Discman

Model Name Using Similar Mechanism	New Mechanism
CD Mechanism Name	CDM-350

SPECIFICATIONS

System	Compact disc digital audio system
Laser diode properties	Material: GaAlAs Wavelength: 780 nm Emission duration: Continuous Laser output: Less than 44.6 μ W (This output is the value measured at a distance of 200 mm from the objective lens surface on the Optical Pick-up Block.)
Error correction	Sony Super Strategy Cross Interleave Read Solomon Code D-A conversion 16-bit linear 8fs digital filter
Frequency response	20 – 20,000 Hz \pm 1dB (measured by EIAJ CP-307)
Output (at 9 V input level)	Line output (stereo minijack) Output level 0.6 V rms at 50 kilohms Load impedance over 10 kilohms Headphones (stereo minijack) 9 mW + 9mW at 16 Ω

General	
Power requirements	Supplied: • DC IN 9 V jack accepts the Sony AC power adaptor.

Where purchased	Operating voltage
US, Canadian model	120 V AC, 60 Hz
UK, Australian model	240 V AC, 50 Hz
AEP model	220 V AC, 50 Hz
E model	110 – 240 V AC, 50/60 Hz

- Lithium battery (Sony CR 2016)
- Optional:
- DC IN 9 V accepts the Sony CPM-200P/CPM-100P mount plate and CPM-200A/CPM-100A plate arm for use on 12 V car battery.
- DC 3 V two LR6 (size AA) alkaline batteries

Power consumption	1.9 W DC
Dimensions	Approx. 127.5 × 25.2 × 137.4 mm (5 1/4 × 1 × 5 1/2 in.) (w/h/d) incl. projecting parts and controls
Weight	Approx. 390 g (13.8 oz.) net Approx. 420 g (14.9 oz.) incl. batteries
Supplied accessories	AC power adaptor (1) Rechargeable battery (1) Battery case (1) Lithium battery (1) Connecting cord (phono plug × 2 ↔ stereo miniplug) (1) Stereo ear receiver with remote controller (1) Carrying case (1) Hand strap (1)

Design and specifications subject to change without notice.

CAUTION

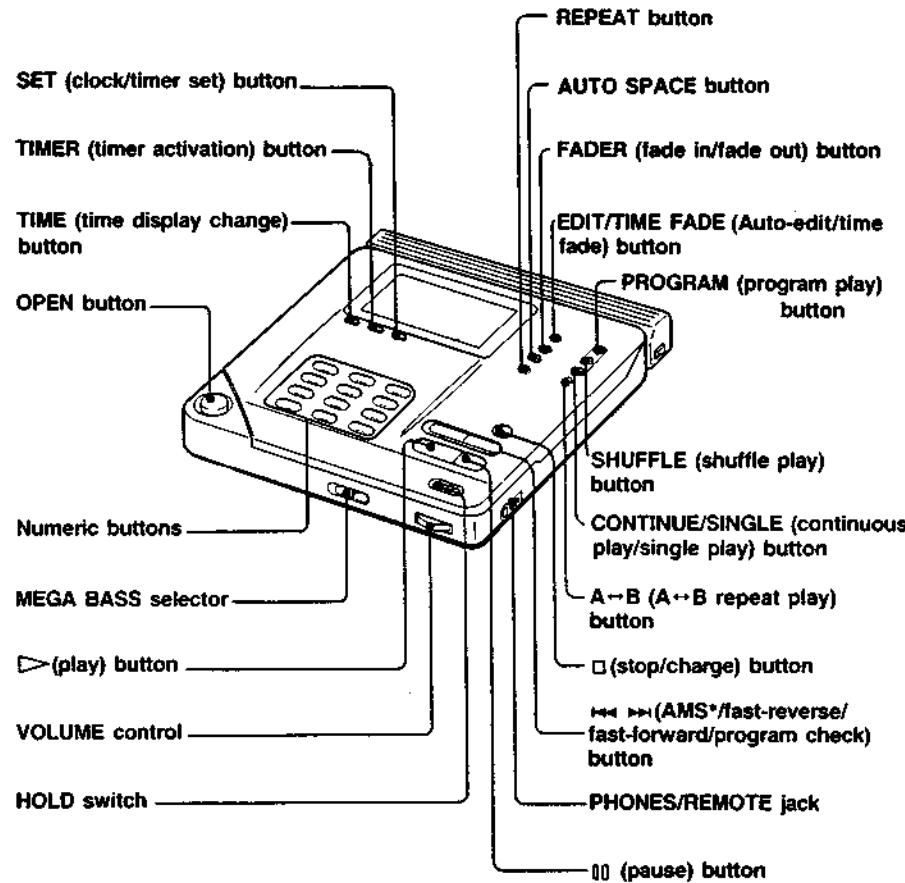

- Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

COMPACT DISC COMPACT PLAYER
SONY®

MICROFILM

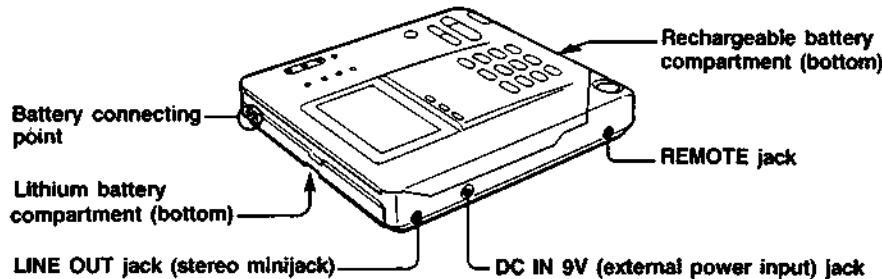

Location and Function of Controls

*AMS is the abbreviation of Automatic Music Sensor.

To avoid accidental operation

Slide the HOLD switch in the direction of the arrow. An orange indicator appears and the unit cannot be operated. In this case, however, you can operate the unit with the remote controller.

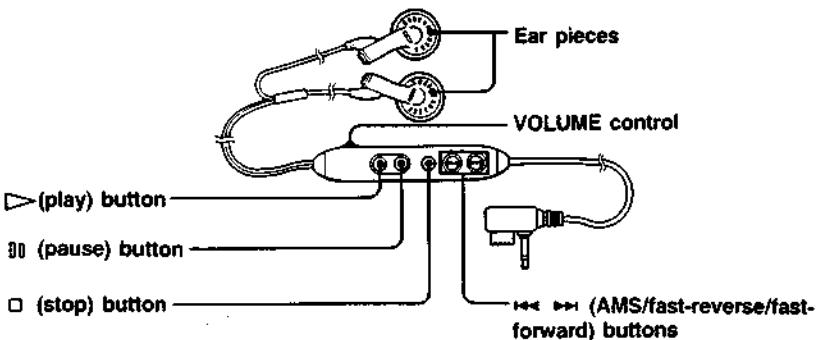

Inside the unit

Lens

A laser beam is emitted from this point to pick up signals on the disc.

Ear receiver with remote controller

Operating the remote controller

The buttons on the remote controller function in the same way as the corresponding buttons on the unit. You can operate the unit even if the HOLD switch on the unit is set in the direction of the arrow.

SECTION 2

SERVICING NOTES

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK

The laser diode in the opticaal pick-up block may suffer electrostatic breakdown because of the potential defference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is inclosed in the repair parts.

Flexible Circuit Board Repairing

1. Keep the temperature of the soldering iron at 270 ° ± 10 °C during repairing.
2. Do not touch the soldering iron more than 4 seconds or 3 times on the same conductor of the circuit board.
3. Do not apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

Before Replacing the Optical Block

Please be sure to check thoroughly the parameters as per the "Optical Block Checking Procedures" (Part No.: 9-960-027-11) issued separately before replacing the optical block.

Note and specifications required to check are given below.

- FOK output: IC501 ⑨ pin
- S curve P-to-P value: 2.5 Vp-p.
When checking FOK and S curve P-to-P value, remove the lead wire to disc motor and unsolder and open IC801 ⑩ pin.
- RF signal P-to-P value: 0.9 – 1.1 Vp-p
- Traverse signal P-to-P value: 2 Vp-p
- The grating holder can not repair.
- Adjusted part for tracking gain adjustment: RV501

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe, from more than 30 cm away from the objective lens.

Laser Diode Check Procedure

The laser diode on this set will not emit unless the top panel is closed and S901 (push SW type) is turned on. The laser diode will always emit even if focus search is not performed in service mode.

The laser diode is checked using the current value which flows to the laser diode inside the optical pick-up.

Procedure 1 (service mode or normal operation)

1. Open upper panel.
 2. S901 on as Fig. 1.
(In service mode, this operation is not necessary.)
 3. Observe the objective lens and confirm that the laser diode goes on about 2.5 seconds due to focus search. If it does not, APC circuit or the optical pick-up is defective.

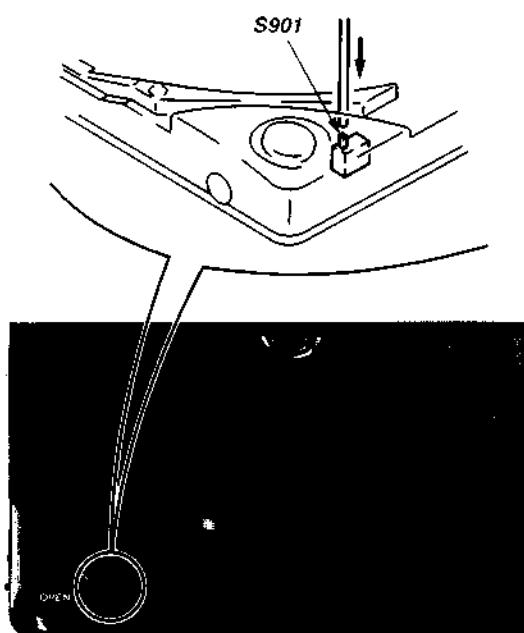

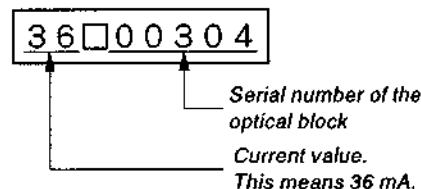

Fig. 1 Turning S901 Connection

Procedure 2 (service mode or normal operation)

Check by the current with flows in the laser diode.

1. Close the top panel.
 2. Remove the main board and read the current value on the label affixed to the optical pick-up.
(Label on the flexible board of the optical pick-up)

The current value varies with the set.

3. Connect a VOM as shown in Fig. 2.
 4. Press the Δ key.
 5. Calculate the current by the VOM reading.
 $VOM\ reading\ (V) \div 10 = current\ (A)$
ex. $VOM\ reading = 0.37\ V$
 $0.37 \div 10 = 0.037\ (A) = 37\ (mA)$
 6. Confirm that the ammeter reading is within the range given below.

If the value is more than the range given, diode has deteriorated. If it is less, APC circuit or the optical pick-up is defective.

- main board -

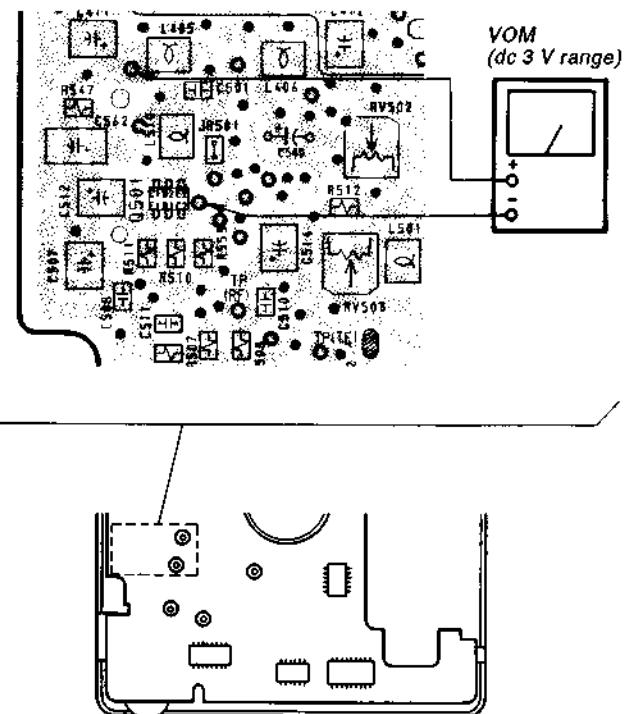

Fig. 2 VOM Connection

SERVICE MODE (service program)

This set has built-in service program in the microcomputer as usual sets.

The operation method of service program is explained below.

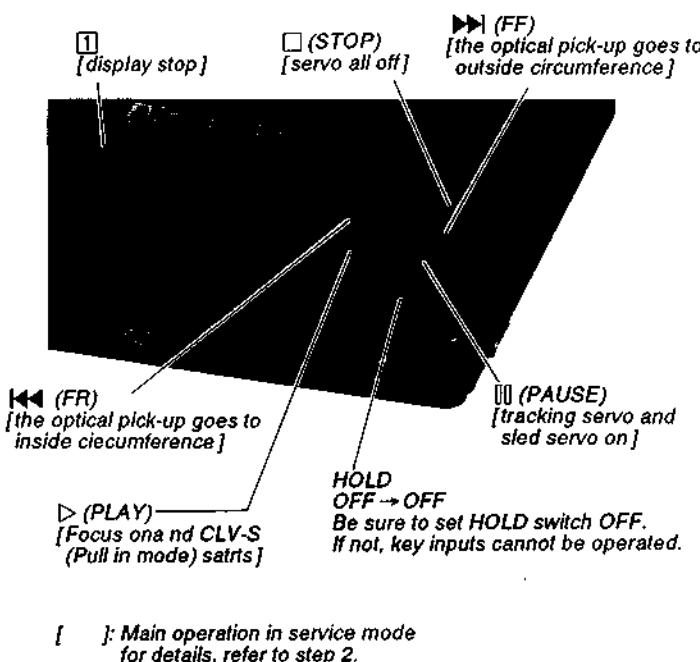

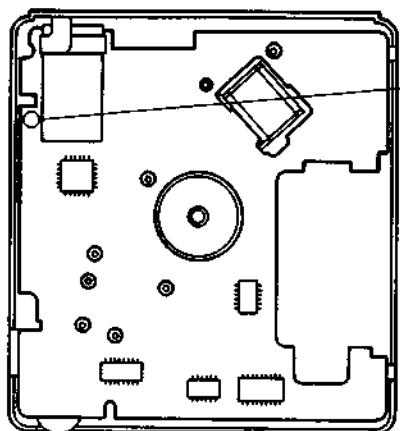

Fig. 3 Key Positions

Step 1 (Service Mode setting method)

1. Turn the HOLD switch OFF with the external power supply not plugged in (no power applied to set) and press the ▶ key.
2. Solder jumper TEST point.
(IC801 pin ⑧ (TEST) pin is grounded.)
3. Plug in external power supply.
This puts the set into service mode.

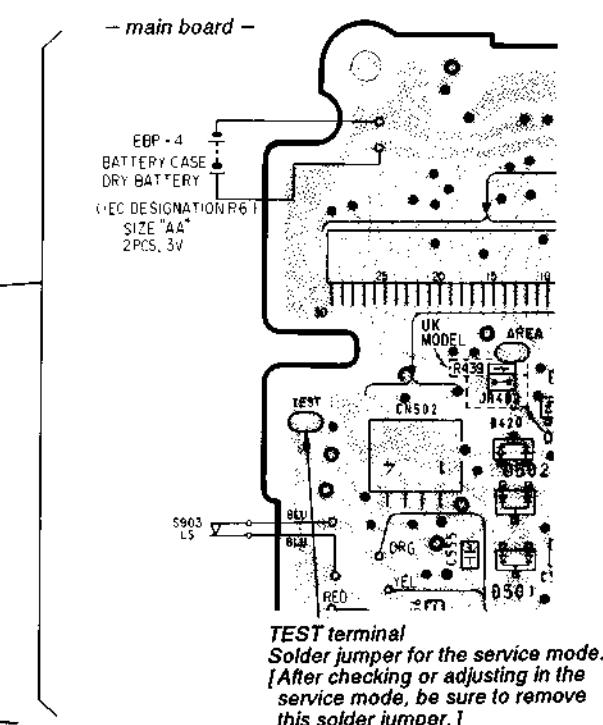

Step 2 (Service Mode operation)

1. When service mode is set, the display will change 6 times, and those 6 changes will be repeated over and over.
With this the LCD display should be present in service mode. Even if LCD does not display, other operations will be performed.
2. When ► or ▲ key is pressed, the optical pick-up moves to the inside or outside circumference. Tracking servo and sled servo go off when this is done, so press ■ to turn on the tracking servo if necessary.
3. When 1 is pressed, the display stops.
When 1 released, the display continues to change. This allows check of each segment.
4. When ▶ key is pressed, CLV-S (pull-in mode) starts while performing focus search. When there is no disc installed, focus search is repeated several times while disc motor is rotating.
5. When ■ is pressed, tracking servo, sled servo and CLV-A (servo during PLAY) go ON.
6. When 4 and 5 are performed, the disc begins to play. At this time, the top panel should be closed and S901 are to be ON. When S901 is OFF, muting is ON. So there is no sound.
7. All servo (focus, tracking, sled and spindle) go off when □ key is pressed. But disc motor continues rotating for a while by inertia.

Step 3 (Service Mode release)

1. First be sure to unplug the external power supply, then remove the TEST point solder jumper.
2. The set will now operate normally.

SECTION 3

ELECTRICAL ADJUSTMENTS

Notes on Adjustment

1. Perform adjustments except for RECHARGEABLE VOLTAGE ADJUSTMENT in service mode. Be sure to release service mode after completing adjustment.
(Refer to "Service Mode (service program)" on page 5.)
2. Perform adjustments in the order given.
3. Use YEDS-18 disc (part No.: 3-702-101-01) unless otherwise indicated.
4. Power supply voltage: DC 9V
HOLD switch: OFF
VOLUME knob: Minimum
MEGA BASS switch: NORM

PREPARATION

Put the set into service mode (see page 5) and perform the following checks. Repair if there are any abnormalities.

• Sled Motor Check

1. Press the OPEN button and open the top panel.
2. Press the **►►**, **◀◀** keys and make sure that the optical pick-up moves smoothly, without catching, from the inmost → outmost → inmost circumference.
►►: The optical pick-up moves outward
◀◀: The optical pick-up moves inward

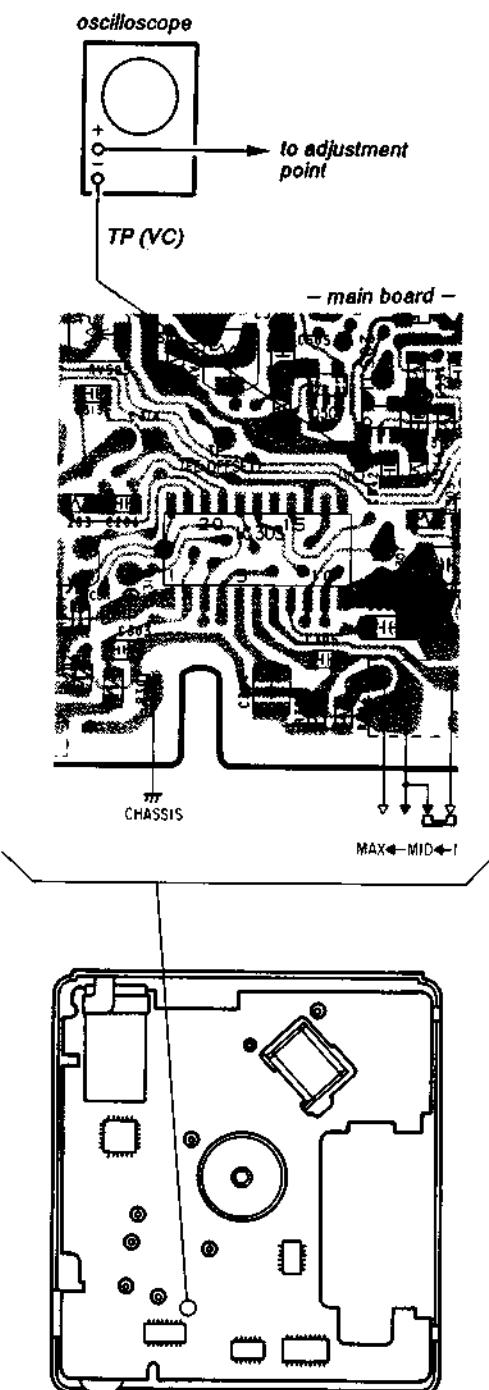

• Focus Search Check

1. Press the OPEN button and open the top panel.
2. Press the **▷** key. (Focus search is performed continuously.)
3. Observe the optical pick-up objective lens and check that it moves smoothly up and down with no catching or noises.
4. Press the **□** key.
Check that focus search operation stops. If it does not stop, press the **□** key again longer than before.

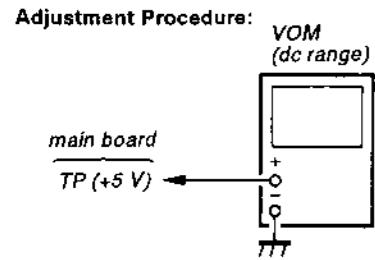

VC (1/2 Vcc) Connecting Point

FOCUS BIAS ADJUSTMENT
TRACKING BALANCE ADJUSTMENT

When the adjustments above are performed, connect the \ominus side of oscilloscope to the point below.

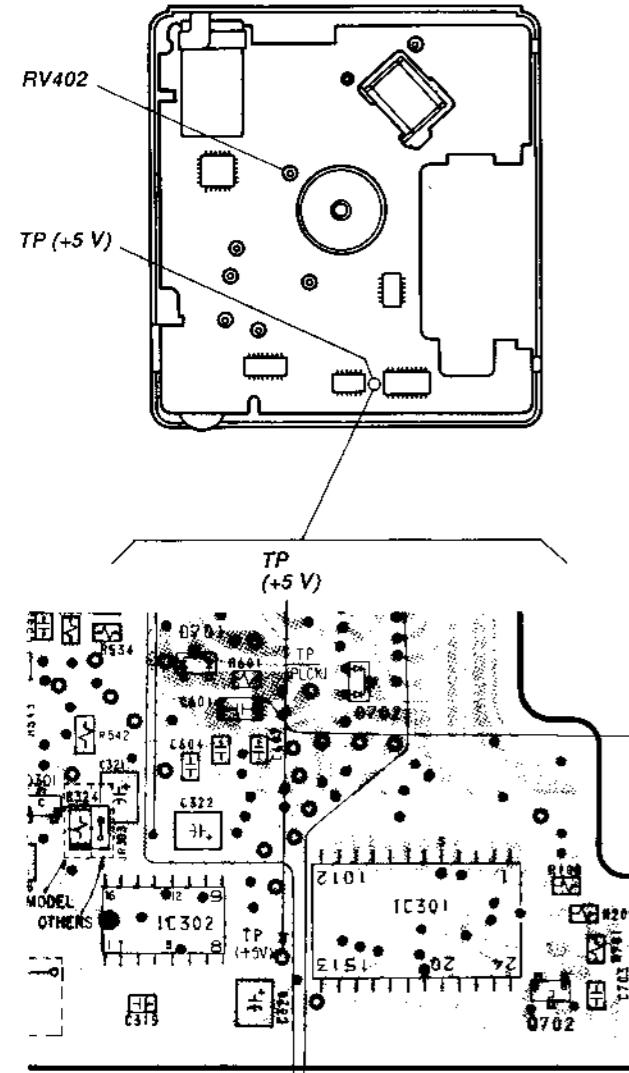

+5 V Adjustment

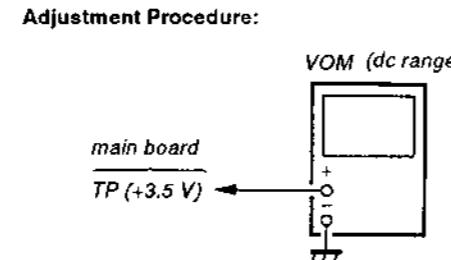

1. Put the set into service mode stop state (see page 5).
2. Connect the VOM to main board TP (+5 V).
3. Adjust RV402 for $+5 \pm 0.1$ V reading on the VOM.
4. After adjustment, release service mode (see page 5).

Adjustment Location: main board

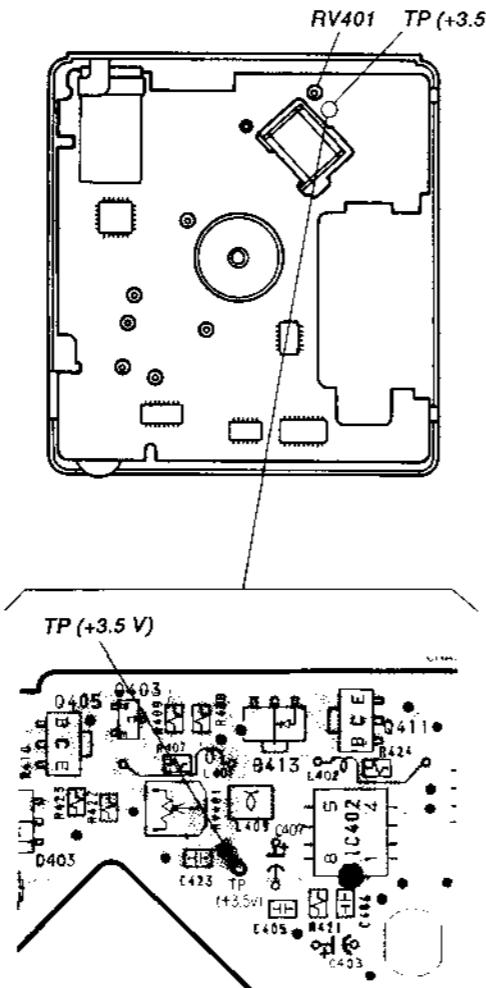

+3.5 V Adjustment

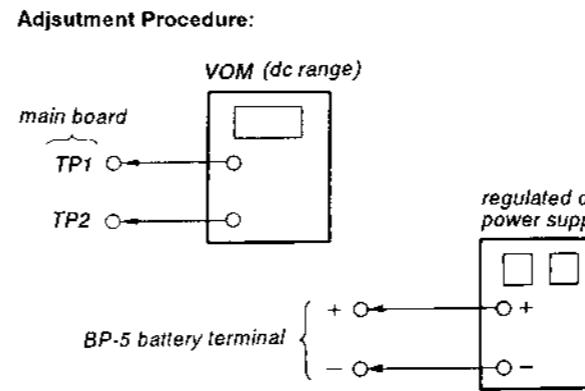

1. Put the set into service mode stop state (see page 5).
2. Connect the VOM to main board test point TP (+3.5 V).
3. Adjust RV401 for 3.5 ± 0.05 V reading on the VOM.
4. After adjustment, release service mode (see page 5).

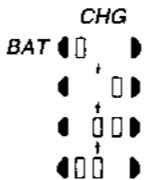

Adjustment Location: main board

Charge Det Voltage Adjustment

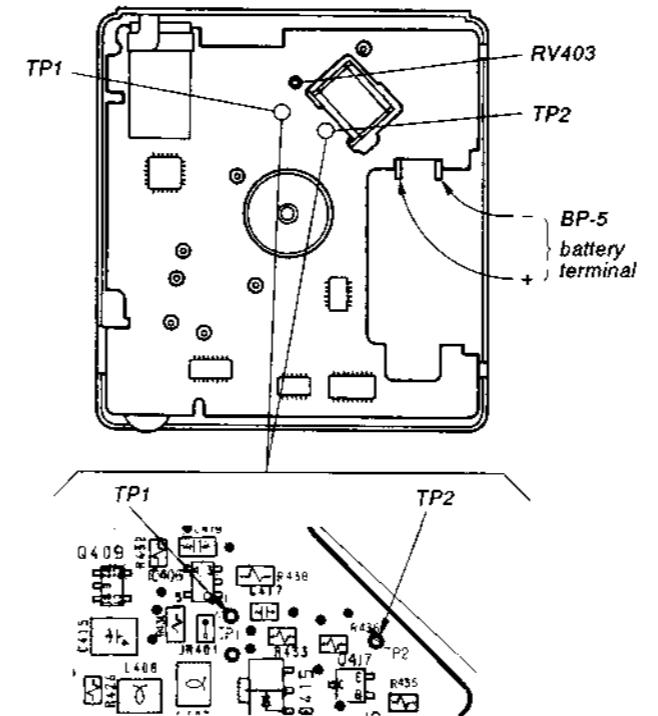

1. Connect VOM to TP1 and 2 on the main board and supply 3.92 Vdc to BP-5 battery terminal. (At this time, supply 9 Vdc to the external power supply jack (DC IN 9 V)).
2. Confirm the LCD module display becomes to the charge mode as following.

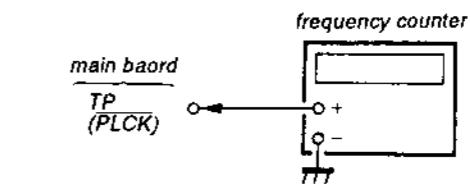

3. Adjust RV403 for 0 ± 10 mV reading on VOM.

Adjustment Location: main board

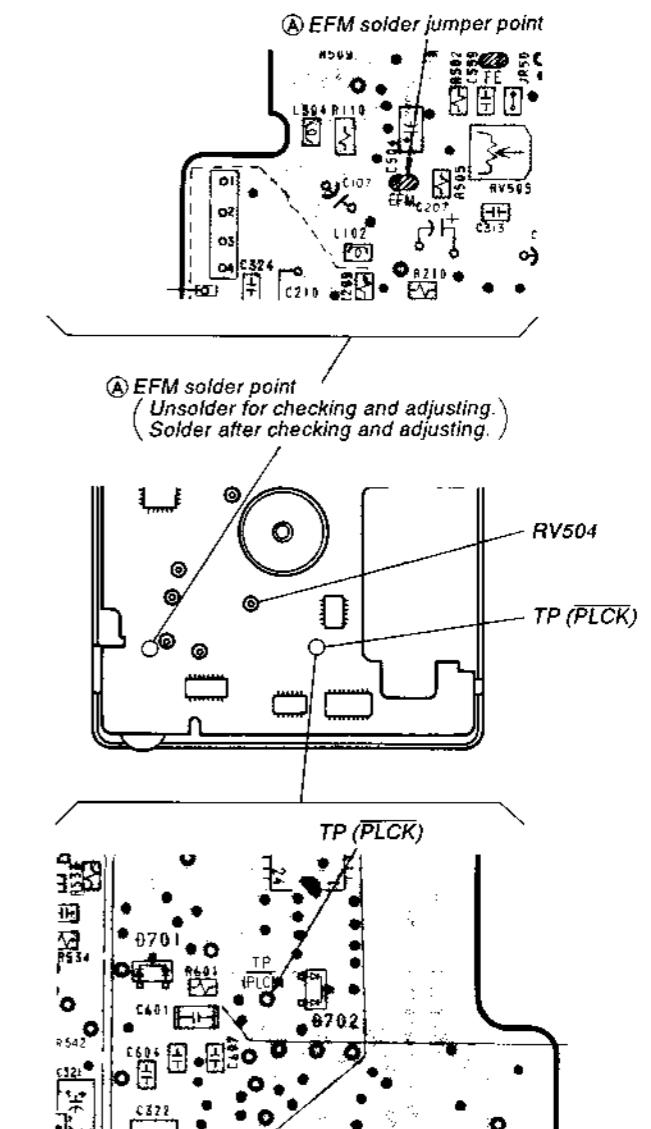

PLL Free Run Frequency Check and Adjustment

Check/Adjustment Procedure:

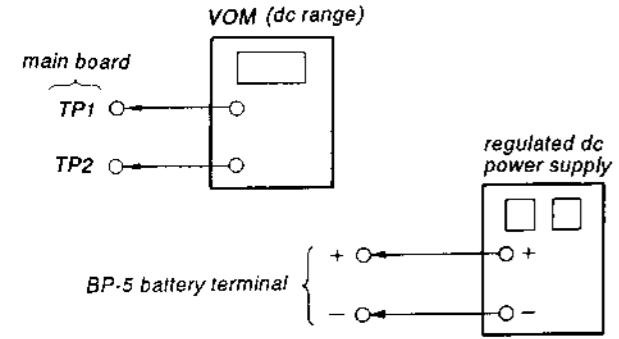

1. Disconnect the jumper point ① (EFM) in the diagram below.
2. Connect a frequency counter to servo board test point TP (PLCK).
3. Put the set into service mode stop state (see page 5).
4. Check that the frequency counter reading is 4.3218 ± 0.01 MHz. If not, adjust RV504 so that it is 4.3218 ± 0.01 MHz.
5. After adjustment, release service mode (see page 5).
6. Short the jumper point disconnected in step 1.

Check/Adjustment Location: main board

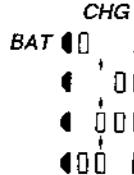

Charge Det Voltage Adjustment

Adjustment Procedure:

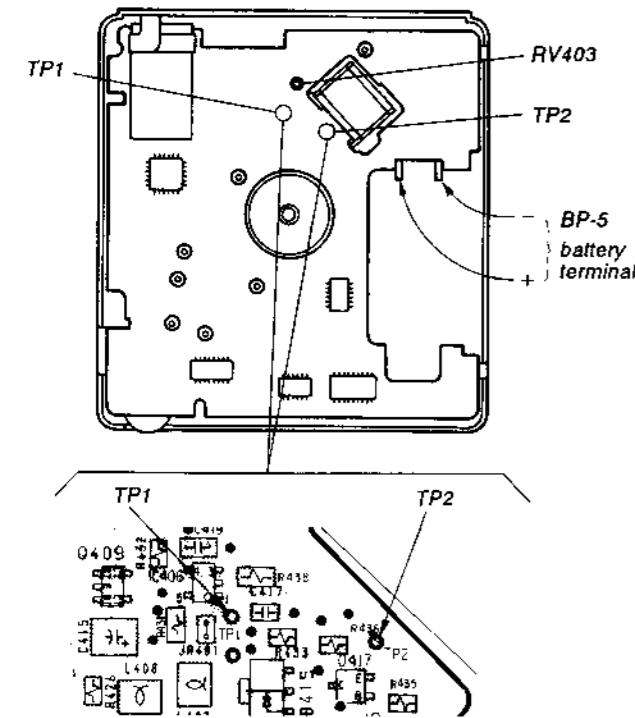

1. Connect VOM to TP1 and 2 on the main board and supply 3.92 Vdc to BP-5 battery terminal. (At this time, supply 9 Vdc to the external power supply jack (DC IN 9 V).)
2. Confirm the LCD module display becomes to the charge mode as following.

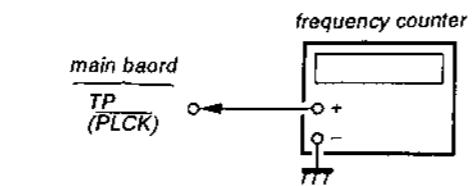

3. Adjust RV403 for 0 ± 10 mV reading on VOM.

Adjustment Location: main board

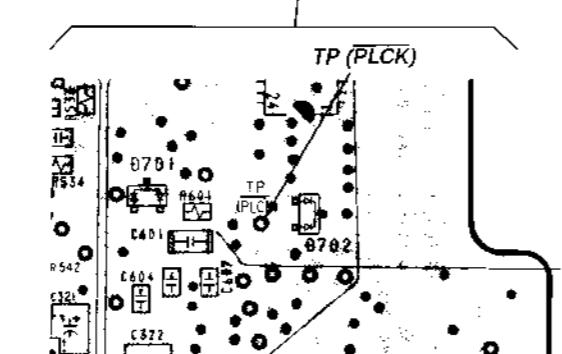

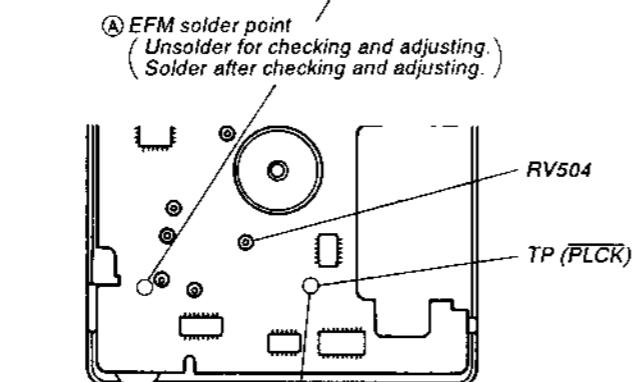

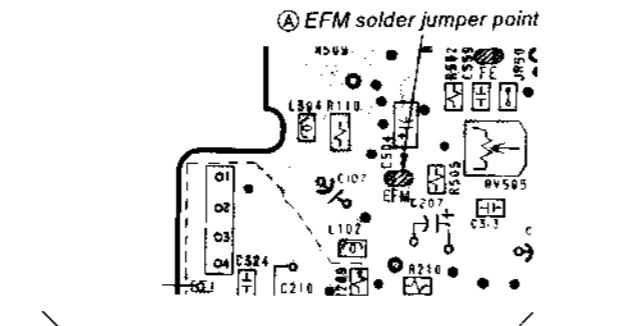

PLL Free Run Frequency Check and Adjustment

Check/Adjustment Procedure:

1. Disconnect the jumper point ④ (EPM) in the diagram below.
2. Connect a frequency counter to servo board test point TP (PLCK).
3. Put the set into service mode stop state (see page 5).
4. Check that the frequency counter reading is 4.3218 ± 0.01 MHz. If not, adjust RV504 so that it is 4.3218 ± 0.01 MHz.
5. After adjustment, release service mode (see page 5).
6. Short the jumper point disconnected in step 1.

Check/Adjustment Location: main board

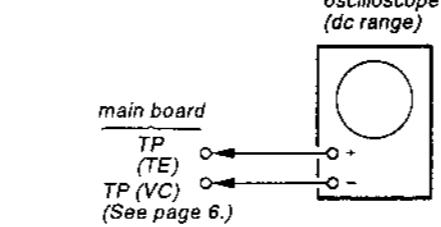

Tracking Balance Adjustment

Conditions:

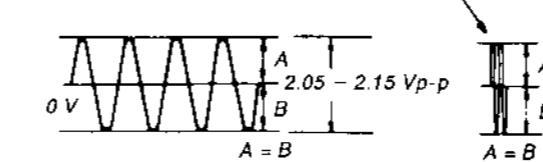

The set should be placed either horizontally.

Adjustment Procedure:

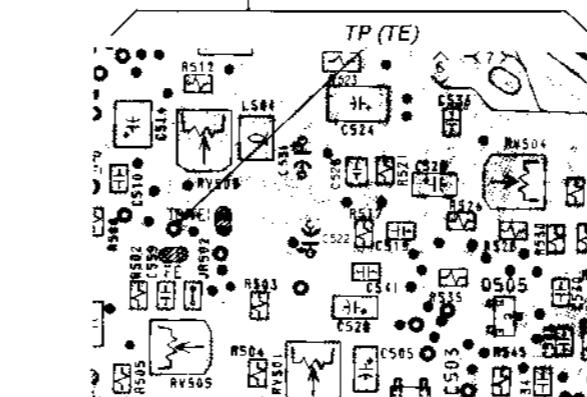

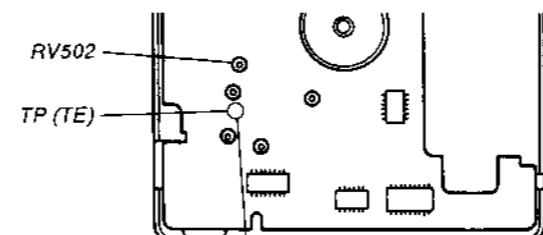

1. Connect the oscilloscope to servo board TP (TE).
2. Put the set into service mode stop state (see page 5).
3. Press the \blacktriangleright and \blacktriangleleft keys to move the optical pick-up to the center.
4. Insert the disc (YEDS-18) and close the top panel.
5. Press the \triangleright key.
(It will go from focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.)
6. Adjust RV502 so that the oscilloscope waveform is symmetrical on the top and bottom in relation to 0 V.

Note: Take sweep time as long as possible to obtain best waveform.

7. Press the \square key to stop spindle motor from rotating.
8. After adjustment, release service mode (see page 5).

Adjustment Location: main board

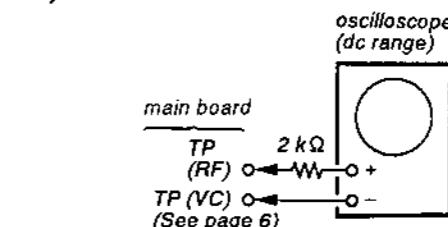

Focus Bias Adjustment

Conditions:

The set should be placed either horizontally.

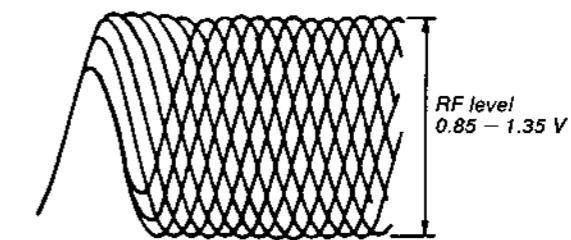

Adjustment Procedure:

1. Put the set into service mode stop state (see page 5).
2. Connect the oscilloscope to main board test point TP (RF).
3. Press the \blacktriangleright and \blacktriangleleft keys to move the optical pick-up to the center. (Move the optical pick-up to the music area on the disc to enable easy visibility of the eye pattern).
4. Insert the disc (YEDS-18) and close the top panel.
5. Press the \triangleright key.
(It will go from focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.)
6. Press the \square button. (Tracking and sled go ON.)
7. Adjust RV503 so that the oscilloscope waveform eye pattern is good. A good eye pattern means that the diamond shape (\diamond) in the center of the waveform can be clearly distinguished.

• RF Signal Reference Waveform (eye pattern)

VOLT/DIV: 200 mV
TIME/DIV: 500 nS

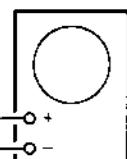

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

8. Press the \square key to stop spindle motor from rotating.
9. After adjustment, release service mode (see page 5).

Focus Adjustment

keep time as long as possible to obtain best waveform.

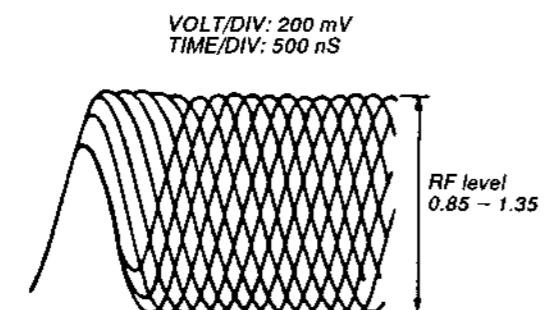

tion: main board

**Focus Bias Adjustment****Conditions:**

The set should be placed either horizontally.

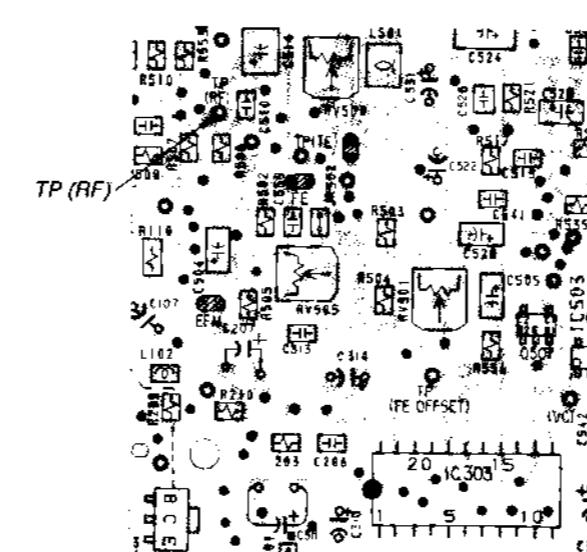

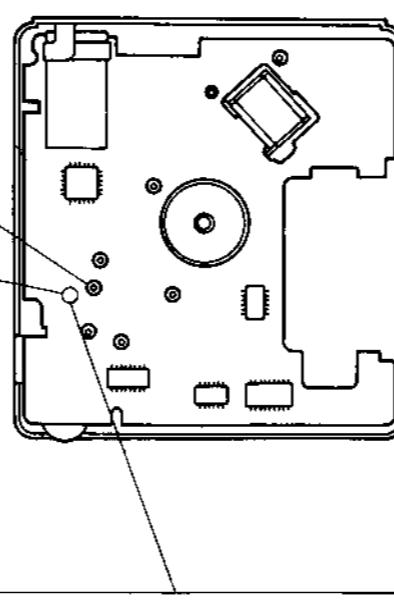

Adjustment Procedure:

- Put the set into service mode stop state (see page 5).
- Connect the oscilloscope to main board test point TP (RF).
- Press the \blacktriangleright and \blacktriangleleft keys to move the optical pick-up to the center. (Move the optical pick-up to the music area on the disc to enable easy visibility of the eye pattern).
- Insert the disc (YEDS-18) and close the top panel.
- Press the key.
(It will go form focus search to focus on, and CLV pull-in mode state. Tracking and sled are OFF.)
- Press the \square button. (Tracking and sled go ON.)
- Adjust RV503 so that the oscilloscope waveform eye pattern is good. A good eye pattern means that the diamond shape (\diamond) in the center of the waveform can be clearly distinguished.

• RF Signal Reference Waveform (eye pattern)

When observing the eye pattern, set the oscilloscope for AC range and raise vertical sensitivity.

- Press the \square key to stop spindle motor from rotating.
- After adjustment, release service mode (see page 5).

Adjstment Locaton: main board**Reference****Focus/Tracking Gain Adjustment**

A frequency response analyzer or CD jig is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up followup (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate. However, as these reciprocate, the adjustment is at the point where both are satisfied.

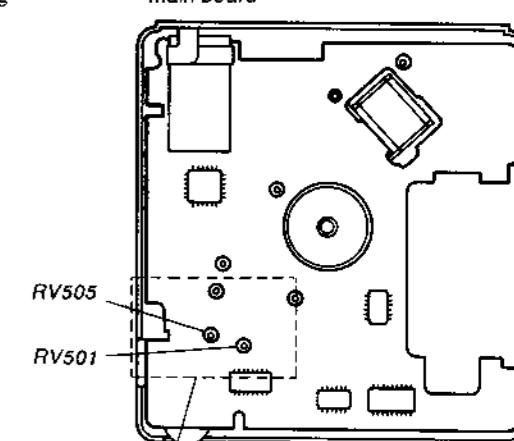

- When gain is high, the noise when the 2-axis device operates increases.
- When gain is low, it is more susceptible to mechanical shock and skipping occurs more easily.

This adjustment is to be performed when replacing the following parts:

- optical pick-up block
- RV505 (focus gain VR)
- RV501 (tracking gain VR)

Be careful not to move RV505 (focus gain volume) and RV501 (tracking gain volume) ordinarily.

- main board -

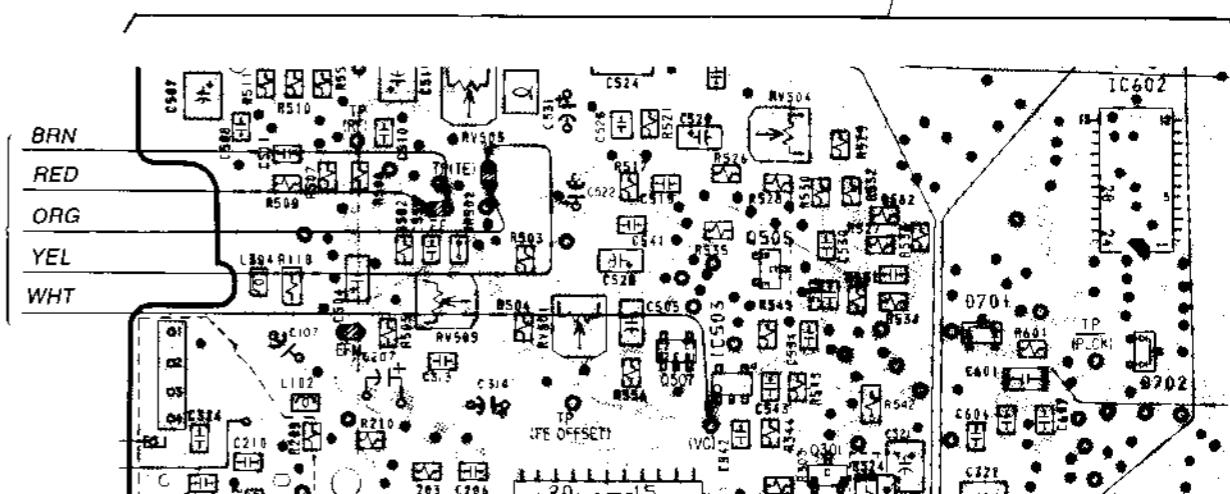

On this set, it is very difficult to simplify this adjustment. For those sets on which symptoms such as "occasional skipping" are hard to discover, or it is hard to tell if the set has been repaired, use the CD jig and perform this adjustment. Refer to the diagram below for connection of the CD jig. The adjustment procedure is described in the separate CD Jig Instruction Manual.

CD Jig Connecting Procedure:

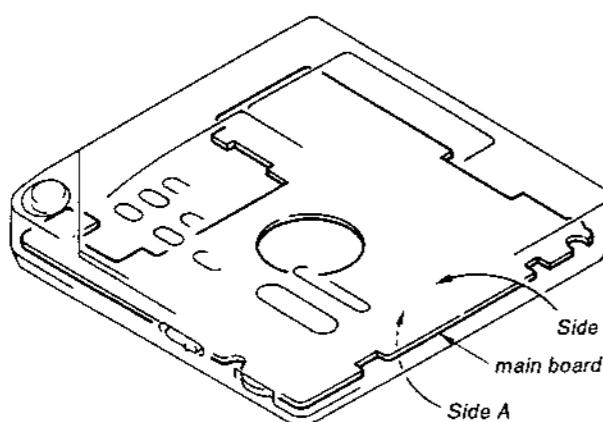

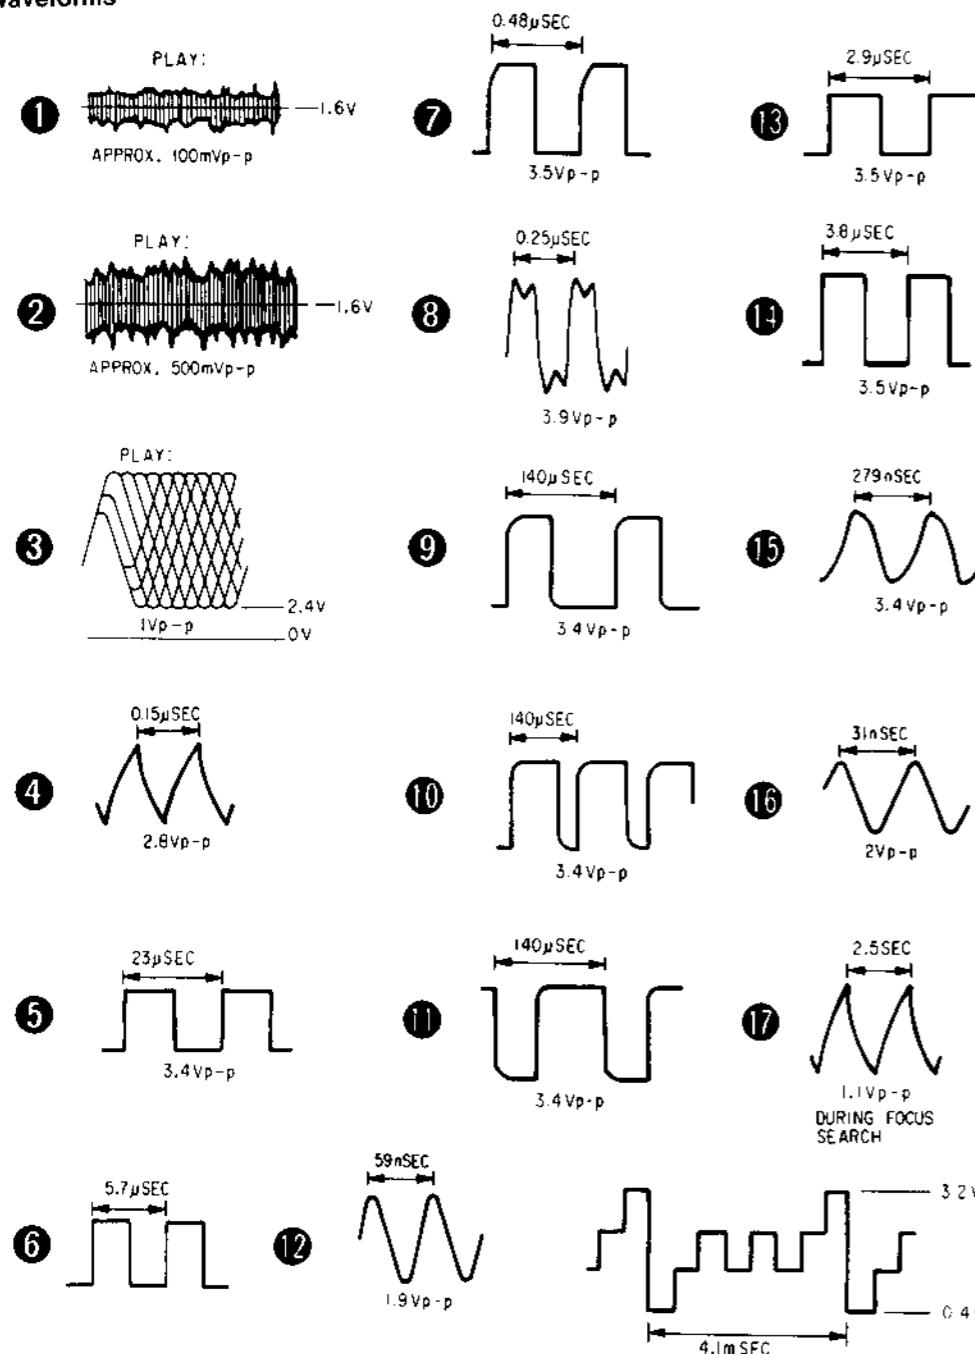

Remove the solder jumpers at the TE and FE locations and connect the CD jig.

(Connect the points on both TE and FE located on the side of IC501 to the output to the CD jig, and points located on the side of volumes to the input from the CD jig.)

EXPLODED VIEWS

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
 - The construction parts of an assembled part are indicated with a collation number in the remark column.
 - Items marked “★” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- Due to standardization, parts with part number suffix -XX and -X may be different from the parts specified in the components used on the set.

Note:
The components identified by mark ▲ or dotted line with mark ▲ are critical for safety.
Replace only with part number specified.

Note:
Les composants identifiés par une marque ▲ sont critiques pour la sécurité.
Ne les remplacer que par une pièce portant le numéro spécifié.

SECTION 6

ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:MF: μ F, PF: μ PF.**RESISTORS**

- All resistors are in ohms.
- F: nonflammable

COILS

- MMH: mH, UH: μ H

SEMICONDUCTORS

In each case, U: μ , for example:
 UA...: μ A..., UPA...: μ PA...,
 UPC...: μ PC, UPD...: μ PD...

The components identified by mark or dotted line with mark are critical for safety.
 Replace only with part number specified.

Les composants identifiés par une marque sont critiques pour la sécurité.
 Ne les remplacer que par une pièce portant le numéro spécifié.
