you get 120 volts on the chassis full time. Other sets switched one conductor through the power switch to the chassis while the other conductor went directly to the circuitry. This is the worst of configurations because while the chassis may be grounded through the switch when the radio is on, it becomes ungrounded and floats to 120 volts when the power is off. And, of course, if the 120 volts is connected to

Reassembled and ready to play.

A proud new owner holding his treasure.

the switch the chassis is hot when the power is on. Either way, the chassis is always going to be hot under one condition or the other. The advantage to this wiring is that it tends to minimize AC hum coupling from the switch to the volume control.

The Knight was wired with the power switch in the chassis leg of the line cord. I changed that and wired the hot side of a polarized line cord through the power switch to the circuitry and connected the neutral side of the cord directly to the chassis. I don't like even this arrangement because it is still possible to unknowingly plug the radio into a miswired outlet.

I replaced the tubes in their sockets and did an alignment with instruments. The chassis was ready and working well. I did not have much to do on the cabinet. I did some cleaning and removed the major dirt infestation. I removed the old grille cloth and replaced it. The chassis slid right in and the new dial glass fit perfectly in the opening. The final task was to solder a wire onto the antenna terminal and deliver the radio.

A Knight to Treasure

This radio had sat in my basement for quite a few years, just waiting for me to have

the time and motivation for a restoration. One never knows what turn of events will bring a similarly half-forgotten radio to the bench and maybe even find it a new home where it will find a new life as a treasured piece of history.

My thanks to Mike Urban of Urban Antique Radio and Vintage Hi-Fi for supplying me with a piece of appropriate grille cloth. Grille cloth has gone out of production and is very hard to find.

PHOTO REVIEW

This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other old radio-related items from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short, descriptive paragraph **MUST** be included with each photo. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.

National SW-3 Receiver - Made in the early 1930s, this was a simple regenerative receiver. It used three tubes: 58, 58, 56. Originally came with three sets of coils for different bands. Arnold Corwin, Memphis, TN

Silvertone Model 1724 Radio - Manufactured in 1934 by Sears, his TRF set originally sold for \$22.95. The four tubes are: 78 RF, 77 detector, 43 output, and 25Z5 rectifier. Peter Dieguez, Roslyn, NY

Attention Subscribers: You can access a color version of this article on the A.R.C. website...

PHOTO REVIEW

Peter Pan Radio – This Australian radio was manufactured in the 1940s. It uses European tubes, a 240 volt power source, and sports a Peter Pan logo. Peter Dieguez, Roslyn, NY

Heathkit ARW-15 Stereo Receiver – This popular Heathkit stereo receiver from the 1970s was sold in kit form. The ARW-15 was store- or factory-wired. Benny Gertner, Minneapolis, MN

Kolster K-45 Console Radio – An 11-tube radio that covered the AM band and was AC powered, this handsome set was made in 1928 and originally had a remote control. The output was two #50 tubes. It originally cost \$500 when introduced. Gregory Jones, San Leandro, CA

From the A.R.C. Bookstore...

Practical Radio Repair – Volume II

by Ray Bintliff

\$22.95 - 126 pages, 315 illustrations, soft cover

Volume I of *Practical Radio Repair* by Ray Bintliff is one of the hottest selling titles in the A.R.C. Bookstore.

Volume II complements the original volume and provides additional information regarding special tools, test adapters, supplies, chemicals, and shop set-up. An excellent book for both the experienced restorer as well as the novice learning repair.

OLD TECH BOOKS & THINGS

A 2,000 sq. ft. museum is not enough space for my 1000+ set collection. And, hundreds of boxes await either space in the museum or sale. Some things must go! Choices must be made. As the late Dr. Muchow said, "As collectors, we truly are temporary caretakers of these historical artifacts."

Items for sale are either duplicates or the result of fine-tuning the scope of my collection.

For details on these items and much more, visit:

www.oldtech.com

Most orders shipped by next business day. If using credit card, include name on card, card number and expiration date. Send payment with order. New York residents must add sales tax.

DO YOU KNOW YOUR A.R.C. SUBSCRIBER BENEFITS?

Since becoming publisher I've asked many of our subscribers about the benefits that come with a subscription to *Antique Radio Classified*.

These have included both our print subscribers as well as our online edition subscribers. The only difference between the print and online subscribers is that the online subscribers pay a reduced subscription rate and don't receive the print magazine.

Many of the people I spoke with didn't know about our subscription benefits.

Let's take a look at them:

ABILITY TO LOOK AT THE MAGAZINE ONLINE

As a print or online subscriber you can look at the latest issue of the magazine online on our web site. This is the entire issue of the magazine and not an abbreviated edition. Subscribers can look at the last four issues of the magazine. Non-subscribers can look at earlier editions of the magazine at no cost.

One advantage of the online edition is that any photograph sent to us in color is posted in color!

ABILITY TO LOOK AT PAST AUCTION RESULTS

Almost every month we publish auction results in the magazine. Did you know that we have a database of the auction prices online on our web

site? Subscribers can look at the auction results and they are **SEARCHABLE!** If you want to see if a specific radio, piece of equipment, tube, magazine, etc. that has been sold, all you have to do is enter the item and see every time the item has been sold as well as the price, auction house, and date!

ABILITY TO LOOK AT ONLY THE CLASSIFIED ADS

Subscribers can also look only at the classified ads without downloading the entire magazine. This is very useful for readers who just want to read the classified ads. Readers with dial up Internet service will save a lot of downloading time.

FREE MONTHLY CLASSIFIED AD

Each month a paid subscriber is entitled to place a free classified ad in the magazine. The classified ad can be up to 50 words. Additional words are 10 cents each. Classified ads can be submitted by email, fax, or mail. Typewritten preferred to reduce possible errors. Name, address and telephone number count as 6 words. Full name and address are required in all classified ads.

Of course the most important benefit to the subscribers of *Antique Radio Classified* are the articles containing information that will help you in increasing your knowledge of our hobby.

HOW DO I ACCESS THESE BENEFITS?

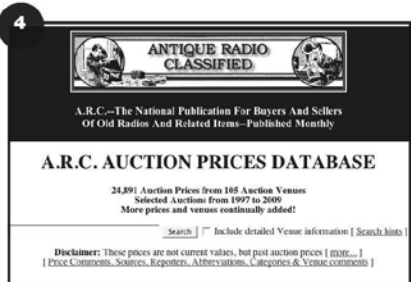

Your print subscriber user ID and password are on your mailing label. Online subscribers are emailed their user ID and password. Your user ID is the number after "SUB#" on your mailing label. Your password is the digits in brackets [xxxx] after your "SUB#".

On the Subscriber-Only Access page you can click on the Full Issue you would like to view or click on the Classified Ads section from that issue.

Go to A.R.C.'s home page www.antiqueradio.com and click on Subscriber Only Page.

Or you can click on the Auction Prices Data Base. Just enter the item that you are researching.
