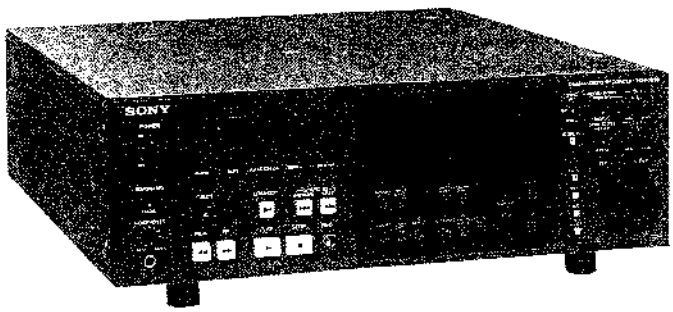
DIGITAL AUDIO RECORDER

PCM-7050



MAINTENANCE MANUAL

1st Edition (Revised 7)

Serial No. 20001 and Higher(UC)

Serial No. 50001 and Higher(EK)

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 3.5 mA. Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.

2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.

3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 5.25 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 20 V AC range are suitable. (See Fig. A)

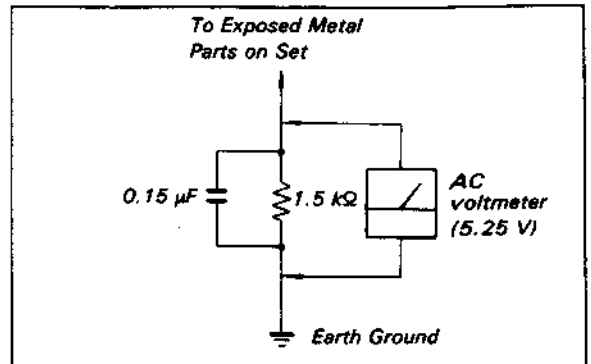


Fig. A. Using an AC voltmeter to check AC leakage.

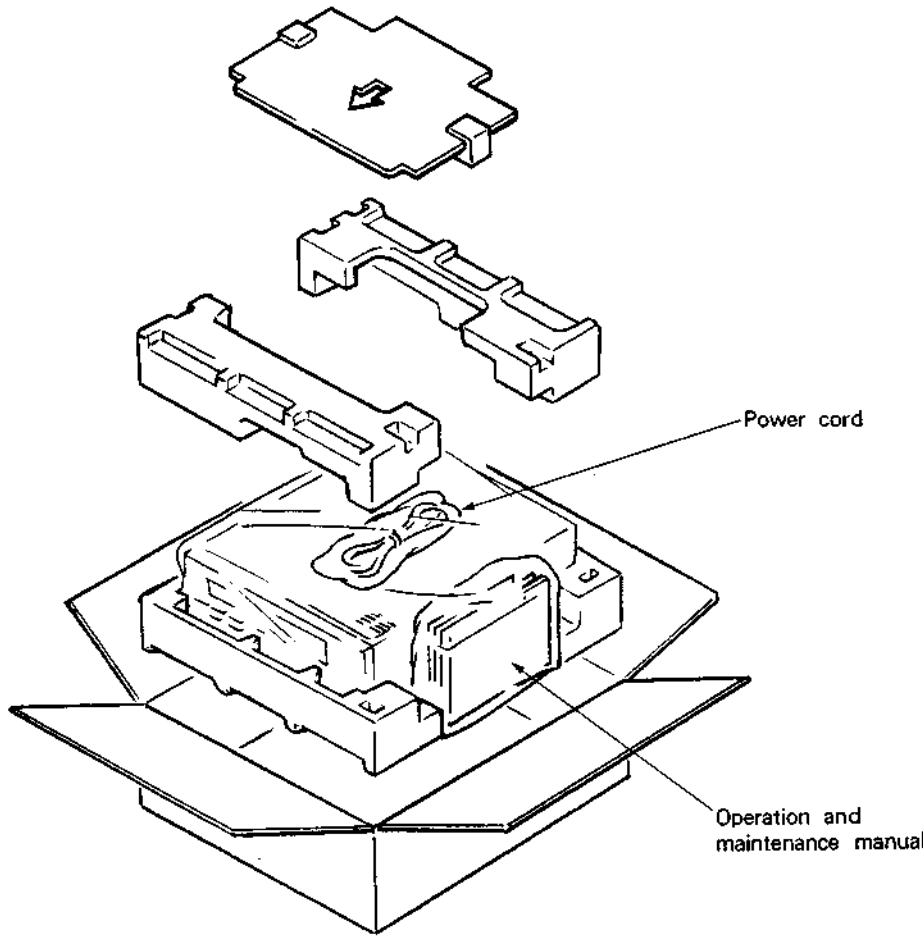
SECTION 1
INSTALLATION

1-1. Packing



1-2. Installation Environment and Installation Space

Be sure to observe the following precautions including operation environment and installation space when you install the PCM-7050 Digital Audio Recorder.

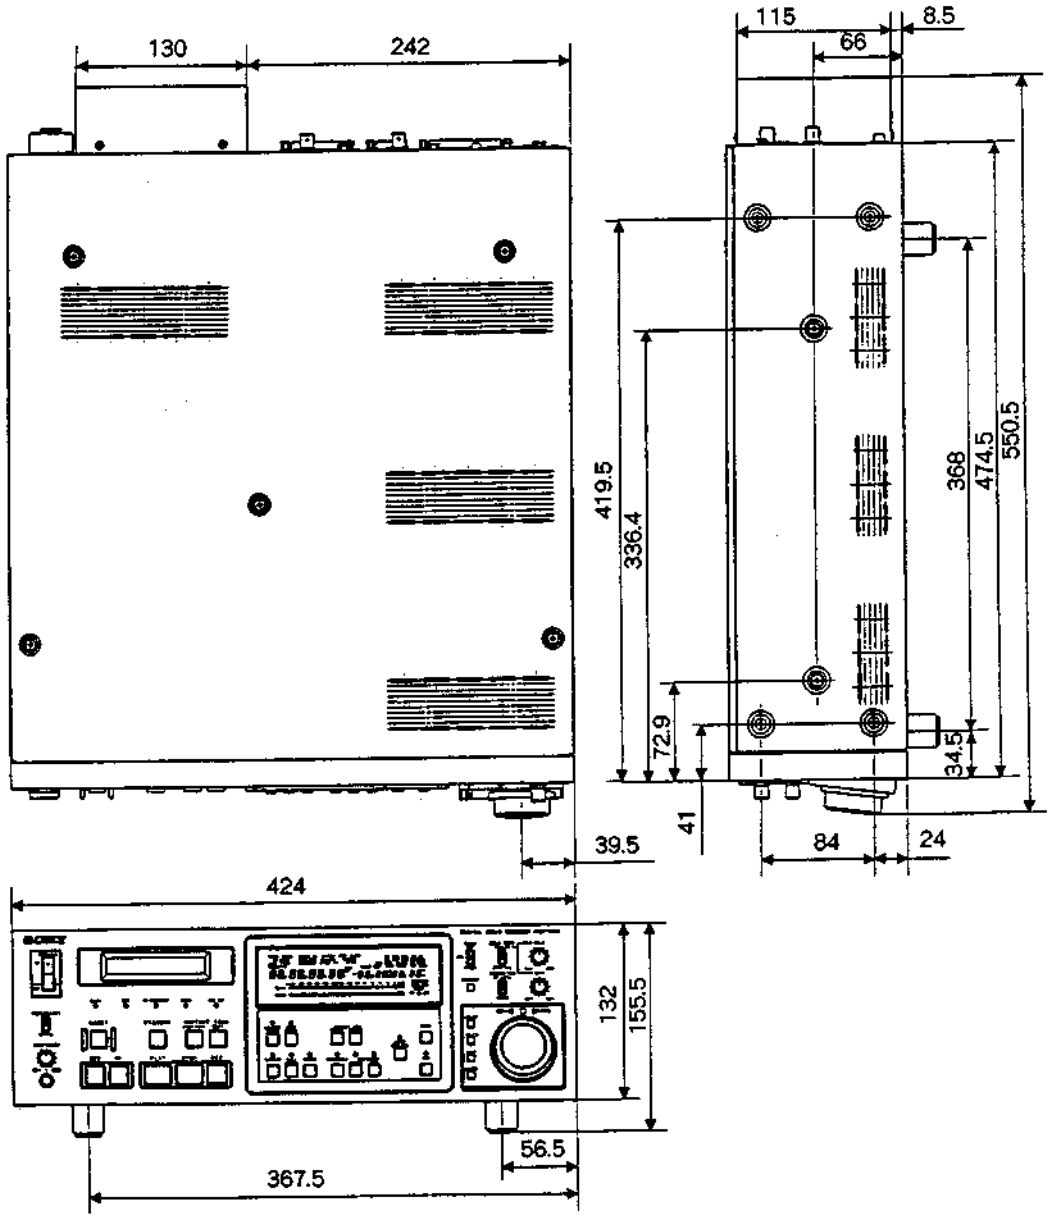
1-2-1. Operating environment

1. Do not install the unit in a place subject to direct sunlight or strong light, excessive dust, and frequent vibrations. Also do not install the unit near intense electric or magnetic fields.
2. Give consideration to the air circulation of the installation site to prevent the temperature of the inside unit from rising.
3. The operating temperature inside the unit is 5℃ to 35℃ (41°F to 95°F). Do not install the unit in a place near heat sources.

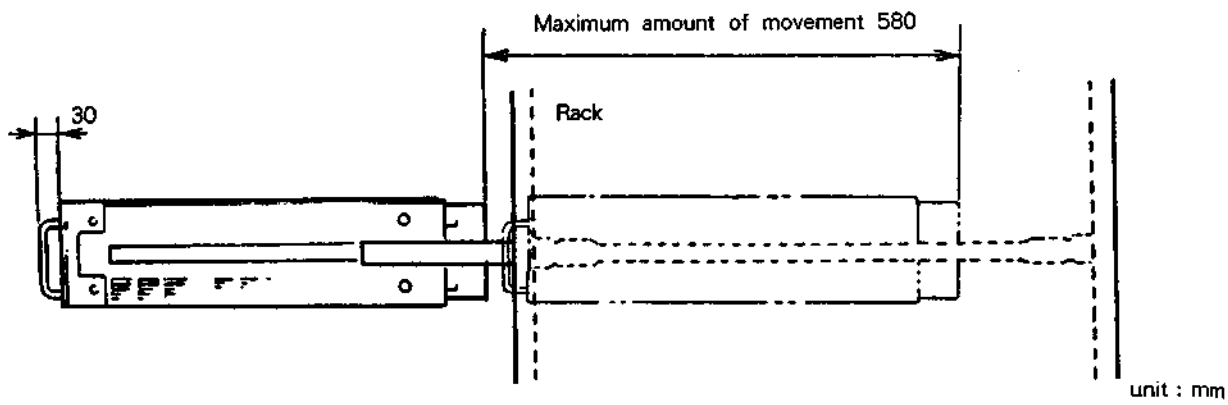
1-2-2. Installation space

1. The outside dimensions of the unit is given in the figure on next page.
2. Be sure to install the unit with a clearance of at least 40cm (15.75″) between the wall and the rear surface of the unit for ventilation and easier maintenance.
3. When you use the unit on a desk, provide a clearance of at least 40cm (15.75″) above the upper surface of the unit for easier maintenance of the printed circuit board. On the other hand, when you mount the unit on a rack, you can insert or remove the printed circuit board by drawing the unit forward. Therefore, you do not have to provide the clearance over the upper surface of the unit.

External dimensions



When mounted in a rack



1-3. Rack mounting method

The PCM-7050 can be used together with the EIA 19 inch standard rack.

It is recommended to use the rail and handles below to install it in the rack.

Rail : Rack mount rail RMM-30 (option)
suitable for a rack 660-830mm (26~33 3/4 inches) long.

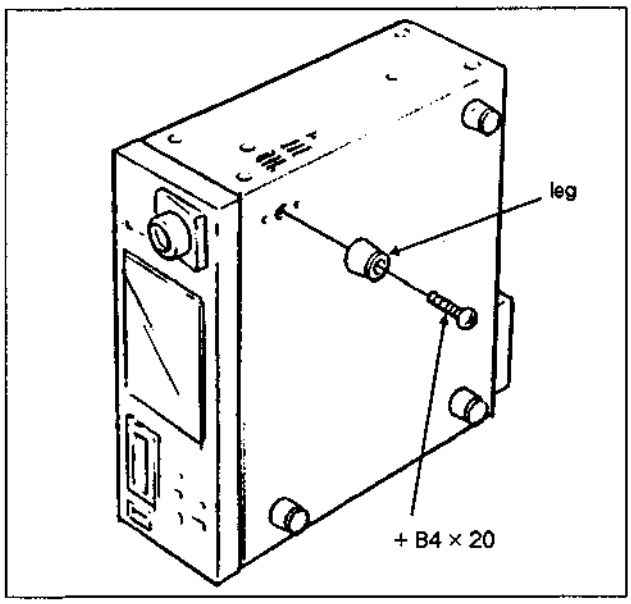
Handle : Rack mount adapter RMM-31 (option)

Note :

Please be sure to carry out the installation with two or more persons. If the PCM-7050 is not supported securely when being inserted onto the rack's rails, injury or damage can result.

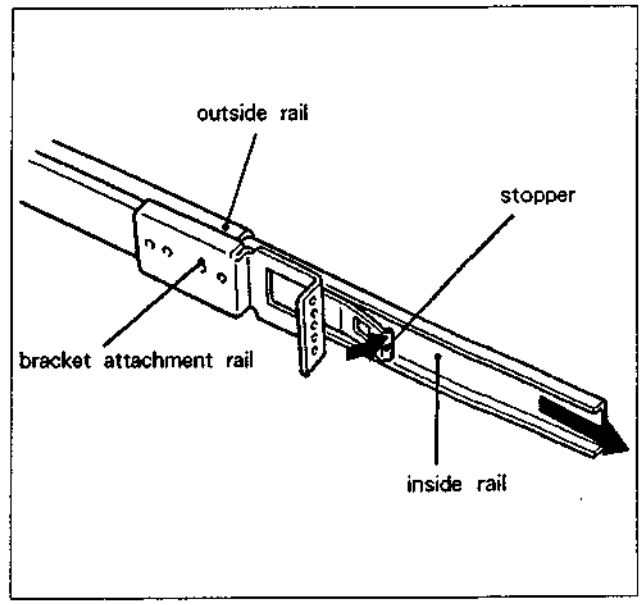
Preparation

Remove the four legs of the PCM-7050.

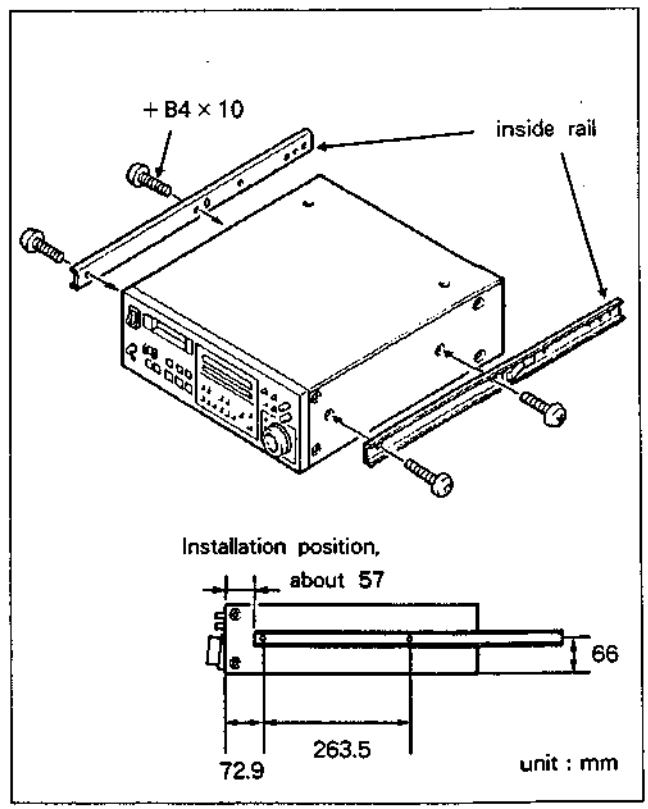


Rack mounting procedure (for RMM-30, RMM-31)

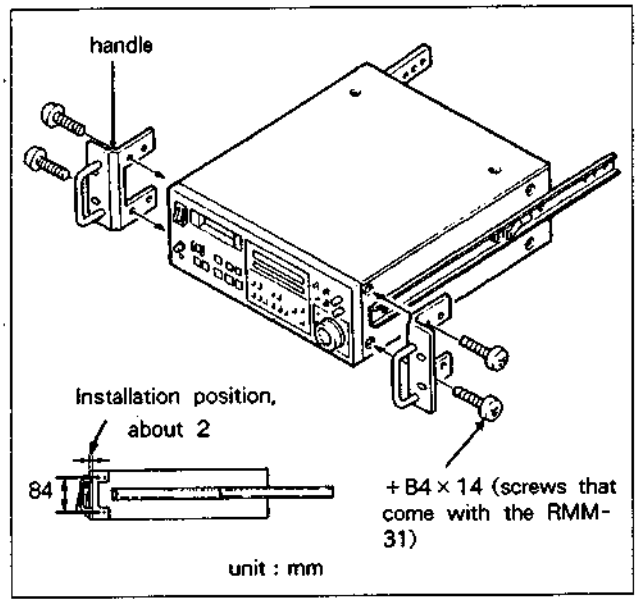
(1) Remove the inside rail from the RMM-30 bracket attachment rail.



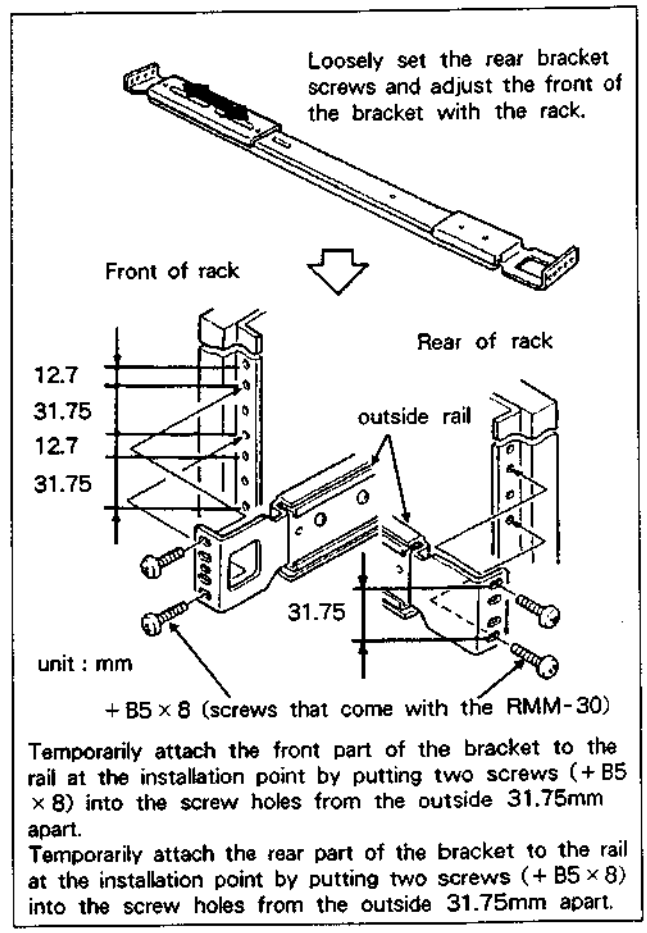
(2) Remove the side panel screws of the PCM-7050 (+ B4 × 10, two places on the right and left respectively) and remove the inside rail as in the illustration. (Use the removed screws (+B4 × 10) for the installation.)



(3) Remove the side panel screws (+B4×6) of the PCM-7050 and install the RMM-31 handles as illustrated.
(To install, use the screws (+B4×14) that come with the RMM-31.)
Note : Save the screws removed so they can be used later.

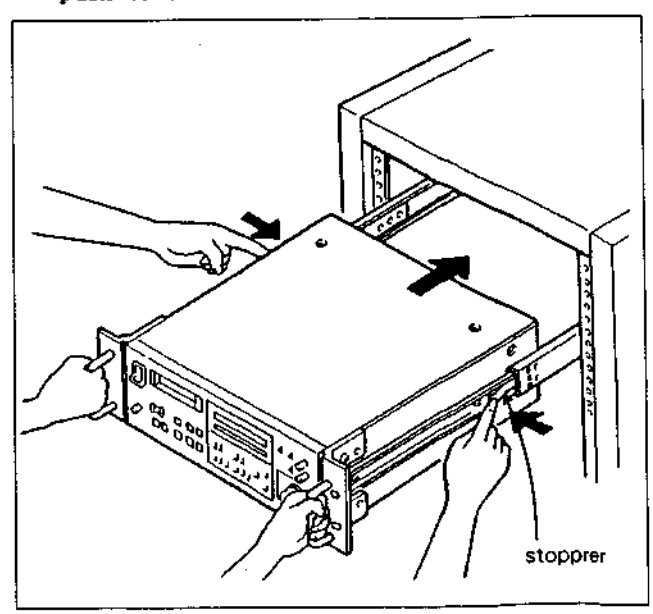


(4) Temporarily attach the outside rail of the RMM-30 bracket attachment rail to the rack. (To install, use the screws (+B5×8) that come with the RMM-30.)

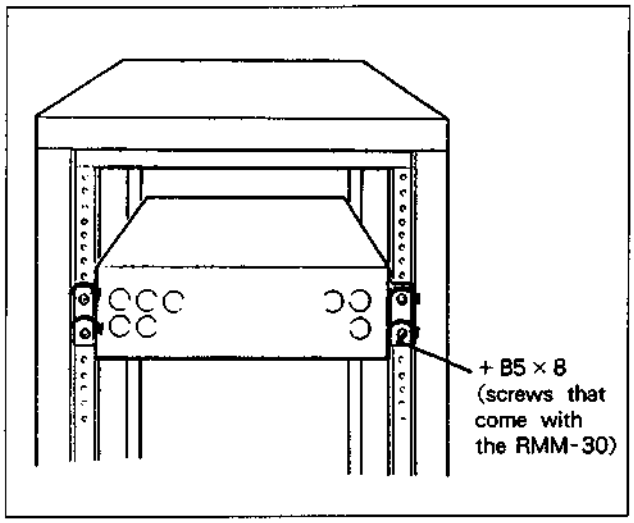


Temporarily attach the front part of the bracket to the rail at the installation point by putting two screws (+B5×8) into the screw holes from the outside 31.75mm apart.
Temporarily attach the rear part of the bracket to the rail at the installation point by putting two screws (+B5×8) into the screw holes from the outside 31.75mm apart.

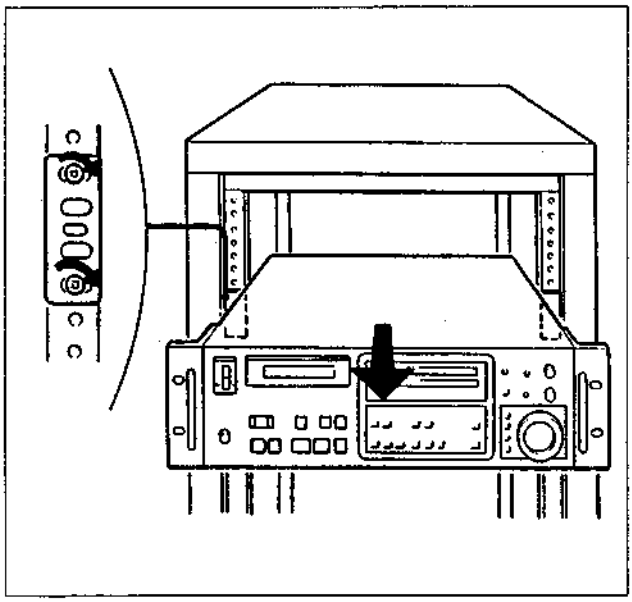
(5) While pressing the stoppers on the inside rails, insert the PCM-7050 on the outside rails and push to the rear of the rack.



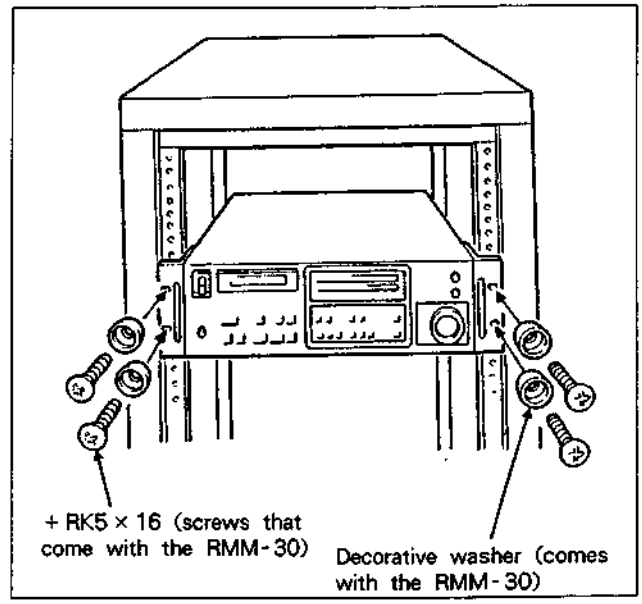
(6) Firmly tighten the rear bracket screws.



(7) Pull the PCM-7050 out about 20cm and firmly tighten the front bracket screws.



(8) Push the PCM-7050 into the rack and attach the handles to the rack with the screws (+ RK5 × 16) and decorative washers that come with the RMM-30.



1-4. Installation of the DABK-7030, DABK-7033, and DABK-7055

The installation of the DABK-7030, DABK-7033, and DABK-7055 is described below.

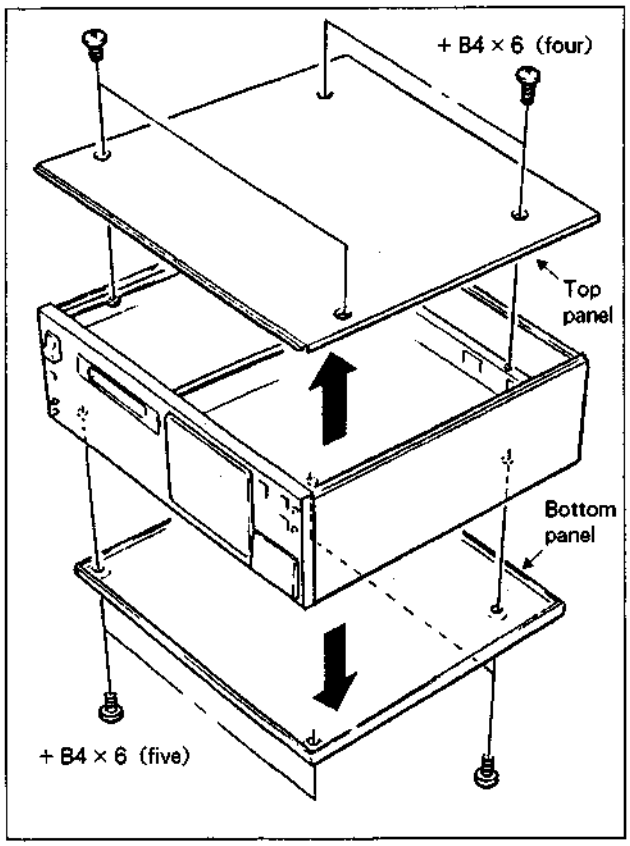
1-4-1. DABK-7030 Installation Procedure

The DABK-7030 comprises the following :

TC-58 (UC) or	
TC-58P (EK) board	: 1
TC panel	: 1
Screws (+ PWH3 × 6)	: 2
Nylon rivets	: 2
Flexible card cable (30P)	: 1

Initial preparation

Remove the unit's top panel (secured by four + B4 × 6 screws) and the bottom panel (secured by five + B4 × 6 screws).

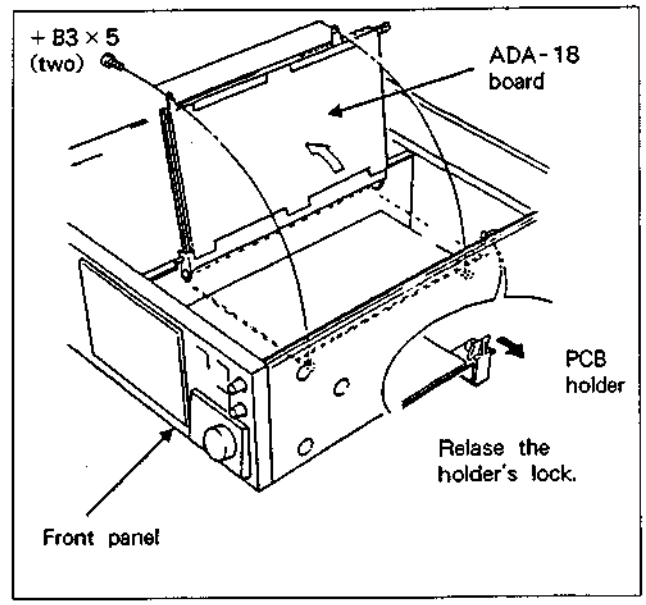


Note : Before installing the DABK-7050, turn off the unit's POWER switch.

1) Flexible card cable (30P) connection to the SY-155A board

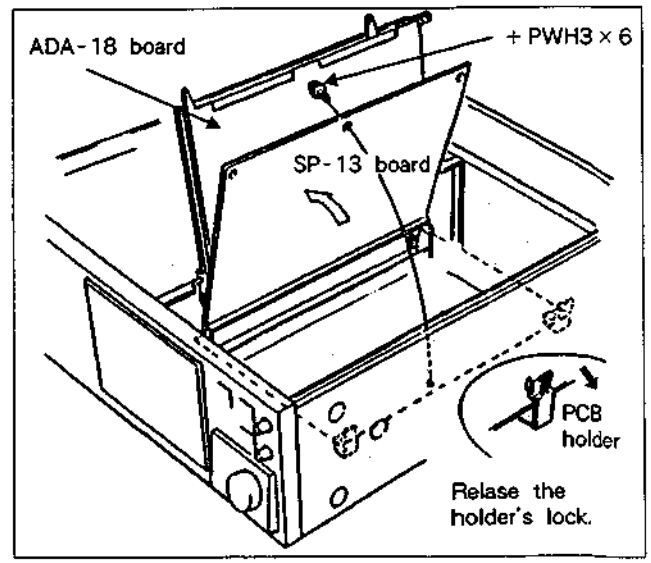
(1) Remove the ADA-18 board's two screws (+ B3 × 5).

(2) Release the PCB holder's lock and open the ADA -18 board as shown by the arrow.



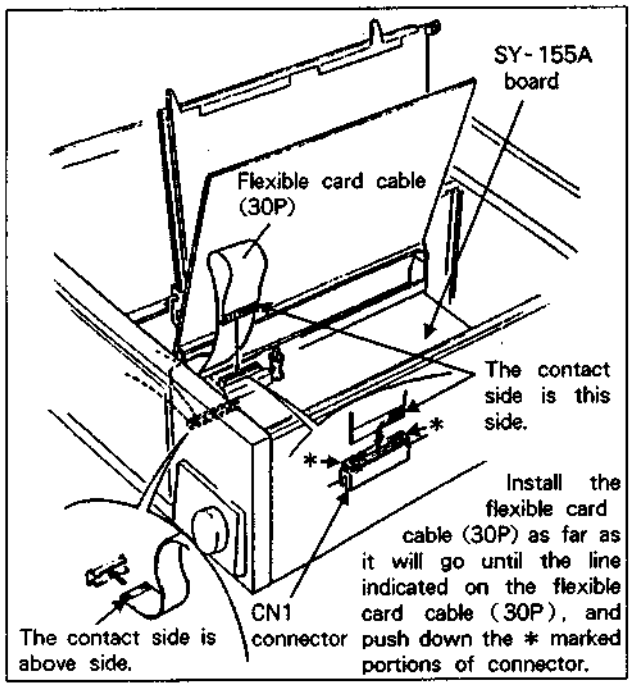
(3) Remove the SP-13 board's screw (+ PWH3 × 6).

(4) Release the PCB holders' locks and open the SP -13 board as shown by the arrow.



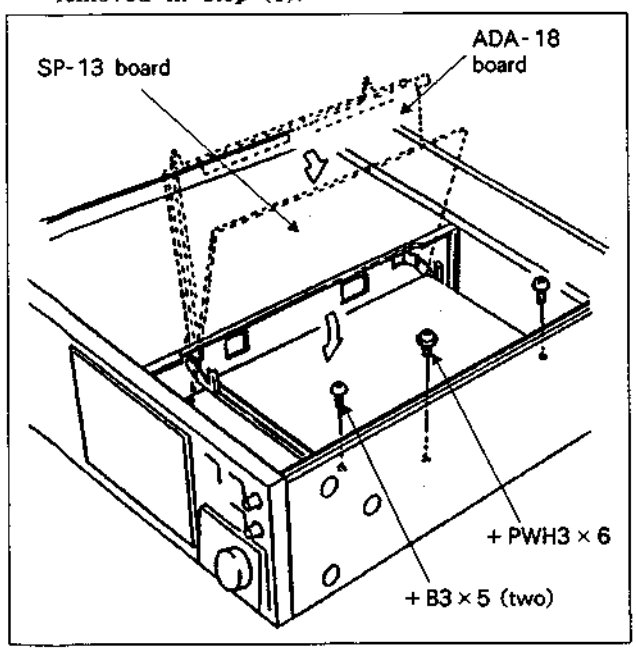
(5) Insert the flexible card cable (30P) through the chassis hole. Keep inserting the cable until it locks into the CN1 connector on the SY-155A board.

Note : Take care to insert the flexible card of the contact/incontact side.



(6) Close the SP-13 board until the two PCB holders lock. Then tighten the screw (+ PWH3 × 6) removed in step (3).

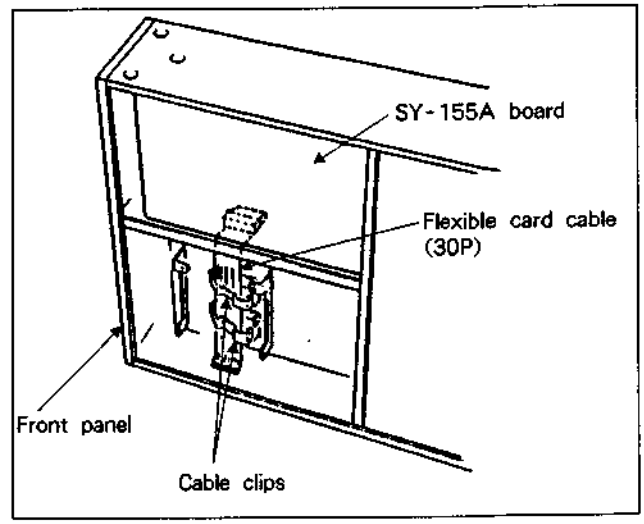
(7) Close the ADA-18 board until the PCB holder locks. Then tighten the two screws (+ B3 × 5) removed in step (1).



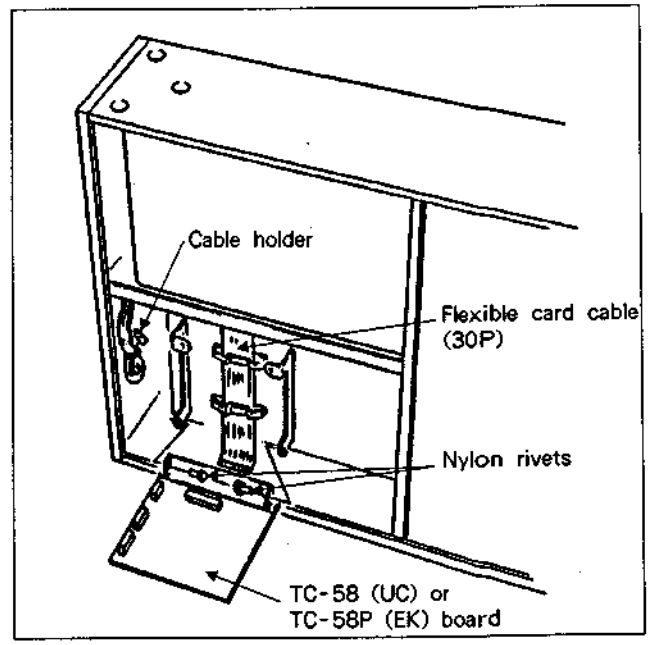
2) TC-58 (UC) or TC-58P (EK) board installation

(1) Lay the unit so that the bottom side is in front of you.

(2) Secure the flexible card cable with the two cable clips.



(3) Fasten the TC-58 (UC) or TC-58P (EK) board to the chassis with the two nylon rivets.

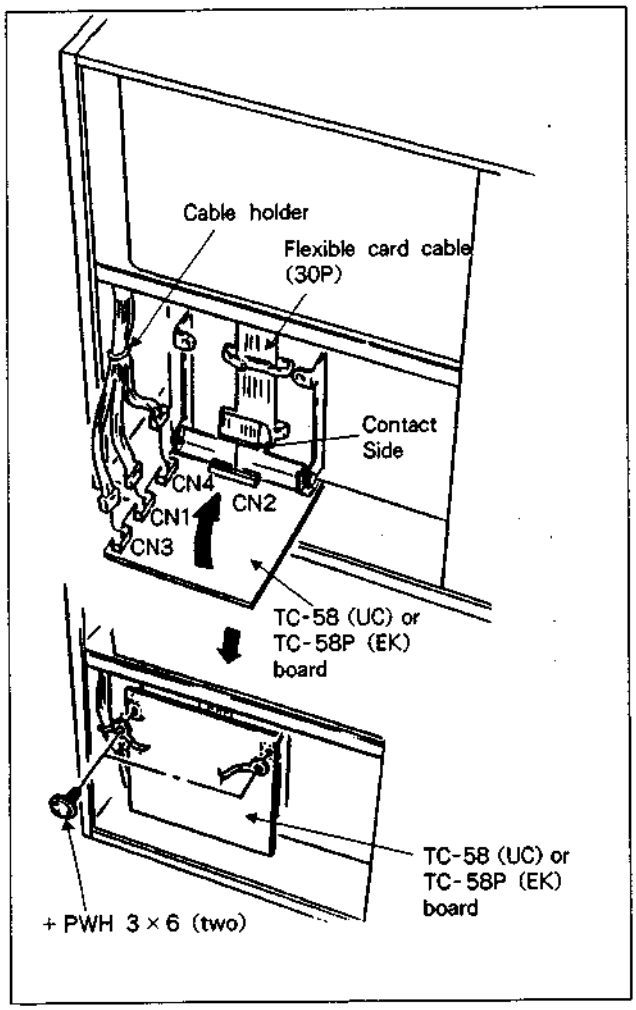


(4) Connect the flexible card cable (30P) to the CN2 connector on the TC-58 (UC) or TC-58P (EK) board.

(5) Connect the 4P, 5P, and 6P harnesses held by the cable holder to CN1 (5P), CN3 (4P), and CN4 (6P) respectively on the TC-58 (UC) or TC-58P (EK) board.

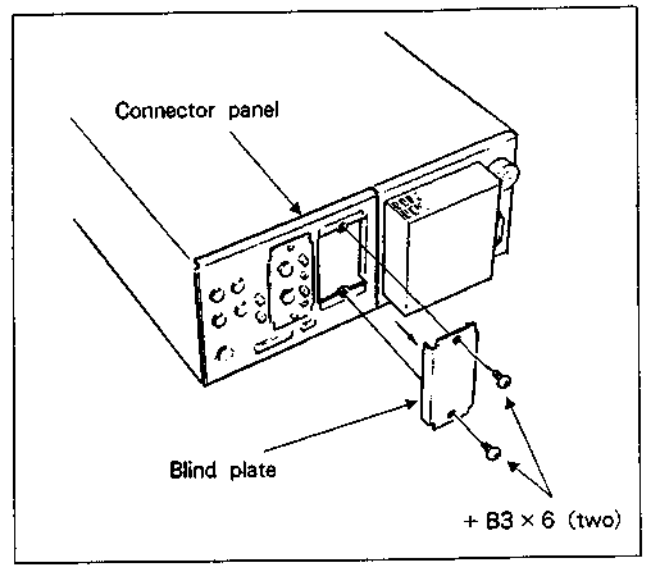
(6) Close the TC-58 (UC) or TC-58P (EK) board as shown by the arrow.

(7) Secure the TC-58 (UC) or TC-58P (EK) board to the chassis with the two screws (+PWH3×6).

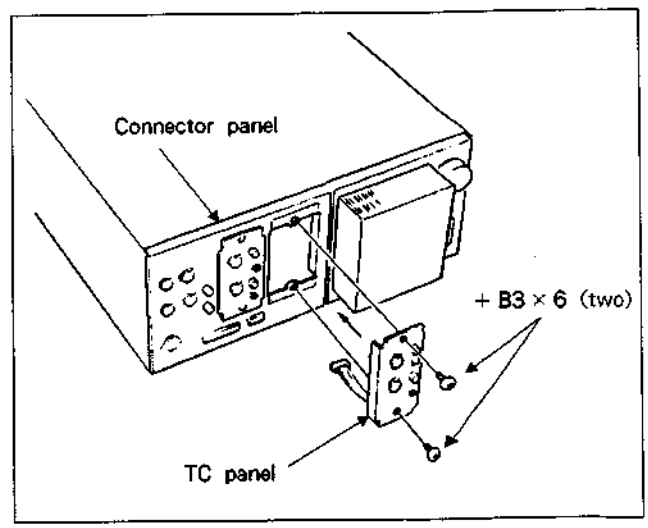


3) Installation of Connector Panel to TC Panel

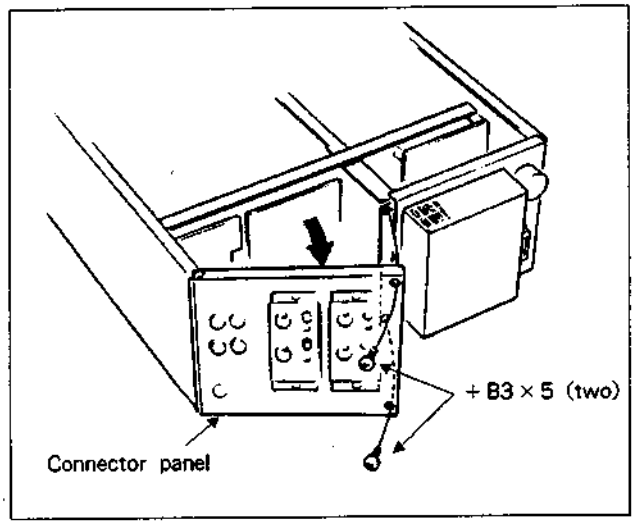
(1) Remove the blind plate from the Connector Panel.



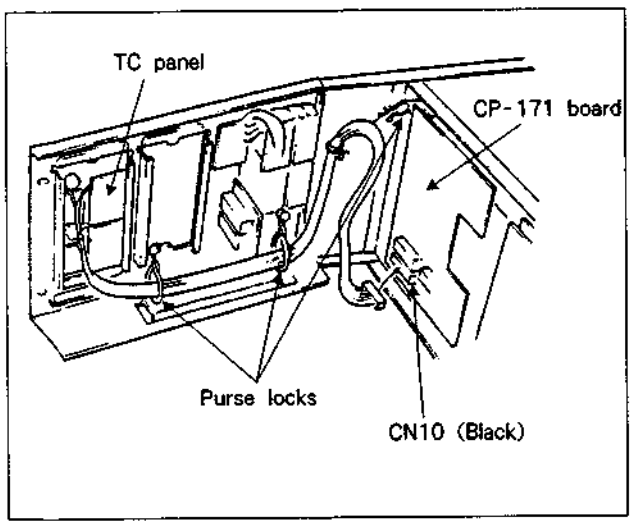
(2) Install the TC panel on the connector panel (where the blind Plate was removed) and secure it with the +B3×6 screws removed in step (1).



(3) Remove the two connector panel screws (+B3×5) and open the connector panel as shown by the arrow.



(4) Connect the TC panel's harness to the CP-171 board's CN10 connector (black). Secure the harness with the four purse locks shown in the figure below.



(5) Close the connector panel.

(6) Fasten the connector panel to the chassis with the two +B3×5 screws removed in step (3).

(7) Re-install the top panel (with the four +B4×6 screws) and bottom panel (with the five +B4×6 screws) on the unit.

4) Post-Installation Check

After installing the DABK-7030, do the following check.

1. Video synchronization signal input check procedure

(1) From the video synchronization signal generator, input the signal to the TC panel's REF VIDEO INPUT terminal.

Note : The unit's video synchronization signal frequency setting must match the input signal. Refer to the menu operation in the Operation Manual.

(2) Set the TC panel's 75 ohm termination ON/OFF switch to ON.

(3) Set the SYNC switch on the front panel to VIDEO.

(4) Make sure the VIDEO display on the front panel's display is lit.

(5) Then set the 75 ohm termination ON/OFF switch to OFF.

2. Time code I/O check

(1) Connect the INPUT and OUTPUT terminals of the TIME CODE terminal on the TC panel.

(2) Play the tape containing the time code.

(3) Press the DISPLAY key on the front panel to display the EXT TIME CODE on the display's work area.

(4) On the display, make sure the tape time area's time code display matches the work area's time code display.

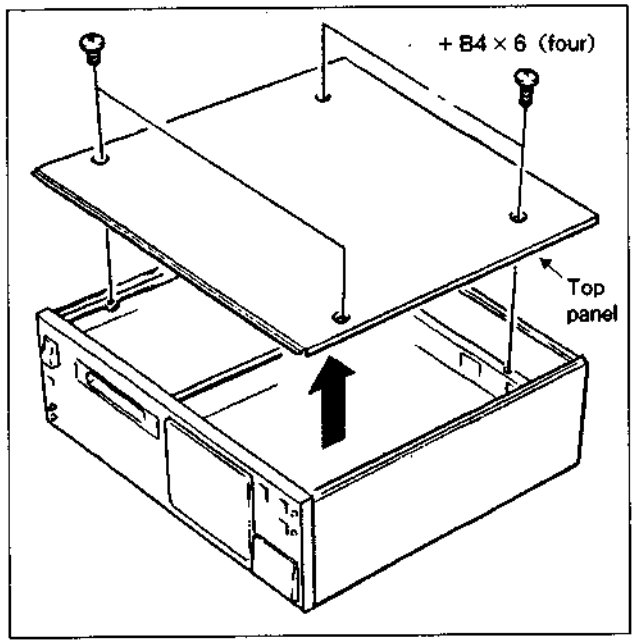
1-4-2. DABK-7033 Installation Procedure

The DABK-7033 comprises the following :

IF-283 board	: 1
Board supporter	: 3
Harness with D-SUB connector	: 1
D-SUB connector screws	: 2
ROM	: 2
Sample Disk	: 1

Initial preparation

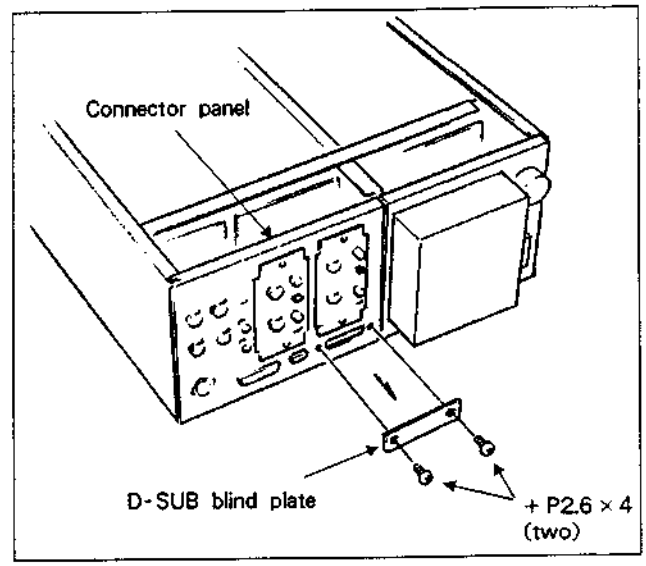
Remove the top panel by removing the four + B4 × 6 screws. Remove the top panel as shown by the arrow.



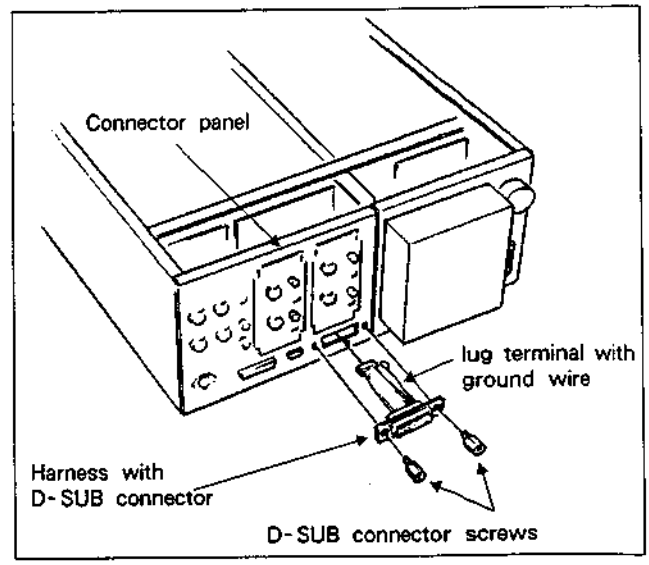
Note : Before installing the DABK-7033, turn off the unit's POWER switch.

1) Installation of Harness with D-SUB connector to the connector panel

(1) Remove the D-SUB blind plate from the connector panel.

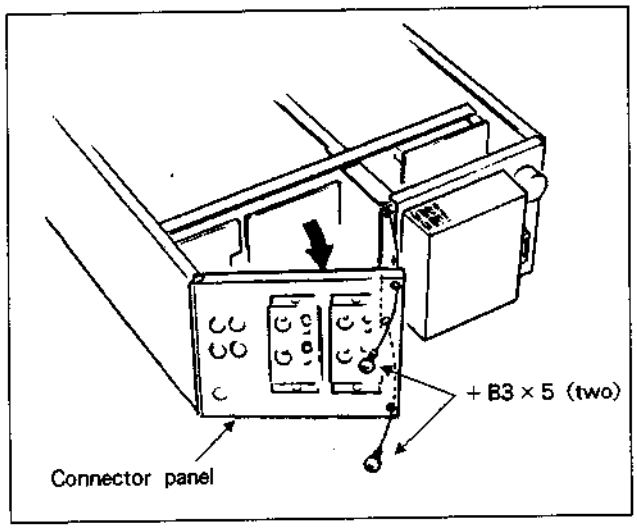


(2) Install the harness with D-SUB connector on the connector panel (where the D-SUB blind plate was removed) with the two D-SUB connector screws.

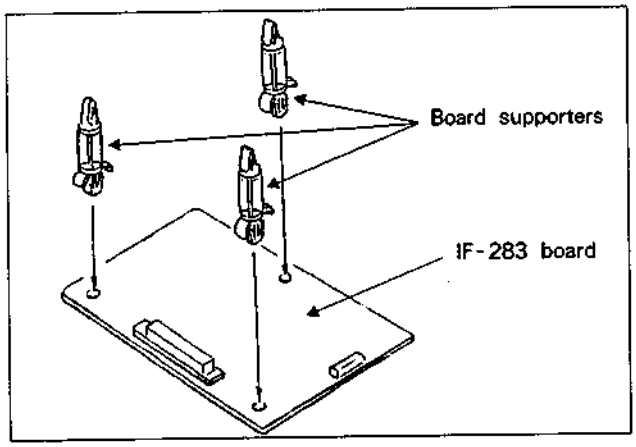


2) IF-283 board installation on the RM-77 board

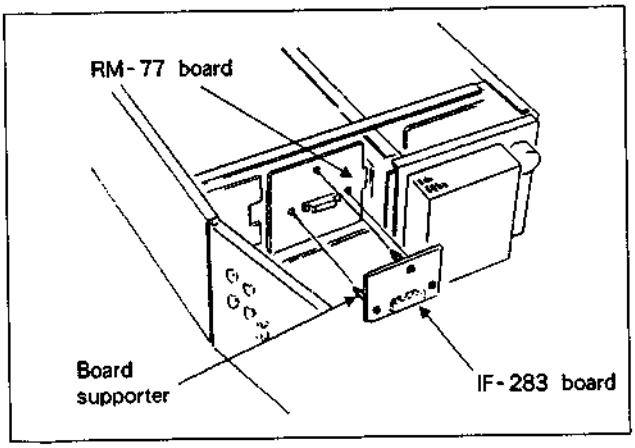
(1) Remove the two + B3 × 5 screws and open the connector panel as shown by the arrow.



(2) Insert the three board supporters into the IF-283 board as shown in the figure below.



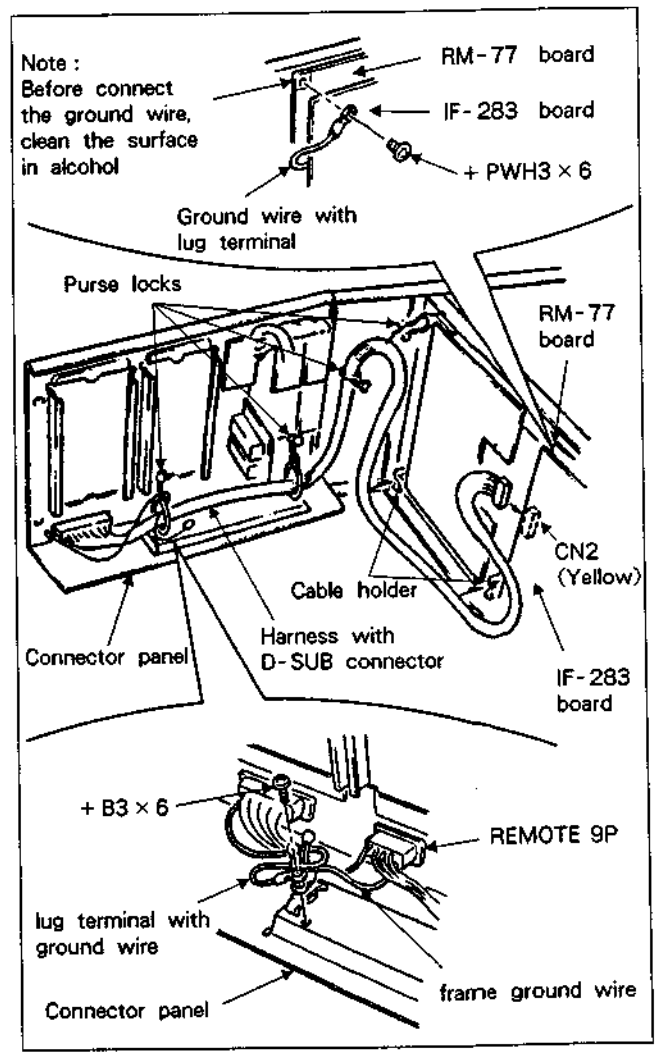
(3) Mount the IF-283 board to the RM-77 board and push it in until the board supporters lock.



(4) Connect the harness with D-SUB connector to the IF-283 board's CN2 connector (yellow). Connect the harness by securing it with the four purse locks.

(5) Remove the screw (+ PWH3 × 6) that the stopping on the RM-77 board (A Side board address A -1) and install the harness together with the ground wire with the lug terminal provided with the IF-238 board.

(6) Remove the screw (+ B3 × 6) holding the frame ground wire of the D-SUB 9 pin (REMOTE 9P). Secure the lug terminal with ground wire of the harness with the D-SUB connector with a purse lock, and install it together with the removed frame ground wire with a screw (+ B3 × 6).



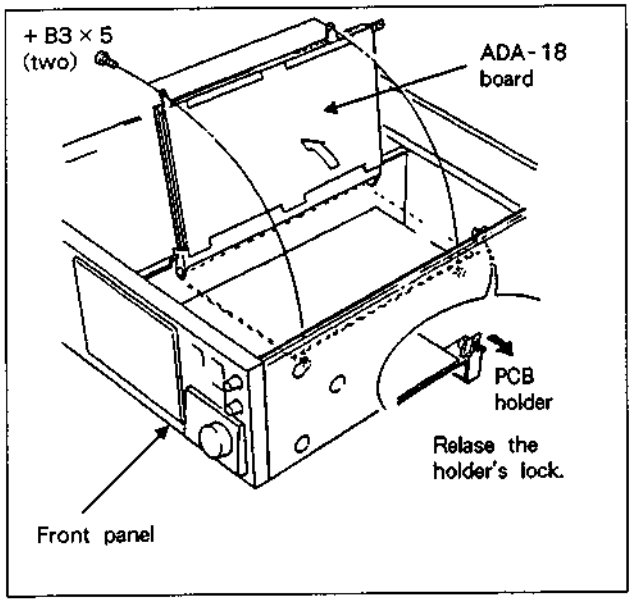
(7) Close the connector panel.

(8) Fasten the connector panel to the chassis with the two + B3 × 5 screws removed in step (1).

3) ROM Replacement

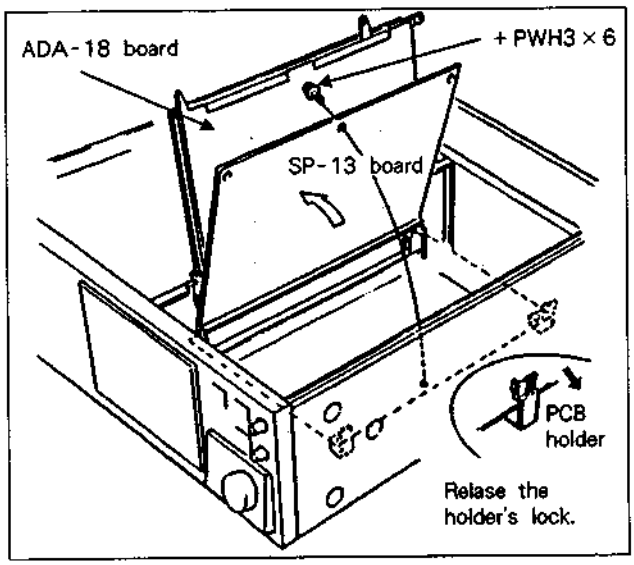
(1) Remove the ADA-18 board's two +B3×5 screws.

(2) Release the PCB holder's lock and open the ADA -18 board as shown by the arrow.

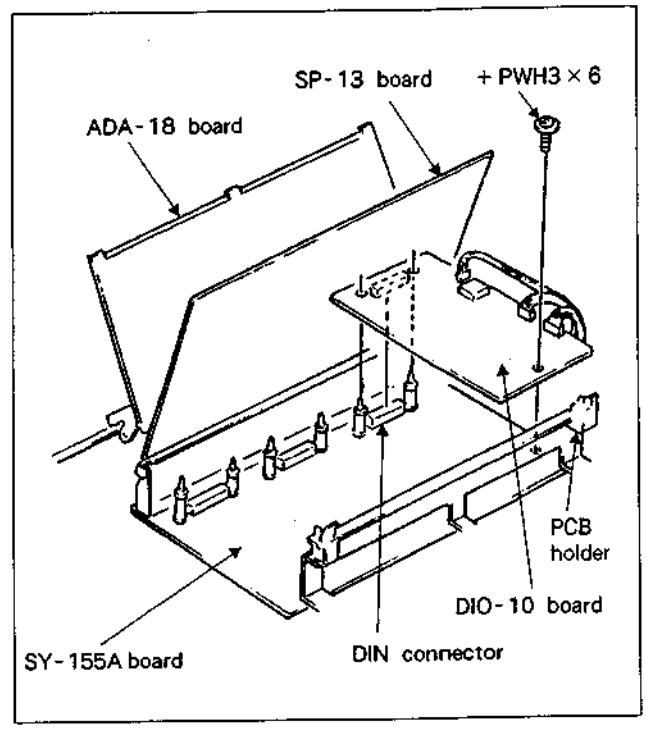


(3) Remove the SP-13 board's screw (+PWH3×6).

(4) Release the PCB holders' locks and open the SP -13 board as shown by the arrow.

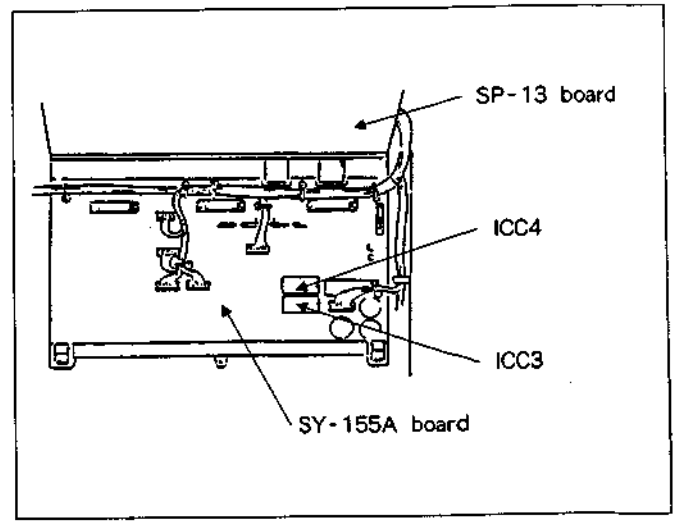


(5) Remove the DIO-10 board from the SY-155A board.



(6) Remove the ROM SYC3V *.* (board adress C-3) on the SY-155A board and install the ROM (IFC3V *.*) that goes with the DABK-7033.

(7) Remove the ROM SYC4V *.* (board adress C-4) on the SY-155A board and install the ROM (IFC4V *.*) that goes with the DABK-7033.



(8) Install the DIO-10 board on the SY-155A board.
(9) Close the SP-13 board until the two PCB holders lock.
(10) Fasten the SP-13 board to the board guide with the +PWH3×6 screw that was removed in step (3).
(11) Close the ADA-18 board until the PCB holder locks.
(12) Fasten the ADA-18 board to the chassis with the two +B3×5 screws that were removed in step (1).
(13) Install the top cover on the unit with the four +B4×6 screws.

1-4-3. DABK-7055 Installation Procedure

The DABK-7055 comprises the following :

MEM-40C board : 1
Screw (+PWH3×6) : 1

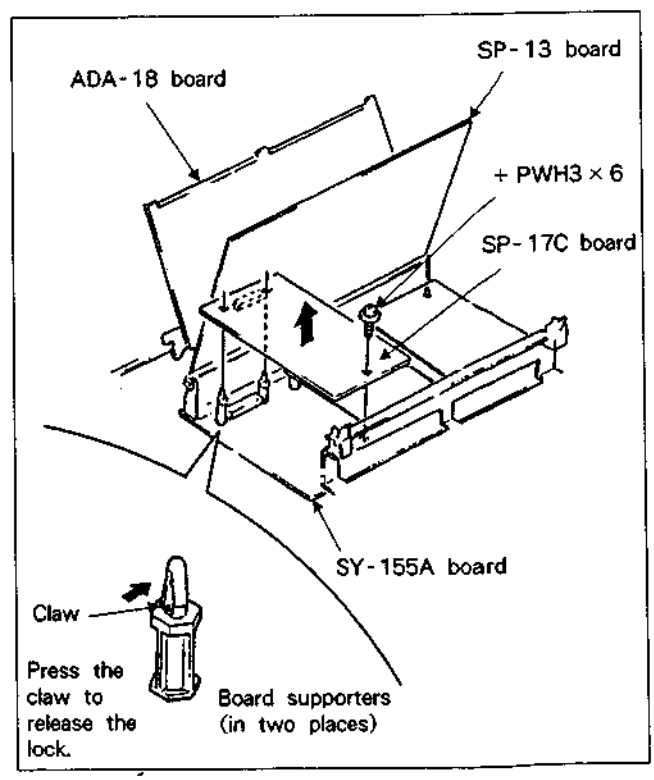
Initial preparation

Remove the unit's top panel.
(Refer to the 1-4-1. DABK-7030 installation procedure.)

Note : Before installing the DABK-7055, turn off the unit's POWER switch.

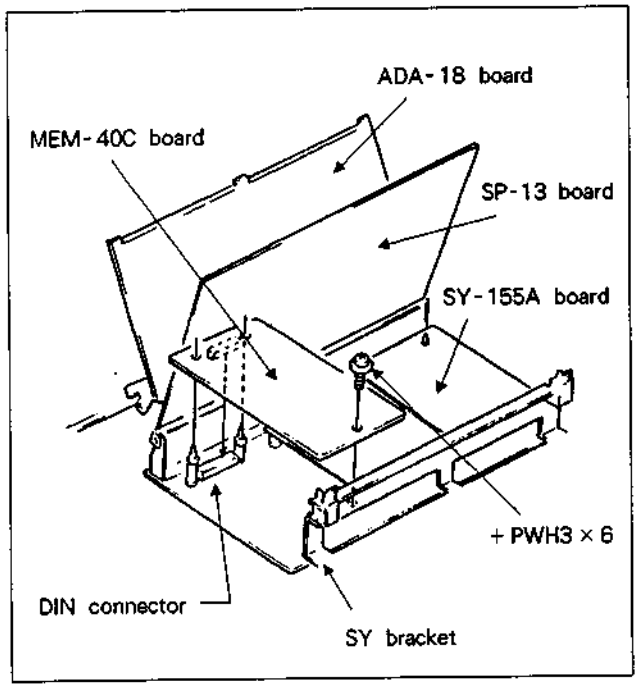
1) Installation of MEM-40C board to SY-155A board

(1) Open the ADA-18 board and SP-13 board. (Refer to the 1-4-1. DABK-7030 installation procedure.)
(2) Remove the SP-17C board from the SY-155A board. (The board supporters are located in two places. One +PWH3×6 screw.)



(3) Insert the MEM-40C board's DIN connector into the SY-155A board's DIN connector. Insert the MEM-40C board until the SY-155A board's board supporters lock.

(4) Fasten the MEM-40C board to the SY-155A board's SY bracket the + PWH3 × 6 screw.



(5) Close the SP-13 board and ADA-18 board. (Refer to the 1-4-1. DABK-7030 installation procedure.)

(6) Install the top panel on the unit and secure it with the four + B4 × 6 screws.

2) Post-Installation Check

After installing the DABK-7055, do the following check :

(1) Open the SERVICE menu. (Simultaneously pressing the STOP, DISPLAY, and SET keys on the front panel.)

(2) Open the TEST menu.

① While pressing the MENU key, turn the dial counterclockwise to display the following :
[tESt] cLoSE

② While pressing the DATA key, turn the dial until "oPEn" is displayed. Then press the SET key.

③ While pressing the MENU key, turn the dial clockwise to display the following :
[iS_Ed] cLoSE

④ While pressing the DATA key, turn the dial until "oPEn" is displayed. Then press the SET key.

(3) While pressing the MENU key, turn the dial clockwise to display the following :
Edit tESt

(4) Press the SET key and check if "noError" is displayed about 20 seconds later.

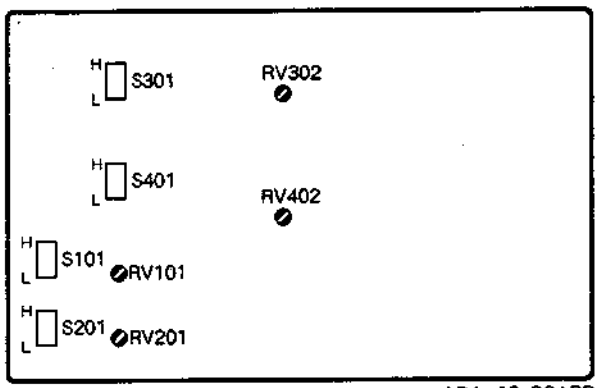
(5) Close the SERVICE menu. (Simultaneously press the STOP, DISPLAY, and SET keys.)

1-5. Initial Settings of the Board's Switches and Volumes

The switch and volume settings required for level schedule changes (ADA-18 board) and fader start/stop procedure changes (RM-77 board) are described below.

Note : Do not touch any switches and volumes other than those specified below.

1-5-1. Level schedule change (ADA-18 board)



ADA-18 BOARD
COMPONENT SIDE
BOARD No. 1-637-267-11

(1) If the standard signal level used is small (around −20dBs), do the following :
Switchover the S101, S201, S301, and S401 switches in correspondence to the analog audio I/O signal's standard signal level.
This is to be used if the standard level is set low, at around −20dBs.
If all the switches are set to H, the +4dBs input signal will be displayed as −20dB on the level meter.(Setting upon factory shipment.)
If all the switches are set to L, the −20dBs input signal will be displayed as −20dB on the level meter.

(2) Level schedule change
Upon factory shipment, the RV101, RV201, RV301, and RV401 volumes are set to the level schedule (+4dBs input → 20dB display → 4dBs output).
To change the above volumes' level schedule, adjust the volumes as described below.
First set the ANALOG AUDIO INPUT level adjustment knob (CH1 and CH2 on the front panel) to the center position.

RV101 and RV201 input level adjustment
For RV101, adjust the CH1 input level.When it is turned clockwise, the level will increase.
For RV201, adjust the CH2 input level.When it is turned clockwise, the level will increase.
The level setting (+4dBs = −20dB) upon factory shipment has a variable range of +8/−14dB for RV101 and RV201.

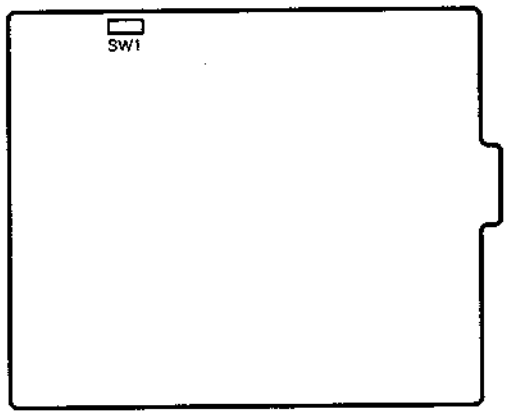
RV302 and RV402 output level adjustment
For RV302, adjust the CH1 output level.When it is turned clockwise, the level will increase.
For RV402, adjust the CH2 output level.When it is turned clockwise, the level will increase.
The level setting (−20dB = +4dBs) upon factory shipment has a variable range of +4/−12dB.

1-5-2. Fader Start/Stop Change Procedure (RM-77 Board)

The following two methods can be used for tape transport control with the fader :

1. Start the tape transport by raising the fader and stop it with the STOP key.Or, start the tape transport with the START key and stop it with the STOP key.
2. Start the tape transport by raising the fader and stop it by lowering the fader.

Select one of the above methods with SW1.



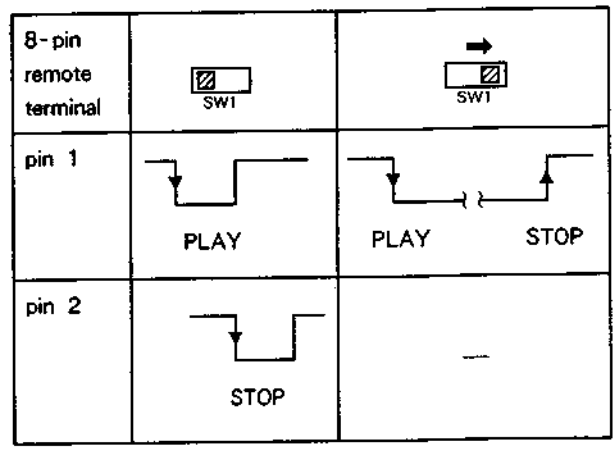
RM-77 BOARD
COMPONENT SIDE
BOARD No. 1-637-272-11

Setting upon factory shipment : The start and stop are independent.

Pin 1 of the 8-pin remote terminal is dedicated to the PLAY command.The fader start can be done with an external fader (mixer).Pin 2 is dedicated to the STOP command.

When the switch is set, the setting will apply to both start and stop.

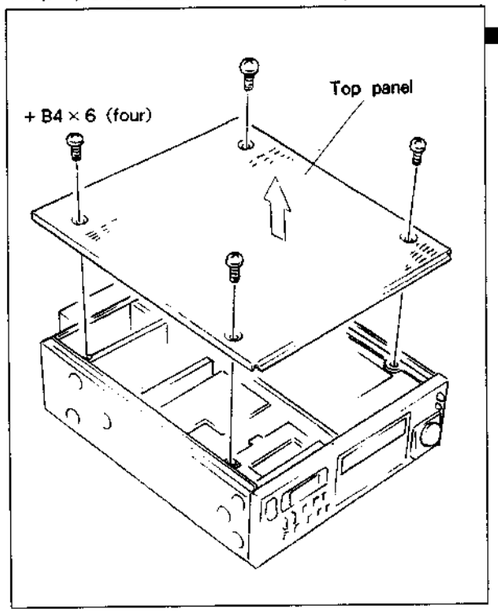
From pin 1 of the 8-pin remote terminal, the PLAY and STOP commands will be input alternately.This allows an external fader (mixer) to perform fader start and fader stop.The signal from of the 8-pin remote terminal's pin 1 will thereby change as follows :



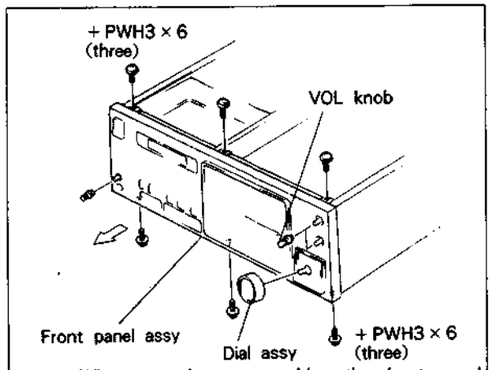
SECTION 2
SERVICE INFORMATION

2-1. Removal of Boards and Major Mechanical Parts

Top panel removal

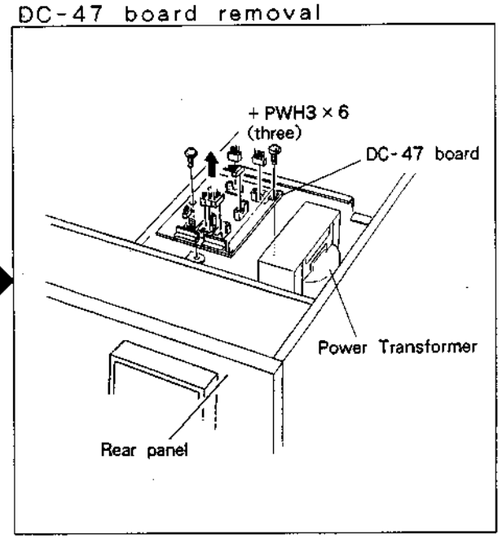


Removal of front panel assembly

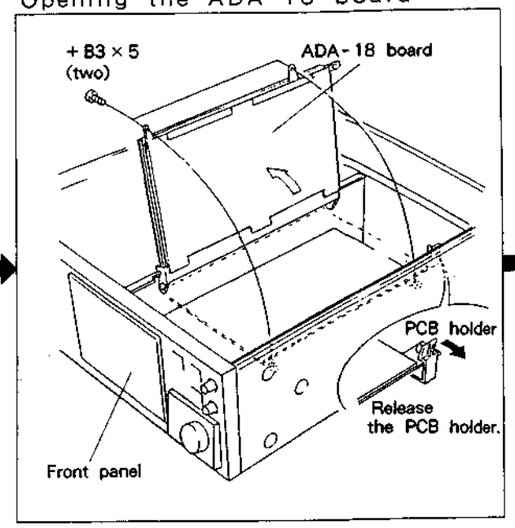


Note : • When removing or attaching the front panel assembly, please do it when the cassette compartment has finished ejecting or when the cassette holder has finished lowering.
• Refer to the instructions "2-4-1. Installation position of the panel and cassette compartment" for installing the front panel assembly.

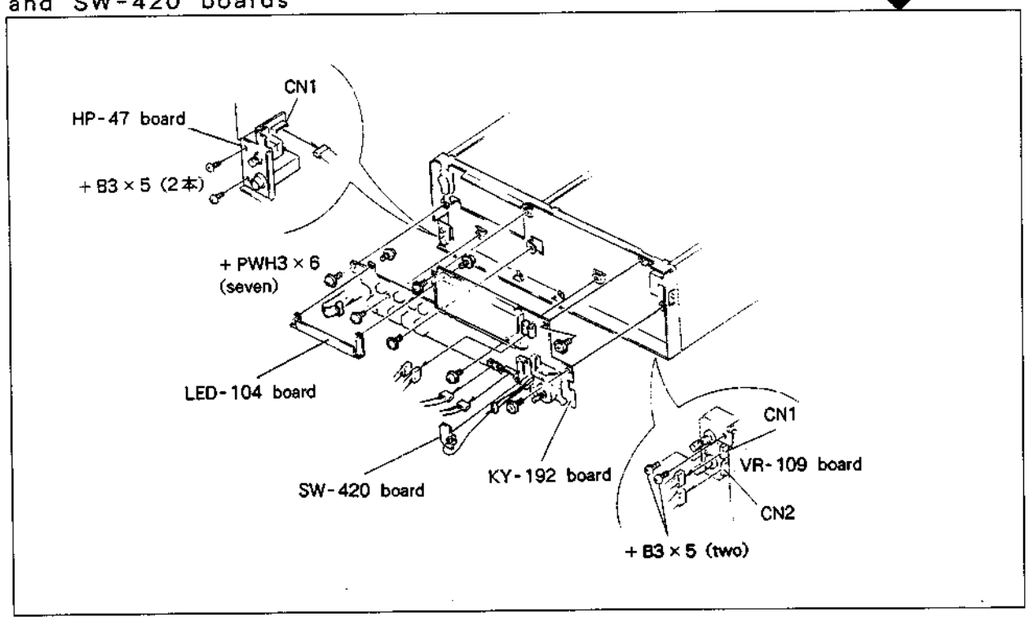
DC-47 board removal



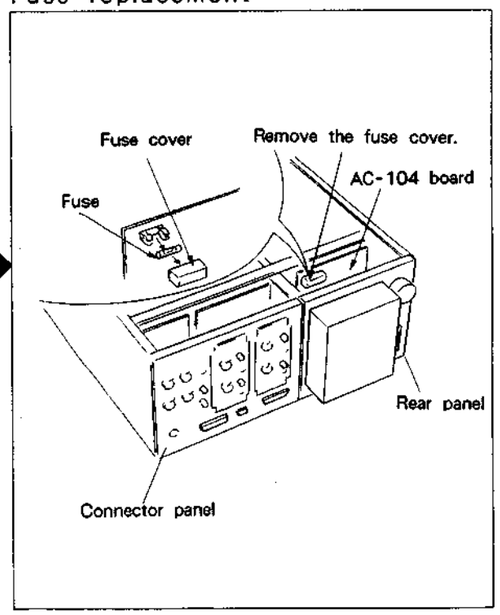
Opening the ADA-18 board



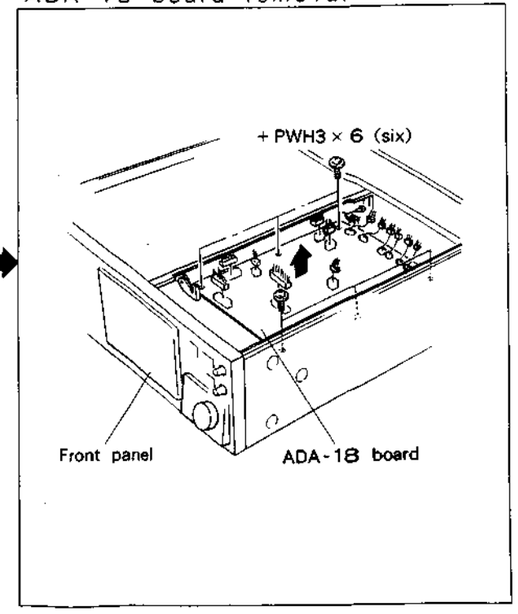
Removal of KY-192, HP-47, VR-109, LED-104, and SW-420 boards



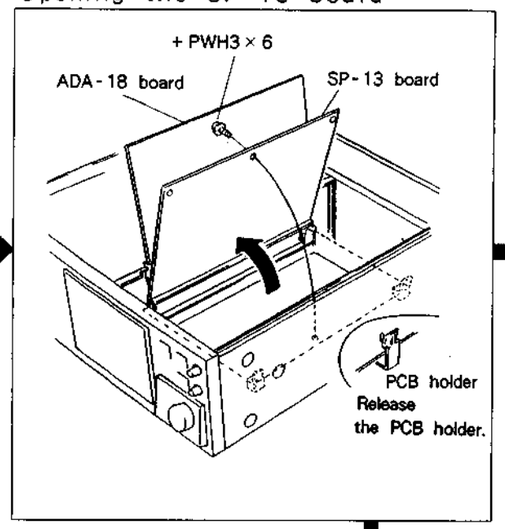
Fuse replacement



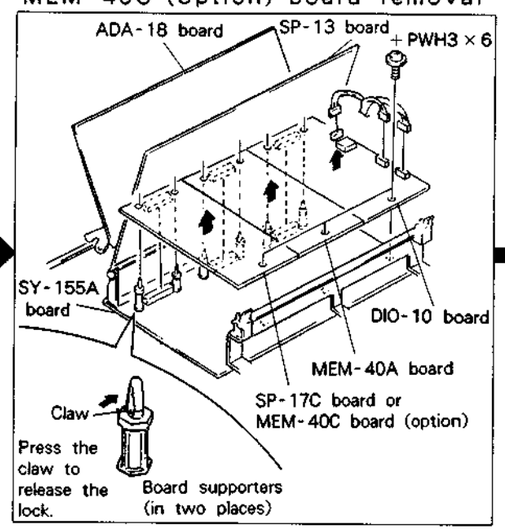
ADA-18 board removal



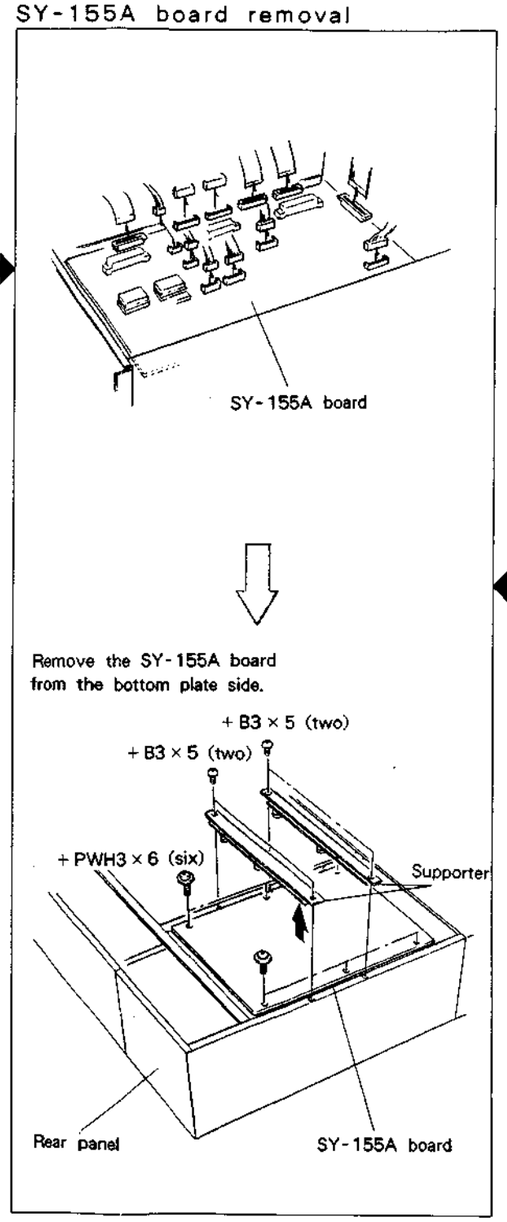
Opening the SP-13 board



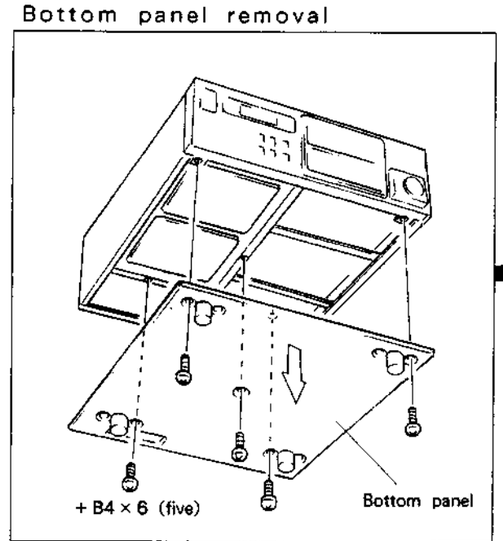
MEM-40A, SP-17C or MEM-40C (option) board removal



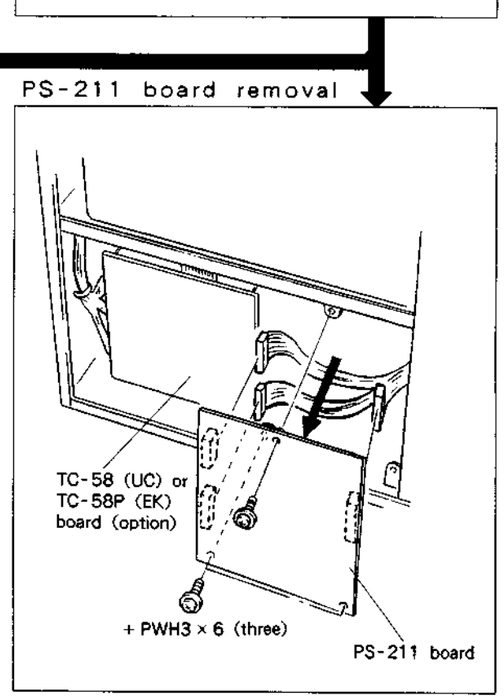
SY-155A board removal



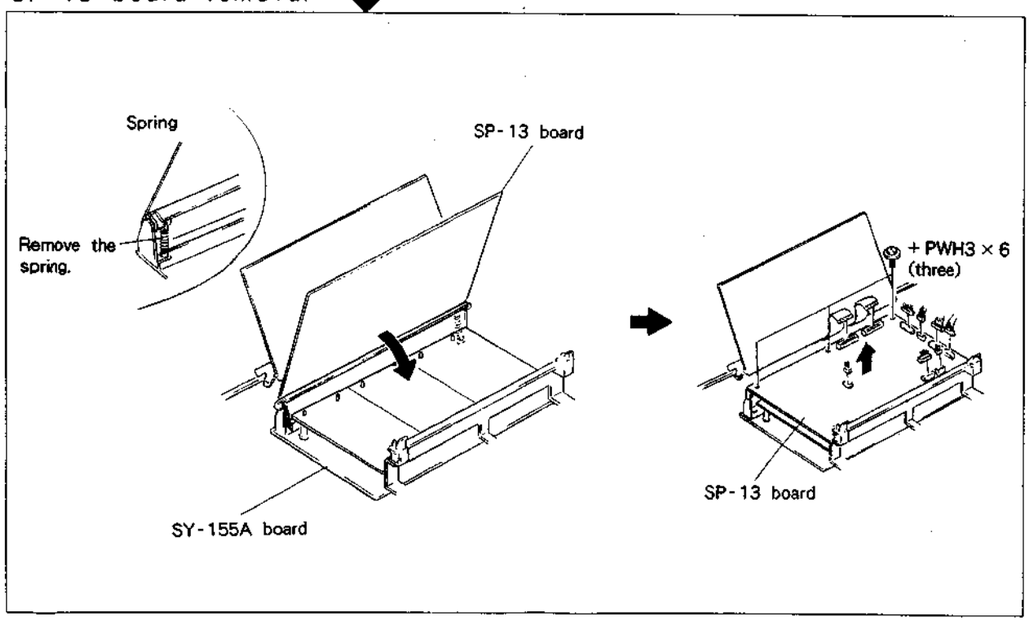
Bottom panel removal



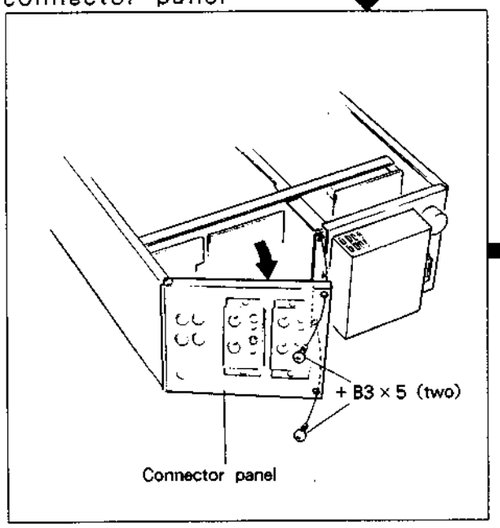
PS-211 board removal



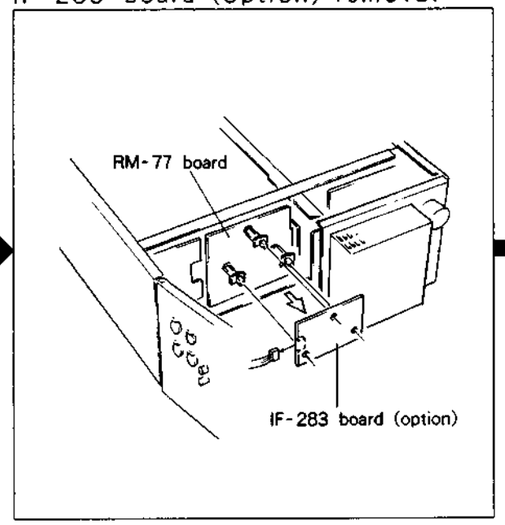
SP-13 board removal



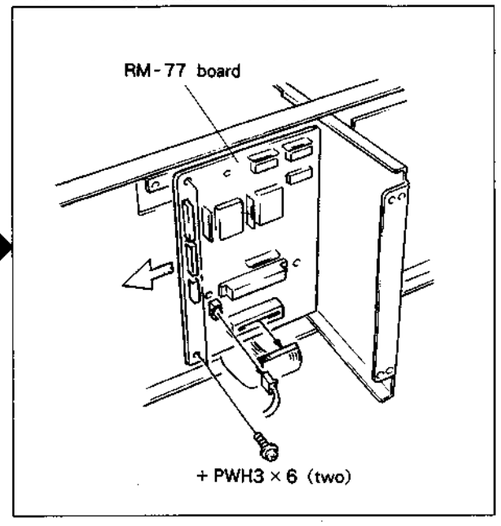
Opening the connector panel



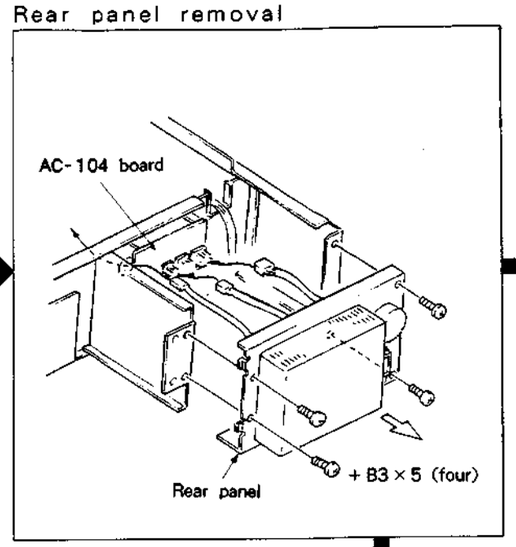
IF-283 board (option) removal



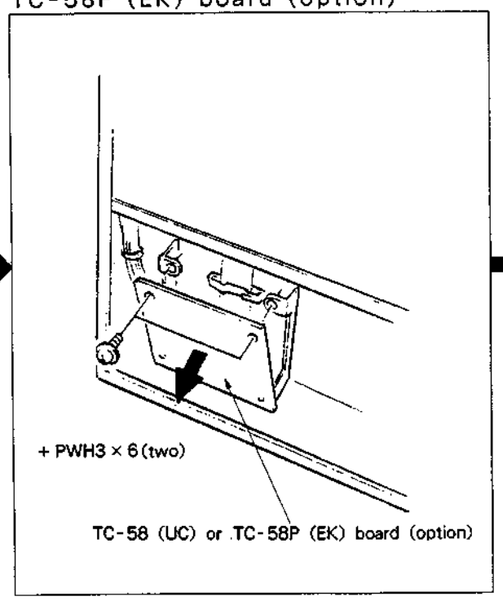
RM-77 board removal



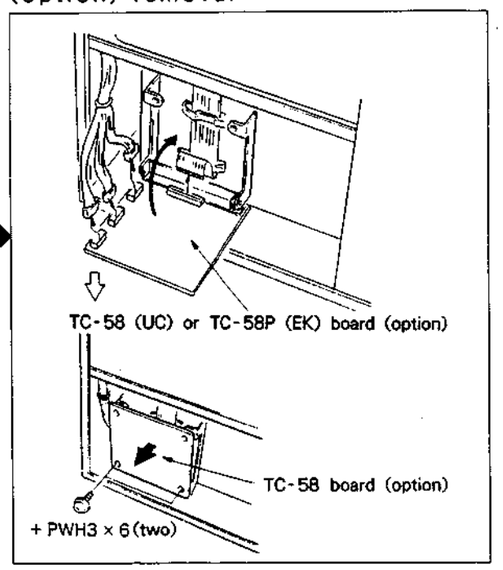
Rear panel removal



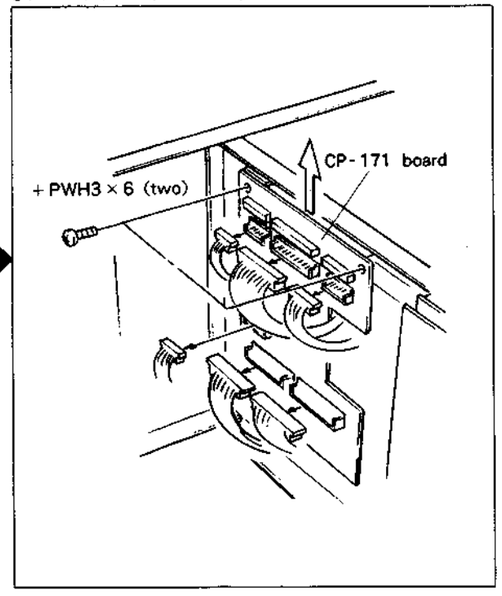
Opening the TC-58 (UC) or TC-58P (EK) board (option)



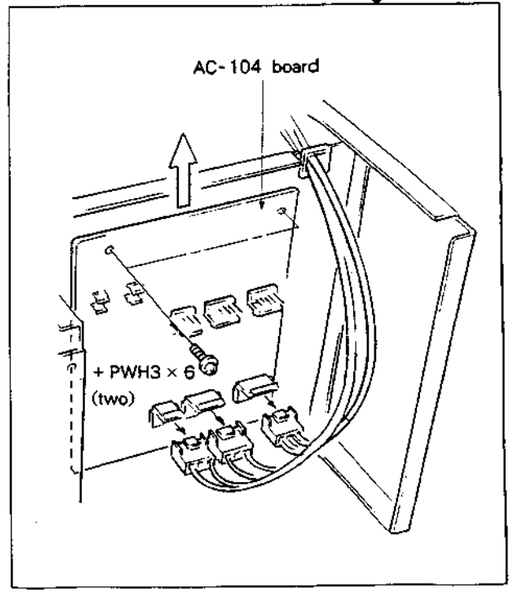
TC-58 (UC) or TC-58P (EK) board (option) removal



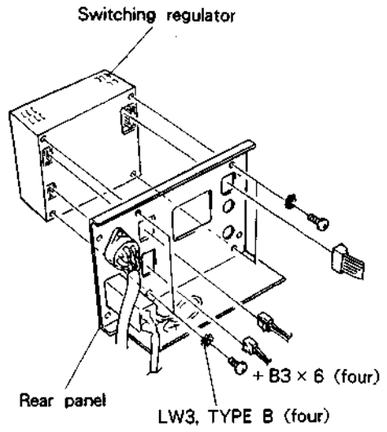
CP-171 board removal



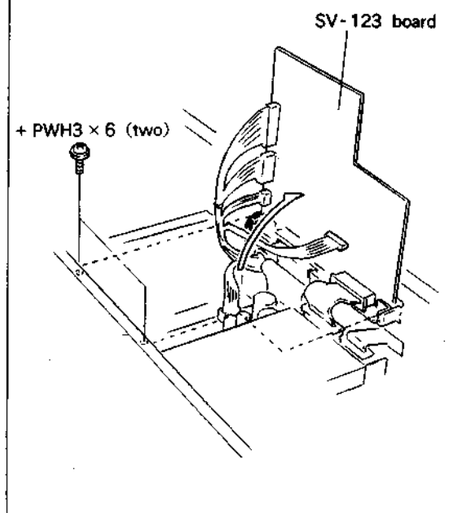
AC-104 board removal



Switching regulator removal

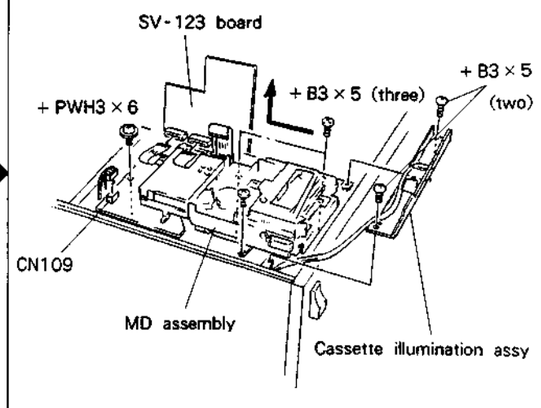


Opening the SV-123 board

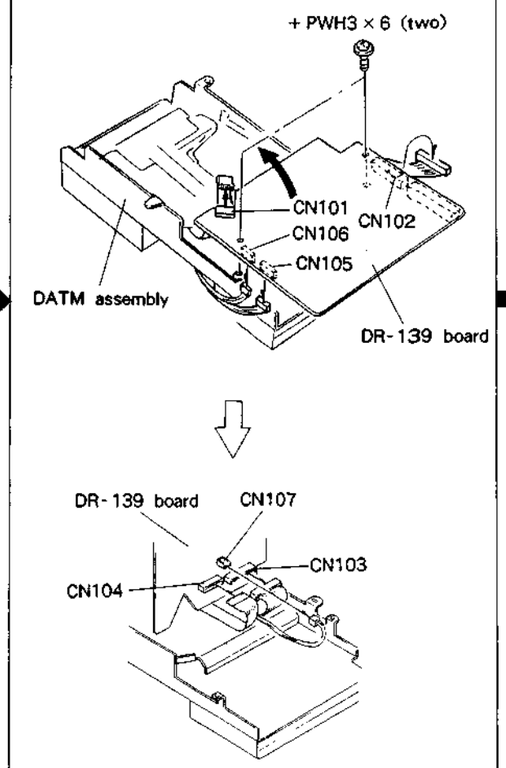


MD assembly removal

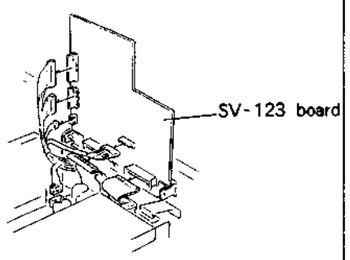
Move the MD assembly toward the rear panel and lift it up to remove.



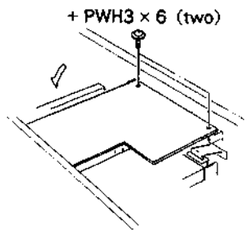
DR-139 board removal



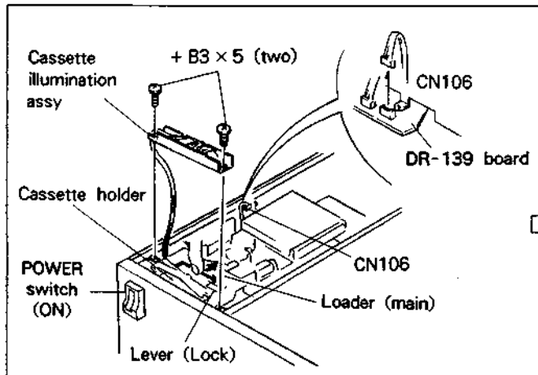
SV-123 board removal



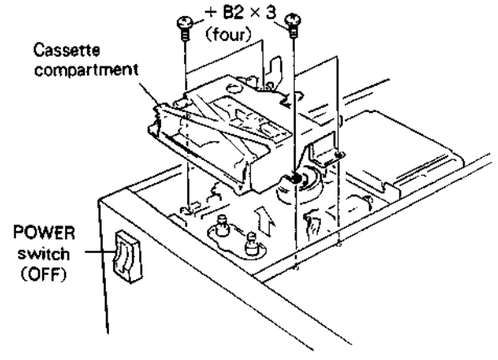
Remove the harness and close the SV-123 board.



Cassette compartment removal



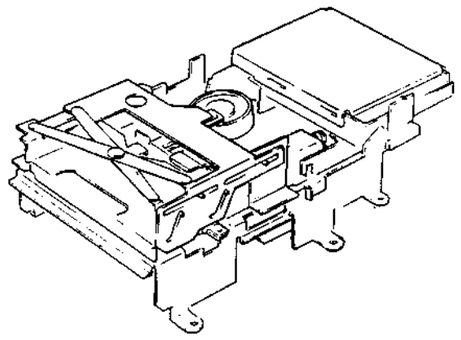
1. Turn on the POWER switch.
2. Lift up the lever (lock).
3. Use your finger to push the loader as shown by the arrow so that the cassette holder goes all the way down.
4. With the cassette holder all the way down, turn off the POWER switch. (The cassette holder will normally go back up after about a second it is down. Turn off the POWER switch before the cassette holder goes back up.)



5. To remove the cassette compartment, lift up the rear panel side and then lift up the front panel side. Then remove it directly upward, as shown by the arrow.

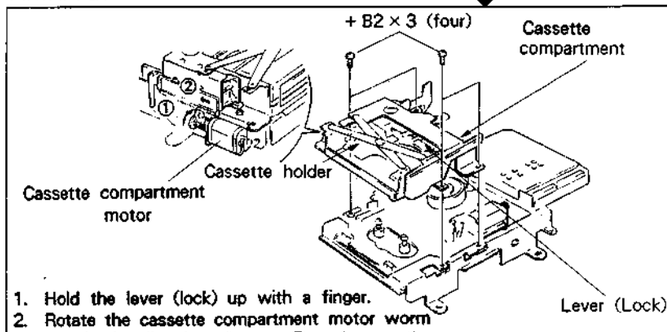
Note : While removing the cassette compartment, do not bump it left or right.

DATM assembly and Cassette compartment



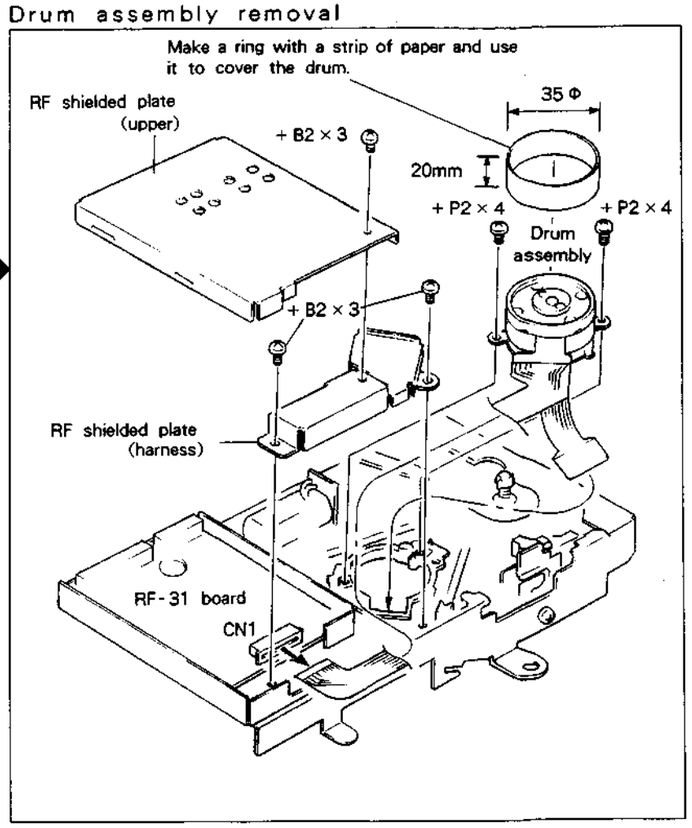
Note : Refer to the instructions "2-4-1.Instllation position of the front panel and cassette compartment" for installing the DATM assembly and the cassette compartment.

Cassette compartment removal

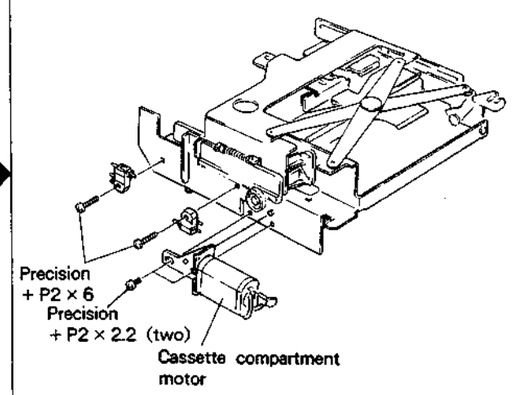


1. Hold the lever (lock) up with a finger.
2. Rotate the cassette compartment motor worm gear in the direction of arrow ①, and move the cassette holder in the direction of arrow ②. After the cassette holder has advanced a little bit take your finger off the lever (lock).
3. Rotate the cassette compartment motor worm gear and lower the cassette holder completely.
4. Remove screws + B2 × 3 (4 screws) and remove the cassette compartment from the DATM assembly.

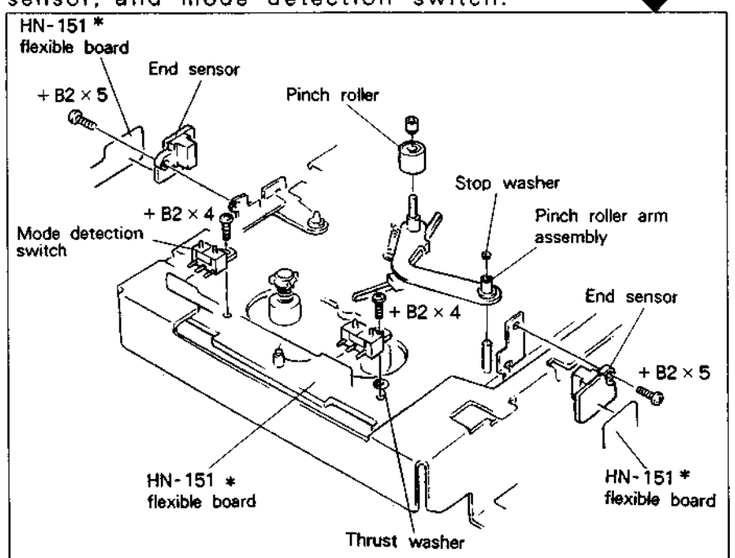
Drum assembly removal



Removal of the cassette compartment motor and cassette holder detection switches (S1 and S2)



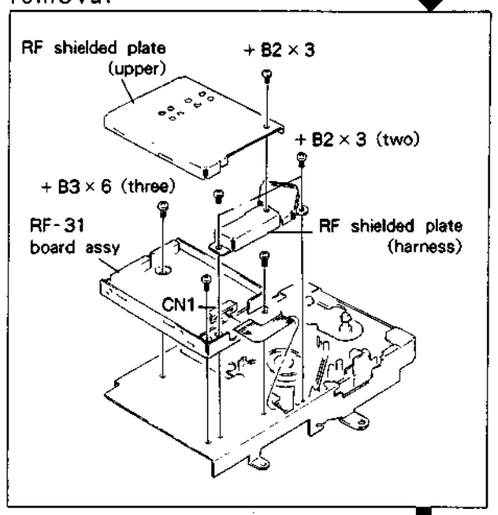
Removal of the pinch roller, tape-end sensor, and mode detection switch.



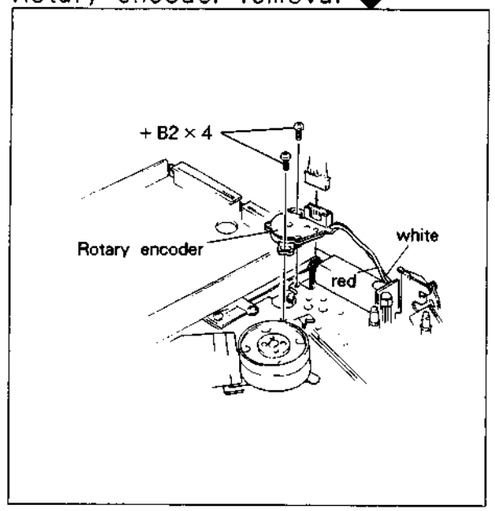
* Handling the flexible printed board

- Keep the soldering iron temperature at around 270℃.
- Do not touch the same pattern more than 3 times with the soldering iron.
- Do not exert any excessive force on the pattern.

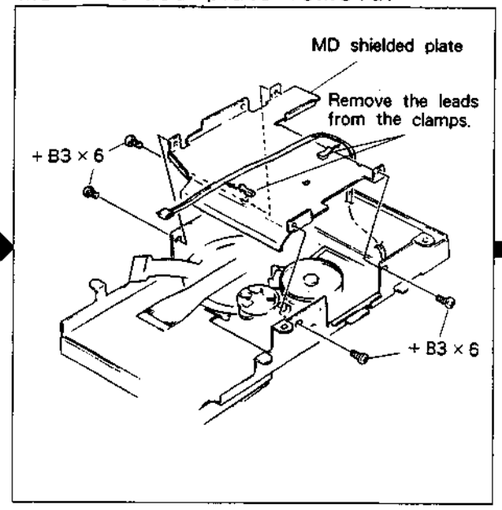
RF-31 board assembly removal



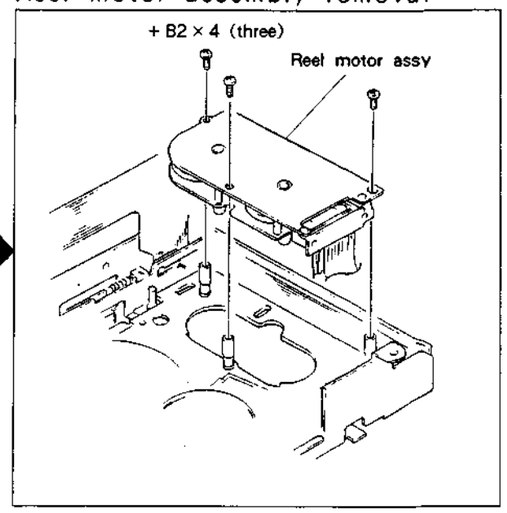
Rotary encoder removal



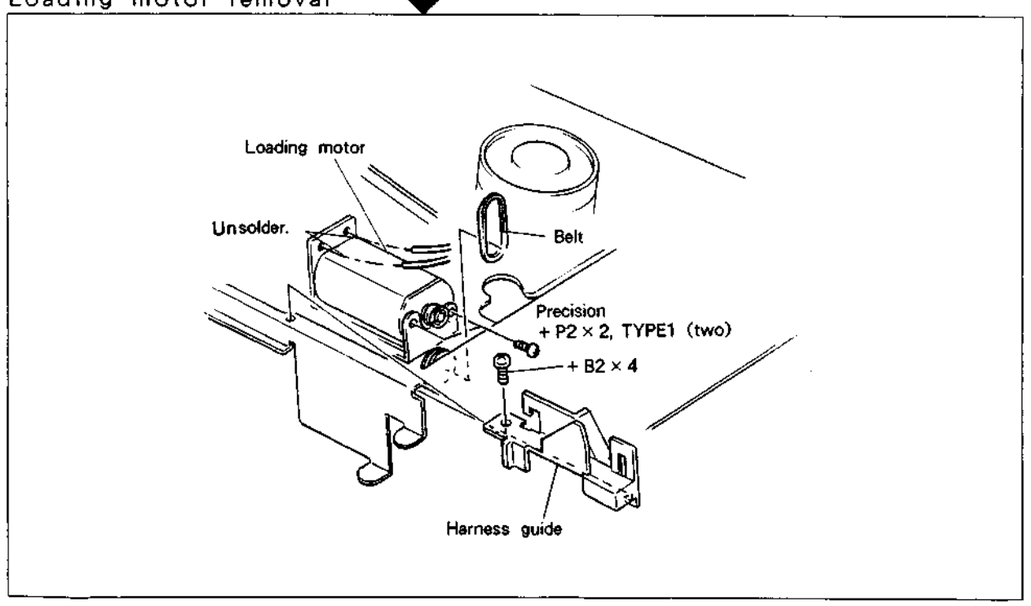
MD shielded plate removal



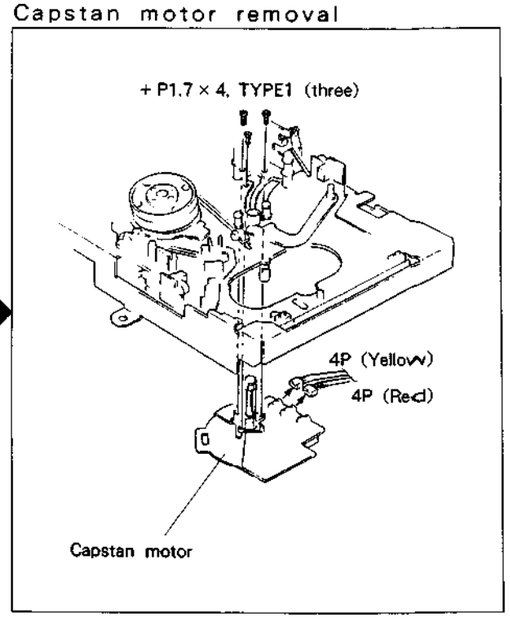
Reel motor assembly removal



Loading motor removal



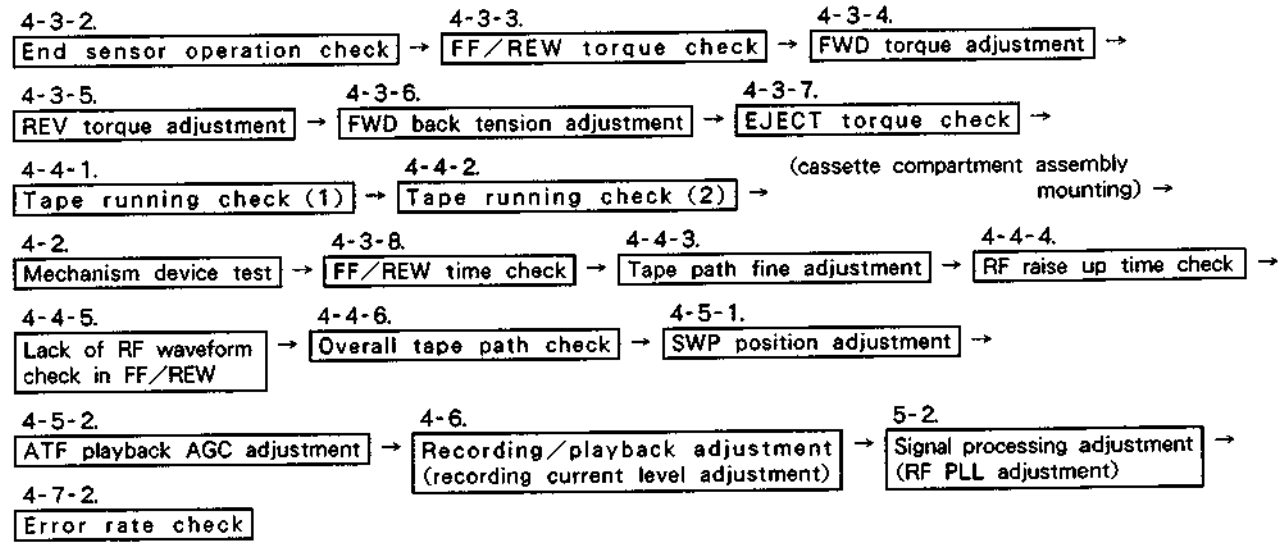
Capstan motor removal



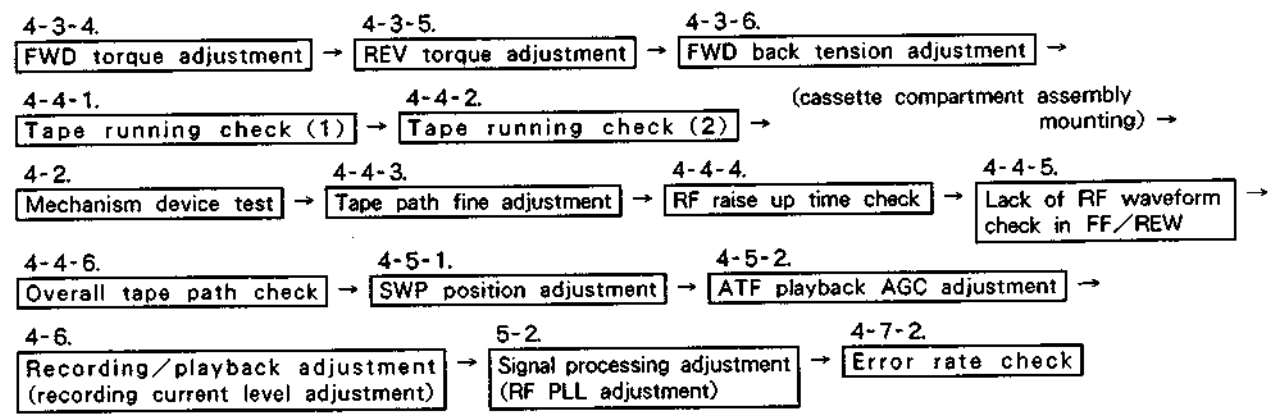
ADJUSTMENTS (CONFIRMATIONS) AFTER MAJOR PARTS REPLACEMENTS

When you replace major parts, be sure to adjust and confirm the following items.

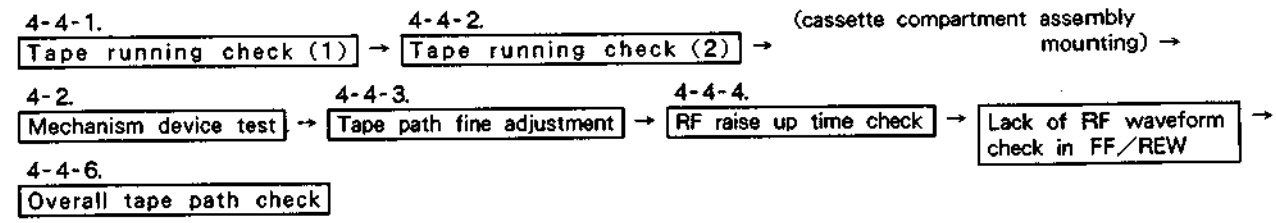
Mechanism Deck Assembly (DATM-06R)



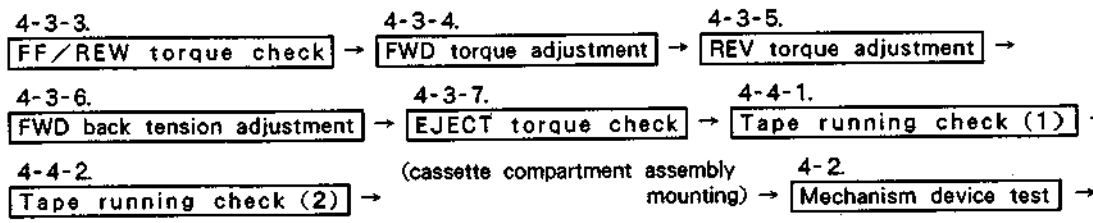
Drum Assembly (DDH-14AR)



Capstan Motor (BHF2803A)



Reel Motor (U-2A)



4-3-8. FF/REW time check → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check →
4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check

Pinch Roller Block Assembly

4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) →

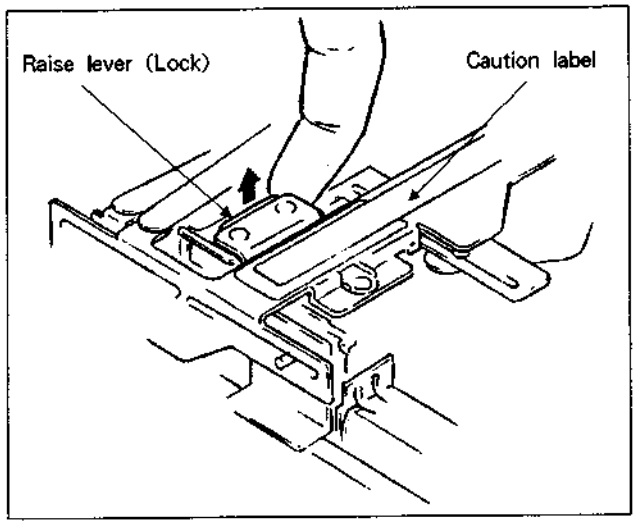
2-3. Cassette Compartment Service Information

1) Releasing the cassette compartment lever

Be sure to release the lever (lock) before turning (by hand) the cassette control motor's worm gear to move the cassette holder when the cassette compartment is to be replaced, etc.

Raise the lever (lock) as shown below to release the lock.



2) Extracting a cassette tape when EJECT and cassette UP are inoperational.

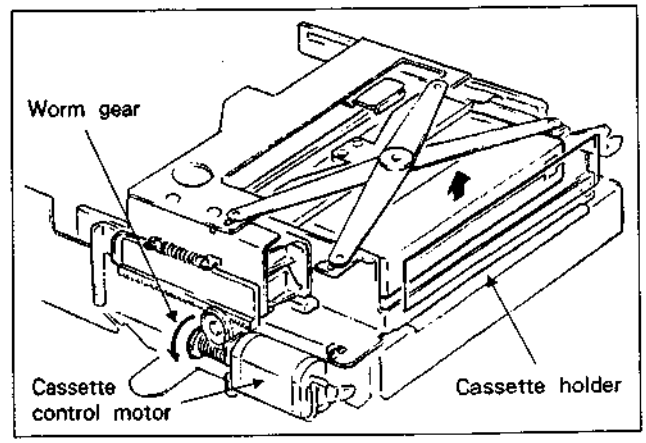
If the EJECT operation does not work or if the cassette compartment does not go up, extract the cassette tape by following the procedure below.

Procedure

(1) Turn off the POWER switch.
(2) Remove the top panel.(Refer to 2-1.)
(3) Check whether the tape is out of the cassette or contained in the cassette.

If the tape is contained in the cassette, do the following :

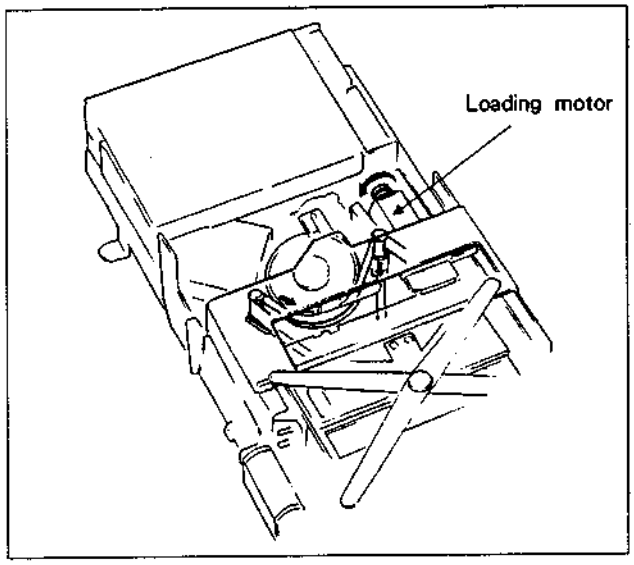
(4) Turn the cassette control motor's worm gear as shown by the arrow to raise the cassette holder.



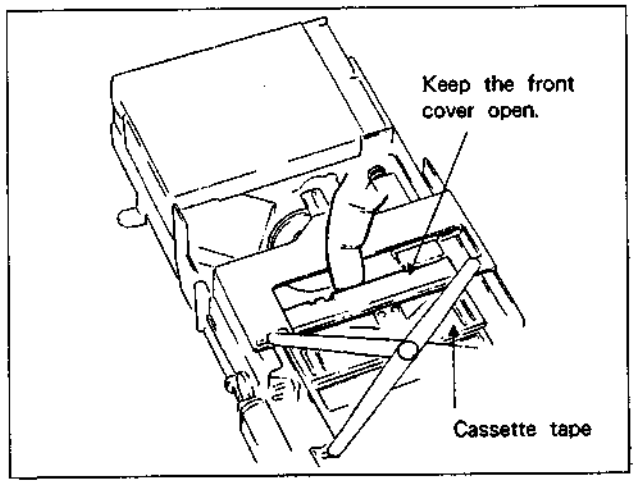
(5) Eject the cassette when the cassette door on the front panel opens upward in link with the raising of the cassette holder (cassette tape).
(6) Turn the worm gear until the cassette is positioned to be taken out.
(7) Check for any problems after taking out the cassette. Execute proper countermeasures if necessary.

If the tape is out of the cassette, do the following:

(4) Turn (by hand) the loading motor pulley on the mechanical deck, as shown by the arrow (ccw). Unload the eject guide to return it. The tape will then be in the loading position.



(5) Remove the cassette compartment.(Refer to 2-1.) Slowly take out the cassette compartment while keeping the front cover open with your fingers.

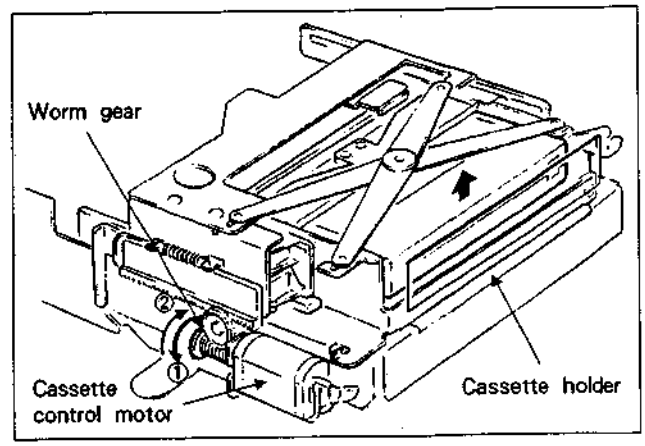


(6) Carefully take out the tape remaining in the unit (mechanical deck) without scratching it.

(7) While keeping the cassette's front cover open, turn the reel hub in the cassette to wind the tape around the reel.

(8) Turn the cassette control motor's worm gear to raise the cassette holder, as shown by the arrow ①. Then take out the cassette. Check for any problems after taking out the cassette. Execute proper countermeasures if necessary. After executing countermeasures, install the cassette compartment on the mechanical deck. To install, turn the worm gear in reverse to lower the cassette holder, as shown by the arrow②. Turn the worm gear until the cassette holder goes all the way down. Then attach the cassette compartment to the MD with the four screws (+ B2 × 3).

Turn on the POWER switch to return the cassette compartment to its proper position.



3) Operation Without the Cassette Compartment (Using the cassette weight and cassette compartment dummy connector)

To operate the unit while the cassette compartment is removed, use the cassette compartment dummy connector * to stop the function of the cassette compartment motor control. Also use the cassette weight (J-6224-140-A) to insert a cassette (test tape, etc.) and to operate the unit.

* About the cassette compartment dummy connector

The cassette compartment dummy connector is used to short pins 1, 2, and 3 of the CN106 connctor on the DR-139 board.

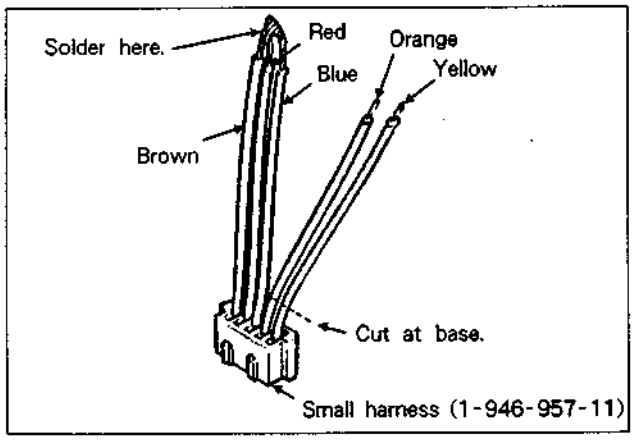
You can make it simply in the following way using a small harness (CCP).

Required item :

Small harness (CCP), part number 1-946-957-11

(1) Cut the orange and yellow lead wires of the harness (CCP) at the base as shown in the figure.

(2) Short (solder) the three remaining lead wires (red, brown, and blue) as shown in the figure.

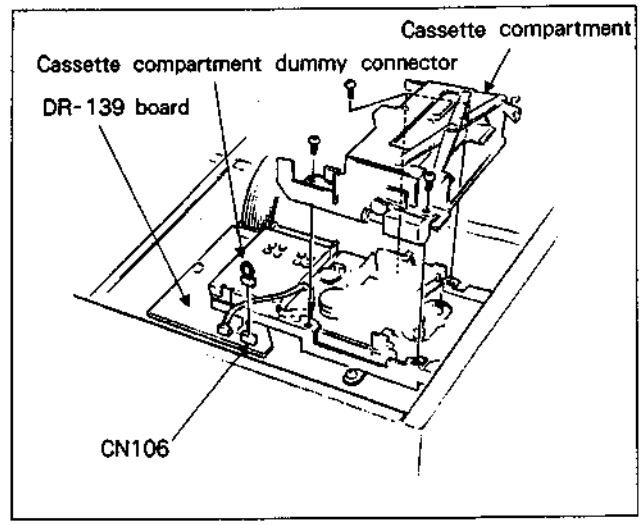


Using the Cassette compartment dummy connector and cassette weight

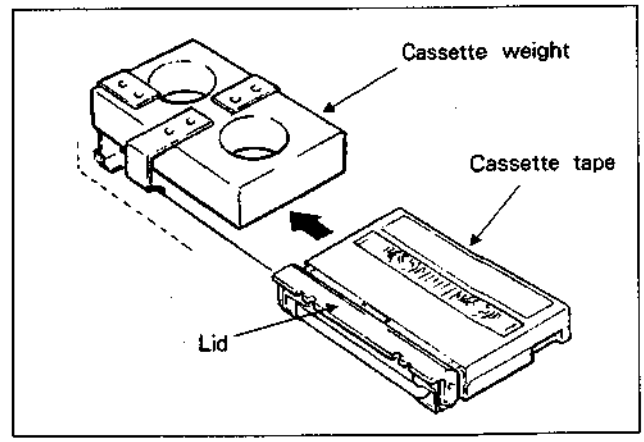
(1) Remove the top panel.

(2) Remove the cassette compartment. (Refer to the removal procedure in 2-1.)

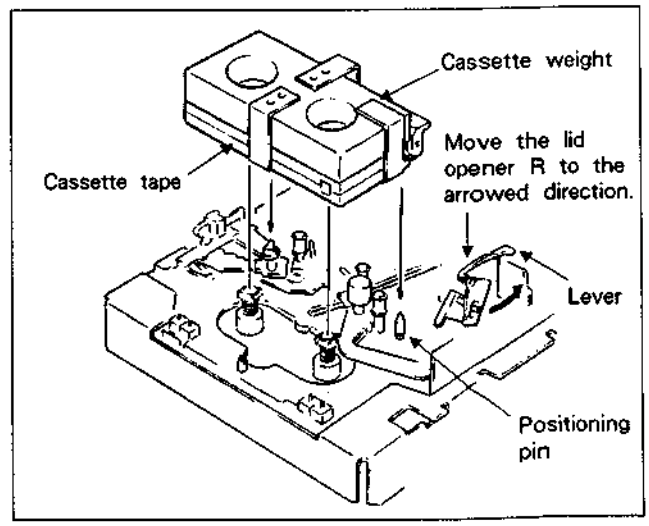
(3) Insert the cassette compartment dummy connector into the CN106 connector on the mechanical deck's DR-139 board.



(4) Attach the cassette tape (test tape, etc.) to the cassette weight.



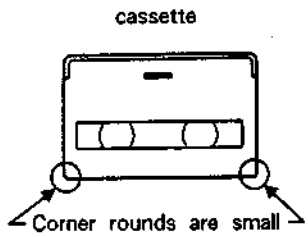
(5) Align the cassette weight attached the cassette tape over the cassette positioning pin and mount it on the mechanical deck.



2-4. Precautions for the main parts replacement procedure

2-4-1. Installation position of the front panel and cassette compartment

Some DAT cassettes have a different external shape with a small corner round as shown below.



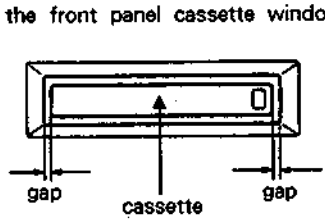
Using this type of cassette causes the round part of the corner of cassette tape being caught in the front panel window if the gaps between the cassette and the insertion window of the front panel are insufficient as shown below, and the error massage "ERROR 2-21"may be displayed on the display of the front panel.

①DATM assembly (DATM-06R)
②Cassette compartment assembly
③Front panel assembly

Ensure to have spaces between the cassette and front panel window when reinstalling the above parts after exchanging them for repairment.

Adjust the installing position within the range of the holes in order to install the front panel assembly and DATM assembly. Install the whole DATM by clockwise to make gaps easier.

After installation, carry out an eject operation several times by using an optional cassette tape and confirm that the both sides of the cassette tape do not touch the front panel window.



2-5. Chip Part Replacement Procedure

Tools : Soldering iron of 20W (Use a temperature controller, if possible, which can set control the iron temperature to 270 ± 10℃)
Solder (0.6 mm dia.)
Desoldering metal braid (Solder wick or equivalent)
Tweezers

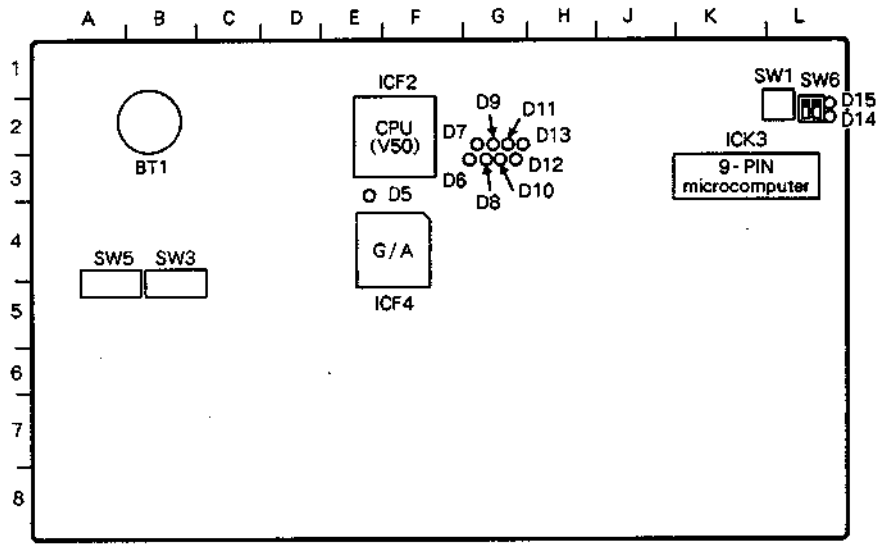
Soldering Conditions : Tip temperature ; 270 ± 10℃
Within the 2 seconds.

1. To remove a resistor or capacitor, place the tip of a soldering iron on chip parts to heat the parts, and then move it horizontally for removal while being desoldered.
   For removal of a diode or transistor, heat the one side, with two pins, of chip parts at the same time, set the parts up when desoldered, and remove the two pins.
   And then, remove the pin on anothe side.
2. Absorb solder by using a desoldering metal braid to smooth the land surface of board after removal.
3. Confirm by visual check that no pattern of the removed chip parts is peeled off and no adjacent parts is damaged or bridged.
4. Perform a thin pretinning on the pattern.
5. Place new chip parts on the pattern to solder its both sides.

Note :
- The chip part removed should not be used again.
- When mounting the new chip part, should not shift so that it not short.
- Use the soldering iron verticaly as much as possible.
- When mounting the new chip part, heat it from pattern side. Never contact the tip of the soldering iron to the part.

2-6. SERVICE INFORMATION CONCERNING THE SY-155A BOARD (SYSTEM CONTROL)

2-6-1. LED for confirming the operations of the SY-155A board



SY-155A Board
(component side)

There are 11 LED, D5-D15, to confirm the operations of the SY-155A board.
The following explains the workings of each LED.

D5 (RED) : HARD INITIALIZE completion TALLY (SYS-INIT)
- Lights when the power source voltage monitoring circuit (ICK2) is reset.
- Extionguished when initialization (SYS-INIT ROUTINE) is completed.

D6 (RED) : BACKUP MEMORY INITIALIZE TALLY
- Lights when the backup memory is initialized at the DEFAULT value.

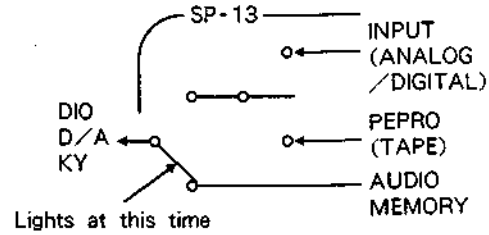
D7 (GREEN) : SYS nomal TALLY
- Blinks when the system component (SYSCON) operates normally . (200ms interval)

D8 (YELLOW) : SP-13 MUTE TALLY
Lights when the system activates muting on the SP-13 board

MUTE —— • PB AUDIO MUTE
—— • SP-13 OUTPUT MUTE

(Lights in each case.)

D9 (YELLOW) : AUDIO MEMORY DATA OUT TALLY
- AUDIO MEMORY (MEM-40 board) Lights when data is output from the SP-13 board
- Lights when the monitor is set to REPRO in the SYNC REC (RMW) mode.



D10 (YELLOW): RMW TALLY

Lights when the operating mode of the CXD1008/1009 (SP-13 board) is RMW (Read Modify Write).

① When the recording system mode is SYNC REC.

② When SOFT tape (wide track pitch) is loaded.

③ When the leading head is selected on the ERROR RATE HEAD menu (SERVICE MENU)

④ When trailing head is selected on the TEST signal recording menu (SERVICE MENU)

08/09 MODE / Conditions	Leading head mode	Trailing head mode
The above ② or ③ or ④	AUDIO SUB (PB)	AUDIO SUB REC
SYNC REC SAFE	AUDIO SUB (PB)	AUDIO SUB REC
SYNC REC ASSEMBLE	AUDIO SUB (PB)	AUDIO SUB REC
SYNC REC AUDIO INSERT	AUDIO SUB (PB)	AUDIO REC SUB PB
SYNC REC SUB INSERT	AUDIO SUB PB	AUDIO (PB) SUB REC
MONITOR REC SAFE	AUDIO SUB REC	AUDIO (PB) SUB
MONITOR REC ASSEMBLE	AUDIO SUB REC	AUDIO (PB) SUB
MONITOR REC AUDIO INSERT	AUDIO REC SUB PB	AUDIO (PB) SUB
MONITOR REC SUB INSERT	AUDIO SUB PB	AUDIO (PB) SUB REC

◯ mark : Sound comes out from here

D11 (GREEN) : 9-PIN microcomputer normal TALLY

- Lights when communication between the 9-PIN microcomputer (ICK3) and the system (ICF2) has been confirmed.

D12 (RED) : 9-PIN data signal reception TALLY (9-PIN microcomputer → SYSCON)

- Lights when receiving data from a 9-PIN microcomputer.

D13 (RED) : 9-PIN data signal transmission TALLY (9-PIN microcomputer ← SYSCON)

- Lights when data is transmitted to a 9-PIN microcomputer.

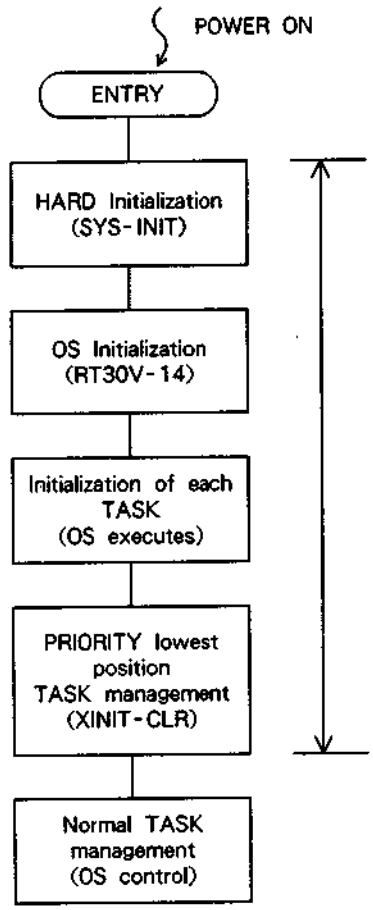
D14 (RED) : 9-PIN data signal reception TALLY (SCU → 9-PIN microcomputer)

- Lights when receiving data from a SCU (μPD71051) ICK4.

D15 (GREEN) : 9-PIN data siganl transmission TALLY (SCU ← 9PIN microcomputer)

- Lights when data is transmitted to a SCU.

LED display management after power is on



: LED D5~13 Lighted

: LED D5 Extinguished

Initialization management

: LED D6~13 Display starts

: Fluorescent display front panel TALLY display starts

2-6-2. Replacing the SY-155A board

The following two items are necessary when replacing the SY-155A board

(1) Initialization of the SETUP item to back up

(2) Writing to the SERVO system DPG and AGC DATA backup memory

Make sure that the following time information (① ~⑤) is reset by doing step (1).

①HOUR TIME (DRUM ON TIME) :
display menu, service munu

②OPERATION TIME : service munu

③TAPE RUNNIING TIME : service munu

④TOTAL HOUR TIME : service munu

⑤THREAD/UNTHREAD COUNTER :
service munu

Consequently, before replacing the SY-155A board make a note of this information. After replacing, it is important to figure out the sum of the information taken note of and the newly displayed time to set the correct time.

SY-155A board replacing procedure

Step 1 Make a note of the hour meter data

(1) Turn on the power (POWER) to the unit.

(2) Open the service menu by simultaneously pressing the STOP, DISPLAY and SET keys on the front panel.

(3) While pressing the DATA key, turn the search dial to the right to set the work area of the display of the front panel to the following.
Display (work area) : oPEn

(4) Press the SET key.

(5) While pressing the MENU key, turn the search dial to the right, display the hour meter data (① ~⑤) and make a note of them.

(6) Turn the power (POWER) OFF.

Step 2 Removing the SY-155A board

Carry out the following procedure while referring to the instructions for "2-1. Removal of boards and major mechanical parts".

Note : Carry out removal with the power (POWER) turned off.

(1) Remove the top and bottom panels from the unit.

(2) Open the ADA-18 board and the SP-13 board

(3) Remove the DIO-10 board, MEM-40A board and the optional MEM-40C board (if the DABK-7055 is installed).

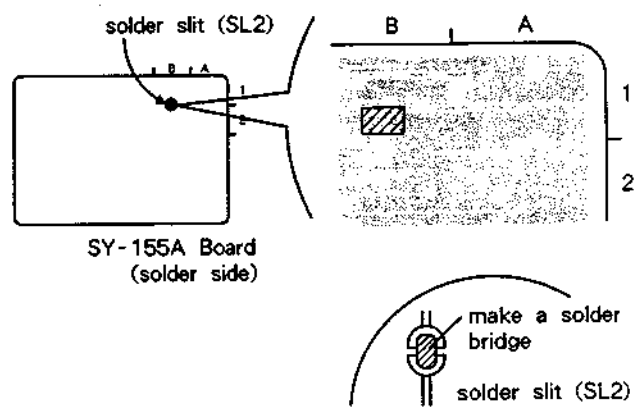
(4) Remove the harness from each connector of the SY-155A board.

(5) Remove the SY-155A board from the bottom panel.

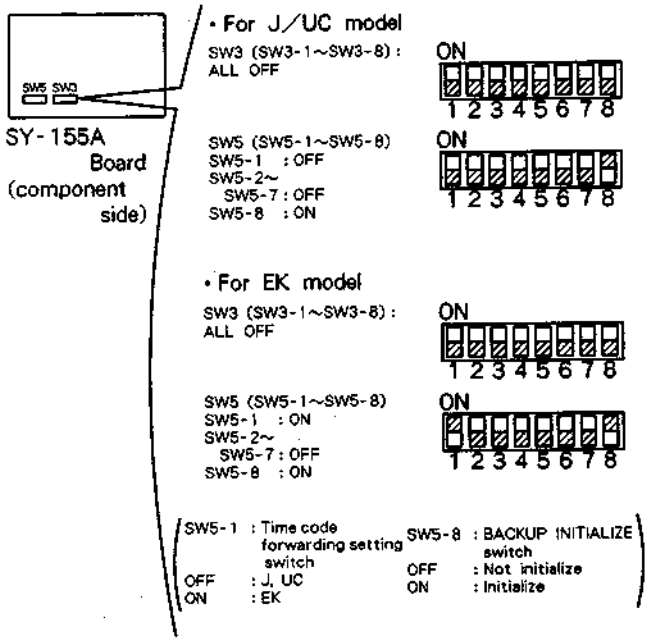
Step 3 Installation of the new SY-155A board

(1) Carry out the following procedures before installing the SY-155A board in the unit.

① Solder (solder bridge) the battery backup solder slit (SL2) (see diagram below) on the solder side of the SY-155A board.



② Set the bit switches (SW5, SE,3) on the component side of the SY-155A board in the following way.



(3) Install the SY-155A board in the unit.

(4) Attach the bottom panel to the unit.

Step 4 Initialization of set up data and time information data

(1) Turn the main unit power switch (POWER) to ON.

(2) Confirm that LED D6, that confirms the operation of the SY-155A board, is lighted.
(Execute the initialization of the back up memory TALLY)

(3) Confirm that the FL display of the front panel display is as below.
(That is ; SERVO DPG, AGC DATA CLEAR)
FL display : Error 2-05

(4) Turn main unit power switch to OFF.

(5) Set switch number 8 of the SY-155A board's bit switch (SW5) to OFF.
Note : Make sure that this switch (SW5-8) is off. If it is left on, the back up memory will be initialized each time the power switch is turned on.

(6) Confirm that the SY-155A board's LED D6 (red) goes out when the power switch is turned on. (At this point the Error 2-05 indicator is displayed on the FL display because the SERVO is not yet adjusted.)
Further, confirm that the time code indicator (upper left) and time code mode indicator (time area, upper right) are set in the tape time area of the FL display in the following way.

FL display / Destination	Tape time area	
	Set time code display	Time code mode display
J, UC	SMPTE	DF
EK	EBU	—

If the display is different, confirm the setting of switch 1 (time code setting switch that depends on the destination) of the SY-155A board's bit switch (SW5) and redo the step 4 procedure form (1).
(It must be redone. The TC format's default value is set by the number 1 switch during backup memory initialaization.)

Step 5 Writing the servo system's DPG and AGC data into memory

(1) Perform adjustment of DPG and AGC by opening up the test menu in the service menu.
Concerning adjustment. Perform it while referring to 4-21 page, 4-5-1. SWP position adjustment and 4-22 page, 4-5-2. ATG playback AGC adjustment

(2) Confirm that Error 2-05 is not displayed in the FL display. Further, insert a cassette that has finished being recorded (music) and replay it to confirm that the sound is reproduced.

(3) Turn the power switch (POWER) to OFF.

(4) Turn the power switch (POWER) to ON.

(5) Confirm that the following indicators are not displayed on the FL display.
Display indicator (work area) : Error 1-05
If the indicator is displayed confirm the battery backup's solder slit.

(6) Turn the power switch (POWER) to OFF.
(7) Install the optional board.
(8) Close the SP-13 board and ADA-18 board and fasten with screws.
(9) Put on the top panel.

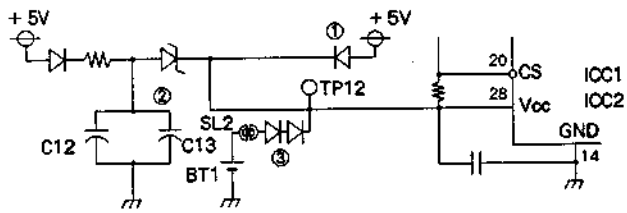
2-6-3. Replacing the lithium battery (CR-2450)

Replace the SY-155A board's lithium battery (CR-2450) for battery backup according to the following procedure.

Name of parts

Lithium battery (CR-2450) : 1 (part number : 1-528-229-11)

Explanation of operation



In the above circuits, Vcc + 5V and CS pull-up resistor + 5V are supplied to ICC1 and ICC2 by three power circuits as follows :

① Power source of the unit
② + 5V from C12 and C13 charged by the power source of the unit.
③ + 3V from BT1

- During operation of the unit the above voltages are supplied by ①, and ② recharges.
- When the unit is off the above voltages are supplied by ②.
- When ② is completely discharged, the above voltages are supplied by ③.

In this way the ICC1's and ICC2's SRAM data is backed up.

Replacing procedure

(1) Turn the power switch (POWER) of the PCM-7030 to ON and wait for more than 10 minutes.
(2) Turn the power switch (POWER) to OFF.
(3) Remove the SY-155A board from the unit.
(4) Remove the solder from the solder slit (SL2) on the solder side of the SY-155A board.
(5) Remove the lithium battery (BT1) from the SY-155A board.
(6) Solder (solder bridge) a new lithium battery (CR-2450).
(7) Solder (solder bridge) the solder slit (SL2).
(8) Install the SY-155A board in the unit.
(9) Turn the power switch (POWER) to ON.
(10) Confirm that the ARAM (ALARM) indicator on the front panel is extinguished.

Precautions :

- Perform the change carefully because the contents of the SRAM will be destroyed if the pins of TP12, ICC1 and ICC2 are shorted.
- In procedure (8) above if ARAM (ALARM) is lighted (Error 1-05 or Error 2-05 are displayed in the FL display), their ALARM management is carried out. (Refer to the item on setting the servo data)
- Replace them after confirming that the voltage of the new batteries is 2.6V or more.

2-7. SELF-DIAGNOSIS (ERROR CODE)

2-7-1. Error codes

This section shows the error codes and the malfunctioning parts that can be assumed from the error codes displayed (refer to the OPERATION MANUAL's pages 7-6, 7-2-2. for the section on error codes) by the self-diagnosis function of the SYS CPU (SY-155A board's ICF2, μPD70216 [V50]). With these it is possible to know what caused the error.

Error code1-** (Error 1-**)
Errors that occur related to the SY-155 board (system control)

Error code	Error content	Error level	Assumed malfunctioning parts
1-01	Error in ADDRESS BUS	5	• μPD70216L (CPU) (ICF2) • CXD8139AQ (ICF4) • ADDRESS (A0~A19) pattern
1-02	Error in DATA BUS	5	• μPD70216L (CPU) (ICF2) • CXD8139AQ (ICF4) • DATA (D0~D15) pattern
1-03	Error in ROM	5	• AM27C010 (ROM) (ICC3, ICC4) • ADDRESS, DATA or CONTROL pattern in ROM
1-04	Error in RAM	5	• μPD43256AGU (RAM) (ICC1, ICC2) • ADDRESS, DATA or CONTROL pattern in RAM
1-05*	BACKUP MEMORY DATA has been destroyed	5	• Battery backup circuit • RAM • TL7705CPS (RESET IC) (ICK2) • SN74LS03NS (ICD3)
1-10	Invalid interrupt occurred	5	• μPD71059GB (ICU) (ICG1, ICH1) • ADDRESS, DATA or CONTROL pattern in ICU

* Refer to the 2-7-2. Remedy for error code "Error 2-05" on page 2-31.

Error code2-** (Error 2-**)

Errors that occur related to the SV-123 board (servo)

Error code	Error content	Error level	Assumed malfunctioning parts
2-02	Error in DATA BUS	5	• CXD8139AQ (ICF4), SY-155 board (SV I/F circuit) • CXP80524 (CPU) (IC101), SV-123 board • 8P harness, SV-123 board
2-04	Error in RAM	5	SV-123 board • CXP80524 (CPU) (IC101)
2-05*	BACKUP MEMORY for servo has been destroyed	5	Same as error code 1-05 (System backs up servo-system's DPG and AGC data)
2-10	Interrupt error during communications	5	SV-123 board • CXP80524 (CPU) (IC101) • SV INT signal pattern • 8P harness
2-20	Position error inside cassette insertion part	5	• Cassette compartment (mechanical trouble) • Cassette compartment sensors (CC UP, CC DOWN signals) and harness
2-21	Malfunction inside cassette insertion part	5	• Cassette tape is stuck in the cassette compartment • Cassette compartment sensors (CC UP, CC DOWN signals) and harness • Cassette compartment motor and casstte compartment motor drive circuit (DR-139 board)
2-22	Position error on tape guide	5	• Mechanical deck (tape guide, pinch rollor, etc.) • MD sensor (RE STOP, RE FWD, LIM SW signals) and harness
2-23	Malfunction of cassette loading motor	5	• Mechanical deck • MD sensor (RE STOP, RE FWD, LIM SW signals) and harness • Loading motor and loading motor drive circuit (DR-139 board)
2-24	Malfunction of pinch roller	5	
2-30	Malfunction of head drum motor	5	• Head drum • Drum motor and drum motor drive circuit (DR-139 board) • DFG sensor (drum FG) and harness

* Refer to the 2-7-2. Remedy for error code "Error 2-05" on page 2-31.

Error code	Error content	Error level	Assumed malfunctioning parts
2-31	Head drum motor doesn't revoluve (Drum stopped)	5	· Head drum · DFG sensor and harness · Drum motor and drum motor drive circuit (DR-139 board)
2-32	Abnormal head drum rotation speed (Drum revolves at high speed)	5	· Drum motor drive circuit (DR-139 board) · DFG sensor and harness
2-33	Head drum motor doesn't stop	5	· Drum motor drive circuit (DR-139 board) · DFG sensor and harness
2-40	Capstan motor doesn't rotate	5	· Tape is wrapped around the pinch roller (or tape guide) · Capstan motor and capstan motor drive circuit (DR-139 board) · CFG sensor (capstan FG) and harness
2-41	Capstan motor won't stop	5	· Capstan motor drive circuit (DR-139 board) · CFG sensor and harness
2-50	Take-up reel motor won't revolve	5	· Reel motor · Tape end sensor · Cassette tape load is abnormal · TFG sensor (Take-up FG) and harness
2-51	Supply reel motor won't revolve	5	· Reel motor · Tape end sensor · Cassette tape load is abnormal · SFG sensor (supply FG) and harness
2-52	Take-up reel motor won't stop	5	· Take-up reel drive circuit (DR-139 board) · TFG sensor and harness
2-53	Supply reel motor won't stop	5	· Supply reel drive circuit (DR-139 board) · SFG sensor and harness
2-60	Abnormal tape travel motion	5	· Supply torque (torque value adjustment) · Tape guide and head drum, etc.
2-70	Condensation on head drum	5	· Condensation sensor

Error code3-＊＊ (Error 3-＊＊)

Errors that occur related to the SP-13 board (signal management)

Error code	Error content	Error level	Assumed malfunctioning parts
3-02	Error in DATA BUS	5	・CN10, 20P flexible wire ・CXD8184AQ (ICD3) (SYS I/F circuit)
3-10	Error in clock system (forward head)	5	・CN9, 20P flexible wire ・CXD1009Q (ICD9)
3-11	Error in clock system (reverse head)	5	・CN9, 20P flexible wire ・CXD1009Q (ICJ9)
3-12	Error in clock system ("DAT FRAME")	5	・CN9, 20P flexible wire ・CXD8185AQ (ICC3) ・CXD1008Q (ICC9)

Error code4-＊＊ (Error 4-＊＊)

Errors that occur related to the DIO-10 board (digital I/O)

Error code	Error content	Error level	Assumed malfunctioning parts
4-02	Error in DATA BUS	4	・CN15 (SY-155 board), CN3 (DIO-10 board) 48P D-SUB connector ・CXD8134Q (IC12) (SYS I/F CIRCUIT)

Error code5-＊＊ (Error 5-＊＊)

Errors that occur related to the TC-58 board (time code reader/generator)

(When the DABK-7030 option is installed)

Error code	Error content	Error level	Assumed malfunctioning parts
5-02	Error in DATA BUS	4	・CN11 (SY-155 board), CN2 (TC-58 board) 30P fiexible wire ・CXD8140Q (ICG4) (SYS I/F circuit)

Error code6-** (Error 6-**)
Errors that occur related to the MEM-40A board (memory-start)

Error code	Error content	Error level	Assumed malfunctioning parts
6-01	Error in ADDRESS BUS	4	• CN13 (SY-155 board), CN1 (MEM-40A board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit)
6-02	Error in DATA BUS	4	• CN13 (SY-155 board), CN1 (MEM-40A board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit)
6-04	Error in RAM	4	• CN13 (SY-155 board), CN1 (MEM-40A board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit) • TMS44C256-00 (IC2~IC9)

Error code7-** (Error 7-**)
Errors that occur related to the MEM-40C board (edit memory)
(When the DABK-7055 option is installed)

Error code	Error content	Error level	Assumed malfunctioning parts
7-01	Error in ADDRESS BUS	4	• CN14 (SY-155 board), CN1 (MEM-40C board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit)
7-02	Error in DATA BUS	4	• CN14 (SY-155 board), CN1 (MEM-40C board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit)
7-04	Error in RAM	4	• CN14 (SY-155 board), CN1 (MEM-40C board) 48P D-SUB connector • CXD8163AQ (IC1) (SYS I/F circuit) • TMS44C256-00 (IC2~IC9)

Error code8-** (Error 8-**)
Errors that occur related to the IF-283 board (RS-232C Interface)
(When the DABK-7033 option is installed)

Error code	Error content	Error level	Assumed malfunctioning parts
8-02	Error in DATA BUS	4	• CN12 (SY-155 board) CN1 (RM-77 board) CN2 (RM-77 board) CN1 (IF-283 board) 30P flexible wire • IC1, 2, 3, 5 (RM-77 board) (SYS I/F circuit) • IC1 (IF-283 board) (SYS I/F circuit)

2-7-2. Remedy for error code "Error 2-05"

The SWP position DPG data and ATF playback AGC data are stored in the backup RAM of the SY-155A board. When the backup RAM is initialized if the SY-155A board's lithium battery is exhausted or the ROM chip has been improperly mounted, "Error 1-05" (backup memory destroyed) as well as "Error 2-05" occurs. In this case, write both servo-data into the backup RAM in the following way.

Procedure

Step 1. Opening the test menu in the service menu

(1) Press the SET key while holding down the STOP key and the DISPLAY key. The service menu opens.

"[dSPLY] cLoSE"

(2) While pressing the MENU key, turn the search dial and set the following display.

"[tESt] cLoSE"

Next, while pressing the DATA key, turn the search dial and set the display to "oPEn", and press the SET key. The test menu in the service menu opens.

"[tESt] oPEn"

(3) While pressing the MENU key, turn the search dial and set the following display.

"[trnSP] cLoSE"

Next, while pressing the DATA key, turn the search dial and set the display to "oPEn", and press the SET key. The servo menu in the test menu opens.

"[trnSP] oPEn"

Step 2. Writing the DPG data into RAM

(1) While pressing the MENU key, turn the search dial and set the following display.

"dPG Adj 00 oFF"
(00 ↑ DPG data)

(2) Insert the test tape TY-7111D, and press the PLAY key to put it in the playback mode.

(3) While pressing the DATA key, turn the search dial and set the display to "on", and press the SET key.

(4) If the DPG data is other than 00, while pressing the DATA key, turn the search dial and set the display to "oFF", and press the SET key.
The DPG data is read into the backup RAM.
DPG data's guideline : 5 * to 6 *

Step 3. Writing the AGC data into RAM

(1) While pressing the MENU key, turn the search dial and set the following display.

"AGc Adj 00 00 oFF"
(00 ↑ AGC data)

(2) Insert the test tape TY-7111D, and press the PLAY key to put it in the playback mode.

(3) While pressing the DATA key, turn the search dial and set the display to "on", and press the SET key.
The display will change from being lit steadily to flashing, and begin automatic adjustment.

(4) If the display changes from flashing to being lit steadily, while pressing the DATA key, turn the search dial and set the display to "oFF", and press the SET key.
The AGC data is read into the backup RAM.
If an "Error" display appears, perform steps (3) and (4) above.
AGC data guideline : 1 * to 2 *

Step 4. Confirmation

(1) After turning the power off, turn it on again. Confirm that "ERROR 1-05" or "ERROR 2-05" are not displayed.

(2) Playback a pre-recorded (music sound) tape. Confirm that the SERVO indicator of the front panel is lit, and that the sound is coming out.

(3) Record the audio signals in the assemble mode. After recording, playback the tape.
Confirm that the SERVO indicator of the front panel is lit, and that the sound is coming out.

Note : If "ERROR 1-05" incessantly occurs, the lithium battery may be exhausted. In this case, it is necessary to replace it.

2-8. SERVICE MENU

The SERVICE MENU consists of the following two submenus.

DISPLAY MENU : Displays data such as the hour meter and FS counter.

TEST MENU : Execute self-diagnosis and each adjustment mode.

You can enter/exit (OPEN/CLOSE) the SERVICE MENU using the STOP, DISPLAY, SET, and RESET keys on the front panel as follows.

To enter the SERVICE MENU

Press the STOP, DISPLAY, and SET keys simultaneously (press all three keys at the same time). When you enter the SERVICE MENU, the first item of the SERVICE MENU will appear on the FL tube display.

FL tube display message : [dSPLY] cLoSE

To exit the SERVICE MENU

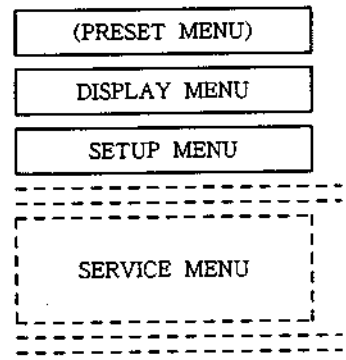
Press the STOP, DISPLAY, and RESET keys simultaneously (press all three keys at the same time).

Notes :

- The OPEN/CLOSE status of the SERVICE MENU and the SERVICE MENU settings will not be stored in the backup memory.
  In other words, all settings are canceled when you turn OFF the power.

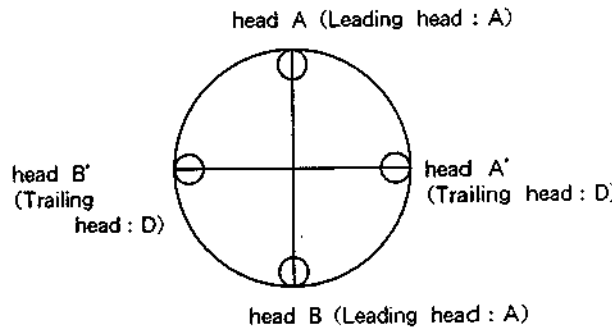
- When you turn ON the power, the SERVICE MENU status will be CLOSE.
  You can set and modify each item in the SERVICE MENU (DISPLAY MENU and TEST MENU) using the MENU, SET, RESET, and DATA keys and the SEARCH dial on the front panel. The setting data will be displayed in the Tape Time Area and Work Area of the FL tube display.

The SERVICE MENU follows the SETUP MENU in the menu hierarchy.



Head nomenclature

The four heads on the drum of this unit, as in the diagram below, include two Leading system heads (heads A and B) and two Trailing system (heads A' and B').



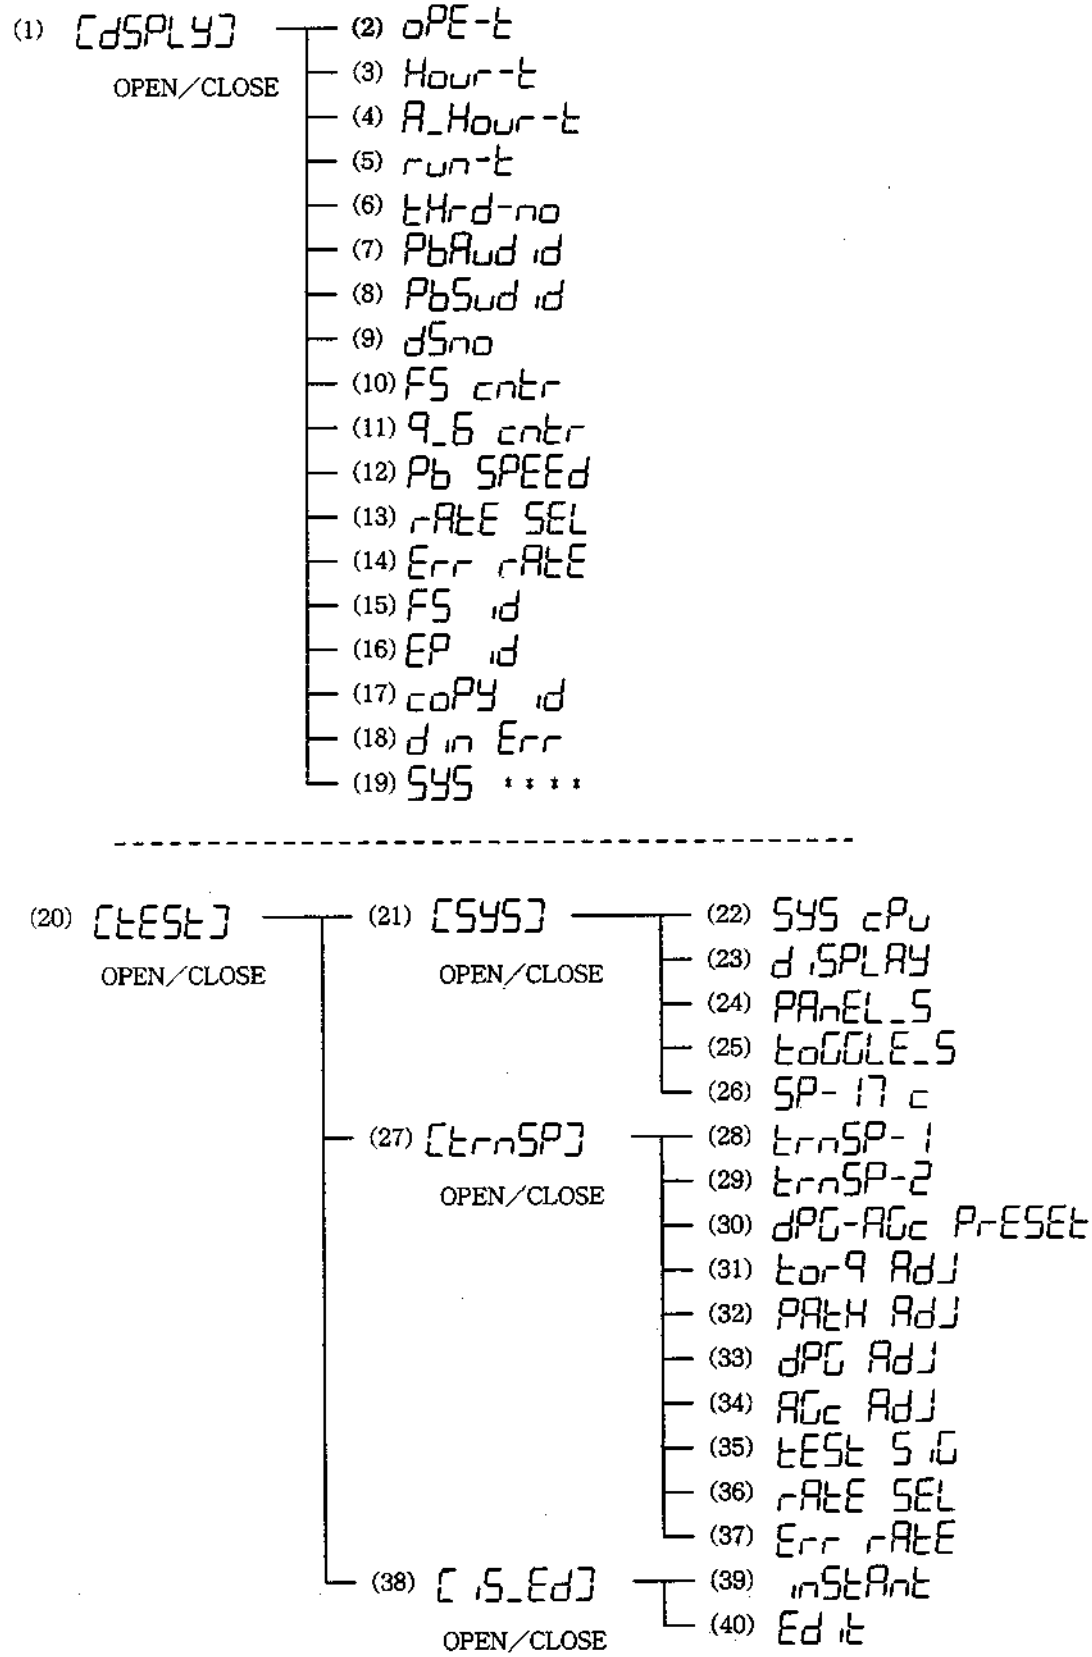
The nomenclature for these is as below :

	nomenclature
+ (plus) azimuth head	: A and A'
− (minus) azimuth head	: B and B'

Leading head : (A-A, A-B) or (A, B)

Trailing head : (D-A, D-B) or (A', B')

2-8-1. SERVICE MENU Structure



2-8-2. SERVICE MENU items

(1) [dSPLY] (Display)

Selects/cancels (OPEN/CLOSE) DISPLAY MENU items ((2) to (19)) in the SERVICE MENU.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to specify OPEN /CLOSE.

1) Enter (OPEN) the SERVICE MENU.
   FL tube display message : [dSPLY] cLoSE

To select (OPEN) a DISPLAY MENU item

2) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : [dSPLY] oPEn
   (flashing → ON)
3) After you enter (OPEN) the DISPLAY MENU, hold down the MENU key and turn the SEARCH dial to select the required DISPLAY MENU item ((2) to (18)). (Turn the dial until the required item appears on the FL tube display.)

To cancel (close) a DISPLAY MENU item

2) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : [dSPLY] cLoSE
   (flashing → ON)

The DISPLAY MENU items ((2) to (18)) are listed below. After you enter (OPEN) the DISPLAY MENU, hold down the MENU key and turn the SEARCH dial to select the required DISPLAY MENU item ((2) to (18)). (Turn the dial until the required item appears on the FL tube display.)

Uses of the DISPLAY MENU items

HOUR METER : "oPE-t," "Hour-t," "run-t," and "thrd-no"
- Indicates the time to perform head cleaning and time to replace the drum, mechanism deck, and cassette compartment.

PB MAIN ID : "Pb Aud id"
- Main ID data during CAUTION 1-01 (main ID invalid).
- Copy ID data.

PB SUB ID : "Pb Sub id"
- Sub-ID data during CAUTION 1-02 (sub-ID invalid).

FS COUNTER : "Fs cntr"
- Checks the EXT SYNC (the input Fs can be counted backward using the display data).

9.6K COUNTER : "9.6 cntr"
- Checks the VARI control clock to be input from REMOTE 37P (the input signal frequency is counted backward using the display data).

ERROR RATE : "Err rAtE"
- Error rate when the PB CONDITION TALLY (when the SET UP PB COND : BAD CONDITION is set) turns ON (lights when the condition deteriorates beyond 8×10^{-2}).
- Measurement after replacing a drum and mechanism deck.
- Measurement after servo-related adjustments (torque, tape path, DPG, AGC).
- Measurement after RF-related adjustments (recording current, RF PLL).

FS ID : "Fs id"
- Fs (Sampling frequency) ID data

EMPHASIS ID : "EP id"
- EMPHASIS ID data

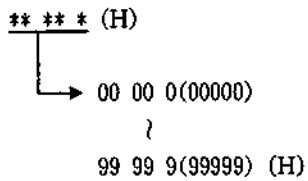
COPY ID : "coPY id"
- COPY ID data

DIN ERROR : "din Err"
- Error cause for flashing "D-I" message on FL tube display
- Pro/consumer data of input digital audio signal

(2) oPE-t (Operation Time) : Current-carrying hour meter.

Displays the current-carrying time of the unit (total time during which the unit's power was ON) in the Work Area of the FL tube display.

FL tube display message (Work Area) :

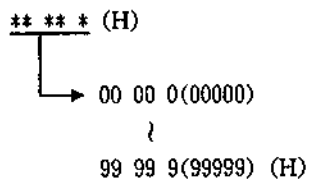


Factory setting :00 00 0(00000)

(3) Hour-t (Hour Time) : Drum rotation hour meter

Displays the hours for which a drum has rotated in the Work Area of the FL tube display. Use this as guideline to replace the drum assembly.

FL tube display message (Work Area) :

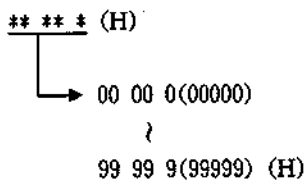


Factory setting :00 00 0(00000)

(4) A-Hour-t (Additional Integrated Hour Meter) : Drum rotation hour meter

Displays the total time for which a drum has rotated in the Work Area of the FL tube display.

FL tube display message (Work Area) :

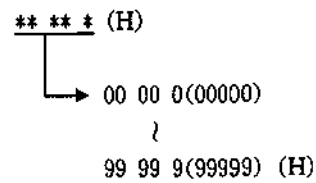


Factory setting :00 00 0(00000)

(5) run-t (Running Time) : Tape running hour meter

Displays the total time for which a tape was running in the Work Area of the FL tube display.

FL tube display message (Work Area) :

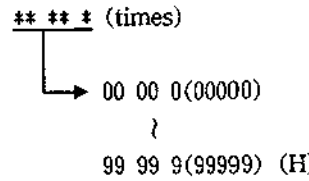


Factory setting :00 00 0(00000)

(6) tHrd-no (Threading Number) : Meter for the threading / unthreading operation of a tape

Displays the total number of threading and unthreading operations of a tape in the Work Area of the FL tube display.

FL tube display message (Work Area) :



Factory setting :00 00 0(00000)

(7) PB Aud id (PB Main ID Data)

Displays the main ID data recorded on the playback tape in the Work Area of the FL tube display.

FL tube display message (Work Area) :

⑧ ⑦ ⑥ ⑤ ④ ③ ② ①
* * * * * * * *

No.	ID Name	Display	Description
①	Format ID	0 1 2 3	AUDIO USE Reserved Reserved Reserved
②	ID1, Emphasis	0 1 2 3	OFF 50/15 μ sec Reserved Reserved
③	ID2, Fs	0 1 2 3	48kHz 44.1kHz 32kHz Reserved
④	ID3, Number of channel	0 1 2 3	2channels 4channels Reserved Reserved
⑤	ID4, Quantization	0 1 2 3	16-bits linear 12-bits non linear Reserved Reserved
⑥	ID5, Track pitch	0 1 2 3	Normal Wide Reserved Reserved
⑦	ID6, Copy	0 1 2 3	Permitted Reserved Prohibited Pre recorded
⑧	ID7, pack contents	—	—

(8) Pb Sub id (PB Sub ID Data)

Displays the sub-ID data recorded on the playback tape in the Work Area of the FL tube display.

FL tube display message (Work Area) :

④ ③②①
\- * * * - * * *

No.	ID Name	Display	Description
①	Data ID	0	When 0, it has the meaning of ② ③ ④ below When not 0, it is invalid.
②	Control ID	4-bit Hex.	③	Pack ID	0 ~ 7	Number of recorded packs.
④	P No.	000 ~ 799 0AA 0BB 0EE	program number invalid lead in area lead out area (END ID)

(9) dSno (Sample Number)

Displays the difference between TAGET TC and PB TC by a word unit on the FL tube display.

FL tube display message (Work Area) :

Sign 0 0 0 ** ** (Word)

When the difference exceeds FFFFH, the data will flash.

(10) FS cntr (Fs Counter)

Displays the counter data of the EXT SYNC signal in the Work Area of the FL tube display.

FL tube display message (Work Area) :

\- - - - * * * * (Hex.)

$$\text{Fs counter (Hex.)} = \frac{\text{Counter clock frequency (Hz)} \times 256}{\text{EXT clock frequency (Hz)}}$$

Counter clock (128Fs) 48kHz : 6.1440MHz
44.1kHz: 5.6448MHz

(11) 9.6 cntr (9.6K Counter)

Displays the counter data of the 9.6K clock signal input from the remote 37P in the Work Area of the FL tube display.

FL tube display message (Work Area) :

$$\underset{②}{****}\ \underset{①}{****}\ \text{(HEX)}$$

①Moving average of the 9.6K counter (average for 8 times)
②9.6K counter value

$$\text{9.6K counter (Hex.)} = \frac{\text{Counter clock frequency (Hz)} \times 256}{\text{9.6K clock frequency (Hz)}}$$

Counter clock (32Fs) 48kHz : 1.536MHz
44.1kHz: 1.4112MHz

(12) Pb SPEEd (PB Speed)

Displays the VARI speed data executed during VARI mode in the Work Area of the FL tube display.

FL tube display message (Work Area) :

Sign ** *%

Example of message : -12 5→-12.5%

(13) rAtE SEL (Error Rate Select)

Selects and sets the head (Leading or Trailing) and channel (A or B) whose playback data will be used during Err rAtE (error rate is displayed).

Specification conditions :

The "tEST SiG" of the STOP mode and test menu must be OFF.

Specification method :

Hold down the DATA key and turn the SEARCH dial to display the required item on the FL tube display. Then, press the SET key. The items to be selected are listed below.

Display	Playback data to be selected
Auto	Complies with the recording system mode (RAW/RMW). • RMW : Average of Leading head A and B channels • RAW : Average of Trailing head A and B channels
d-Ab	Average of Trailing head A and B channels
d-A	Trailing head A channel
d-b	Trailing head B channel
A-Ab	Average of Leading head A and B channels
A-A	Leading head A channel
A-b	Leading head B channel

When you press the SET key, the display data will be selected (flashing → ON).

Note : When you select data besides "Auto." the ALARM indicator on the front panel will flash.

(14) Err rAtE (Error Rate)

Displays the error rate calculated from the playback data of the head and channel selected in the "rAtE SEL" menu, in the Work Area of the FL tube display. (Ignore fractions following two decimal places.)

FL tube display message (Work Area) :

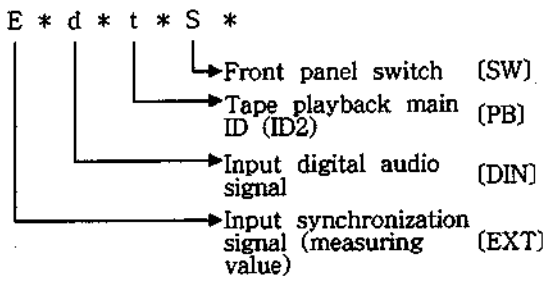
_-* (= *.* × 10^{-*})

Example of message : 1_0-4→1.0 × 10^{-4}

Note : No error rate will be displayed for invalid measurement data. Only a dashed line (- - - - - - -) will appear.

(15) FS id (Fs ID) : Displays each Fs ID in the Work Area of the FL tube display.

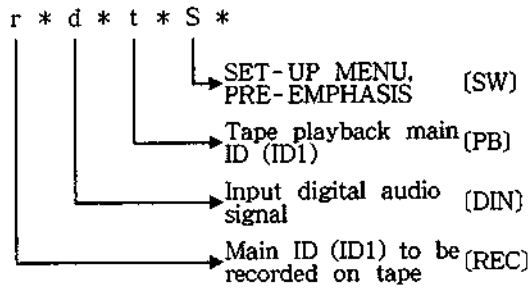
FL tube display message (Work Area) :



* : "8" 48kHz
"4" 44.1kHz
"0" 44.056kHz
"3" 32kHz
"-" Settings other than above.

(16) EP id (EMPHASIS ID) : Displays each EMPHASIS ID in the Work Area of the FL tube display.

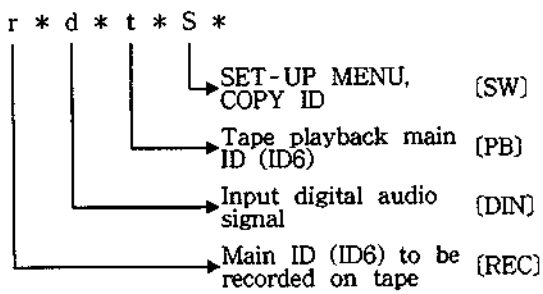
FL tube display message (Work Area) :



* : "0" OFF
"1" 50/15 μ sec ON
"2" CCITT ON
"-" Settings other than above.

(17) coPY id (COPY ID) : Displays each COPY ID in the Work Area of the FL tube display.

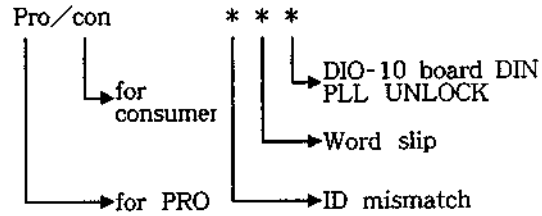
FL tube display message (Work Area) :



* : "0" Allowed
"2" Inhibited
"3" Pre-recorded

(18) din Err (DIN ERROR) : Displays (in the Work Area of the FL tube display) the error cause for the flashing "D-I" message on the FL tube as well as the pro/consumer data of input digital audio signal.

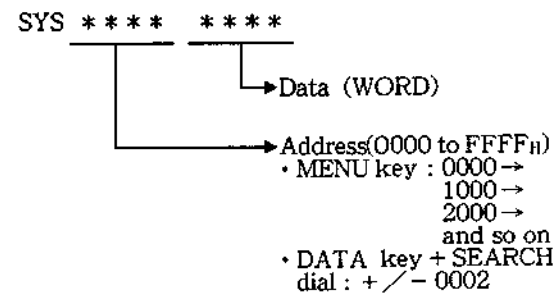
FL tube display message (Work Area) :



* : "0" No occurrence
"1" Occurrence

(19) SYS * * * * (SYSCOM RAM data) : Displays the system component RAM data (64k byte) in the Work Area of the FL tube display.

FL tube display message (Work Area) :



(20) [tEST] (Test)

Selects/cancels (OPEN/CLOSE) the TEST MENU items in the SERVICE MENU.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to specify OPEN /CLOSE.

1) Enter (OPEN) the SERVICE MENU.
FL tube display message : [dSPLY] cLoSE

To select (OPEN) a TEST MENU item

2) Hold down the MENU key and turn the SEARCH dial until the following message appears.
FL tube display message : [tESt] cLoSE

3) Hold down the DATA key turn the SEARCH dial until the following message appears. Then, press the SET key.
FL tube display message : [tESt] oPEn (flashing → ON)

To cancel (close) a TEST MENU item

2) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
FL tube display message : [tESt] cLoSE (flashing → ON)

(21) [SYS] (System control)

Selects/cancels (OPEN/CLOSE) the System control related test items in the TEST MENU. The test items are: (22) SYS cPu, (23) diSPLAY, (24) PAnEL-S, (25) toGGLE-S, and (26) SP-17c.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to specify OPEN /CLOSE.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU.
FL tube display message : [tESt] oPEn

To select (OPEN) a TEST MENU item

3) Hold down the MENU key and turn the SEARCH dial until the following message appears.
FL tube display message : [SYS] cLoSE
4) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
FL tube display message : [SYS] oPEn (flashing → ON)
5) After System control is executed (OPEN), hold down the MENU key and turn the SEARCH dial to select the required test item ((22) to (26)).

To cancel (close) a TEST MENU item

6) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
FL tube display message : [SYS] cLoSE (flashing → ON)

The TEST MENU items ((22) to (26)) are listed below. After you enter (OPEN) the [SYS] MENU, hold down the MENU KEY AND turn the SEARCH dial to select the required TEST MENU item. (Turn the dial until the required item appears on the FL tube display.)

(22) [SYS cPu] (System control CPU)

Tests the address bus, data bus, ROM, and RAM of the System control CPU.

Specification conditions : STOP mode

Specification method :

Start/cancel the test mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [SYS] MENU.
FL tube display message : [SYS] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message is displayed.
FL tube display message : [SYS cPu] tESt (rapid flashing)

Starting the test

5) Press the SET key.
The display message "tESt" will flash at a slower speed than before, indicating the start of the test.
(Approximately 6 seconds)
6) After the test ends, the results appear in the Work Area of the FL tube display.
Results (Work Area of the FL tube display) :

Result	Work Area Display
①No error	no Error
②Error	* * * * * * * * → Address bus → Data bus → ROM → RAM When an error is detected, a "1" is indicated at the corresponding position.

Canceling the test

7) Press the DATA and RESET keys simultaneously.
   The display message "tESt" will flash at a higher speed than before, indicating the suspension of the test.

(23) [diSPLAY] (Display Test)

Tests the FL tube display and indicator lamps.

Specification conditions : STOP mode

Specification method :

Start/cancel the test mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [SYS] MENU.
   FL tube display message : [SYS] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : diSPLAY tESt (rapid flashing)

Starting the test

5) Press the SET key.
6) The FL tube display and the LED indicator lamps of the front panel will light in the following sequence (cycle).
   ① All lamps will turn ON. →② The LED indicator lamps will turn ON one after another. →③ The segments (0 to 31) of the FL tube display will turn ON one after another. →④ The grids (0 to 7) of the FL tube display will turn ON one after another. →①
   During the test mode, the FL tube display and indicator lamps will light in the above cycle ① to ④. (Approximately 40 seconds per cycle)

Canceling the test

7) Press the DATA and RESET keys simultaneously.

(24) [PAnEL-S] (Panel Switch Test)

Tests the connections of each front panel key switch.

Specification conditions : STOP mode

Specification method :

Start/cancel (stop) the test mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [SYS] MENU.
   FL tube display message : [SYS] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : PanEL tESt (rapid flashing)
5) Press the SET key.
6) Test method
   Press all 27 key switches on the front panel one by one. If the bit corresponding to each key switch displayed in the Work Area of the FL tube display is a "1," that key is good. (See the table below.)
   After you press all keys, the test results will be displayed in the Work Area of the FL tube display.
   Results (Work Area on the FL tube display) :

Result	Work Area Display
No error	no Error
Error	-* ** ** ** (HEX) ⑦ ⑥⑤ ④③ ②① When data displayed in HEX is converted to binary, the key switches that correspond to the bits that have become 0 are inoperative. example F FF FF dF (HEX display) ②↓ 1101 (Binary display) ↓ bit5 is 0 ↓ CUE switch is inoperative

Canceling the test

7) Press the DATA and RESET keys simultaneously.

Corresponding table for bits and key switch

(25) [toGGLE-S] (Toggle Switch Test)

Tests the connections of the toggle switch and SEARCH dial on the front panel ; of the TC EXT/INT switch (when it is installed with the optional DABK-7030) and D-I/WORD switch on the rear panel.

Specification conditions : STOP mode

Specification method :

Start/cancel the test mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [SYS] MENU.
   FL tube display message : [SYS] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : toGGLE-S tESt
   (rapid flashing)
5) Press the SET key.
6) Test method
   ①Switch the front panel toggle switch (REMOTE/LOCAL, EXT/INT, ANALOG/DIGITAL, FS 44.1K/FS 48K).
   ②Turn the SEARCH dial in both directions.
   ③Switch the D-I/WORD switch on the connector panel.
   ④Switch the TC INT/EXT switch on the connector panel.
7) The test results will be displayed in the Work Area of the FL tube display as shown in the table below.
   Results (Work Area on the FL tube display) :

Result	Work Area Display
No error	no Error
Error	- - - - * * * * (Hex.) ④ ③ ② ① When data displayed in HEX is converted to binary, the key switches that correspond to the bits that have become 0 are inoperative.

Corresponding table for bits and key switches

13	TC INT (TC OPTION)
14	TC EXT (TC OPTION)

(26) SP-17c (SP-17C Test) : Checks the SP-17C board used for the SYNC REC mode.

Specification conditions :

- STOP modes
- The SP-17C board must be installed (no testing is required if the MEM-40C (DABK-7055 option) board is installed).

Specification method :

Use the SET, DATA, and RESET keys to start and cancel the test.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU.
3) Select (OPEN) the [SYS] mode.
   FL tube display message : [SYS] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : [SP-17c] tESt
5) Press the SET key.
   The Work Area message "tESt" will flash at a slower speed than before, indicating the start of the test.
6) After the test ends, the results will be displayed in the Work Area of the FL tube display.
   Results (Work Area of the FL tube display) :

Result	Work Area Display
No error	no Error
Error	* * → Address bus → Data bus The item corresponding to the bit containing a "1" is defective.

Canceling the test

7) Press the DATA and RESET keys simultaneously.

(27) [trnSP] (Transport)

Selects/cancels (OPEN/CLOSE) the mechanism deck and servo (SV) related test and adjustment items in the TEST MENU. The test items are : (28) trn SP-1,(29) trn SP-2,(30) dPG AGc,(31) torq Adj,(32) PAtH Adj,(33) dPC Adj,(34) AGc Adj,(35) tESt SiG,(36) rAtE SEL, and (37) Err rAtE.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to specify OPEN/CLOSE.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU (tESt).
   FL tube display message : [tESt] oPEn

To select (OPEN) the Transport test item

3) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : [trnSP] cLoSE
4) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : [trnSP] oPEn (flashing → ON)
5) After Transport is selected (OPEN), hold down the MENU key and turn the SEARCH dial to select the required test item ((28) to (37)).

To cancel (close) the Transport test item

6) Hold down the DATA key and turn the SEARCH dial until the following message is displayed. Then, press the SET key.
   FL tube display message : [trnSP] cLoSE
   The TEST MENU items ((28) to (37)) are listed below. After you enter (OPEN) the [trnSP] MENU, hold down the MENU key and turn the SEARCH dial to select the required Transport test item. (Turn the dial until the required item appears on the FL tube display.)

(28) [trn SP-1] (Transport-1)

Tests the cassette compartment, loading motor, drum motor, reel motor, and capstan motor operations.

Specification conditions :

No cassette (Do not insert a cassette.)

Specification method :

Start/cancel (stop) the test mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn
4) Hold down the MENU KEY AND turn the SEARCH dial until the following message appears.
   FL tube display message : trnSP-1 tESt (rapid flashing)
5) Press the SET key without loading a cassette. The display message "tESt" will flash at a slower speed than before, indicating the start of the test.
6) Test method
   Load a cassette. When you load a cassette, the following operations are automatically checked. Cassette loading. → Cassette eject operation (checks the cassette compartment). → Loading operation. → Drum rotation operation. → Reel motor and capstan rotation operations. → End. These operation checks are started about 10 seconds after you load a cassette.
7) After the operations are checked, the test results will be displayed in the Work Area of the FL tube display as shown in the table below.
   Results (Work Area on the FL tube display) :

Result	Work Area Display
No error	no Error
Error	** ** ** ** ⑧⑦ ⑥⑤ ④③ ②① The tested item corresponding to the bit containing a "1" is defective. ①Cassette compartment ②Loading motor ③Brake ④Cassette hole sensor switch ⑤Take-up reel ⑥Supply reel ⑦Capstan motor ⑧Drum motor

Canceling the test
8) Press the DATA and RESET keys simultaneously.

(29) [trn SP-2] (Transport-2)
Tests the pinch roller operation.
Specification conditions :
No cassette (Do not insert a cassette.)
Specification method :
Start/cancel (stop) the test mode using the SET, DATA, and RESET keys.
1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : trnSP-2 tESt (rapid flashing)
5) Press the SET key without loading a cassette. The display message "tESt" will flash at a slower speed than before, indicating the start of the test.
   The pinch roller will repeat loading and unloading operations 5 times.
Canceling the test
6) Press the DATA and RESET keys simultaneously.

(30) [dPG-AGc] (DPG-AGC Preset)
Presets the DPG and AGC data before performing the torque, tape path, DPG and AGC adjustments.
Specification conditions :
No cassette (Do not load a cassette.)
Specification method :
Preset the DPG and AGC data using the DATA and SET keys.
1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn

4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
FL tube display message : dPG-AGc PrESEt
5) Press the DATA and SET keys simultaneously. The DPG data (60 (H)) and AGC data (A channel : 20 (H), and B channel : 20 (H)) will be set.

(31) [torq Adj] (Torque Adjustment)

To perform the reel torque adjustment, use this menu to specify the adjustment mode. Use this menu also to display the speed during the CUE mode.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to turn ON/OFF the adjustment mode.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
FL tube display message : torq Adj oFF
5) Hold down the DATA key and turn the SEARCH dial until the following message appears.
FL tube display message : torq Adj on
6) Press the SET key to turn ON the adjustment mode. Perform each torque adjustment under this condition. See section 4-3. Mechanism Adjustment for the adjustment methods.

Note : When you set the adjustment mode to ON, the ALARM indicator on the front panel will flash.

Setting the adjustment mode OFF

1) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
FL tube display message : torq Adj oFF

The Work Area of the FL tube display indicates the speed during the CUE mode besides the ON/OFF data of the test mode.

Data (Work Area of the FL tube display) :

** ** oFF (on)
↑
CUE speed data Display

• Other than the CUE mode	: - - - -
• STILL mode	: 0
• (-) 1/5	: (-) 0_2
• (-) 1/2	: (-) 0_5
• (-) 1	: (-) 1
• (-) 3	: (-) 3
• (-) 8	: (-) 8
• (-) 16	: (-) 16

(32) [PAtH Adj] (Path Adjustment)

To perform the tape path adjustment, use this menu to specify the adjustment mode.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to turn ON/OFF the adjustment mode.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
FL tube display message : PatH Adj oFF
5) Hold down the DATA key and turn the SEARCH dial until the following message appears.
FL tube display message : PatH Adj on
6) Press the SET key to turn ON the adjustment mode.

Perform each tape path adjustment under this condition. See section 4-4. Tape Path Adjustment for the adjustment methods.

Note : When you set the adjustment mode to ON, the ALARM indicator on the front panel will flash.

Setting the adjustment mode OFF

7) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : PatH Adj oFF

(33) [dPG Adj] (DPG Adjustment)

To perform the SWP adjustment of the servo block, use this menu to specify the adjustment mode. The adjusted data is stored in the backup memory of System control when you set the adjustment mode to OFF.

Specification conditions : None

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to turn ON/OFF the adjustment mode.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : dPG Adj oFF
5) Hold down the DATA key and turn the SEARCH dial until the following message appears.
   FL tube display message : dPG Adj on
6) Press the SET key to turn ON the adjustment mode. Perform the SWP adjustment under this condition. See the section 4-5. Servo Block Adjustment for the adjustment methods.

Note : When you set the adjustment mode to ON, the ALARM indicator on the front panel will flash.

Setting the adjustment mode OFF

7) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : dPG Adj ** oFF
   Data stored in the backup memory.

After the adjustment, the adjusted data will be stored in the backup memory when you set the adjustment mode to OFF. The stored data will be displayed in the Work Area of the FL tube display.

Data (Work Area of the FL tube display) :

** oFF
Data stored in the backup memory.

(34) [AGc Adj] (AGC Adjustment)

Performs the gain adjustment of the AGC. When you set this adjustment mode to ON, the SV CPU will automatically perform the adjustment. The adjusted gain data will be stored in the backup memory of System control.

Specification conditions : None

Specification method :

Turn ON/OFF the adjustment mode using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : AGc Adj oFF
5) Hold down the DATA key and turn the SEARCH dial until the following message appears.
   FL tube display message : AGc Adj on
6) Press the SET key to turn ON the adjustment mode. When you press the SET key, the gain adjustment of AGC will start automatically. See the section 4-5. Servo Block Adjustment for adjustment methods.

Note : When you set the adjustment mode to ON, the ALARM indicator on the front panel will flash.

Setting the adjustment mode OFF

7) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.

FL tube display message : AGC Adj **** oFF

Data stored in the backup memory.

After the adjustment, the adjusted data will be stored in the backup memory when you set the adjustment mode to OFF. The stored data will be displayed in the Work Area of the FL tube display.

Data (Work Area of the FL tube display) :

** **oFF

Data stored in the backup memory.

(35) tESt SiG (Test Signal)

Selects the test signal to be recorded. The selected signals will be recorded using the REC and PLAY keys.

Specification conditions :

- Insert a cassette (the cassette with the tab hole open).
- Exclude software tapes.
- STOP mode.
- Set the test menu "rAtE SEL" to the "Auto".

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to set the test signal.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [trnSP] MENU.
   FL tube display message : [trnSP] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : tESt SiG OFF
5) Hold down the DATA key and turn the SEARCH dial until the required test signal appears in the Work Area of the FL tube display. Then, press the SET key.
   When you press the SET key, the Work Area message will light without flashing.

Work Area Display	Signal to be recorded
1) oFF	–
2) A-A 157	Leading head A ch 1.57M
3) A-b 157	Leading head B ch 1.57M
4) d-A 157	Trailing head A ch 1.57M
5) d-b 157	Trailing head B ch 1.57M
6) A-47 157	Leading head A ch 4.7M B ch 1.57M
7) A- 157 47	Leading head A ch 1.57M B ch 4.7M
8) d-47 157	Trailing head A ch 4.7M B ch 1.57M
9) d- 157 47	Trailing head A ch 1.57M B ch 4.7M
10) A- 13 157	Leading head A ch 130K B ch 1.57M
11) A- 157 13	Leading head A ch 1.57M B ch 130K
12) d- 13 157	Trailing head A ch 130K B ch 1.57M
13) d- 157 13	Trailing head A ch 1.57M B ch 130K
14) A-tSt in	Leading head TEST INPUT
15) d-tSt in	Trailing head TEST INPUT
16) A- inPut	Leading head NORMAL INPUT
17) d- inPut	Trailing head NORMAL INPUT

Note : If you do not set the [tESt SiG] mode to OFF (Step 4), the ALARM indicator on the front panel will flash.

(36) rAtE SEL (Error Rate Select)

Same as the "rAtE SEL" menu item in the DISPLAY MENU.

(37) Err rAtE (Error Rate)

Same as the "Err rAtE" menu item in the DISPLAY MENU.

(38) [iS-Ed] (Instant-Edit)

Enters/exits (OPEN/CLOSE) the test menus of the MEMORY START memory and EDIT MEMORY option board.

Specification conditions : Option board must be installed.

Specification method :

Hold down the DATA key and turn the SEARCH dial. Then, press the SET key to OPEN/CLOSE the mode.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
   FL tube display message : [tESt] oPEn

Starting (OPEN) the [iS-Ed] mode

3) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : [iS-Ed] cLoSE
4) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : [iS-Ed] oPEn (flashing → ON)
5) After the mode is OPEN, hold down the MENU key and turn the SEARCH dial to select either (39)"inStAnt" or (40)"Edit" menu.

Ending (CLOSE) the [iS-Ed] mode

6) Hold down the DATA key and turn the SEARCH dial until the following message appears. Then, press the SET key.
   FL tube display message : [iS-Ed] cLoSE

The TEST MENU items ((39) and (40)) are listed below. After you start the [iS-Ed] MENU (OPEN), hold down the MENU key and turn the SEARCH dial to select the required TEST MENU item. (Turn the dial until the required item appears on the FL tube display.)

(39) [inStAnt] (Instant Test)

Tests the memory used for MEMORY START.

Specification conditions : STOP mode

Specification method :

Start/cancel the test using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [iS-Ed] MENU.
   FL tube display message : [iS-Ed] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : inStAnt tESt (rapid flashing)

Starting the test

5) Press the SET key.
   The Work Area message "tESt" will flash at a slower speed than before, indicating the start of the test.
6) After the test ends, the results will be displayed in the Work Area of the FL tube display.
   Results (Work Area of the FL tube display) :

Result	Work Area Display
No error	no Error
Error	 The item corresponding to the bit containing a "1" is defective.

Caution : When you perform this test, the audio data stored in the memory will be lost.

Canceling the test

7) Press the DATA and RESET keys simultaneously.

(40) Edit (Edit Test) : Tests the EDIT MEMORY.

Specification conditions :

- STOP mode
- The MEM-40C board must be installed (the optional DABK- 7055 must be installed).

Specification method :

Start/cancel the test using the SET, DATA, and RESET keys.

1) Enter (OPEN) the SERVICE MENU.
2) Enter (OPEN) the TEST MENU ([tESt]).
3) Enter (OPEN) the [iS-Ed] MENU.
   FL tube display message : [iS-Ed] oPEn
4) Hold down the MENU key and turn the SEARCH dial until the following message appears.
   FL tube display message : Edit tESt (rapid flashing)

Starting the test

5) Press the SET key.
   The Work Area message "tESt" will flash at a slower speed than before, indicating the start of the test.
6) After the test ends, the results will be displayed in the Work Area of the FL tube display.
   Results (Work Area of the FL tube display) :

Result	Work Area Display
No error	no Error
Error	 The item corresponding to the bit containing a "1" is defective.

Caution : When you perform this test, the audio data stored in the memory will be lost.

Canceling the test

7) Press the DATA and RESET keys simultaneously.

2-9. Tools and Instruments

Item	Part No.	Remarks
Adjustment mirror	J-6080-029-A	For tape pass adjustment
Spare mirror	J-6080-030-1	For tape pass adjustment
Thickness gauge	9-911-053-00	For spacing check
Cassette weight	J-6224-140-A	For tape pass adjustment
Cleaning cassette DT-10CL	—	For head cleaning (Sony product)
Adjustment driver	J-6225-100-A	For tape pass adjustment
Test tape TY-7111D	8-909-820-00	For playback level check
Test tape TY-7251	8-909-813-00	For tracking adjusutment
Test tape TY-7212	8-960-081-01	For error rate check
Blank tape TY-30B	8-892-358-00	For recording level adjustment
Torque meter TW-7131	8-909-708-71	For FWD and REV torque adjustment
Torque meter TW-7231	8-909-708-72	For FF and REW torque check
Molycote grease EM-30L	4-918-645-01	For cassette Up compartment
EX-264 extension board	J-6226-090-A	For DIO-10 and MEM-40 boards check
EX-265 extension board	J-6226-100-A	For DIO-10 and MEM-40 boards check
Cleaning fluid	9-919-573-00	For cleaning
Cleaning piece (chamois)	2-034-697-00	For cleaning
RF LEVEL CHECKER PD-817	J-6228-170-A	For Recording/Playback Block Adjustment

SECTION 3
Periodical Inspection and Maintenance

3-1. Cleaning

After cleaning, thoroughly wipe the drum surface using a dry cloth before inserting a cassette. If you do not wipe the drum surface completely with a dry cloth, the tape may be damaged due to an effect similar to moisture condensation.

1) Normal cleaning

Clean the drum and tape passing system once a week using the following cleaning cassette.

Note : Run the cleaning cassette for no more than 30 seconds.

2) When dirt is not removed completely with the cleaning cassette (perform this cleaning once a month)

Cleaning the drum

(1) Wipe the lower section of the drum along the lead using a cleaning piece moistened with alcohol. Never touch the side surface of a drum with your bare hands.

(2) Use a dry cleaning piece and wipe the section you just wiped in the previous step.
Be sure to perform step (2) immediately after (1). After the alcohol dries up, removing the remaining dirt just by wiping with a dry cloth will be difficult.

(3) Clean the upper section of the drum using a cleaning piece moistened with alcohol.
Never touch the side surface of upper drum with your hands. Rotate the drum in the direction ofthe arrow (⇨) to wipe the side surfaces of the upper drum and head. Repeat this procedure for approximately three rotations of the upper drum.

(4) Wipe the upper section of the drum using a dry cleaning piece along the lead and rotate the upper drum approximately twice to wipe with a dry cleaning piece.
Be sure to perform step (4) immediately after (3). After the alcohol dries up, removing the remaining dirt just by wiping with a dry cloth will be difficult.

(5) Inspect the entire circumference of upper drum by sight to make sure no fingerprints and no stains remain when the alcohol dries up.

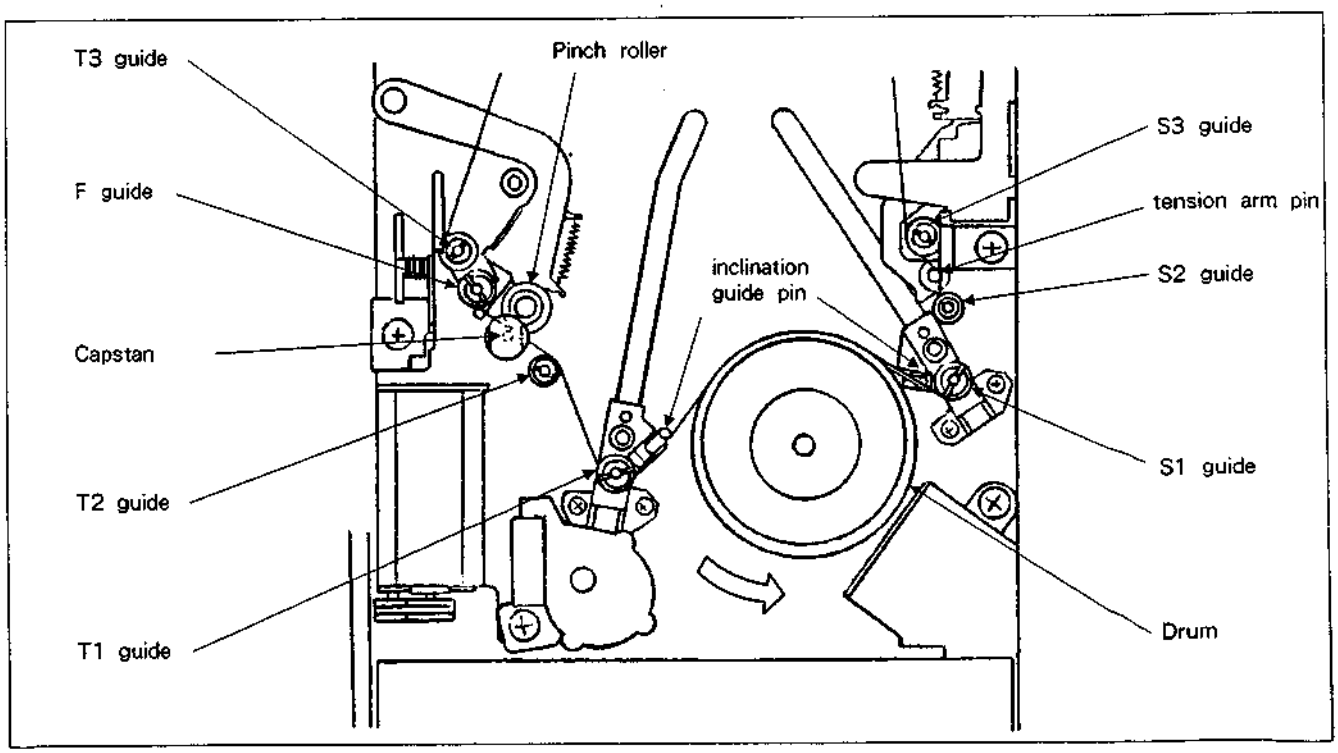
Notes :

1. Never clean the drum while it is being driven.
2. Do not wipe with the cleaning piece in a vertical motion with respect to the head chip.
Doing so will most likely damage the head chip.

Cleaning the tape running system

(1) Remove the dirt on the capstan axis, pinch roller, tension arm pin, and inclination guide pin using a cleaning piece moistened with alcohol. Wipe these parts then with a dry cleaning piece.

(2) Peel off the dirt on the rotation rollers (T1, T2, T3, S1, S2, S3, and F guides) using a stick made of pliant piece such as bamboo before too much dirt accumulates. Then, wipe these areas with a dry cleaning piece.



3-2. Periodical Inspection and Maintenance Procedures

To maintain proper performance, replace worn parts, clean the mechanical parts, inspect the mechanical and electrical systems, and make necessary adjustments. As a guideline, refer to the hour meter (Hour-t (HOUR-TIME)) reading in the display menu to determine the inspection and maintenance intervals. The table below shows the maintenance and inspection guidelines corresponding to the hour meter readings. A list of replacement parts is also shown. The part replacement intervals are based on the part' s service life recorded in the past.These intervals may be changed in the future.

3-3. Post-Repair Maintenance

After repairing a unit, do the following regardless of the unit's length of service.

1. Clean the drum head.
2. Clean the tape transport surfaces.

Regular inspection and maintenance schedule

Part Name (Part No.)	Head Hour Meter (h)						Remarks
	1Week	500H	1500H	3000H	4500H	6000H	
DATM assembly DATM-06R (A-7806-080-A)						☆	Replace every 6000 H.
Drum assembly DOM-14AR (8-848-548-11)	○		☆	☆	☆	(☆)	Clean once week and replace every 1500 H.
Capstan DC motor BHF-2803A (8-835-206-01)	○			☆		(☆)	Clean every week and replace every 3000 H.
Reel, U-2A DC motor (8-835-205-01)				☆		(☆)	Replace every 3000 H.
Pinch roller assembly (A-7810-488-A)	○		☆	☆	☆	(☆)	Clean once week and replace every 1500 H.
Rotary encoder (1-464-724-11)			☆	☆	☆	(☆)	Replace every 1500 H.
Cassette compartment assembly (A-7810-496-A)						☆	Replace every 6000 H.
Lithium Battly CR-2450 (1-528-229-11)			☆	☆	☆	☆	Replace when the drum assembly is replaced.

○ : Clean. ☆ : Replace. (☆) : This part is in the DATM assembly. Therefore it will be replaced at the same time when the DATM assembly is replaced.

SECTION 4
MECHANICAL ADJUSTMENT, TAPE PATH ADJUSTMENT, SERVO BLOCK ADJUSTMENT, RECORDING/PLAYBACK BLOCK ADJUSTMENT, AND ERROR RATE CHECK

This section provides information on the adjustments and checks required when you replace the following main parts of the mechanical deck.

1. Mechanical deck assembly
2. Drum assembly
3. Capstan motor
4. Reel motor
5. Pinch roller assembly
6. Rotary encoder
7. Cassette compartment assembly

The following adjustment and check items are explained here. Perform each adjustment and check using the corresponding TEST MENU item (see list below) in the SERVICE MENU.

See "2-8. Service Menu" of Section 2 for details on the TEST MENU.

Adjustment Item		TEST MENU Item (FL display)
4-2. Mechanical Device Test (operation check)		tranSP-1 tESt (trAnSP-1 tESt)
4-3. Mechanical Adjustment	4-3-1. Rotary encoder position adjustment	—
	4-3-2. End sensor operation check	torq Adj oFF (torq Adj oFF)
	4-3-3. FF/REW torque adjustment	torq Adj on (torq Adj on)
	4-3-4. FWD torque adjustment	torq Adj on (torq Adj on)
	4-3-5. REV torque adjustment	torq Adj on (torq Adj on)
	4-3-6. FWD back tension adjustment	torq Adj on (torq Adj on)
	4-3-7. EJECT torque adjustment	torq Adj on (torq Adj on)
	4-3-8. FF/REW time check	torq Adj oFF (torq Adj oFF)
4-4. Tape Path Adjustment	4-4-1. Tape running check (1)	PAtH Adj oFF (PAtH Adj oFF)
	4-4-2. Tape running check (2)	PAtH Adj oFF (PAtH Adj oFF)
	4-4-3. Tape path fine adjustment	PAtH Adj on (PAtH Adj on)
	4-4-4. RF raise up time check	PAtH Adj on (PAtH Adj on)
	4-4-5. Lack of RF waveform check in FF/REW	PAtH Adj oFF (PAtH Adj oFF)
	4-4-6. Overall tape path check	PAtH Adj oFF (PAtH Adj oFF)
4-5. Servo Block Adjustment	4-5-1. SWP position adjustment	PAtH Adj on (PAtH Adj on) and DPG Adj on (dPG Adj on)
	4-5-2. ATF playback AGC adjustment	AGc Adj on (AGc Adj on)
4-6. Recording /Playback Block Adjustment	4-6-1. Adjustment using the RF level checker PD-817	tESt SiG A-tst in (tESt SiG A-tSt in) tESt SiG d-tst in (tESt SiG d-tSt in)
	4-6-2. Adjustment using a spectrum analyzer	tESt SiG A-157-13 (tESt SiG A-157_13) tESt SiG A-13-157 (tESt SiG A-13_157) tESt SiG d-157-13 (tESt SiG d-157_13) tESt SiG d-13-157 (tESt SiG d-13_157)
4-7. EQ-H Preset and Error Rate Check	4-7-1. EQ-H preset	—
	4-7-2. Error rate check	rAtE SEL A-Ab (rAtE SEL A-Ab) rAtE SEL d-Ab (rAtE SEL d-Ab) and Err rAtE (Err rAtE)
4-8. Cassette Compartment Operation Check		—

Adjustment Procedure after Replacing the Main Parts

Use the following procedure to make adjustments after you replace the main parts.

Parts Replaced	Adjustment Procedure
Mechanical Deck Assembly (DATM-06R)	4-3-2. End sensor operation check → 4-3-3. FF/REW torque check → 4-3-4. FWD torque adjustment → 4-3-5. REV torque adjustment → 4-3-6. FWD back tension adjustment → 4-3-7. EJECT torque check → 4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) → 4-2. Mechanism device test → 4-3-8. FF/REW time check → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check → 4-5-1. SWP position adjustment → 4-5-2. ATF playback AGC adjustment → 4-6. Recording/playback adjustment (recording current level adjustment) → 5-2. Signal processing adjustment (RF PLL adjustment) → 4-7-2. Error rate check
Drum Assembly (DDH-14AR)	4-3-4. FWD torque adjustment → 4-3-5. REV torque adjustment → 4-3-6. FWD back tension adjustment → 4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) → 4-2. Mechanism device test → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check → 4-5-1. SWP position adjustment → 4-5-2. ATF playback AGC adjustment → 4-6. Recording/playback adjustment (recording current level adjustment) → 5-2. Signal processing adjustment (RF PLL adjustment) → 4-7-2. Error rate check
Capstan Motor (BHF2803A)	4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) → 4-2. Mechanism device test → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check

Parts Replaced	Adjustment Procedure
Reel Motor (U-2A)	4-3-3. FF/REW torque check → 4-3-4. FWD torque adjustment → 4-3-5. REV torque adjustment → 4-3-6. FWD back tension adjustment → 4-3-7. EJECT torque check → 4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) → 4-2. Mechanism device test → 4-3-8. FF/REW time check → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check
Pinch Roller Assembly	4-4-1. Tape running check (1) → 4-4-2. Tape running check (2) → (cassette compartment assembly mounting) → 4-2. Mechanism device test → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-4-5. Lack of RF waveform check in FF/REW → 4-4-6. Overall tape path check → 4-5-1. SWP position adjustment
Rotary Encoder	4-3-1. Rotary encoder position adjustment → 4-4-3. Tape path fine adjustment → 4-4-4. RF raise up time check → 4-2. Mechanism device test
Cassette Compartment Assembly	4-2. Mechanism device test → 4-8. Cassette compartment operation check → 4-3-8. FF/REW time check

The following table lists the items that must be adjusted when you replace the main parts. An item indicated with a circle requires adjustment.

Main Replacement Parts / Adjustment Item	Mechanical Deck	Drum Assembly	Capstan Motor	Reel Motor	Pinch Roller Assembly	Rotary Encoder	Cassette Compartment
4-2. Mechanical Device Test	○	○	○	○	○	○	○
4-3-1. Rotary encoder position adjustment						○	
4-3-2. End sensor operation check	○						
4-3-3. FF/REW torque adjustment	○			○			
4-3-4. FWD torque adjustment	○	○		○			
4-3-5. REV torque adjustment	○	○		○			
4-3-6. FWD back tension adjustment	○	○		○			
4-3-7. EJECT torque adjustment	○			○			
4-3-8. FF/REW time check	○			○			○
4-4-1. Tape running check (1)	○	○	○	○	○		
4-4-2. Tape running check (2)	○	○	○	○	○		
4-4-3. Tape path fine adjustment	○	○	○	○	○		
4-4-4. RF raise up time check	○	○	○	○	○		
4-4-5. Lack of RF waveform check in FF/REW	○	○	○	○	○		
4-4-6. Overall tape path check	○	○	○	○	○		
4-5-1. SWP position adjustment	○	○					
4-5-2. ATF playback AGC adjustment	○	○					
4-6. Recording/Playback Block Adjustment	○	○					
4-7-2. Error Rate Check	○	○					
4-8. Cassette Compartment Operation Check							○
5-2. Signal processing adjustment (RF PLL adjustment)	○	○					

4-1. Preparation

Equipment Required

Item	Minimum Specifications	Model
Spectrum analyzer	• frequency range : - 10 MHz and above •frequency span : zero span measurement is possible • sweep time : 100 msec and below is possible • averaging, exterior trigger is possible	advanced R3261A or equivalent
Oscilloscope	• frequency range : DC - 100 MHz and above • accuracy : 5mV • occurrence : 2 occurrences or more	TEKTRONIX 2445A or equivalent
Audio frequency oscillator	• oscillating frequencies : 20 Hz - 100 kHz • output level : - +4 dBm and above	—

Tools Required

Item	Part No.	Remarks
Cassette compartment dummy connector	—	Make a cassette compartment dummy connector using a small harness (ccp). See " 3) Operation Without the Cassette Compartment" on page 2-16 for the procedure to make a dummy connector.
Cassette weight	J-6224-140-A	Used for making adjustments (checks) while the cassette compartment is removed.
Screwdriver for adjusting	J-6225-100-A	Used for the tape path fine adjustment.
RF LEVEL CHECKER PD-817	J-6228-170-A	Used for the recording / playback Block adjustment.

Test Tape and Torque Meter

Item	Part No.	Remarks
Test tape TY-7111D	8-909-820-00	Used for the playback level check.
Test tape TY-7251	8-909-813-00	Used for the tracking adjustment.
Test tape TY-30B	8-892-358-00	Used for the recording level adjustment.
Test tape TY-7212	8-960-081-01	Used for the error rate check.
Torque cassette TW-7131	8-909-708-71	Used for the FWD/REV torque adjustment.
Torque cassette TW-7231	8-909-708-72	Used for the FF/REW torque check.
Cassette tape for testing the operations	—	Any 120-minute tape sold in the market

4-2. Mechanical Device Test (operation check)

Perform the Mechanical Device Test when you replace major parts including the mechanical deck assembly, drum assembly, capstan motor, reel motor, pinch roller assembly, cassette compartment, DR-139 board and SV-123 board.

Equipment and Tools Required

Cassette tape for testing the operations

Procedure

(1) Enter (OPEN) the [trnSP] test menu in the SERVICE MENU and select the following test item. Then, press SET.
FL tube display message : trnSP-1 tESt
(rapid flashing→slow flashing)

(2) Load a cassette tape (any tape sold in the market) to test the operations. The test will automatically start checking the operations of the cassette compartment, loading motor, drum motor, reel motor, and capstan motor.(The test cassette tape will be automatically ejected.)

(3) After the operations have been tested, make sure the FL tube display indicates the following message.
FL tube display message : trnSP-1 no Error

Notes :
You must perform the above operation tests with the cassette compartment mounted in the mechanical deck (normal operating condition).
See "2-8. Service Menu" in Section 2 for the TEST MENU specification procedure.

4-3. Mechanical Adjustment

Each mechanical adjustment and check item must be performed while the cassette compartment is removed from the mechanical deck.(See "2-1. Removal of Boards and Major Mechanical Parts" on page 2-7 for the cassette compartment removal procedure.) The test cassette tape and torque meter will be used after they are mounted in the cassette weight.(See "3) Operation Without the Cassette Compartment" on page 2-18 for information on using the cassette weight.)

Equipment and Tools Required

Oscilloscope
TW-7131 Torque cassette (8-909-708-71)
Cassette tape (any 120-minute cassette tape sold in the market) for testing the operations
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector *
* Make a cassette compartment dummy connector using a small harness (ccp). See "3) Operation Without the Cassette Compartment" on page 2-18 for the procedure to make a dummy connector.

Preparations

Insert the cassette compartment dummy connector in the CN106 connector on the DR-139 board.

4-3-1. Rotary encoder position adjustment

Adjust the rotary encoder position when you replace the rotary encoder.

Procedure

(1) Switch off the POWER of the unit.

(2) Remove the rotary encoder.
(Remove the rotary encoder mounting screws before disconnecting its connector.)

(3) Turn the loading motor pulley and move the pinch roller so that the roller comes in contact with the capstan axis housing as shown in the figure below.

(4) Align the arrow mark and the line in the gear of the rotary encoder (rear side) as shown in the figure below.

(5) Use two screws (+ B2x4) to mount the rotary encoder lightly on the mechanical chassis so that the gear of the rotary encoder properly engages the gear of the mechanical chassis. (Lightly tighten the screws at the center of the long holes of rotary encoder.)

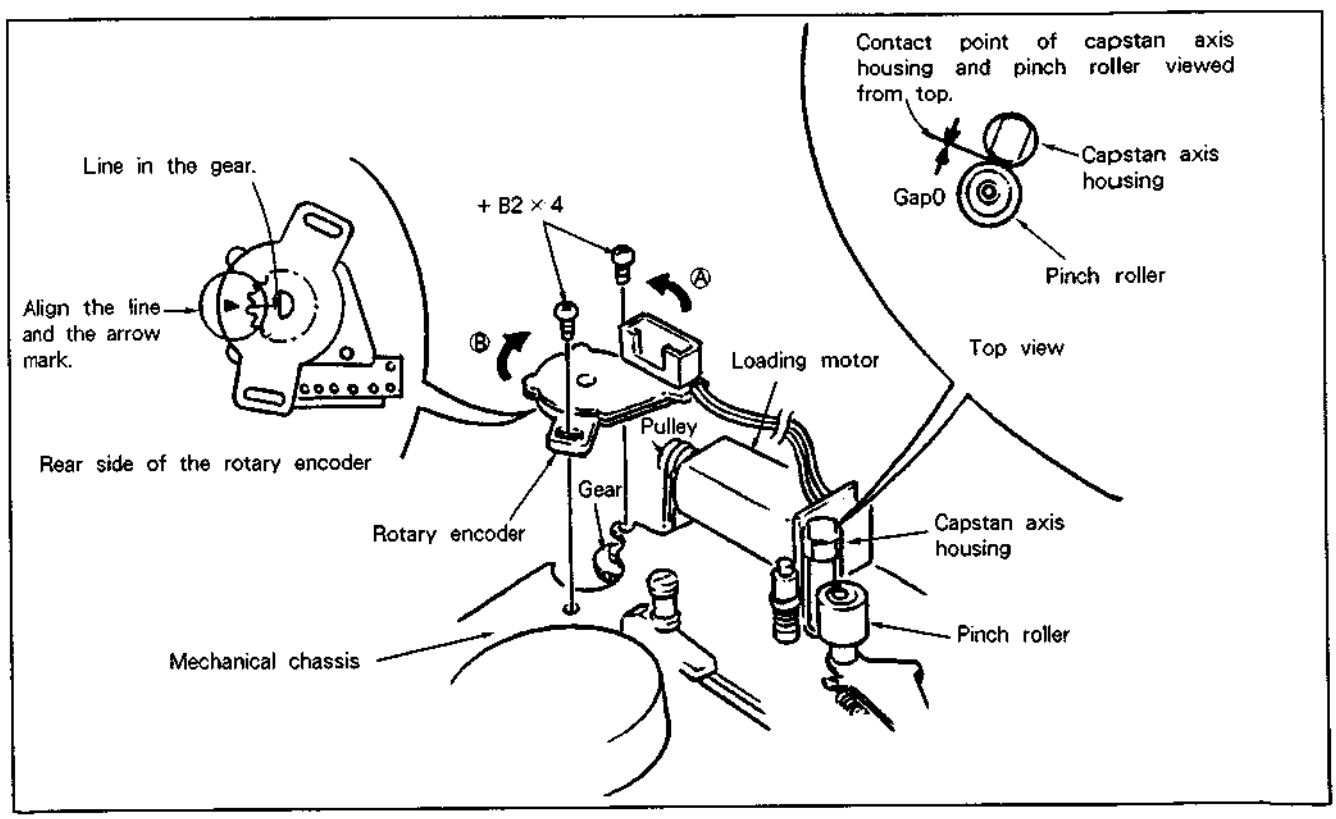
(6) Switch on the POWER. Hold down cassette sensor switch and press PLAY to set the playback mode temporarily. Then, press STOP to set the mechanical deck to STOP mode. During the STOP mode, check the following items ((1),(2), and (3)). Adjust the rotary encoder mounting position as shown in the figure below to comply with the specifications. Make adjustments while POWER is switched off and check the position when POWER is on.

Specifications :

① The tension regulator release pin shall be set at the OFF position of the tension regulator.

② The gap between the capstan axis and the pinch roller shall be 1.5mm to 2.5mm.

③ The F guide must be in contact with the groove of the square hole of the mechanical chassis.



Adjustment location :

Move the mounting position of the rotary encoder.

Adjustment direction	Distance to pinch roller
Direction A	Closer
Direction B	Wider

(7) Set the mechanical deck (guide) to FWD mode. Make sure the rotary encoder position complies with the following specifications in this condition.

Specifications :

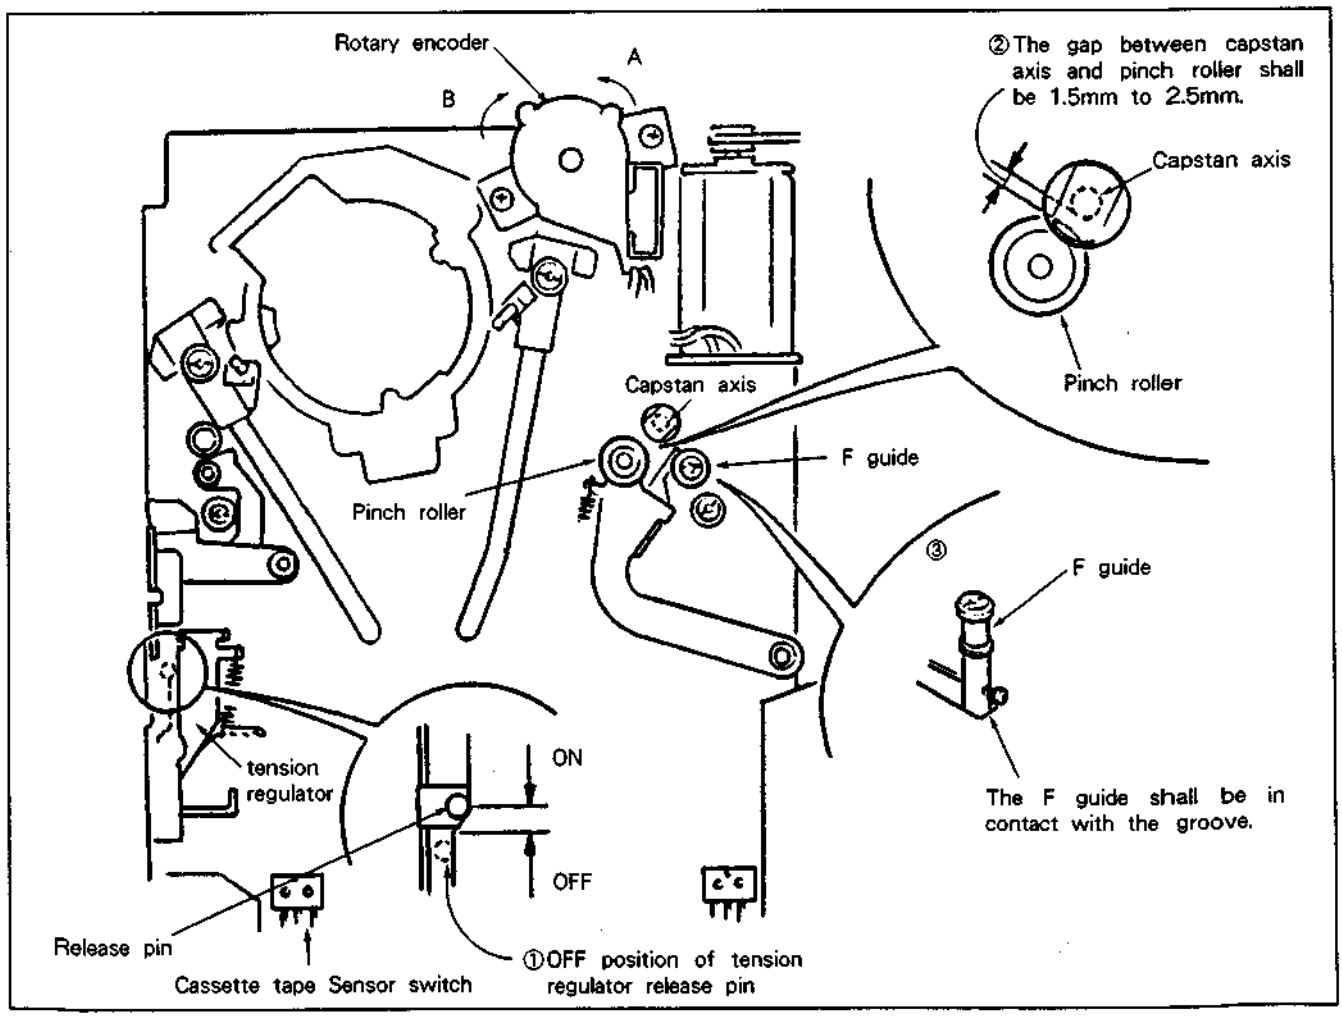
①Tension regulator release pin shall be at the ON position of the tension regulator.

②The pinch roller shall be in contact with the capstan axis.

(8) Set the mechanical deck (guide) to STOP mode again. In this condition, make sure the rotary encoder position complies with the specifications indicated in step (6).

(9) This time, firmly tighten two screws (+ B2x4) which mount the rotary encoder on the mechanical chassis.

If the rotary encoder position does not comply with the specifications of steps (6) and (7), retry the procedure from step (1).



4-3-2. End sensor (S side, T side) operation check

Check the operation of the end sensor when you replace the mechanical deck.

Equipment and Tools Required

Oscilloscope

CH1 : DC 500mV/DIV

CH2 : DC 500mV/DIV

500usec/DIV

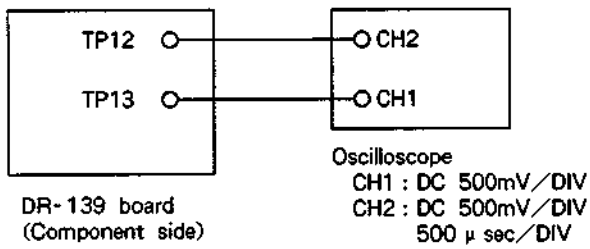
Note : When the DC measurement causes a scale overflow, measure in AC mode.

TY-30B Test tape (8-892-358-00)

Cassette compartment dummy connector

Cassette weight (J-6224-140-A)

Connections

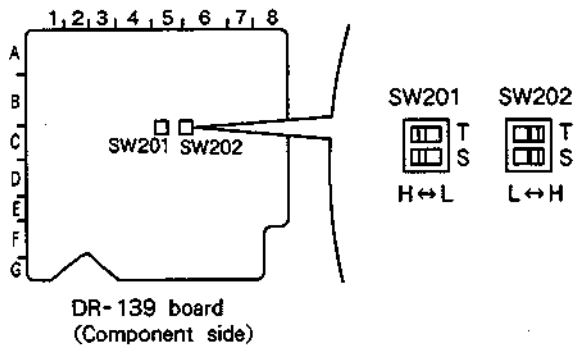


Switch settings

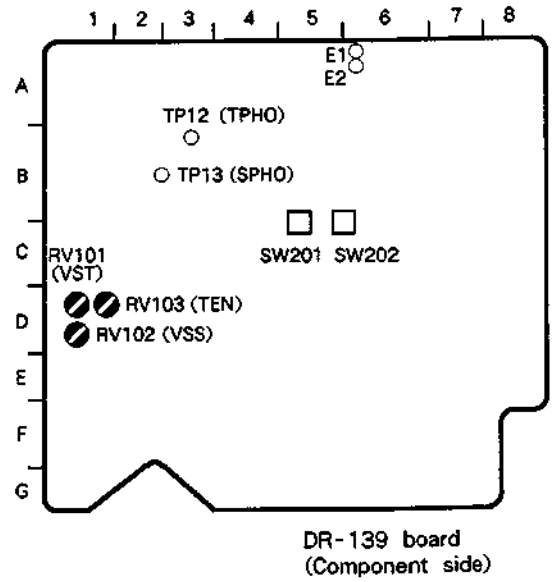
DR-139 board

SW201 (C,5) : H (Both switches S and T) See figure below.

SW202 (C,5) : H (Both switches S and T) See figure below.



Measurement Location



Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.

FL tube display : torq Adj oFF

Note : When ON is set from the POWER switch OFF status, this mode is automatically selected.

(2) Connect the oscilloscope to the following connectors of the DP-139 board.

CH1 : TP13 (SPHO) · E1 (GND), DR-139 board

CH2 : TP12 (TPHO) · E2 (GND), DR-139 board

(3) Attach the TY-30B test tape to the cassette weight and mount it on the mechanical deck.

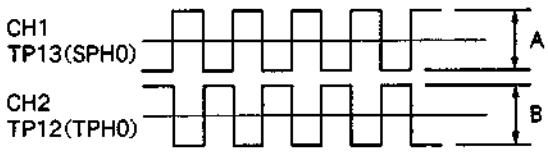
Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, be sure to mount it quickly.

(4) Press REW and rewind the tape to its beginning to make sure the output level of the TP12 (TPHO) at the reader tape section complies with the following specifications.(Check operation of the T side end sensor.)

(5) Press FF and feed the tape to the its end to make sure the output level of the TP13 (SPHO) at the reader section complies with the following specifications.(Check operation of the S side end sensor.)

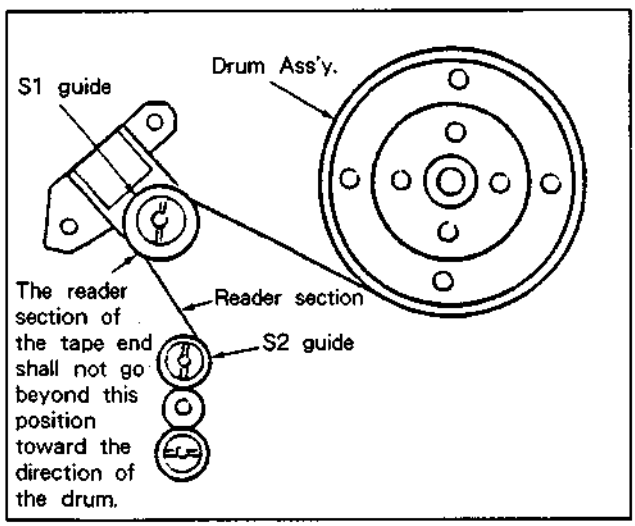
Note : When you check the operation of the T side end sensor, the tape will be rewound automatically a little at the tape beginning and the FF/REW operations will be repeated.

Specifications : S side output level (A) 800mVp-p
T side output level (B) 800mVp-p

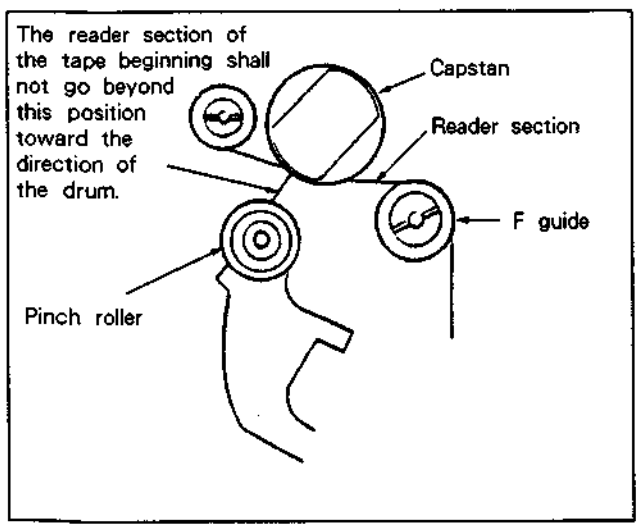


(6) Perform FF and REW operations and make sure the beginning and end of a tape stop at the following positions.

Tape end position check (FF operation)



Tape start position check (REW operation)



(7) Press EJECT. After a tape is wound, remove the cassette tape from the mechanical deck.

4-3-3. FF/REW torque check

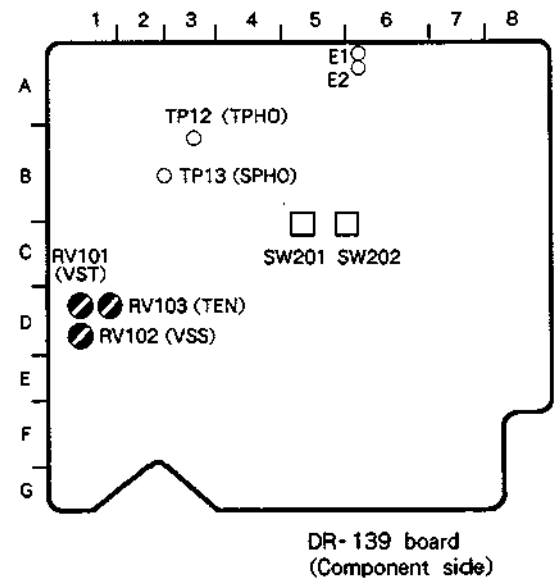
Check the FF/REW torque operations when you replace the reel motor, and DR-139 board. Be sure to perform the following adjustments after you check the FF/REW torque operations.

4-3-4. FWD torque adjustment
4-3-5. REV torque adjustment
4-3-6. FWD back tension adjustment

Equipment and Tools Required

TW-7231 Torque cassette (8-909-708-72)
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Adjustment Locations



DR-139 board
(Component side)

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.
FL tube display message : torq Adj on
(At this time, the ALARM indicator on the front panel will flash.)

(2) Attach the TW-7231 torque cassette to the cassette weight and mount it on the mechanical deck.

Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.

(3) Turn ◐RV101 (VST) and ◐RV102 (VSS) fully clockwise.

(4) Press FF to select the FF mode.

(5) When the FF mode stabilizes, make sure the maximum torque value of the TW-7231 torque cassette (take-up reel side) complies with the following specifications.

Specifications :

Maximum FF torque 25 to 40g · cm

(6) Press STOP.

(7) Press REW to select the REW mode.

(8) When the REW mode stabilizes, make sure the maximum torque value of the TW-7231 torque cassette (supply reel side) complies with the following specifications.

Specifications :

Maximum REW torque 25 to 40g · cm

(9) Set ◐RV101 (VST) and ◐RV102 (VSS) of the DR-139 board at the detent position (the midpoint of a full rotation).

4-3-4. FWD torque adjustment (DR-139 board adjustment)

Perform this adjustment when you replace the mechanical deck assembly, drum assembly, reel motor, and DR-139 board.

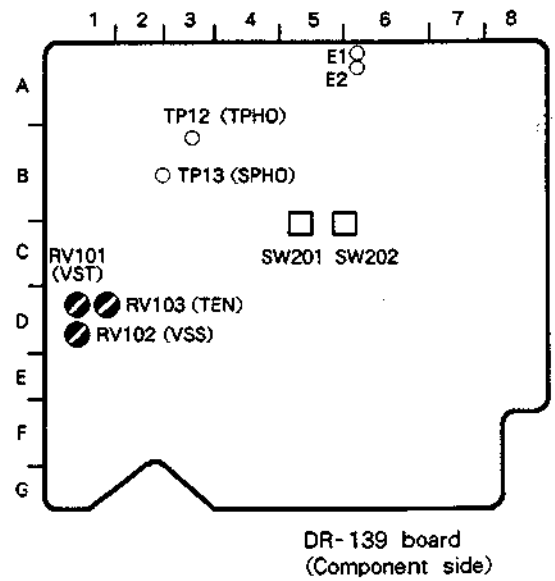
Equipment and Tools Required

TW-7131 Torque cassette (8-909-708-71)

Cassette weight (J-6224-140-A)

Cassette compartment dummy connector

Adjustment Locations



DR-139 board
(Component side)

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.

FL tube display message : torq Adj on

(At this time, the ALARM indicator on the front panel will flash.)

(2) Attach the TW-7131 torque cassette to the cassette weight and mount it on the mechanical deck.

Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.

(3) Press PLAY to start the playback mode.

(4) Adjust ◐RV101 (VST) of the DR-139 board so that the torque value of the TW-7131 torque cassette (take-up reel side) complies with the following specifications. Make the adjustment in accordance with the structure of the S2 guide.

Specifications :

S2 guide structure	FWD torque (g • cm)
Fixed guide	12 to 14
Roller guide	8 to 10

Note : When the meter indication fluctuates, make adjustments so that the center of this fluctuation complies with the specifications.

Adjustment Location :

◐RV101 (VST), DR-139 board

(5) Press EJECT. After the tape is wound, remove the TW-7131 torque cassette from the mechanical deck.

4-3-5. REV torque adjustment

Perform this adjustment when you replace the mechanical deck assembly, drum assembly, and reel motor, and DR-139 board.

Equipment and Tools Required

TW-7131 Torque cassette (8-909-708-71)
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Adjustment Location

See "Adjustment Locations" in 4-3-4. FWD torque adjustment.

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.

FL tube display message : torq Adj on

(At this time, the ALARM indicator on the front panel will flash.)

(2) Attach the TW-7131 torque cassette to the cassette weight and mount it on the mechanical deck.

Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.

(3) Press CUE to start the REVx (-1) mode of the CUE mode (turn the SEARCH dial counter clockwise until "-1" appears on the FL tube display).

(4) Adjust ◐RV102 of the DR-139 board so that the torque value of the TW-7131 torque cassette (supply reel side) complies with the following specifications.

Specifications : REV torque 14 ± $\frac{1}{3}$ g • cm

Adjustment Location : ◐RV102, DR-138 board

(5) Press EJECT. After the tape is wound, remove the TW-7131 torque cassette from the mechanical deck.

4-3-6. FWD back tension adjustment

Perform this adjustment when you replace the mechanical deck assembly, drum assembly, reel motor, and DR-139 board.

Equipment and Tools Required
TW-7131 Torque cassette (8-909-708-71)
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Adjustment Location
See "Adjustment Locations" in section 4-3-4. FWD torque adjustment.

Procedure
(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.
FL tube display message : torq Adj on
(At this time, the ALARM indicator on the front panel will flash.)
(2) Attach the TW-7131 torque cassette to the cassette weight and mount it on the mechanical deck.
Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.
(3) Press PLAY to start the playback mode.
(4) Adjust ◐RV103 (TEN) of the DR-139 board so that the torque value of the TW-7131 torque cassette (supply reel side) complies with the following specifications. Make the adjustment in accordance with the structure of the S2 guide.

Specifications :

S2 guide structure	FWD back tension (g·cm)
Fixed guide	4.5 ±0.5
Roller guide	5.5 ±0.5

Adjustment Location : ◐RV103, DR-139 board
(5) Press EJECT. After the tape is wound, remove the TW-7131 torque cassette from the mechanical deck.

4-3-7. EJECT torque check

Check the EJECT torque when you replace the reel motor, and DR-139 board.

Equipment and Tools Required
TW-7131 Torque cassette (8-909-708-71)
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Procedure
(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.
FL tube display message : torq Adj on
(At this time, the ALARM indicator on the front panel will flash.)
(2) Attach the TW-7131 torque cassette to the cassette weight and mount it on the mechanical deck.
Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.
(3) Press PLAY to start the playback mode.
(4) Press EJECT and make sure the torque value of the TW-7131 torque cassette (both supply and take-up reel sides) complies with the following specifications during the unthreading (unloading) operation.
Specifications : EJECT torque 5 to 10g·cm
(5) Set the torq Adj test menu to OFF (the following message should appear).
FL tube display message : torq Adj oFF

4-3-8. FF/REW time check

Check the FF/REW time when you replace the mechanical deck assembly, drum assembly, and reel motor.

Equipment and Tools Required

Cassette tape (any 120-minute tape sold in the market) for checking the operation
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] in the SERVICE MENU and make the following selection.
FL tube display message : torq Adj oFF
(2) Attach the 120-minute cassette tape for the operation check to the cassette weight and mount the weight on the mechanical deck.
Note : Since the loading operation will start almost immediately after you mount the cassette weight on the mechanical deck, mount it quickly.
(3) Press FF to start the FF operation from the beginning to the end of the tape. Make sure the tape winding time complies with the following specifications.
Specifications :
Tape winding time Maximum 60 seconds
(4) Press REW to start the REW operation from the end to the beginning of the tape. Make sure the tape winding time complies with the following specifications.
Specifications : REW mode time Maximum 60 seconds
(5) Press EJECT. After the tape is wound, remove the cassette tape from the mechanical deck.

4-4. Tape Path Adjustment

4-4-1. Tape running check (1)

Check the tape running system when you replace the mechanical deck assembly, drum assembly, capstan motor, reel motor, pinch roller assembly, and DR-139 board. The following section explains how to check tape running conditions in the PLAY mode or CUE mode.(The state in which the capstan axis and pinch roller are in contact with each other.) Perform the following procedure while the cassette compartment is removed from the mechanical deck.

Equipment and Tools Required

Cassette tape (any 120-minute tape sold in the market) for checking the operation
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Preparation

Insert the cassette compartment dummy connector in the CN106 connector on the DR-139 board.

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selection.
FL tube display message : Path Adj oFF
(2) Attach the 120-minute cassette tape for the operation check to the cassette weight and mount them on the mechanical deck.
(3) Press PLAY to start the playback mode.
(4) Follow instructions ① and ② below to check the tape running conditions. See the Guide Position Diagram for each guide position.
① Confirm that the tape does not come out from the flanges of the S1, T1, S2, T2, S3, T3 and F guides.
Note : Tape curling is accepted as long as it is within the specified range (see figure below). If the S1 and T1 guides are displaced to a large height, tape curling may occur at the S2 and T2 guides. In that case, first follow the procedure

in "4-4-3. Tape path fine adjustment" and adjust the S1 and T1 guides, and then check item ① above.

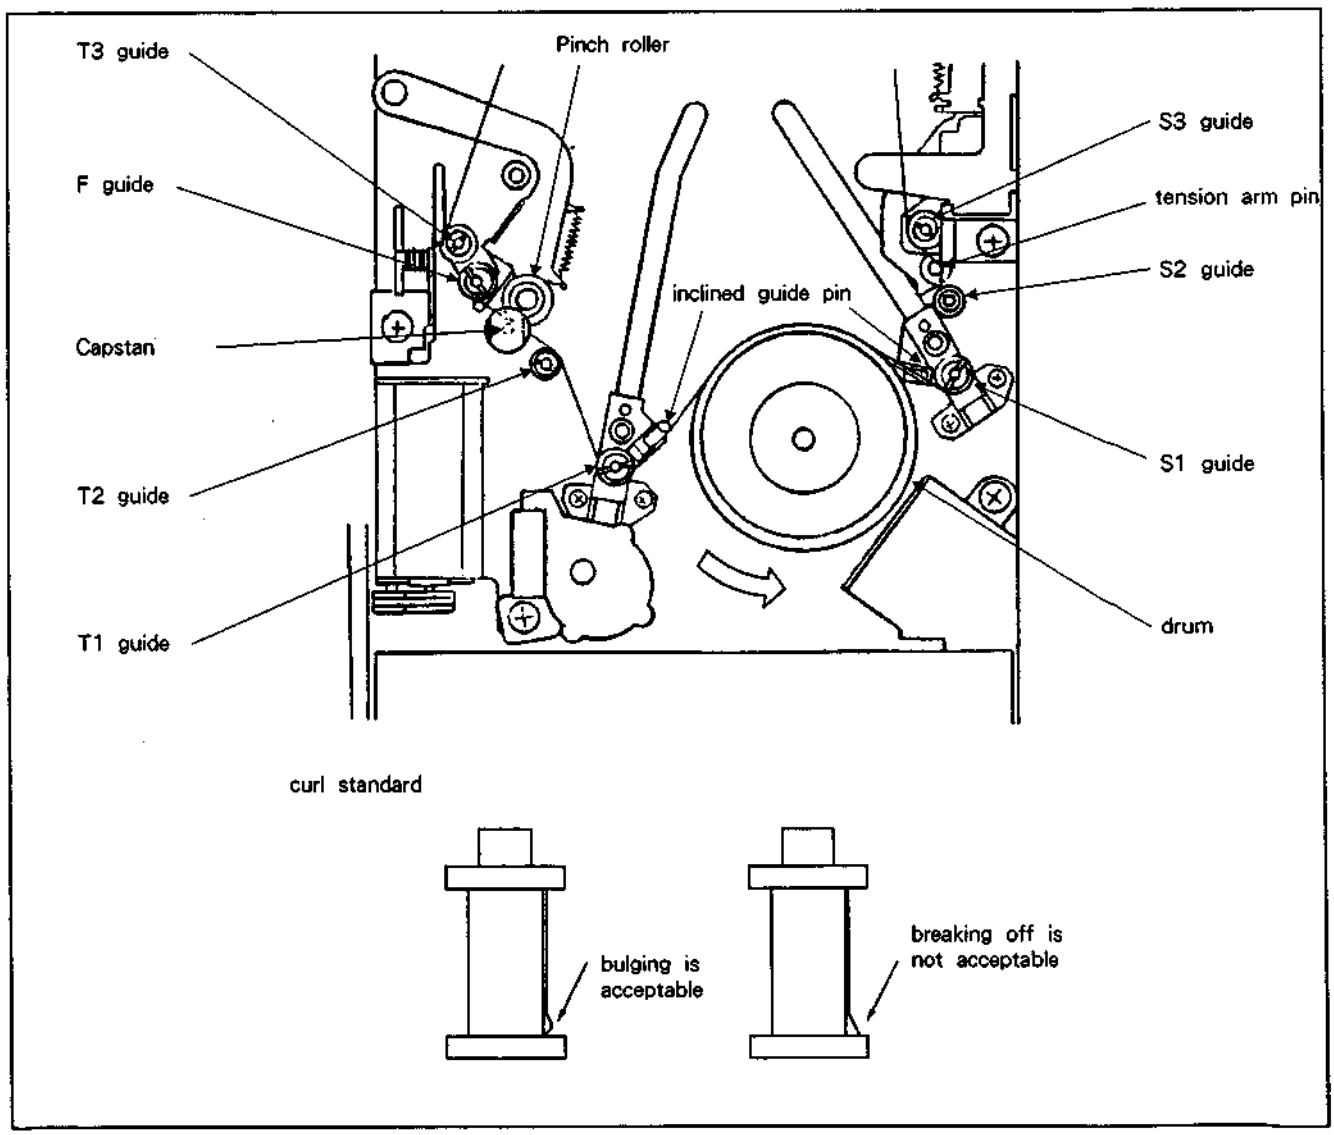
② Confirm that the tape is not slack end, wrinkled, or twisted before and after the pinch roller (capstan axis).

Note : When you switch between the FWD and REV modes, a tape may sometimes be stretched or twisted. If the tape recovers from such a slack end or twist within 2 seconds, the condition is acceptable. Wrinkling of tape, however, is not acceptable.

(5) Check items 1 and 2 of step (4) above for each operation (FWD 1/5, 1/2, 1, 3, 8, 16 ; REV -1 /5, -1/2, -1, -3, -8, -16) of the CUE mode.

Note : You can display the speed of each mode on the FL tube display. See "2-8. Service Menu" in Section 2 for information on the displaying method.

Example : FWD 1/5→0_2 (display)



4-4-2. Tape running check (2)

Check the tape running system when you replace the mechanical deck assembly, drum assembly, capstan motor, reel motor, and pinch roller assembly, and DR-139 board. The following section explains how to check the tape running conditions in the FF mode or REW mode.(The state in which the capstan axis and pinch roller are separated from each other.) Perform the following procedure while the cassette compartment is removed from the mechanical deck.

Equipment and Tools Required

Cassette tape (any 120-minute tape sold in the market) for checking the operation
Cassette weight (J-6224-140-A)
Cassette compartment dummy connector

Preparation

Insert the cassette compartment dummy connector in the CN106 connector on the DR-139 board.

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selection.
FL tube display message : PAtH Adj oFF
(2) Attach the 120-minute operation check cassette tape to the cassette weight and mount them on the mechanical deck.
(3) Press FF to start the FF mode.
(4) Follow the instructions below to check the tape running condition near the beginning of a tape. Confirm that the tape is not come out from the flanges of the S1, T1, S2, T2, S3, T3 and F guides.
Note : Tape curling is accepted as long as it is within the specified range (see page 4-15 for curl specifications).
(5) Press REW to start the REW mode.
(6) Follow the instructions indicated in step (4) to check the tape running condition near the end of a tape.

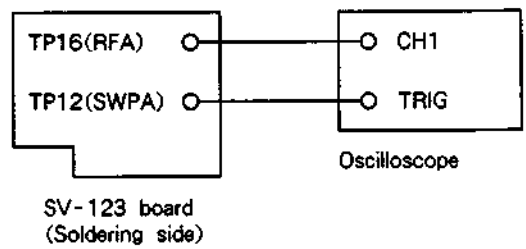
4-4-3. Tape path fine adjustment

Make fine adjustments of the tape path when you replace the mechanical deck assembly, drum assembly, capstan motor, reel motor, and pinch roller assembly, and DR-139 board. Perform the following adjustment and the subsequent items while the cassette compartment is mounted in the mechanical deck. Be sure to execute the procedure in "4-2. Mechanism Device Test" to make sure there are no errors when the cassette compartment is mounted in the mechanical deck.

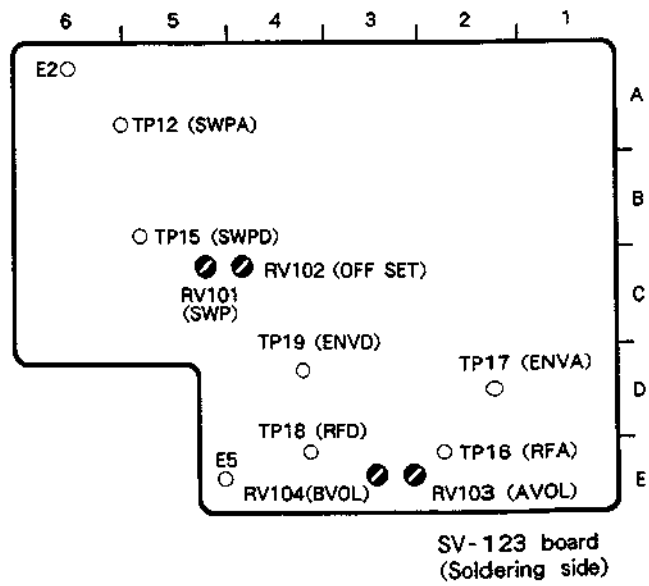
Equipment and Tools Required

Oscilloscope
CH1 : AC 200mV/DIV
TY-7251 Test tape (8-909-813-00)
Adjustment driver (J-6225-100-A)

Connections



Adjustment Location



Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selection.
FL tube display message : PatH Adj on

(2) Connect the oscilloscope to the SV-123 board as indicated below.
CH1 : TP16 (RF-A) • E5 (GND), SV-123 board
TRIG : TP12 (SWP-A) • E2 (GND), SV-123 board

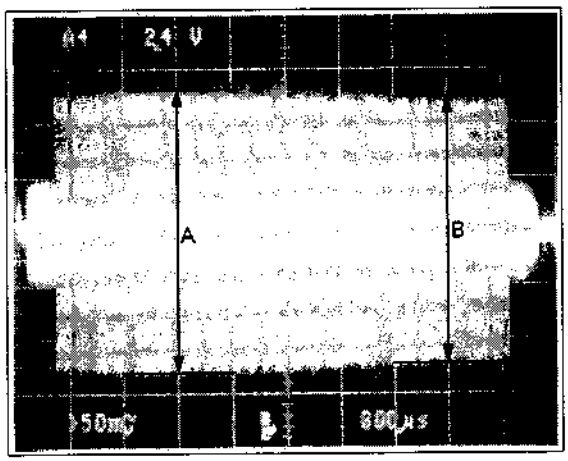
(3) Load the TY-7251 test tape.

(4) Press PLAY to playback the TY-7251 test tape.

(5) Adjust ◐RV102 on the SV-123 board to obtain maximum output of the RF signal waveform on the oscilloscope.

(6) Make fine adjustments of the S1 and T1 guides so that the RF signal waveform of the oscilloscope CH1 complies with the following specifications.
Specifications : $\frac{B}{A} \times 100(\%) \geq 90\%$

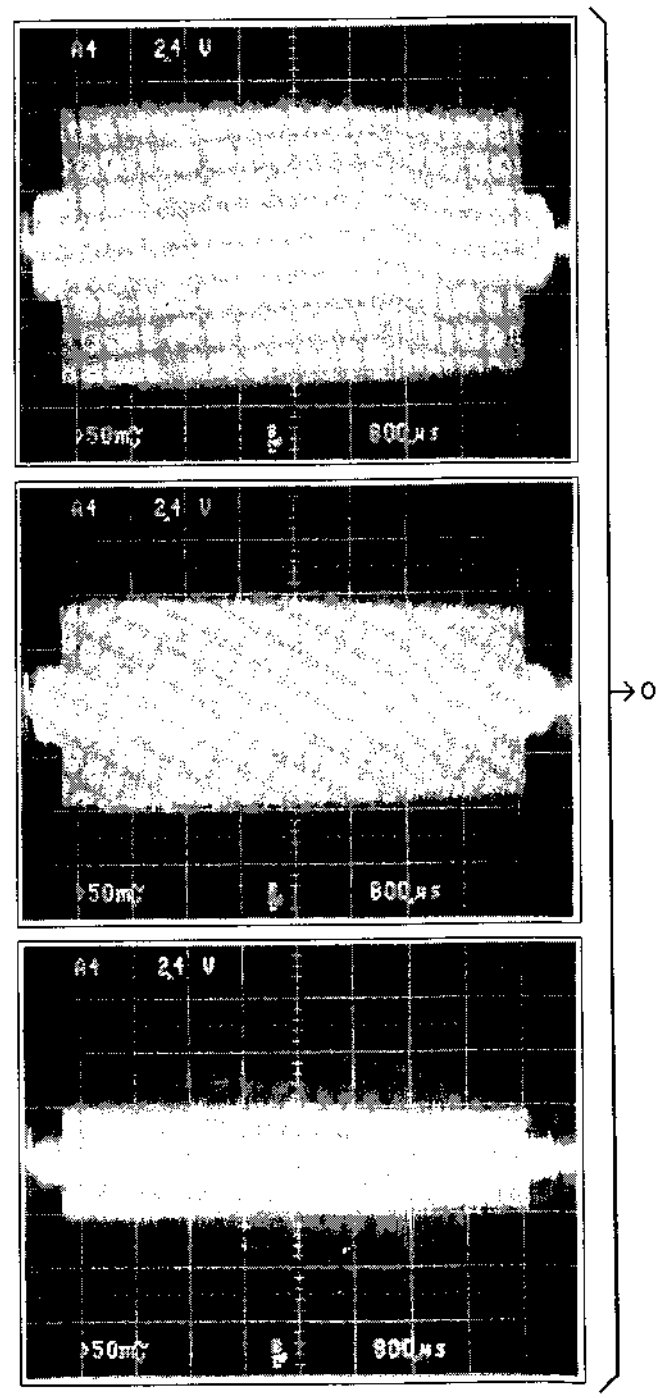
TP16 RF signal waveform A' ch



max A
min B

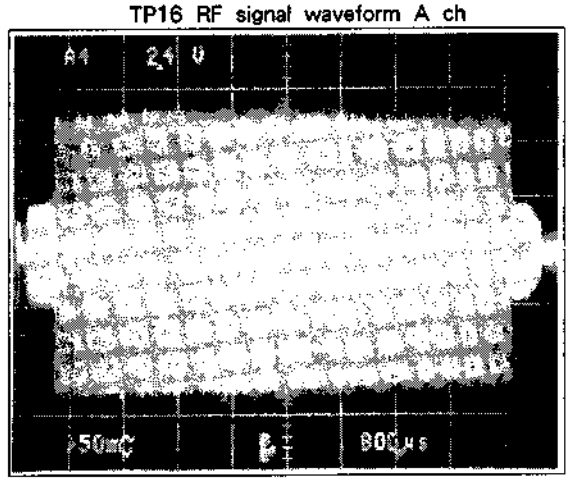
Note : If you adjust the S1 and/or T1 guides, press PLAY again after pressing EJECT and make sure the RF signal waveform complies with the above specifications. (This is because, sometimes, a guide may become skewed when you apply force to the adjusting screwdriver during adjustment.)

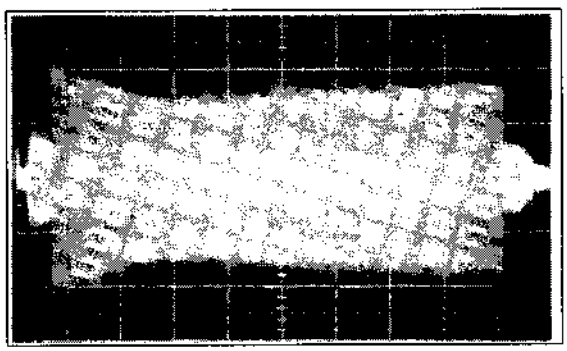
(7) Turn ◐RV102 (OFFSET VR) on the SV-123 board to make sure the above RF signal waveform is changed in a parallel direction.

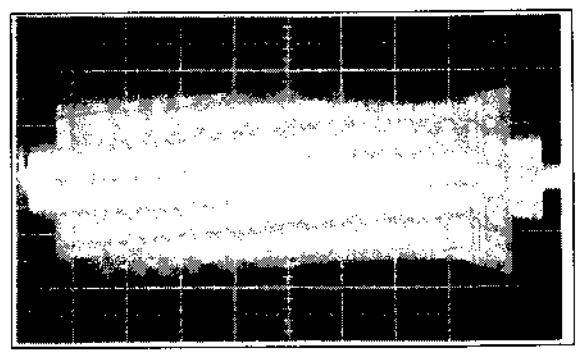


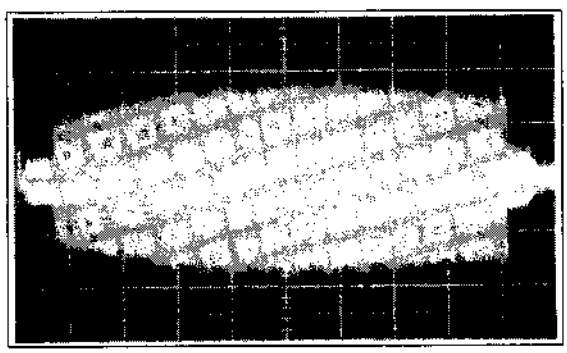
If the waveform is not good

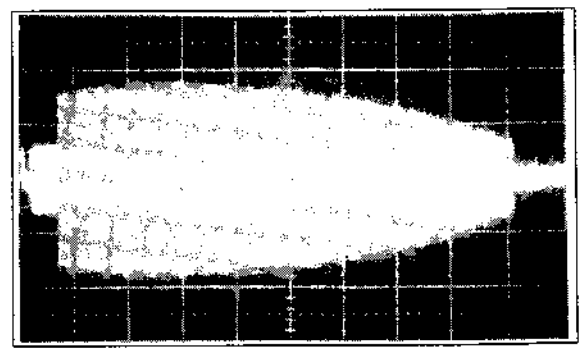
TP16 RF signal waveform A ch









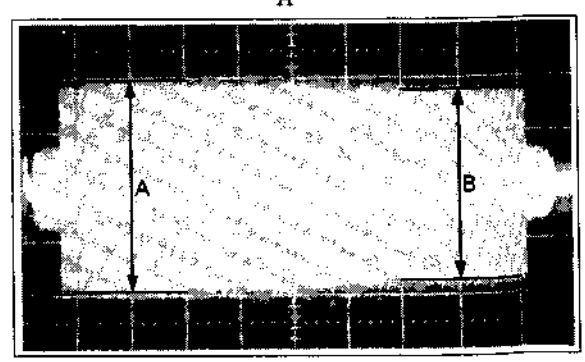


If the input waveform is not good, readjust the S1 guide.

If the output waveform is no good, readjust the T1 guide.

(8) Turn ◐RV102 (OFFSET VR) on the DR-139 board so that the RF signal waveform level will be at 80% (maximum). At that time, confirm that the RF signal waveform complies with the following specifications. If the waveform is not good, repeat steps (6) and (7).

Specifications : $\frac{B}{A} \times 100(\%) \geq 80\%$



TP16 RF signal waveform A ch

4-4-6. Overall tape path check

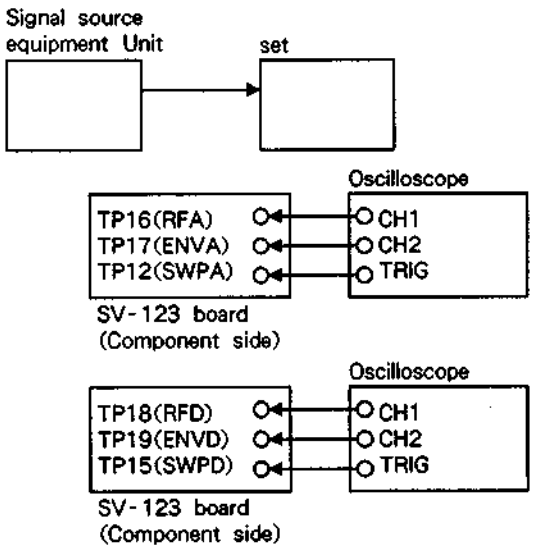
Equipment and Tools Required

Oscilloscope

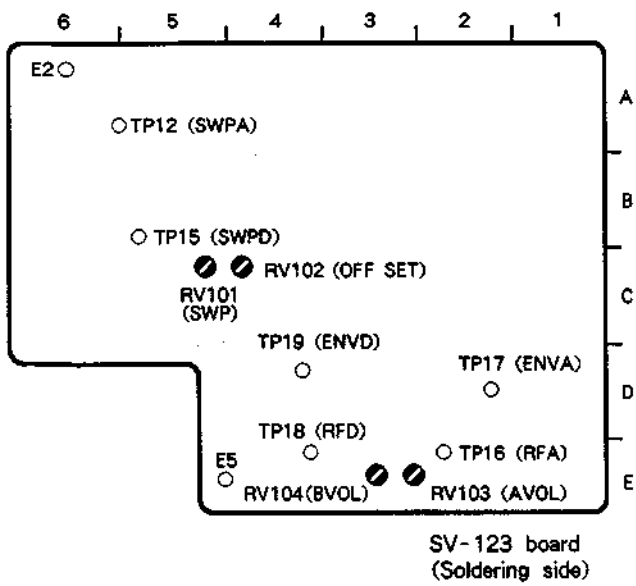
Cassette tape (any 120-minute tape sold in the market) for checking the operation

Signal source equipment (low frequency oscillator) A signal can be a sine wave or a music signal with a signal input level of about standard level.

Connections



Measurement Location



Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selection.
FL tube display message : PatH Adj oFF

(2) Transmit an input signal level of about 0dB from the signal source equipment.

(3) Load the 120-minute cassette tape for checking the operation in the mechanical deck.

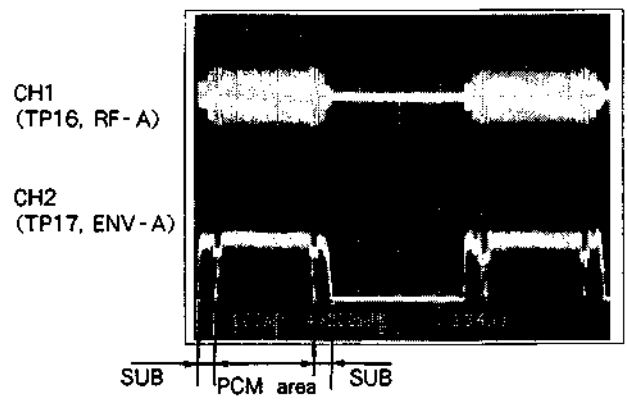
(4) Set the recording mode to ASSEMBLE and record the signal of step (2) above (for about 2 minutes).

(5) Playback the recorded portion and check the following items.

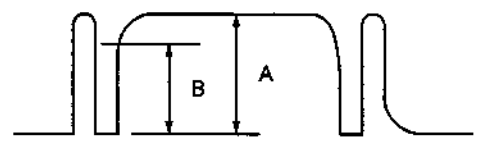
Leading head RF check

(6) Connect the oscilloscope to the SV-123 board as indicated below.
Oscilloscope
CH1 : TP16 (RF-A) · E5 (GND), SV-123 board
CH2 : TP17 (ENV-A) · E5 (GND), SV-123 board
TRIG : TP12 (SWP-A) · E2 (GND), SV-123 board

(7) Make sure the PCM area of the oscilloscope CH2 waveform (TP17, envelope) complies with the following specifications.



Observe the PCM area.



Specifications : $\frac{B}{A} \times 100\% \geq 80\%$

(8) After pressing EJECT, load a cassette tape to check the operation again. Press PLAY and check if the oscilloscope CH2 waveform (TP17, envelope) attains the specification range indicated in step (7) within 3 seconds (the waveform stabilizes within 3 seconds).

(9) In the same way as step (8), change the mode to PLAY from REV (x1) and check if the oscilloscope CH2 waveform (TP16, envelope) attains the specification range indicated in step (7) within 2 seconds (the waveform stabilizes within 2 seconds).

(10) Press STOP.

Trailing head RF check

(11) Connect the oscilloscope to the SV-123 board as indicated below.

Oscilloscope

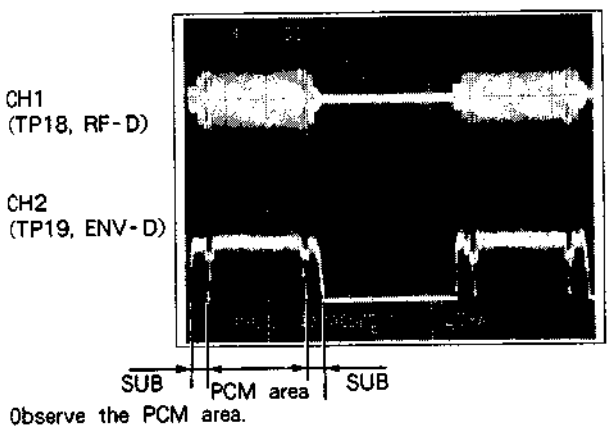
CH1 : TP18 (RF-D) · E5 (GND), SV-123 board

CH2 : TP19 (ENV-D) · E5 (GND), SV-123 board

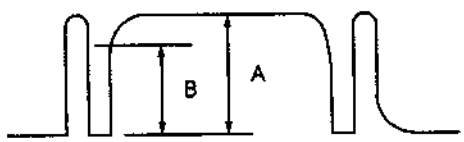
TRIG : TP15 (SWP-D) · E2 (GND), SV-123 board

(12) Press PLAY to playback the portion recorded in step (4) and check the following item.

(13) Make sure the PCM area of oscilloscope CH2 waveform (TP19, envelope) complies with the following specifications.



Observe the PCM area.



Specifications : $\frac{B}{A} \times 100\% \geq 80\%$

(14) After pressing EJECT, load a cassette tape to check the operation again. Press PLAY and check if the oscilloscope CH2 waveform (TP19, envelope) attains the specification range indicated in step (13) within 3 seconds (the waveform stabilizes within 3 seconds).

(15) In the same way as step (14), change the mode to PLAY from REV (x1) and check if the oscilloscope CH2 waveform (TP19, envelope) attains the specification range indicated in step (13) within 2 seconds (the waveform becomes stable within 2 seconds).

(16) Press EJECT and remove the cassette tape for checking the operation.

4-5. Servo Block Adjustment

4-5-1. SWP position adjustment

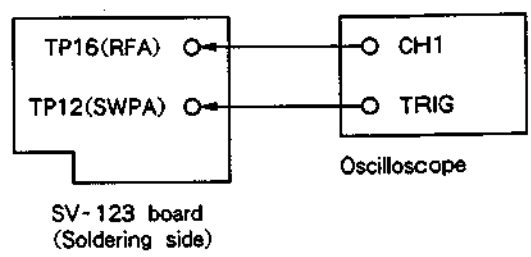
Adjust the SWP position when you replace the mechanical deck assembly, drum assembly, and SV-123 board. Perform the following adjustment while the cassette compartment is mounted in the mechanical deck.

Equipment and Tools Required

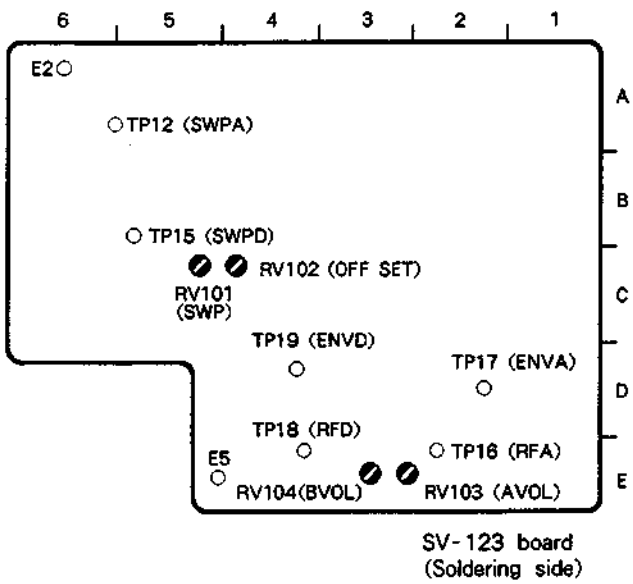
Oscilloscope

TY-7251 Test tape (8-909-813-00)

Connections



Adjustment Location



Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selections.
FL tube display message : PatH Adj on and
FL tube display message : dPG Adj on

(2) Connect the oscilloscope to the SV-123 board as indicated below.
CH1 : TP16 (RF-A) · E5 (GND), SV-123 board
CH2 : TP18 (RF-D) · E5 (GND), SV-123 board
CH3 : TP12 (SWP-A) · E1 (GND), SV-123 board

(3) Load the TY-7251 test tape.

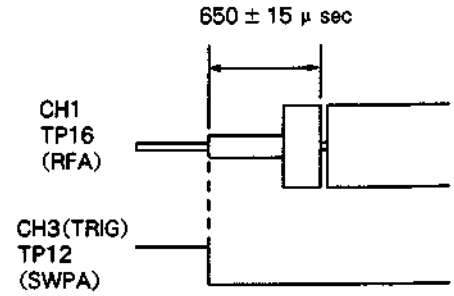
(4) Press PLAY to playback the TY-7251 test tape.

(5) Adjust ●RV102 on the SV-123 board to obtain maximum output of the RF waveform of oscilloscope CH1.

(6) Adjust ●RV101 on the SV-123 board so that the RF output waveform of oscilloscope CH1 complies with the following specifications.
Specifications :
T of the RF A output waveform = 650usec. ± 15usec.
Adjustment Location : ●RV101, SV-123 board

(7) Press EJECT to remove the TY-7251 test tape from the mechanical deck.

(8) Select the following TEST MENU modes.
FL tube display message : dPG Adj oFF and
FL tube display message : PatH Adj oFF



4-5-2. ATF playback AGC adjustment

Adjust the ATF playback AGC when you replace the mechanical deck assembly and drum assembly. Perform the following adjustment while the cassette compartment is mounted in the mechanical deck.

Equipment and Tools Required

Oscilloscope
TY-7111D Test tape (8-909-820-00)

Connections

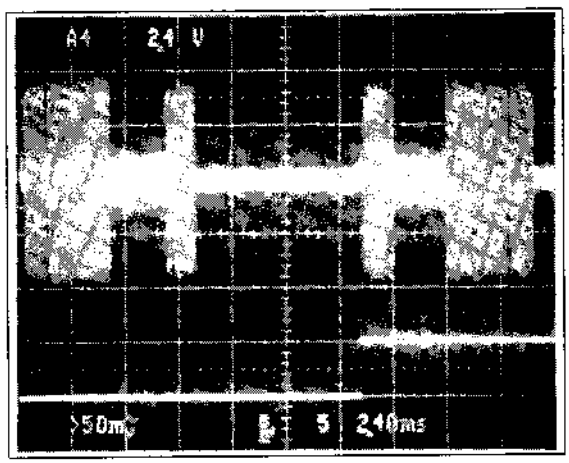
Same as "4-5-1. SWP position adjustment"

Procedure

(1) Enter (OPEN) the TEST MENU [trnSP] and make the following selections.
FL tube display message : AGC Adj on
(flashing)

(2) Load the TY-7111D test tape.

(3) Press PLAY to playback the TY-7111D test tape. At that time, make sure the RF waveform is output properly. The output level of 1.57MHz should be 250mV or more.



(4) Press SET. When you press SET, the message "ON" in the Work Area of FL tube display will be lit instead of flashing.This status indicates that the ATF playback AGC gain is being automatically adjusted (set). The adjusted gain will be displayed on the FL tube display.

(5) Select the following TEST MENU mode and then press SET.
FL tube display message : AGc Adj oFF

(6) Press EJECT to remove the TY-7111D test tape from the mechanical deck.

4-6. Recording/Playback Block Adjustment (Recording current level adjustment)

Adjust the recording current level when you replace the mechanical deck assembly, drum assembly, and RF-31 board assembly. Perform the adjustment while the cassette compartment is mounted in the mechanical deck.

4-6-1. Adjustment using the RF LEVEL CHECKER PD-817

This section provides information on the adjustment method using the RF LEVEL CHECKER PD-817, which is a dedicated adjustment tool. Follow the sequence below to make adjustments :

Equipment and Tools Required

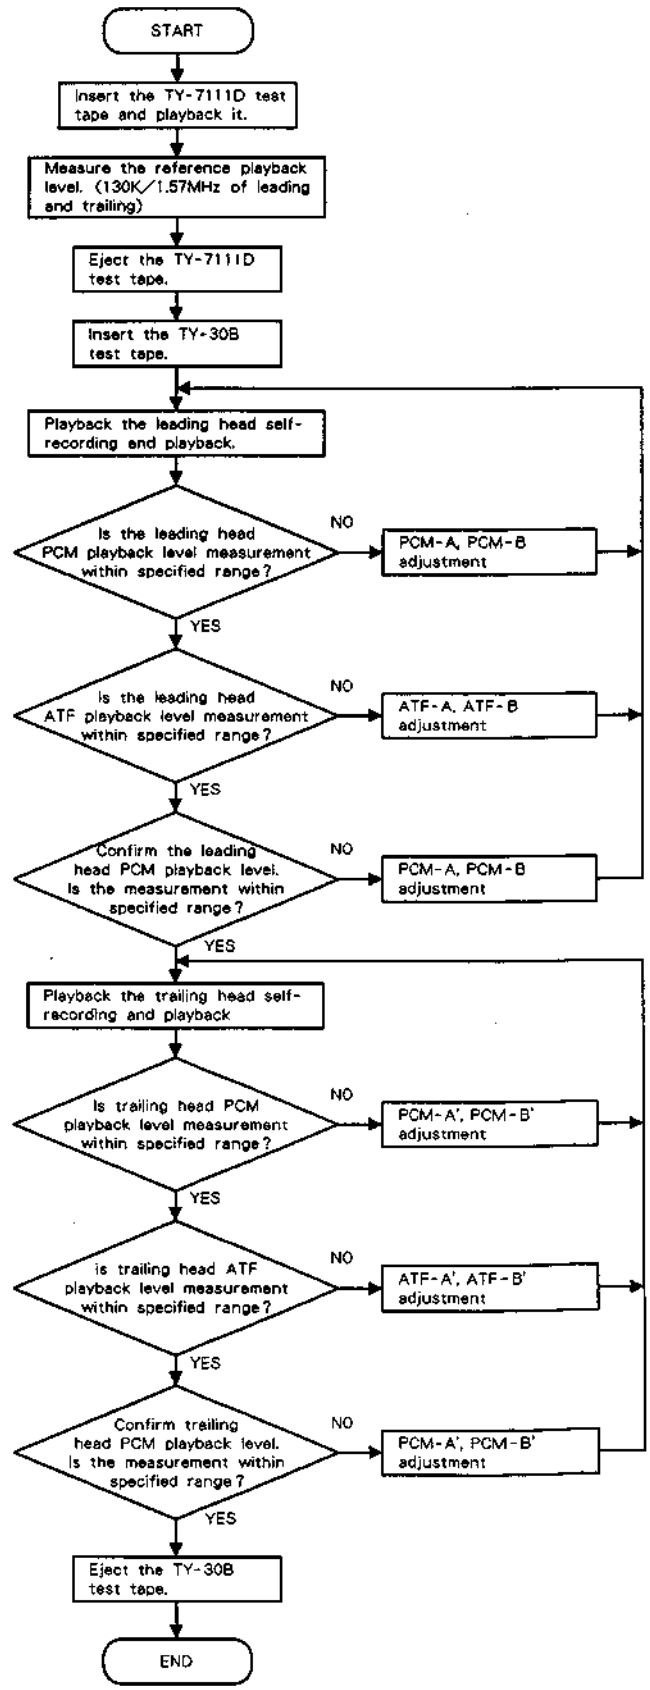
Oscilloscope

RF LEVEL CHECKER PD-817 : (part no. : J-6228-170-A)

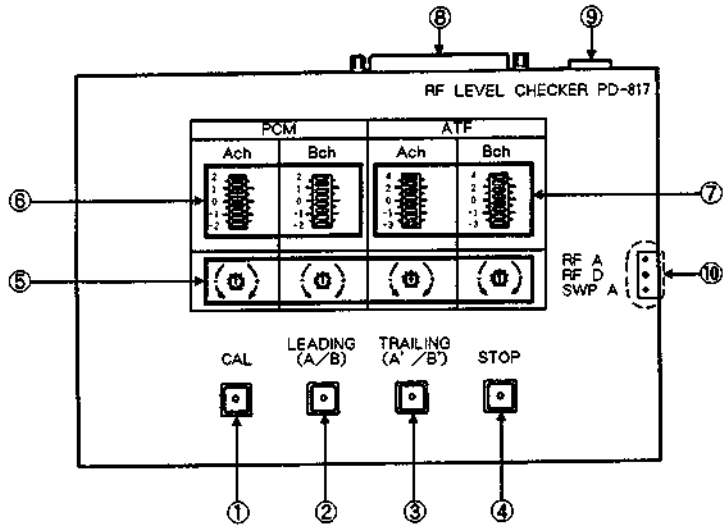
TY-7111D Test tape (part no. : 8-909-820-00)

TY-30B Test tape (part no. : 8-892-358-00)

Adjustment procedure



RF LEVEL CHECKER PD-817



Switches

①CAL ;

Used for automatically measuring the reference level of the TY-7111D test tape. The indicator flashes during measurement. The flashing stops and the measurement is finished (the indicator lights.).

②LEADING (A, B) ;

Used for self-recording and playback (automatic measurement) of PCM and ATF of the leading head using the TY-30B test tape. The indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (the indicator lights.).

③TRAILING (A, B) ;

Used for self-recording and playback (automatic measurement) of PCM and ATF of the trailing head using the TY-30B test tape. The indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (the indicator lights.).

④STOP ;

Used for canceling the measurements of ①、② and ③above.

Control

⑤Offset dial ;

Used for setting the measurement level of the TY-7111D test tape in accordance with the correction value table provided with the TY-7111D test tape to be used.

Level meter

⑥PCM Ach, Bch ;

Used for displaying the measurement results compared with the reference level of the TY-7111D test tape when the leading/trailing head PCM self-recording and playback level has been measured.

⑦ATF Ach, Bch ;

Used for displaying the measurement results compared with the reference level of the TY-7111D test tape when the leading/trailing head ATF self-recording and playback level has been measured.

Connectors

⑧37-Pin remote connector (D-SUB, female) ;

Used to connect the supplied 37P parallel remote cable.

⑨6-pin connector (CN1) ;

Used to connect the supplied 6P connector with RF-EXT board.

⑩Monitor output (RF A, RF B, SWP-A) terminals ;

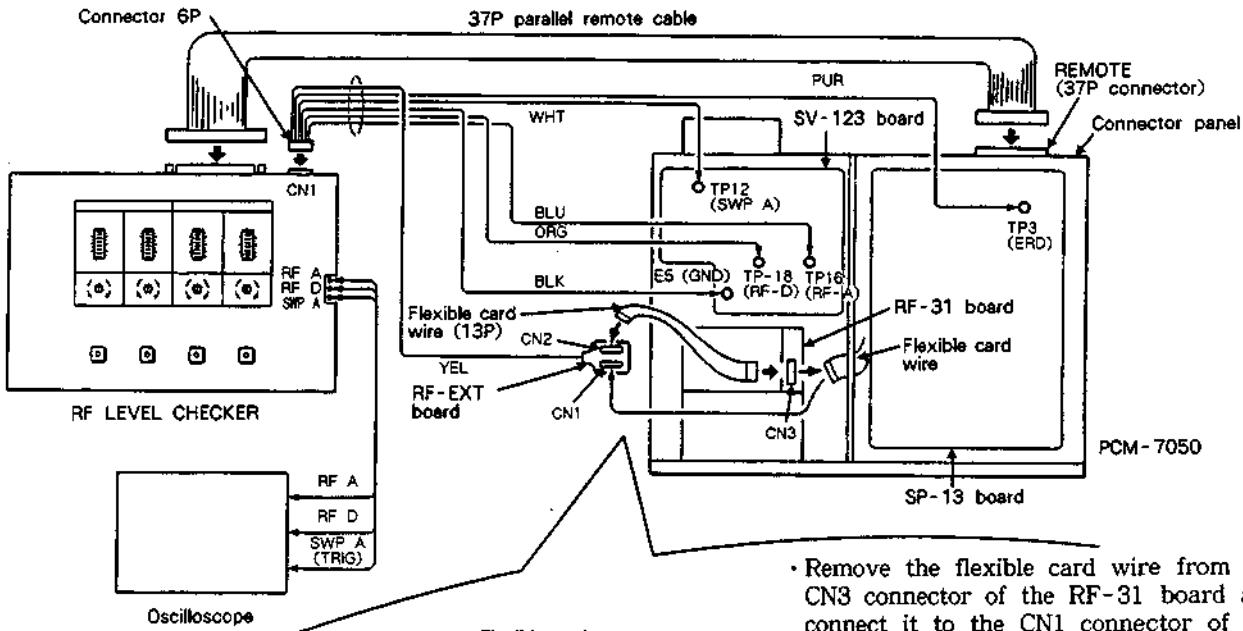
Used to connect the oscilloscope and monitor the RF A and RF B signals (SWP A is TRIG).

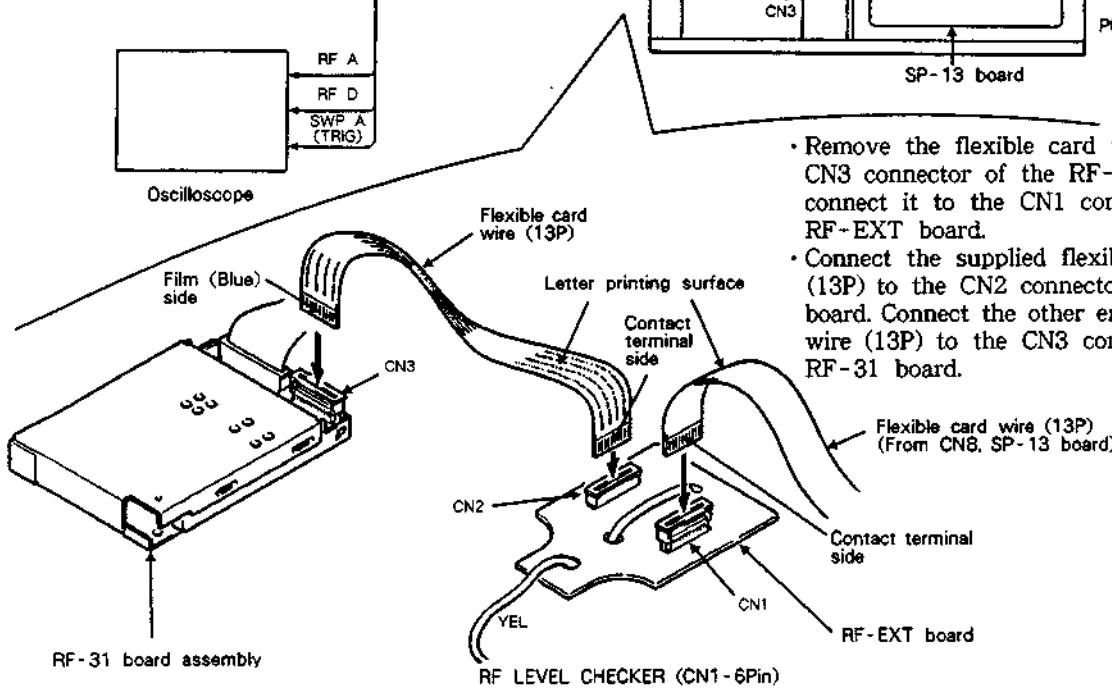
Accessories supplied

- 37P parallel remote cable : 1
- Flexible card wire 13P : 1
- RF-EXT board : 1

Connections

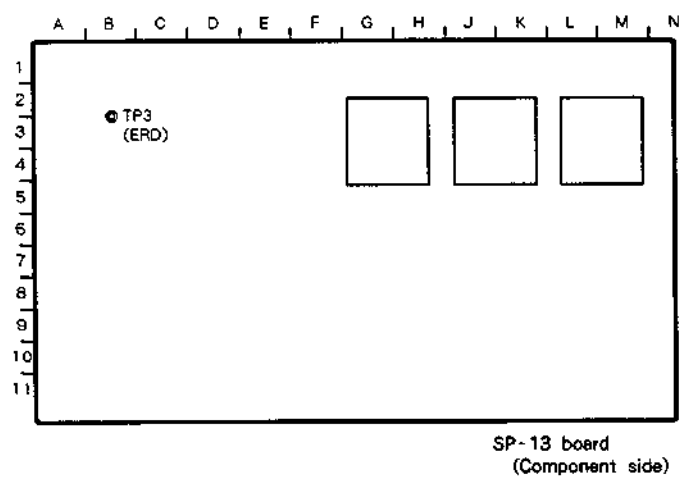
Note : When making the connections, be sure to turn off the power of the PCM-7050.

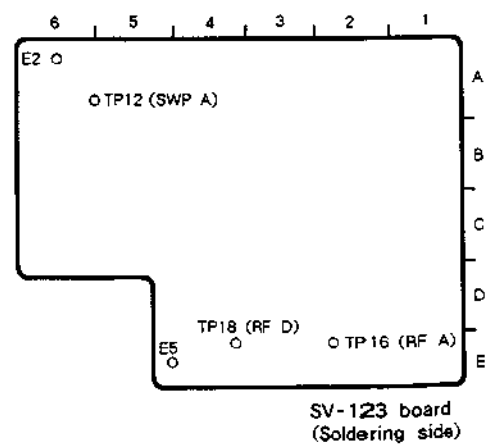




- Remove the flexible card wire from the CN3 connector of the RF-31 board and connect it to the CN1 connector of the RF-EXT board.
- Connect the supplied flexible card wire (13P) to the CN2 connector of RF-EXT board. Connect the other end of the card wire (13P) to the CN3 connector of the RF-31 board.

Measurement location





Preparations

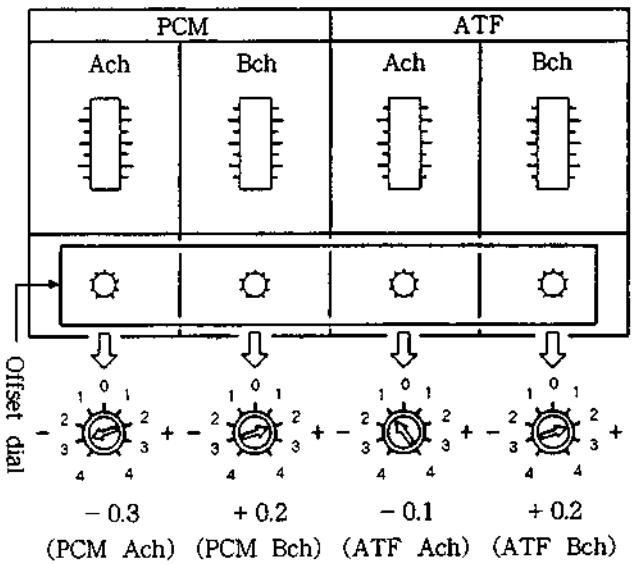
1. Use the offset dial of the RF level checker and set the correction values of the 1.57MHz and 130KHz Ach／Bch in accordance with the correction value table provided with the TY-7111D test tape to be used.

Setting example

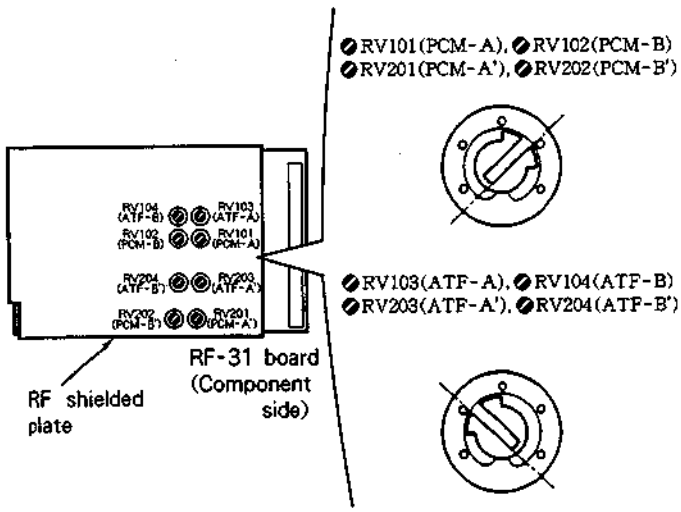
Example of correction value table :

	130.7 (KHz)	1.568 (MHz)
Ach	-0.1	-0.3
Bch	+0.2	+0.2

Offset dial setting (In the case of above correction values)



2. Set each control volume on the RF-31 board mechanically as indicated below.

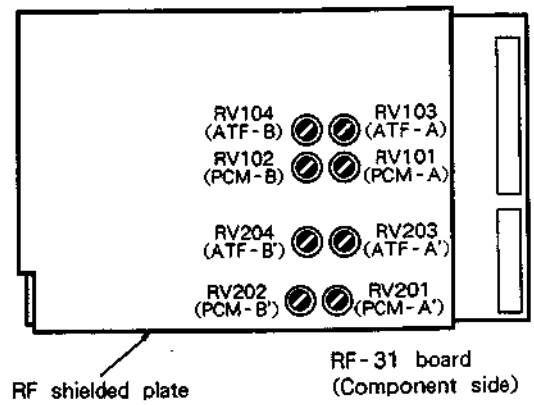


Switches and control setting

PCM-7050 front panel

SYNC mode switch ; INT (internal synchronization mode)

Adjustment location



1. Leading and trailing heads PCM/ATF reference recording current level measurement (TY-7111D test tape playback level measurement)

(1) Insert the TY-7111D test tape.

(2) Press the CAL switch of the RF LEVEL CHECKER. The playback level of 1.57MHz/130KHz of the leading and trailing heads are automatically measured, The CAL indicator flashes during measurement.

(3) The flashing stops and the measurement is finished (The indicator lights.).

(4) Eject the TY-7111D test tape.

Note : Rapid Flashing of the CAL Indicator :

If the playback level data on the TY-7111D test tape cannot be fed for the 128DAT frame, the CAL indicator flashes rapidly.

In this case, perform the following procedures.

①Advance the test tape (playback portion) slightly and perform the measurement again.

②Replace the TY-7111D test tape with a new one and perform the measurement.

If the situation remains the same even when the new test tape is used, the drum may be defective. Replace the drum.

2. Leading head PCM/ATF recording current level adjustment

Notes on adjustment :

1. When adjusting ◐RV101, ◐RV102, ◐RV103, and ◐RV104 be aware of the following items.

1) Mutual relationship between Ach and Bch of PCM adjustment level

- When adjusting the level of the Ach (Bch) indicator to high, the level of the Bch (Ach) indicator will drop slightly.
- When adjusting the level of the Ach (Bch) indicator to low, the level of the Bch (Ach) indicator will drop slightly.

2) Mutual relationship between PCM level and ATF level

- When adjusting the level of the Ach PCM indicator to high (low), the level of the Ach ATF indicator will increase (drop) slightly.
- When adjusting the level of the Bch PCM indicator to high (low), the level of the Bch ATF indicator will increase (drop) slightly.

2. Note on the test menu settings when the TY-30B test tape is loaded.

The test menu "tESt SiG A-tESt in" previously set, will be voided if the tape is repeatedly loaded and ejected. In this case, the test menu "tESt SiG A-tESt in" should be set again otherwise recordings are not possible.

Leading head PCM (Ach, Bch) recording current level adjustment

(1) Load the TY-30B test tape (blank).

(2) Enter (OPEN) the SERVICE MENU and set the following TEST MENU mode.

FL tube display message : tESt SiG A-tSt in

(The ALARM indicator flashes and the ASSEMBLE key indicator lights.)

(3) Press the LEADING switch of the RF level checker to perform the self-recording and playback (automatic measurement).

The LEADING switch indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (The indicator lights.).

Note : If the TY-30B test tape to be used already has a recording, the tape will play for 15 seconds and then stop. If this happens, replace the TY-30B test tape with a blank tape and retry from step (3).

(4) Make sure the level meter indication (Ach and Bch PCM levels) of the RF level checker complies with the following specifications.

If the playback Ach and Bch PCM levels do not comply with the specifications, adjust ◐RV101 and ◐RV102 on the RF-31 board as indicated below.

If the indication level of a level meter is higher than the specifications :

- Leading head Ach PCM level ;

Turn ◐RV101 counterclockwise.

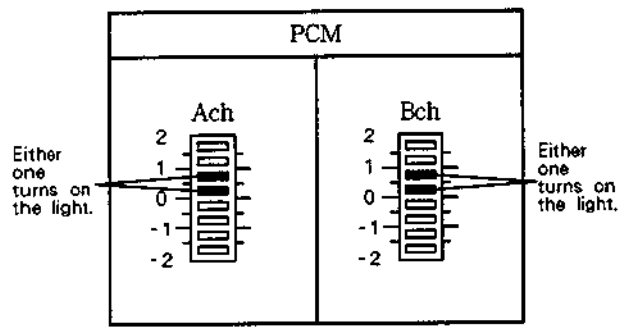
- Leading head Bch PCM level ;
  Turn ◐RV102 counterclockwise.

If the indication level of a level meter is lower than the specifications :

- Leading head Ach PCM level ;
  Turn ◐RV101 clockwise.
- Leading head Bch PCM level ;
  Turn ◐RV102 clockwise.

Specifications :

Level indicators of the PCM (Ach, Bch) level meter of the RF LEVEL CHECKER = Light indicators between 0dB and 1dB.



Adjustment : ◐RV101 (Ach, PCM), RF-31 board
◐RV102 (Bch, PCM), RF-31 board

Note : Rapid flashing of the LEADING switch indicator means that enough data cannot be gathered for the 128 DAT frame because the recording current level is considerably lower than the reference level. In this case, the indicator flashes rapidly.

Under this condition, adjust the control volume (turn ◐RV101 and ◐RV102 clockwise). Perform the measurement by pressing the LEADING switch again.

If the same condition occurs even when you increase the recording level to maximum (by turning ◐RV101 and ◐RV102 clockwise), the TY-30B test tape may be slack or the drum may be defective. Therefore, replace the TY-30B test tape or the drum with new ones.

(5) Repeat steps (3) and (4) until you get the playback level that complies with the specifications indicated in step (4).

Leading head ATF (Ach, Bch) recording current level adjustment

(6) Press the LEADING switch of the RF LEVEL CHECKER to perform the self-recording and playback (automatic measurement).
The LEADING switch indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (the indicator lights.).

(7) Make sure the level meter indication (leading head Ach and Bch ATF level) of the RF LEVEL CHECKER complies with the following specifications.
If the playback Ach and Bch ATF levels do not comply with the specifications, adjust ◐RV103 and ◐RV104 on the RF-31 board as indicated below.

If the indication level of a level meter is higher than the specifications :

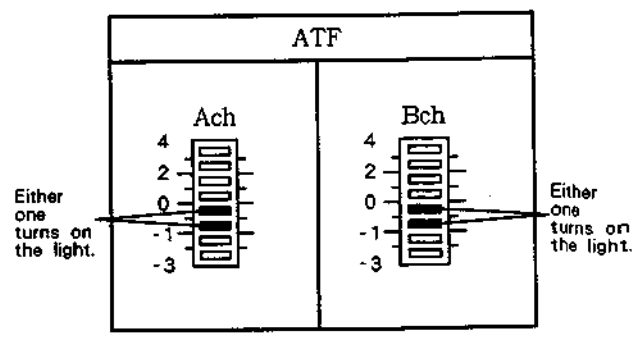
- Leading head Ach ATF level ;
  Turn ◐RV103 counterclockwise.
- Leading head Bch ATF level ;
  Turn ◐RV104 counterclockwise.

If the indication level of a level meter is lower than the specifications :

- Leading head Ach ATF level ;
  Turn ◐RV103 clockwise.
- Leading head Bch ATF level ;
  Turn ◐RV104 clockwise.

Specifications :

Level indicators of the ATF (Ach, Bch) level meter of the RF LEVEL CHECKER = Light indicators between -1dB and 0dB.



Adjustment : ◐RV103 (Ach, ATF), RF-31 board
◐RV104 (Bch, ATF), RF-31 board

(8) Repeat steps (6) and (7) until you get the playback level that complies with the specifications indicated in step (7).

(9) After adjusting the ATF level, make sure the PCM (Ach, Bch) level indication complies with the specifications indicated in step (4).
If the PCM level does not comply with the specifications, make adjustments as indicated in step (3) onwards.

3. Trailing head PCM/ATF recording current level adjustment

Notes on adjustment :

1. When adjusting ◐RV201, ◐RV202, ◐RV203, and ◐RV204 be aware of the following items.
   1) Mutual relationship between Ach and Bch of PCM adjustment level
      · When adjusting the level of the Ach (Bch) indicator to high, the level of the Bch (Ach) indicator will drop slightly.
      · When adjusting the level of the Ach (Bch) indicator to low, the level of the Bch (Ach) indicator will drop slightly.
   2) Mutual relationship between PCM level and ATF level
      · When adjusting the level of the Ach PCM indicator to high (low), the level of the Ach ATF indicator will increase (drop) slightly.
      · When adjusting the level of the Bch PCM indicator to high (low), the level of the Bch ATF indicator will increase (drop) slightly.
2. Note on the test menu settings when the TY-30B test tape is loaded.
   The test menu "tESt SiG d-tESt in" previously set, will be voided if the tape is repeatedly loaded and ejected. In this case, the test menu "tESt SiG d-tESt in" should be set again otherwise recordings are not possible.

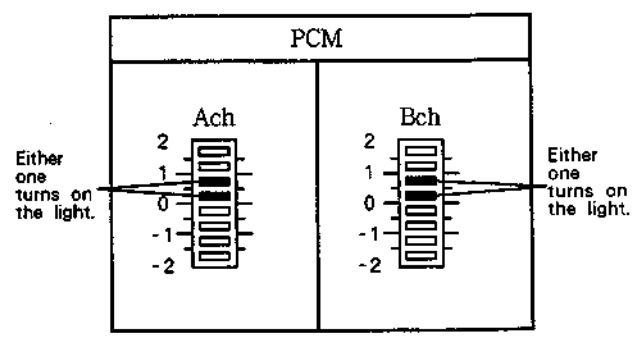
Trailing head PCM (Ach, Bch) recording current level adjustment

(1) Insert the TY-30B test tape (blank).

(2) Enter (OPEN) the SERVICE MENU and select the following TEST MENU mode.
FL tube display message : tESt SiG d-tSt in
(Only the ALARM indicator flashes.)

(3) Press the TRAILING switch of the RF level checker to perform the self-recording and playback (automatic measurement).
The TRAILING switch indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (The indicator lights.)

(4) Make sure the level meter indication (Ach and Bch PCM level) of the RF level checker complies with the following specifications.
If the playback Ach and Bch PCM levels do not comply with the specifications, adjust ◐RV201 and ◐RV202 on the RF-31 board as indicated below.
If the indication level of a level meter is higher than the specifications :
· Trailing head Ach PCM level ;
Turn ◐RV201 counterclockwise.
· Trailing head Bch PCM level ;
Turn ◐RV202 counterclockwise.
If the indication level of a level meter is lower than the specifications :
· Trailing head Ach PCM level ;
Turn ◐RV201 clockwise.
· Trailing head Bch PCM level ;
Turn ◐RV202 clockwise.
Specifications :
Level indicators of the PCM (Ach, Bch) level meter of the RF LEVEL CHECKER = Light indicators between 0dB and 1dB.



Adjustment : ◐RV201 (Ach, PCM), RF-31 board
◐RV202 (Bch, PCM), RF-31 board

Note : Rapid flashing of the TRAILING switch indicator means that enough data cannot be gathered for the 128DAT frame because the recording current level is considerably lower than the reference level. In this case, the indicator flashes rapidly.

Under this condition, adjust the control volume (turn ◐RV201 and ◐RV202 clockwise). Perform the measurement by pressing the TRAILING switch again.

If the same condition occurs even when you increase the recording level to maximum (by turning ◐RV201 and ◐RV202 clockwise), the TY-30B test tape may be slack or the drum may be defective. Therefore, replace the TY-30B test tape or the drum with new ones.

(5) Repeat steps (3) and (4) until you get the playback level that complies with the specifications indicated in step (4).

Trailing head ATF (Ach, Bch) recording current level adjustment

(6) Press the TRAILING switch of the RF LEVEL CHECKER to perform the self-recording and playback (automatic measurement).

The TRAILING switch indicator flashes during self-recording and playback. The flashing stops and the measurement is finished (The indicator lights.).

(7) Make sure the level meter indication (trailing head Ach and Bch ATF level) of the RF LEVEL CHECKER complies with the following specifications.

If the playback Ach and Bch ATF levels do not comply with the specifications, adjust ◐RV203 and ◐RV204 on the RF-31 board as indicated below.

If the indication level of a level meter is higher than the specifications :

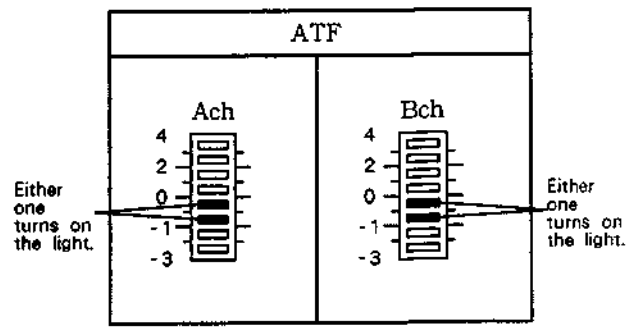
- Trailing head Ach ATF level ;
  Turn ◐RV203 counterclockwise.
- Trailing head Bch ATF level ;
  Turn ◐RV204 counterclockwise.

If the indication level of a level meter is lower than the specifications :

- Trailing head Ach ATF level ;
  Turn ◐RV203 clockwise.
- Trailing head Bch ATF level ;
  Turn ◐RV204 clockwise.

Specifications :

Level indicators of the ATF (Ach, Bch) level meter of the RF LEVEL CHECKER = Light indicators between -1dB and 0dB.



Adjustment : ◐RV203 (Ach, ATF), RF-31 board
◐RV204 (Bch, ATF), RF-31 board

(8) Repeat steps (6) and (7) until you get the playback level that complies with the specifications indicated in step (7).

(9) After adjusting the ATF level, make sure the PCM (Ach, Bch) level indication complies with the specifications indicated in step (4).

If the PCM level does not comply with the specifications, make adjustments as indicated in step (3) onwards.

4-6-2. Adjustment using a spectrum analyzer

This section provides information on the adjustment method using the spectrum analyzer. Follow the sequence below to make adjustments :

Adjustment Location

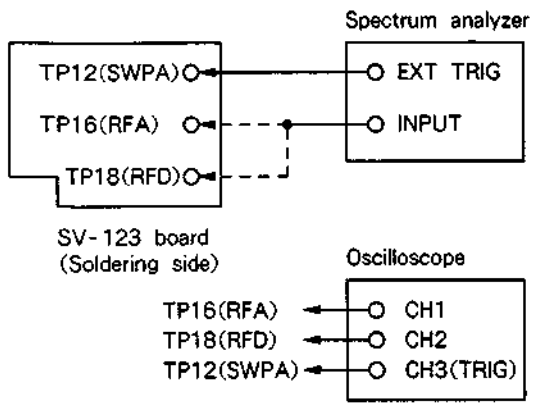
1. Leading head PCM recording current level adjustment
2. Leading head ATF recording current level adjustment
3. Trailing head PCM recording current level adjustment
4. Trailing head ATF recording current level adjustment

Note : Perform the adjustment while the cassette compartment is mounted in the mechanical deck.

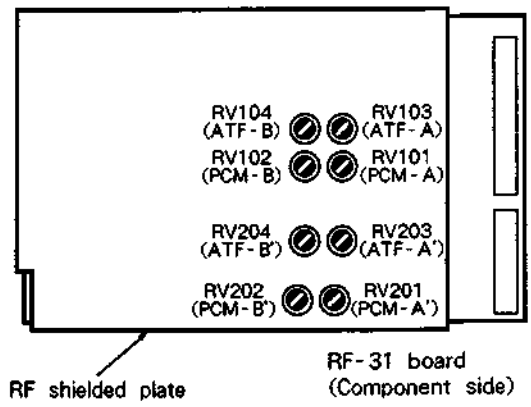
Equipment and Tools Required

Spectrum analyzer
Oscilloscope
TY-7111D Test tape (8-909-820-00)
TY-30B test tape (8-892-358-00)

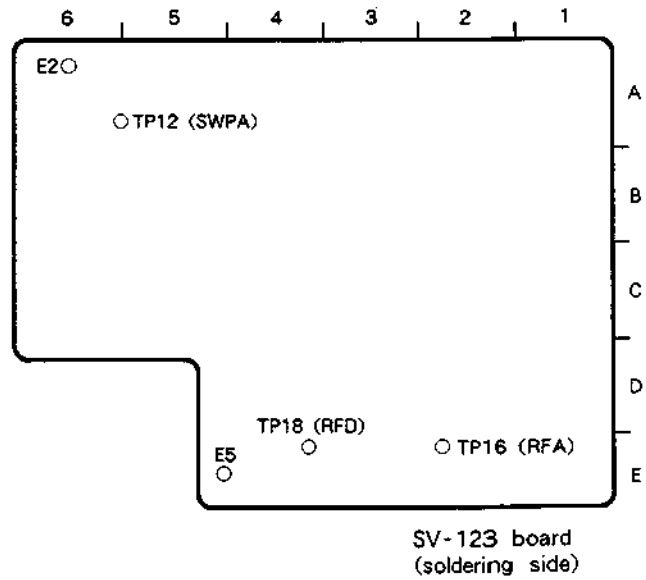
Connections



Adjustment Location



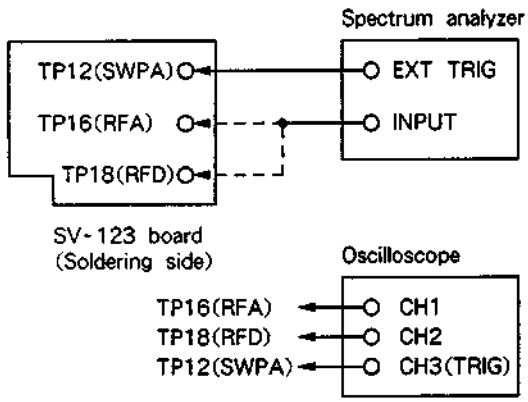
Measurement Location



1. Leading head PCM recording current level adjustment

Leading head A ch recording current level adjustment

(1) Connect the spectrum analyzer to the SV-123 board as shown below.

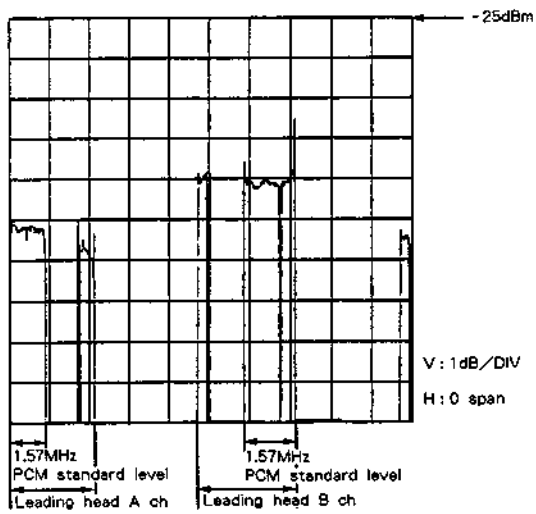


(2) Set the spectrum analyzer as indicated below.

Center frequency	: 1.57MHz
Reference level	: -25dBm
Frequency span	: 0Hz
Resolution Bandwidth (RBW)	: 30kHz
Video Bandwidth (VBW)	: 300kHz
Input ATT	: 10dB
SWP	: 30msec.

(3) Load the TY-7111D test tape and play the tape.

(4) Find the average of the RF output waveforms using the spectrum analyzer and store the data in the spectrum analyzer memory.



(5) Press EJECT to remove the TY-7111D test tape.

(6) Load the TY-30B test tape (blank).

Note : You need to load the TY-30B test tape to specify the "tESt SiG A-157_13" of the TEST MENU.

(7) Enter (OPEN) the SERVICE MENU and select the following TEST MENU mode.

FL tube display message : tESt SiG oFF

(8) Hold down the DATA key and turn the SEARCH dial clockwise until the following message appears. Then, press SET.

FL tube display message : tESt SiG A-157_13 (flashing → ON)

(9) Press REC and PLAY to record the test signal specified in step (7) (for about 30 seconds).

Note : Since the time code will not be recorded in this mode, specify the display counter mode and use it as a guide to find the recorded portion of a tape.

(10) Playback the portion of the TY-30B test tape recorded in step (9).

(11) Make sure the playback Leading head A ch PCM level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard Leading head A ch PCM level (TY-7111D test tape). If the playback Leading head A ch PCM level does not comply with the specifications, adjust ◐RV101 on the RF-31 board as indicated below.

If the playback level is higher than the specifications, turn ◐RV101 counterclockwise.

If the playback level is lower than the specifications, turn ◐RV101 clockwise.

Specifications :

TY-30B test tape playback level (Leading head A ch) = (Standard level * + 0.5dB) ± 0.5dB

* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)

Adjustment Location : ◐RV101, RF-31 board

(12) Repeat steps (6) to (11) until you get the playback level that complies with the specifications indicated in step (10).(Repeat the self-recording and playback.)

Caution : Be careful not to overwrite the TY-30B test tape when you perform the recording.

Leading head B ch recording current level adjustment

(13) Hold down the DATA key and turn the SEARCH dial counterclockwise until the following message appears. Then, press SET.(Set the mode during the STOP mode.)

FL tube display message : tESt SiG A-13_157 (flashing→ON)

(14) Press REC and PLAY to record the test signal specified in step (13) using the TY-30B test tape (for about 30 seconds).

(15) Playback the portion of the TY-30B test tape recorded in step (14).

(16) Make sure the playback Leading head B ch PCM level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard Leading head B ch PCM level (TY-7111D test tape). If the playback Leading head B ch PCM level does not comply with the specifications, adjust ◐RV102 on the RF-31 board as indicated below.

If the playback level is higher than the specifications, turn ◐RV102 counterclockwise.

If the playback level is lower than the specifications, turn ◐RV102 clockwise.

Specifications :

TY-30B test tape playback level (Leading head B ch) = (Standard level * + 0.5dB) ± 0.5dB

* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)

Adjustment Location : ◐RV102, RF-31 board

(17) Repeat steps (14) to (16) until you get the playback level that complies with the specifications indicated in step (16).(Repeat the self-recording and playback.)

(18) Since ◐RV101 and ◐RV102 affect each other, perform steps (6) to (11) after you adjust ◐RV102 to confirm that the A ch PCM level complies with the specifications indicated in step (11).

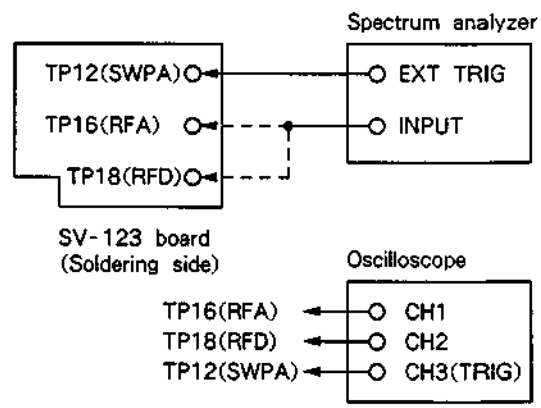
(19) After you adjust the Leading head PCM recording current level, be sure to adjust the "2. Leading head ATF recording current level".

2. Leading head ATF recording current level adjustment

Be sure to adjust the Leading head ATF recording current level when you adjust the "1. Leading head PCM recording current level".

Leading head A ch ATF recording current level adjustment

(1) Connect the spectrum analyzer to the SV-123 board as shown below.

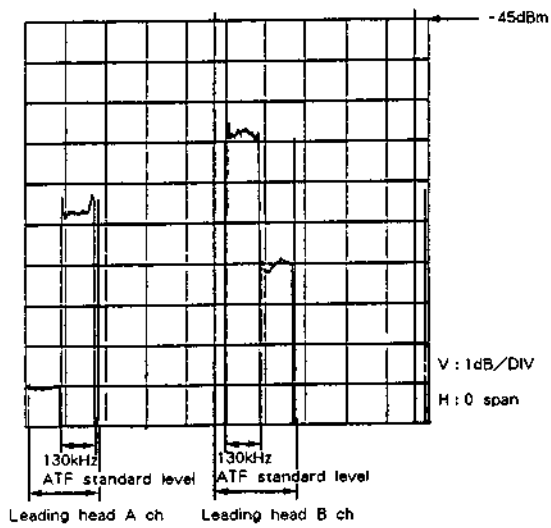


(2) Set the spectrum analyzer as indicated below.

Center frequency	: 130kHz
Reference level	:-45.0dBm
Frequency span	: 0Hz
Resolution Bandwidth (RBW)	: 30kHz
Video Bandwidth (VBW)	: 300kHz
Input ATT	: 10dB
SWP	: 30msec.

(3) Load the TY-7111D test tape and play the tape.

(4) Find the average of the RF output waveforms using the spectrum analyzer and store the data in the spectrum analyzer memory.



(5) Press EJECT to remove the TY-7111D test tape.

(6) Load the TY-30B test tape (blank).

(7) Select the following TEST MENU mode.
FL tube display message : tESt SiG A-13_157
(flashing→ON)

(8) Press REC and PLAY to record the test signal specified in step (7) (for about 30 seconds).

(9) Playback the portion of the TY-30B test tape recorded in step (8).

(10) Make sure the playback A ch ATF level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard playback A ch ATF level (TY-7111D test tape). If the playback A ch ATF level does not comply with the specifications, adjust ◐RV103 on the RF-31 board as indicated below.
If the playback level is higher than the specifications, turn ◐RV103 counterclockwise.
If the playback level is lower than the specifications, turn ◐RV103 clockwise.
Specifications :
TY-30B test tape playback level (Leading head A ch ATF) = (Standard level* - 0.5dB) ±0.5dB
* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)
Adjustment Location : ◐RV103, RF-31 board

(11) Repeat steps (6) to (10) until you get the playback level that complies with the specifications indicated in step (10).(Repeat the self-recording and playback.)

Leading head B ch ATF recording current level adjustment

(12) Hold down the DATA key and turn the SEARCH dial counterclockwise until the following message appears. Then, press SET.(Set the mode during the STOP mode.)
FL tube display message : tESt SiG A-157_13
(flashing→ON)

(13) Press REC and PLAY to record the test signal specified in step (12) using the TY-30B test tape (for about 30 seconds).

(14) Playback the portion of the TY-30B test tape recorded in step (13).

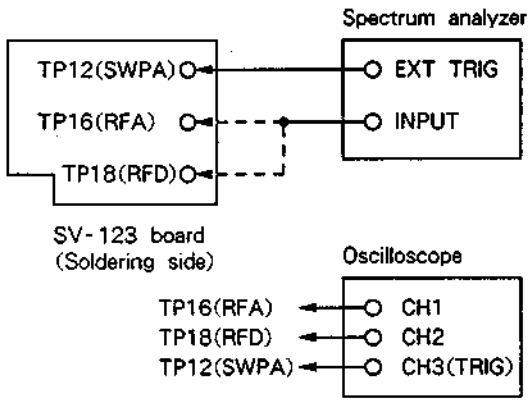
(15) Make sure the playback B ch ATF level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard playback B ch ATF level (TY-7111D test tape). If the playback B ch ATF level does not comply with the specifications, adjust ◐RV104 on the RF-31 board as indicated below.
If the playback level is higher than the specifications, turn ◐RV104 counterclockwise.
If the playback level is lower than the specifications, turn ◐RV104 clockwise.
Specifications :
TY-30B test tape playback level (Leading head B ch ATF) = (Standard level* - 0.5dB) ±0.5dB
* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)
Adjustment Location : ◐RV104, RF-31 board

(16) Repeat steps (13) to (15) until you get the playback level that complies with the specifications indicated in step (15).(Repeat the self-recording and playback.)

3. Trailing head PCM recording current level adjustment

Trailing head A ch recording current level adjustment

(1) Connect the spectrum analyzer to the SV-123 board as shown below.

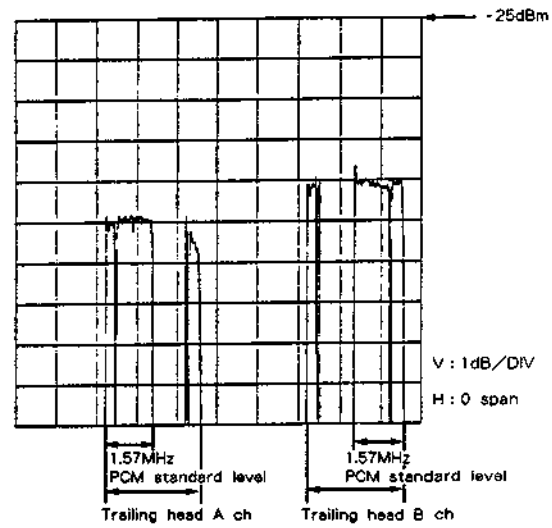


(2) Set the spectrum analyzer as indicated below.

Center frequency	: 1.57MHz
Reference level	: -25dBm
Frequency span	: 0Hz
Resolution Bandwidth (RBW)	: 30kHz
Video Bandwidth (VBW)	: 300kHz
Input ATT	: 10dB
SWP	: 30msec.

(3) Load the TY-7111D test tape and play the tape.

(4) Find the average of the RF output waveforms using the spectrum analyzer and store the data in the spectrum analyzer memory.



(5) Press EJECT to remove the TY-7111D test tape.

(6) Load the TY-30B test tape (blank).

(7) Enter (OPEN) the SERVICE MENU and select the following TEST MENU mode.
FL tube display message : tESt SiG oFF

(8) Hold down the DATA key and turn the SEARCH dial clockwise until the following message appears. Then, press SET.
FL tube display message : tESt SiG D-157_13
(flashing → ON)

(9) Press REC and PLAY to record the test signal specified in step (7) (for about 30 seconds).

(10) Playback the portion of the TY-30B test tape recorded in step (9).

(11) Make sure that the Trailing head playback A ch PCM level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard Trailing head A ch PCM level (TY-7111D test tape). If the Trailing head playback A ch PCM level does not comply with the specifications, adjust ◐RV201 on the RF-31 board as indicated below.
If the playback level is higher than the specifications, turn ◐RV201 counterclockwise.
If the playback level is lower than the specifications, turn ◐RV201 clockwise.

Specifications :

TY-30B test tape playback level (Trailing head A ch PCM) = (Standard level * + 0.5dB) ± 0.5dB

* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)

Adjustment Location : ◐RV201, RF-31 board

(12) Repeat steps (6) to (11) until you get the playback level that complies with the specifications indicated in step (10).(Repeat the self-recording and playback.)

Caution : Be careful not to overwrite the TY-30B test tape when you perform the recording.

Trailing head B ch PCM recording current level adjustment

(13) Hold down the DATA key and turn the SEARCH dial counterclockwise until the following message appears. Then, press SET.(Set the mode during the STOP mode.)

FL tube display message : tESt SiG D-13_157 (flashing → ON)

(14) Press REC and PLAY to record the test signal specified in step (13) using the TY-30B test tape (for about 30 seconds).

(15) Playback the portion of the TY-30B test tape recorded in step (14).

(16) Make sure the playback Trailing head B ch PCM level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard Trailing head B ch PCM level (TY-7111D test tape). If the playback Trailing head B ch PCM level does not comply with the specifications, adjust ◐RV202 on the RF-31 board as indicated below.

If the playback level is higher than the specifications, turn ◐RV202 counterclockwise.

If the playback level is lower than the specifications, turn ◐RV202 clockwise.

Specifications :

TY-30B test tape playback level (Trailing head B ch PCM) = (Standard level * + 0.5dB) ± 0.5dB

* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)

Adjustment Location : ◐RV202, RF-31 board

(17) Repeat steps (14) to (16) until you get the playback level that complies with the specifications indicated in step (16).(Repeat the self-recording and playback.)

(18) Since ◐RV201 and ◐RV202 affect each other, perform steps (6) to (11) after you adjust ◐RV202 to make sure the A ch PCM level complies with the specifications indicated in step (11).

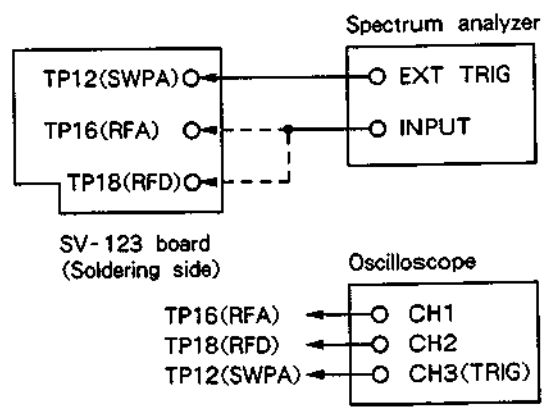
(19) After you adjust the Trailing head PCM recording current level, be sure to adjust the "4. Trailing head ATF recording current level".

4. Trailing head ATF recording current level adjustment

Be sure to adjust the Trailing head ATF recording current level when you adjust the "3. Trailing head PCM recording current level".

Trailing head A ch ATF recording current level adjustment

(1) Connect the spectrum analyzer to the SV-123 board as shown below.

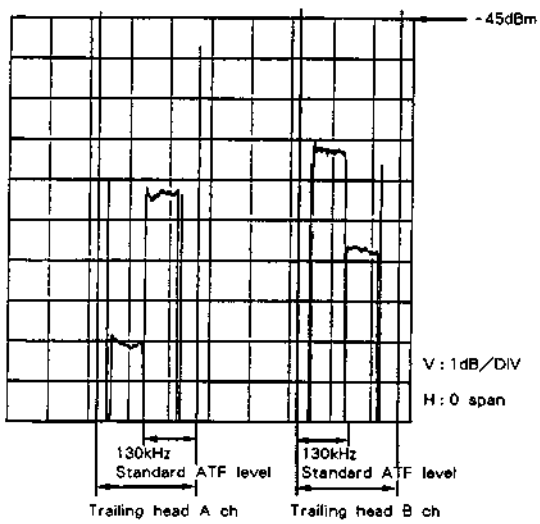


(2) Set the spectrum analyzer as indicated below.

Center frequency	: 130kHz
Reference level	: -45.0dBm
Frequency span	: 0Hz
Resolution Bandwidth (RBW)	: 30kHz
Video Bandwidth (VBW)	: 300kHz
Input ATT	: 10dB
SWP	: 30msec.

(3) Load the TY-7111D test tape and play the tape.

(4) Find the average of the RF output waveforms using the spectrum analyzer and store the data in the spectrum analyzer memory.



(5) Press EJECT to remove the TY-7111D test tape.

(6) Load the TY-30B test tape (blank).

(7) Select the following TEST MENU mode.
FL tube display message : tESt SiG D-13_157

(8) Press REC and PLAY to record the test signal specified in step (7) (for about 30 seconds).

(9) Playback the portion of the TY-30B test tape recorded in step (8).

(10) Make sure the playback Trailing head A ch ATF level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard playback A ch ATF level (TY-7111D test tape). If the playback Trailing head A ch ATF level does not comply with the specifications, adjust ◐RV203 on the RF-31 board as indicated below.

If the playback level is higher than the specifications, turn ◐RV203 counterclockwise.
If the playback level is lower than the specifications, turn ◐RV203 clockwise.
Specifications :
TY-30B test tape playback level (Trailing head A ch ATF) = (Standard level * - 0.5dB) ± 0.5dB
* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)
Adjustment Location : ◐RV203, RF-31 board

(11) Repeat steps (6) to (10) until you get the playback level that complies with the specifications indicated in step (10). (Repeat the self-recording and playback.)

Trailing head B ch ATF recording current level adjustment

(12) Hold down the DATA key and turn the SEARCH dial counterclockwise until the following message appears. Then, press SET. (Set the mode during the STOP mode.)
FL tube display message : tESt SiG D-157_13
(flashing → ON)

(13) Press REC and PLAY to record the test signal specified in step (12) using the TY-30B test tape (for about 30 seconds).

(14) Playback the portion of the TY-30B test tape recorded in step (13).

(15) Make sure the playback B ch ATF level (TY-30B test tape) of the spectrum analyzer complies with the following specifications against the previously stored standard playback B ch ATF level (TY-7111D test tape). If the playback B ch ATF level does not comply with the specifications, adjust ◐RV204 on the RF-31 board as indicated below.
If the playback level is higher than the specifications, turn ◐RV204 counterclockwise.
If the playback level is lower than the specifications, turn ◐RV204 clockwise.

Specifications :

TY-30B test tape playback level (Trailing head B ch ATF) = (Standard level * - 0.5dB) ± 0.5dB

* Standard level = Playback level of the TY-7111D test tape ± correction value (See the correction value table provided with the TY-7111D test tape for the correction value you should use.)

Adjustment Location : ◐RV204, RF-31 board

(16) Repeat steps (13) to (15) until you get the playback level that complies with the specifications indicated in step (15).(Repeat the self-recording and playback.)

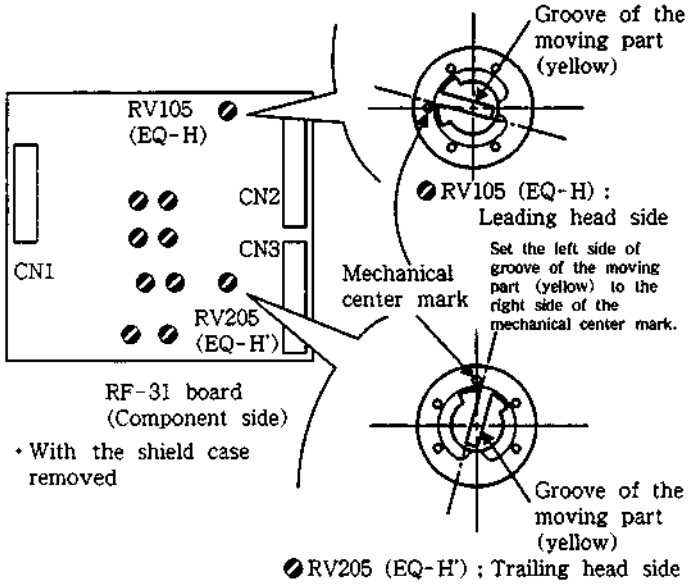
4-7. EQ-H preset (RF-31 board) and error rate check

4-7-1. EQ-H preset (RF-31 board)

The LTS voltage control volume ●RV105 (EQ-H) and ● RV205 (EQ-H') on the RF-31 board are set as follows when it is shipped. Follow the set procedure below after the replacement of ●RV105 or ●RV205.

Specifications :

Set ● RV105 (EQ-H) and ● RV205 (EQ-H') automatically as shown below (set as when it is shipped) :



4-7-2. Error Rate Check

Check the error rate after performing "5-2. Signal Processing Adjustment (SP-13 board)" (page 5-5) when you removal the mechanical deck assembly, drum assembly SP-13 board and RF-31 board. Follow the sequence below for checking : 4-41 page

Equipment and Tools Required

Audio frequency oscillator
TY-30B Test tape (8-892-358-00)
TY-7212 Test tape (8-960-081-01)

Switch and Control Settings

Front panel

REMOTE/LOCAL selection switch	: LOCAL
SYNC Select switch	: INT
AUDIO INPUT Select switch	: ANALOG

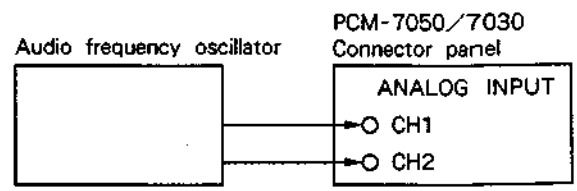
Connections



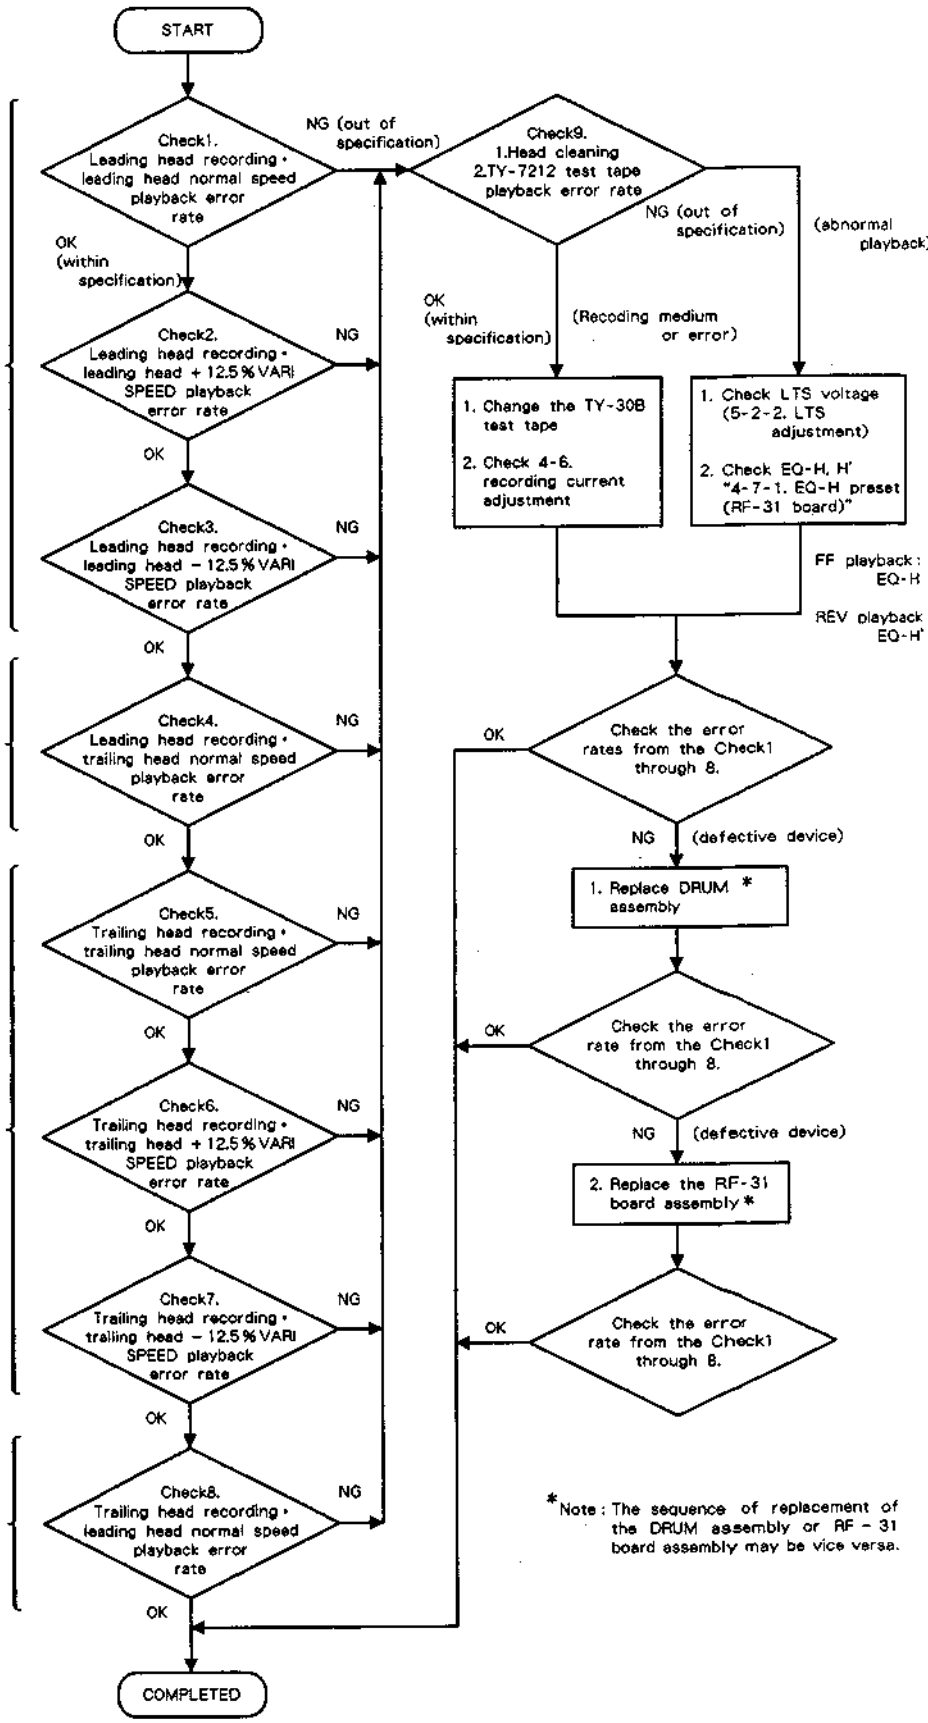
Error rate check procedure

1. Leading head recording • leading head playback error rate check (inc. ± 12.5 % VARI SPEED check)

2. Leading head recording • trailing head playback error rate check (exc. ± 12.5 % VARI SPEED check)

3. Trailing head recording • trailing head playback error rate check (inc. ± 12.5 % VARI SPEED check)

4. Trailing head recording • leading head playback error rate check (exc. ± 12.5 % VARI SPEED check)



*Note : The sequence of replacement of the DRUM assembly or RF - 31 board assembly may be vice versa.

1. Leading head recording • leading head playback error rate check (Including ± 12.5 % VARI SPEED check)

Check1. Leading head recording•leading head normal speed playback error rate

(1) Transmit a 1kHz, standard level input signal (sine -wave) to the ANALOG INPUT CH1 and CH2 connectors from the low frequency oscillator.

(2) Adjust the CH1 and CH2 ANALOG INPUT level controls so that the level meter pointer on the front panel shows full deflection.

(3) Set the "SYnc rEc" mode of SET-UP MENU to "oFF" to select the RAW mode (leading head recording) and press the [ASSEMBLE] key. Load the TY-30B test tape (blank) and record the signal specified in step (2) for about 2 minutes. After recording, rewind the tape to the beginning of the recorded portion.

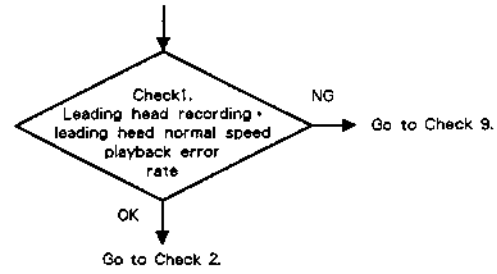
(4) Select the following TEST MENU mode (the following message will appear).
FL tube display message : rAtE SEL Auto

(5) Hold down the [DATA] key and turn the [SEARCH] dial clockwise until the following message appears. Then, press [SET].
FL tube display message : rAtE SEL A-Ab

(6) Hold down the [MENU] key and turn the [SEARCH] dial clockwise to select the following TEST MENU mode (turn the dial until the following message appears). Then, press [SET].
FL tube display message : Err rAtE

(7) Press [PLAY] and play the TY-30B test tape.

(8) Make sure the error rate displayed on the FL tube display 6 seconds after playback starts complies with the following specifications (the average of error rates for about 30 seconds).
Specifications :
Leading head recording • leading head normal speed playback error rate = 5 x 10^{-3} or less
Sample message appears on the display :
5_8-4→5.8 x 10^{-4}



(9) Press [STOP] key.

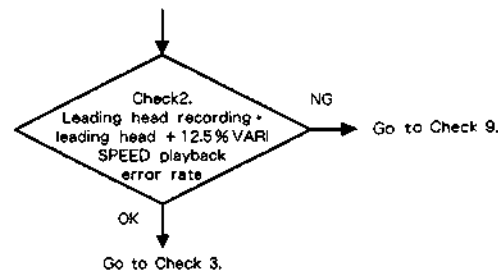
Check2. Leading head recording•leading head +12.5% VARI SPEED playback error rate

(10) Press [VARI SPEED].

(11) Hold down the [DATA] key and turn the [SEARCH] dial clockwise until the following message appears.
FL tube display message : 12 5 %

(12) Hold down the [MENU] key and turn the [SEARCH] dial clockwise to select the following TEST MENU mode (turn the dial until the following message appears).
FL tube display message : Err rAtE

(13) Make sure the error rate displayed on the FL tube display complies with the following specifications (the average of error rates for about 10 seconds).
Specifications :
Leading head recording • leading head + 12.5% VARI SPEED playback error rate = 9.9 x 10^{-3} or less



Check3. Leading head recording•leading head -12.5% VARI SPEED playback error rate

(14) Press [VARI SPEED] twice.

(15) Press [DATA] and [RESET] simultaneously (resets the VARI SPEED to 0%). Then, Hold down the

DATA key and turn the SEARCH dial counterclockwise until the following message appears.

FL tube display message : -12 5 %

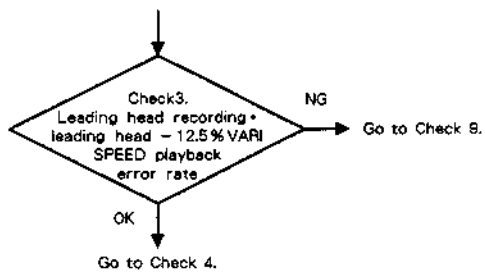
(16) Hold down the MENU key and turn the SEARCH dial slightly clockwise until the following message appears.

FL tube display message : Err rAtE

(17) Make sure the error rate displayed on the FL tube display complies with the following specifications (the average of error rates for about 10 seconds).

Specifications :

Leading head recording • leading head -12.5% VARI SPEED playback error rate ≒ 9.9×10^{-3} or less



(18) Press STOP key.

2. Leading head recording • trailing head playback error rate check (excluding ±12.5% VARI SPEED, playback check)

Check4. Leading head recording • trailing head normal speed playback error rate

(19) Press the VARI SPEED key once (to return to the normal speed condition).

(20) Hold down the MENU key and turn the SEARCH dial counterclockwise until the following message appears.

FL tube disply message : rAtE SEL A-Ab

(21) Hold down the DATA key and turn the SEARCH dial counterclockwise until the following message appears. Then, press SET.

FL tube display message : rAtE SEL d-Ab

(22) Hold down the MENU key and turn the SEARCH dial clockwise to select the following TEST MENU mode (turn the dial until the following message appears).

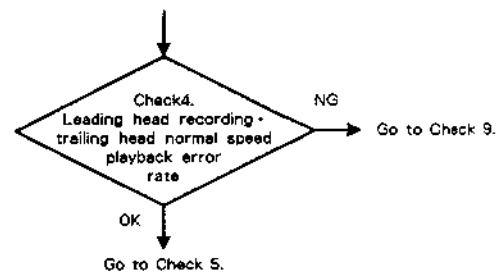
FL tube display message : Err rAtE

(23) Press PLAY and play the TY-30B test tape.

(24) Make sure the error rate displayed on the FL tube display 6 seconds after playback starts complies with the following specifications (the average of error rates for about 30 seconds).

Specifications :

Leading head recording • trailing head normal speed playback error rate = 5×10^{-3} or less



(25) Press STOP key.

3. Trailing head recording • trailing head playback error rate check (Including ±12.5% VARI SPEED playback check)

Check5. Trailing head recording • trailing head normal speed playback error rate check

(1) After turning the POWER switch to OFF, turn the POWER switch ON (to reset)

(2) Set the "Sync rEc" mode of SET-UP MENU to "on" to select the RMW mode (trailing head recording) and press the ASSEMBLE key.

Load the TY-30B test tape (blank).

Record the signal specified for about two minutes. After recording, rewind the tape to the beginning of the recorded portion.

(3) Select the TEST MENU mode (display indication) as indicated below.

FL tube display message : rAtE SEL Auto

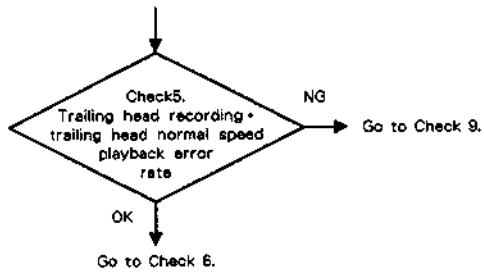
(4) Hold down the DATA key and turn the SEARCH dial clockwise until the following message appears. Then, press the SET key.

FL tube display message : rAtE SEL d-Ab

(5) While pressing the [MENU] key, turn the [SEARCH] dial clockwise to select the following TEST MENU (display).
FL display : Err rAtE

(6) Press the [PLAY] key and play the test tape.

(7) After playing for 6 seconds confirm that the error rate conforms to the following specifications (the average error rate for about 30 seconds).
Specifications : Trailing head recording/trailing head nomal speed playback error rate = 5×10^{-3} or less.



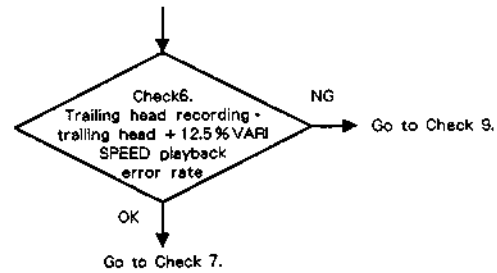
Check6. Trailing head recording • trailing head + 12.5% VARI SPEED playback error rate

(8) Press [VARI SPEED] key.

(9) Hold down the [DATA] key and turn the [SEARCH] dial clockwise until the following message appears.
FL tube display message : 12 5 %

(10) Hold down the [MENU] key and turn the [SEARCH] dial clockwise to select the following TEST MENU mode (turn the dial until the following message appears).
FL tube display message : Err rAtE

(11) Make sure the error rate displayed on the FL tube display complies with the following specifications (the average of error rates for about 10 seconds).
Specifications :
Trailing head recording • trailing head + 12.5% VARI SPEED playback error rate = 9.9 x 10^{-3} or less



Check7. Trailing head recording • trailing head -12.5% VARI SPEED playback error rate

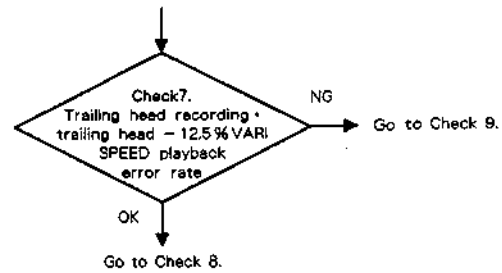
(12) Press [VARI SPEED] twice.

(13) Press [DATA] and [RESET] simultaneously (resets the VARI SPEED to 0%). Then, Hold down the [DATA] key and turn the [SEARCH] dial counterclockwise until the following message appears.
FL tube display message : -12 5 %

(14) Hold down the [MENU] key and turn the [SEARCH] dial slightly clockwise until the following message appears.
FL tube display message : Err rAtE

(15) Make sure the error rate displayed on the FL tube display complies with the following specifications (the average of error rates for about 10 seconds).
Specifications :
Trailing head recording • trailing head -12.5% VARI SPEED playback error rate = 9.9 x 10^{-3} or less

(16) Press the [STOP] key.



4. Trailing head recording • leading head playback error rate check
(Excluding ± 12.5% VARI SPEED check)

Check8. Trailing head recording • leading head nomal speed playback error rate

(17) Press the [VARI SPEED] key once (to return to the normal speed condition).

(18) Hold down the [MENU] key and turn the [SEARCH] dial clockwise until the following message appears.
FL tube disply message : rAtE SEL d-Ab

(19) Hold down the [DATA] key and turn the [SEARCH] dial counterclockwise until the following message appears. Then, press [SET].
FL tube disply message : rAtE SEL A-Ab

(20) While pressing the [MENU] key, turn the [SEARCH] dial clockwise to select the following TEST MENU (display).
FL display : Err rAtE

(21) Press the [PLAY] key and play the test tape.

(22) After playing for 6 seconds confirm that the error rate conforms to the following specifications (the average error rate for about 30 seconds).
Specifications :
Trailing head recording • leading head normal speed playback error rate = 5×10^{-3} or less.

(23) Press the [STOP] key.

(24) Press the [EJECT] key and remove the TY-30B test tape.

Check9. Head cleaning and TY-7212 test tape playback error rate

In case that the error rates from the Check 1. through 8. do not comply with the specifications, perform head cleaning by using a cleaning cassette tape (See page 3-1, "3-1. Cleaning") and playback the TY-7212 error rate test tape.

If the error rate after playback the TY-7212 test tape does :

(1) comply with the specifications, perform the following ① or ② and check the error rates from the Check 1. through 8.
① Change the TY-30B test tape.
② Perform "4-6. Recording current level adjustment" again, or

(2) not comply with the specification, then, perform the following ① or ② and check the error rates from the Check 1. through 8.
① Review the instructions in 5-2-2. Standard level of LTS adjustment (SP-13 board) and perform readjustment if the level is out of standard.
② Review the instructions in 4-7-1. adjustment position of ●RV105, ●RV205 of EQ-H preset (RF-31 board) and perform readjustment if the level is out of standard.
Leading head playback : ●RV105 (EQ-H)
Trailing head playback : ●RV205 (EQ-H')

(3) not comply with the specification even the above (1), (2) are performed, then, change the drum assembly and check the error rates from the Check 1. through 8.

(4) not comply with the specification even the above (3) is performed, change the RF-31 board assmbly and check the error rates from the Check 1. through 8.

Note : (3) and (4) specified above should be performed vice versa if only the RF board assembly is replaced before the error rate check.

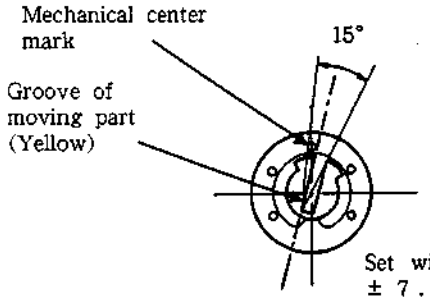
Precautions on checking

1) In 1. Leading head recording • leading head playback error rate check :
- The error rates in the Check 1. and 2. are O.K. and NG in the Check 3.
- The error rates in the Check 1. and 3. are O.K. and NG in the Check 2.

2) In 3. Trailing head recording • trailing head playback error rate check :
- The error rates in the Check 5. and 6. are O.K. and NG in the Check 7.
- The error rates in the Check 5. and 7. are O.K. and NG in the Check 6.

In case of above 1) and 2), execute the setting of ●RV105 (EQ-H) or ●RV205 (EQ-H') on the RF-31 board according to the range below and recheck the error rate.

●RV105/●RV205 (RF-31 board)



Set within the range of ± 7.5° against the installation position of 4-7-1. EQ-H preset.

1) Leading head recording • leading head playback : ●RV105 (EQ-H)
2) Trailing head recording • trailing head playback : ●RV205 (EQ-H')

4-8. Cassette Compartment Operation Check

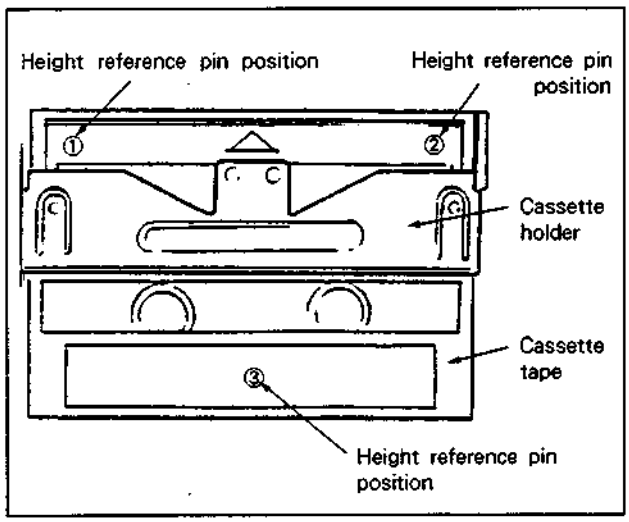
Equipment Required

Cassette tape (any 120-minute tape sold in the market) for checking the operation

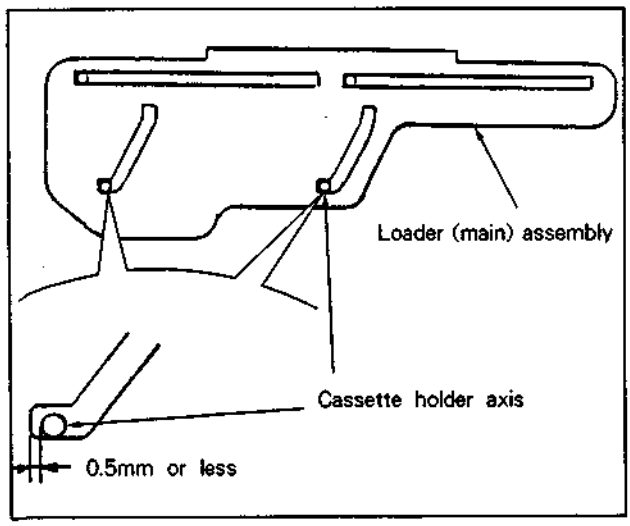
Procedure

(1) Load the cassette tape for checking the operation.

(2) Press down the following three points (①,②, and ③) to make sure the cassette tape does not project from the height reference pin on the mechanical deck while the tape is inside.



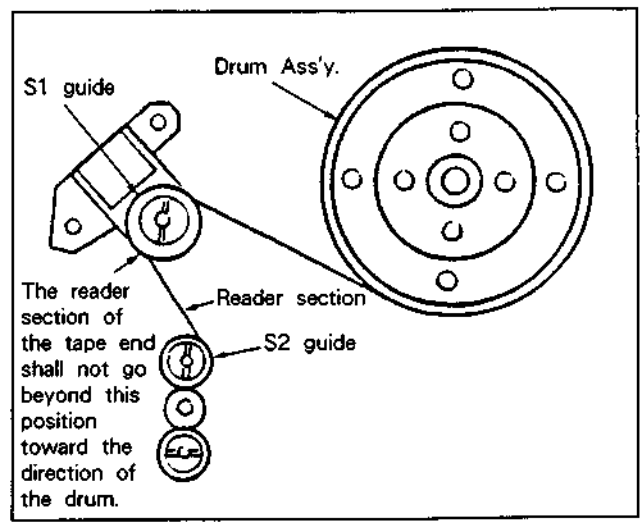
(3) Make sure the cassette holder axis is located at the loader (main) assembly guide position on the right side of the cassette compartment, as shown in the figure below, while a cassette tape is inside.



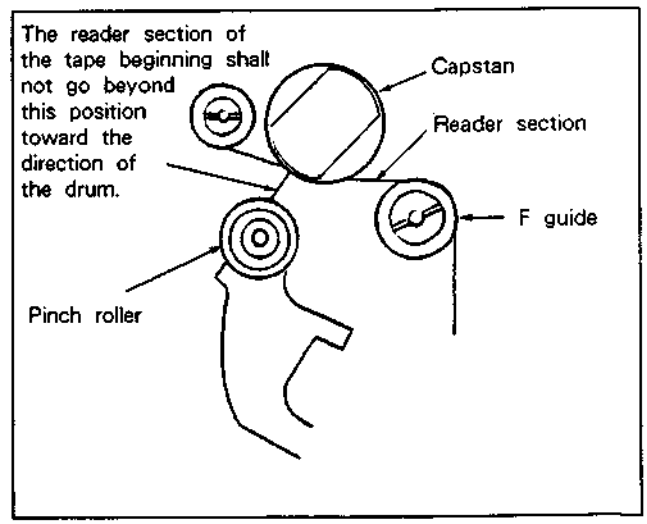
(4) Perform FF/REW operations and make sure that the beginning and end (reader tape portion) of the cassette tape stops at the position shown in the figure below.

(5) Press EJECT and make sure the cassette tape is ejected properly.

Tape end position check (FF operation)



Tape start position check (REW operation)

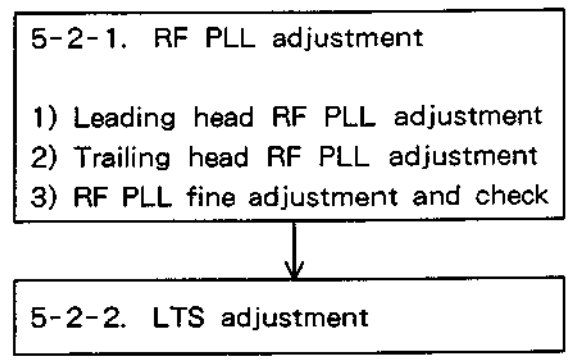


SECTION 5
Electrical Adjustments

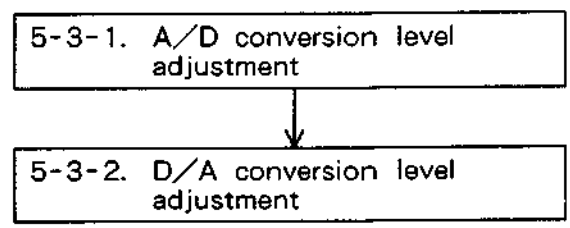
This chapter describes the electrical adjustments required when a board is repaired or maintained. Do the adjustments in accordance with "Electrical Adjustment Items." Before making an adjustment, the items to be adjusted beforehand must have been completed. If there are multiple adjustment item problems, check the adjustment items before and after the suspect adjustment item. This chapter describes the adjustments of the internal switches and controls required to meet the unit's specifications. Regarding the adjustments of the external switches and controls and the unit operation, refer to the Operation Manual.

Electrical Adjustment Items

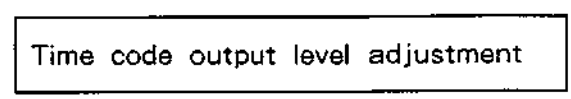
5-2. Signal processing adjustment (SP-13 board)



5-3. A/D and D/A adjustment (ADA-18 board)



5-4. Time code adjustment (Applicable if the optional TC-58 board (DABK-7030) is installed.)



5-1. Initial Preparation

5-1-1. Equipment Required

Equipment	Minimum Specifications	Model
Oscilloscope	f : DC to 100 MHz Precision : 5 mV	—
Digital DC voltmeter	Valid digits : 4 1/2 digits or more Precision : 1 mV	—
Audio analyzer	f : 0 kHz to 30 kHz Level : +24 dBm to -70 dBm Distortion : 0.001 % S/N : 98 dB	TEKTRONIX SG505 or equivalent

5-2. Signal Processing Adjustment (SP-13 board)

To make the adjustment, first remove the top panel and open the ADA-18 board. (Refer to the removal procedure in 2-1.)

5-2-1. RF PLL adjustment

The RF PLL block generates the clock for extracting the playback data from the head. In correspondence to the head/RF amplifier characteristics, adjust the RF PLL block to obtain the best error rate. Do this adjustment when replacing the SP board or the head and RF assembly.

Initial preparation

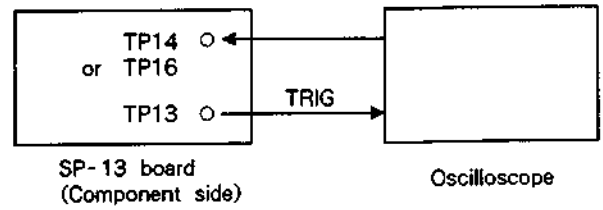
1. Take out J1 and J2 from the SP-13 board. (See "Adjustment Location.") J1 and J2 are to be reinserted after the RF PLL adjustment.
2. Remove the shielded case's top cover in the CHANNEL block on the SP-13 board. (See " Adjustment Location.") (The top cover is to be re-installed after the RF PLL fine adjustment and check.)

Equipment Required

Oscilloscope

Pre-recorded music cassette tape (Fs = 48 kHz)

Connections



Switch and Control Settings

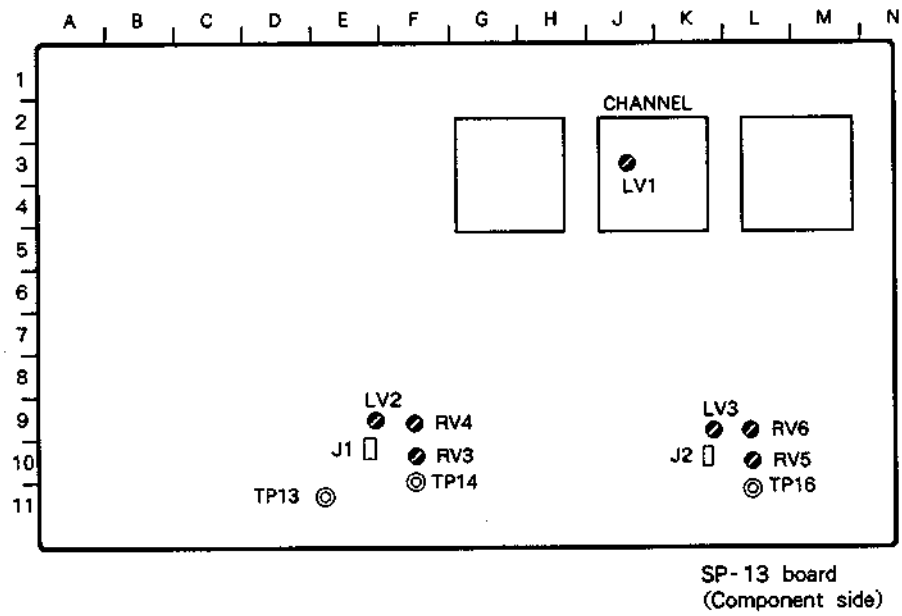
SYNC EXT/INT/VIDEO selection switch ; INT

SAMPLING FREQ 44.1 kHz / 48 kHz

Selection switch ; 48 kHz

POWER switch ; ON

Adjustment Location



SP-13 board
(Component side)

1) Leading head RF PLL Adjustment

Step	Adjustment Condition	Specification	Adjustment Location (SP-13 board)
1	Insert the pre-recorded music cassette tape (Fs = 48kHz) and playback the tape. (PLAY mode)	TP14 (F, 10) output waveform OK  NG  NG  NG  TRIG : TP13 (E, 11)	◐RV4 (F, 9) If the waveform is no good, turn ◐RV3 slightly and then readjust ◐RV4.
2	Same as step 1.	TP14 (F, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 11)	◐RV3 (F, 10)
3	Same as step 2.	TP14 (F, 10) output waveform  3.0 ± 0.5V Amplitude's center voltage where is RF. TRIG : TP13 (E, 11)	◐LV2 (E, 9) Note : After being turned clockwise all the way, adjust ◐LV2 so that it can be loosened within one full turn. If it is too tight, the core may be damaged. And if it is too loose, the core may core may come off.
4	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE FWD (× 16 speed).	TP14 (F, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 11)	◐RV4 (F, 9)
5	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE REV (× 16 speed).	TP14 (F, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 11)	◐RV4 (F, 9)
6	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE FWD and CUE REV (× 3 speed). Repeatedly two or three times.	TP14 (F, 10) output waveform  This portion is to be flat while the tape is running. TRIG : TP13 (E, 11)	

2) Trailing head RF PLL Adjustment

Step	Adjustment Condition	Specification	Adjustment Location (SP-13 board)
1	Insert the pre-recorded music cassette tape (Fs = 48kHz) and playback the tape. (PLAY mode)	TP16 (L, 10) output waveform OK  NG  NG  NG  TRIG : TP13 (E, 10)	◐RV6 (L, 9) If the waveform is no good, turn ◐RV5 slightly and then re-adjust ◐RV6.
2	Same as step 1.	TP16 (L, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 10)	◐RV5 (L, 10)
3	Same as step 2.	TP16 (L, 10) output waveform  Amplitude's center voltage where is RF. TRIG : TP13 (E, 10)	◐LV3 (L, 9) Note : After being turned clockwise all the way, adjust ◐LV3 so that it can be loosened within one full turn. If it is too tight, the core may be damaged. And if it is too loose, the core may core may come off.
4	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE FWD (× 16 speed).	TP16 (L, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 10)	◐RV6 (L, 9)
5	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE REV (× 16 speed).	TP16 (L, 10) output waveform  This portion is to be flat. TRIG : TP13 (E, 10)	◐RV6 (L, 9)
6	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set CUE FWD and CUE REV (× 3 speed). Repeatedly two or three times.	TP16 (L, 10) output waveform  This portion is to be flat while tape is running. TRIG : TP13 (E, 10)	

3) RF PLL Fine Adjustment and Check

Before making the adjustment, turn off the POWER switch and re-insert J1 and J2 into the SP-13 board. Then turn on the POWER switch and make the adjustment.

After completing the adjustment, turn off the POWER switch and re-install the top cover on the CHANNEL block's shielded case on the SP-13 board.

Step	Adjustment Condition	Specification	Adjustment Location (SP-13 board)
1	Insert the pre-recorded music cassette tape (Fs = 48kHz) and playback the tape. (PLAY mode)	TP16 (L, 10) output waveform  TRIG : TP13 (E, 10)	◐LV1 (J, 2) Adjust ◐LV1 so that the center of the RF portion and no signal portion becomes flat. If the center cannot be flattened, redo the adjustments from steps 3 to 6 for the back ward RF PLL adjustment described in 2). Before making the re-adjustment, shift the center voltage within the adjustment standard range stated in step 3 of the back ward RF PLL adjustment described in 2). Note : After being turned clockwise all the way, adjust ◐LV1 so that it can be loosened within one full turn.If it is too tight, the core may be damaged.And if it is too loose, the core may come off.
2	Same as step 1.	TP14 (E, 10) output waveform  TRIG : TP13 (E, 10)	◐LV2 (E, 9) Adjust ◐LV2 so that the center of the RF portion and no signal portion becomes flat. If the center cannot be flattened, redo the adjustments from steps 3 to 6 for the forward RF PLL adjustment described in 2).Before making the re-adjustment, shift the center voltage within the adjustment standard range stated in step 3 of the forward RF PLL adjustment described in 2). Note : After being turned clockwise all the way, adjust ◐LV2 so that it can be loosened within one full turn.If it is too tight, the core may be damaged.And if it is too loose, the core may come off.
3	Insert the pre-recorded music cassette tape (Fs = 48kHz) and set the FF and REW modes.	TP14 (F, 10) and TP16 (L, 10) output waveform OK  NG  As the voltage is high, the waveform swings to plus. TRIG : TP13 (E, 10)	

5-2-2. LTS Adjustment

LTS ; Longitudinal Tape Speed

During vari-pitch playback, adjust the cantrol voltage to optimize the RF equalizer's characteristices. Do this adjustment after replacing the SP board or the head and RF assembly.

Equipment Required

Digital DC voltmeter

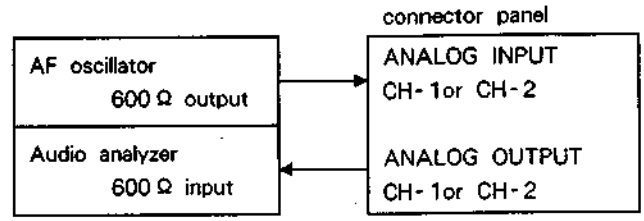
5-3-1. A/D conversion level adjustment

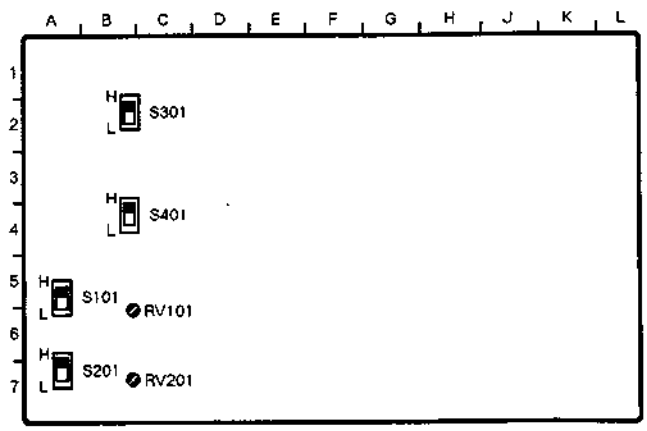
Do electrical adjustments on the A/D block on the ADA-18 board. After replacing the ADA-18 board, do this adjustment first.

Equipment Required
Audio analyzer
(equipment measuring audio characteristics)

Connections



Adjustment Location



ADA-18 board
(Component side)

Before making the adjustment, set the FL tube display on the front panel as follows. Regarding the procedure, refer to the Operation Manual.

FL tube display

Au-rEF (input signal level's digital display mode)

EMPH OFF (emphasis OFF mode)

Step	Adjustment Condition	Specification	Adjustment Location (ADA-18 board)
1	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-1 connector.	Value of the Au-rEF CH1 (left side) on the FL tube display. -20.0 dB	◐RV101 (B, 6)
2	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-2 connector.	Value of the Au-rEF CH2 (right side) on the FL tube display. -20.0 dB	◐RV201 (B, 7)
3	• Same as step 2. • Turn the POWER switch OFF/ON once, then set the INPUT MONITOR mode.	Only the -∞ dot should be lit on the CH-1 level meter. CH-2 Au-rEF value. -20.0 dB	

5-3-2. Center potential adjustment

This adjustment applies to the ADA-18 board on the followintg board numbers which end in -14 and higher.

ADA-18 board

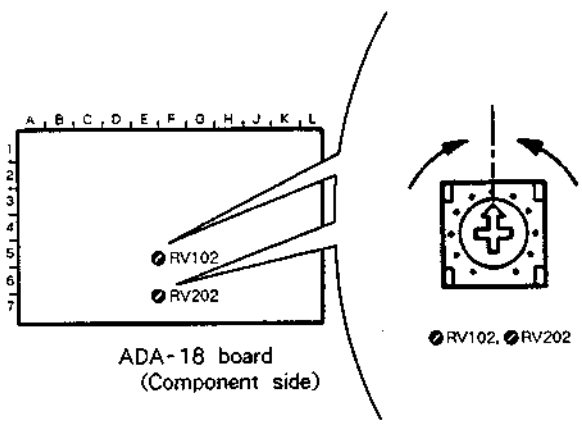
Board No : 1-637-267-14 and higher

Specification method :

The center potential should always be adjusted as figure below when ●RV102, ●RV202 are replaced.

Specification :

Set ●RV102 (E,7) and ●RV202 (E,7) to the center (as the adjustment when shipped).



ADA-18 board
(Component side)

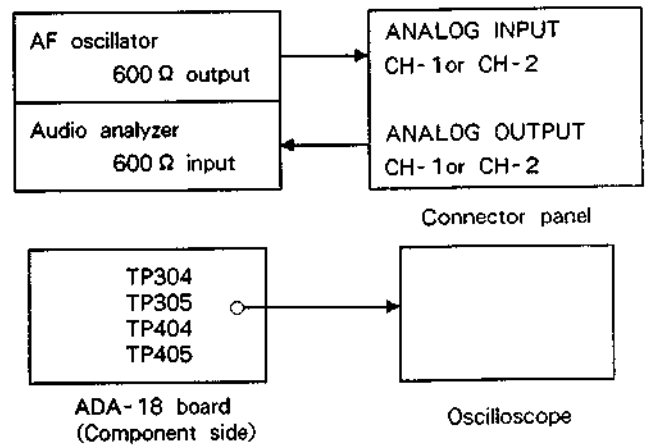
5-3-3. D/A conversion level adjustment

Do electrical adjustments on the D/A block on the ADA-18 board. After replacing the ADA-18 board, do this adjustment after completing "A/D conversion level adjustment."

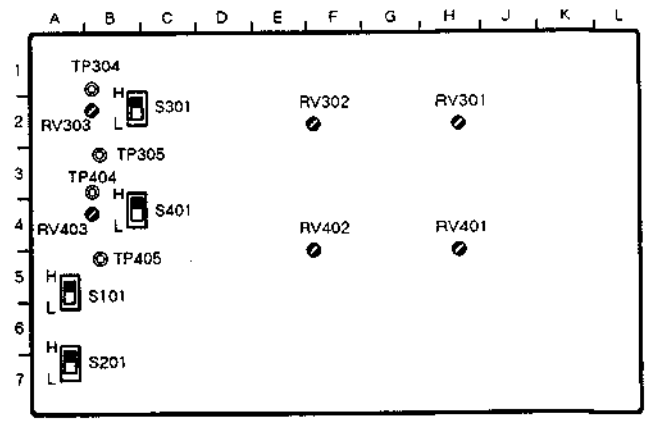
Equipment Required

Audio characteristic measuring equipment
(AF oscillator/audio analyzer) Oscilloscope

Connections



Adjustment Location



ADA-18 board
(Component side)

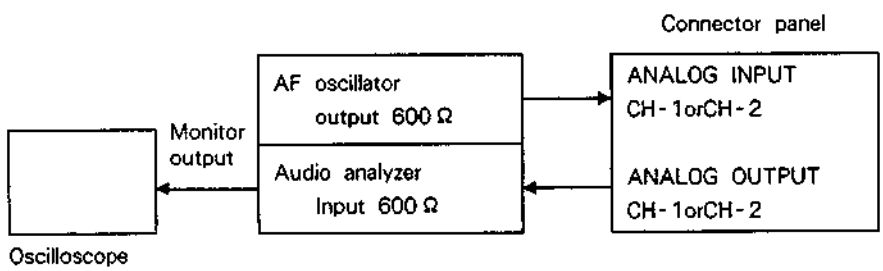
1. This adjustment applies to the ADA-18 board on the following board numbers which end in -11, -12, -13.
   ADA-18 board
   Board No : 1-637-267-11
   1-637-267-12
   1-637-267-13

Step	Adjustment Condition	Specification	Adjustment Location (ADA-18 board)
1	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-1 connector.	ANALOG OUTPUT CH1 output level +4 dBs ± 0.1 dB	◐RV302 (F, 2)
2	• Same as step 1.	Adjust the ANALOG OUTPUT CH1 distortion to the minimum. The distortion should be 0.05 % or less.	◐RV301 (H, 2)
3	• Same as step 1.	TP304 (A, 1) to TP305 (B, 3)  The amplitudes are to be equal.	◐RV303 (A, 2)
4	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-2 connector.	ANALOG OUTPUT CH2 output level +4 dBs ± 0.1 dB	◐RV402 (E, 4)
5	• Same as step 4.	Adjust the ANALOG OUTPUT CH2 distortion to the minimum. The distortion should be 0.05 % or less.	◐RV401 (H, 4)
6	• Same as step 4.	TP404 (A, 3) to TP405 (B, 4)  The amplitudes are to be equal.	◐RV403 (A, 4)

2. This adjustment applies to the ADA-18 board on the following board numbers which end in -14 and higher.
   ADA-18 board
   Board No : 1-637-267-14 and higher

Step	Adjustment Condition	Specification	Adjustment Location (ADA-18 board)
1	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-1 connector.	ANALOG OUTPUT CH1 output level +4dBs ± 0.1dB	◐RV302 (F, 2)
2	• Same as step 1.	TP304 (A, 1) ~TP305 (B, 3)  The amplitudes are to be equal.	◐RV303 (A, 2)
3	• Input a 1kHz, +4dBs signal into the ANALOG IN CH-2 connector.	ANALOG OUTPUT CH2 output level +4dBs ± 0.1dB	◐RV402 (E, 4)
4	• Same as step 3.	TP404 (A, 3) ~TP405 (B, 4)  The amplitudes are to be equal.	◐RV403 (A, 4)

Connection (step 5, 6)
Connect the oscilloscope to the monitor output of the audio analyzer.



Note : Adjustment for ◐RV301, ◐RV401 have to be done after heating up the body with the top board installed, then remove the top board before adjustment.

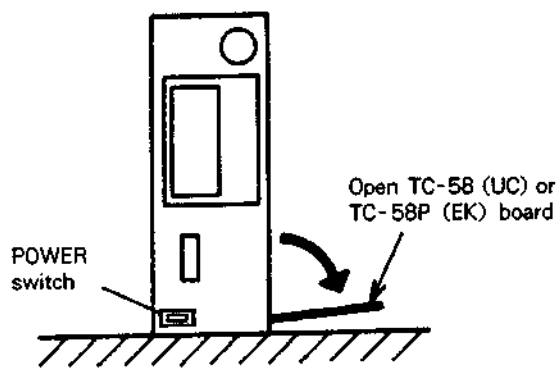
Step	Adjustment Condition	Specification	Adjustment Location (ADA-18 board)
5	• Input a 1kHz, -60dBs signal into the ANALOG IN CH-1 connector.	Satisfy ①, ② below both at the same time. ①Output level of CH1 : Between -61.0 ~ -61.5dBs ②Osciloscope wave : sin wave  OK (sin wave) NG	◐RV301 (H, 2)
6	• Input a 1kHz, -60dBs signal into the ANALOG IN CH-2 connector.	Satisfy ①, ② below both at the same time. ①Output level of CH2 : Between -61.0 ~ -61.5dBs ②Osciloscope wave : sin wave  OK (sin wave) NG	◐RV401 (H, 4)

5-4. Time Code Adjustment (With the optional TC-58 board (DABK-7030) installed.)

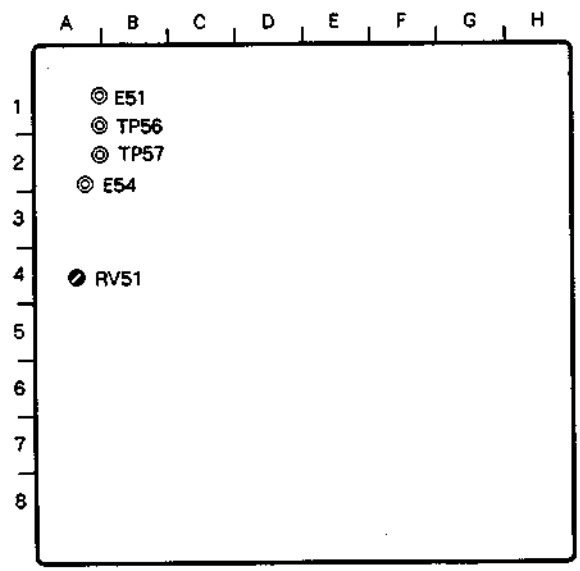
Do this adjustment if the DABK-7030 (TIME CODE OPTION) is installed on the PCM-7030/PCM-7050 or if the time code output level is to be changed.

Initial preparation

1. As shown in the figure below, lay the unit with the POWER switch on the front panel facing down.
2. Remove the bottom panel and open the TC-58 board to expose the component side. (See the figure below.) Refer to the removal procedure in 2-1.



Adjustment Location



TC-58 (UC) or
TC-58P (EK) board
(Component side)

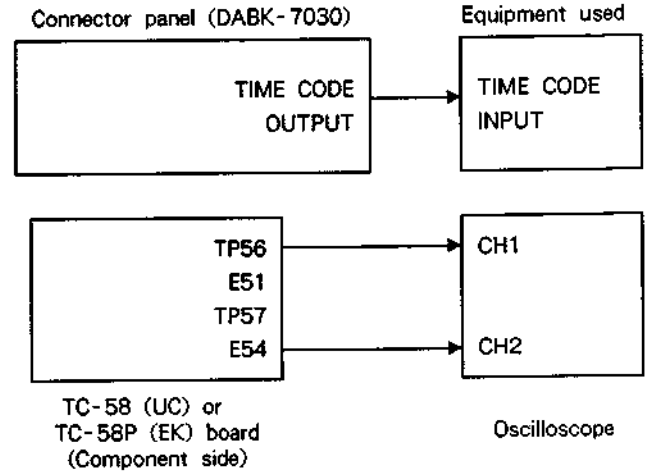
Equipment Required

Oscilloscope

Cassette tape recorded with a time code

Equipment connected to the time code output

Connections



Switch and control settings

Same as the initial settings.

Adjustment Condition	Specification	Adjustment Location (TC-58 board)
Insert the time code-recorded cassette tape and playback the tape.(PLAY mode) • Connect the oscilloscope's CH1 and GND to TP56 (A, 1) and E51 (A, 1) respectively. • Connect the oscilloscope's CH2 and GND to TP57 (A, 1) and E54 (A, 2) respectively.	Oscilloscope CH-1 Oscilloscope CH-2 ; INVERT } Both channels : ADD mode  $A = 2.4\ V_{P-P}$ • If the time code output level is to be changed, adjust ◐RV51 so that voltage A above becomes the desired voltage.	◐RV51 (A, 4)

ADA-18
PCM-7050

ADA-18 Board

The ADA-18 board consists of the A/D converter, D/A converter of two channels, and timing control block.
The A/D converter converts the analog signal to the digital signal of two channels and output the digital signal to the SP-13 board.
The D/A converter converts the digital signal of two channels transmitted from the SP-13 board to the analog signal.

1. A/D converter

A/D converter consists of -20dBs/+4dBs input level change circuit, LINE IN AMP (IC101/IC201), MUTE (Q101, 102/Q201, 202), PRE-EMPHASIS (IC102, Q103/IC102, Q203), and L.P.F.(IC102, IC202). The circuit offset (OFFSET CALIBLATION) is canceled automatically when the power turns on. The input level can be set to -20dBs or +4dBs by INPUT ATT SWITCH.(S101/S201)

2. D/A converter

D/A converter consists of the digital filter (IC2), D/A converter (IC301,IC401), L.P.F.(IC301/IC402), DE-EMPHASIS, LINE OUT AMP (IC304, 305, Q302-307 / IC404, 405, Q402-407), -20dBs/+4dBs output level change circuit, MONITOR OUT AMP (IC9) and HEADPHONE AMP (IC10). It can make the cut off characteristic of the L.P.F. moderate to make the sampling frequency eight times by using the digital filter. This improves a linear phase characteristic in the audible frequency range. The output level can be set to -20dBs or +4dBs by OUTPUT ATT SWITCH (S301, S401).

3. Timing control division (IC5, 7, 8, 11)

It regenerates the each timing signal (AD LRCK, BCK, 256Fs) transmitted from the SP-13 board into timing signals (Fs, 32Fs, 128Fs, 256Fs) which are required for A/D and D/A conversion.

DIO-10
PCM-7050

DIO-10 Board

DIO-10 board performs input/output of the digital signal of the AES/EBU standard and input/output of the word sync signal.

1. Digital In

The digital input signal of the AES/EBU Standard is converted into signal of the internal transmitting format of the PCM-7050/7030, L/R 16bit slots, and transmitted into SY-155 Board.

The digital input signal of the AES/EBU Standard (AESDI) is converted from the balanced type to the unbalanced type with RS-422 receiver (IC1) and transmitted to IC10, CXD1147Q (receiver use).
In CXD1147Q, after synchronizing pulse detection, clock demodulation and demodulation of biphase modulation signals to the NRZ signal, AESRX (digital audio data, the letter half of L/R 32bit), AESLR (FS clock) and AESBCK (bit clock ; 64fs) are generated. The AESRX signal is converted from serial to parallel in the IC12, CXD8134Q by using the AESLR AESBCK signal and then is converted from serial to parallel by using the internal FS clock (LRCK, BCK, 128FS) from the SY-155 board. The data slip information can be monitored as the WD UNLOCK signal (WD SLIP DETECTOR). Then, after 32/16bit slot conversion by the internal FS clock, AESRX is transmitted to the SY-155 board (as a DTDI).
On the other hand, after a phase correction (27 * 64Fs DELAY) against the DTDI, AESLR is transmitted to the SY-155 board (as a DIFS).
The channel status, users bit information (sampling frequency, emphasis, etc.), 1147 UNLOCK signal (LOCK information of PLL) and WD UNLOCK signal, decoded in CXD1147Q, are transmitted into the System control of PCM-7050/7030 through the CXD1147Q micro-computer interface and CXD8134Q micro-computer interface.

2. Digital Out

The digital signal of L/R 16bit slot which is the internal transmitting format of the PCM-7050/7030 is converted the AES/EBU Standard.

DTDO, from the SY-155 board, is converted from 16bit slots to 32bit slots in CXD8134D by the internal FS clock and transmitted to IC11, CXD1147Q (DADT : digital audio data, the letter half of L/R 32bit).
On the other hand, the informations of sampling frequency, emphasis, etc., taken from through the CXD8134Q micro-computer interface and through the micro-computer interface block or the SBDT block in the IC11, CXD1147Q are encoded to the channel status (C bit) and users bit (U bit). Then the DADT, after biphase modulation with the C bit and U bit in the transmitter block results in AESTX.
The AESTX signal is transmitted to the IC12, CXD8134Q again and after phase correction (85 * 128fs DELAY) against the internal FS (LRCK) (AESOUT), it is converted from unbalanced type to the blanced type with RS-422 driver (IC5) and output to the CP-171 board as the AESDO.

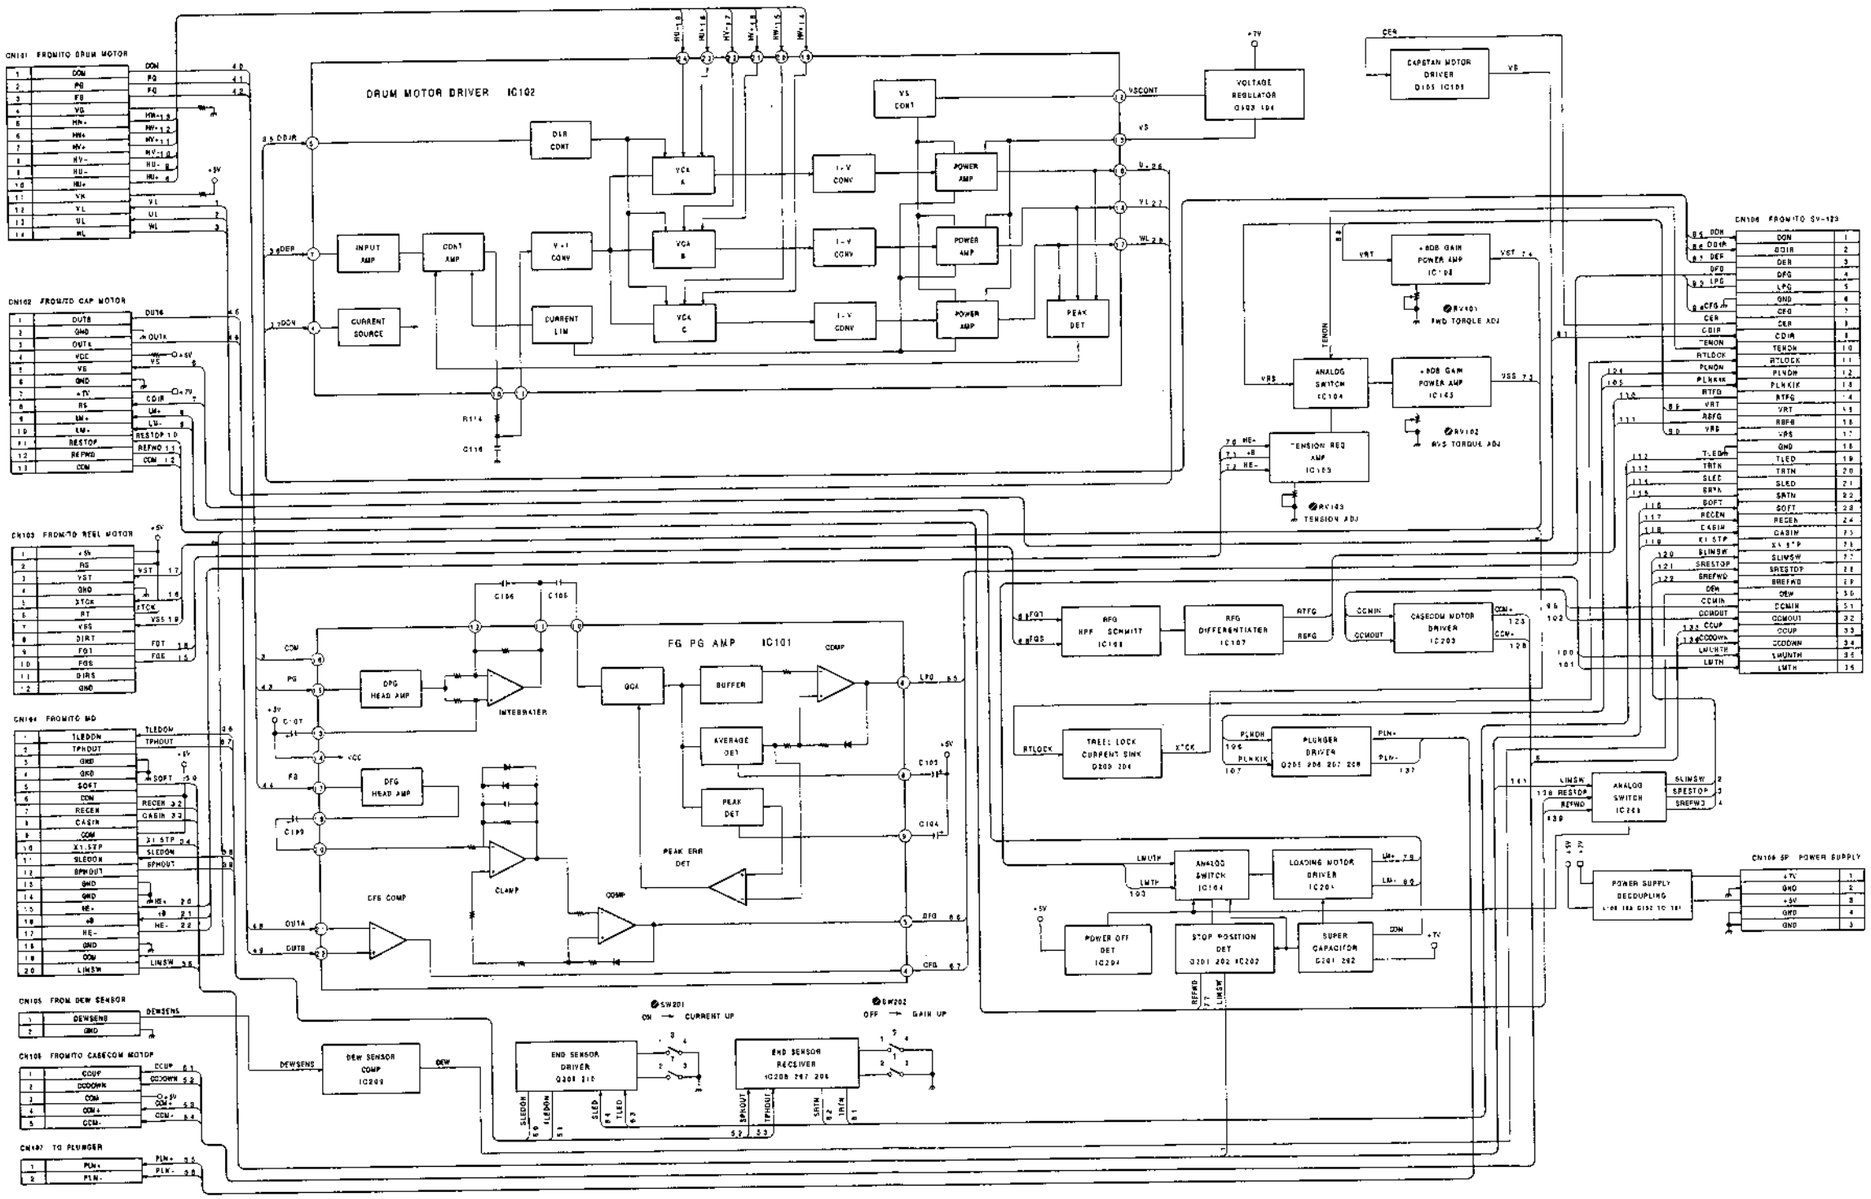
3. Word Sync Signal

The WD.SYNC IN signal transmitted from the CP-171 board is received with the line receiver (IC9) and is transmitted to the SY-155 board as a WDFS signal.

The WD.SYNC IN signal is transmitted to the CP-171 board as the WD.SYNCOUT signal when the WD INT/EXT signal from the DATA BUS of System CPU (V50) means "EXT". If the WD INT/EXT signal means is "INT", the internal FS (LRCK) is converted to the word sync signal with line driver and output to CP-171 board as the WD.SYNC OUT signal.

(MOTOR DRIVE,SENSOR)
DR-139 BLOCK DIAGRAM

DR-139 BOARD
Motor Drive,Sensor



DR-139
PCM-7050

(MOTOR DRIVE,SENSOR)
DR-139 BLOCK DIAGRAM

DR-139 Board

The hardware of DR-139 board consists of the following blocks :

1. Drum FG, PG amplifier and driver (IC101, 102)

Drum FG and PG are a system that forms a magnetizing pattern on the drum and detects the alteration of a magnetic field with a fixed printed coil. Drum PG is converted to TTL LEVEL through a comparator after passing through the head amplifier, integrator and AGC AMP in the FG, PG AMP IC (IC101). Drum FG is converted to TTL LEVEL through a comparator after passing through the head amplifier and the level clamper in the FG, PG AMP IC (IC101).

Three phase brushless motors is used as the drum motor. The drum servo error voltage (DER) from the SV-123 board will be into the control amplifier after passing through the input amplifier in the DRUM MOTOR DRIVER (IC102).

The difference between each phase detected by the peak detector and the output amplitude is taken and receives V-I conversion after passing through L.P.F. which is to stabilize the amplitude control loop, and is input to VCA. On the other hand, the drum rotation phase information input as control signals of VCA for each phase after detected with hall elements (HU-, HU+, HV-, HV+, HW-, HW+).VCA output is connected to the motor coil through the I-V converter and power amplifier, and VCA control signals rotate the motor by the current into the coil that generates a rotating magnetic field. The voltage regulator (Q103, Q104) reduce the power loss of IC102 by providing it with driving voltage according to the output amplitude.

2. Capstan FG amplifier and driver (IC101, 103, Q105)

The capstan FG is a system that forms a magnetizing pattern on the rotor and detects the alteration of a magnetic field with fixed magnetic reluctance elements. The differential output signal (OUTA, OUTB) is input to the comparator in FG, PG AMP IC (IC101) and is converted to TTL LEVEL (CFG), Three phase brushless motor is used as the capstan motor. The driver is in the board unified with the capstan motor, however, most of the power loss is borne by Q105 on this board.

3. Reel FG forming circuit and driver (IC104-107)

The reel FG uses an optical system and is detected in the reel motor and is converted to TTL LEVEL. This FG are detected by differential circuit after passing HPF and the Schmitt circuit (IC106) and is transmitted to the servo micro-computer (CXP-80524 on the SV-123 board). On the other hand, T-side reel error signal (VRT) from the SV-123 board, pass through the attenuator for the FWD torque adjustment and input to the power amplifier (IC105). This power amplifier has 6dB gain. Three-phase brushless motors are used as reel motors. The driver is in the board in the reel motor, however, most of the power loss is borne by Q105.S-side reel error signal (VRS) is shifted to the output signal of the tention regulator amplifier according to modes by the analog switch (IC104) and is input to IC105.

4. Tention regurator amplifier (IC103)

The positioning information of the tention regurator on the mechanical deck is detected by the hall elements and is input to the differential amplifier of IC103 (HE+, HE-). The amplified signal will be selected by the analog switch in record mode and play mode, and the tention servo loop will be formed. RV103 is for FWD tention adjustment.

5. Plunger driver (Q205-208)

The break for the reel motors shall be released by using plunger. The voltage required for kicking and holding plunger is shifted.

6. End sensor driver/receiver (IC206-208, Q209, 210)

By using end sensor driver (Q209, Q210), the square wave of 1KHz comes from servo micro-computer drive LED in the end sensor unit. The driving current value shall be shifted into two steps by using SW201. When a tape ends, the light from LED is reflected by prism in the cassette and is input into the photo transistor inside the end sensor unit.

Photo transistor output (TPH OUT, SPH OUT) enters the END sensor receiver (IC206, 207, 208), changed into TTL LEVEL by compalator then transmitted to micro computer (IC101) in the SV-123 board.

Gain of the amplifier section shall be shifted into two steps by using SW202.

7. Loading cassette compartment motor driver (IC104, 201-204, Q201, 202)

The loading motor driver (IC201) is a bidirectional driver for a loading motor. In order to avoid the transformation of a pinch roller, it includes a circuits (Q201, Q202, IC202) that return to STOP position when the power turned off during installation. The cassette compartment motor driver (IC203) is a bidirectional driver for the cassette compartment motor.

8. T-side reel lock circuit (Q203, 204)

This is to shunt service voltage of T-side reel motor and lock the motor in order to avoid the slack of the tape during loading and unloading mode.

9. Dew sensor detecting circuit (IC209)

The resistance value of sensor mounted on the mechanical deck decreases when humidity is increased. It detects the change and transmits to servo micro-computer.

KY-192/LED-104/SW-420 BLOCK DIAGRAM

KY-192, LED-104 and SW-420 Boards

The KY-192 board consists of KEY and SELECTOR on the front panel scan block, and FL tube and LED display block. The METER IC (IC4) performs a holding of a peak value of 16 bit serial audio data and a detection of OVER LEVEL. CPU (IC6) is a 8bits CPU with ROM, RAM, and FL DRIVER. It display FL tube and LED according to the serial data from SY-155 and the audio peak data from the METER IC (IC4).

1. KEY, SW SCAN block

It decode (IC1) the SCAN LINE DATA (SL0, 1, 2) transmitted from ICA4 (TMP82C79) on the SY-155 board and output the RETURN LINE DATA (RL0-5) to the SY-155 board. The Key scan is performed for all keys and selectors on the front panel. Also it outputs the rotary encoder pulse data of the dial to the SY-155 board (Dial A, B) via the SW-420 board.

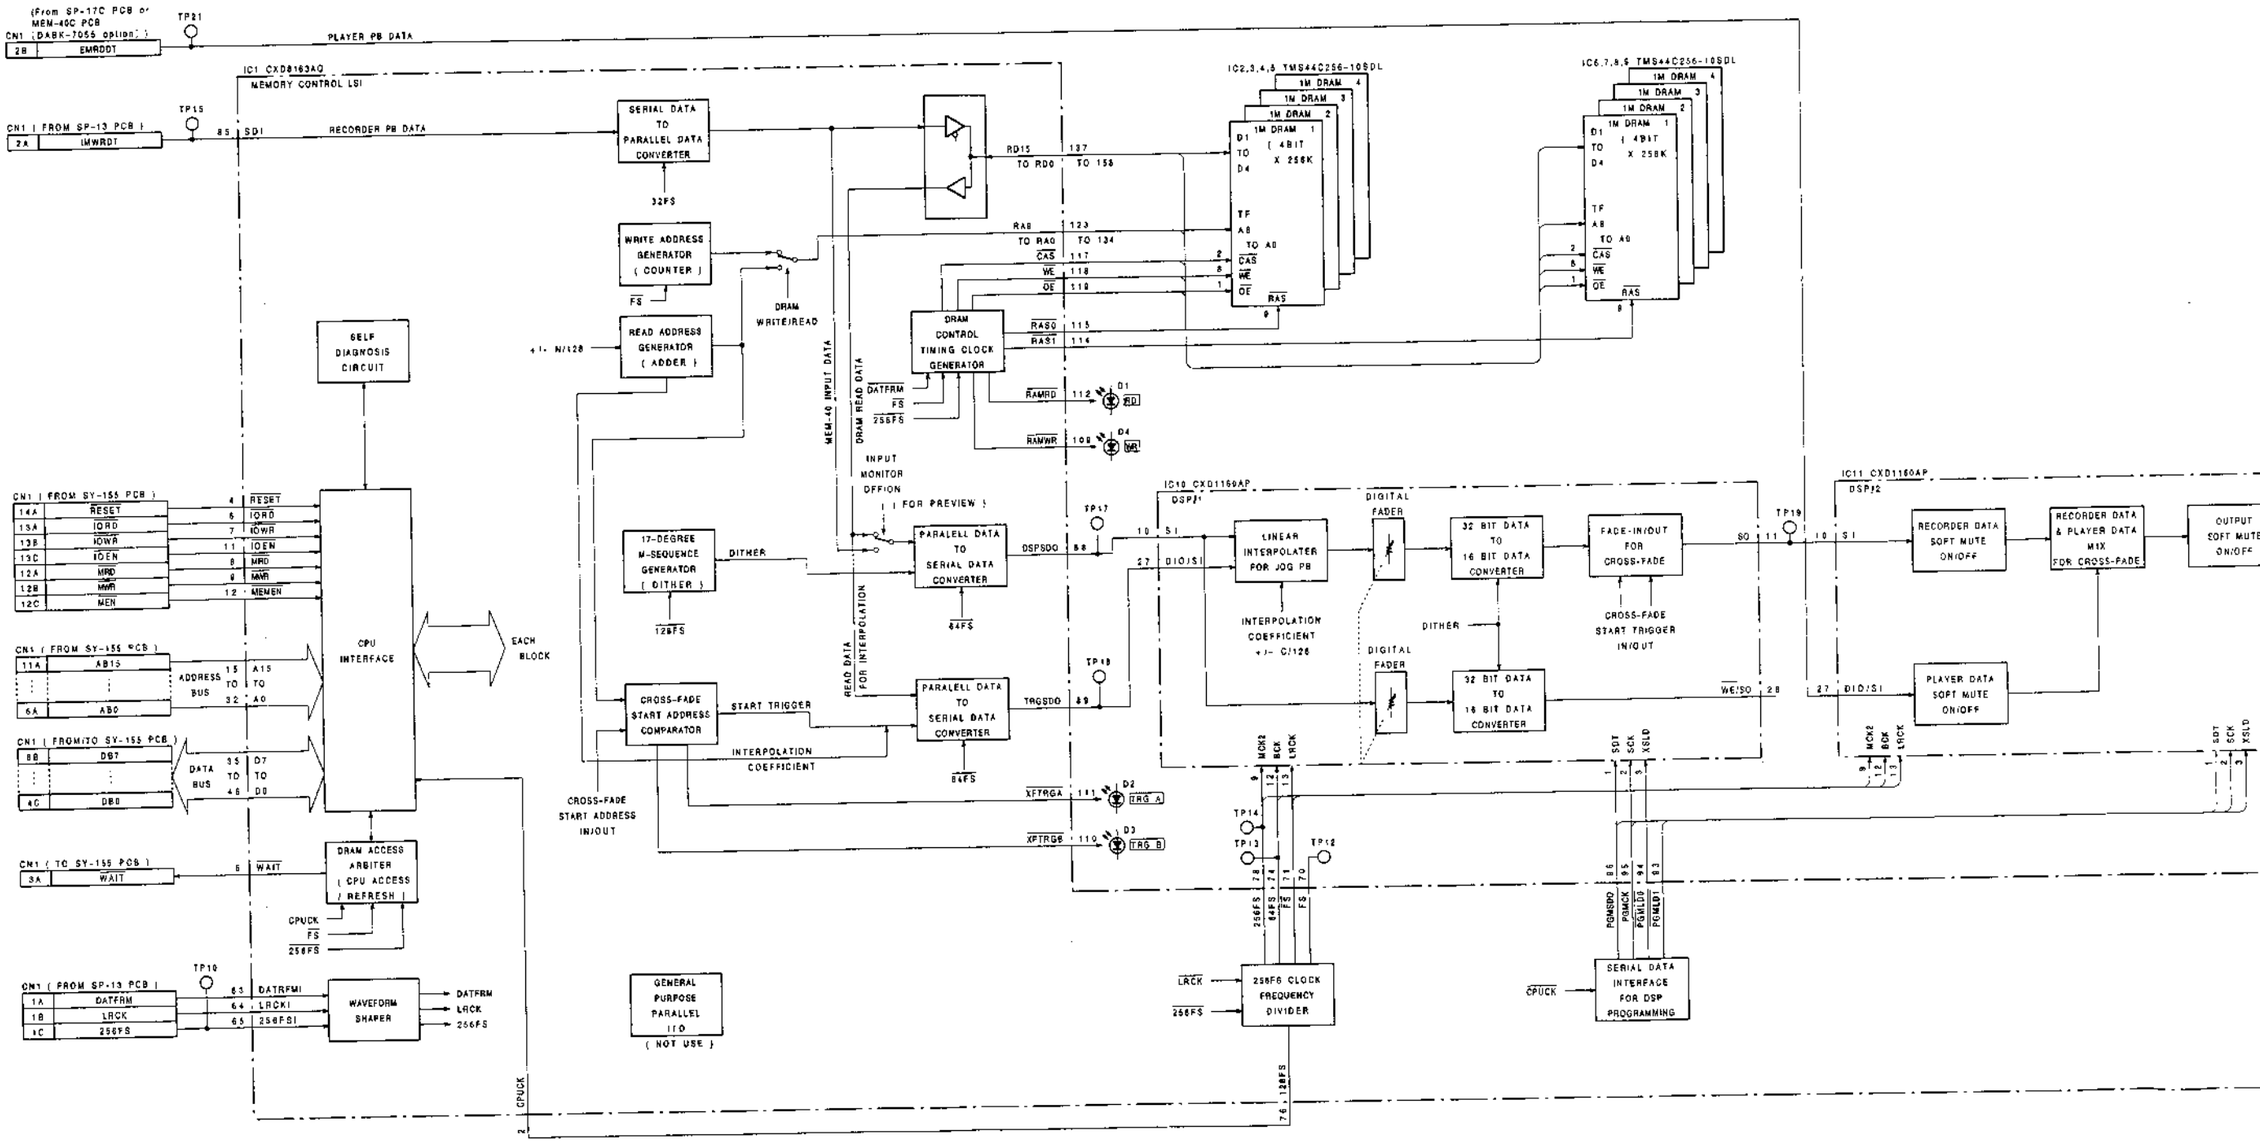
2. FL tube, LED display block

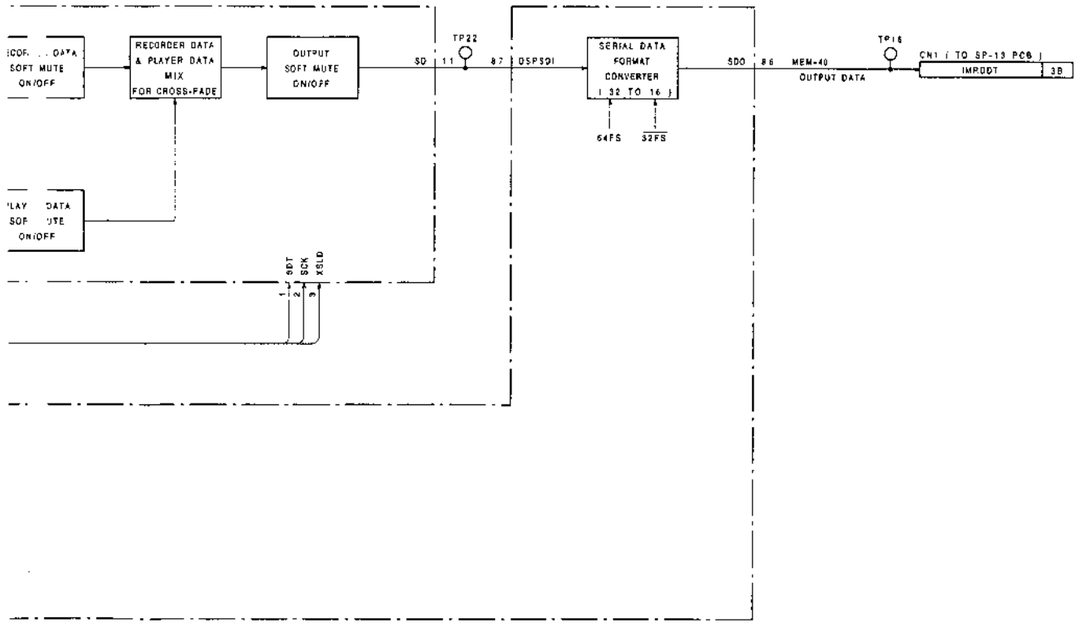
The 16bit digital audio data (DTPPM) input from the SP-13 board via the SY-155 board will be inserted into IC4 (MSM6338) together with LRCK, BCK signals. In this division, the peak value is held after the S /P conversion and the absolute value conversion. The detection of over level is performed simultaneously according to the over level value and over level sensitivity. The IC6 (MSC62408) executes serial communication with ICF2, MAIN CPU (UPD70216 (V50)) on the SY-155 board and performs lighting, and flashing of FL tube and LED as well as the METER display mode (ex. PEAK HOLD MODE, HOLD TIME).

It reads the peak data from the METER IC (IC4) and converts it to the segments data according to the parameter specified from the main CPU (V50).

(MEMORY START)
MEM-40A BLOCK DIAGRAM

MEM-40A BOARD
Memory Start





MEM-40A

PCM-7050

MEM-40A Board

The MEM-40A board consists of eight 1Mbit DRAMs (IC2-9), two DSP (CXD1160AP) (IC10, IC11) and the gate array (IC1, CXD8163AQ) that controls them. It writes the reproduced tape sound into the DRAM, reads it out and performs signal processing with DSP that enable the functions such as memory start, spot erase and locating point using a memory. Also it enables users to perform cross-fade with a player sound at editing point if the edit memory board (DABK-7055) (optional) is installed.

First of all, the tape playback sound from the SP-13 board is written into the DRAM after converted into parallel data in gate array (IC1).

Since the memory capacity is 8Mbit, the sound of approximately 5.5 seconds can be held in case of 48kHz sampling frequency. The timing control for reading/writing DRAM is all executed by the gate array and it controls the starting address and start/stop by system control. The refreshment of the DRAM is automatically executed by the gate array twice in every one sampling period.

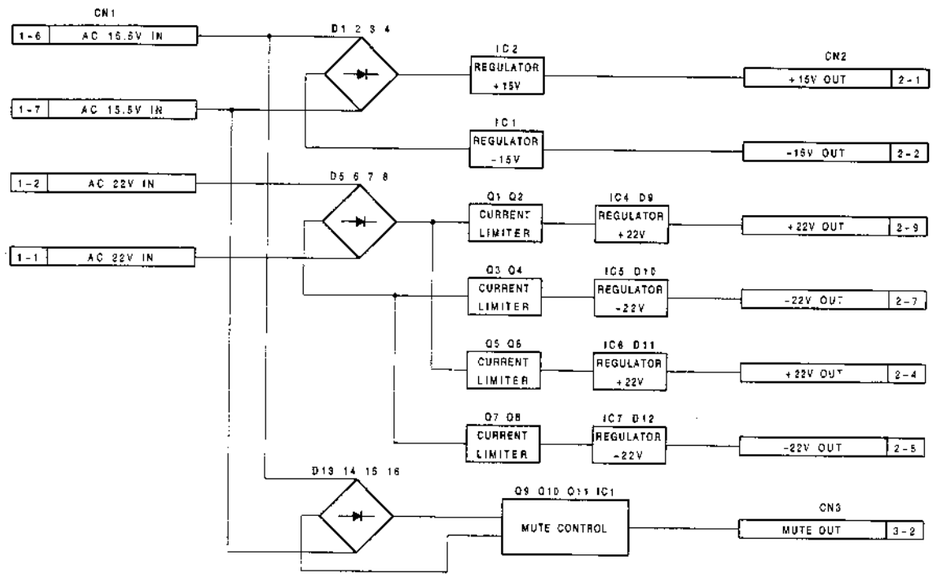
Secondly, the tape playback sound read from the DRAM is transmitted to the DSP and the signal processing such as cross-fade in automatic editing, FADE OUT/FADE IN for spot erasing and the linear interpolation for locating point using a memory are performed. In case of memory start, no processing occurs in DSP but passing. The DSP program is set by system control through the DSP serial interface built in the gate array when the power turned on. Starting trigger for cross-fade and FADE OUT/FADE IN, and the cofficients for linear interpolation operation are generated in the gate array and are transmitted to the DSP.

The sound after the signal processing in the DSP returns to the gate array and is output to the SP-13 board, receives D/A conversion on the ADA-18 board, is output in digital from the DIO-10 board and recorded into a tape.

In addition, MEM-40A board enables users a direct reading/writing the DRAM data from system control CPU for the self-diagnosis.

(POWER SUPPLY)
PS-211 BLOCK DIAGRAM

PS-211 BOARD
Power Supply



PS-211 Board

The PS-211 board consists of one analog +15V system (IC1/IC2), two analog +22V systems (IC4, D9/IC5, D10/IC6, D11/IC7, D12) and the MUTE CONTROL (Q9-Q11, IC1) which controls mute when the power turned ON/OFF.

+15V uses the analog power source of the ADA-18 board and +22V uses the LINE OUT AMP power source of the ADA-18 board supplying in the different system for ch1 and ch2. The current limitter (Q1, Q2/Q3, Q4/Q5, Q6/Q7, Q8) will work when more than 100mA electricity is sent to the regulator. The MUTE CONTROL outputs the mute release signal three seconds after power on and relay on the ADA-18 board will be turned on, and shortly after power off, it sends the MUTE ON signals and turn off the relay in order to avoid the occurance of poping noise.

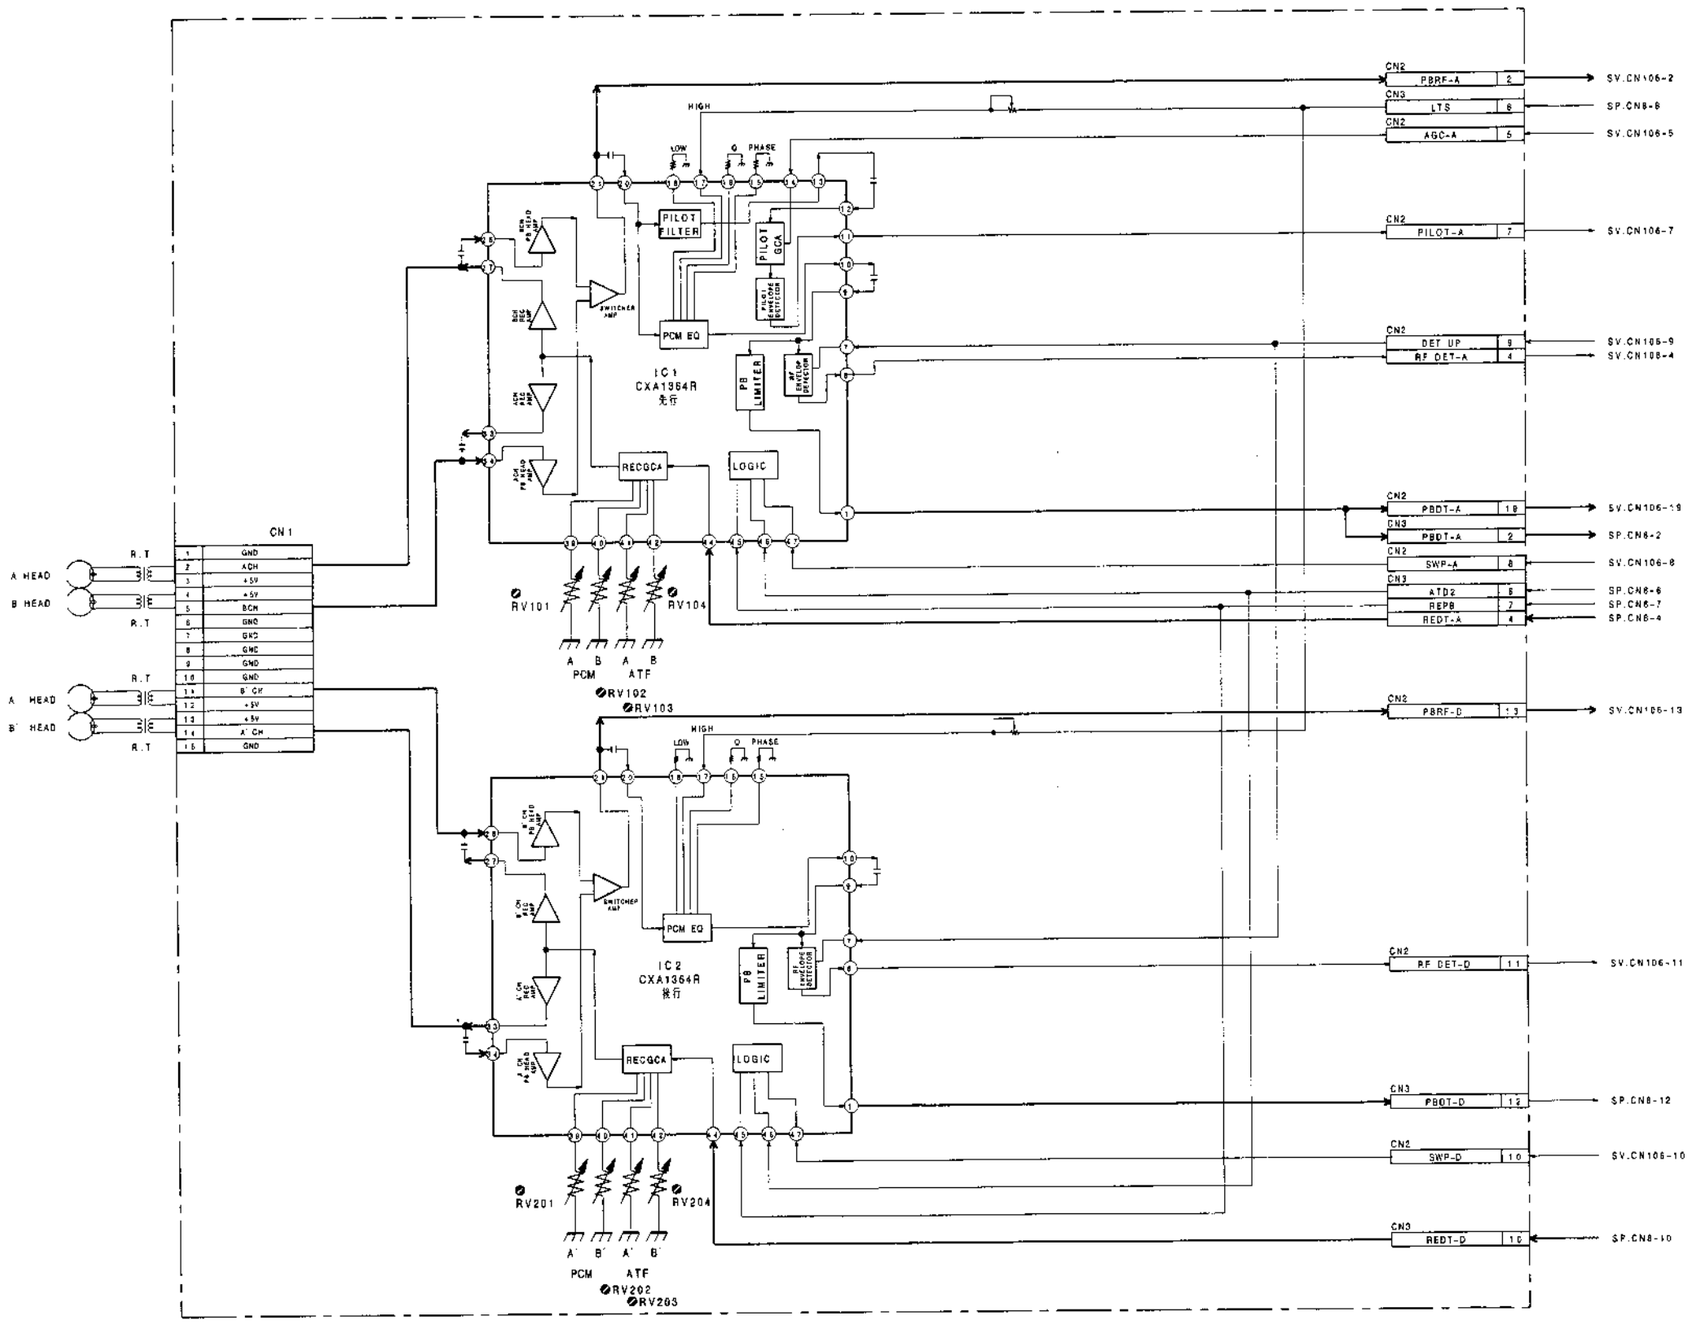
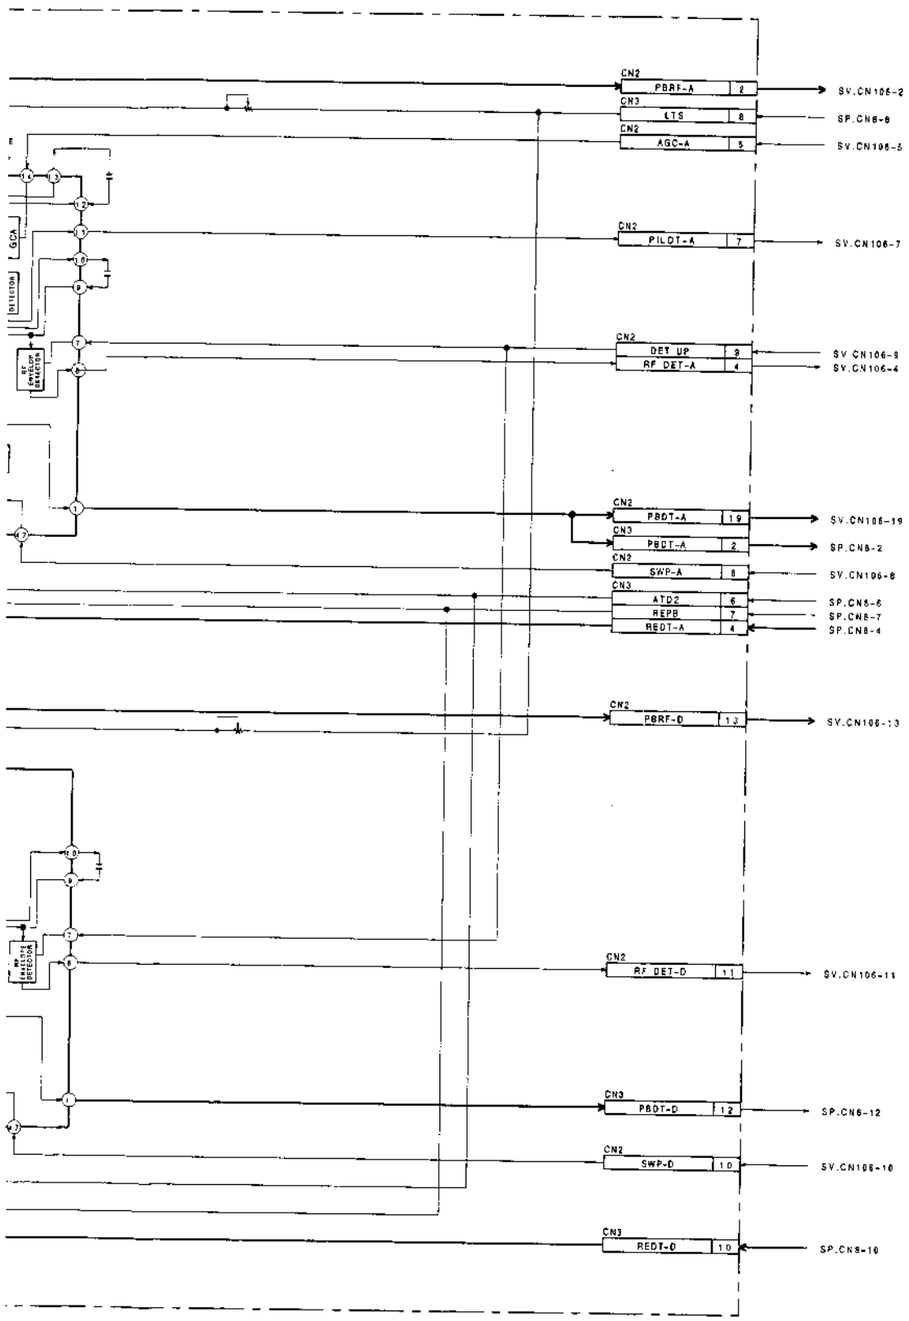
(RF AMPLIFIER)
RF-31 BLOCK DIAGRAM

RF-31 BOARD
RF Amplifier



RF-31
PCM-7050



RF-31
PCM-7050

RF-31 Board

The RF-31 board can record and playback the digital signal into the tape and mainly consists of two RF amplifier ICs (IC1, 2) for leading head and trailing head.

The RF amplifier IC is integrated the recording/playback amplifier, PCM equalizer and ATF analog signal processing block into one chip.

1. The REC signal flow

During recording, the recording signal REDT-A (A, Bch) and REDT-D (A', B'CH) from the digital signal processing IC on the SP-13 board is entered into the REC gain control division of the IC (IC1 for leading head recording and IC2 for trailing head recording) on the SP-13 board. The recording signal is converted from the voltage into the current and the current is adjusted to meet the head feature of A, B, A', B'ch (PCM current adjustment leading head : RV101 for Ach, RV102 for Bch, trailing head : RV201 for A'ch, RV202 for B'ch, ATF current adjustment leading head : RV103 for Ach, RV104 for Bch, trailing head : RV203 for A'ch, RV204 for B'ch.). Then, it is amplified 40dB by the amplifier in the IC and is output to the drum.

2. The PB signal flow

The playback signal from the head is amplified 60dB (IC1 amplifies the leading head A, Bch and IC2 amplifies the trailing head A', B'ch) and is output to the SV-123 board as PBRF-A (A, Bch) and PBRF-D (A', B'ch). On the other hand, the playback signal amplified 60dB is amplified and phaze-equalized in each EQ division of IC1 and IC2 (High frequency characteristic adjustment : leading head A, Bch = RV105, trailing head A',B'ch = RV205). During the VARI PITCH, The EQ high frequency characteristic is controlled by VARI PITCH voltage (LTS) from SP-13 board in order to check inferiority of the error rate.The wave-equalized playback signal is converted to the rectangular wave with an amplitude of 870mVp-p by the limitter in the IC and is output as REDT-A (leading head A, Bch) and REDT-D (trailing head A', B'ch).

3. ATF analog signal process division

(1) Detection the detection signal of tracking error (normal speed and variable speed playback)

The IC1 on the RF-31 board extracts the pilot signal (130KHz) from the playback signal and adjusts the gain based on the features of A and B head by the AGC-A signal that the pilot gain control amplifier in the IC1 is transmitted from the SV board.
Then, the envelop of the pilot signal is generated and output to the PILOT-A.

(2) RF envelope detection

The RF envelop detector in the IC inputs the PCM equalizer output and detects the PCM band signal out of the RF signal and output the outcome to the RF DET-A (IC1 leading head A, Bch) and RFDET-D (IC2 trailing head A', B'ch), It also shifts the threshold voltage level to normal PB mode and search mode.

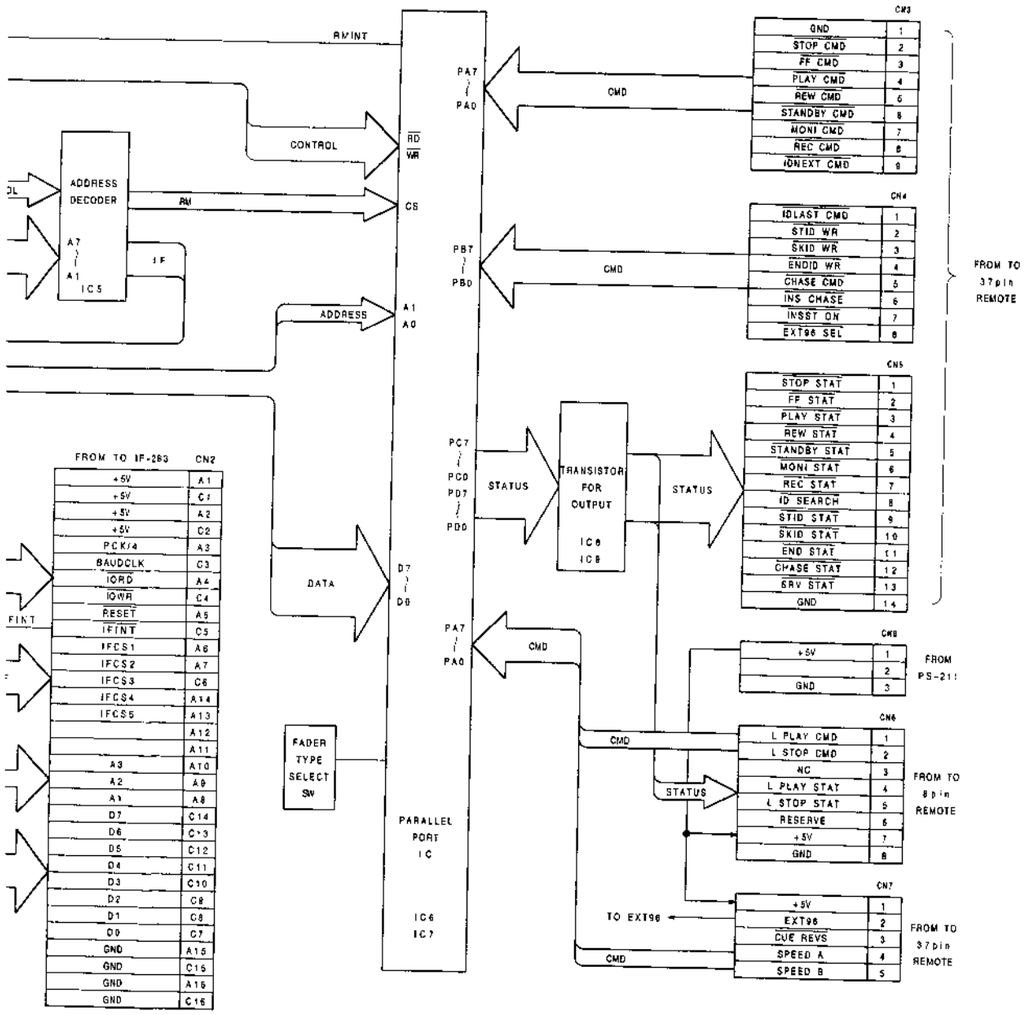
RM-77
PCM-7050

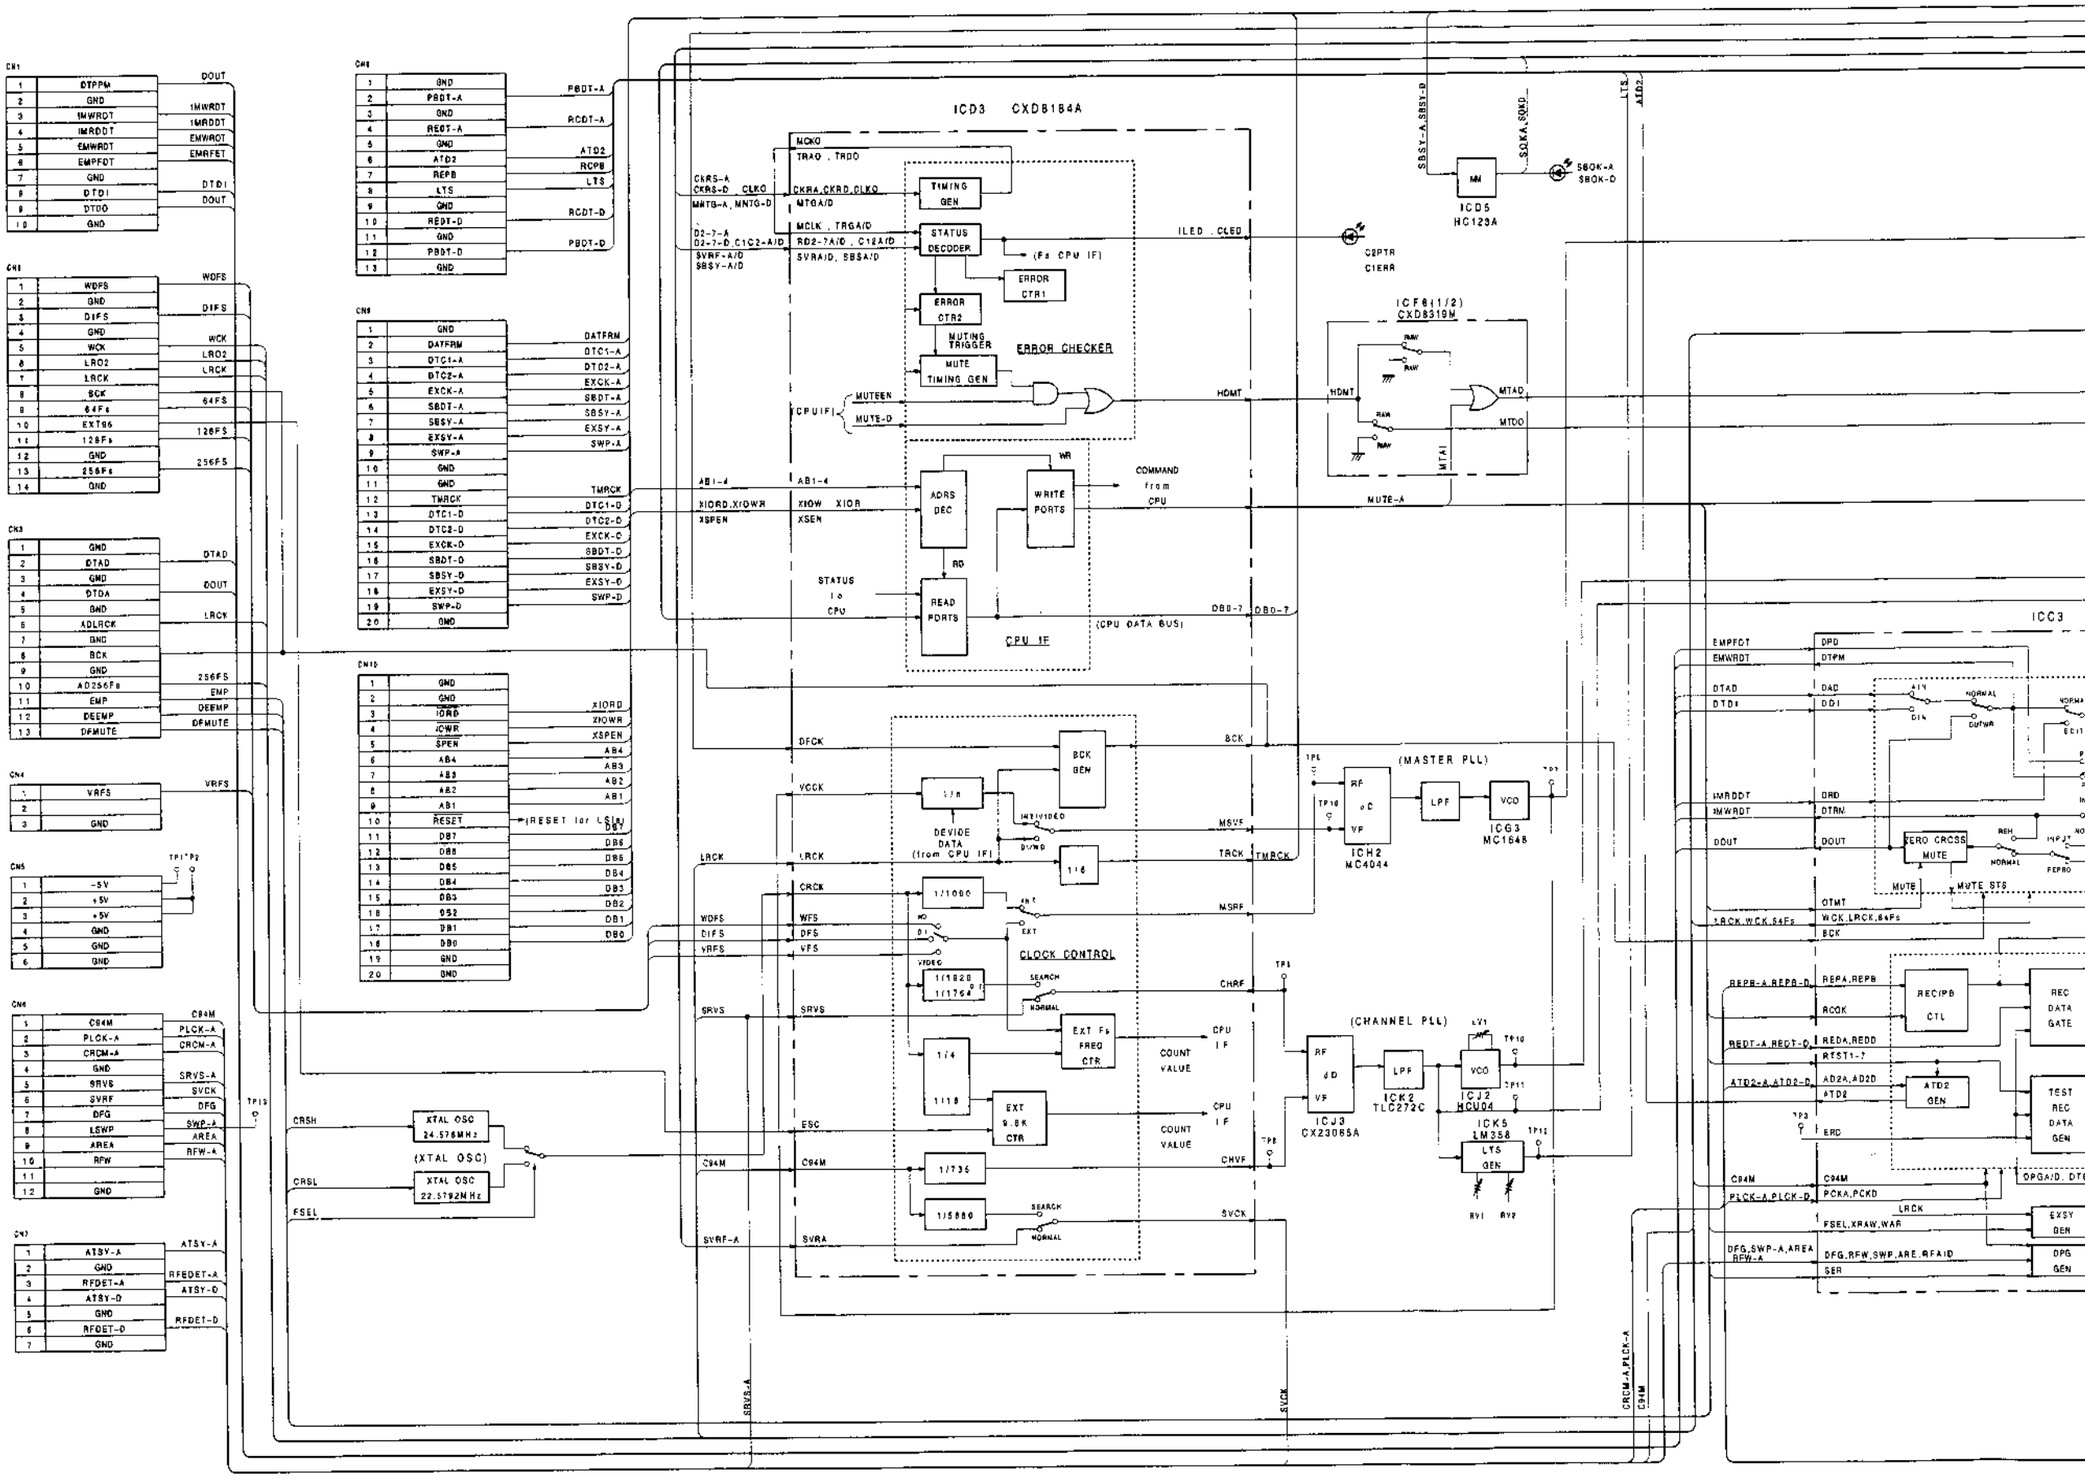


RM-77 Board

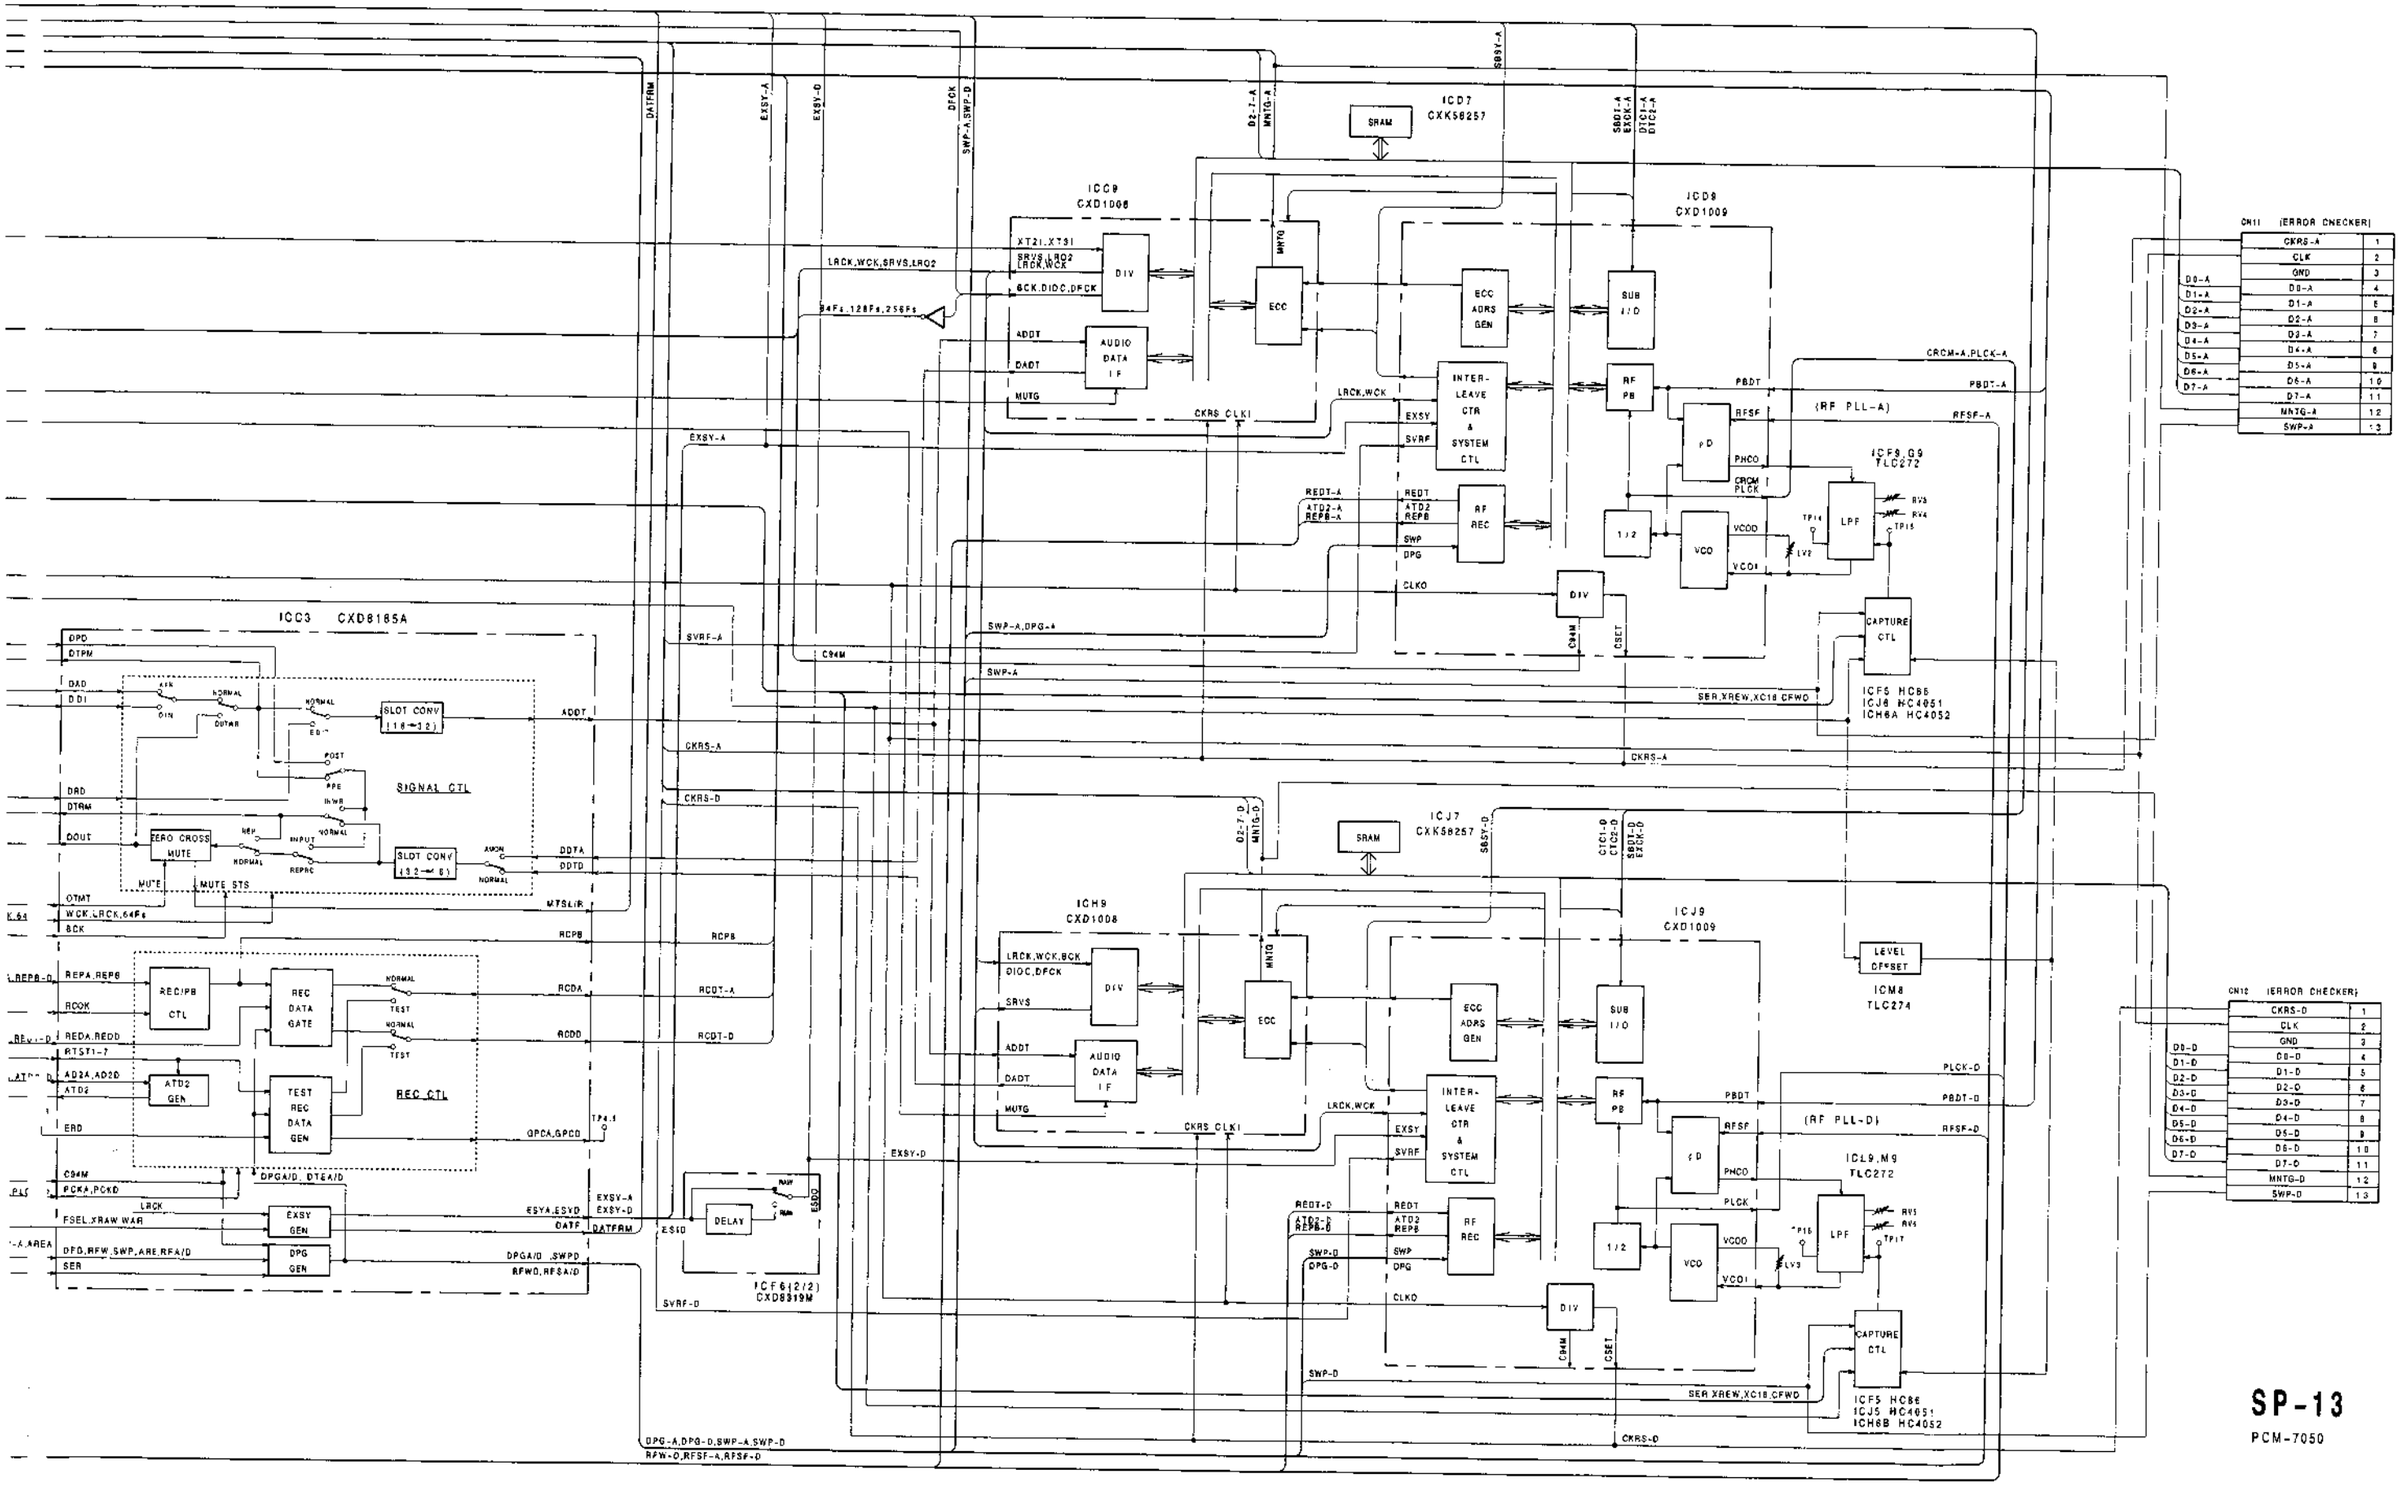
The RM-77 board is to control 37pin parallel remote and 8pin fader start remote. It uses two 32bit I/O PORT gate arrays (IC6, 7) to output the status.
It sends the SY-155 board an offering signal for process requirement when 50msec pulse input command is transmitted.
The PS-211 board supplies +5V to 7pin of connector CN6 and 1pin of CN7 and is able to supply up to 500 (mA).
SW1 is to specify the shift the PLAY/STOP for fader start to 2 switch for pulse input and 1 switch for level input.
CN2 48pin DIN connector on the RM-77 board is to install the optional board (IF-283 board) for the DABK-7033 RS-232C.

RM-77
PCM-7050

SP-13 BOARD
Signal Processor



(SIGNAL PROCESSOR)
SP-13 BLOCK DIAGRAM



SP-13

PCM-7050

SP-13 Board

The SP-13 board has the features that encodes the audio and sub-code signals according to the DAT format and sends the encoded signal to the recording amplifier ; decodes the signal transmitted from the playback amplifier and takes the audio and sub-code signals to send each boards.

The audio signals transmitted from the A/D converter (ADA-18 board) and AES/EBU D-IN (DIO-10 board) are first entered into CXD8185A (ICC3). The audio signal from ICC3 will be transmitted to CXD1008 (IC9/ICH9) through the conversion from 16bit slot into 32bit slot after selected by the AUDIO INPUT switch (ANALOG/DIGITAL) in ICC3. On the other hand, the sub-code came from the SY-155 board enters into CXD1009 (ICD9/ICJ9). The audio signal and the sub-code signal receive the interleave, ECC encoding and 8-10 modulation in CXD1008 and CXD1009, and are transmitted to the recording amplifier (RF-31 board) with the ATF signal and are recorded on the tape (RCDT-A, RCDT-D).

The playback signal (PBDT-A, PBDT-D) transmitted from the playback amplifier (RF-31 board) enters into CXD1009. Data extraction clock is generated by RFPLL circuit and the playback data is extracted by this clock. The extracted data receive the 10-8 demodulation, ECC decoding and deinterleave in CXD1008 and CXD1009, and are output as the audio signal and sub-code signal. The sub-code signal is sent to the SY-155 board. The audio signal receives the conversion from 32bit slot to 16bit slot in CXD8185A and is transmitted to the D/A converter (ADA-18 board), AES/EBU D-OUT (DIO-10 board), METER (KY-192 board) and MEMORY (MEM-40 board).

The signal process ICs for DAT (CXD1008, 1009) are used in pairs in the leading head and trailing head. Generally, the leading head for recording and the trailing head for playback. In SUB INSERT mode, the leading head for playback and the trailing head for recording the sub-code. Also, the tape recorded with the Wide track mode is played back the leading head.

The SP-13 board includes the following circuit other than the above :

Error block counter (in CXD8184A) : enables the CPU (SY-155 board) to monitor the error rate by counting the numbers of error detected blocks during playback.

Muting circuit (in CXD8184A and CXD8185A) : performs a zero-cross mute to the playback audio signal when playback error rate becomes worse than the initially set-up theshold.

PLL circuit : consists of the Master PLL which generates master clock and the Channel PLL which generates the reference clock for the recording signal. The dividing circuit (in CXD8184A) is controlled by CPU and enables the VARI SPEED function.

Frequency counter (in CXD8184A) : measures frequency of the external reference clock and EXT SOURCE from the parallel remote connector.

Audio signal switch circuit (in CXD8185A) : shifts signal flow by corresponding with the modes such as memory start, editing as well as the normal recording and playback.

Test signal generating circuit (in CXD8185A) : generates test signals in order to make the test tape for the mechanical servo adjustment.

SP-17C Board

The SP-17C board consists of the DSP (CXD1160AP, IC10) and the gate array (CXD8163AQ, IC1) that controls them. It performes an input signal processing from the outside with DSP, and using SP-17C board enables to cross-fade this sound signal with the recorder sound at an editing point.

The DSP program is set by the system control through the DSP serial interface built into the gate array when the power is turned on. Starting triggers for cross-fade and FADE-OUT/FADE-IN are generated in the gate array and are transmitted to the DSP.

The sound after its signal processing in the DSP is sent to the MEM-40A board. It is added to the recorder sound in the DSP (CXD1160AP, IC11) on the MEM-40A board, and is retured again to the gate array.

After that, it is output to the SP-13 board.

SY-155
PCM-7050

(SYSTEM CONTROL)
SY-155 BLOCK DIAGRAM

SY-155 Board

The SY-155 board is the main CPU (ICF2) and peripheral circuit that perform the main control operation as well as the mother board of the PCM -7050/7030.

There are a gate array (ICF4), an interrupting controller (PIC) (ICG1,ICH), an interval timer (PIT) (ICJ1A,B), a key encoder (ICA4),a sub-code serial I/F (ICJ6,ICK6), a two-phase clock counter, ROM (256K) (ICC3,ICC4), RAM (64K) (ICC1,ICC2), RAM BACK UP circuit (ICD3), a sub-CPU for RS422 (ICK3, ICK4) as peripheral units.

MAIN CPU (μ D70216-10,ICF2) ;

PD70216-10 (V50) is a 16bit micro-processor with the operation frequency of 10MHz.

Gate array for sub-CPU I/F (CXD8139AQ,ICF4) ;

consists of two synchronous SIOs, one PIO and the address decoder.

PIC (μ D71059,(ICG1,ICH1)) ;

Control 17 interrupts with a master PIC in the main CPU chip.

PIT (μ D71054 (ICJ1A,ICJ1B)) ;

An interval timer with three 16bit, used for a timer for the operation system, baud rate generator, V-SYNC input detector.

Key encoder (TMP82C79,ICA4) ;

Inputs key data from the KY-192 board and performs sensor matrix process.

Sub-code serial I/F (CXD8130Q (ICJ6,ICK6), 27C256 -SCCKV1.0 (ICK5,ICJ5)) ;

Synchronous SIO for controlling CXD1009 in the SP-13 board.

Two-phase clock counter (μ D4702G,ICF5) ;

Two-phase clock counter from the dial.

MEMORY (RAM) back up circuit (ICD3) ;

Performs back up for the MEMORY (RAM) during the power-off by using a condenser (C12,C13) and lithium battery (BT1).

Sub-CPU for the RS-422 (μ PD78C11 (ICK3), μ PD71051 (ICK4)) ;

Converts the RS-422 serial communication into the parallel communication for the main CPU.

DESCRIPTION OF THE INTERRUPT

PIC0 : INT0 : System timer interruption for a real -time operating system RT30V for 5msec.
INT1 : Interruption for the data loading from the time code generator.
INT3 : Interruption for data ready from the external time code reader.
INT4 : Interruption of the PIO RxRDY.
INT5 : DAT FRAME interruption for 30msec.
INT6 : Receiving usage for PIC1
INT7 : Receiving usage for PIC2

PIC1 : INT0 : Interruption for the sub-code input /output of the leading processor.
INT1 : Interruption for the sub-code input/ output of the trailing processor.
INT2 : Interruption by the access completion of the leading processor.
INT3 : Interruption by the access completion of the trailing processor.
INT4 : RESERVED
INT5 : Interruption from the servo CPU (CX80524).
INT6 : Interruption to inform the input alternation of the parallel remote.
INT7 : Interruption from the Key encoder (TMP82C79).

PIC2 : INT0 : Interruption for IF-283, RS-232C
INT1 : RESERVED
INT2 : Timer interruption for the FL tube CPU.

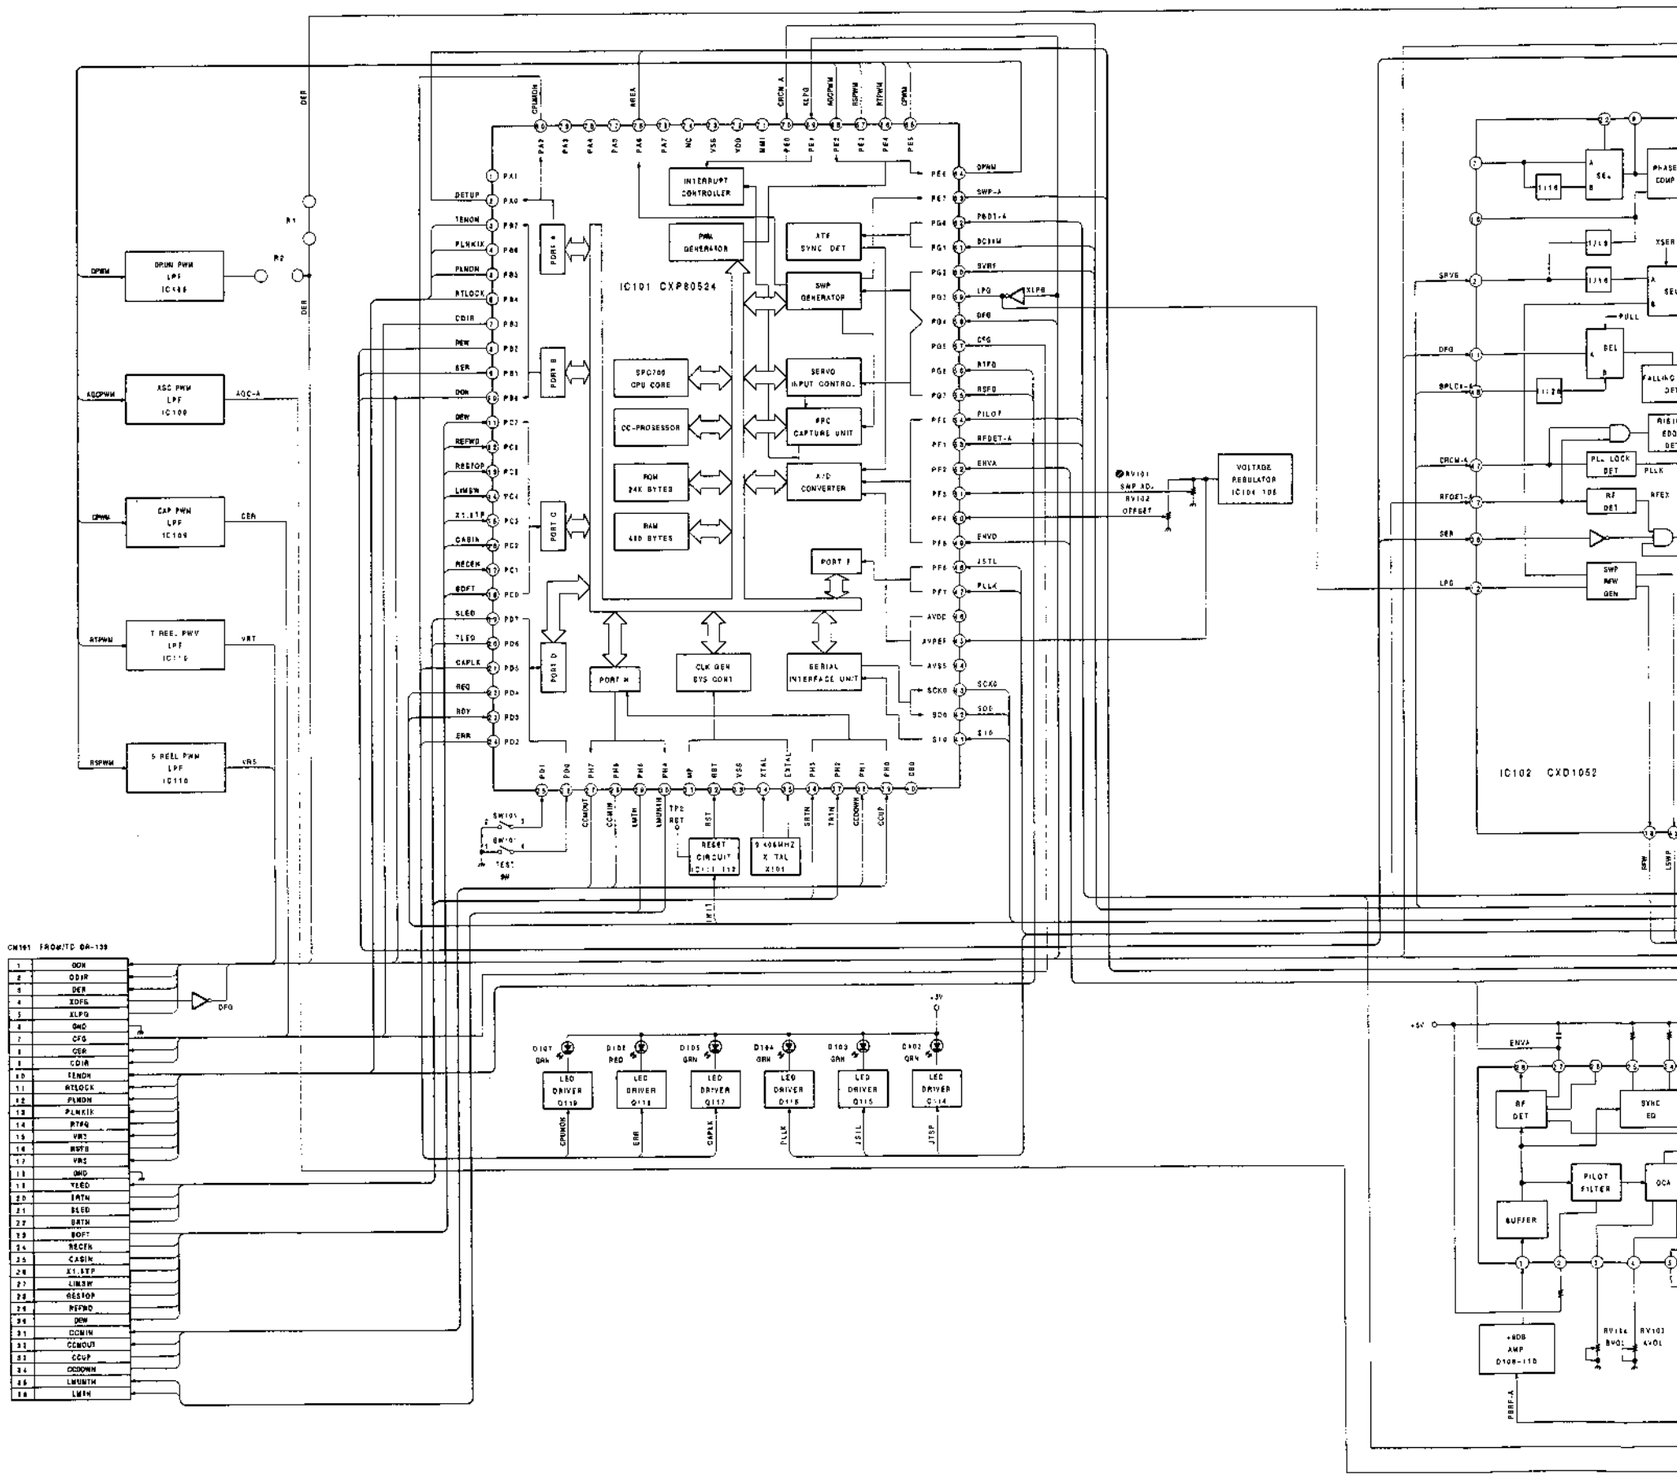
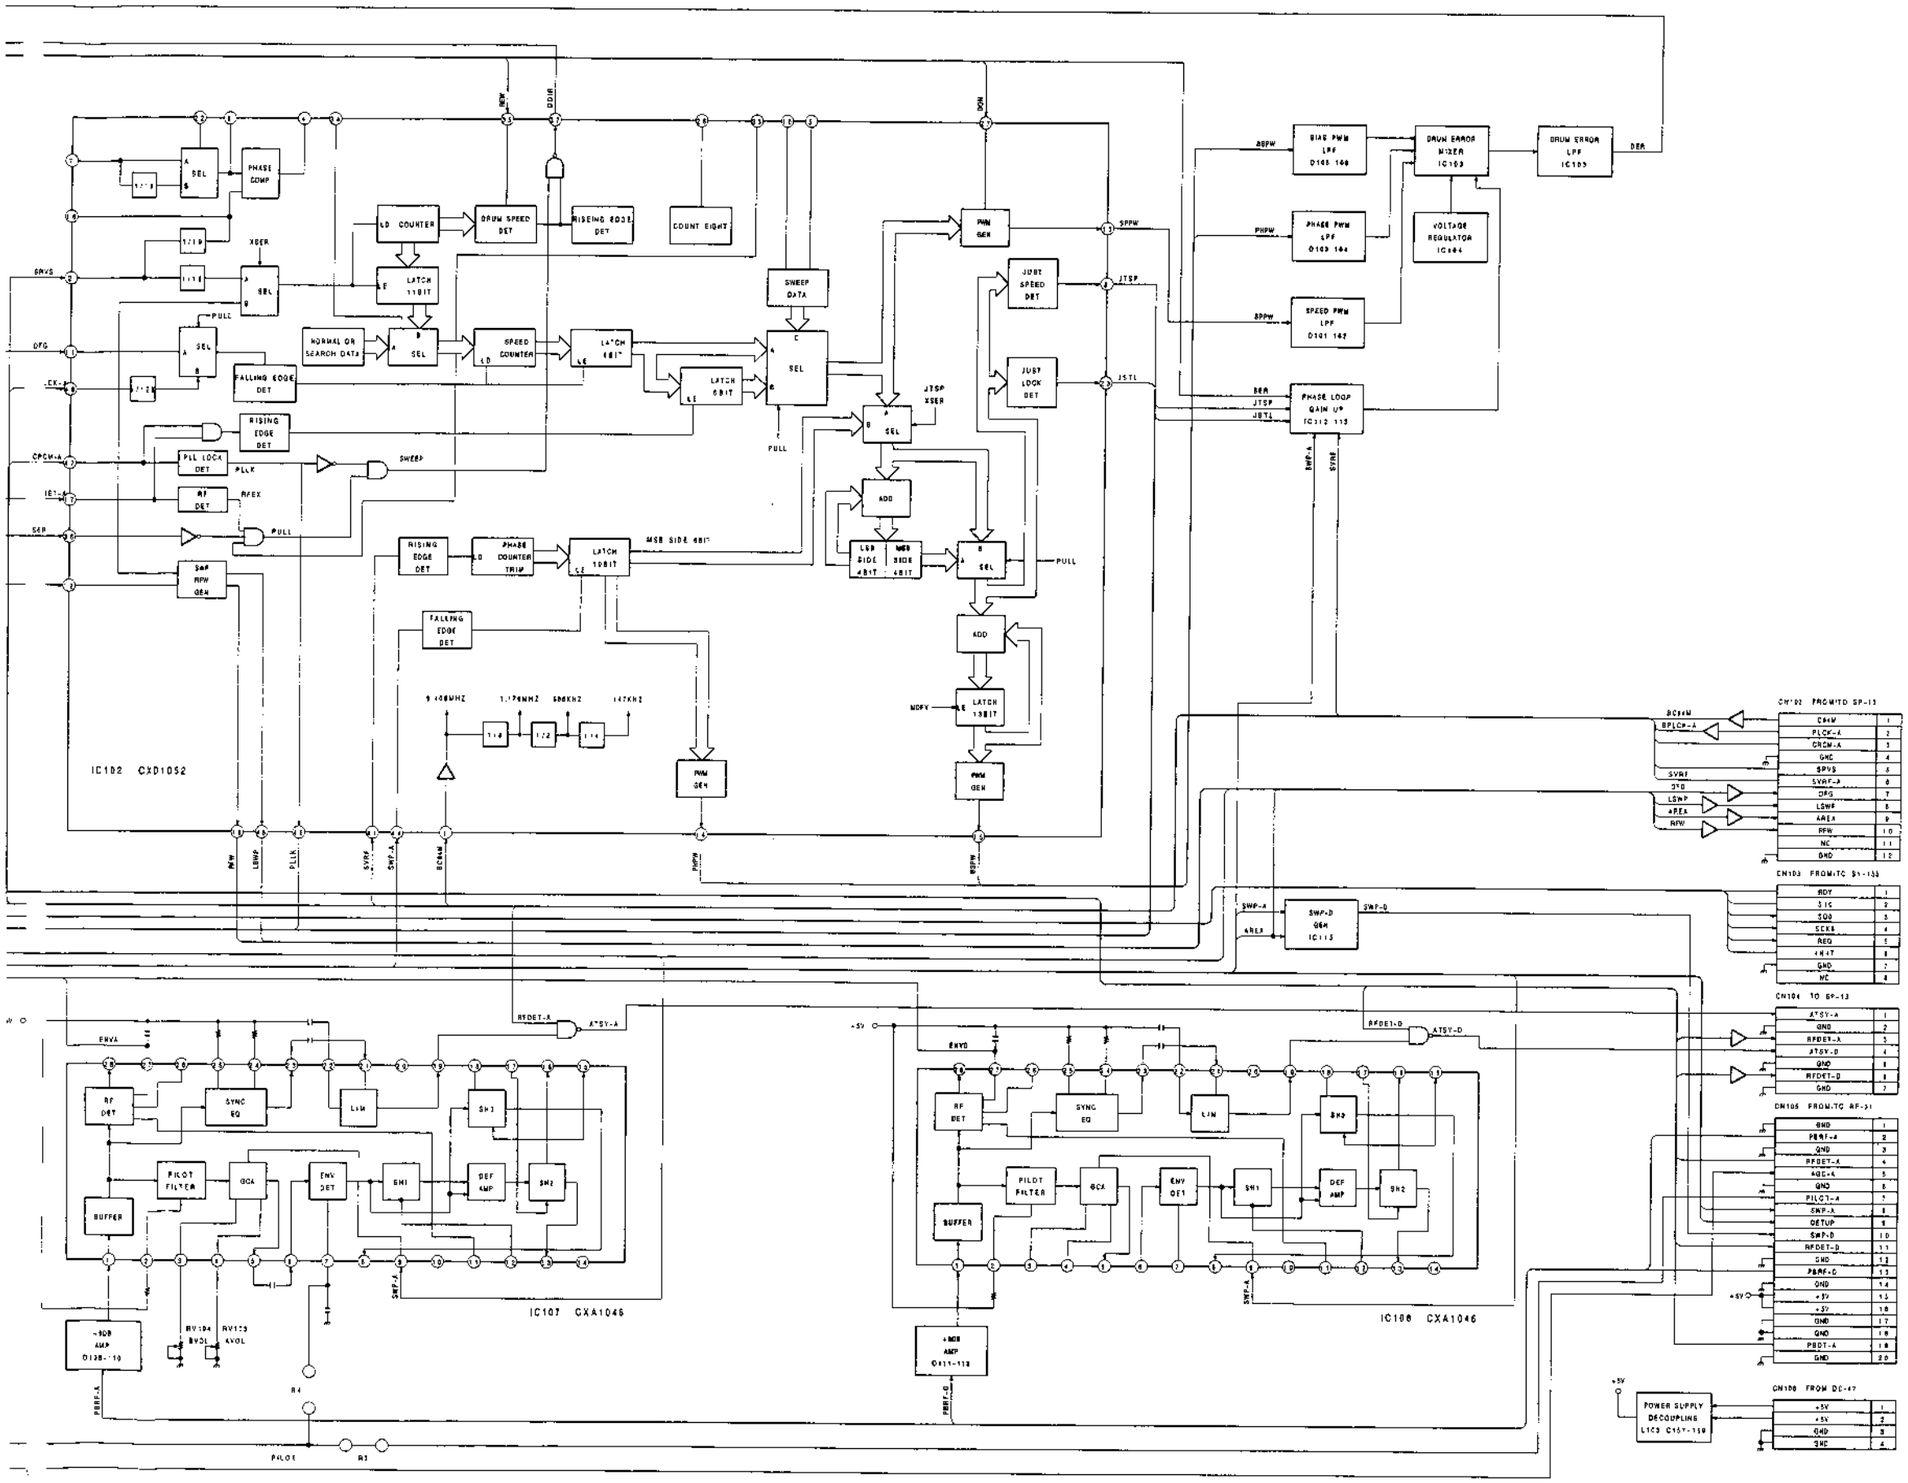
SV-123 BOARD
Servo



(SERVO)
SV-123 BLOCK DIAGRAM



SV-123
PCM-7050

SV-123 Board

The hardware of SV-123 board consists of the following blocks.

1. CXP80524 (IC101) and its peripheral circuit

CXP80524 (IC101) is the one-chip microprocessor which leads the center of the SV-123 board. It consists of CPU core, ROM, RAM blocks and the peripherals such as FRC capture, ATF sync detection circuit, etc. The error signals of each servo system are output as PWM waveforms (DRUM, AGC, CAP, T REEL, S REEL) and transmitted to each motor driver after removing carrier in L.P.F.(IC106, IC109, IC110).

(1) Operation process of the capstan servo

During REC mode, forward the tape in constant speed in order to get a track pitch based on the format. During play mode, use the tracking servo in order to make that the head traces correctly on the track and control the forward phase of tape. During CUE mode, run the tape for both forward and backward with multiple speed of 1/5, 1/2, 1, 2.5, 8, 16.

(2) Operation process of the reel servo

During FF and REW modes, use servo as the tape linear speed becomes 150 times. Reduce the speed to 80 times at the end of the tape.

During REC and play modes, feed back the positioning information of the tention regulator to S-motor in order to stabilize the head contact. In other mode, output a fixed data that generates an appropriate torque.

(3) Operation process of the reel counter

The tape running distance is calculated from the reel FG.

The tape running time is displayed in realtime at the display.

(4) The switch conditions on the mechanical deck receiving and device control

- Control for the loading motor
  The loading moter is controlled by detecting the position of the rotary encoder condition.
- Control for the cassette compartment motor
  The cassette compartment motor is controlled in accordance with the cassette compartment switch codition.
- Detection for the condition of the cassette identification holes (detection of cassette in/out, REC inhibit, track pitch and pre-recorded tape).
- The end sensors driving signal generation and tape end detection.
- Control for the reel break plunger.

(5) Drum servo IC control

CXD1052 (IC102) and CX20174 on DR-139 board are controlled.

(6) Generation for the information signal of the drum rotary phase

SWP-A, AREA signals are generated. These signals are sent to the RF-31 board and SP-13 board. Play the test tape during the SWP adjustment mode and adjust the phase between the SWP-A and playback RF waveform to comply with the standard. The adjusting data is stored in the memory of the SY-155 board.

(7) Gain control of the PILOT GCA in CXA1364 (RF-31 board)

Playback the test tape during the AGC adjusting mode, and perform automatic adjustment on each A head and B head for the PILOT GCA gain to stabilize the added voltage of the track contents of the pilot envelope waveform.

The adjusting data is stored in the memory of the SY-155 board.

(8) Communication with the system controller

Asynchronous serial communication is performed between SY-155 board.

2. CXD1052 (IC102) and its peripheral circuit

CXD1052 (IC102) is the digital servo IC for the drum motor. It has the loops for speed, phase and bias control, outputs the error signals in PWM waveforms (SPPW,PHPW,BSPW) which are added after removing the carrier in L.P.F. and transmitted to the moter driver (DR-139 board).

(1) Operation process of normal servo

During REC and PLAY modes, CXD1052 operates to lock the drum phase to the reference phase of signal processing block.

In REC mode, the drum rotates to make the tape pattern specified by DAT format.

In PLAY made, the drum rotates to time the reproduced RF signal to the reference phase of signal processing block.

A gain-up circuit is added to speed up the phase lock operation.

(2) Operation process of search servo

During FF and REW modes, CXD1052 operates to regulate the period of PLL CK extracted from RF signal.

In this way, the relative speed between heads and tape is kept constant as long as the servo loop operates.

This makes it possible to read sub-code date intermittently.

During this mode, the PWM waveform of phase servo loop (PHPW) does not change.

(3) Generation for information signal of the drum rotary phase

LSWP, RFW signals are generated. These signals are sent to the SP-13 board.

3. CXA1046 (IC108) and its peripheral circuit

During the assemble recording in DAT, the recording is performed based on the drum PG. During the post-recording, it acknowledges the position from ATF patter recorded on the tape to the head and generate the timing. Reproduced RF signal is equalized by IC108 and transformed to ATF SYNC signal as its limiter output.

This signal is sent to SP-13 board to generate the timing to flow recording current.

SECTION D
SEMICONDUCTOR PIN ASSIGNMENTS

この章の図の中には互換性のないダイオード, トランジスタ, ICが併記されていることがあります。部品を交換をするときには必ず部品表を参照して下さい。
等価回路はICメーカーのData Bookに従いました。

The chart in this section may sometimes show diodes, transistors, and ICs that are not interchangeable. When replacing a component, be sure to refer to the parts list. The circuit diagram of each IC is obtained from the IC data book published by the manufacturer.

INPUT

A VOL	:RESISTOR AND BY-PASS CAPACITOR CONNECTION FOR ADJUSTING ACH GAIN OF THE GAIN CONTROL AMPLIFIER
ATF ON/OFF	:ATF BLOCK ON/OFF (L:ON)
ATS1-ATS3	:SAMPLE PULSE INPUT FOR SAMPLE AND HOLD
ENV DET IN	:ENVELOPE DETECTOR INPUT
LIM IN	:LIMITER INPUT
LIM PC	:BYPASS CAPACITOR FOR LIMITER BLOCK
NORM PLAY	:DETERMINES IF NORMAL MODE(L:NORMAL MODE)
RF IN	:RF INPUT
SWP	:ACH/BCH SELECT CONTROL OF PROCESS SIGNAL (H:BCH,L:ACH)

OUTPUT

EQ OUT	:ATF SYNC EQUALIZER OUTPUT
PILOT OUT	:PILOT SIGNAL OUTPUT
RF DET OUT	:RF DETECTOR OUTPUT
S/H 3 OUT	:SAMPLE HOLD 3 OUTPUT
SYNC OUT	:ATF SYNC OUTPUT
TE	:TRACKING ERROR OUTPUT

OTHERS

B VOL	:RESISTOR AND BY-PASS CAPACITOR CONNECTION FOR ADJUSTING BCH GAIN OF THE GAIN CONTROL AMPLIFIER
DET C1	:CAPACITOR CONNECTION FOR SMOOTHING FILTER TO DETERMINE THE RF DETECTOR THRESHOLD LEVEL
DET C2	:EXTERNAL CAPACITOR CONNECTION FOR RF ENVELOPE WAVEFORM ADJUSTMENT
ENV HOLD	:ENVELOPE DETECTOR HOLD CAPACITOR CONNECTION
F CTL	:EXTERNAL RESISTOR CONNECTION FOR DECIDING THE PILOT FILTER (L.P.F)
LCTL	:EXTERNAL RESISTOR CONNECTION FOR DECIDING THE SYNC EQUALIZER LOW RANG
PCTL	:EXTERNAL RESISTOR CONNECTION FOR DECIDING THE SYNC EQUALIZER PHASE
HOLD2C	:EXTERNAL HOLD CAPACITOR CONNECTION FOR SAMPLE AND HOLD 2
HOLD3C	:EXTERNAL HOLD CAPACITOR CONNECTION FOR SAMPLE AND HOLD 3

INPUT

ATSY : DATA SIGNAL AFTER ATF EQ
CKOE : CLKO PIN I/O CONTROL (Fch CLOCK INPUT/OUTPUT SWITCHING (L : Fch CLOCK OUT, H : Fch CLOCK EXTERNAL INPUT)
DPG : PG SIGNAL INPUT PIN (REFERENCE = FALLING EDGE)
DTC1 – DTC2 : SBDT MODE DESIGNATION SIGNAL
ECA0 – ECA4 : ECC LOCATION ADDRESS (ECA0 = LSB, ECA4 = MSB)
EXCK : SBDT INPUT/OUTPUT CLOCK
LRCK : Lch/Rch DISCRIMINATION SIGNAL OF AD/DA DATA (SAME FREQUENCY CLOCK AS FS) (Lch : L, Rch : H)
PBDT : RF PLAYBACK SIGNAL
PRGE : ECC PROGRAM END SIGNAL
PTRD : POINTER READ SIGNAL
RFSF : RF ENVELOPE DETECT SIGNAL
RSEL : RAM SELECT PIN (SRAM : L, DRAM : H)
RW : ECC DATA READ/WRITE DISCRIMINATION SIGNAL (READ : H, WRITE : L)
SRVS : DRUM FG REFERENCE SIGNAL (12.8K)
SWP : TRACK DISCRIMINATION OF + AZIMUTH AND – AZIMUTH (+ AZIMUTH : L, – AZIMUTH : H)
TEST : LSI TEST PIN (NORMAL : L, TEST : H)
VCOI : VCO INPUT PIN
WCK : 1 WORD (= 16 bit) DISCRIMINATION REFERENCE SIGNAL (2 × FS) OF AD/DA DATA
XCLR : LSI TEST PIN (NORMALLY FIXED TO H.)
XTII : CRYSTAL CONNECTION PIN

OUTPUT

ATD1 : OFF TRACK DETECTION SIGNAL (WHEN PB ; OFF : H, ON : L, WHEN REC ; FIXED TO L)
ATD2 : DISCRIMINATION SIGNAL OF ATF PILOT SIGNAL (130kHz) (WHEN ALL REC (130kHz) : H, WHEN OTHER THAN ALL REC : FIXED TO L)
ATS1 – ATS3 : ATF PILOT SIGNAL DETECTION SAMPLING PULSE (WHEN PB ; SAMPLING : H, HOLD : L, WHEN REC : FIXED TO L)
C1C2 : C1/C2 DISCRIMINATION SIGNAL (C1 : H, C2 : L)
C94M : 9.408MHz CRYSTAL CLOCK
CRCM : CRC DETECTION RESULT (OK : H, NG : L)
CSET : Fch/SYSTEM CLOCK (4.704MHz) SYNCHRONIZATION RESET SIGNAL
DARE : INDICATES THAT AD/DA SYSTEM HAS PRIORITY TO USE OF THE DATA BUS.
DE : 08 DATA OUTPUT SYNC ENABLE SIGNAL
ECRP : ECC ENCODE/DECODE SWITCHING SIGNAL (ENCODE : H, DECODE : L)
FLCT : DISCRIMINATION SIGNAL (TIME DIVISION) FOR FORCED INTERPOLATION, C2 ERASURE FORBID, 0 CROSS MUTE, etc.
PHCO : PHASE COMPARATOR OUTPUT PIN
PLCK : PLL CLOCK EXTRACTED FROM PBDT SIGNAL
PREN : ECC RAM ACCESS ENABLE SIGNAL
PRGS : ECC PROGRAM START SIGNAL
REDT : RF REC SIGNAL
REPB : REC/PB SWITCHING SIGNAL OF RF AMPLIFIER (REC : H, PB : L)
SBSY : SUBCODE DATA I/O TIMING REFERENCE SIGNAL (OTHER THAN SEARCH = DUTY 50)
SVRF : DRUM SERVO REFERENCE SIGNAL (100/3Hz) (DUTY 50)
VCOO : VCO OUTPUT PIN
XEAN : EXTERNAL RAM ACCESS TIMING SIGNAL
XOE : RAM OUTPUT ENABLE SIGNAL
XT1O : CRYSTAL CONNECTION PIN
XWE : RAM WRITE ENABLE SIGNAL

INPUT/OUTPUT

AD00 – AD13 : ADDRESS BUS (AD0 = LSB, AD13 = MSB)
CLKO : Fch CLOCK (18.816MHz)
D0 – D7 : DATA BUS (D0 = LSB, D7 = MSB)
EXSY : EXTERNAL SYSTEM SYNC SIGNAL (DUTY 50)
SBDT : SERIAL I/O PORT FOR SUBCODE DATA, STATUS INFORMATION, etc.

CFG	: CAPSTAN FREQUENCY GENERATOR INPUT
CLR	: RESET INPUT (RESET WHEN L)
CRC	: CYCLIC REDUNDANCY CHECK SIGNAL INPUT (CRC OK WHEN H)
DFG	: DRUM FREQUENCY GENERATOR INPUT
DON	: DRUM ON/OFF SWITCHING INPUT (ON WHEN L)
DPG	: DELAY PG INPUT
DREF	: DRUM PG REFERENCE INPUT
DVS1	: SETS VOLTAGE GIVEN TO DRUM MOTOR DURING SERVO LOCK-IN IN SEARCH MODE
DVS2	: SET VOLTAGE GIVEN TO DRUM MOTOR DURING SERVO LOCK-IN IN SEARCH MODE
LPG	: DRUM PHASE GENERATOR INPUT
REW	: FAST FORWARD, REWIND SETTING (REWIND WHEN L)
RFDT	: RF SIGNAL INPUT
RPCK	: REFERENCE INPUT AT SEARCH
SER	: SEARCH MODE SETTING (SEARCH WHEN L)
TIN1 – TIN5	: TEST INPUT (NORMALLY FIXED TO L)
TST1, TST2	: TEST INPUT (NORMALLY FIXED TO L)
VAR	: EXTERNAL REFERENCE SETTING PIN OF PIN No.2 (NORMALLY FIXED TO H)

OUTPUT

ALM	: ALARM OUTPUT AT SEARCH (ALARM CONDITION WHEN L)
BSPW	: BIAS SERVO PWM OUTPUT
CFGO	: CAPSTAN FREQUENCY GENERATOR OUTPUT
CREF	: CAPSTAN FREQUENCY REFERENCE OUTPUT
DBRK	: DRUM BRAKE OUTPUT (BRAKE ON WHEN H)
JSTL	: JUST LOCK MONITOR (JUST WHEN H)
JTSP	: JUST SPEED MONITOR OUTPUT (JUST SPEED WHEN H)
PCOT	: CAPSTAN PHASE COMPARATOR OUTPUT (TRI-STATE OUTPUT)
PHPW	: PHASE SERVO PWM OUTPUT
PLLK	: DRUM LOCK MONITOR OUTPUT (AT SEARCH, LOCK WHEN H)
RFW	: RF WINDOW OUTPUT (RF SPECIFIED AREA WHEN L)
SPPW	: SPEED SERVO PWM OUTPUT
SWP	: SWITCHING PULSE OUTPUT
TOU1 – TOU4	: TEST OUTPUT

INPUT/OUTPUT

TIO1, TIO2 : TEST INPUT/OUTPUT (NORMALLY FIXED TO L)

INPUT

A0, 1 ; MICROCOMPUTER INTERFACE ADDRESS
ANDT ; SERIAL DATA INPUT FOR A/D CONVERTER
DADT ; AUDIO DATA INPUT (DIGITAL SIGNAL PROCESS LSI FORMAT)
DIAN ; SELECT OUTPUT FROM ADDT (L = ANDT, H = RX)
DTC1, 2 ; DATA TRANSMISSION CONTROL BETWEEN DIGITAL SIGNAL PROCESS LSI AND MICROCOMPUTER
ERRF ; ERROR FLAG (H = INTERPOLATED AUDIO DATA)
EXCK ; DATA TRANSMISSION CLOCK BETWEEN DIGITAL SIGNAL PROCESS LSI AND MICROCOMPUTER
FFI ; D FLIP-FLOP INPUT
INVI ; INVERTER INPUT
LSBF ; LSB/MSB FIRST SELECT OF ADDT AND DADT (L = MSB FIRST)
M94 ; FOR RECEIVE FREQUENCY CHECK (9.408MHz)
MC1 – 7 ; TEST PIN
MOD1 – 4 ; MODE SELECT
PLCK ; PLL SYSTEM MASTER CLOCK (REF 512FS)
PLLC ; PLL MODE SELECT (L = INTERNAL DIGITAL PLL MODE, H = EXTERNAL PLL MODE)
RW ; MICROCOMPUTER INTERFACE READ/WRITE CONTROL (L = WRITE)
RX ; RECEIVE DATA (DIGITAL AUDIO INTERFACE FORMAT)
SBDT ; TRANSMISSION DATA BETWEEN DIGITAL SIGNAL PROCESS LSI AND MICROCOMPUTER
SBSY ; DATA TRANSMISSION SYNC SIGNAL BETWEEN DIGITAL SIGNAL PROCESS LSI AND MICROCOMPUTER
SRVS ; SERVO REFERENCE SIGNAL (12.8MHz) FOR RECEIVE FREQUENCY CHECK
SUBTHR ; WHEN IT IS "0", ALL DATA ASSIGNED AT SLOTS 4 TO 11 IS FORCIBLY SET TO "0". SLOTS 4 TO 11 ARE CONFORMED TO DIGITAL AUDIO INTERFACE FORMAT.(L = ALL 0)
TEST ; TEST PIN
XCLR ; RESET (L = RESET)
XFSEN ; FS SYSTEM CLOCK I/O CONTROL (L = OUTPUT)
XREQ ; MICROCOMPUTER INTERFACE DATA REQUEST
XTI ; CRYSTAL OSCILLATOR INPUT (512FS). USE IN INTERNAL DIGITAL PLL MODE.

OUTPUT

ADDT ; AUDIO DATA OUTPUT (DIGITAL SIGNAL PROCESS LSI FORMAT)
COPYO ; COPY INFORMATION (L = COPY OK)
EMPO ; PRE-EMPHASIS INFORMATION (L = NOT PRE-EMPHASIS)
FFO ; D FLIP-FLOP OUTPUT
FS256 ; 1/2 PLCK CLOCK
FS5120 ; 512FS (X'TAL OSC). USE IN INTERNAL DIGITAL PLL MODE.
FSCTL ; FS SYSTEM CLOCK I/O CONTROL (L = OUTPUT)
INVO ; INVERTER OUTPUT
PLREF ; SYNC DETECT SIGNAL OF RX INPUT (PHASE COMPARATION SIGNAL FOR PLL)
PLVAR ; 1/256 PLCK CLOCK (PHASE COMPARATION SIGNAL FOR PLL)
TX ; TRANSMISSION DATA (DIGITAL AUDIO INTERFACE FORMAT)
UNLOCK ; SHOWS RECEIVING CONDITION OF RX INPUT (H = ERROR OR FS TRANSITION)
WCK ; 2FS (XFSEN = L ; OUTPUT, XFSEN = H ; HIGH-IMPEDANCE)
XFCO ; RECEIVE FREQUENCY CHECK (H = NG, L = OK)
WHEN SRVS IS FIXED M94/735 SIGNAL IS OUTPUT.
XTO ; CRYSTAL OSCILLATOR OUTPUT (512FS). USE IN INTERNAL DIGITAL PLL MODE.

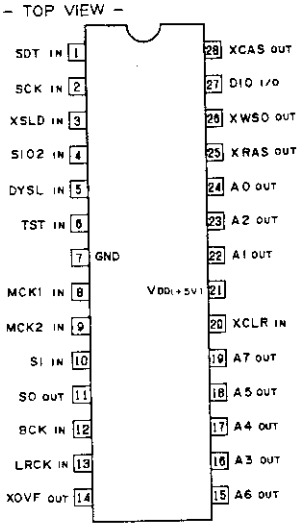
INPUT/OUTPUT

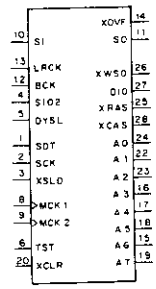
BCK ; 64FS (XFSEN = L ; OUTPUT, XFSEN = H ; INPUT)
D0 – 3 ; MICROCOMPUTER INTERFACE DATA BUS
EXSY ; EXTERNAL SYNC SIGNAL (REF 50/3Hz)
FS128 ; 128FS (XFSEN = L ; OUTPUT, XFSEN = H ; INPUT)
LRCK ; FS (XFSEN = L ; OUTPUT, XFSEN = H ; INPUT)

CXD1160AP (SONY)

C-MOS DIGITAL AUDIO SIGNAL PROCESSOR

– TOP VIEW –





INPUT

BCK : SERIAL BIT CLOCK FOR SERIAL INPUT DATA (SI) AND SERIAL OUTPUT DATA (SO)

DYSL : DELAY I/O MODE SELECT

LRCK : SAMPLING FREQ. CLOCK

MCK1 : MASTER CLOCK 1

MCK2 : MASTER CLOCK 2

SCK : SERIAL CLOCK FOR SDT

SDT : SERIAL DATA FROM CPU

SI : SERIAL DATA (2's COMPLEMENT)

SIO2 : BCK CLOCK MODE SELECT (L (GND) : 32 BIT CLOCK MODE, H (+5V) : 24 BIT CLOCK MODE)

TST : FOR TEST

XCLR : FOR TEST

XSLD : LATCH FOR SDT (SERIAL DATA) ACTIVE LOW

OUTPUT

A0 – A7 : ADDRESS FOR EXT. DRAM

SO : SERIAL DATA (2's COMPLEMENT)

XCAS : COLUMN ADDRESS STROBE FOR EXT. DRAM

XOVF : OVERFLOW DETECT

XRAS : LOW ADDRESS STROBE FOR EXT. DRAM

INPUT/OUTPUT

DIO : SERIAL DATA INPUT (DYSL = L) OR DATA INPUT/OUTPUT FOR EXT. DRAM (DYSL = H)

INPUT/OUTPUT

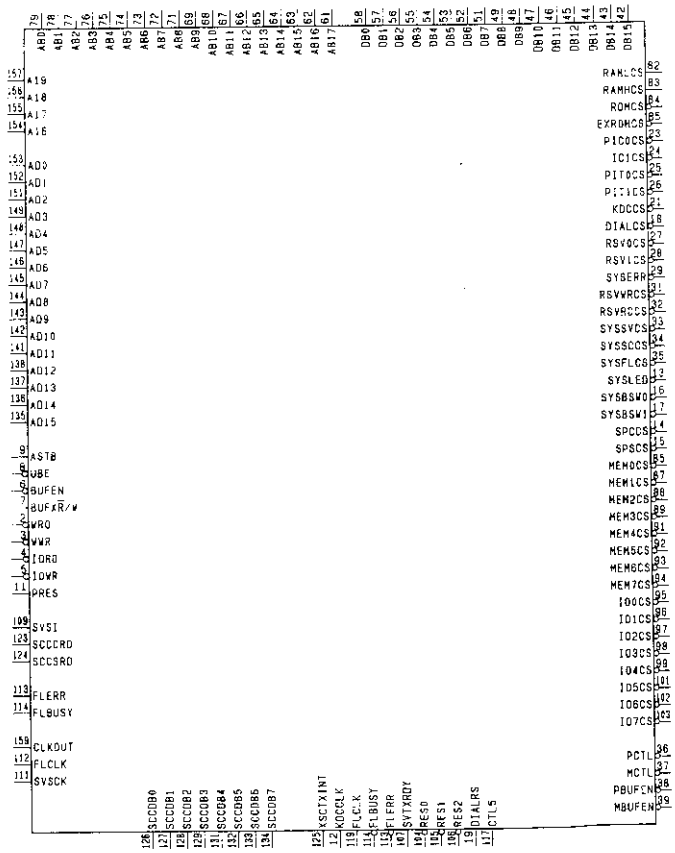
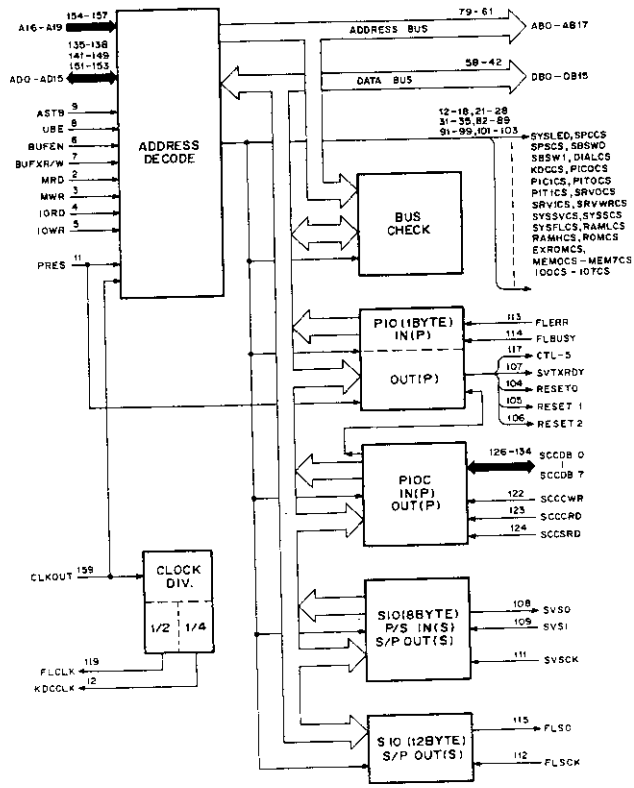
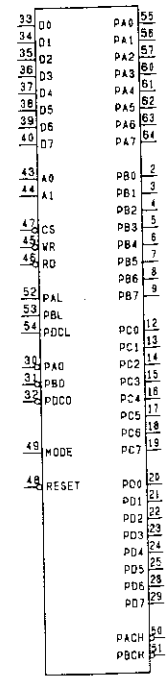
AD00 – AD15	: ADDRESS/DATA BUS
DB00 – DB15	: SYSTEM DATA BUS
SCCDB0 – SCCDB7	: DATA BUS







INPUT

A1, A0	: CPU ADDRESS BUS
CS	: CHIP SELECT
D7 – D0	: CPU DATA BUS
MODE	: LATCH SETTING SELECT IN THE PORT.
PAL	: LATCH SIGNAL INPUT FOR PORT-A PAO : L : PORT-A IS USED AS OUTPUT PORT. H : PORT-A IS USED AS INPUT PORT.
PBL	: LATCH SIGNAL INPUT FOR PORT-B PBO : L : PORT-B IS USED AS OUTPUT PORT. H : PORT-B IS USED AS INPUT PORT.
PDCL	: LATCH SIGNAL FOR PORT-C/D
PDCO	: L : PORT-C/D IS USED AS OUTPUT PORT. H : PORT-C/D IS USED AS INPUT PORT.
RD	: WHEN SET TO "L" IN CASE OF CS "L", PORT DATA SELECTED AT A1 AND A0 IS OUTPUT TO D7 – D0.
RST	: RESET
WR	: WHEN SET FROM "L" TO "H" IN CASE OF CS "L", D7 – D0 DATA IS OUTPUT TO THE PORT SELECTED AT A1 AND A0.

OUTPUT

PACH	: OUTPUT "L" WHEN PORT-A DATA VARLED BECOMING "HI-Z" WHEN PORT-A DATA NOT VARIED
PBCH	: OUTPUT "L" WHEN PORT-B DATA VARIED BECOMING "HI-Z" WHEN PORT-B DATA NOT VARIED

INPUT/OUTPUT

PA7 – PA0	: PORT-A INPUT/OUTPUT OUTPUT ($\overline{PAO}$: "L"), INPUT ($\overline{PAO}$: "H").
PB7 – PB0	: PORT-B INPUT/OUTPUT OUTPUT ($\overline{PBO}$: "L"), INPUT ($\overline{PBO}$: "H")
PC7 – PC0	: PORT-C INPUT/OUTPUT OUTPUT ($\overline{PDCO}$: "L"), INPUT ($\overline{PDCO}$: "H")
PD7 – PD0	: PORT-D INPUT/OUTPUT OUTPUT ($\overline{PDCO}$: "L"), INPUT ($\overline{PDCO}$: "H")

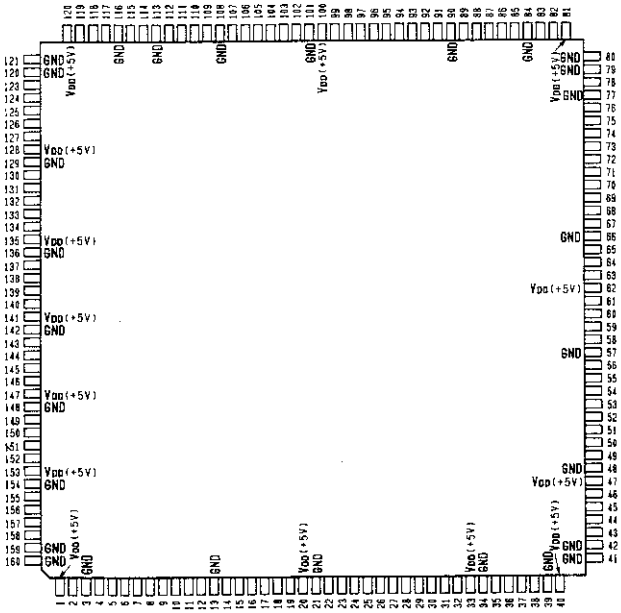
C-MOS SOUND MEMORY CONTROL FOR DAT

– TOP VIEW –



INPUT

256FSI	; MASTER CLOCK (256FS)
A0 – A15	; CPU ADDRESS BUS
CPUCK	; CPU CLOCK
DATFRMI	; DAT FRAME SIGNAL
DSPSDI	; SERIAL DATA INPUT FROM DSP
EA0, 1	; DSP ADDRESS FROM EMMULATOR
ECK	; DSP PROGRAM DATA SHIFT CLOCK INPUT FROM EMMULATOR
ECS	; DSP CHIP SELECT SIGNAL INPUT FROM EMMULATOR
ELD	; DSP PROGRAM DATA LOAD SIGNAL FROM EMMULATOR
EMU	; DSP EMMULATION ON/OFF
ESD	; DSP PROGRAM SERIAL DATA INPUT FROM EMMULATOR
IOEN	; CHIP ENABLE SIGNAL IN I/O SPACE
IORD	; CPU I/O READ SIGNAL
IOWR	; CPU I/O WRITE SIGNAL
LRCKI	; LRCK SIGNAL (FS) WHICH BECOMES "L" WHEN SERIAL DATA LCH, AND "H"WHEN SERIAL DATA RCH.
MEMCAP	; MEMORY CAPACITY SELECT
MEMEN	; CHIP ENABLE SIGNAL IN MEMORY SPACE
MRD	; CPU MEMORY READ
MWR	; CPU MEMORY WRITE
RAMTYP	; DRAM TYPE SELECT
RESET	; CPU RESET SIGNAL
SDI	; SERIAL DATA INPUT. SERIAL DATA OF MSB FIRST AND 16-BIT/CH
TEST1, TEST2	; TEST (NORMALLY FIXED TO L)

OUTPUT

128FS, 64FS, 64FS, 32FS, 32FS, FS, FS	; VARIOUS FREQUENCY-DIVIDED OUTPUT OF 256FS SIGNAL
256FS	; 256FS SIGNAL OUTPUT
BUFDIR	; USED AS DIR SIGNAL WHEN THE BUFFER (TRANCIEVER) IS EXTERNALLY INSTALLED TO THE DATA BUS.
CAS	; DRAM DRAM COLUMN ADDRESS STROBE SIGNAL OUTPUT
DATFRM, DATFRM	; DAT FRAME SIGNAL OUTPUT
DSPSDO	; SERIAL DATA OUTPUT TO DSP. MSB FIRST 32 BIT/CH SERIAL DATA.
LOAD, LOAD	; PARALLEL/SERIAL CONVERSION LOAD SIGNAL OUTPUT
OE	; DRAM OUTPUT ENABLE SIGNAL OUTPUT
PGMCK	; SHIFT CLOCK OUTPUT OF DSP PROGRAM DATA
PGMLD0 – PGMLD3	; DSP PROGRAM DATA LOAD SIGNAL OUTPUT
PGMSDO	; DSP PROGRAM SERIAL DATA OUTPUT MSB FIRST 8 BITS ARE OUTPUT.
PIOA0, 1	; PARALLEL I/O ADDRESS SIGNAL (NORMALLY FIXED TO L)
PIORD	; PARALLEL I/O READ SIGNAL (NORMALLY "H")
PIOWR	; PARALLEL I/O WRITE SIGNAL (NORMALLY "H")
RA0 – RA9	; DRAM ADDRESS OUTPUT
RAMRD	; DRAM READ MONITOR LED OUTPUT
RAMWR	; DRAM WRITE MONITOR LED OUTPUT
RAS0, RAS1	; DRAM LOW ADDRESS STROBE SIGNAL OUTPUT
RD0 – RD15	; DRAM DATA BUS
READY	; CPU READY (WAIT) SIGNAL (NORMALLY "H")
SDO	; SERIAL DATA OUTPUT
TRGSDO	; TRIGGER SERIAL DATA OUTPUT TO DSP. MSB FIRST 32 BIT/CH SERIAL DATA.
WE	; DRAM WRITE ENABLE SIGNAL OUTPUT
XFTRGB, XFTRGA	; MONITOR LED OUTPUT OF X'FADE TRIGGER OUTPUT

INPUT/OUTPUT

D0 – D7	; CPU DATA BUS
PIO0 – PIO7	; 8 BIT DATA BUS OF PARALLEL I/O (NORMALLY "Hi-Z")
RD0 – RD15	; DRAM DATA BUS

VDD = + 5V

INPUT

AB1 – AB4	; CPU ADDRESS BUS (2S8 TO 5SB)
ATD1	; OFF TRACK DETECTION SIGNAL. H : ATF SYNC AND PCM SIGNAL ARE NO GOOD AT REPRODUCTION
C12A	; C1／C2 DISCRIMINATION SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
C12D	; C1／C2 DISCRIMINATION SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
C94M	; Fch CLOCK SIGNAL (9.408MHz typ.)
CKRA	; Fch SYSTEM CLOCK SIGNAL OF CXD1008Q AND CXD1009Q (18.816MHz typ.) USED AS CLOCK SIGNAL FOR ERROR CHECKER
CKRD	; Fch SYSTEM CLOCK SIGNAL OF CXD1008Q AND CXD1009Q (4.704MHz typ.) USED AS CLOCK SIGNAL FOR ERROR CHECKER
CLK0	; Fch CLOCK SIGNAL OF CXD1008Q AND CXD1009Q. USED AS CLOCK SIGNAL FOR ERROR CHECKER
CRCK	; Fs CRYSTAL OSCILLATION CLOCK. USED BY CLOCK CONTROL BLOCK
DFCK	; FS CLOCK SIGNAL (256 fs)
DFS	; FS EXTERNAL SYNC SIGNAL. EXTRACTED FROM AES／EBU D – 1.
ESC	; EXTERNAL SOURCE (PARALLEL REMOTE) INPUT. (9.6kHz typ.)
LRCK	; FS CLOCK SIGNAL (fs)
MCLK	; CLOCK SIGNAL FOR ERROR CHECKER
MT0 – MT3	; MUTING TIME SETTING VALUE (MT0 = LSB, MT3 = MSB)
MTGA	; DURING ERROR MONITOR OUTPUT TO DATA BUS : H. USED AS TIMING SIGNAL FOR ERROR CHECKER
MTGD	; DURING ERROR MONITOR OUTPUT TO DATA BUS : H. USED AS TIMING SIGNAL FOR ERROR CHECKER
MTSL	; MUTE STATUS. H : R-CH MUTE IS BEING PROCESSED.
MTSR	; MUTE STATUS. H : L-CH MUTE IS BEING PROCESSED.
RD2A – 4A, 7A	; DATA BUS OF CXD1008Q AND CXD1009Q.
RD2D – 4D, 7D	; DATA BUS OF CXD1008Q AND CXD1009Q. FROM HERE, ERROR STATUS IS EXTRACTED
SBSA	; CXD1009Q SUBCODE DATA I／O TIMING REFERENCE SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
SBSD	; CXD1009Q SUBCODE DATA I／O TIMING REFERENCE SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
SOKA	; H : ADVANCED SBSY OK
SOKD	; H : DELAYED SBSY OK
SRVS	; FS CLOCK SIGNAL (12.8kHz typ.)
SVRA	; DRUM SERVO REFERENCE SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
SVRD	; DRUM SERVO REFERENCE SIGNAL. USED AS TIMING SIGNAL FOR ERROR CHECKER
TRGA	; TIMING SIGNAL FOR ERROR CHECKER
TRGD	; TIMING SIGNAL FOR ERROR CHECKER
TST0	; TEST PIN. NORMALLY L
VCCK	; VCO OUTPUT CLOCK SIGNAL OF MASTER PLL. USED BY CLOCK CONTROL BLOCK
VFS	; FS EXTERNAL SYNC SIGNAL. EXTRACTED FROM VIDEO REFERENCE.
WFS	; FS EXTERNAL SYNC SIGNAL. INPUT FROM WORD SYNC IN.
XRD	; CPU BUS READ ENABLE SIGNAL (LOW ACTIVE)
XRST	; RESET PIN. L : RESET
XSE	; CPU BUS SP BOARD SELECT SIGNAL (LOW ACTIVE)
XTS1 – XTS4	; TEST PIN. NORMALLY H
XTSC	; TEST PIN. NORMALLY H
XWR	; CPU BUS WRITE ENABLE SIGNAL (LOW ACTIVE)

INPUT/OUTPUT

DB0 – DB7 ; CPU DATA BUS (DB0 = LSB, DB7 = MSB)

OUTPUT

AIN	; INPUT SEL SWITCHING. H : ANALOG IN, L : DIGITAL IN
AMON	; REPRODUCTION SOUND MONITOR SWITCHING. H : ADVANCED REPRODUCTION SOUND MONITOR, L : DELAYED REPRODUCTION SOUND MONITOR. NORMALLY L
BCK	; 32 fs CLOCK SIGNAL
BIT1 – BIT4	; THRESHOLD VALUE OF ZERO CROSS MUTE (BIT1 = LSB, BIT4 = MSB)
CFWD	; FOR RF PLL CONTROL H : TAPE PATH IN FORWARD DIRECTION
CHRF	; CHANNEL PLL REFERENCE SIGNAL (12.8kHz typ.) CONNECTED TO CHANNEL PLL PHASE COMPARATOR
CHVF	; CHANNEL PLL COMPARISON SIGNAL (12.8kHz typ.) CONNECTED TO CHANNEL PLL PHASE COMPARATOR
CLED	; H WHEN C1 ERROR IS DETECTED DURING REPRODUCTION. USED FOR LIGHTENING LED
CRSH	; XTAL, OSC CONTROL SIGNAL. H : 24.5760MHz XTAL ON CONNECTED TO CRYSTAL OSCILLATION CIRCUIT CONNECTED TO CRYSTAL OSCILLATION CIRCUIT
CRSL	; XTAL OSC CONTROL SIGNAL H : 22.5792MHz XTAL ON
DEEM	; CONTROLS DA DE-EMPHASIS H : DA DE-EMPHASIS ON
EDIT	; RECORD SIGNAL SWITCHING SIGNAL. H : EDIT (SELECTS SIGNAL FROM MEMORY START MEMORY) L : NORMAL (SELECTS D IN／A IN SIGNAL)
EMP	; CONTROLS AD EMPHASIS H : AD EMPHASIS ON
FSEL	; FS SELECT SIGNAL H : 48kHz, L : 44.1kHz
HDMT	; MUTES DELAYED 0.8 H : MUTE
ILED	; H WHEN POINTER COPY OR ALL POINTER IS DETECTED AT C2 DURING REPRODUCTION.
IMON	; MONITOR SELECTION. H : INPUT, L : REPRO
INWR	; FOR EDIT MEMORY TEST H : EM TEST MODE, L : NORMAL. NORMALLY L
MCKO	; CLOCK SIGNAL FOR ERROR CHECKER
MSRF	; MASTER PLL REFERENCE SIGNAL CONNECTED TO MASTER PLL PHASE COMPARATOR
MSVF	; MASTER PLL COMPARISON SIGNAL CONNECTED TO MASTER PLL PHASE COMPARATOR
MUTA	; MUTES ADVANCED 0.8 H : MUTE
OTMT	; CONTROLS ZERO CROSS MUTE CIRCUIT OF CXD8185AQ H : MUTE
OTWR	; FOR MEMORY START MEMORY TEST H : IM TEST MODE, L : NORMAL
POST	; SWITCHES THE INPUT MONITOR SIGNAL. H : POST (SELECTS SIGNAL FROM EDIT MEMORY) L : PRE (SELECTS D IN／A IN SIGNAL)
RCLR	; FOR CXD8151AQ TEST. NORMALLY L
RCOK	; REC CONTROL SIGNAL H : RECORDING ABLE
REH	; SWITCHES THE OUTPUT SIGNAL H : REHEARSAL (SELECTS SIGNAL FROM MEMORY START MEMORY) L : NORMAL (SELECTS SIGNAL FROM EDIT MEMORY)
RERD	; AUXILIARY READ PORT ENABLE SIGNAL (LOW ACTIVE)
REWR	; AUXILIARY WRITE PORT ENABLE SIGNAL (LOW ACTIVE)
RTS1	; FOR RECORDING TEST H : REC CON TEST MODE CONNECTED TO RTS1 OF CXD8185AQ.
RTS2	; FOR RECORDING TEST. SELECTS SIGNAL FOR TEST RECORDING. H : EXT (AT THIS TIME, RTST3 AND 7 ARE IGNORED.), L : INT
RTS3	; FOR RECORDING TEST. SELECTS SIGNAL FOR TEST RECORDING TO BE PAIRED WITH 1.57MHz SIGNAL. H : 4.7MHz, L : 130kHz
RTS4	; FOR RECORDING TEST. SELECTS HEAD FOR TEST RECORDING. H : DELAYED, L : ADVANCED
RTS5	; FOR RECORDING TEST. SELECTS HEAD FOR TEST RECORDING. H : ONE HEAD, L : BOTH HEADS (AT THIS TIME, RTST6 IS IGNORED.)
RTS6	; FOR RECORDING TEST. SELECTS HEAD FOR TEST RECORDING. H : B HEAD, L : A HEAD
RTS7	; FOR RECORDING TEST. SELECTS HEAD FOR RECORDING 1.57MHz SIGNAL. H : B HEAD, L : A HEAD
SER	; DPG GEN H : TAPE PATH SEARCH MODE, L : NORMAL
SVCK	; DRUM SERVO REFERENCE SIGNAL
TRAO	; TIMING SIGNAL FOR ERROR CHECKER
TRCK	; LRCK 1／8 FREQUENCY-DIVIDED CLOCK. FOR SY TIMER
TRDO	; TIMING SIGNAL FOR ERROR CHECKER
WAR	; CONTROLS EXSY PHASE H : WAR MODE, L : MODE SPECIFIED BY XRAW
XC16	; FOR RF PLL CONTROL H : TAPE PATH BY ×16 AND ×8
XRAW	; CONTROLS EXSY PHASE L : RAW MODE, H : SUBIN MODE
XREW	; FOR RF PLL CONTROL H : TAPE PATH SEARCH MODE

SECTION E
REPLACEABLE PARTS

E-I . PARTS ORDERING INFORMATION

Standardization of Parts
Repair parts supplied from Sony Parts Center may not be always identical with the part which actually in use due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts".
This manual's exploded views and electrical parts list are indicating the parts numbers of the "standardized genuine parts at present".

Parts marked with S in the column of SP
These parts are normally stocked as replaceable parts.

Parts marked with O in the column of SP
Orders for these parts will be processed, but allow for additional delivery time.

Parts without Part No.
These parts are not stocked because they are seldom required for routine service.

> The components marked with ⚠ are critical to safe operation.
> These components must be replaces with the same ones as described on the Parts List.

E-3. ELECTRICAL PARTS LIST

STANDARDIZED PARTS LIST

Replacements for capacitors and resistors not given in each board parts lists are shown below.
If a capacitor with the desired working voltage is not found, choose one of higher working voltage.

CAPACITOR, CHIP CERAMIC

Part No.	SP	Description			
1-163-093-00	s	CAP, CHIP CERAMIC	10pF	5%	50V
1-163-101-00	s	CAP, CHIP CERAMIC	22pF	5%	50V
1-163-105-00	s	CAP, CHIP CERAMIC	33pF	5%	50V
1-163-109-00	s	CAP, CHIP CERAMIC	47pF	5%	50V
1-163-117-00	s	CAP, CHIP CERAMIC	100pF	5%	50V
1-163-133-00	s	CAP, CHIP CERAMIC	470pF	5%	50V
1-163-141-00	s	CAP, CHIP CERAMIC	1000pF	5%	50V
1-163-019-00	s	CAP, CHIP CERAMIC	6800pF	10%	50V
1-162-970-11	s	CAP, CHIP CERAMIC	0.01	10%	20V
1-163-038-00	s	CAP, CHIP CERAMIC	0.1		50V

CAPACITOR, ELECTROLYTIC

Part No.	SP	Description			
1-123-382-00	ś	CAP, ELECT	3.3	20%	100V
1-126-059-11	s	CAP, ELECT	10	20%	63V
1-124-229-00	s	CAP, ELECT	33	20%	10V
1-124-910-11	s	CAP, ELECT	47	20%	50V
1-124-584-00	s	CAP, ELECT	100	20%	10V
1-126-101-11	s	CAP, ELECT	100	20%	16V
1-124-122-11	s	CAP, ELECT	100	20%	50V
1-126-335-11	s	CAP, ELECT	220	20%	10V
1-124-120-11	s	CAP, ELECT	220	20%	25V

RESISTOR, CHIP

Part No.	SP	Description			
1-216-295-00	s	RES, CHIP	0	5%	1/10W
1-216-001-00	s	RES, CHIP	10	5%	1/10W
1-216-009-00	s	RES, CHIP	22	5%	1/10W
1-216-017-00	s	RES, CHIP	47	5%	1/10W
1-216-021-00	s	RES, CHIP	68	5%	1/10W
1-216-025-00	s	RES, CHIP	100	5%	1/10W
1-216-029-00	s	RES, CHIP	150	5%	1/10W

NOTES ON INSTALLATION OF THE DABK-7030 AND DABK-7033

When installation of the DABK-7030 or DABK-7033 to the PCM-7050 of which serial No. is higher than following No.,it is not necessary to perform the following procedure.

Serial No. J; 17001 and higher
UC; 37001 and higher
EK; 57001 and higher

DABK-7030: Installation of TC panel (Supplied with DABK-7030) to the connector panel.
DABK-7033: Installation of harness with D-SUB connector (Supplied with DABK-7033) to the connector panel.
