

# CDP-102

## SERVICE MANUAL

Refer to RM-D302/D502 Service Manual issued separately for information of the remote controller supplied with this set.

*US Model  
Canadian Model  
AEP Model  
UK Model  
E Model*

**COMPACT  
disc  
DIGITAL AUDIO**

### SPECIFICATIONS

System	Compact disc digital audio system	Outputs	Line outputs
Disc	Compact disc		Output level 2 V rms (at MSB)
Laser diode properties	Material : GaAlAs Wavelength : 780 nm Emission duration : Continuous Laser output : Max. 0.6 mW*	Other jack	Load impedance over 10 kilohms Remote control connector (4 pin) Function control connector (2 pin)
	*This output is the value measured at a distance of about 1.6 mm from the objective lens surface on the optical pick-up block.	Disc	
Spindle speed	500 r.p.m. to 200 r.p.m. (CLV)	Track pitch	1.6 $\mu$ m
Scan velocity	1.2 - 1.4 m/sec.	Sampling frequency	44.1 kHz
Error correction	Sony Super Strategy Cross Interleave Reed Solomon Code	Quantization	16 bit linear quantizing/channel
		Modulation system	EFM
Number of channels	2	Transfer rate	2.03 Mbit/sec. (before modulation)
D-A conversion	16-bit linear	General	
Frequency response	2 - 20,000 Hz $\pm$ 0.5 dB	Power requirements	AEP Model: 220 V ac 50/60 Hz UK model: 240 V ac 50/60 Hz US, Canadian model: 120 V ac 60 Hz E model: 110, 120, 220, or 240 V ac adjustable, 50/60 Hz
Harmonic distortion	Less than 0.003 % (1 kHz)	Power consumption	15 W
Dynamic range	More than 96 dB	AC outlet	US, Canadian, AEP, E model: 1 unswitched, 100 watts max. UK model: 1 switched, 100 watts max.
Channel separation	More than 95 dB	Dimensions	Approx. 355 x 80 x 335 mm (wh/d) (14 x 3 <sup>1</sup> / <sub>4</sub> x 13 <sup>1</sup> / <sub>4</sub> in.) including projecting parts and controls
Wow and flutter	Below measurable limit	Weight	Approx. 5.7 kg (12 lb 9 oz), net

#### SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

#### ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE  SUR LES DIAGRAMMES SCHEMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

**COMPACT DISC PLAYER**  
**SONY**<sup>®</sup>

**PROTECTION OF EYES FROM LASER BEAM DURING SERVICING**

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

**WARNING !!**

**WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION, BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30 cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.**

**1. Laser Diode Properties**

- Material: GaAlAs
- Wavelength: 780 nm
- Emission Duration: continuous
- Laser Output: max. 0.6 mW\*

\* This output is the value measured at a distance of about 1.6 mm from the objective lens surface on the Optical Pick-up Block.

- Classification: Class IIIb

2. During service, do not take the Optical Pick-up Block apart, and do not adjust the APC circuit. If there is a breakdown in the APC circuit (including laser diode), replace the entire Optical Pick-up Block (including APC board).

**LASER WARNING LABELS**

The labels shown below are affixed.

**1. Protective Housing Label**

DHHS Non-Interlocked Protective Housing Label  
..... (US, Canadian model)

**2. Interlock defeatable Label**

..... (US, Canadian model)

- US, Canadian model

*Non-Interlocked Protective Housing Label*

*Interlock defeatable Label*

**2. Aperture Label..... (AEP, UK, E model)**

- See figure on next page for location of label.

**3. Caution Label..... (AEP, UK, E model)**

- AEP, UK, E model

*Caution Label*

*Aperture Label*

## BESKYTTELSE AF ØJNE MOD LASERSTRÅLING UNDER SERVICE

I dette apparat anvendes laserlys. Derfor skal nedenstående instruktioner nøje følges under service.

Følg iøvrigt instruktionerne i servicemanualen.

### ADVARSEL!

Under service må øjnene ikke komme nær objektiv-linsen på den optiske pick-up enhed. I tilfælde af at det er nødvendigt at kontrollere udsendelsen af laserlys, skal det ske i en afstand af mere end 30 cm fra den optiske pick-up.

### 1. Data for Laser Diode

- Materiale: GaAlAs
- Bølgelængde: 780 nm
- Udstråling: Kontinuerlig
- Laser Output: max. 0.6 mW\*
- \* målt i 1.6 mm afstand fra overfladen af objektiv-linsen på den optiske pick-up enhed.
- Klassifikation: Svarende til klasse IIIb

2. Adskil aldrig den optiske pick-up enhed under service, og juster ikke APC kredsløbet (Automatic Power Control). Hvis APC kredsløbet (incl. laser-dioden) bryder ned, skal hele den optiske pick-up enhed (incl. APC printkortet) udskiftes.

## LASER ADVARSEL MÆRKNING (AEP model)

Følgende mærkning findes indvendig i apparatet:

### 1. Advarsel Mærkning

### 2. Aperture Label

- AEP, UK model

**SAFETY CHECK-OUT (US Model)**

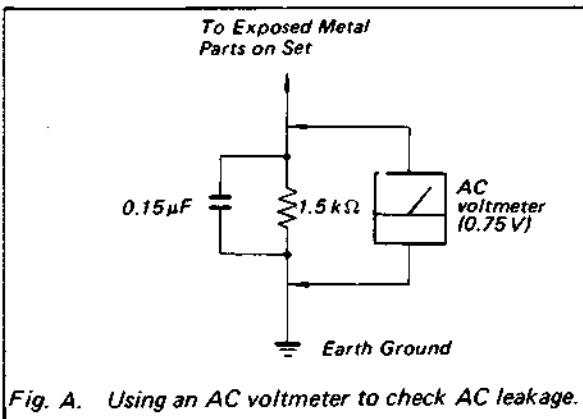

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

**LEAKAGE TEST**

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

**FEATURES**

**Quick operation**

- Feather-touch function keys for direct mode change.
- Linear motor for quick selection search.

**Various functions**

- AMS (Automatic Music Sensor) for quick selection location.
- Index function for quick location of the part you want.
- Full repeat functions for one selection, the whole disc and a particular portion.
- Large and easy-to-read digital display for elapsed playing time and remaining playing time.

**MODEL IDENTIFICATION**

— Specifications Labels —

- AEP model: AC: 220 V ~ 50/60 Hz 15 W
- UK model: AC: 240 V ~ 50/60 Hz 15 W
- US, Canadian model: AC: 120 V 60 Hz 15 W
- E model: AC: 110, 120, 220, 240 V ~ 50/60 Hz 15 W

— CAUTION FOR ELECTROSTATIC BREAKDOWN —

**NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK (BU-1)**

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

The printed matter below is included in the repair parts. During repair, use the procedure in the printed matter.

The following method is an example for reference purposes:

1. Place a conductive sheet on the workbench. (The black sheet used as repair parts wrapping).
2. Place the set on the conductive sheet so that the chassis touches the sheet. (This makes it the same potential as the conductive sheet).
3. Place your hands on the conductive sheet. (This makes them the same potential as the sheet).
4. Remove the optical pick-up block.
5. Perform work on top of the conductive sheet. Be careful that clothing does not touch the optical pick-up block.

**Printed Matter Included in the Repair Parts**

When opening or repairing a BU-1, the procedure for grounding as follows is required to prevent damage caused by static electricity.

1. Grounding for the human body.  
Be sure to put on a wrist-strap for grounding (with impedance lower than  $10^8 \Omega$ ) whose other end is grounded. The strap works to drain away the static electricity built-up on the human body.
2. Grounding for the work table.  
Be sure to lay on the table a conductive sheet (with impedance lower than  $10^9 \Omega$ ) such as sheet of copper which is grounded.
3. As static electricity built-up on clothes is not drained away, be careful not to let your clothes touch the BU-1.

— **SERVICING NOTE** —

**NOTES ON LASER DIODE EMISSION CHECK**

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe, from more than 30 cm away from the objective lens.

**LASER DIODE AND FOCUS SERCH OPERATION CHECK**

1. Make POWER switch on with no disc inserted and disc table closed.
2. Confirm that the following operation is performed while observing the objective lens.

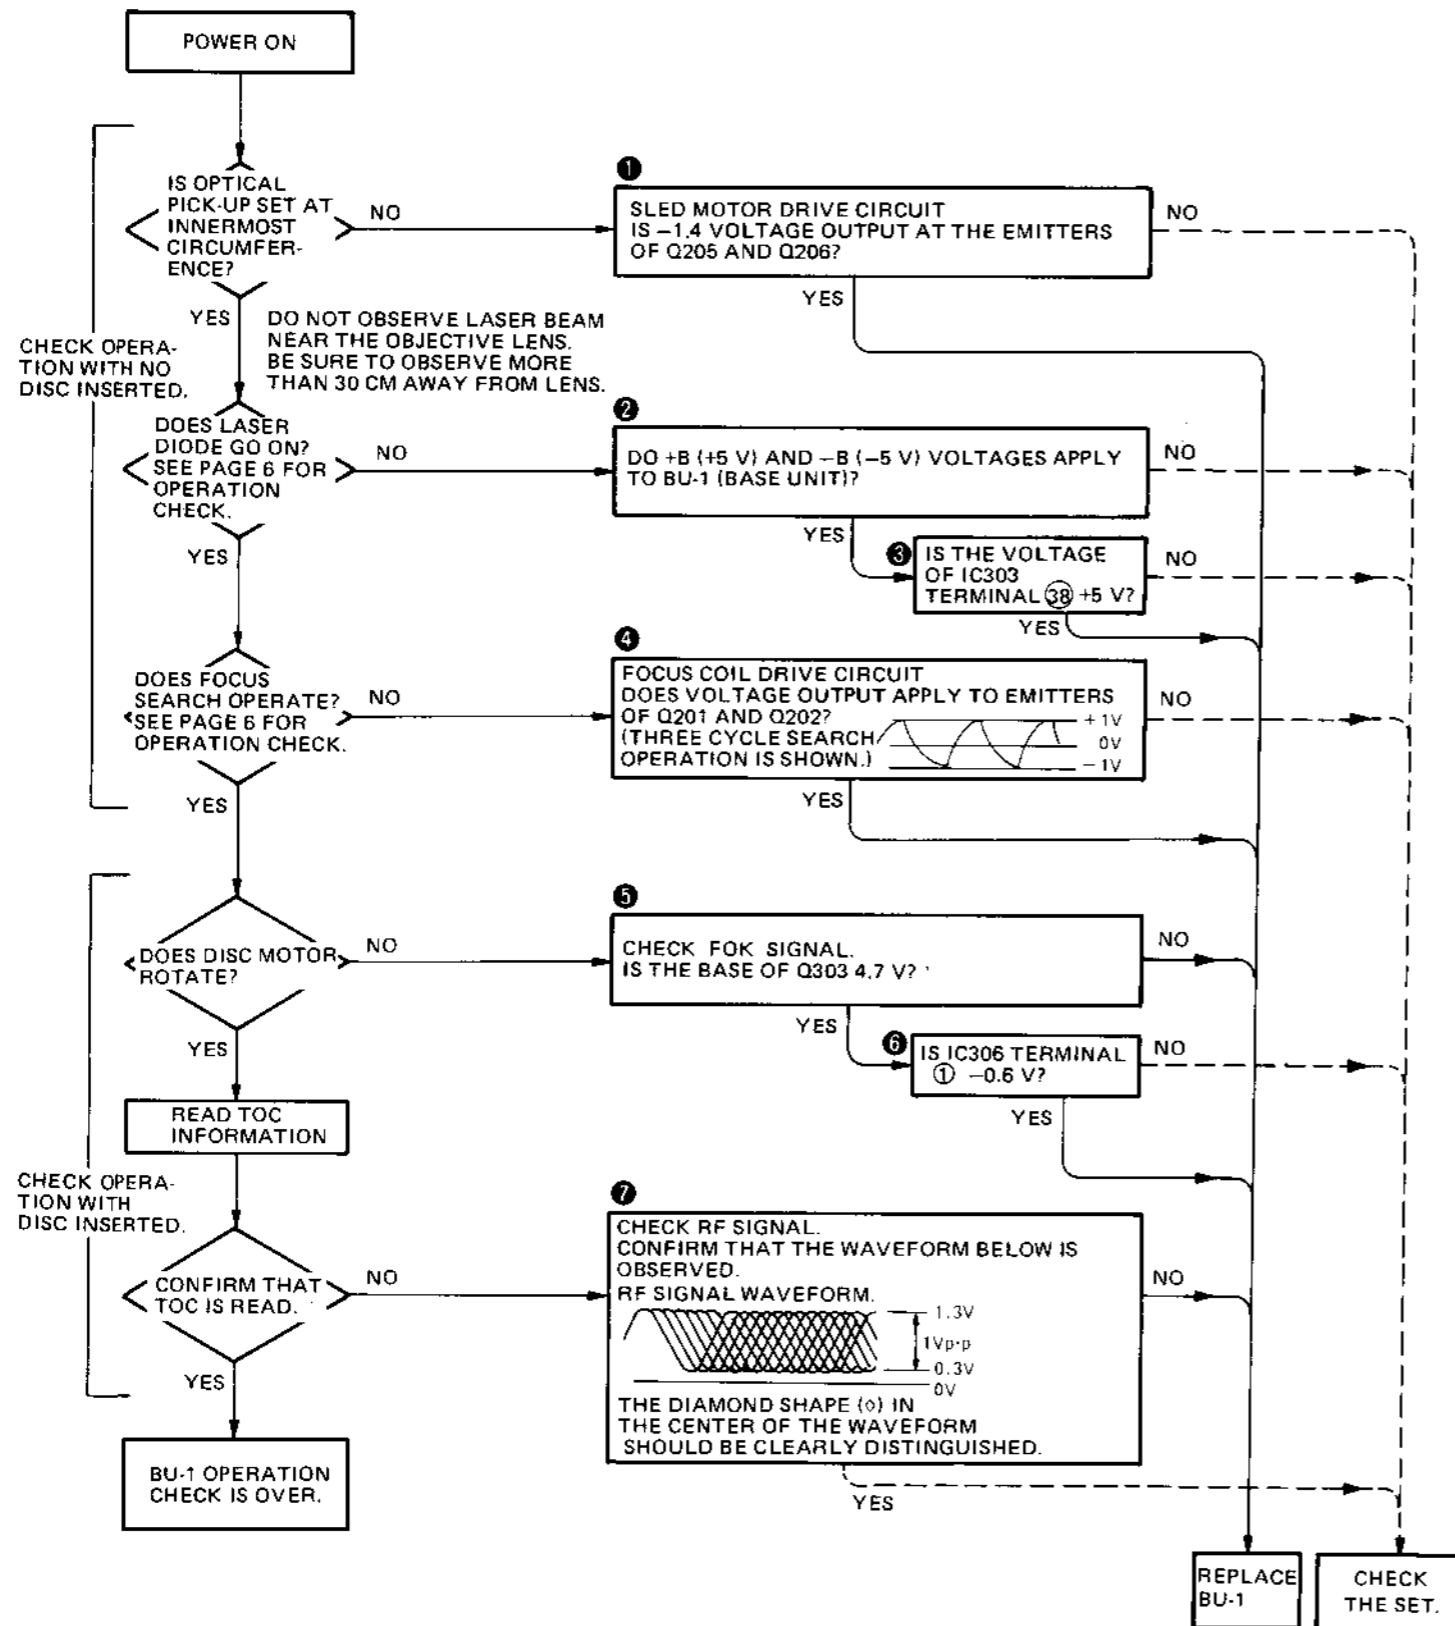

A transit lever is provided at the bottom of the unit to protect the optical system against shock during transportation. Before starting repairing, make following procedures.

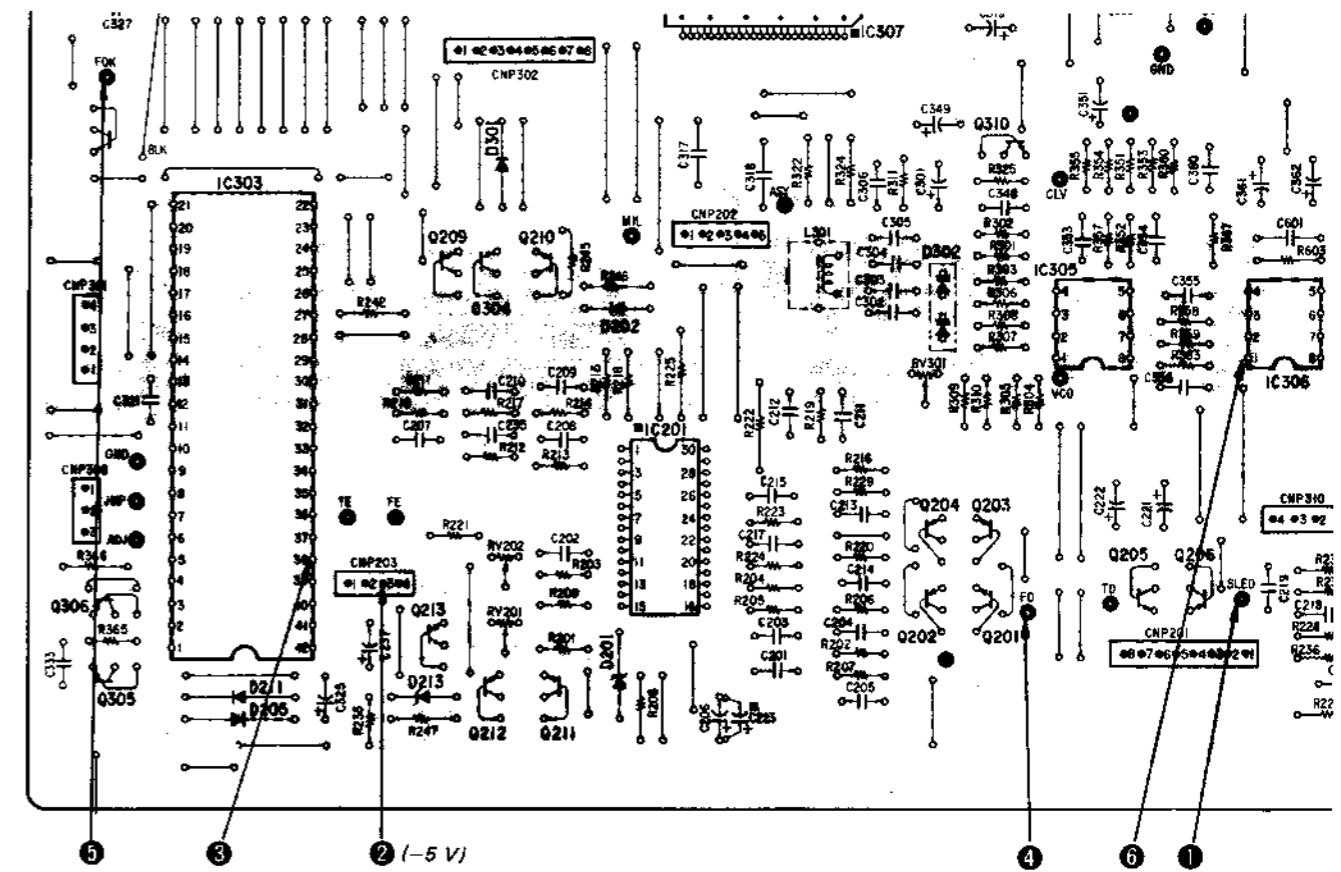

- 1 Loosen the screw (red) with the screwdriver.
- 2 Insert the screwdriver into the slot in the lever and move it in the direction of the arrow until it stops.
- 3 Tighten the screw.

**FLOW CHART OF BU-1 (BASE UNIT)  
TROUBLE SHOOTING**

- Confirm all connectors around BU-1 (base unit) are secured before the following check.

**MAIN BOARD**

**BU-1 (BASE UNIT)**

## LOCATION AND FUNCTION OF CONTROLS

Before plugging in or attempting to operate this unit, it is suggested that you familiarize yourself with all its switches and controls and the purpose of each. Each number in the photo is keyed to the descriptive text.

**1 POWER switch**

**2 ELAPSED/REMAINING TIME button**

The time counter normally indicates elapsed time. When this button is pressed, the time counter shows the time remaining before the end of the last selection, preceded by a minus sign. When this button is pressed a second time, the time counter reverts to the elapsed time.

**3 II PAUSE key**

**4 ► PLAY key**

**5 AUTOMATIC MUSIC SENSOR keys**

**6 REMOTE SENSOR and indicator (for remote control)**

**7 ► PLAY indicator**

**8 II PAUSE indicator**

**9 STOP (RESET) key**

**10 Manual search keys**

**11 INDEX keys**

Press one of these keys to search for a particular index number so that playback can begin at that point. Index numbers will be displayed in the display window. When a key is pressed and immediately released, the index number will increase or decrease by one. When the key is kept depressed, the index number will change continuously.

If a key is pressed during playback of a disc on which no index numbers have been recorded, playback will begin from the beginning of the current selection.

**12 Disc compartment**

**13 OPEN/CLOSE button**

**14 REPEAT programming buttons**

Press these buttons to program repeat play of the disc.

**1/ALL/CLEAR:** To repeat the selection currently being played, press this button once. To repeat all the selections on the disc, press the button again. To release repeat play, press the button again. The selected repeat mode is displayed in the display window.

**A ↔ B :** To repeat play between specific points on the disc.

With one touch of this button the indicator in the display window flickers and the point where the button has been pressed is memorized as the "A" (start) point of repeat play.

With another touch, the indicator illuminates steadily and the point where the button has been pressed a second time is memorized as the "B" (end) point of repeat play.

When the 1/ALL/CLEAR button is pressed, this repeat play will be cancelled.

### Display window

**15 DISC indicator**

The indicator illuminates steadily when the disc compartment is moving, when the disc compartment has closed with a disc in place (in the standby mode) and during disc playing.

**16 TRACK indicator**

When the disc is placed in the disc compartment and the disc compartment is closed by pressing the OPEN/CLOSE button or the disc compartment, this indicator shows for a few seconds the total number of the selections recorded on the disc.

During play, this indicator shows the track number of the selections being played.

**17 SCAN indicator**

This indicator illuminates while the player is searching for the point on the disc you have programmed.

**18 INDEX indicator**

If index signals are recorded on the disc to allow significant parts of a program to be easily located, the index numbers are shown here.

**19 Time counter**

When the disc is placed in the disc compartment and the disc compartment is closed by pressing the OPEN/CLOSE button or the disc compartment, this indicator shows for a few seconds the total playing time of the disc. During play, this time counter shows the location in a particular selection by means of actual elapsed time. When the ELAPSED/REMAINING TIME button is pressed, the time counter shows how much playing time is left on the disc. The first two digits of the counter show playing time of the selection in minutes, and the last two digits show the seconds.

### Rear panel

**20 LINE OUT jacks**

These jacks can be connected to the line input jacks of an amplifier using the supplied connecting cord.

**21 SUBCODE OUT connector**

This connector is provided to extend the utility of this compact disc player by allowing for the connection of optional equipment which will be available in the future.

**22 REMOTE IN (remote control input) connector**

Use this connector to remotely control the whole audio system with the optional Sony ST-V77 FM stereo/FM-AM system control tuner. For details, refer to the operating instructions of the ST-V77.

**23 REMOTE OUT (remote control output) connector**

Use this connector to remotely control the whole audio system with the optional Sony ST-V77 FM stereo/FM-AM system control tuner. For details, refer to the operating instructions of the ST-V77.

**24 FUNCTION CONTROL connector**

This connector can be connected to the CD connector of the optional Sony ST-V77 FM stereo/FM-AM system control tuner.

**25 AC OUTLET (unswitched)**

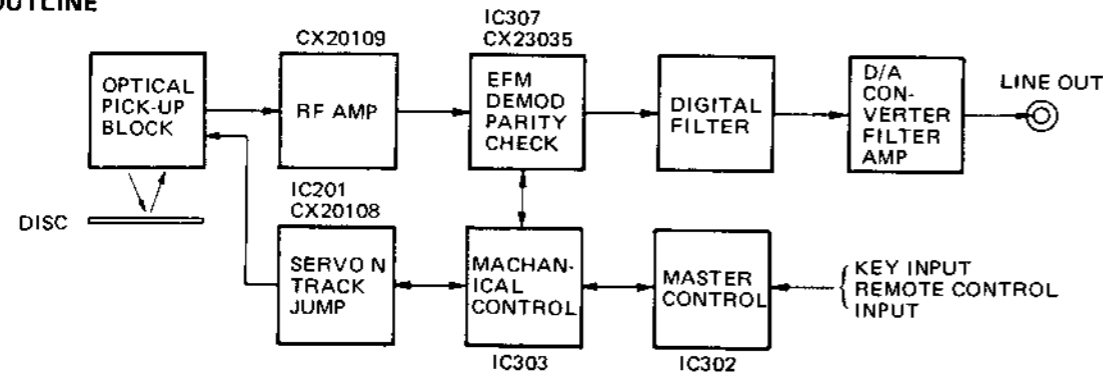

**26 Power cord**

SECTION 1  
OUTLINE

CIRCUIT DESCRIPTION

1-1. OUTLINE

Above block diagram shows configuration of this set. Master control IC (IC302) serves as the center of all operation. Master control IC (IC302) assumes interface between man and machine like key input and remote control input. Mechanical control IC (IC303) assumes interface between master control IC (IC302) and machine.

For example, if PLAY button is pressed from key input, master control (IC302) gives mechanical control IC (IC303) a command to make PLAY mode. When this command is given, mechanical control IC (IC303) works in routine operation to make PLAY mode. It gives every kind of commands for IC201, 307 and they are in PLAY mode.

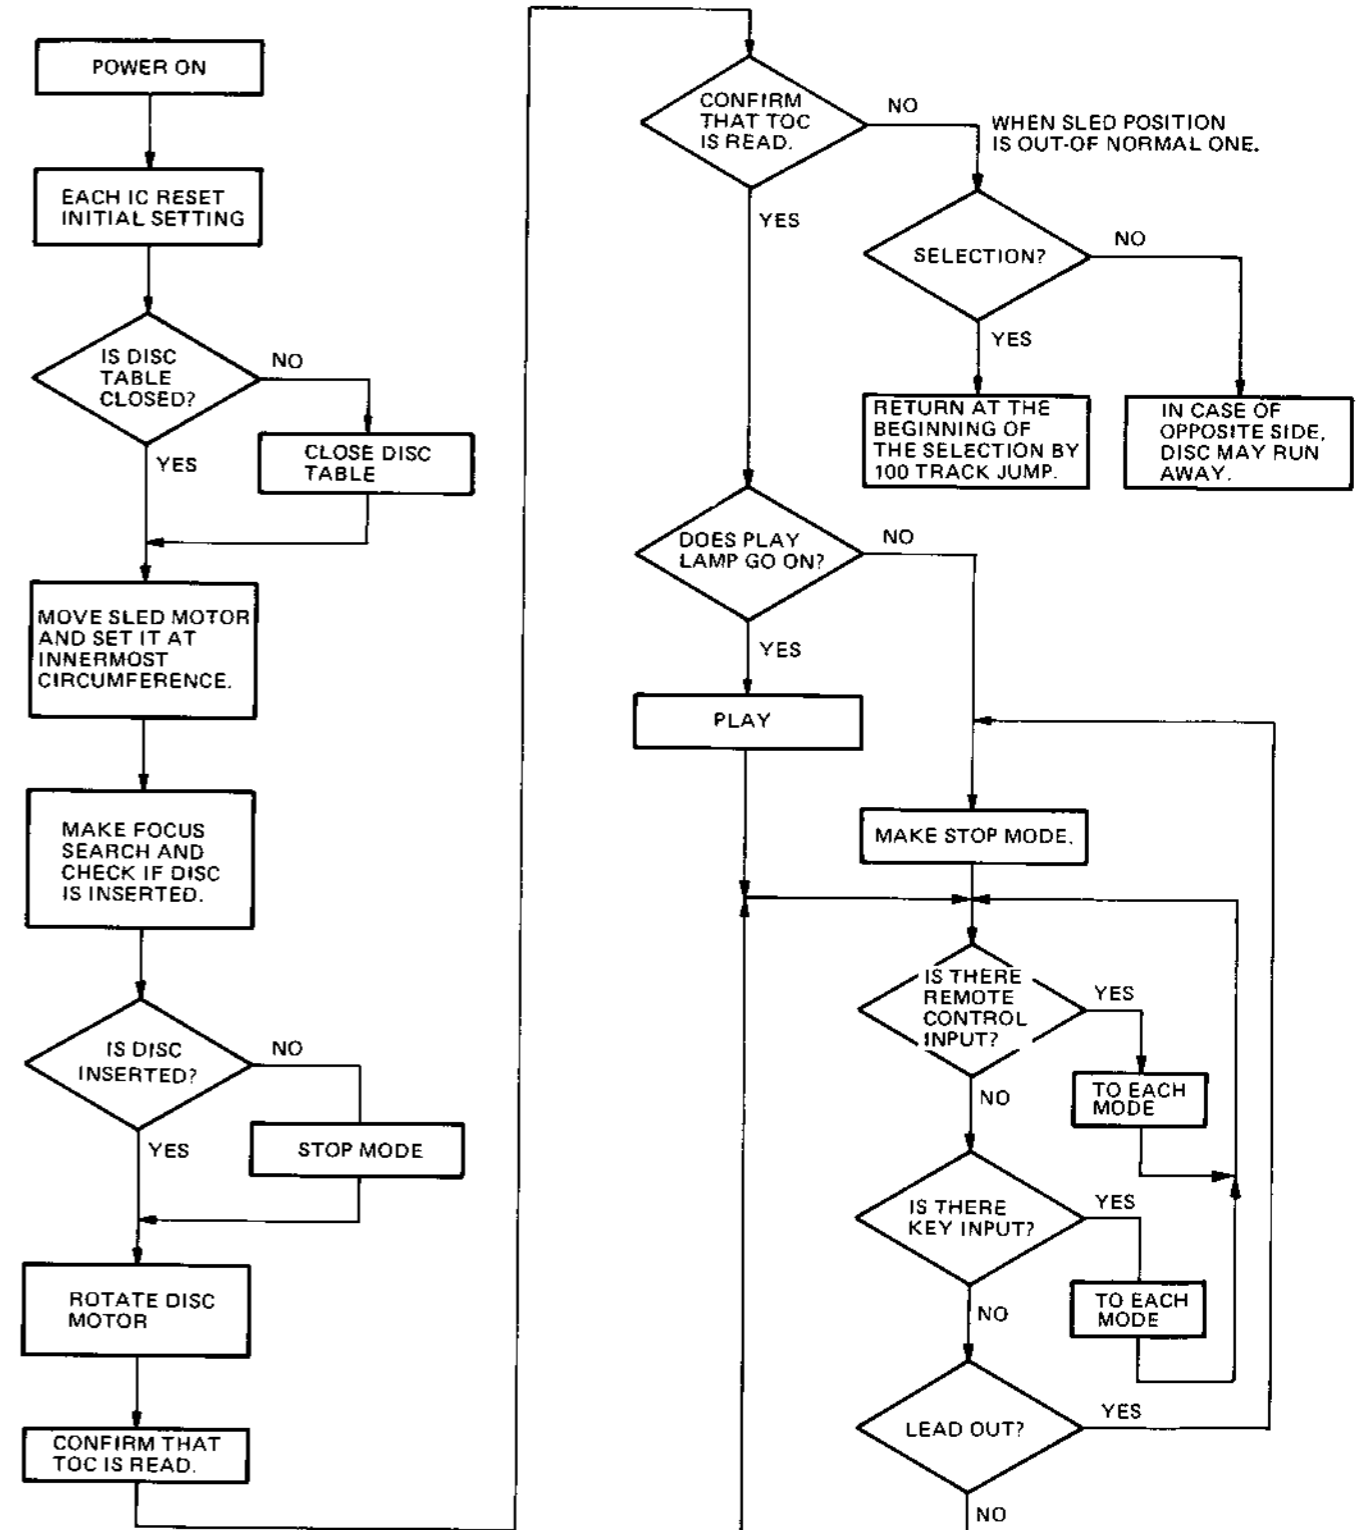

Through IC201 and IC307 use common data bus, they distinguish a command for IC201 or IC307 by a higher rank 4 bit value of each command from mechanical control IC (IC303).

Command for IC201: higher rank 4 bit 0000-0011 (0-3 with hexadecimal number system) are used.

Command for IC307: higher rank 4 bit 1010-1110 (A-E with hexadecimal number system) are used.

IC201 controls servo (focus, tracking, sled) mainly. IC307 checks EFM demodulation and CRC.

The illustration below shows flow chart of simple operation after power is ON.

1-2. MASTER CONTROL IC (IC302)

Master control IC (IC302) controls all of the operations of this set. Besides inputting key input and remote control input and data from mechanism control IC (IC303), it outputs display output and commands to mechanism control IC303.

Pin Functions

Pin No.	I/O	Pin Name	Operation
1-4	OUT	D0-D3	Data output pin for key scan digit signal and to display tube drive IC (IC801)
5-8	IN	K0-K3	Key scan data input pin.
9	IN	OSC	Clock input pin.
11	IN	RESET	Reset input pin. Goes high about 1.5 seconds after power on.
13	IN	Q INT	Trigger input pin when data is transferred from IC303 to IC302.
14	IN	OUT SW	Input pin, goes low when disc compartment opens. When this pin goes high, IC302 outputs load in command to IC303.
15	-	H. L.	When this pin is low, IC302 does not output load in command to IC303 even if pin 14 is high.
17	IN	REC M	Syncro REC signal input pin.
18	IN	SI CLK	Clock input pin from remote control decoder.
19	IN	IN SW	Input pin, goes low when disc compartment closes.
20	IN	SI DATA	Serial data input pin from remote control decoder.
21	-	GND	Ground
29	OUT	CD F	Direct function output pin. High is output for 600 msec when PLAY, PAUSE button is pressed during STOP mode.
30-33	IN/OUT	CMD0-CMD3	I/O pin for data with IC303.
34	OUT	M REQ	Control (request) signal output pin for commands to IC303.
35	IN	S ACK	IC303 acknowledge signal input pin.
36	OUT	RST	Reset output pin to display tube drive IC (IC810).
37	OUT	CTL	Clock output pin to display tube drive IC (IC801).
38	OUT	IDP	Output pin for data which controls display tube drive IC (IC801) characters.
39	OUT	RMS LED	RMS LED output pin.
40	OUT	PAUSE LED	PAUSE LED output pin.
41	OUT	PLAY LED	PLAY LED output pin.
42	OUT	VDD	Power supply pin (5 V)

When commands are sent from the master control IC (IC302) to the mechanism control IC, the master control IC sets the data to be sent and makes the M REQ pin go low from high, as shown in the figure. When the M REQ pin goes low, the mechanism control IC (IC303) makes the S ACK pin go low from high. At the time data is taken in to the mechanism control IC (IC303).

When the master control IC (IC302) confirms that the S ACK pin has gone low, it sets the next data and makes the M REQ pin high. When the M REQ pin goes high, the mechanism control IC (IC303) makes the S ACK pin high and reads in the data.

Example: CLOSE command. (CF)

Command from master control IC (IC302) to mechanism control IC (IC303).

Command

OPEN	DF	Opens disc compartment.
CLOSE	CF	Closes disc compartment.
AMS	A * * 01F	Perform AMS. If for the 5th selection: A0501F
	TRACK NO	
INDEX	A * * * * F	Performs index search. When the INDEX key is pressed, TRACK NO and INDEX NO are input and sent.
	TRACK NO INDEX NO	
LOCATION	B * * * * * * * OF	Performs A → B repeat. The place for A is memorized, that data is put into the * section and set out, the pick-up is returned to the place with that value, and repeats play between that point and the point where B was pressed.
	TRACK NO INDEX NO MIN SEC FRAME	
STOP	1F	Stops spindle motor and sled motor.
manual search	4F-9F	Sends out during FF and REW.
	4F	FF during PAUSE. Performs 40 track jump after a certain time passes.
	5F	REW during PAUSE.
	6F	FF Performs 10 track jump after a certain time passes.
	7F	REW
	8F, 9F	not used
PAUSE	3F	PAUSE
PLAY	2F	normal PLAY command
TOC REQ	* * * * * * * * (F)	This command is sent out when the TOC data in the mechanism control IC is desired, and is sent out during random access, when selection changes, etc.
	H L MIN SEC MIN SEC	
	(Selection N) (Selection N + 1)	

The above signals are sent from CMD0-CMD3 to the mechanism control IC.

The mechanism control IC executes these commands.

Commands sent from the mechanism control IC (IC303) to the master control IC (IC302).

TOC, Q data	C * * * * * * * * * * F	TOC data or Q data is sent.
	TRACK NO INDEX NO MIN SEC FRAME MIN SEC	
	elapsed time in the track	elapsed time from beginning of disc
TOC READ END	A (F)	Sent out when TOC data read-in is finished.
LEAD OUT	B (F)	Sent out when disc ends.
NO DISC	E (F)	Sent out when there is no disc in the disc compartment.
OPEN	D (F)	Sent out when the disc compartment is open.

The mechanism control IC (IC303) keeps the TOC data and Q data read in from the disc, and sends it to the master control IC (IC302) as required.

### 1-3. MECHANISM CONTROL IC (IC303)

Mechanism control IC303 sends commands to IC201 (servo IC CX20108) and IC307 (digital processing/CLV servo IC CX23035) via the DATA, CLOCK and LATCH pins, and also memorizes TOC and Q data, and performs direct search, etc. based on this data.

#### Pin Functions

Pin No.	I/O	Pin Name	Operation
1	OUT	REC MUTE	Synchro REC MUTE signal output pin.
2	OUT	PAUSE	Synchro PAUSE release signal output pin.
3	IN	REC M	Synchro REC signal input pin.
4	-	ADJ	By making this pin low, IC303 will not load the disc out even if servo or other abnormalities are detected. Used for servo and PLL adjustment.
5	OUT	MUTE	Muting control output pin.
6	-	JMP	By making this pin low, direct search is not performed and access is done by track jump. Used for track jump check.
9	IN	OSC	Clock input pin.
11	IN	RESET	Reset input pin. Goes high about 1.5 seconds after power on.
13	IN	SCOR	SUB Q sync signal input pin.
15	IN	IN SW	Input pin; goes low when disc compartment closes.
16	IN	OUT SW	Input pin; goes low when disc compartment opens.
17	IN	FOK	Focus OK signal input pin.
18	IN	WFCK	WFCK (Write Frame Clock) input pin.
19	IN	GFS	Guard Frame Sync input pin. High is input when disc data can be read in normally.
20	IN	SUB Q	SUB Q signal (selection address, emphasis data, etc.) input pin.
21	-	GND	Ground
22	IN	SENSE	IC201, IC301 SENS output input pin.
23	IN	Q CHECK	Input pin for SUB Q CRC results output from IC307.
24	OUT	LATCH	Latch output pin for serial data to IC201, 307.
25	OUT	DIRECT	Output pin to IC201 during track jump. Normally high, reverses track jump pulse direction at low. Next, for high set to normal tracking mode. Outputs low for a set time at detection of TZC rise and fall.
26	OUT	DATA	Serial data output pin to IC201, 307.
27	OUT	CLOCK	Serial data transmission clock output pin to IC201, 307.
28	OUT	SLED G	Output pin; controls sled motor gain. Normally high. Low during access.
29	IN	SLED S	Low when sled motor operates. Inputs high when it stops.
31	OUT	Q INT	Trigger output pin for data sent to IC302.
32	OUT	S ACK	Acknowledge signal output pin for IC302 M REQ signal.
33	IN	M REQ	IC302 M REQ signal input pin.
34-37	IN/OUT	CMD0-CMD3	I/O pin with IC302 data.
38	OUT	LD ON	Output pin; controls laser diode ON/OFF.
39	OUT	LOAD IN	Output pin; drives loading motor to the close side.
40	OUT	LOAD OUT	Output pin; drives loading motor to the open side.
41	OUT	EPS	Detects disc emphasis, switches emphasis ON/OFF. Output pin.
42	-	VDD	Power supply pin (5 V)

The Q data called SUB Q is used for the TOC Table of Contents) data in the lead-in area, mode control signals such as preemphasis during the selections, and track number (TNO), index number, play time, etc. display and address data.

This data is input to mechanism control IC (IC303) SUB Q pin from IC307, and is written into the RAM by 8 bit units. Data is sent from the mechanism control IC (IC303) to the master control IC (IC302) as required, and is displayed. Data is sent from the mechanism control IC to the master control IC about 8 times in 1 second.

**1-4. DIRECT SEARCH**

On this set, a linear motor is used for the sled motor, so that besides 100, 10 and 1 track jump, the optical pick-up can be moved directly to the address specified by the microcomputer. (direct search). (On the conventional CD player, only the objective lens moves, and the optical pick-up follows it by servo in order to perform 100, 10 and 1 track jump only.) Higher performance access is enabled on this set.

On the conventional CD player, only three data, A0 (MNR of first selection on the disc), A1 (MNR of last selection on the disc) and A2 (leadout track start point) were memorized when TOC data was read in to the microcomputer. However, on this model, the absolute time from the first to the 21st selection is memorized in the microcomputer. This absolute time is converted to track numbers inside the microcomputer, and the track number to be jumped is obtained by subtracting the current address track number from the track number of the selection to be jumped to.

Frame number	POINT	PMIN, PSEC, RFRAME
n	01	00, 02, 32
n + 1	01	00, 02, 32
n + 2	01	00, 02, 32
n + 3	02	10, 15, 12
n + 4	02	10, 15, 12
n + 5	02	10, 15, 12
n + 6	03	16, 28, 63
n + 7	03	16, 28, 63
n + 8	03	16, 28, 63
n + 9	04	. . .
n + 10	04	. . .
n + 11	04	. . .
n + 12	05	. . .
n + 13	05	. . .
n + 14	05	. . .
n + 15	06	49, 10, 03
n + 16	06	49, 10, 03
n + 17	06	49, 10, 03
n + 18	A0	01, 00, 00
n + 19	A0	01, 00, 00
n + 20	A0	01, 00, 00
n + 21	A1	06, 00, 00
n + 22	A1	06, 00, 00
n + 23	A1	06, 00, 00
n + 24	A2	52, 48, 41
n + 25	A2	52, 48, 41
n + 26	A2	52, 48, 41
n + 27	01	00, 02, 32
n + 28	01	00, 03, 32
.	.	. . .
.	.	. . .
.	.	. . .

- Frame number: 98 symbol, 1 block No.
- POINT = For A0, PMIN indicates MNR of first selection on the disc. PSEC, PFRAME are "00".
- POINT = For A1, PMIN indicates MNR of last selection on the disc. PSEC, PFRAME are "00".
- POINT = For A2, PSEC, PFRAME indicate lead-out track start point.
- POINT = For 01-06, PMIN, PSEC indicate the absolute time of the selection.

Table A. TOC Structure (Example of a 6 selection disc)

Direct search is performed as follows:

When the search command is input to the mechanism control to (IC303) from the master control IC (IC302) due to key input or remote control input, the mechanism control IC303 converts the current address to track number from the data Q of the current address channel Q (Figure 1) data. (This data Q is always input from pin 20 SUB Q during play.) The address to be jumped to is also converted to a track number, the track numbers are compared, and the number of tracks to be jumped is calculated.

**SO, S1:** parts of sync pattern.  
**CONTROL:** Indicates channel number and preemphasis ON/OFF.  
 Output from MSB  
 0000 - 2CH, no preemphasis  
 1000 - 4CH, no preemphasis  
 0001 - 2CH, preemphasis  
 1001 - 4CH, preemphasis  
 LSB = 0 at lead-in and lead-out portions.  
**ADR:** Control bit for DATA-Q. Output from MSB.  
**DATA-Q:** 72 bits of data; output from MSB.  
**CRC:** CRC for CONTROL, ADR, DATA-Q. Refer to PCM-F1 Operation Manual for details on CRC. Output from MSB.  
 Generation multinomial is  
 $P(x) = x^{16} + x^{12} + x^9 + 1$

Figure 1. Channel Q Structure

**MNR:** Expresses Music Number as 2 digits of BCD.  
 00 → Lead-in track  
 01-99 → Music number  
 AA → Lead-out track  
**X:** MNR index, expressed as 2 digits of BCD.  
 1 MNR is divided into 100. The method of division is determined by the software, and numbering is in order from "00-99". Does not exist on lead-in track.  
 00 → Pause encoding  
 Applies pause. There is 2-3 seconds of pause encoding at the top of the selection.

01-99 → Sub-division number.  
 X = 01 on the lead-out track, MNR = 01-99 and X ≠ 00 during a selection. Initial value is "01", then increases by ones.

**ZERO:** All these 8 bits are "0".  
**MIN, SEC, FRAME:** Selection running time is expressed by BCD 6 digits. All "0" at beginning of selection. Time increases during the selection, stops at pause. Become "0" at end of pause. Time increases on lead-in and lead-out tracks. 1MIN = 60 SEC, 1SEC = 75 FRAME (00-74)

**AMIN, ASEC, AFRAME:** Disc running time is expressed as BCD 6 digits. At start of disc program area, time is "0" and MNR is the first value of that disc.  
 1AMIN = 60 ASEC, 1ASEC = 75 AFRAME (00-74)

**POINT, PMIN, PSEC, PFRAME:** Disc table of contents on this part of the lead-in track. As shown in the table, it is recorded continuously and repeatedly on the lead-in track, or MNR = 00 portion. Also, each content is recorded 3 times each.

PMIN, PSEC, PFRAME values each express selection start point. There is ±1 second precision on AMIN, ASEC, AFRAME time axes.

Figure 2. Data Q Structure

Next, the mechanism control IC puts the digital signal processing/CLV servo IC (IC307) CX23035 into counter set mode. By doing this, CX23035 outputs the CNIN pin (17) input signal CNIN/2h (Hz) signal from SENSE pin (18) (COUNT). At this time 41 is set in n, so a signal which is the input signal divided by 82 is output from the SENSE pin.

Then tracking and sled servo go off, focus servo goes on and the optical pick-up is moved quickly by the linear (sled) motor. When this happens the RF amp (IC201) CX20109 MIRR pin (18) mirror output is as shown in Figure 3. (For example, if there are 20000 tracks from the innermost to outermost circumference, and access is done in 0.5 seconds, mirror output is 40 kHz, which is too fast for the mechanism control IC to read.)

Figure 3. Mirror Output for Direct Search

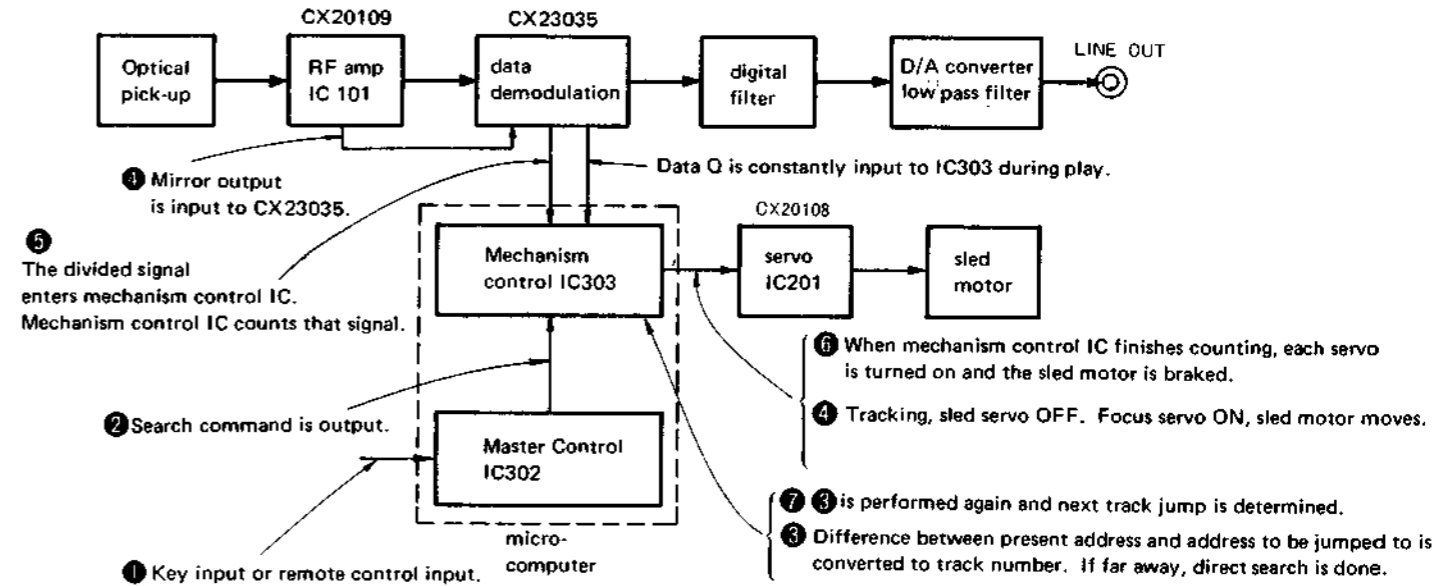

Figure 4. Count Signal Timing

This mirror output is input to CX23035 CNIN pin (17), then is divided into 41 and output from SENSE pin (18) to the mechanism control IC SENS pin (22). (At this time, it is divided and can be read.) This input signal is counted by the mechanism control IC at rise or fall and is converted to the number of tracks to be jumped. For example, for a 1000 track jump, consecutive comparison, such as  $1000/82 \approx 12$  is done and when that value is reached, each servo is turned on and the optical pick-up is braked. Then DATA-Q is read, converted to track number, and if within a certain range, 100, 10, 1 track jump are performed and convergence is done. Outside of that range, direct search is performed again.

**1-5. LINEAR MOTOR AND SERVO CIRCUITS**

A linear motor is used for optical pick-up transportation mechanism on this model.

Figure a shows the optical pick-up transportation mechanism. The linear motor drive coil (sled coil) is part of the optical pick-up and performs transportation

operation. There is a sensor coil mounted on the opposite side of the linear motor. This detects when the optical pick-up reaches the innermost circumference and stops the linear motor.

Figure a. Optical Pick-up Transportation Mechanism

The linear motor is structured with a coil wound around a yoke plate and a magnet at both ends. Figure b shows the theory of operation. The coil re-

ceives force in the direction of (A) when current flows to the coil in the magnetic field.

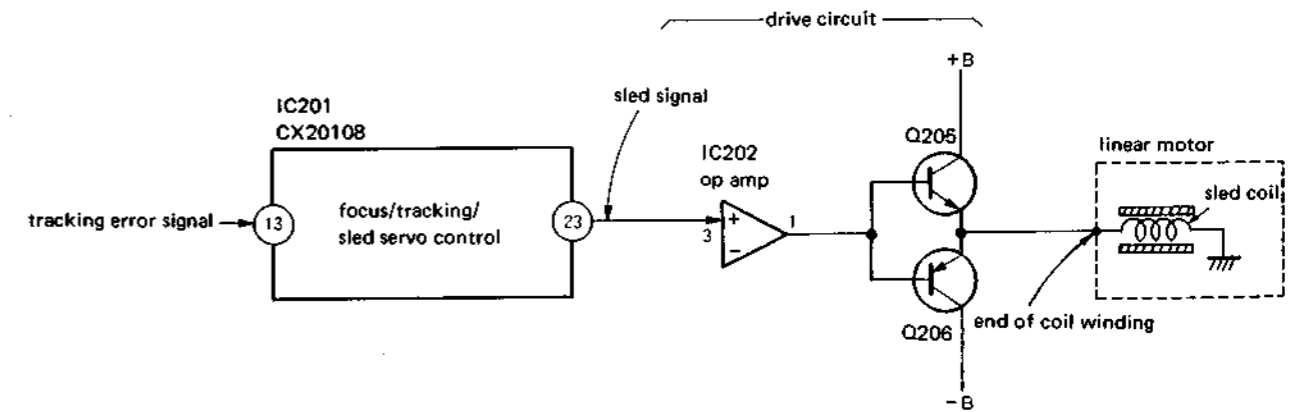

Figure b. Theory of Linear Motor Operation

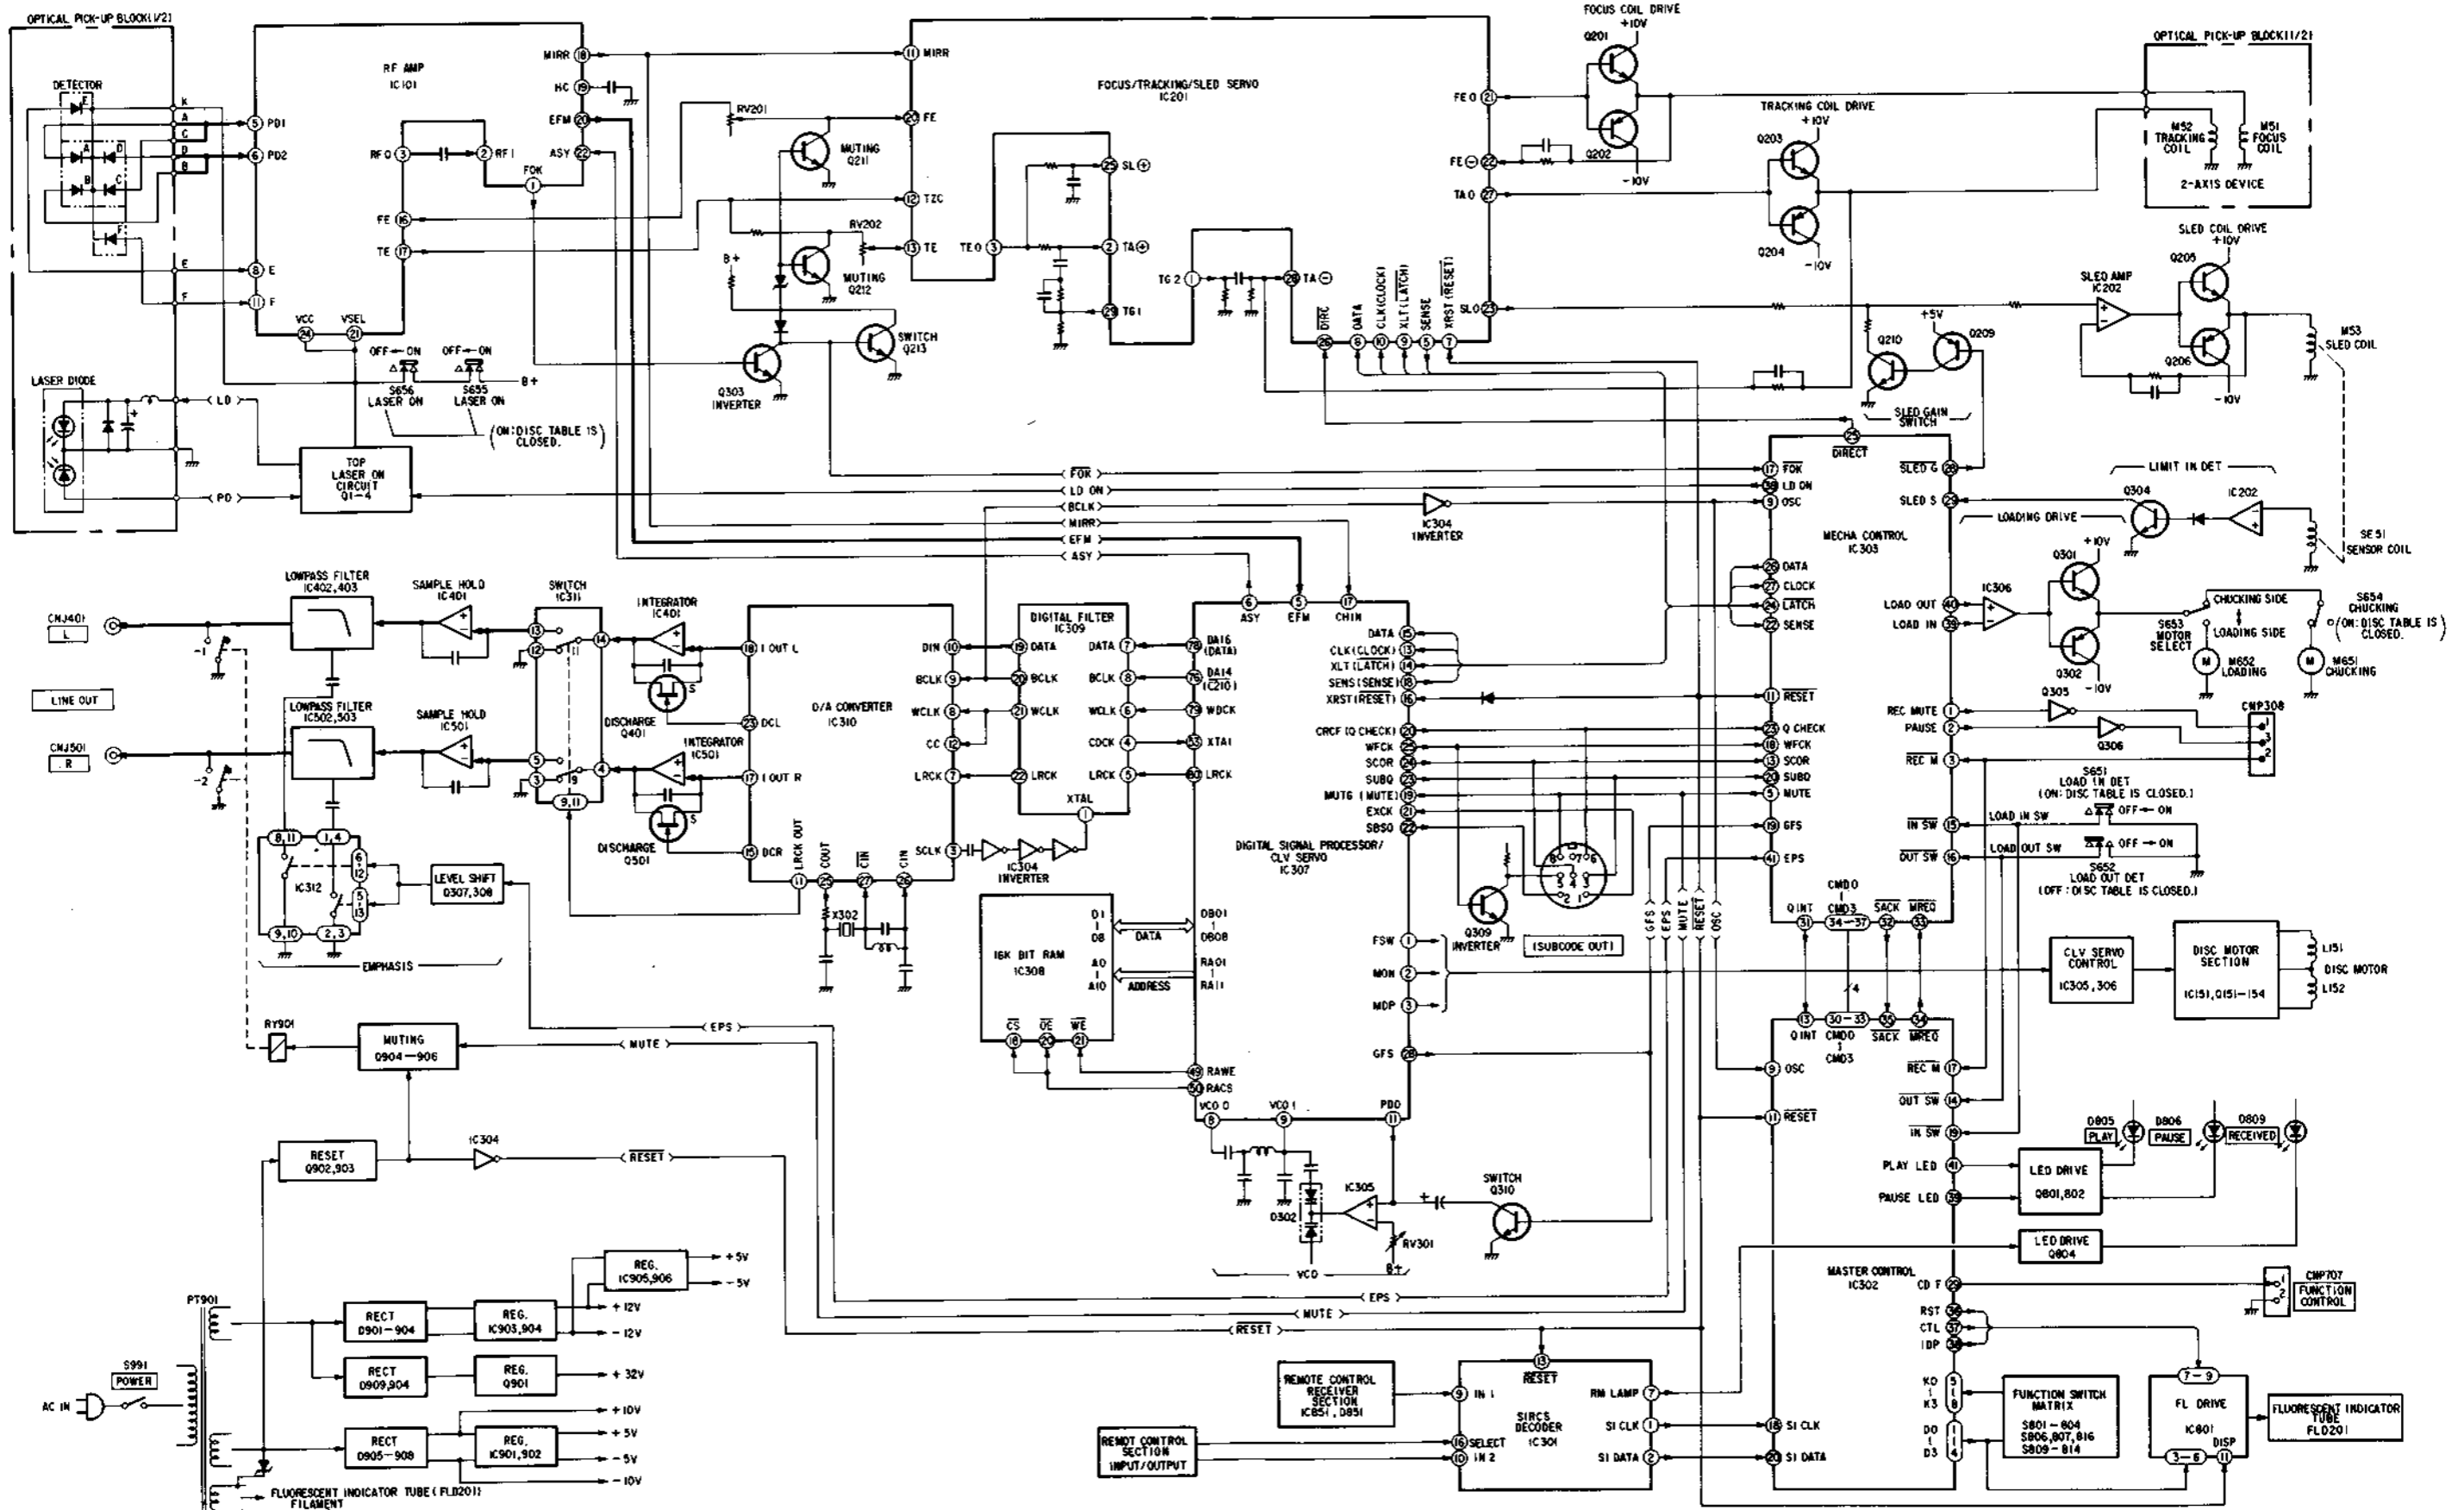

The linear motor servo circuit receives a tracking error signal in order to prevent the optical pick-up laser spot from leaving the pit track, and outputs a sled signal. This sled signal drive controls the linear motor. Also, to

perform 1, 10, 100 track jump, the signal from IC303 (mechanism control) is controlled at IC201 (CX20108) and the linear motor is driven by the sled signal. This allows 1, 10, 100 track jump to be performed smoothly.

Linear Motor Servo Circuit Structure

BLOCK DIAGRAM

SECTION 3  
DISASSEMBLY

3-1. DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

- Remove the case.  
(4 case retaining screws with claw.)

- Remove the bottom plate.  
(+BVTT3 x 6 8 screws)

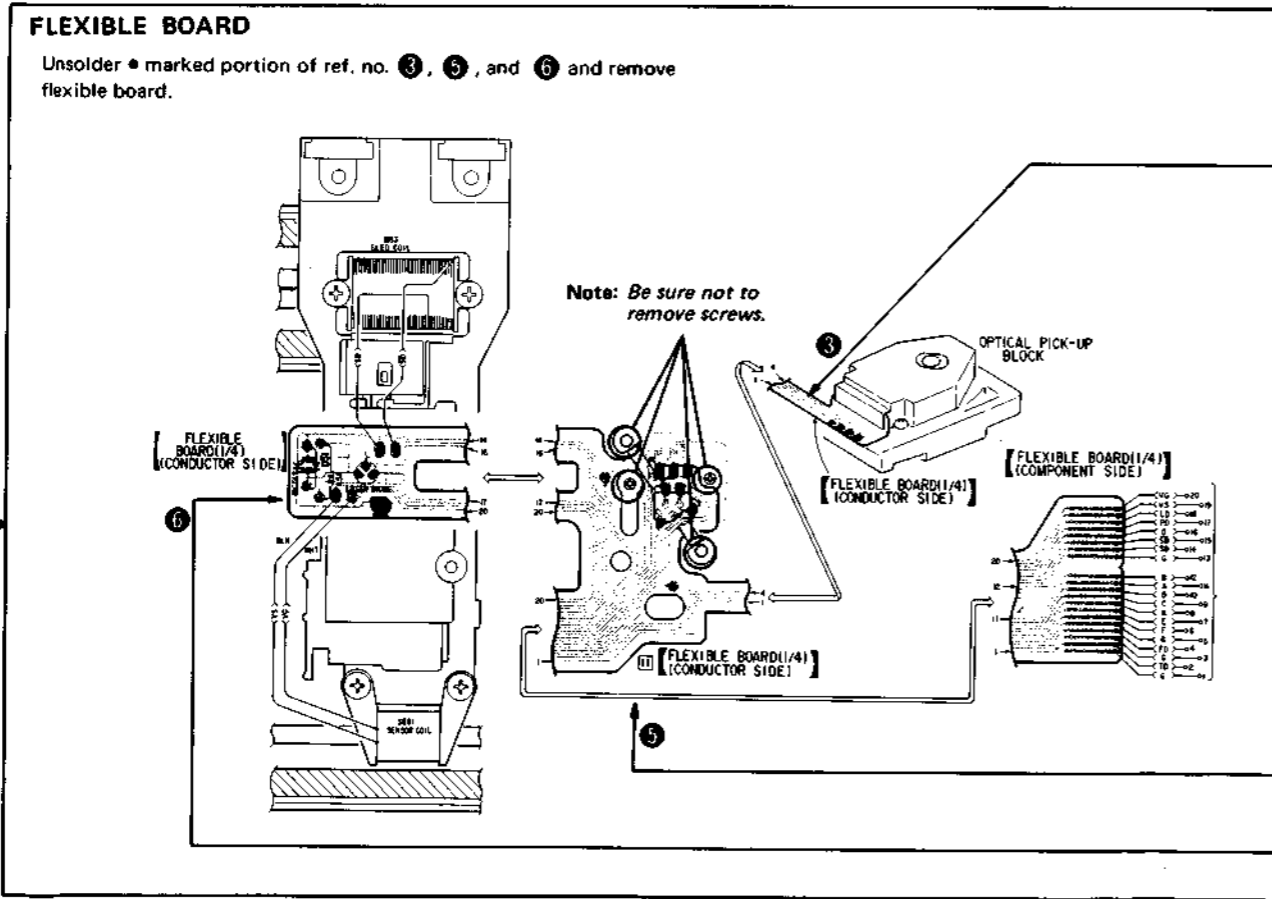

Note (1): When replacing BU-1, refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Note (2): Each compression spring (insulator) differs in size and turns. When installing it, refer to the following list.

compression spring (insulator)		turns	color
A	15 mm	5	gold
B	14.5 mm	6	silver
C	20.5 mm	5	black

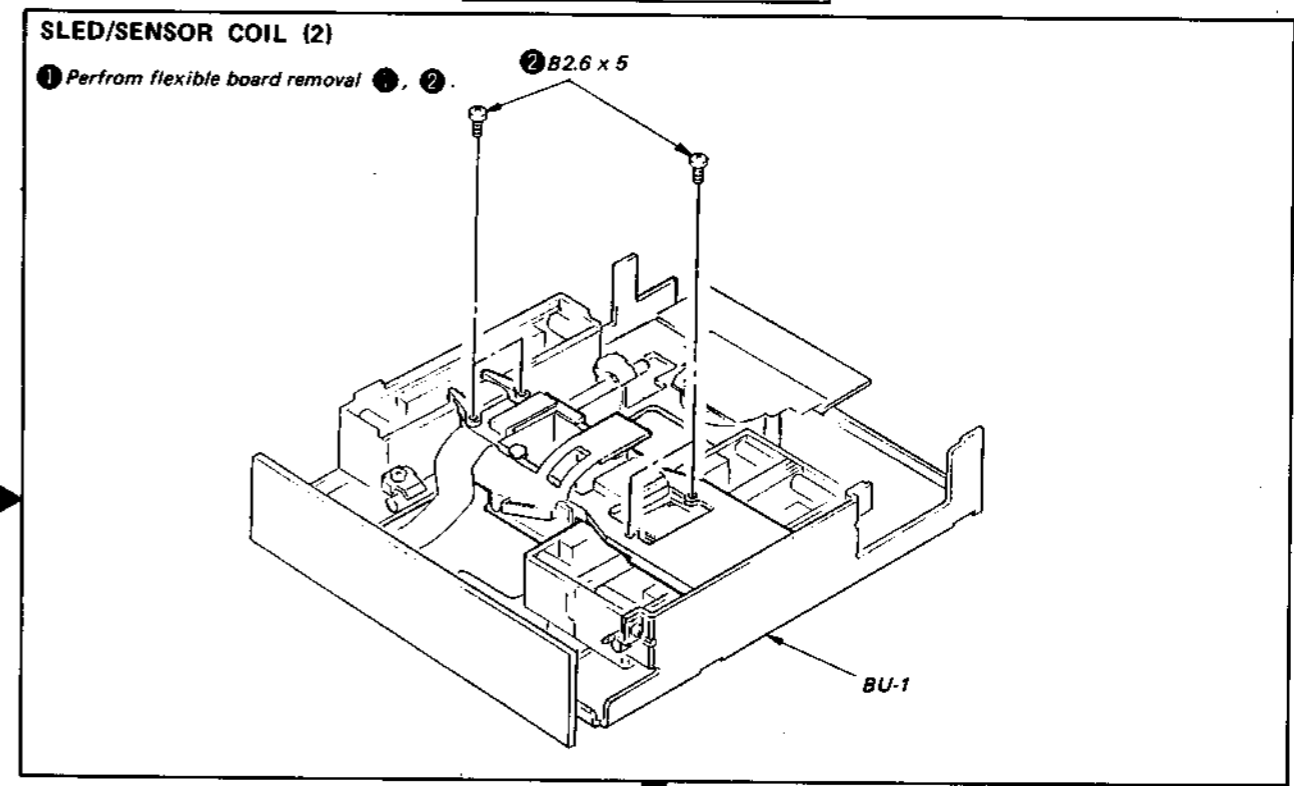

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Refer to "NOTES ON HANDLING BU-1 (BASE UNIT)" on page 5 to prevent damage caused by static electricity.

Note: When installing sled coil, install as illustrated. If it is installed incorrectly, it will not operate.

SECTION 4  
ADJUSTMENTS

3-2. PC BOARDS LAYOUTS

MECHANICAL SECTION

4-1. MECHANICAL ADJUSTMENT  
DISC TABLE POINT ADJUSTMENT

Setting:

- Turn power on.
- Keep disc table closed.

CHUCKING ARM HEIGHT ADJUSTMENT

Adjust the height of portion (A) with disc inserted and disc table closed.

Repeat loading and confirm that chucking arm does not touch disc pulley.

**Disc Pulley Height Adjustment**

Install the disc pulley so that clearance (A) is 0.5 mm.  
Confirm that centering cap moves up and down.

**4-2. ELECTRICAL ADJUSTMENTS**

1. Perform adjustments in the order given.
2. Use YEDS-1 disc unless otherwise indicated.
3. Use the oscilloscope with more than 10MΩ impedance.

**Adjustment Mode**

1. Connect main amp board test point ADJ and GND.  
This is to prevent the disc table from opening even though pits are not read, by making micro-computer IC303 pin (4) low.
2. Turn POWER switch on.  
(To reset microcomputer.)  
After adjustment, remove the lead wire connecting test points ADJ and GND.

**Adjustment Location:** main board.

ADJ GND

Connect test points ADJ and GND.

**RF PLL Adjustment**

**Procedure:**

1. Turn POWER switch ON. (stop mode).
2. Keep disc table opened.
3. Put set into adjustment mode (See page 35.)
4. Connect VTVM to main board test points TP VCO and TP GND.
5. Adjust main board RV301 so that reading on VTVM is  $0V \pm 50 mV$ .
6. Connect the frequency counter to main board test points TP PLCK and TP GND.
7. Adjust main board L301 so that reading on frequency counter is  $4.2818 MHz \pm 10 KHz$ .
8. Reconnect lead wires connected in adjustment mode.
9. Put disc (YEDS-1) in and press ▷ PLAY button.
10. Confirm that reading on frequency counter is 4.3218 MHz.

**Adjustment Location:** main board.

**CLV Phase Lock Check**

Perform this check when replacing BU-1 (base unit) and press pulley in chucking arm section.)

**Procedure:**

1. Put disc (YEDS-1) in.
2. Connect oscilloscope to main board test points TP CLV and TP GND.
3. Press ▷ PLAY button in TLACK 1 mode.
4. Confirm that the waveform is as shown in the figure below.

**Adjustment Location:** main board.

TP CLV TP GND

REFERENCE

Focus/Tracking Gain Adjustment

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

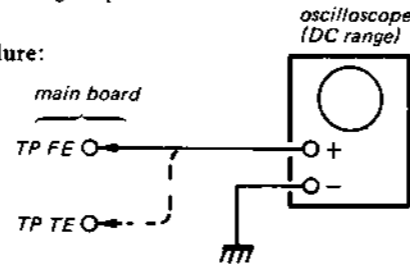

Symptoms	Gain	Focus	Tracking
• The time until music starts becomes longer for STOP →▷PLAY or automatic selection (◀▶▶▶) buttons pressed. (Normally takes about 2 seconds.)		low	low or high
• Music does not start and disc continues to rotate for STOP→▷PLAY or automatic selection (◀▶▶▶) buttons pressed.)		-	low
• Disc table opens shortly after STOP→▷PLAY.		low or high	-
• Sound is interrupted during PLAY. Or time counter display stops progressing.		-	low
• More noise during 2-axis device operation.		high	high

The following is a simple adjustment method.

- Simple Adjustment -

**Note:** Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the simple adjustment are only a little different, return the controls to the original position.

Procedure:

1. Keep the set horizontal. (If the set is not horizontal, this adjustment cannot be performed due to the gravity against the 2 axis device.)
2. Put set in adjustment mode. (see page 35)
3. Insert disc (YEDS-1) and press ▷PLAY button.
4. Connect oscilloscope to main amp board TP FE.
5. Adjustment RV201 so that the waveform is as shown in the figure below. (focus gain adjustment)

- Incorrect Examples (DC level changes more than on adjusted waveform)

6. Connect oscilloscope to main board TP TE.

7. Adjust RV202 so that the waveform is as shown in the figure below. (tracking gain adjustment)

- Incorrect Examples (fundamental wave appears)

high tracking gain (higher fundamental wave than for low gain)

Adjustment Location: main board

Note: The components identified by shading and mark  are critical for safety. Replace only with part number specified.

Note: Les composants identifiés par un trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifique.

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- Items marked "\*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The construction parts of an assembled part are indicated with a collation number on the remark column.

The components identified by shading and mark **A** are critical for safety. Replace only with part number specified.

NOTE:

- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:  
MF:μF, PF:μμF.

RESISTORS  
· All resistors are in ohms.  
· F : nonflammable

COILS  
· MMH : mH, UH : μH

SEMICONDUCTORS  
In each case, U : u, for example:  
UA...: μA..., UPA...: μPA..., UPC...: μPC,  
UPD...: μPD...

The components identified by shading and mark  are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.
