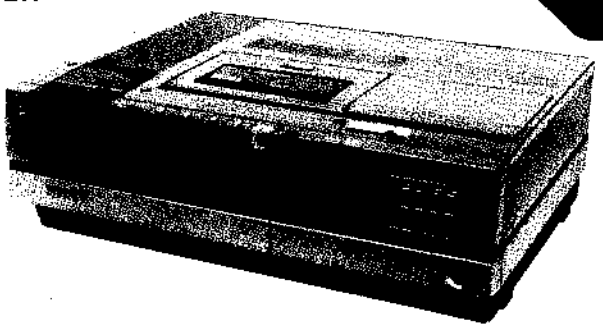
Betamax

VIDEOCASSETTE RECORDER

SL-C5E



SPECIFICATIONS

System

Video recording system: Rotary two-head helical scanning

Video signal: CCIR standards, PAL colour

Aerial input: 75-ohm asymmetrical aerial socket

Channel coverage: VHF: Western European channels E2–12
UHF: Western European channels E21–68
(Up to 8 channels can be preset.)

RF output signal: UHF channels E30 to E39 (variable)
75-ohms, unbalanced

Video

Input: VIDEO IN: BNC connector
1.0 V(p-p) $^{+1.0}_{-0.5}$ V(p-p)
75 ohms unbalanced,
sync negative

Output: VIDEO OUT: BNC connector
1.0 V(p-p) ±0.1 V(p-p)
75 ohms unbalanced,
sync negative

Horizontal resolution: Colour: 260 lines
B/W: 300 lines

Signal-to-noise ratio: Colour: Better than 40 dB
B/W: Better than 43 dB

Audio

Input: AUDIO IN: phono jack
47 kilohms, –10 dBs
(0 dBs = 0.775V rms)
MIC: mini jack
–60 dBs, suitable for microphones with 600-ohm impedance

Output: AUDIO OUT: phono jack
Load impedance less than 10 kilohms
–5 dBs with 47 kilohms load
unbalanced

MICROFILM

Frequency response: 50 Hz to 10 kHz

Signal-to-noise ratio: Better than 40 dB

Audio distortion: Less than 4% at 400 Hz

Tape transport

Tape speed: 18.73 mm/sec.

Maximum recording time: 2 hours 10 min. (with Sony L-500 cassette)
3 hours 15 min. (with L-750)

Fast foward/rewind time: Within 3 1/2 min. (with L-500)

Timer

Clock: Crystal lock

Control time: 24-hour cycle

Timer setting: Only for recording
1 event/day, adjustable for any day(s) of the week

General

Power requirements: 110, 127, 220 or 240 V ±10% ac, adjustable by authorized Sony personnel, (factory preset at 220V)
50/60 Hz

Power consumption: 55W

Storage temperature: –20°C to +65°C (–4°F to +149°F)

Operating temperature: 5°C to 40°C (41°F to 104°F)

Dimensions: Approx. 485 x 168 x 379 mm (w/h/d)
(19 1/8 x 6 5/8 x 15 inches)
not including projecting parts and controls

Weight: Approx. 16.4 kg (36 lb 3 oz)

Accessory supplied

75-ohm coaxial cable (for recorder to TV connection) . . . 1

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND ⚠ MARK ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

SONY®

SERVICE MANUAL

TABLE OF CONTENTS

SECTION 1
GENERAL

1-1. GENERAL

Videocassette Recorder SL-C5E has many features such as logic control to set up a function with its corresponding feather touch button, a quartz lock type 1 event 7 day timer (one recording operation at any date during the week starting tomorrow can be preset), a high speed picture search function to find the picture you want to see, and a timing phase pause function. This VTR can be controlled remotely on the remote commander, optional equipment.

Logic Control System
The function buttons can be handled only with soft touch because of the logic control system. A random access system is employed so that the button corresponding to your purpose can be pressed for setting up the function mode without pressing the STOP button.

High Speed Picture Search
Black and white pictures can be viewed during the high speed tape feeding and the tape rewinding when the CUE/REVIEW button is pressed in the playback operation of the tape. This function is effective for searching a desired picture.

Timer Recording
One recording operation on this VTR in the coming week can be preset by the incorporated high precision digital timer locked to a crystal resonator. Brightness of the timer display can be controlled by the DIMMER switch so that the display can be read in a bright room.

Remote Control (with an optional equipment)
All the VTR function except EDIT and DUB can be controlled remotely on the Remote Commander.

A video camera can be connected to the SONY K-type (14 pins) camera socket on this VTR with one cable and pictures shot by the camera can be recorded at once.

Audio Dubbing
Sound can be added to a pre-recorded tape.

Timing Phase Pause
The timing phase circuit eliminates a picture disorder at the seam between the recorded pictures.

Still Picture
A black and white still picture can be viewed in the PLAY mode by setting the STILL switch to the ON position.

Soft Cassette Eject
The cassette compartment lifts quietly because of the employment of an oil damper and the cassette eject noise is reduced.

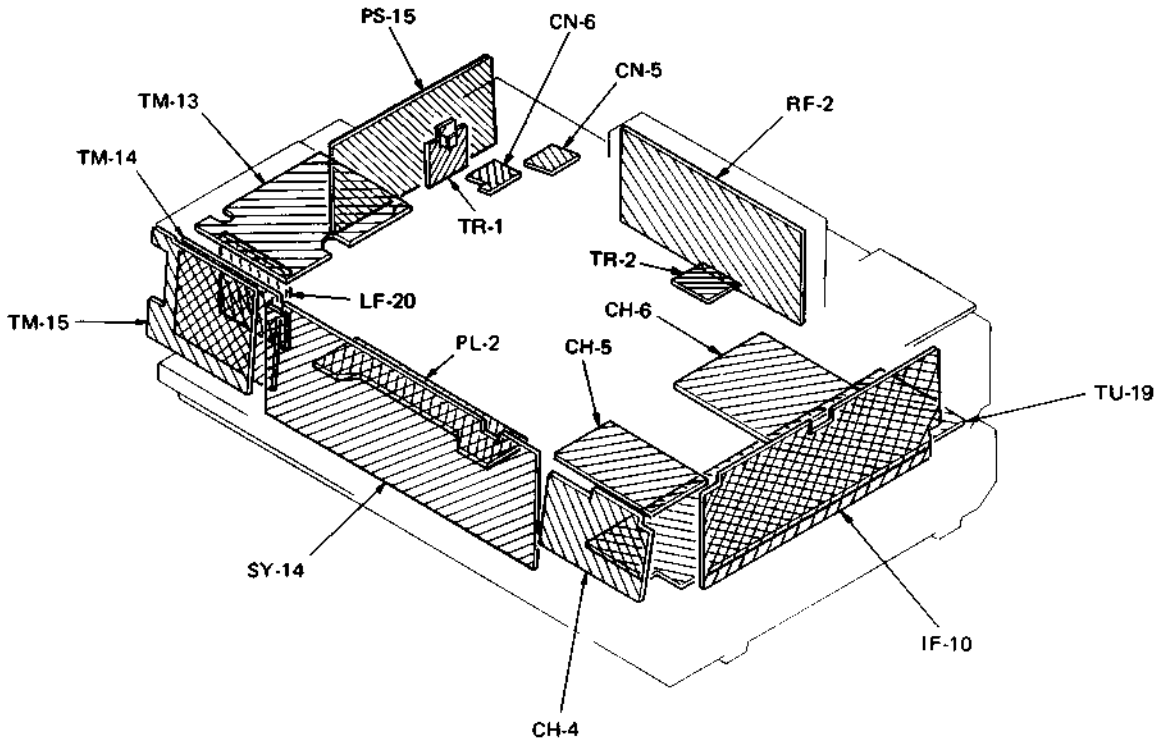
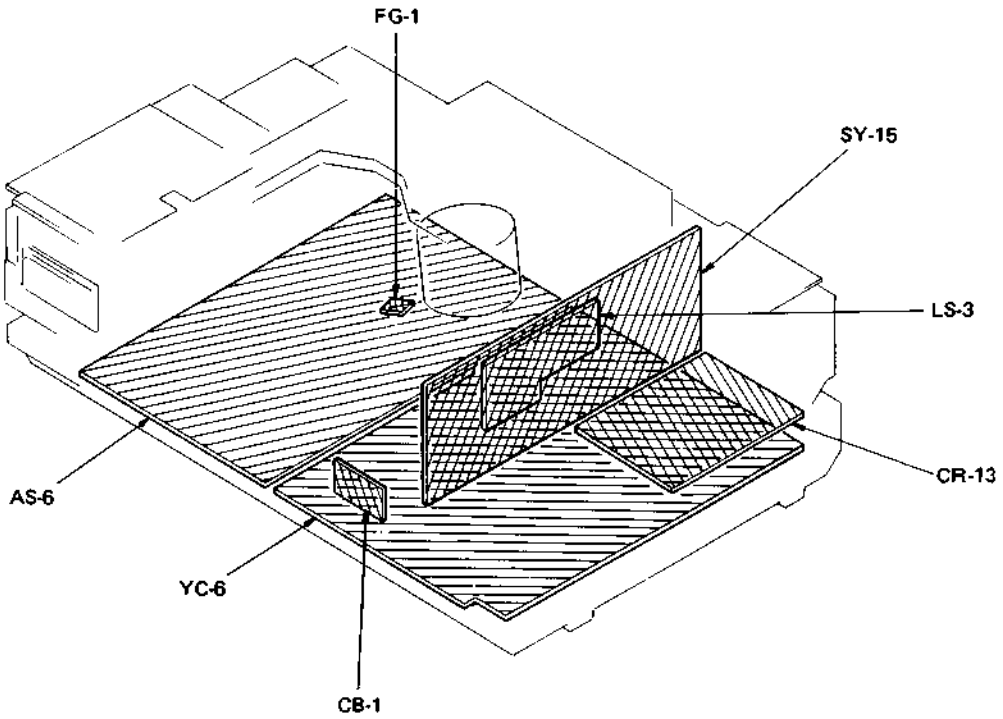
CIRCUIT BOARDS LOCATION

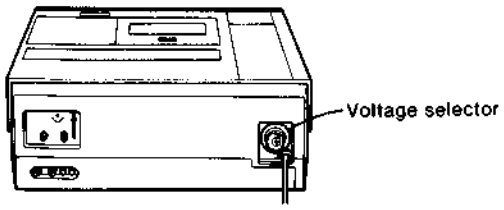




1-3. CONNECTION AND OPERATION

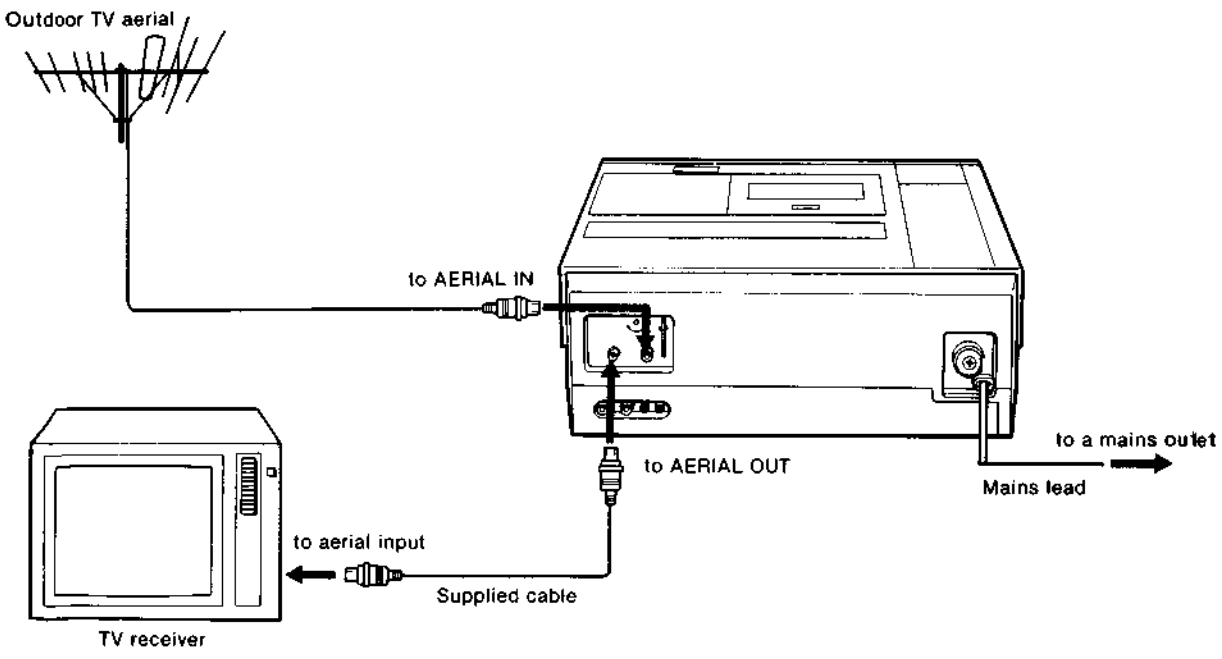
1-3-1. Operating Voltage

Before connecting the set to the power source, check that the voltage selector located at the rear is set to your local mains power voltage.
The operating voltage is preadjusted to 220 V at the factory and is adjustable to 110, 127, or 240 V ac by authorized Sony personnel. To change the voltage setting, please consult your nearest Sony dealer.



1-3-2. System Connections

❶ Unplug your TV receiver from the mains outlet, and remove the aerial cable from its socket in the back of the TV. Then connect the aerial cable to the AERIAL IN socket at the rear of the recorder.
❷ Connect the aerial input of the TV receiver to the AERIAL OUT socket of the recorder, using the supplied cable.
You will find that each socket accepts only one end of the cable.
❸ Connect the recorder and the TV receiver to the mains supply with their own mains leads.

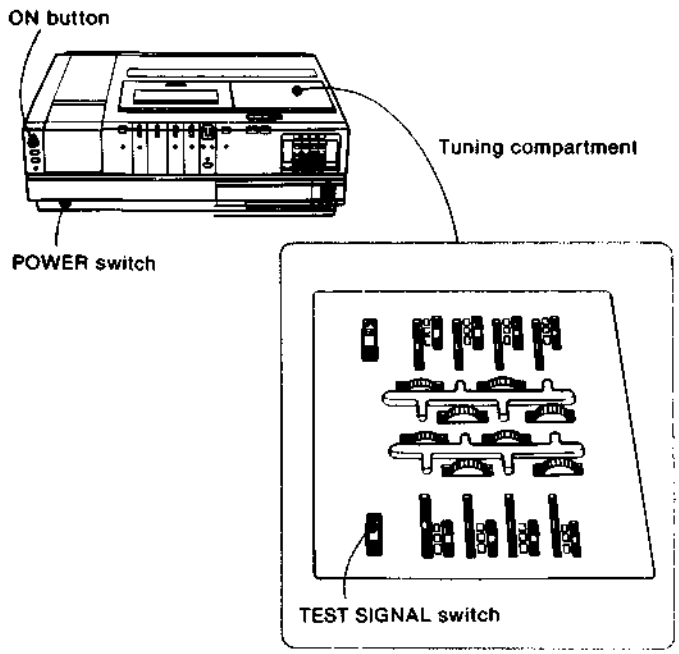


1-3-3. Tuning of the TV and the Recorder

TV ADJUSTMENT

First, adjust your TV receiver so that it is tuned to the signals from the recorder.

❶ After making the connections described on page 4, depress the POWER switch and the ON button of the recorder to turn it on.

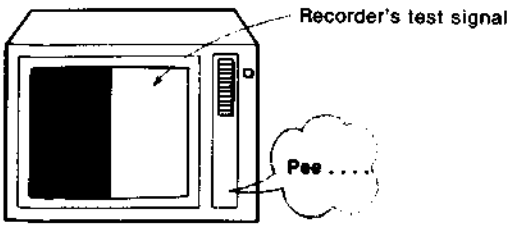


❷ Open the tuning compartment lid and set the TEST SIGNAL switch to ON.

❸ Turn on the TV and select a channel on the TV which is not used for receiving a TV station. Tune the channel until you see a clear black and white pattern on the TV screen and you hear a high-pitched tone. This is the recorder's test signal.

— If all the channels on your TV are used for receiving stations, select the channel you watch least.

— If you are not sure how to tune your TV, please refer to the TV's instruction manual or consult your dealer.



❹ **If the test picture is free of disturbance,** set the TEST SIGNAL switch to OFF.

If the test picture is not free of disturbance

There might be interference. To receive the recorder's signal on your TV without interference, proceed as follows:

❶ Reset the TEST SIGNAL switch in the tuning compartment to OFF.

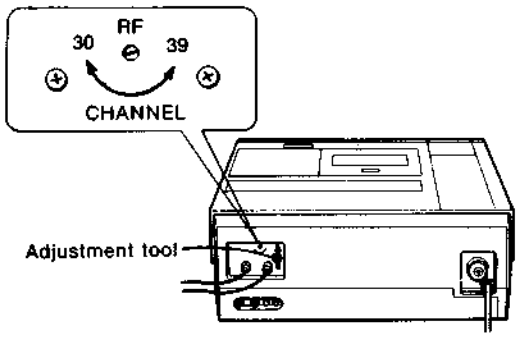
You will probably see interference or perhaps even a TV programme on the TV screen.

❷ Adjust the channel of the TV to a channel between UHF E30 and E39 with the tuning control or the fine tuning control on the TV, so that the TV screen shows only "snow" and so that all you can hear is a steady rustling sound.

❸ Set the TEST SIGNAL switch to ON again.

❹ Slowly turn the RF CHANNEL screw on the back of the recorder until you see an undistorted test picture on the TV screen.

You can use the adjustment tool located to the right of the RF CHANNEL screw hole to turn the screw.



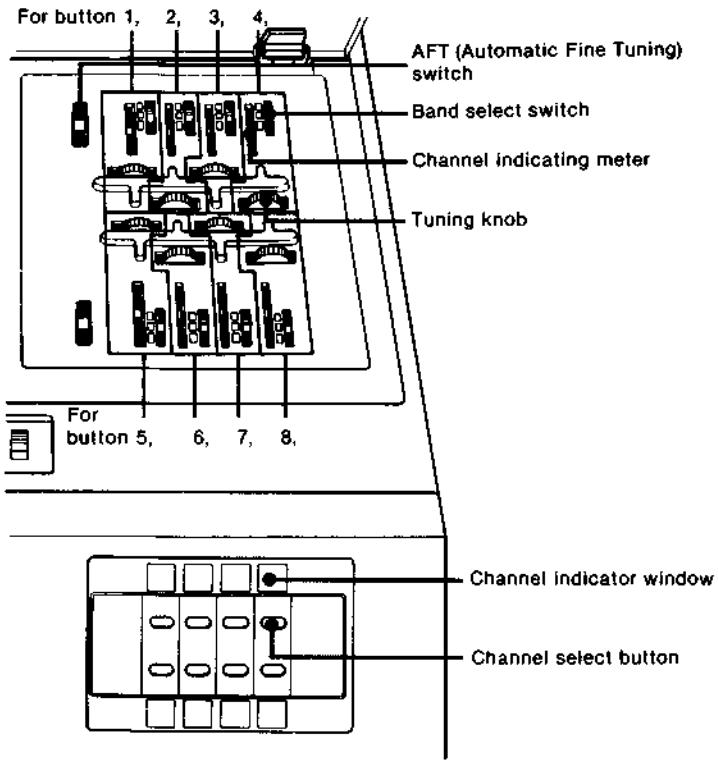
❺ Reset the TEST SIGNAL switch to OFF.

Now your TV receiver is tuned to the recorder. Whenever you use the video recorder, you should set the TV to the channel which you have chosen above.

RECORDER CHANNEL PRESETTING

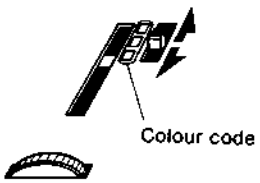
Once you have tuned your TV to the recorder, the next step is to tune the recorder to all the TV stations that you can receive in your area.
Up to 8 TV stations can be preset in any order.

Location of the tuning controls



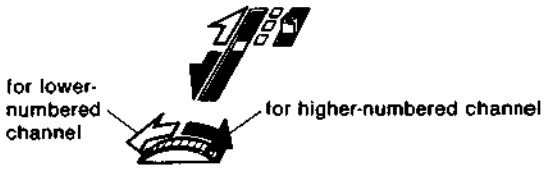
Presetting procedure

❶ Check that the TV and the recorder are turned on.
❷ Set the INPUT SELECT switch to TUNER.
❸ Open the tuning compartment lid and set the AFT switch to OFF.
❹ Press the channel select button to be preset. The corresponding channel indicator lamp will light.
❺ Set the band select switch for that button to one of the three colour-coded positions:
to tune in channel E21 through E68 .....set to **blue.**
to tune in channel E5 through E12 .....set to **yellow.**
to tune in channel E2 through E4 .....set to **red.**



❻ Turn the tuning knob until the desired station is properly tuned in.

The channel indicating meter provides a visual indication of the approximate location of the tuning knob within the operating range of the band select switch.



When the picture appears, slowly turn the tuning knob to the right until a herringbone pattern appears in the coloured part of the picture, then turn the knob back until the picture is perfectly clear.

❼ Repeat steps ❹, ❺ and ❻ for all the other channels.

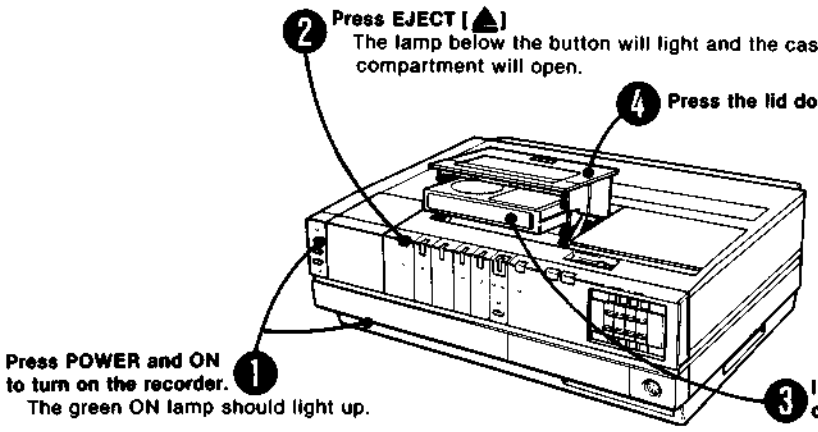
To identify the channels, consult a newspaper or TV programme guide.

❽ Set the AFT switch to ON when all the stations have been set up, then close the lid of the tuning compartment.

You can now fully utilize the recorder without ever having to touch this compartment again.

1-3-4. Cassette Insertion and Removal

TO INSERT A CASSETTE



TO REMOVE A CASSETTE

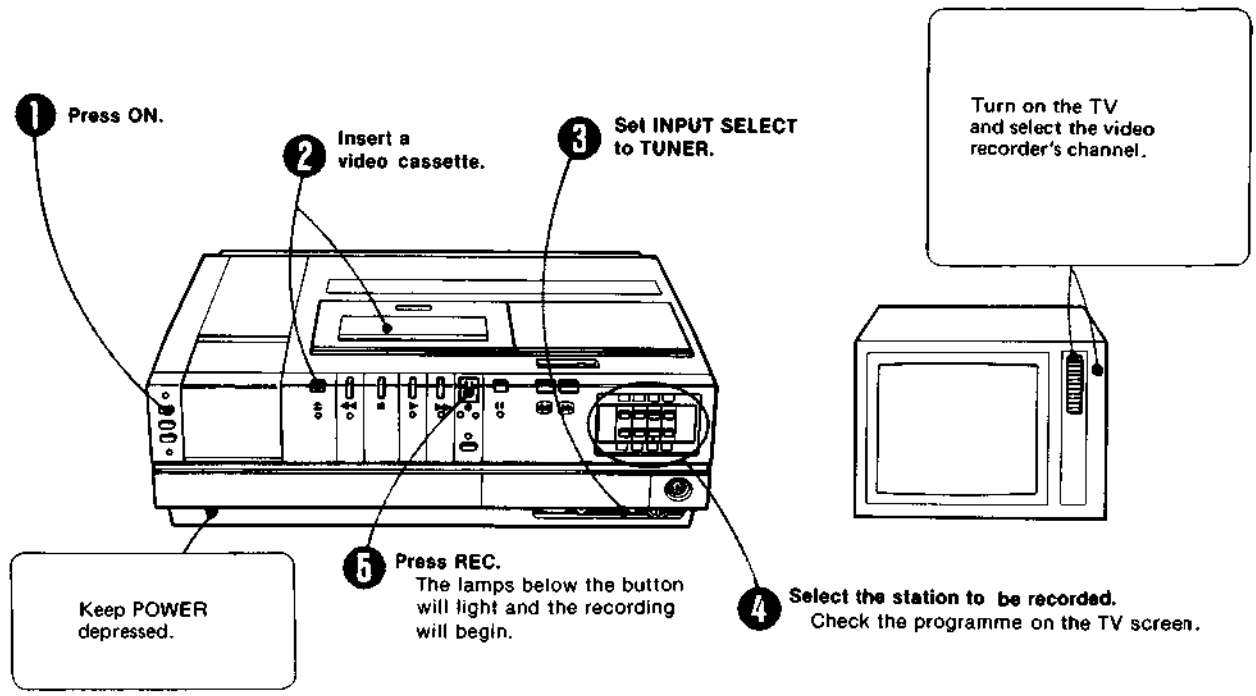
CAUTION: Make sure that the power is turned on before attempting to remove a cassette.

1. Press the EJECT button.
   There will be a delay of a few seconds while the tape is moved away from the recorder's head, after which the cassette compartment will open.
2. Remove the cassette.
3. Press the lid down.

1-3-5. Recording TV Programmes

RECORDING PROCEDURE

- First check the points indicated in green, then follow the blue-numbered sequence.

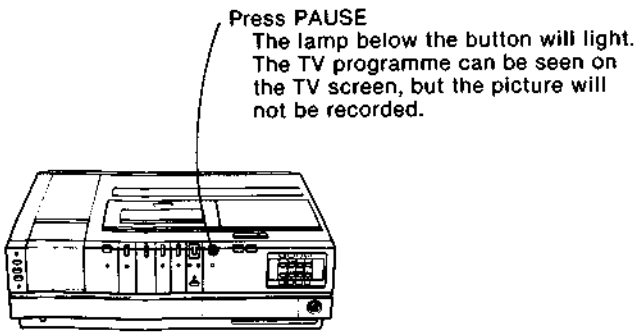


To stop recording, press the STOP button.

- We recommend to rewind the tape to the beginning when the recordidng is finished, using the REW button.

TO STOP THE TAPE MOMENTARILY

Press the PAUSE button to cut out any portion of a broadcast you do not want to record, such as a commercial.



To resume recording, press this button again.

- At the point where the PAUSE button was pressed during recording, some slight instability may occur in the playback picture, but the picture transition will be much smoother than if the STOP button were used.

Automatic release

To protect the video head and the tape, the pause mode will be automatically released after about 8 minutes and recording will begin again.

RECORDING ONE TV PROGRAMME WHILE VIEWING ANOTHER

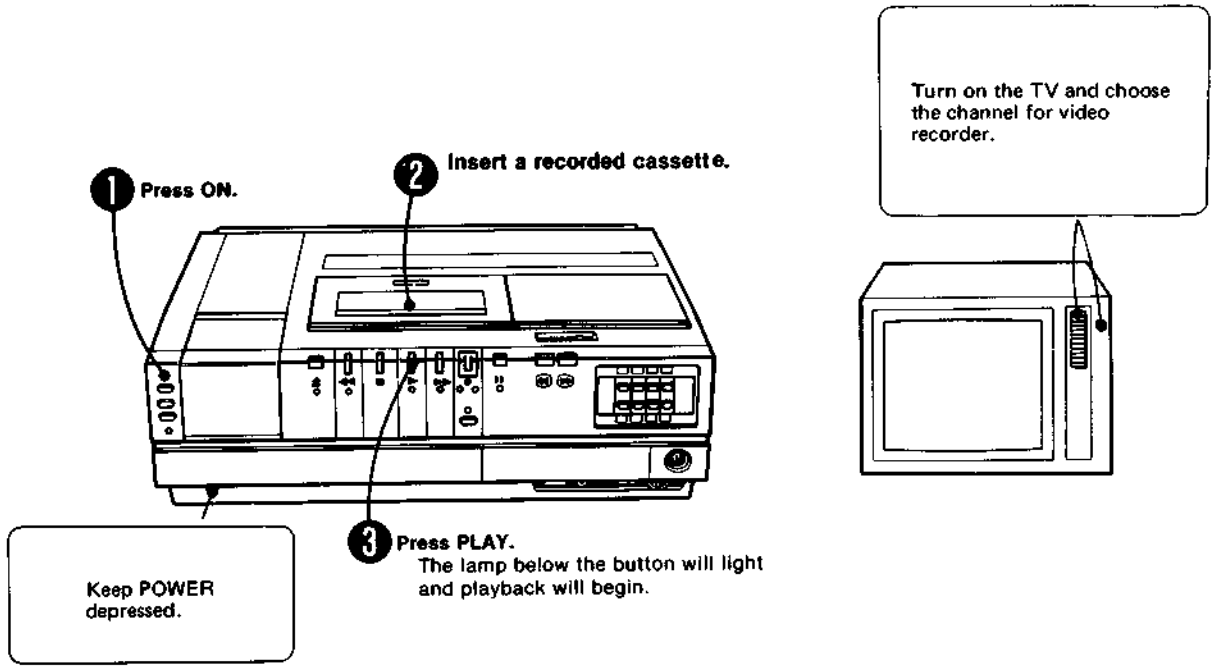
You can enjoy one TV programme while recording another TV programme as follows:

❶ Start recording the desired TV programme in the usual way.

❷ Select the channel you want to view with the TV's programme selector.

PLAYBACK PROCEDURE

- First check the points indicated in green, then follow the blue-numbered sequence.



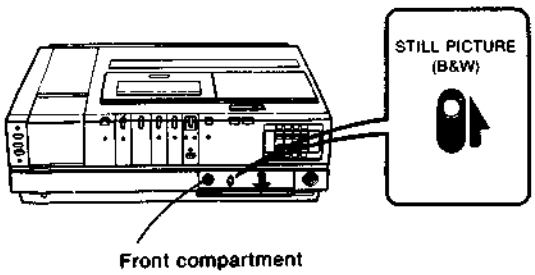
To stop playback, press the STOP button.

- If the tape is at the end, it cannot be played back. In this case, press the REW button to rewind the tape.

TO GET A STILL PICTURE

You can obtain a black and white still picture during playback as follows:

❶ Open the front compartment and set the STILL PICTURE (B&W) switch to ON.



❷ Press the PLAY button to start playback.
❸ At the desired point, press the PAUSE button.
A still picture will be displayed on the TV screen.
- In the still picture, the noise band may appear, but this is normal.

❹ To resume playback, press the PAUSE button again.

To stop the tape momentarily without a still picture display

❶ Set the STILL PICTURE (B&W) switch located in the front compartment to OFF.
❷ Press the PAUSE button during playback to stop the tape.
No picture will be shown on the TV screen during the pause mode.

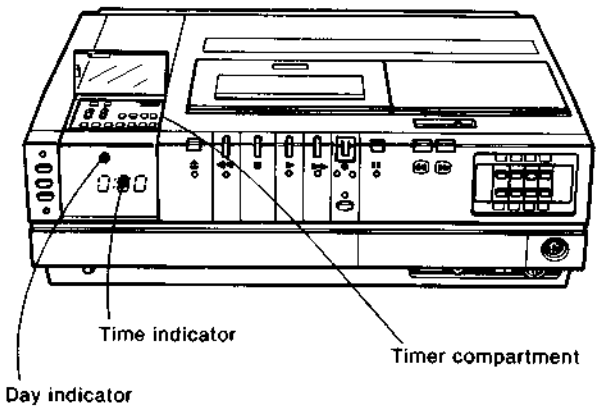
Automatic release

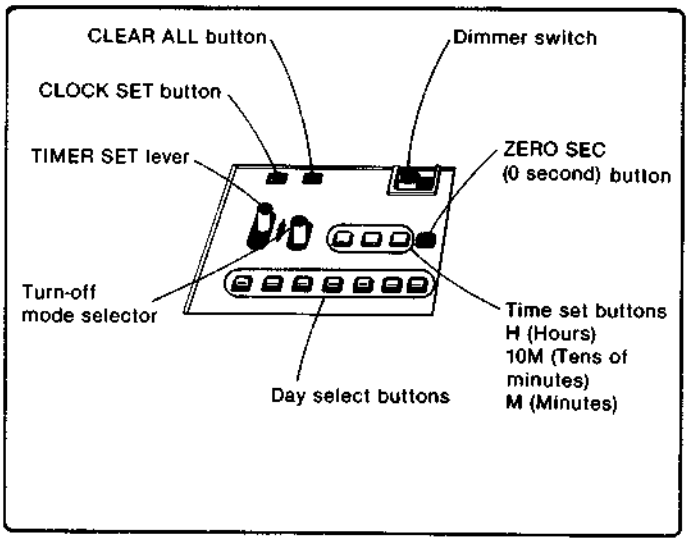
To protect the video head and the tape, the pause mode will be automatically released after about 8 minutes and playback will begin again.

1-3-7. Timer Activated Operation

Using the built-in timer, you can record a TV programme without being in attendance.
This timer is only for recording.

IDENTIFICATION OF THE TIMER SECTION'S PART





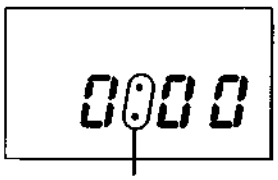
SETTING THE CLOCK

When you depress the POWER switch to ON, the dots on the time indicator start blinking. This means the clock must be set. The clock time can be adjusted as follows:

- If the time indicator does not show 0:00 or if the dots do not blink when the power is turned on, press the CLEAR ALL button, then proceed as follows.

❶ Open the timer compartment lid.

❷ Press the CLOCK SET button and hold it down until step ❸



Dots stop blinking.

❸ Press one of the day select buttons to set the day of the week.

The corresponding day indicator lamp will light.

The day select buttons are numbered 1 to 7. You can designate any day of the week as Day 1. If Sunday, say, is chosen as Day 1 and you are setting the time on Tuesday, press button 3.

Lights up.

❹ Press the H button to advance the hour digits on the clock to the correct time.

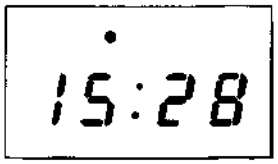
The button can be pressed in two ways.

— If the button is held down, the digits will advance continuously until the button is released.

— If the button is pressed and immediately released, the digits will advance by one.

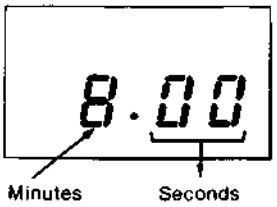
❺ Press the 10M and M buttons to advance the minute's tens and units digits to the correct time, in the same way as the hours digits were set.

The hours or the tens of minutes digits will not advance even when tens of the minutes or units digits return to 0. The H, 10M and M buttons operate independently.

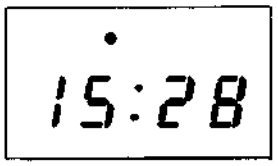


❻ When the standard time signal (received by radio, telephone, etc.) of the time you have set is given, depress the ZERO SEC button.

The built-in clock will start operating from the 0 second of the displayed time.



❼ Now release the CLOCK SET button.



When the dots between the hours and minutes blink

The dots between the hours and minutes will blink to indicate that the power has been interrupted or that the CLEAR ALL button has been depressed. If this happens, the clock time and timer settings should be reset.

CLEAR ALL button

This button cancels all the timer and clock settings.

Press this button when the time indicator display is irregular. The clock will be reset to 0:00 and will not advance and the memory of the timer setting will be erased.

TIMER RECORDING

You can set a turn-on time and a turn-off time of the recording with the built-in timer. It is possible to set a turn-on time without setting a turn-off time if you want the recorder to turn-off at the end of the tape. You cannot, however, set only a turn-off time. The timer can be set to operate either any day (or days) of the week or every day.

Turn-on/off time setting

When a new setting is made, the previous timer setting will be automatically cancelled.

❶ Open the timer compartment lid.
❷ While holding the TIMER SET lever in the TURN ON position (away from you), set the turn-on time and days as follows.
— Set the desired turn-on time using the H, 10M, and M buttons in the same way you set the clock time.
— Select the day(s) to make a recording by using the day select button(s).

When the TIMER SET lever is set to TURN ON, all day indicators light. To select a day, depress the day select button(s) corresponding to the day(s) you **do not want** to make a recording. The corresponding lamp(s) will go out.

- The timer will function on the days whose indicators light.
- To select a day whose day select button you have depressed mistakenly, depress the button again and the lamp will light up.

❸ While holding the TIMER SET lever in the TURN OFF position (toward you), set the turn-off time with the H, 10M and M buttons.

There is no need to select the turn-off time day. The recorder will be turned off within 24 hours of the turn-on time at the turn-off time set.

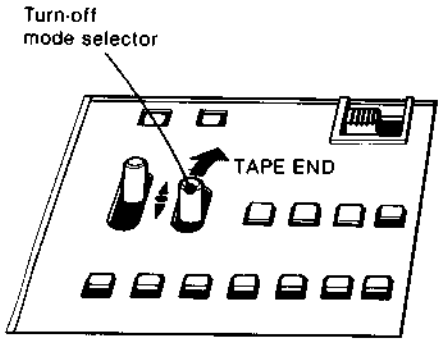
❹ Set the turn-off mode selector to TURN OFF.

In this way, the turn-on and turn-off times are set. Now you must prepare the recorder for timer operation following the "Timer recording procedure".

To record to the end of the tape

You can set the recorder so that timer recording will continue to the end of the tape and so that the recorder will automatically turn off at that time.

To do this, set the turn-off mode selector to the TAPE END position.

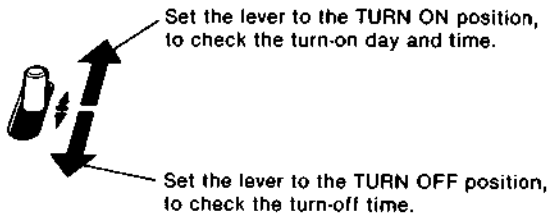


CAUTION: When the turn-off mode selector is set to TAPE END, the recording will continue to the tape end even if the turn-off time is set at an earlier time than the tape end. For example, suppose that you are using a Sony L-500 cassette which allows 2 hours 10 min. of recording and that recording starts at 10:00. In this case, recording will stop at 12:10 with the switch set to TAPE END, even if the turn-off time is set, say, at 11:00.

Be sure to reset this selector to the TURN OFF position (toward you) in order to stop timer recording at a particular time.

To check the timer setting

Move the TIMER SET lever up or down to check the timer setting shown on the time indicator.



Timer recording procedure

❶ Set the turn-on day and time and the turn-off time as described in "Turn-on/off time setting".
❷ Press the TIMER button.

The green ON lamp lights up.

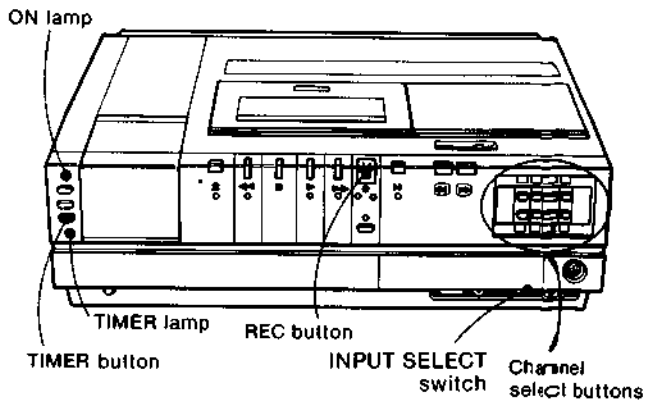
❸ Set the INPUT SELECT switch to TUNER.
❹ Select the desired channel to be recorded with the recorder's channel select buttons.

We recommend checking the selected channel on the TV screen. After checking the channel, be sure to turn the TV off.

❺ Insert a video cassette into the compartment.
❻ Press the REC button.

The green ON lamp goes off and the red TIMER lamp lights, indicating that the power to the recorder is turned off and the timer section is now standing by.

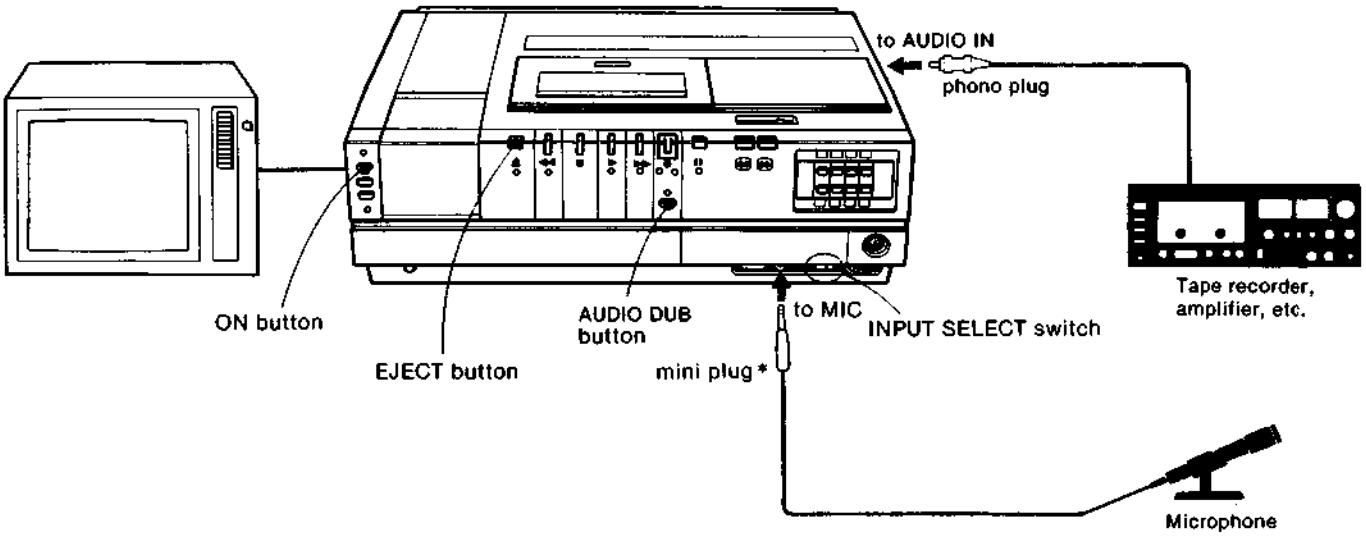
At the preset turn-on time on the preset day, recording will start automattically and will continue to the preset turn-off time or to the tape end, then the recorder will be turned off.



1-3-8. Dubbing Audio

You can record only sound such as music, commentary, etc., on a previously recorded tape. A new recording automatically erases the previous recording.

To dub audio from the beginning of the tape



*If the microphone has a phone type plug, use a Sony PC-1A plug adaptor to make the connection.

❶ Connect the sound source, such as a microphone, tape recorder, etc., to the MIC jack at the front or the AUDIO IN jack at the rear.
If both a microphone and another audio source are connected, only the microphone sound will be recorded.
❷ Set the INPUT SELECT switch to LINE.
❸ Turn on the TV and select the channel for the video recorder.
❹ Depress the ON button to turn on the recorder.
❺ Press the EJECT button and insert a recorded cassette.
❻ Press the AUDIO DUB button.
The recorder will enter the audio dubbing mode.
❼ Start playing the sound to be added.
To stop dubbing, press the STOP button.

NOTE: You cannot record only sound on a blank tape which has no previously recorded video signals.

If a whistle-like sound occurs during microphone recording
Move the microphone away from the TV or turn the TV volume down.

To record a sound in the middle of the tape
Locate in the playback mode to the point on the tape where the sound is to be added, then press the PAUSE button to stop the tape momentarily.
Press the AUDIO DUB button, then the PAUSE button again to release the pause mode. The recorder will now enter the audio dubbing mode.

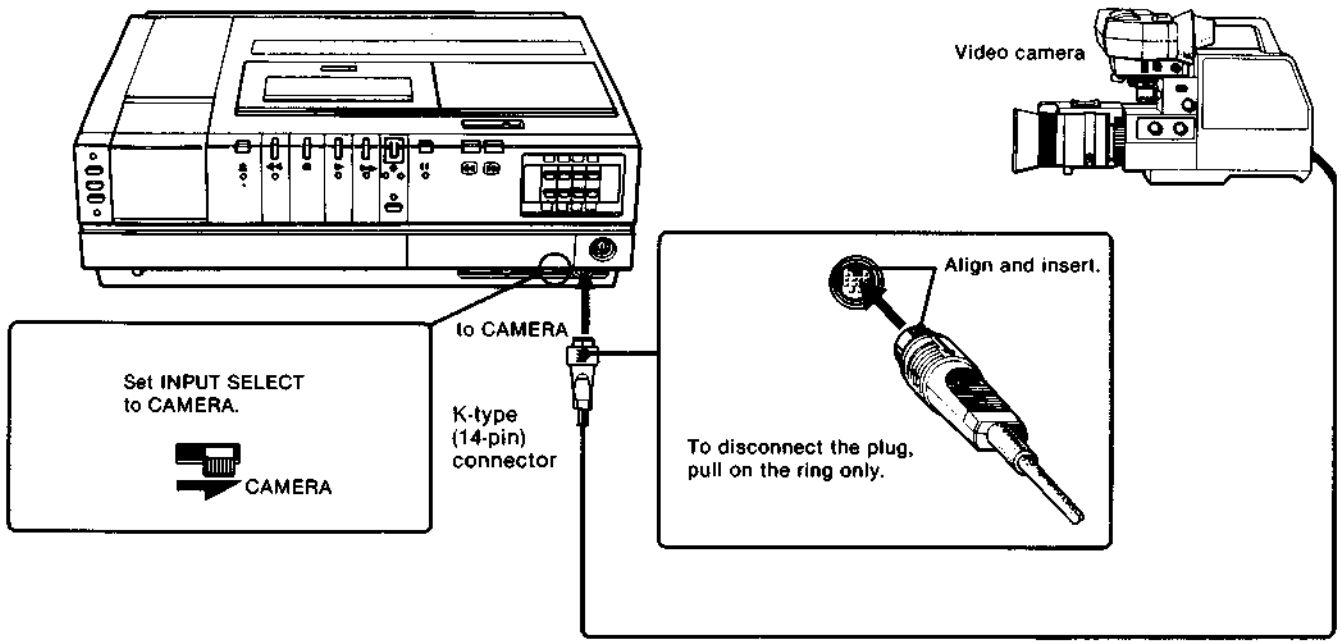
1-3-9. Camera Recording

Using a video camera, you can produce your own programmes.

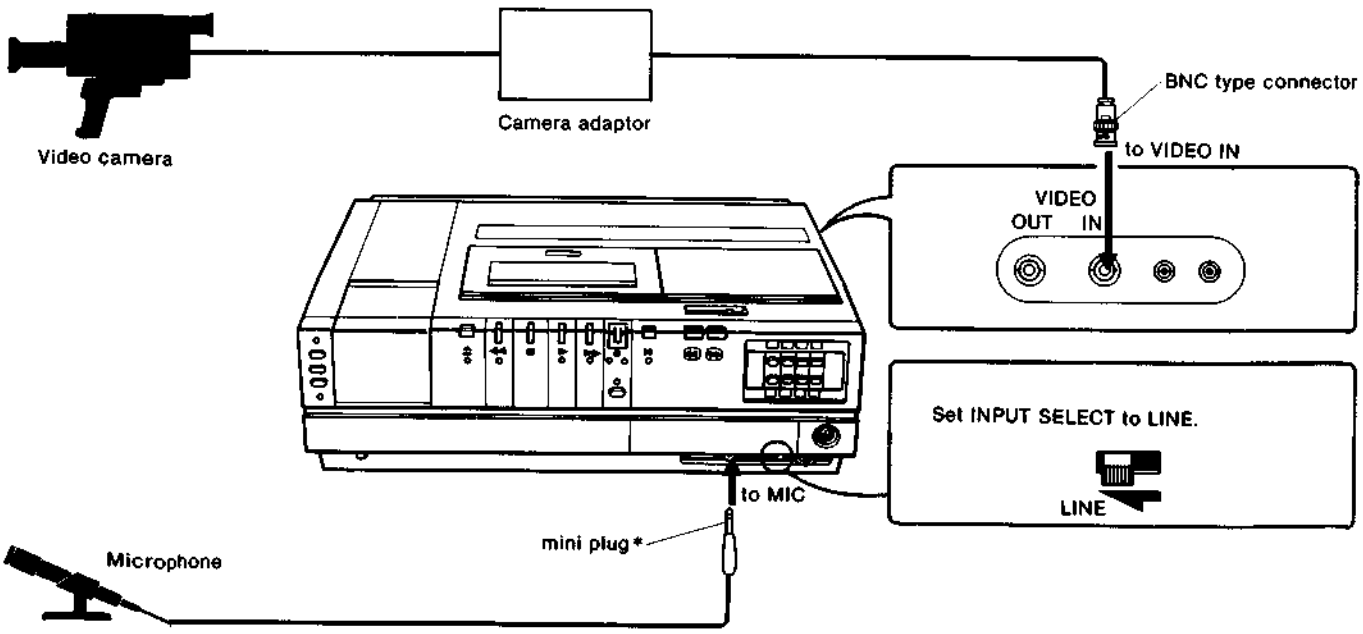
CONNECTIONS

- The camera to be connected must conform to CCIR TV standard (PAL colour system).

When using a Sony video camera equipped with a K-type (14-pin) connector



When using a camera equipped with a BNC type video output connector



*If the microphone has a phone type plug, use a Sony PC-1A plug adaptor to make the connection.

OPERATION

❶ Depress the ON button and insert a video cassette into the compartment.

❷ Check the INPUT SELECT switch setting.

When the camera is connected to the 14-pin CAMERA connector ..... to CAMERA

When the camera is connected to the VIDEO IN connector at the rear ..... to LINE

❸ Make the necessary adjustments on the camera.

For details on the camera operation, see the instruction manual furnished with the camera.

❹ Press the REC button on the recorder.

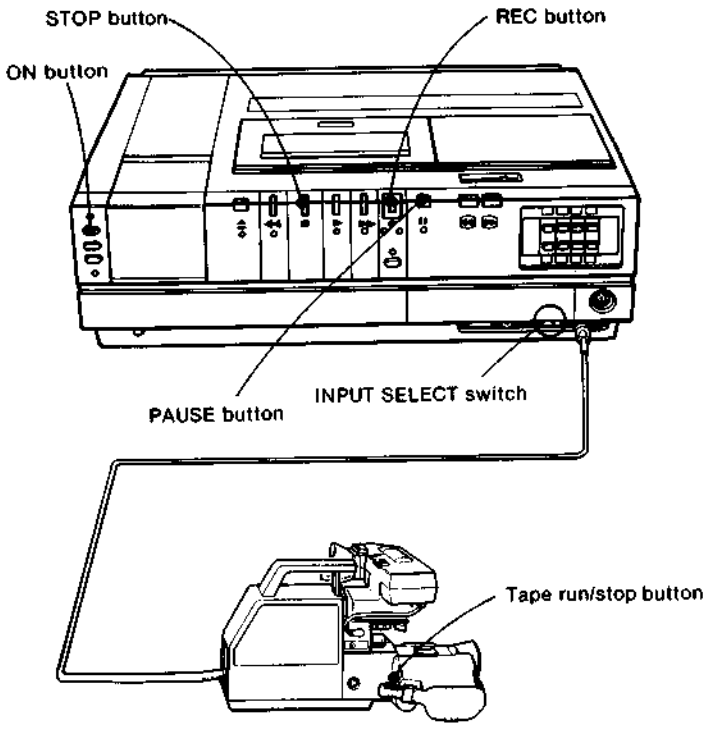
When using a Sony video camera equipped with K-type connector, the recorder will enter the recording pause mode.

To start recording, press the tape run/stop button on the camera.

The tape run/stop button can start and stop the recording.

When using a video camera equipped with BNC connector, the recording will begin immediately.

In this situation, use the PAUSE button on the recorder to stop and start recording.



When all recordings have been finished, press the STOP button.

When a TV is connected to the recorder

You can monitor the picture from the camera on the TV screen. Turn on the TV and select the channel for the video recorder.

● If a whistle-like sound occurs while you are monitoring the picture on the TV, point the microphone (or the camera if the microphone is built into the camera) away from the TV or turn down the TV volume.

1-3-10. Remote Control Operation

With the optional RM-75T remote commander, you can control the tape transport from a distance (the RM-75T's cable is 6 m long). The function of the function buttons on the remote commander is in most cases the same as that of the corresponding button on the recorder.

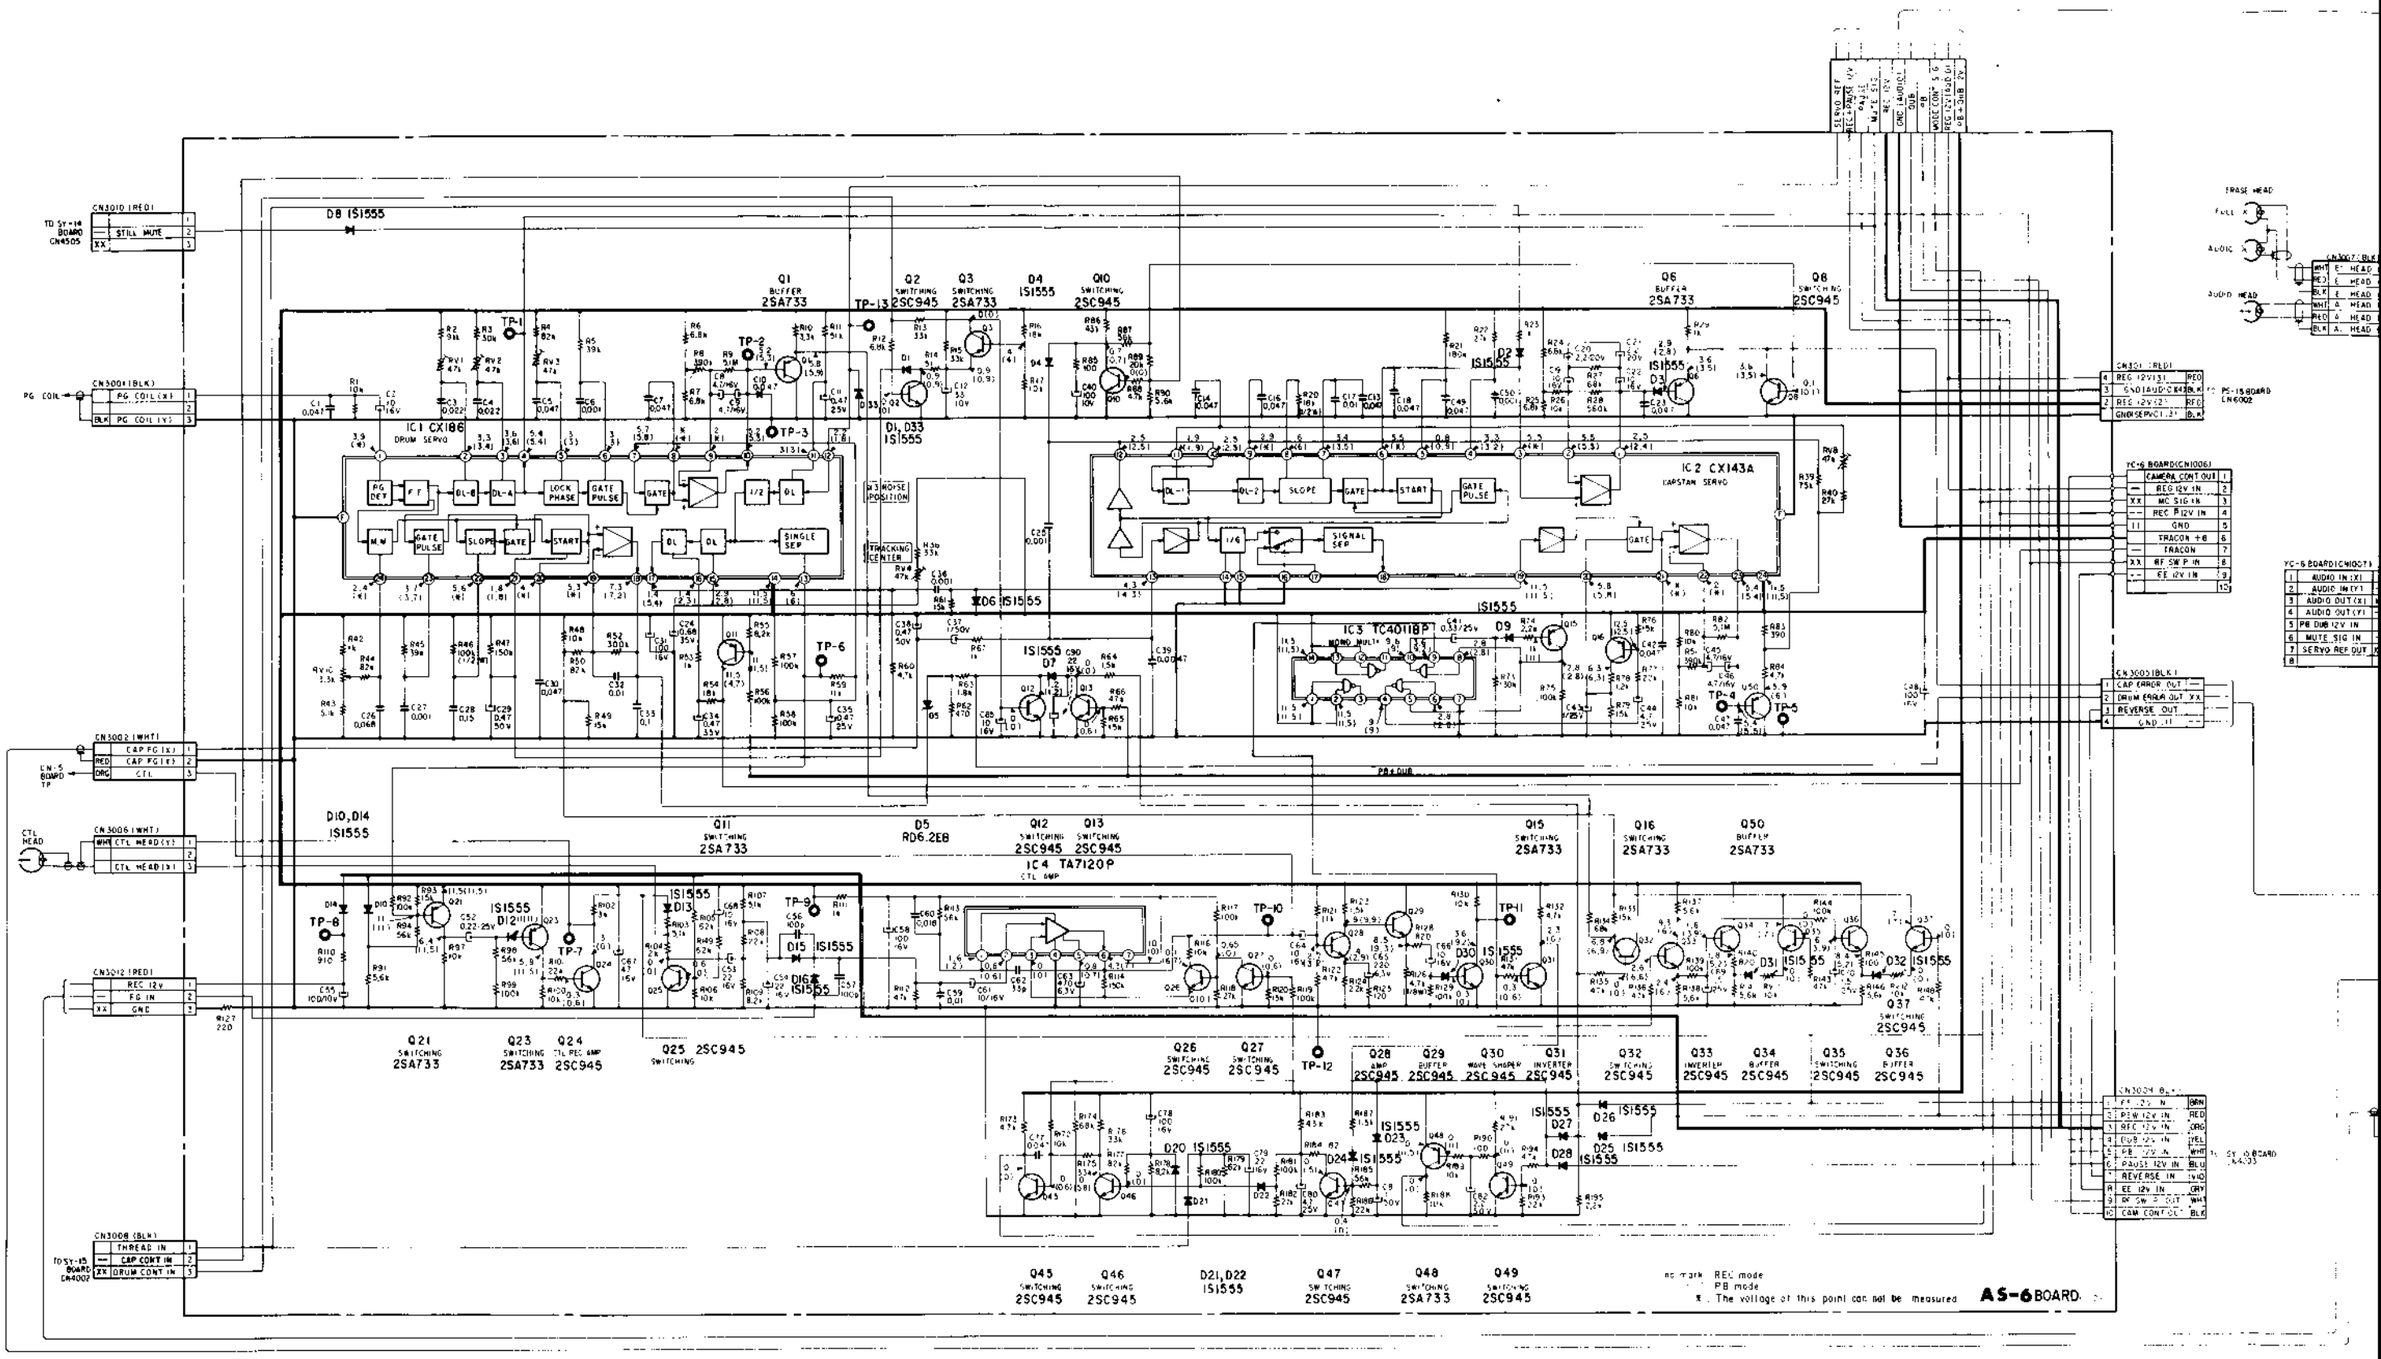
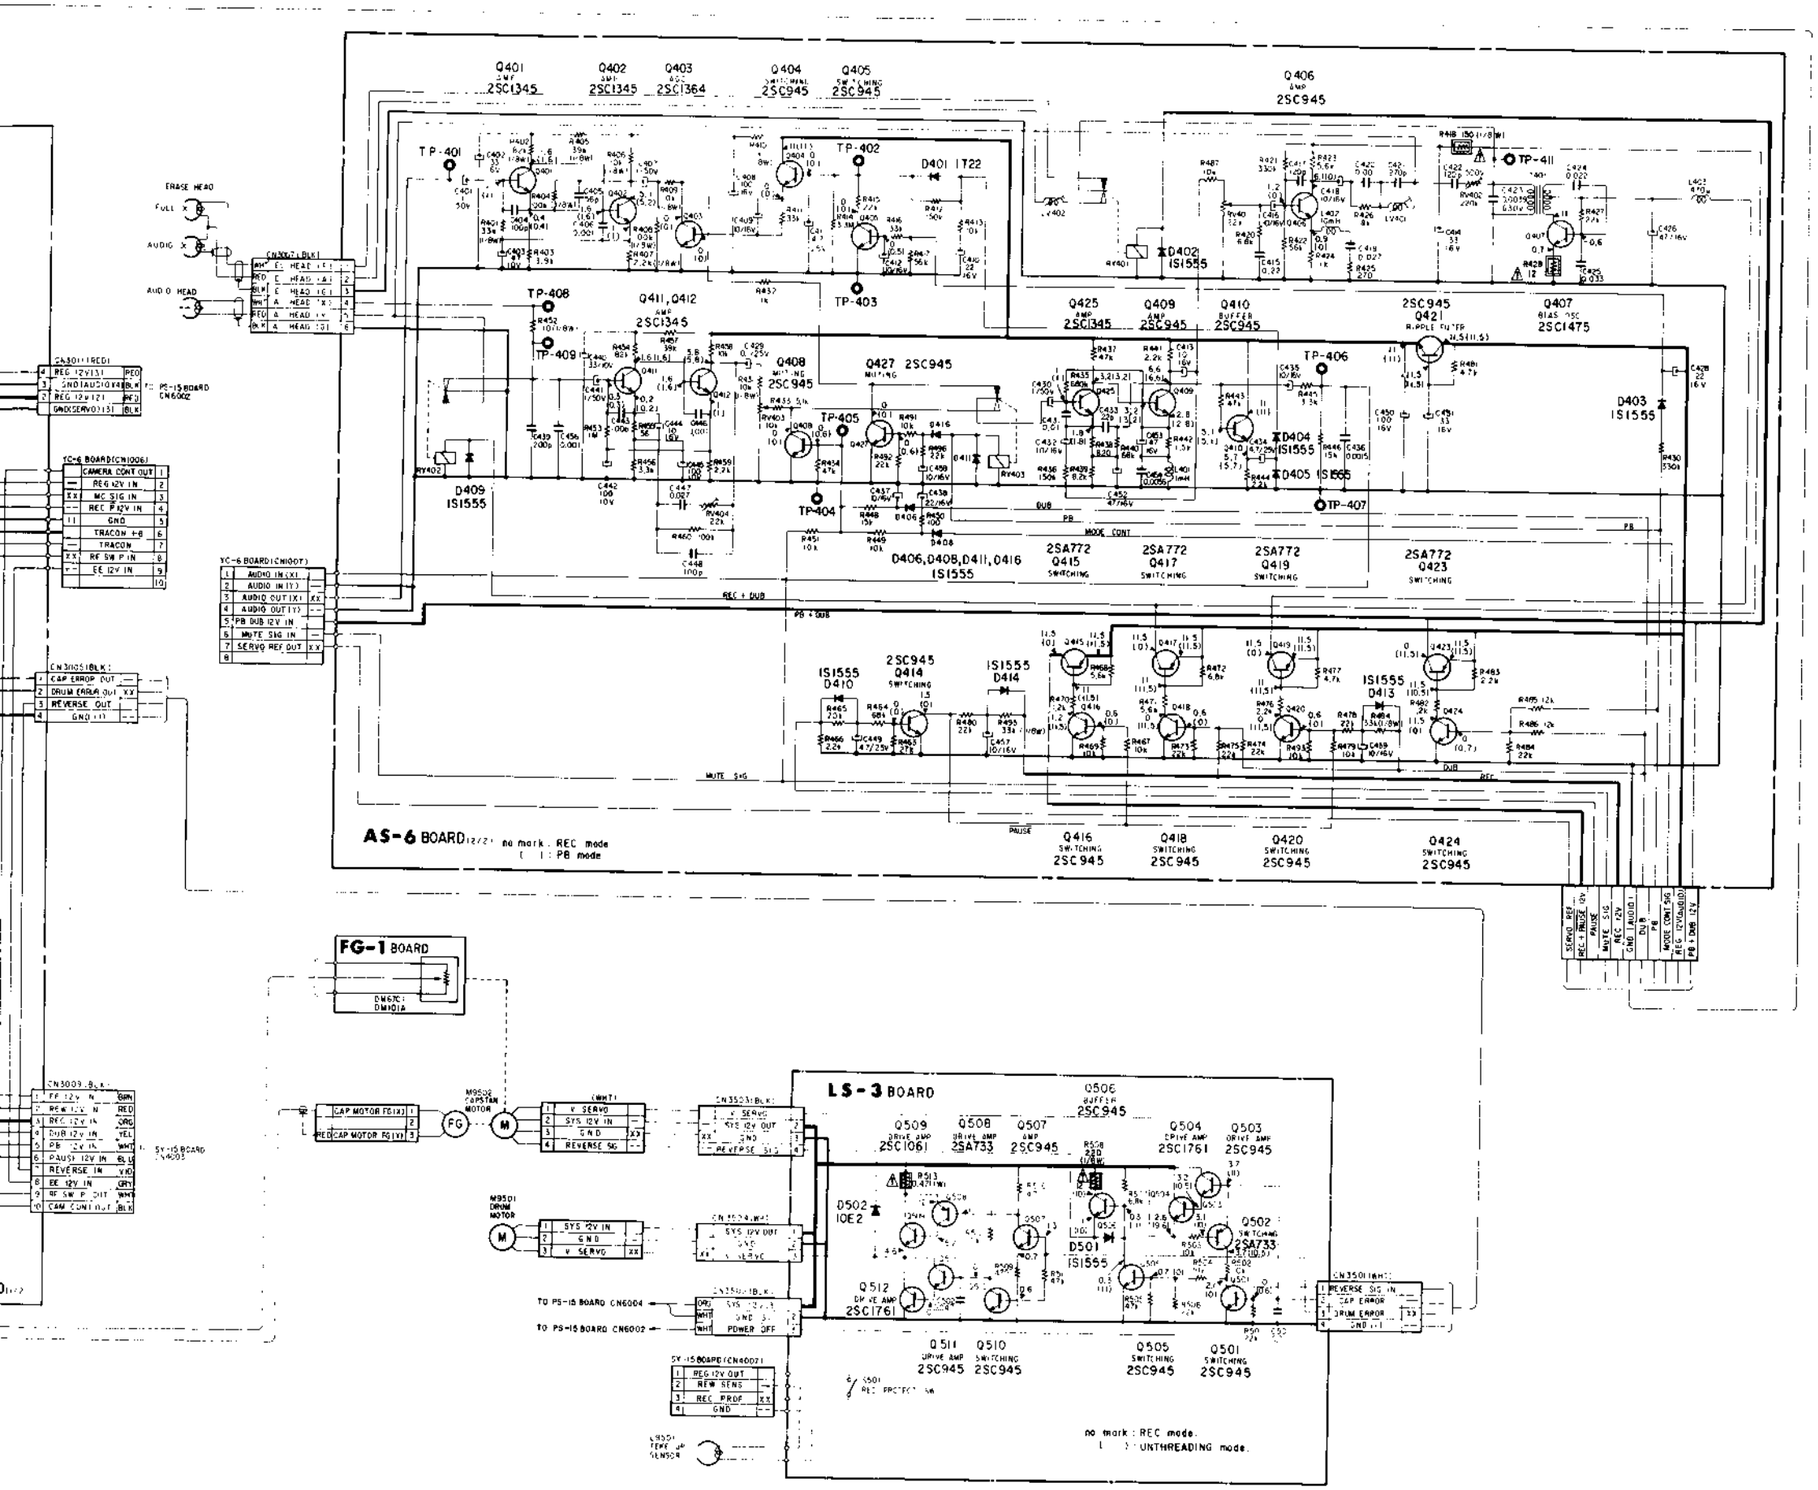
AS-6 (SERVO, AUDIO RECORD/PLAYBACK PROCESS), LS-3 (CAPSTAN & DRUM MOTOR DRIVE) AND FG-1 (CAPSTAN FLY FG) BOARDS SCHEMATIC DIAGRAM

– Ref. No. AS-6 BOARD: 3000 series LS-3 BOARD: 3500 series FG-1 BOARD: 6700 series –





NOTES:

- All resistors are in ohms, ¼ W unless otherwise noted. kΩ = 1000Ω; MΩ = 1000kΩ
- All capacitors are in μF unless otherwise noted. p : μμF 50WV or less are not indicated except for electrolytics.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- : nonflammable resistor.
- The red lines show the main voltages.
- All voltages are dc measured with a VOM (20kΩ/V).

The components identified by shading and ⚠ mark are critical for safety. Replace only with part number specified.

SY-15 (SYSTEM CONTROL), SY-14 (FUNCTION KEY, LAMP & ANTENNA SWITCH), PL-2 (SOLENOID DRIVE), CN-5 (RELAY) AND CN-6 (SLACK SENSOR) PRINTED WIRING BOARDS

– Ref. No. SY-15 BOARD: 4000 series SY-14 BOARD: 4500 series PL-2 BOARD: 4600 series CN-5, CN-6 BOARD: 6200 series –

SECTION 4
EXPLODED VIEWS

Note:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- All screws are Phillips (cross recess) type unless otherwise noted.
- As to the part numbered with E-, refer to the electrical parts list.
- Items marked "♦" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The construction parts of an assembled part are indicated with a collation number in the remark column.

SECTION 5
ELECTRICAL PART LIST

NOTE:

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

- =>: Due to standardization, interchangeable replacements may be substituted for parts specified in the diagrams.

- Items marked " ♣ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

CAPACITORS
- MF : μF, PF : μμF

RESISTORS
- All resistors are in ohms
- F : nonflammable

COILS
- MMH : mH, UH : μH

VIDEOCASSETTE RECORDER

SL-C5E

No. 1
April, 1981

SUPPLEMENT

Subject: Alignment

SONY
SERVICE MANUAL

TABLE OF CONTENTS

SECTION 1
PREPARATION FOR MECHANICAL SECTION CHECK, ADJUSTMENT, AND REPLACEMENT

1-1. DISASSEMBLY

1. Cabinet Removal

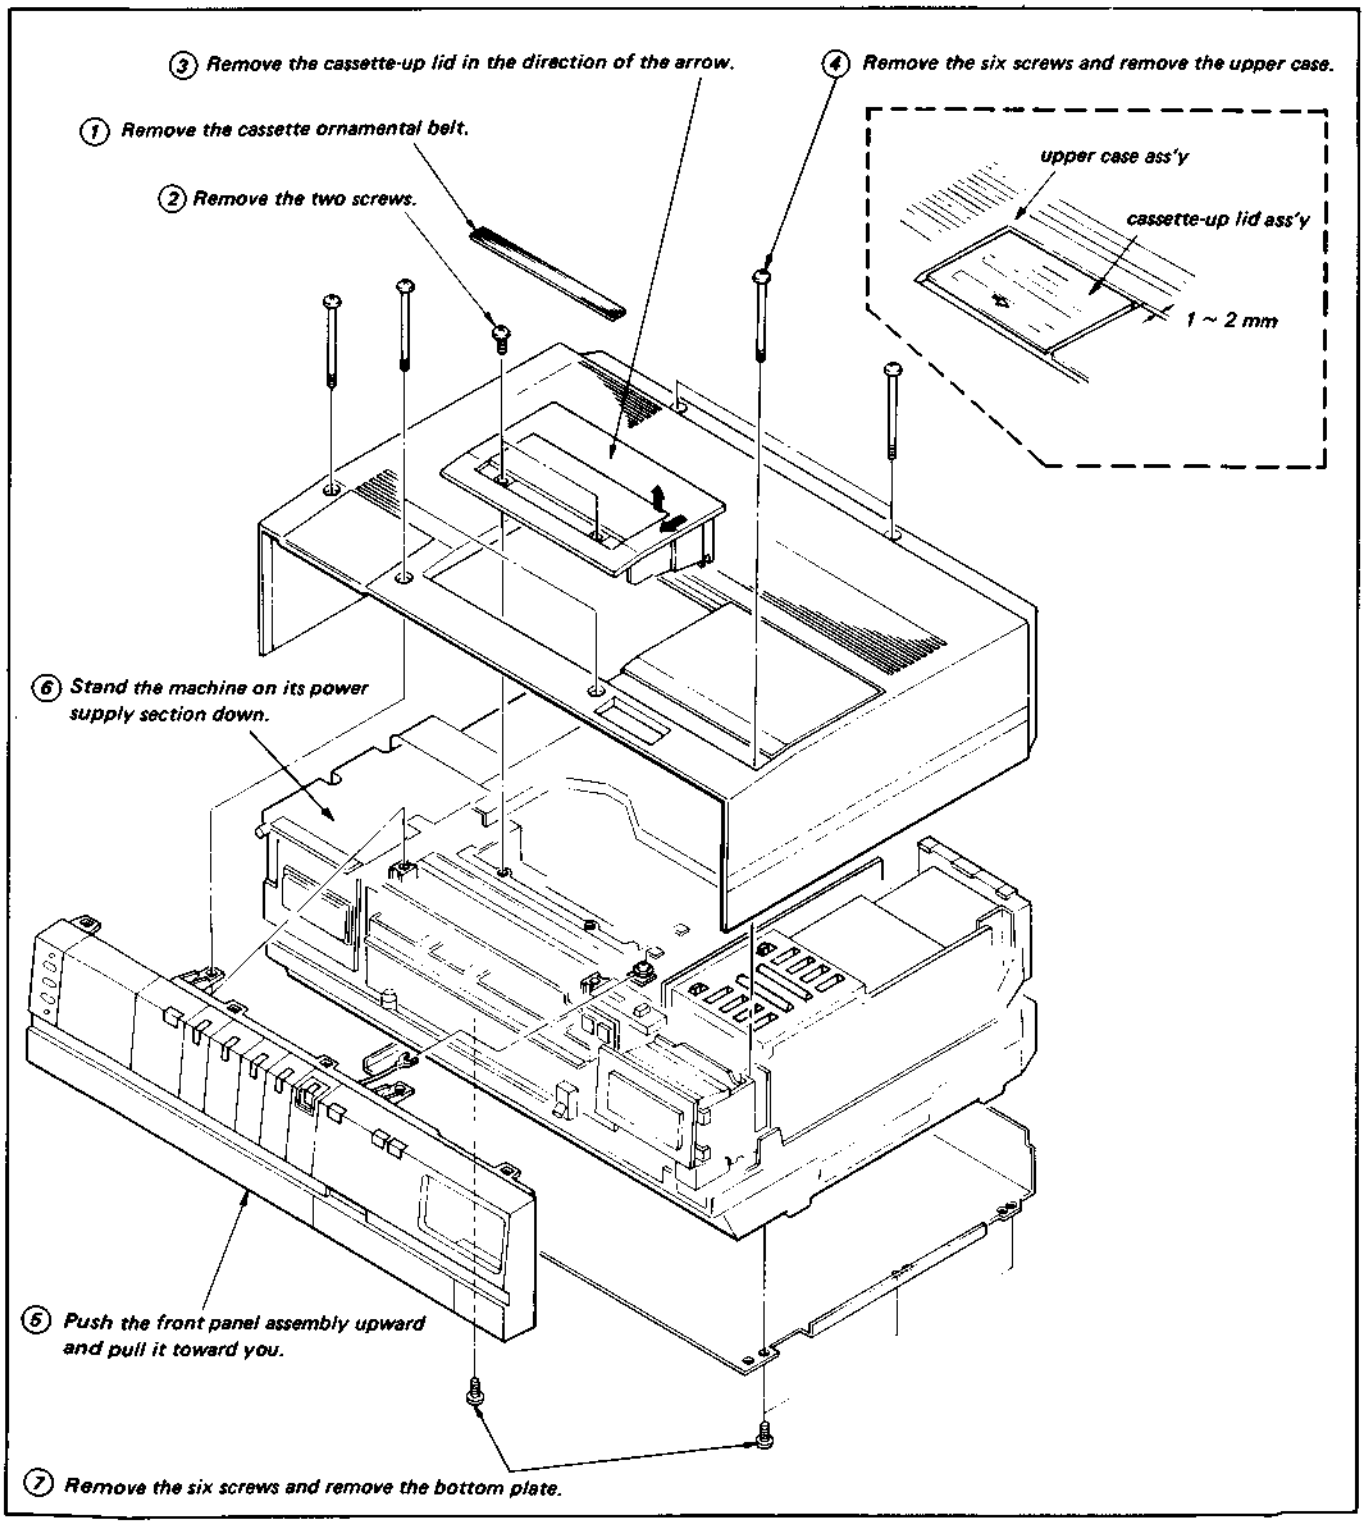

Fig. 1-1. Cabinet removal

2. Tuner-IF Block Removal

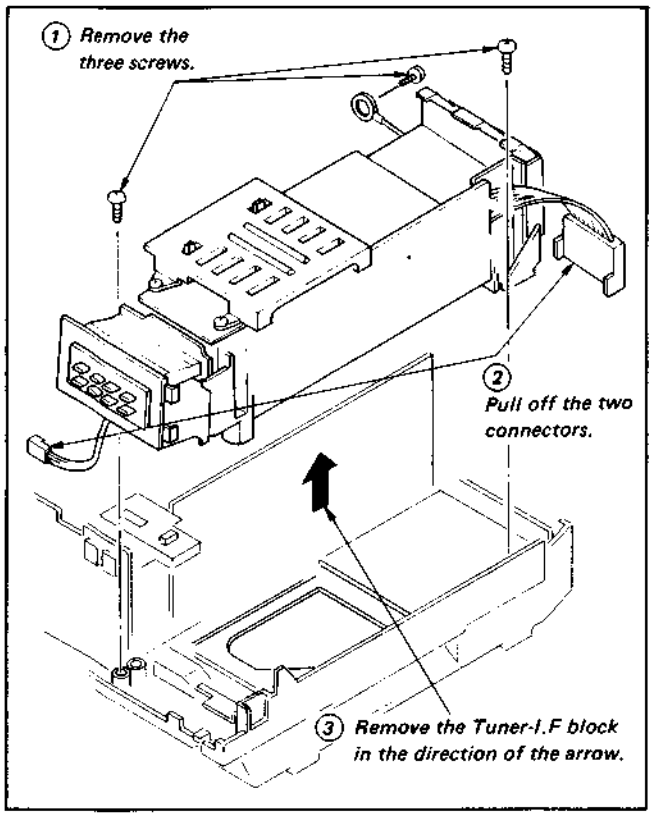

Fig. 1-2.

3. Timer Block Removal

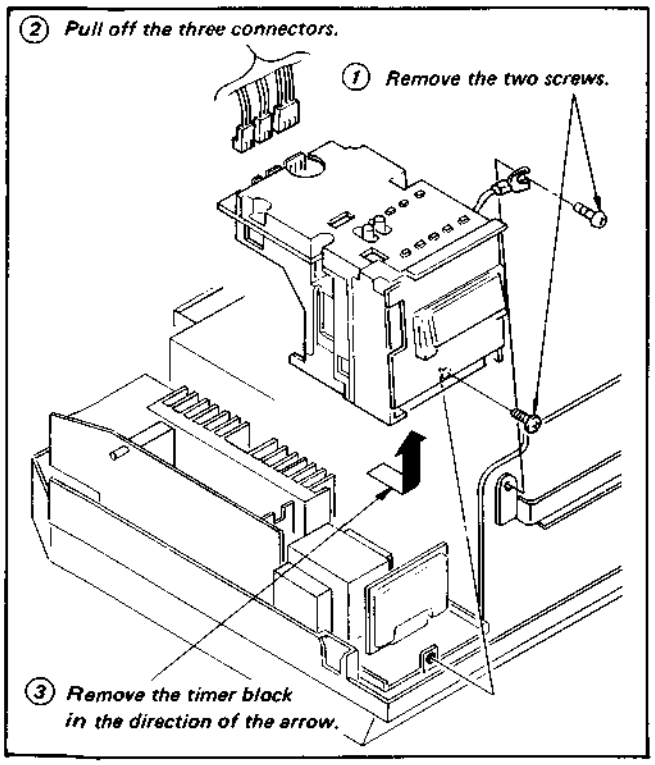

Fig. 1-3.

4. Timer Panel Removal

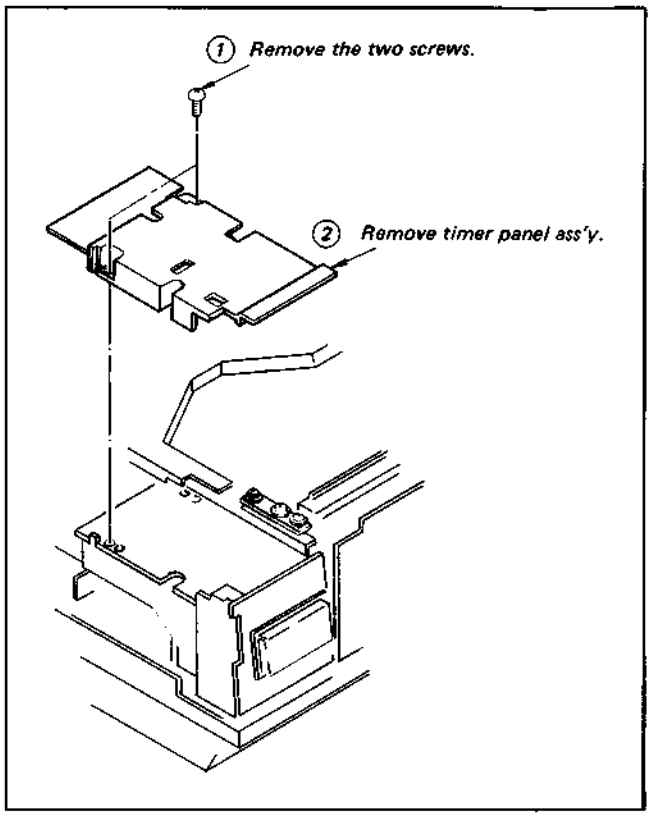

Fig. 1-4.

5. YC-6 and AS-6 Board Removal

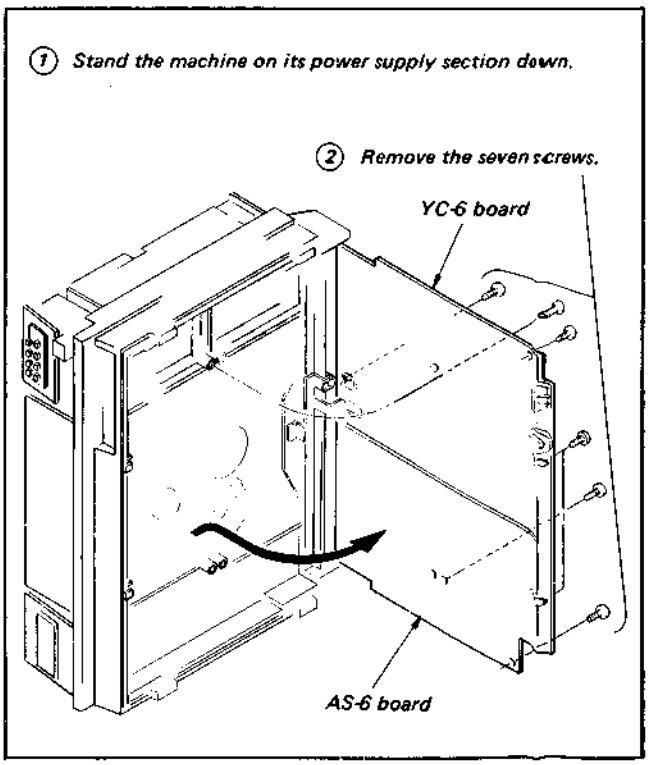

Fig. 1-5.

6. PS-15 Board Removal

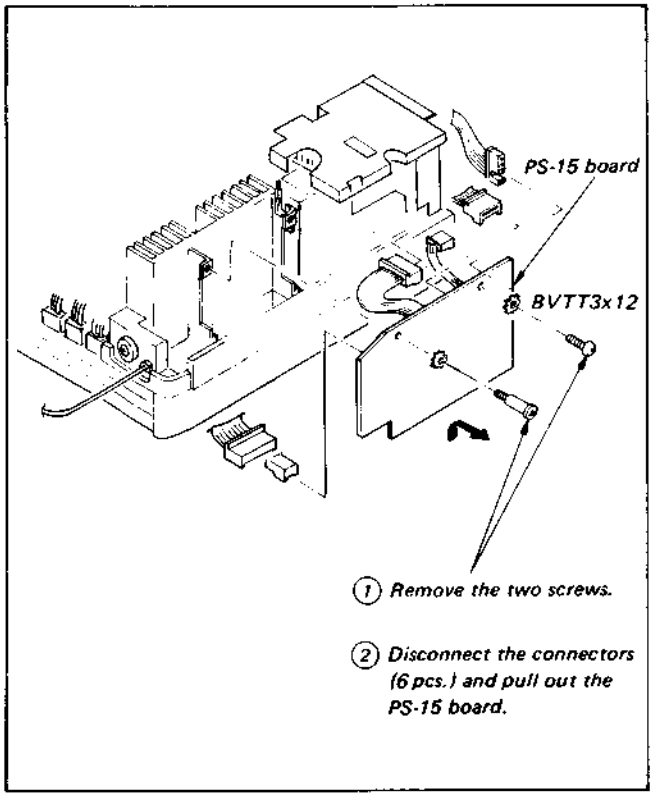

Fig. 1-6.

1-2. NOTES ON MAINTENANCE

1. Never place the machine upside down when the upper case lid has been removed from the machine, with the fan (black) attached on the drum assembly. (Since the fan projects from the chassis surface, an excessive force is applied on the drum if the machine is placed upside down, which could alter the tape movement and the tape interchangeability.)
2. Be sure to install the fan on the drum prior to the tape playback check or the electrical system alignment. If the check or the alignment is performed without the fan installed, the picture on the monitor may bend, as shown in Fig. 1-7.
3. The KR5-1H alignment tape is effective in making the tape path adjustment easy, as compared with the former alignment tapes.

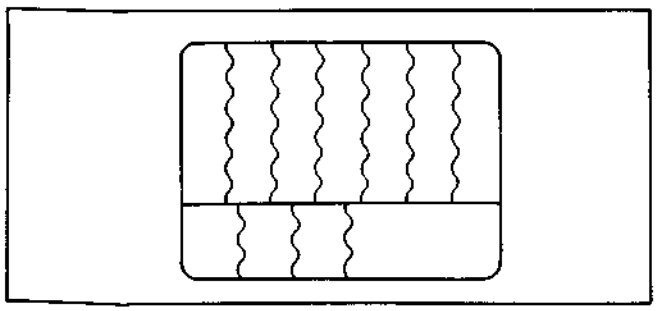

Fig. 1-7.

1-3. OPERATING RECORDER WITHOUT CASSETTE INSTALLED

1. To Set Up Threading Completion State Without Cassette and Cassette Lift Assembly.
   (This state is called "STOP mode" in this guide.)
   - Push down the cassette delection lever until the threading ring stops. (See Fig. 1-8.)

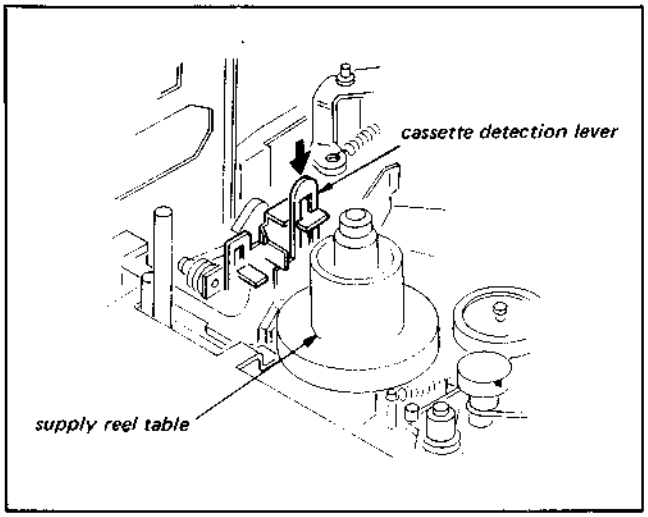

Fig. 1-8.

2. To Set Up PLAY, FAST FWD, And REWIND States Without Cassette Installed
   - Capture the cassette detection lever with an alligator clip, or an equivalent, as shown in Fig. 1-9, to place the cassette detection switch, mounted on the chassis, into the ON state. Then a desired state of operation can be set up by depressing the function button for the desired state. But note that the PLAY function button must be depressed after performing the procedures for stopping the slack sensor operation described in Section 1-4.

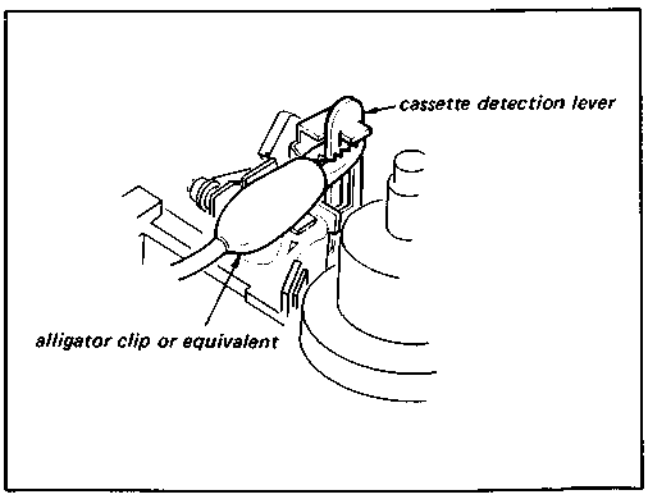

Fig. 1-9.

3. To Set Up EJECT Mode Without a Cassette:

   Note: Remove the alligator clip that captured cassette detection lever in Step 2.

   - Keep pressing the EJECT button until the unthreading is completed.

4. To Set Up RECORD Mode Without a Cassette:

   - Capture the cassette detection lever with an alligator clip as shown in Fig. 1-9, manually depress the erasing protection plate as shown in Fig. 1-10, and perform the procedure in Section 1-4, "Stopping Slack Sensor Operation". Then depress the RECORD button or the AUDIO DUB button.

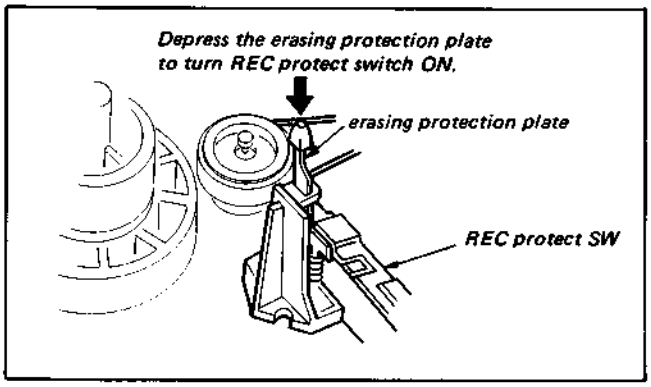

Fig. 1-10.

1-4. STOPPING SLACK SENSOR OPERATION

1. Insert a toothpick, or something like a matchstick whose point is sharpened, into the hole on the CN-6 board as shown in Fig. 1-11 to stop the movement of the slack sensor arm. A plastic pick would be preferred to the wooden one.

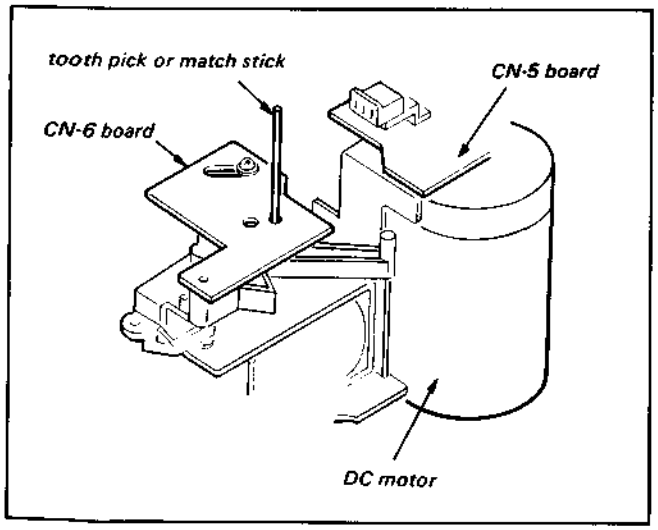

Fig. 1-11.

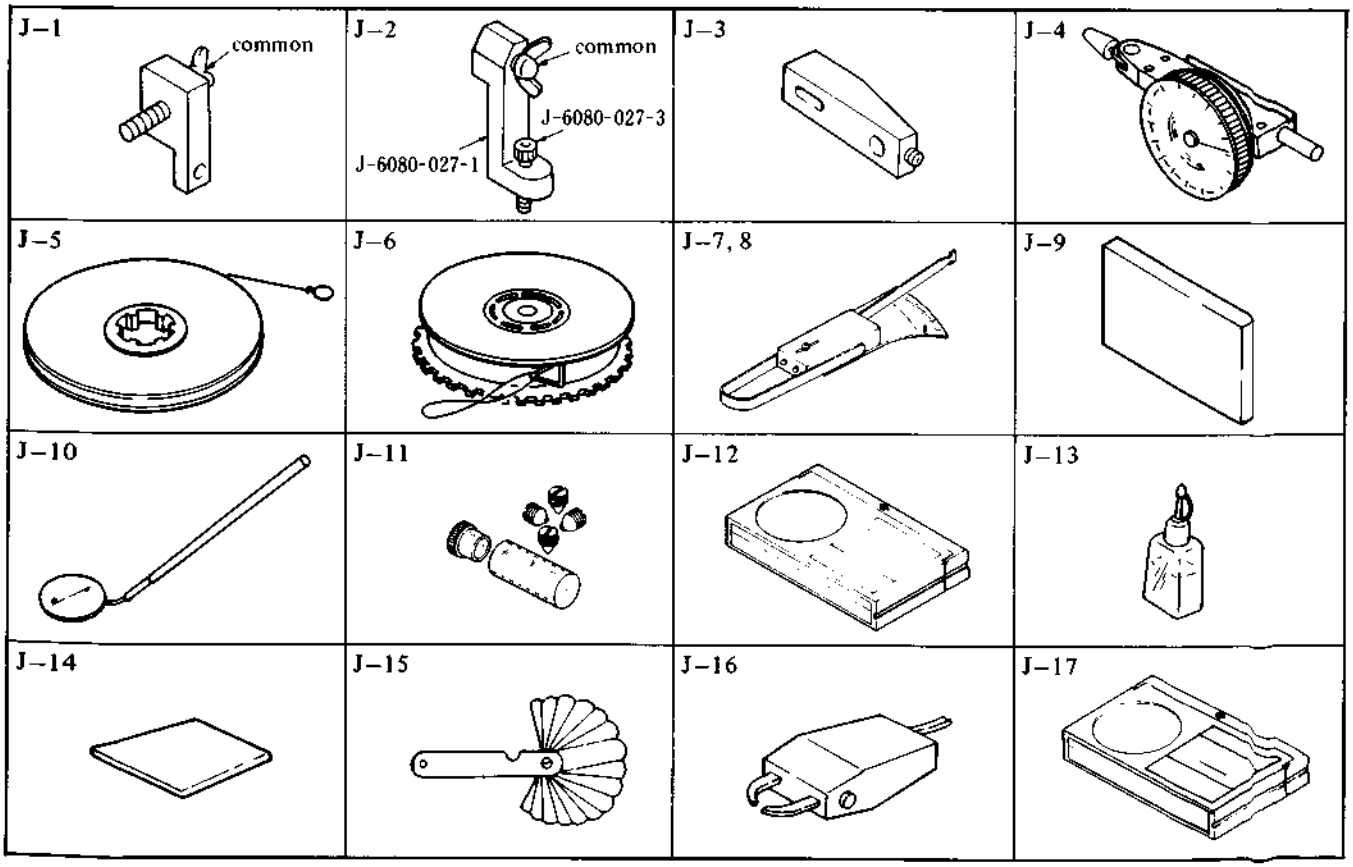
1-5. TOOLS AND FIXTURES REQUIRED

Ref. No.	Name	Part Code	Carved Jig No.	Use and Remarks
J-1	Video head disk eccentricity adj. jig	J-6080-027-2	SL-0027	Components of the SL-0012 which has been used are utilized as eccentricity adjustment jigs (J-3 and J-4) of the video head disc.
J-2	Video head disk eccentricity adj. jig	J-6080-027-1 J-6080-027-3		
J-3	Video head disk eccentricity adj. jig	J-6080-012-A	SL-0012	
J-4	Video head disk eccentricity adj. jig			
J-5	Reel table tension gauge	J-6080-011-A	SL-0011	For torque measurements
J-6	FWD back tension measurement jig	J-6080-002-A	SL-0002	For FWD back tension measurement
J-7	Sector type gauge (for 50 g)	7-732-050-20	———	For back tension and torque measurements
J-8	Sector type gauge (for 100 g)	7-732-050-30	———	
J-9	Parallel board	J-608-657-0A	SL-0657	For zenith adjustment of the audio/CTL head
J-10	Inspection mirror (handle)	7-723-902-01	———	For tape path adjustment and tape running check Be sure to place an order for the handle and the mirror as a set.
	Inspection mirror (mirror)	7-723-902-11	———	
J-11	Dihedral adjustment screw	J-6080-013-1	SL-0013	For video head dihedral adjustment
J-12	Alignment tape (KR5-1H)	8-969-995-91	———	For over all adjustments such as tracking and picture quality
J-13	Cleaning fluid	Y-2031-001-0	———	For cleaning
J-14	Cleaning piece	2-034-697-00	———	For cleaning
J-15	Thickness gauge	9-911-053-00	———	For checking clearance
J-16	Head demagnetizer	Common	———	For video and audio head degaussing (Demagnetizer HE-2 or HE-3)
J-17	Lapping tape	8-888-004-00	———	For video head cleaning

Note: When the Jig Nos. J-1 and J-2 are ordered, be sure to place an order for these together as a set.



SECTION 2
PERIODIC CHECK AND MAINTENANCE

- It is recommended that the following periodic check and maintenance be performed for obtaining the full function and performance of the machine and extending the lives of the machine and tape.

2-1. MAINTENANCE AFTER REPAIR

The following maintenance items must be performed after repair of the machine without regard to the operating hours of the machine.

(1) Cleaning of the video head disk assembly
- Press chamois saturated with the cleaning fluid or isopropyl alcohol lightly on the video head disk assembly and turn the fan on the drum slowly by hand for cleaning. (Never try to clean the video head disk assembly with the motor running.)
- Never move the chamois vertically against the head tips for cleaning, or the head tips will be damaged.

(2) Cleaning of the tape movement system
- Clean the surfaces which the tape contacts during its movement (the tape guides, drum assembly, capstan, and pinch roller) with chamois saturated with the cleaning fluid or isopropyl alcohol.

(3) Cleaning of the driving system
- Clean the driving elements (such as belts, idlers, and reel table surfaces) with a piece of cloth saturated with the cleaning fluid or isopropyl alcohol.

2-2. PERIODIC CHECK ITEMS

Perform the maintenance and check listed on the table below, according to user's operating hours.

○ Cleaning ◎ Lubrication ★ Replacement ☆ Confirmation

Maintenance & Check		Operating Hour (H) / Replacement Part No.	500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks
Tape Movement System	Cleaning of tape movement system	———	○	○	○	○	○	○	○	○	○	○	This cleaning must be done whenever a repair is made.
	Cleaning & degaussing of ACE ass'y	———	○	○	○	○	○	○	○	○	○	○	
	Cleaning, degaussing & replacement of video head disk ass'y	A-6762-044-A	○	★	○	★	○	★	○	★	○	★	The life of a head varies, depending on operational conditions and methods.
Driving System	Lubrication to thrust retainer	———	—	◎	—	◎	—	◎	—	◎	—	◎	Apply a drop of oil (such as sewing machine oil) on each of upper and lower bearings.
	Lubrication to thrust bearing (under reel table)	———	—	—	◎	—	—	◎	—	—	◎	—	Remove reel table and apply a drop of oil (such as sewing machine oil) on thrust bearing.
	Cleaning & replacement of capstan belt	3-659-351-00	○	○	★	○	○	★	○	○	★	○	•Cleaning must be done whenever repair is made.
	Cleaning & replacement of belts other than capstan belt	———	○	○	○	○	○	○	○	★	○	○	•Replacement must be done depending on operating hours on the table, or every two years.
	Replacement of FWD limiter	X-3653-310-0	—	—	★	—	—	★	—	—	★	—	
	Cleaning of iron core and opening of solenoid	———	—	—	—	○	—	—	—	○	—	—	Wipe iron core and opening of solenoids with a dry cloth.
Performance Confirmation	Abnormal sound	———	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Adjust or replace the section which makes abnormal sound.
	Measurement of FWD back tension	———	—	☆	—	☆	—	☆	—	☆	—	☆	Confirmation must be made according to Section 3-18. Specified value: 35 to 45g. (when measured with jig tape)
	Confirmation of brake system	———	—	☆	—	☆	—	☆	—	☆	—	☆	Confirmation must be made according to Section 3-17.
	Confirmation of record & playback functions	———	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Perform the confirmation whenever repair is made.

- Belts other than capstan belt

FWD belt	:	3-653-324-00
Threading belt	:	3-659-301-00
EJECT belt	:	3-659-397-00
FF belt	:	3-662-347-00
Counter belt	:	3-659-485-00

(Note on Overhaul)

A part replacement must be done in the overhal operation, referring to the listed items. The replacement periods of the motor and the head which are not included in the chart items are as follows.

Full erase head . . . . . about 4,000 operating hours
Capstan motor . . . . . about 2,000 operating hours

2-3. OTHERS

(1) Lubricating Oil

- Be careful in applying oil to any parts.
  Do not permit the oil to coat any surface that is touched by the tape, heads, or drive belts.

- Be sure to use SONY oil (or equivalent) for lubrication. (Various troubles will be caused, if a different viscosity oil is used.)
  SONY Oil: Part No. 7-661-018-01

  OR THE EQUIVALENT OF SEWING MACHINE TYPE OIL

- Use the oil without dust or other foreign material for the bearing lubrication. (If an oil including dust and others is used, friction and burning of the bearing are apt to occur)

- The quantity of "a drop of oil" is about the quantity that will attach to the tip of a 2 mm diameter stick, as shown in the figure.

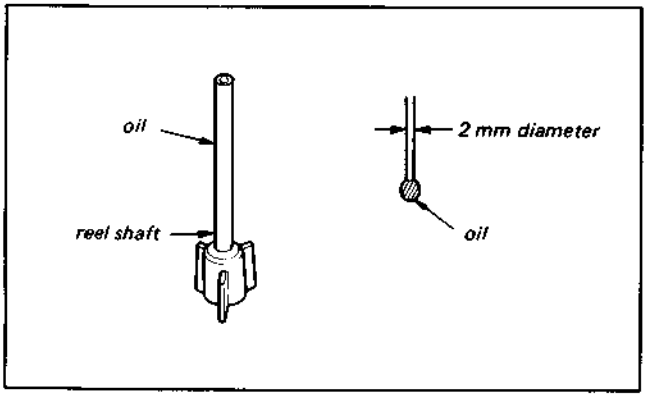


Fig. 2-1.

SECTION 3
CHECK, ADJUSTMENT, AND REPLACEMENT PROCEDURES

3-1. REPLACEMENT OF VIDEO HEAD DISK ASSEMBLY AND ECCENTRICITY ADJUSTMENT

1. Remove the video head disk assembly, following Steps ① to ⑥ shown in Fig. 3-1.

   Note:
   - For removing fan ①, hold video head disk assembly ⑥ (without touching heads) and turn the fan in a counterclockwise direction.
   - Never loosen the two setscrews that fasten the lower flange to the drum shaft.
   - Never loosen the lower two screws of the drum support.
   - Prior to installing the video head disk assembly ⑥, clean surfaces Ⓐ and Ⓑ with a piece of cloth saturated with methanol or isopropyl alcohol.

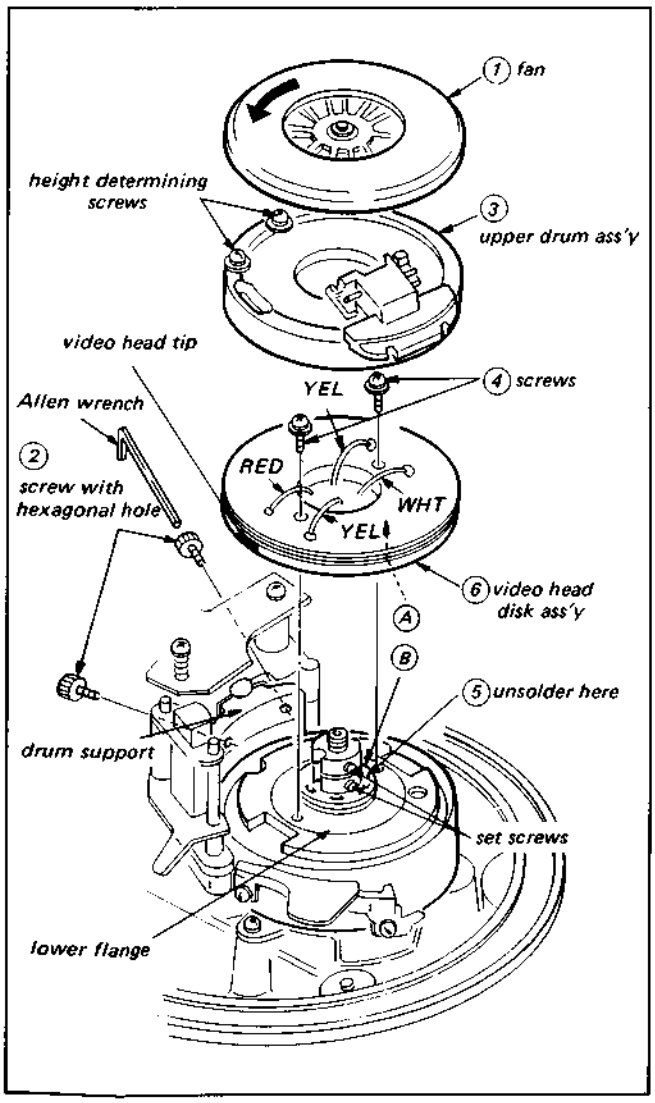

Fig. 3-1. Replacement of the video head disk assembly

2. Install the video head disk assembly tentatively (with two screws only finger-tight) and perform the eccentricity adjustment.

   (i) Combine adjusting fixture parts ①, ②, ③, and ④ as shown in Fig. 3-2. Set the combined fixture on the machine by mounting the eccentricity gauge assembly in the capstan husing assembly. See Fig. 3-2.

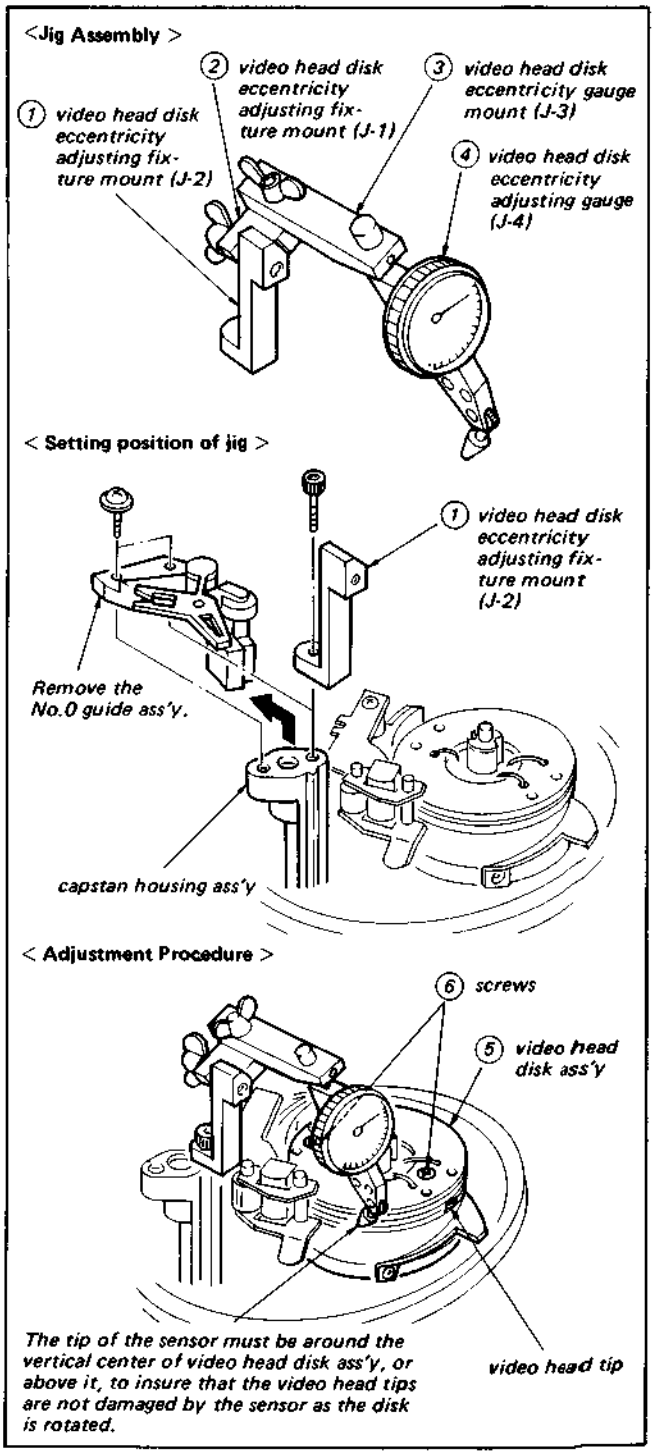

Fig. 3-2. Eccentricity adjustment of the video head disk assembly

(ii) Turn the shaft of the drum counterclockwise slowly with the fingers and adjust the video head disk position so that the variation in the reading of the drum eccentricity adjusting gauge is within 5 μm during each turn of the drum, by very gently tapping a screwdriver whose blade-tip is against the inner circumference of video head disk assembly (5).

(iii) Tighten the screws (6) that secure the video head disk assembly (5) alternately and gradually after the eccentricity adjustment is completed. (tightening torque: more than 10 kg.cm.)

(iv) After the screws are tightened, confirm again that the eccentricity deflection is within 5 μm.

(v) Solder the four leads of the head and remount the upper drum assembly while holding the upper drum height determining screws. (See Fig. 3-1.)

3. Perform the following adjustments after the replacement of the video head disk assembly.

3-11-6. No. 0 guide section assembly adjustment
3-19-1. Tape path adjustment
3-19-4. ACE assembly position adjustment
3-19-5. Video head dihedral adjustment
4-3-1.–2. RF switching position adjustment
4-3-1.–3. REC mode servo lock phase adjustment
4-4-19. Playback amplifier frequency characteristic adjustment (RF-2 board)
4-4-18. Record current adjustment (RF-2 board)
4-4-16. Chroma record current adjustment (YC-6 board)

3-2. REPLACEMENT OF DRUM ASSEMBLY

1. Stand the machine on its left side. Open the YC-6 and AS-6 boards. (Refer to Section 1-1-5.)
2. Remove FF belt (1) and drum shield (2) shown in Fig. 3-3.
3. Remove two screws (1) and connectors (2) and (3) shown in Fig. 3-4. The drum assembly can then be removed, by pulling it up.
4. Loosen the rotor assembly by inserting a long-nose pliers or a screwdriver into the two rotor holes shown in Fig. 3-5 and removing the N5φ nut and SW5φ washer. Pull off the rotor assembly.
5. Remove the screw mounting the stator assembly (shown in Fig. 3-5) and pull off the stator assembly.
6. Install the rotor assembly and the stator assembly (removed in Steps 4 and 5) onto the new drum assembly.

Note: Install the stator assembly so that the 3P connector on the stator assembly fits into the slot of the shield case assembly.

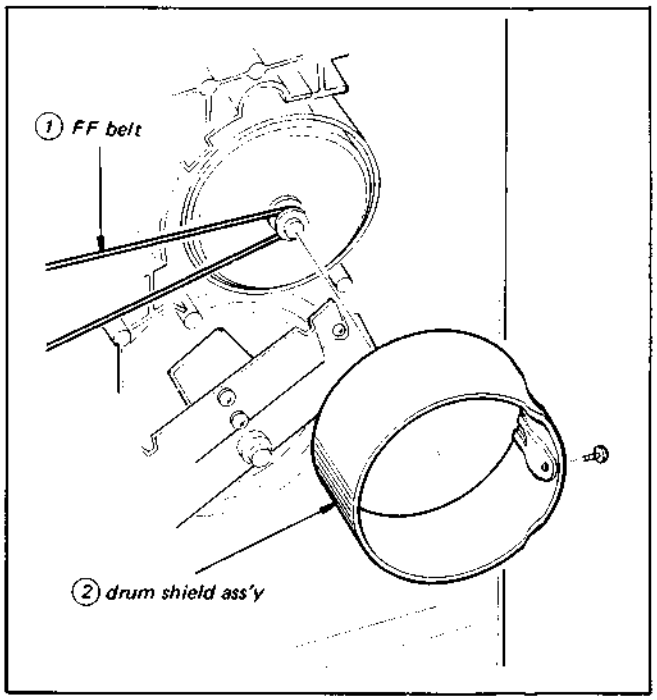

Fig. 3-3. Replacement of drum assembly (1)

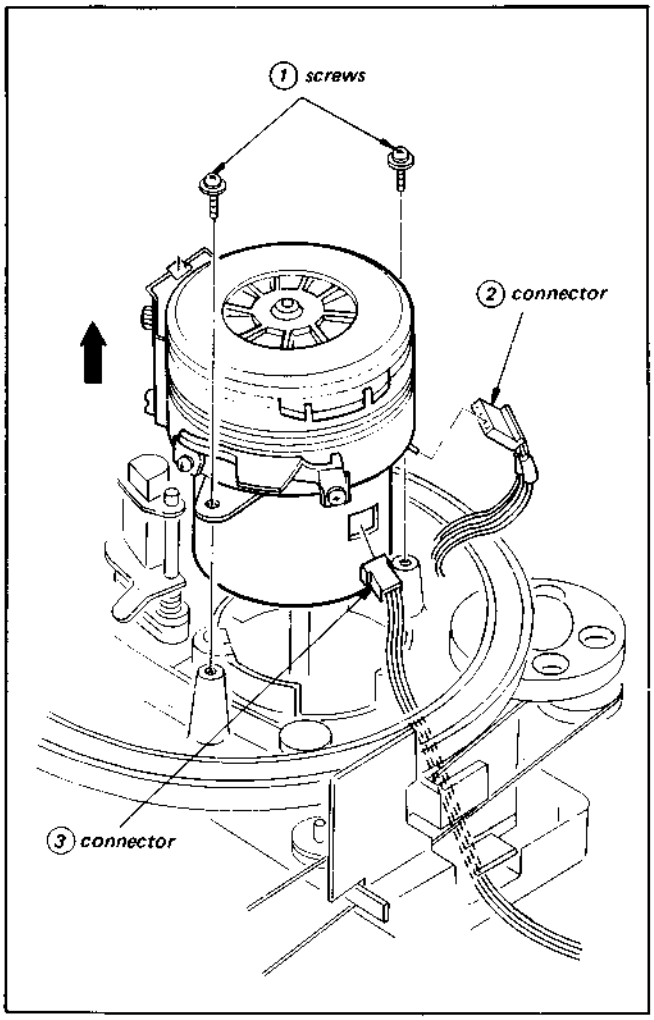

Fig. 3-4. Replacement of drum assembly (2)

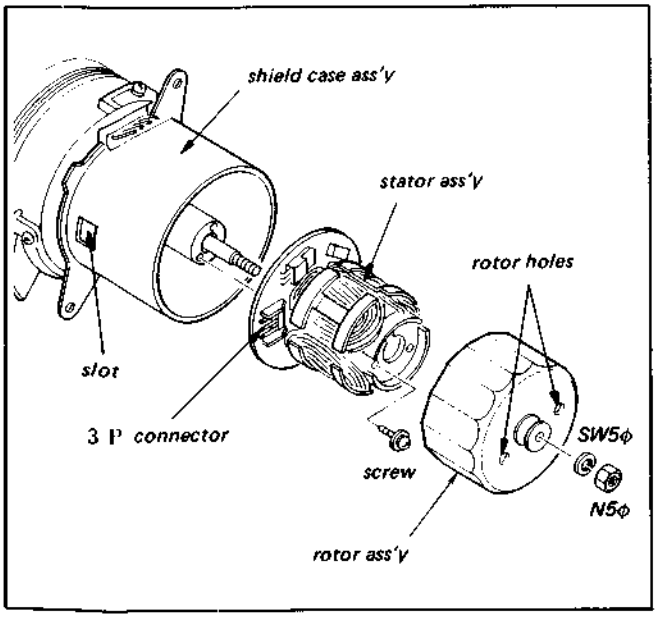

Fig. 3-5. Replacement of drum assembly (3)

7. Install two connectors, the drum shield assembly, and the FF belt on the drum assembly.

Note: 1. The bottom edge of the drum shield must be flush with the bottom edge of the shield base assembly.

2. Do not tighten the drum shield set screw too much or housing will distort.

Pull the leads of connector (A) in the arrow direction and dress the leads so that the leads do not touch the EJECT belt. (See Fig. 3-6.)

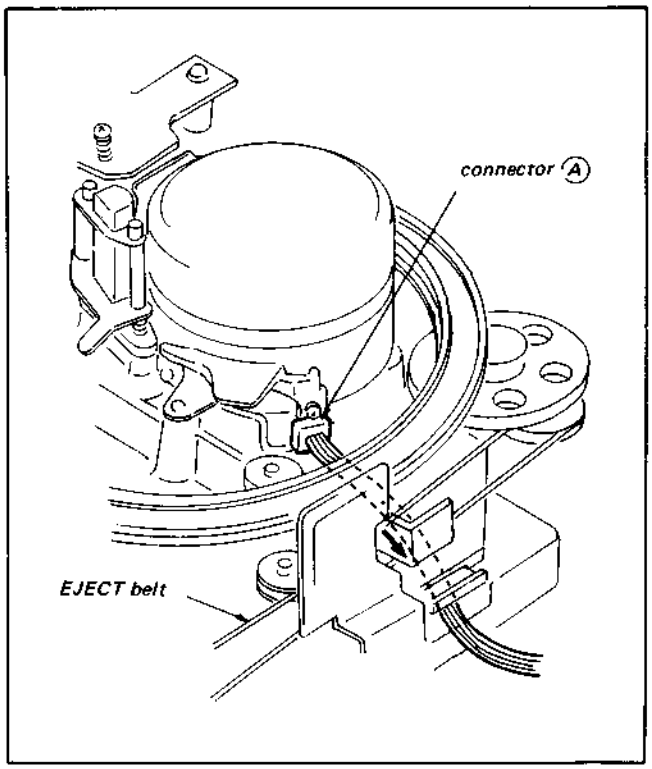

Fig. 3-6. Replacement of drum assembly (4)

8. Perform the following adjustments after the replacement.

3-19-1. Tape path adjustment
3-19-4. ACE assembly position adjustment
4-3-1. Drum servo system adjustment
4-4-19. Playback amplifier frequency characteristic adjustment (RF-2 board)
4-4-18. Record current adjustment (RF-2 board)
4-4-16. Chroma record current adjustment (YC-6 board)

3-3. REPLACEMENT OF CAPSTAN DC MOTOR

1. Stand the machine on its left side. Open the YC-6 and the AS-6 boards. (Refer to Section 1-1-5.)
2. Remove the DC motor from the drum base, following Steps ① to ④ shown in Fig. 3-7.
3. Take out the DC motor, following Steps ① to ⑥ shown in Fig. 3-8.

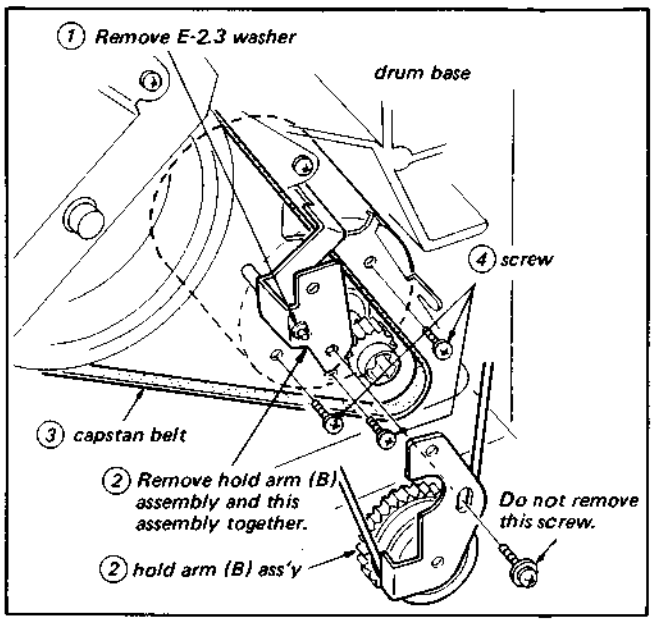

Fig. 3-7. Replacement of DC motor (1)

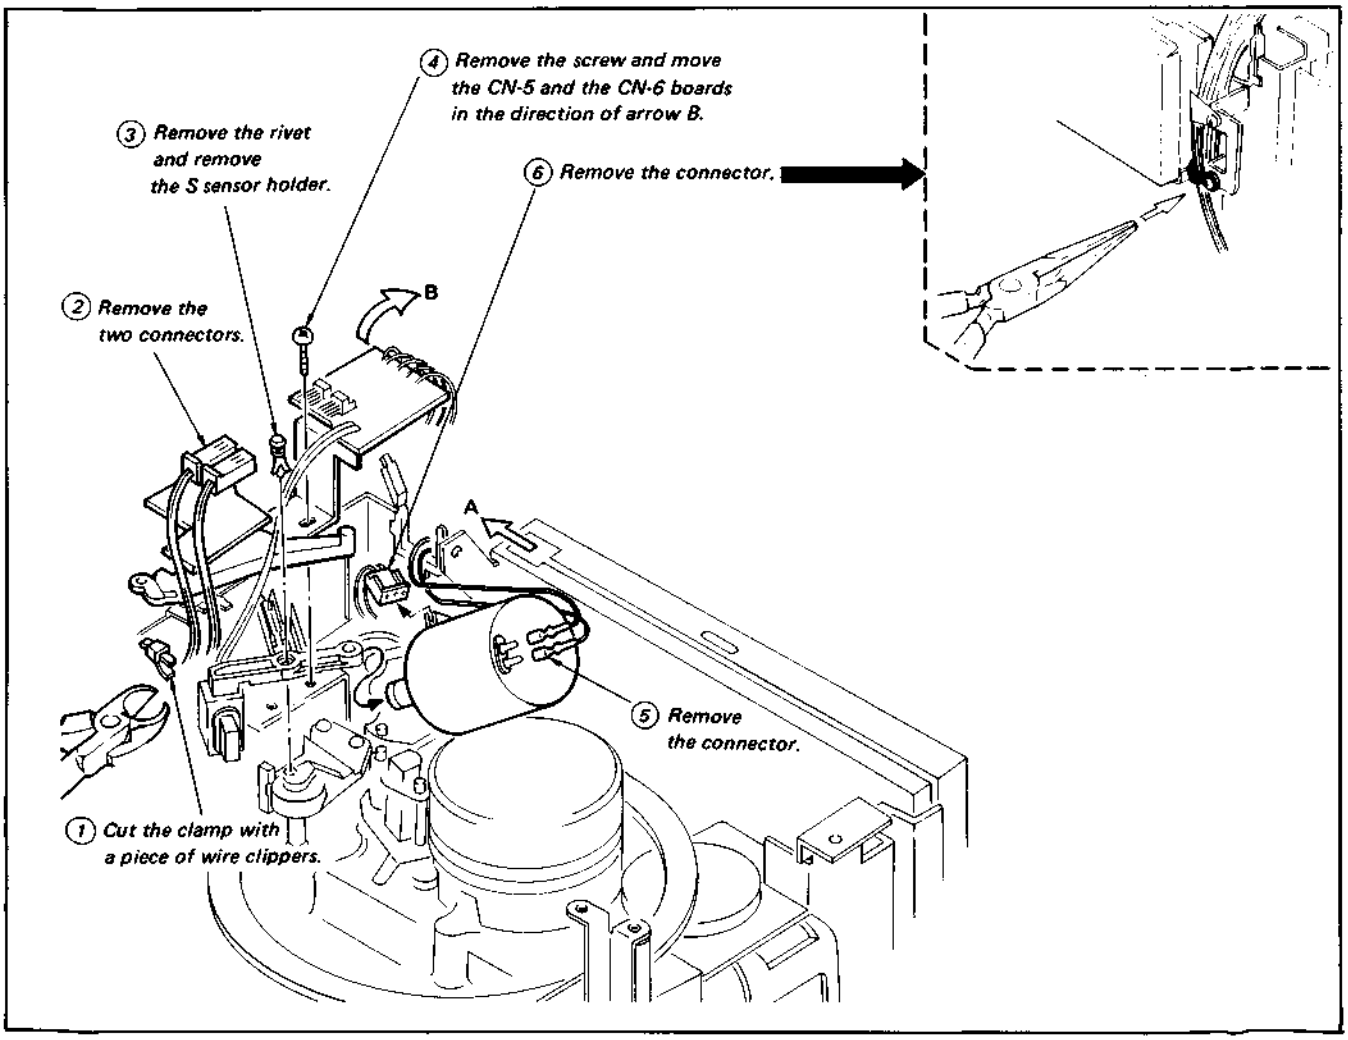

Fig. 3-8. Replacement of DC motor (2)

4. Remove capstan shield (1) from the defective motor and install them on the replacement motor. (See Fig. 3-9.)

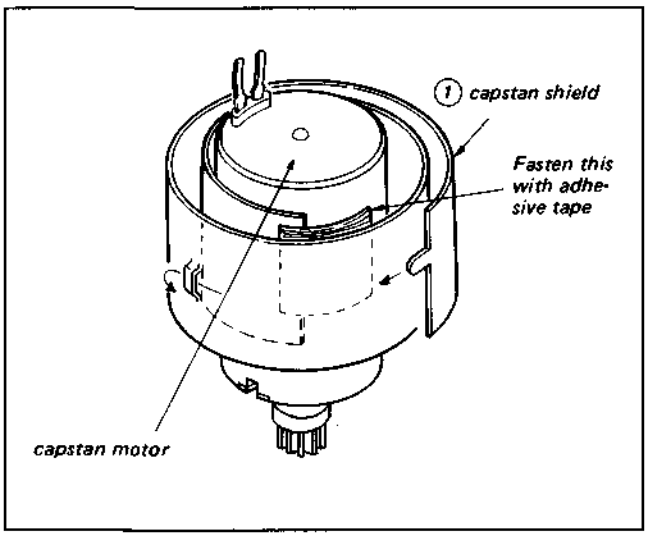

Fig. 3-9. Replacement of DC motor (3)

5. Perform the following adjustment after the replacement.

   4-3-2.–1. Capstan free speed adjustment

3-4. REPLACEMENT AND ADJUSTMENT OF TENSION REGULATOR ARM PLATE ASSEMBLY AND TENSION REGULATOR BAND ASSEMBLY

The tension regulator arm replacement must be done carefully, following the procedure below, because the tape interchangeability is much affected by the tension regulator arm operation.

3-4-1. When Tension Regulator Band Assembly is Replaced;

1. The tension regulator band assembly can be removed after removing screw (1) and hook (2) shown in Fig. 3-10.
2. Perform the tension regulator FWD position adjustment described below after the replacement.
   - (i) Place the machine, without an inserted cassette, into the STOP mode. (Refer to Section 1-3.)
   - (ii) Set up the PLAY mode.
   - (iii) Move the tention regulator band assembly (3) in the arrow direction as shown in Fig. 3-10 so that the positional relationship of the brake band assembly is as shown (A) in Fig. 3-10. Then tighten screw (1)
   - (iv) Perform the FWD back tension adjustment, Section 3-18, after the replacement.

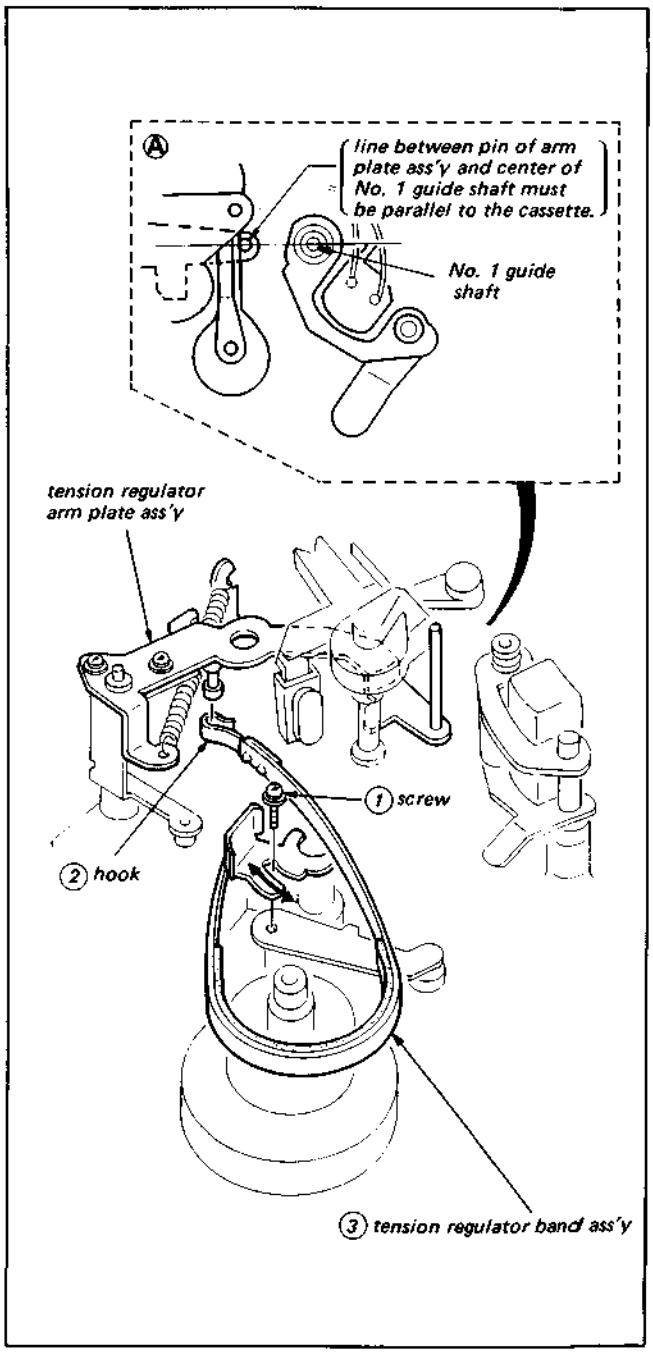

Fig. 3-10. Replacement and adjustment of the tension regulator band assembly

3-4-2. When Tension Regulator Arm Plate is Replaced:

1. The tension regulator arm plate can be removed after removing two screws (2) and spring (3) shown in Fig. 3-11.
2. After the replacement, perform the tension regulator FWD position adjustment as follows.
   (i) Set up the STOP mode without an installed cassette. (Refer to Section 1-3.)
   (ii) Set up the PLAY mode.
   (iii) Loosen screw (5) that mounts tension regulator band assembly (4) as shown in Fig. 3-11. Move tension regulator band assembly (4) in the arrow direction, and tighten screw (5) tentatively when the condition shown in (A) is set up.
   (iv) Insert a standard blade-tip screwdriver into section (B), adjust the clearance between release link (1) assembly (6) and tension regulator arm assembly (7) shown in Fig. 3-11, to be 0.5 to 1.0 mm, and tighten screw (2)
   (v) Repeat Steps (iii) and (iv) again and tighten screws (2) and (5).
   (vi) After the completion of the above steps, perform the FWD back tension adjustment, Section 3-18.

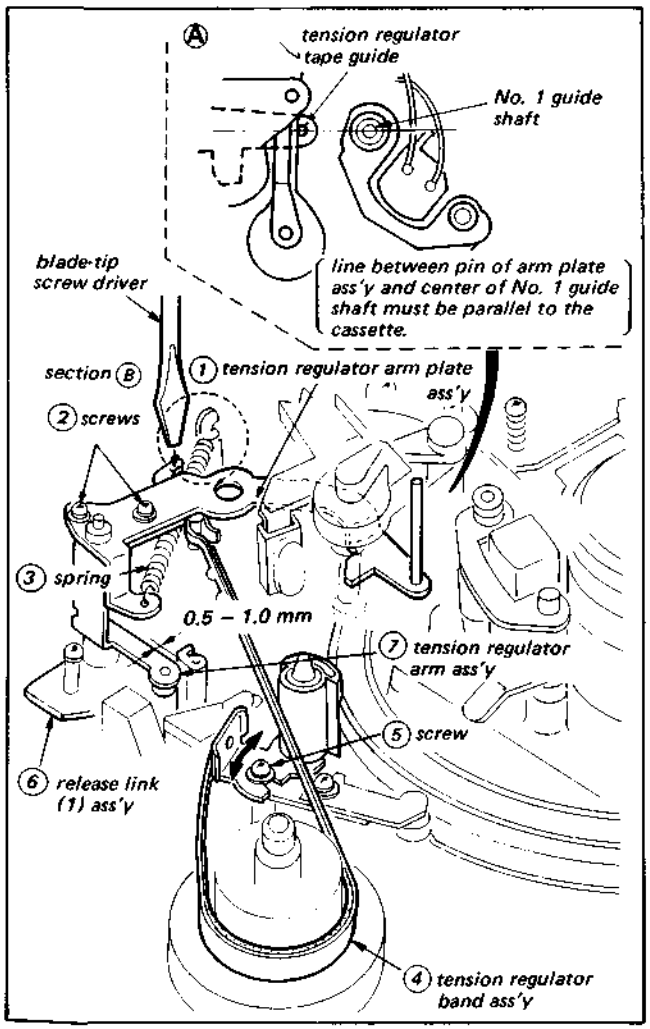

Fig. 3-11. Replacement and adjustment (1) of tension regulator arm plate assembly

3. Play back the 1 MHz segment of the alignment tape (KR5-1H). Loosen the lock screw and adjust screw "A" in Fig. 3-12 so that the RF waveform becomes that (see the waveform in the tape path adjustment, Section 3-19-1.) when the TRACKING knob is turned to the right and left from its center detent position and so that the tape is not apart from the flanges of guides (1), (2) and (3) shown in Fig. 3-12 and there is not a large tape curl at the guides.

   Note: Do not turn screw "A" to the right and left more than 90 degrees from its initial position.

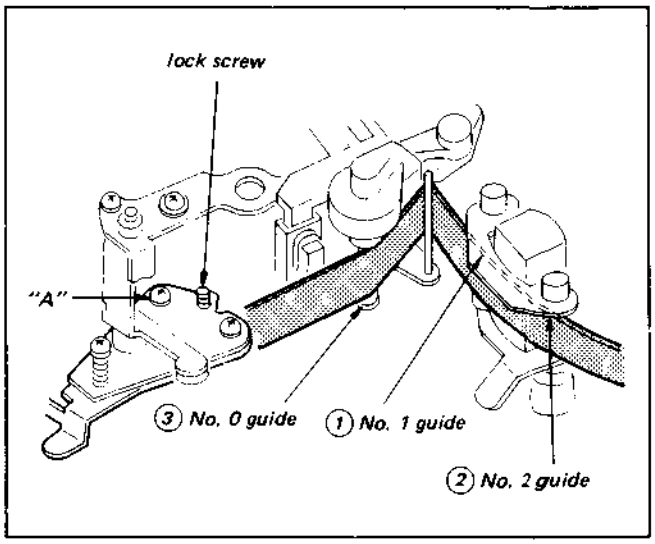

Fig. 3-12. Replacement and adjustment (2) of tension regulator arm plate assembly

4. Confirm that there is not a large bending of the tape at each of the tension regulator guide pin section and the No. 0 guide section shown in Fig. 3-13 after the completion of the adjustment. If the bending is found, repeat Step 3.

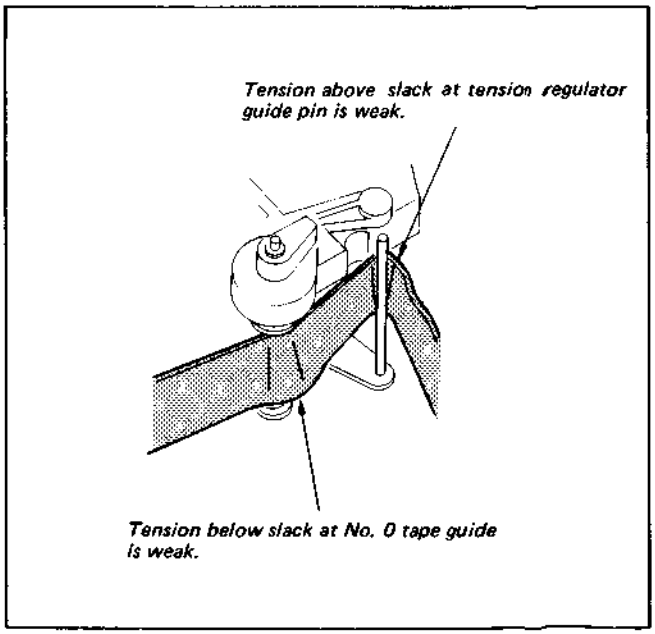

Fig. 3-13. Replacement and adjustment (3) of tension regulator arm plate assembly

3-5. REPLACEMENT OF CASSETTE-LIFT ASSEMBLY

1. Set up the unthreading state and remove the cassette-lift assembly by loosening four screws.
2. Install the cassette-lift assembly so that the reel tables and the reel holes on the cassette holder from concentric circles. (See Fig. 3-14.)
3. Insert the cassette into the cassette-lift compartment after the installation, set up the EJECT mode to perform unthreading after setting up the STOP mode, and confirm that the cassette-lift compartment assembly lifts. Make the confirmation after performing the lid opener position adjustment in Section 3-10.

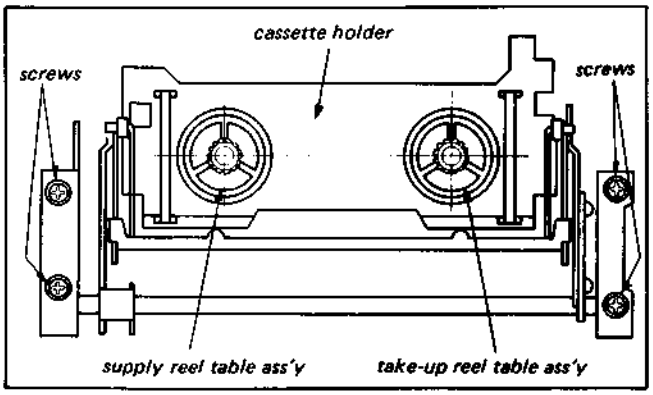

Fig. 3-14. Replacement of cassette-lift assembly

3-6. ADJUSTMENT OF REEL TABLE HEIGHT

- Since the reel table height serves as the reference of the tape movement system, the height must be adjusted caerfully after the reel table replacement.

1. Measure the height of the reel table with a slide caliper prior to the removal of the old reel table. (See Fig. 3-15.)
2. Place a new reel table, measure its height, and adjust height by adding or removing the adjusting spacer so that the difference in the heights of the former and new reel tables is within 0.1mm. (See Fig. 3-15.)

3-7. POSITION ADJUSTMENT, PAUSE SOLENOID

1. Set up the STOP mode without the cassette installed. (Refer to Section 1-3.)
2. Set up the REC PAUSE state so as to place the solenoid into the energized state.
3. Loosen the screws (1) that mount the solenoid and move the solenoid in the direction indicated by screw (A) as shown in Fig. 3-16 so that a clearance is made between the brake rubber and the take-up reel table.
4. Then move the solenoid in the direction shown by arrow (B) and tighten screws (1) after the solenoid is moved further 0.1–0.4 mm in the (B) arrow direction from the point where the brake rubber begins to touch the take-up reel table assembly.

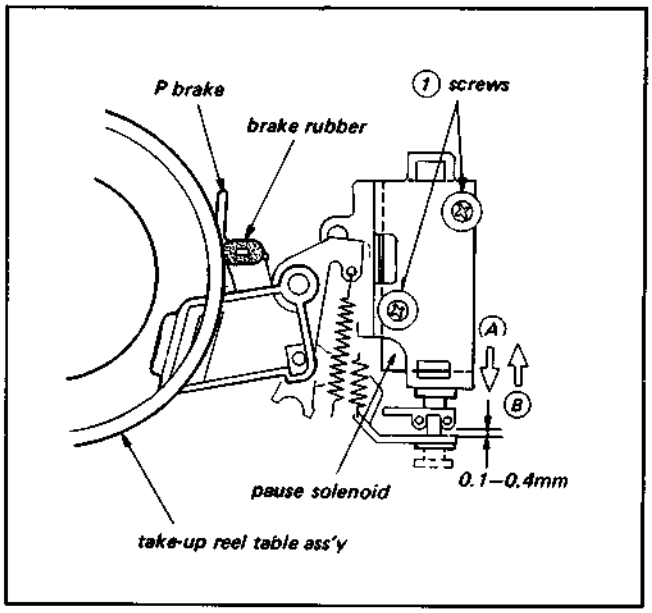

Fig. 3-16. Position adjustment of pause solenoid (Stroke adjustment)

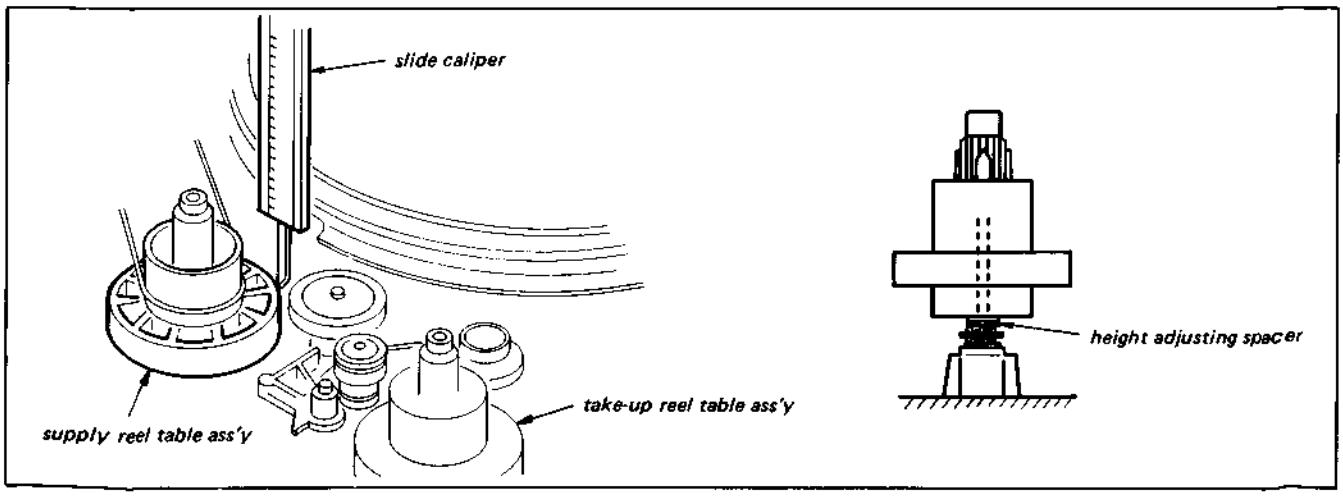

Fig. 3-15. Adjustment of reel table height

3-8. POSITION ADJUSTMENT OF FUNCTION SOLENOID

3-8-1. Position Adjustment of PLAY, F. FWD and REW Solenoids

The four solenoids shown in Fig. 3-17 require careful adjustments because these solenoids are the driving force for the PLAY, F. FWD, and other tape operations. (As to the position adjustment of the EJECT solenoid, refer to Section 3-8-2.)

1. Set up the STOP mode without the cassette. (See Section 1-3.)
2. Remove the two screws fixing the SY-14 board and open the board in the direction of the arrow.

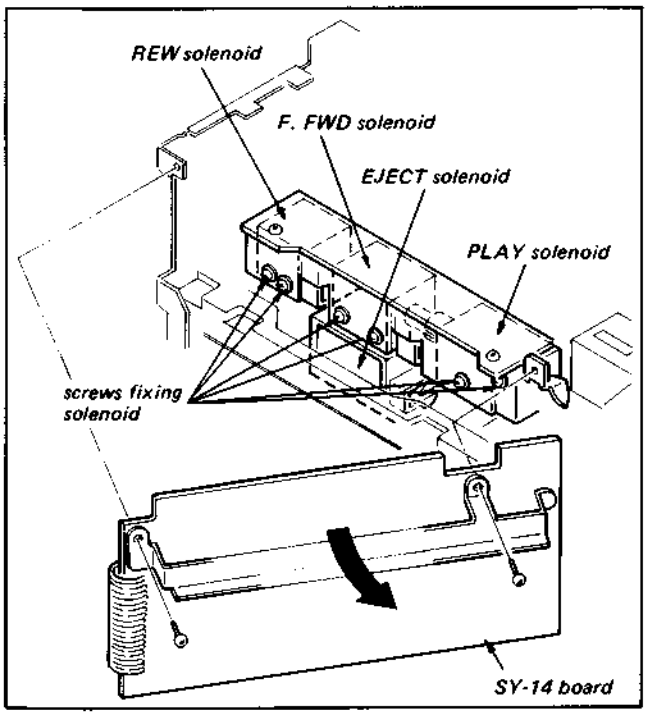

Fig. 3-17. Position adjustment of function solenoid

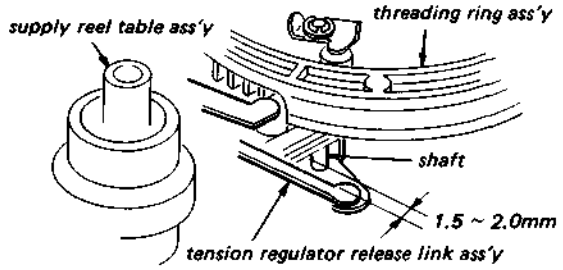
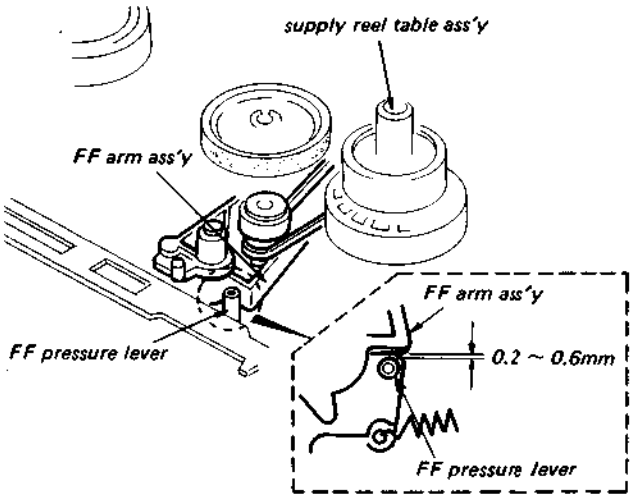
3. Check that the solenoids make the following operations when the relative mode to a solenoid is set up.
   - PLAY solenoid ..... Placing the tension regulator assembly into the operation. Making the FWD limiter assembly press the take-up reel table. Releasing the S and T brakes. Releasing the soft brakes.
   - F. FWD solenoid ..... Making the intermediate pulley assembly press the take-up reel table. Releasing the S and T brakes.
   - REW solenoid ..... Making the REW idler assembly press the supply reel table. Releasing the S and T brakes.
4. Check that the solenoids satisfy the specifications in Fig. 3-18. If the specifications are not satisfied, loosen the screws fixing the solenoid and adjust the position of the solenoid. See Fig. 3-17.
5. After tightening the screws, repeat Steps 3 and 4.

(1) stroke of PLAY solenoid



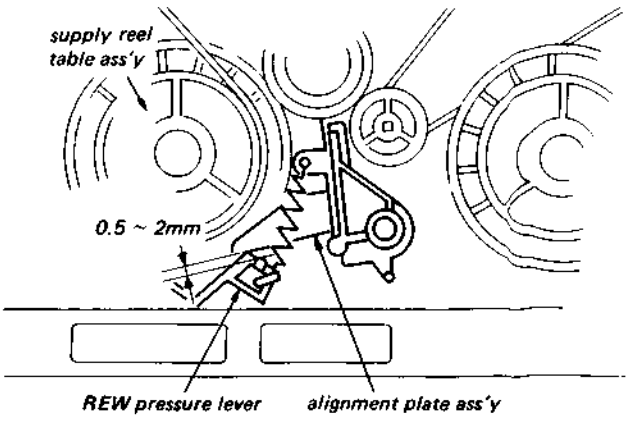
Specification: *A clearance of 1.5 to 2.0mm must be between the tension regulator release link ass'y and the shaft in the PLAY mode.*

(2) stroke of F. FWD solenoid



Specification: *A clearance of 0.2 to 0.6mm must be between the FF arm ass'y and the FF pressure lever in the F. FWD mode.*

(3) stroke of REW solenoid



Specification: *A clearance of 0.5 to 2mm must be between the REW pressure lever and the alignment plate ass'y in the REW mode.*

Fig. 3-18. Specifications of PLAY, F. FWD, and REW solenoid strokes

3-8-2. Position Adjustment of EJECT Solenoid

1. Set up the STOP mode without the cassette. (See Section 1-3.)
2. Check that following operations take place when the EJECT mode is set up.
   - EJECT solenoid . . . . The E idler assembly presses the take-up reel table.
     The ring arm assembly is released.
     The cassette compartment lock is released.
     The gear pulley engages with the motor pulley assembly.
3. Stand the machine on its left side down. Open the YC-6 and the AS-6 boards. (Refer to Section 1-1-5.)
4. Check that the specification shown in Fig. 3-19 is satisfied. If it is not, perform Steps 5, 6, and 7.
5. Push the cassette detect lever and release the lever at a midway of the threading.
6. Loosen the two screws shown in Fig. 3-19. Move the E solenoid base assembly to the position where the specification shown in Fig. 3-19 is satisfied, while turning the capstan motor pulley assembly counterclockwise and setting the solenoid to the energized state.
7. After tightening the screws, repeat Steps 2 and 4.

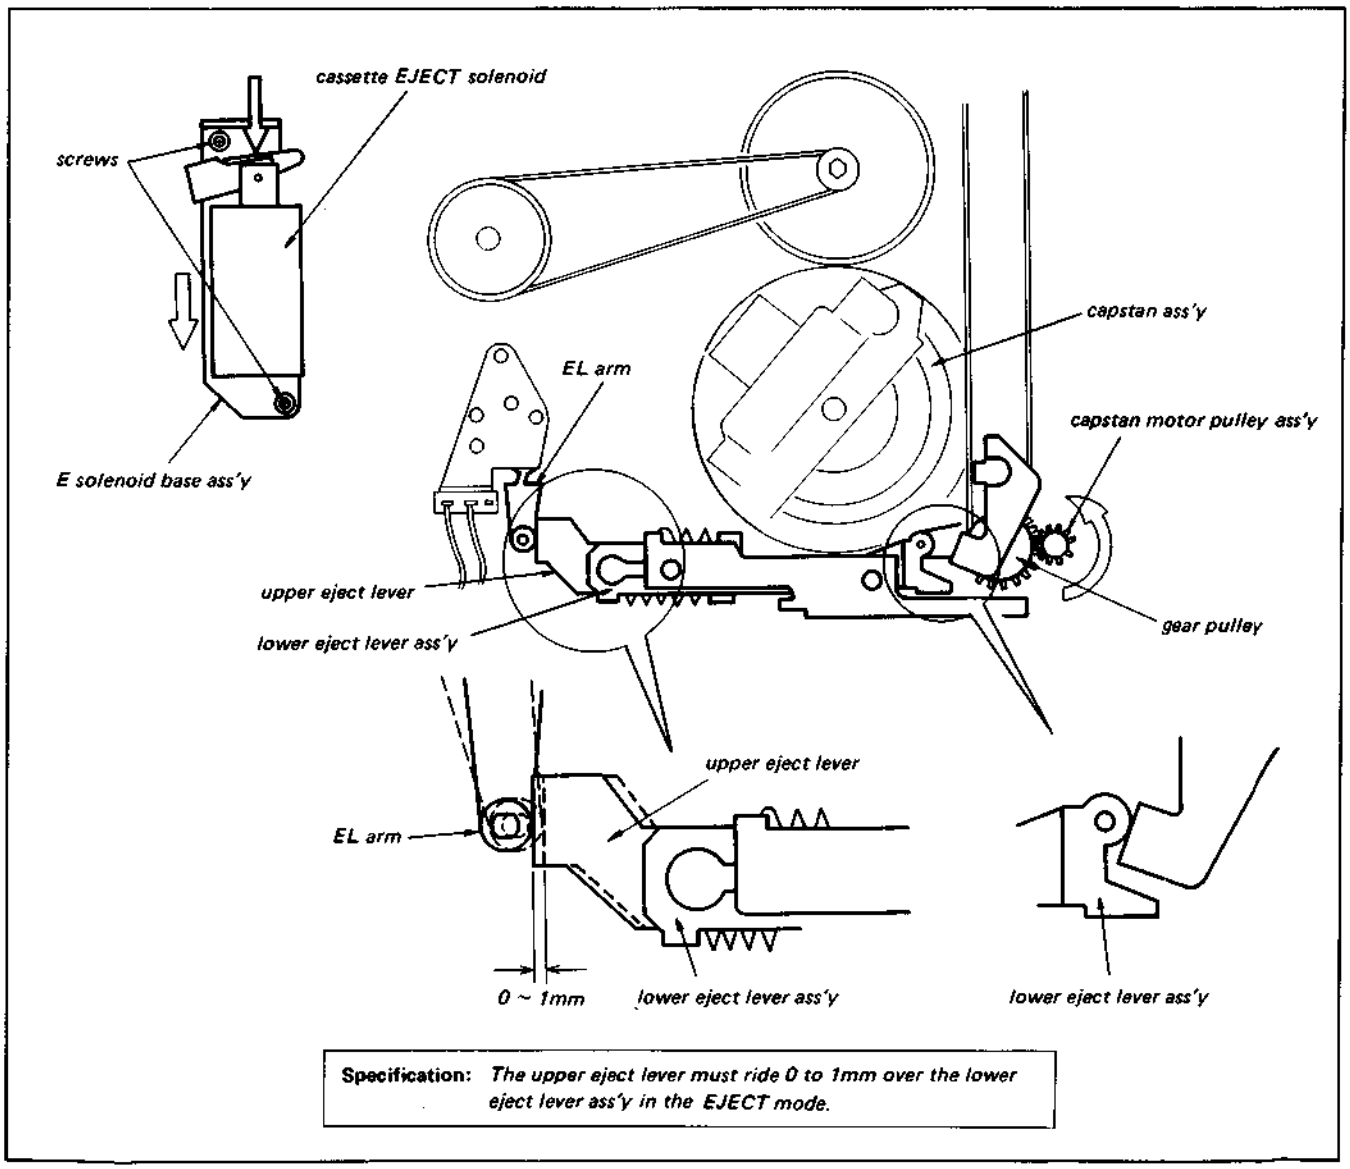


Fig. 3-19. Position adjustment of EJECT solenoid

3-9. ADJUSTMENT OF THREADING AND UNTHREADING

3-9-1. Operation Check of Cassette-in Switch

1. Set up the unthreading completion state without an inserted cassette and turn off the power.
2. Set section (A) as shown in Fig. 3-20.
3. Confirm that the microswitch mounted on the underside of the machine does not turn on when the cassette detection lever (1) is pushed in the arrow direction.
4. Set section (A) as shown in Fig. 3-21.
5. Confirm with a click that the microswitch mounted on the underside of the machine turns on when the cassette detection lever (1) is pushed in the arrow direction.
6. Adjust the mounting position of cassette detection (1) so that it moves more than 1.5mm further from the point where the click is heard.

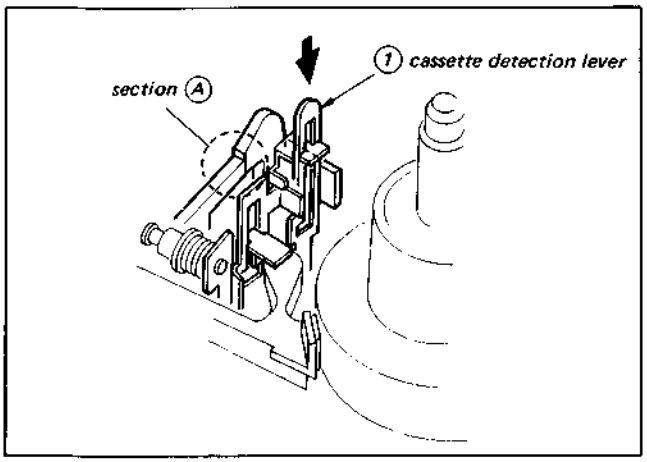

Fig. 3-20. Operation check of cassette-in switch

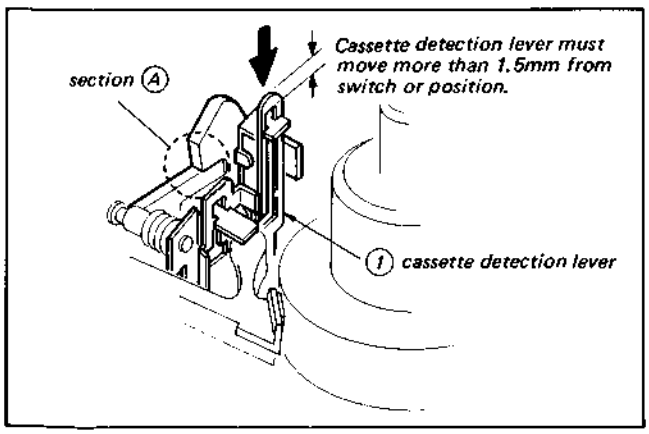

Fig. 3-21. Operation check of cassette-in switch

Note:
- The problem where the cassette-lift assembly does not lock occurs if the microswitch turns on in the condition shown in Fig. 3-20.
- The problem where the modes other than the EJECT mode cannot be set up occurs if the microswitch does not turn on in the state shown in Fig. 3-21.

3-9-2. Position Adjustment of Threading Unit B Assembly and Control Plate

1. Push down the cassette detection lever with fingers to perform the threading operation and release the lever when the threading ring assembly (5) shown in Fig. 3-22 has turned 90 degrees.
2. Loosen screws (1) shown in Fig. 3-22. Make the clearance (0.2mm) between midway gear (B) (4) and threading ring assembly (5) and tighten screws (1).
3. Make a clearance of 0.5mm between control plate (3) and threading ring assembly (5) and tighten screw (6).

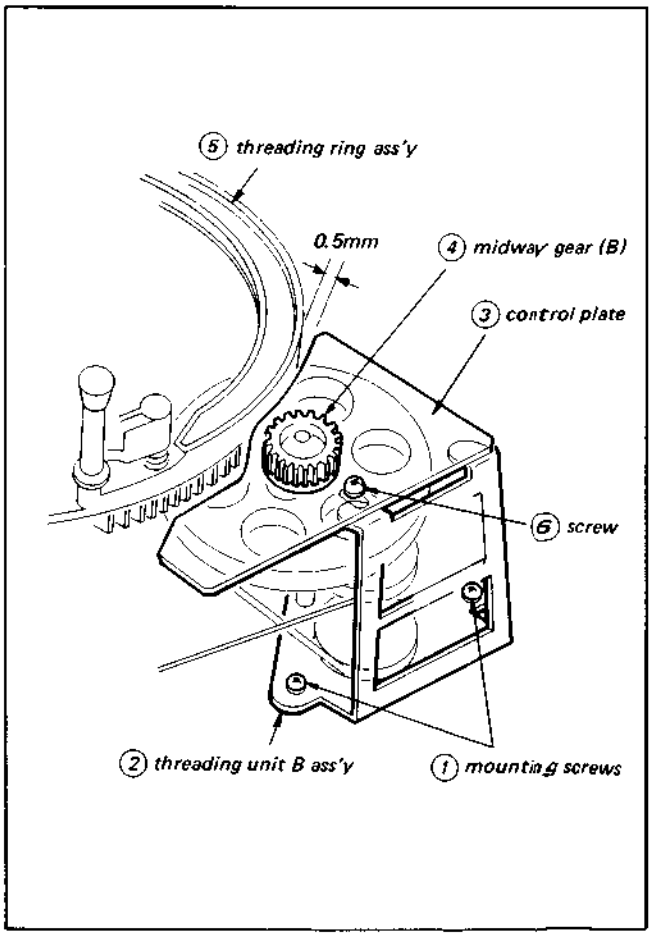

Fig. 3-22. Position adjustment of threading unit B assembly and control plate

3-9-3. Position Adjustment of Gear Pulley Hold Arm Assembly

1. Loosen screw (1) shown in Fig. 3-23, adjust the position of the gear pulley hold arm assembly so that the clearance between the motor pulley assembly (2) and the gear pulley (3) is 0.3 mm, and tighten screw (1).

3-9-4. Adhesion of Brake Shoe

1. Glue the brake shoe to the groove on the brake arm as shown in Fig. 3-23.

   Note: If the brake shoe is not glued in the right position, it is possible for the brake shoe to touch the capstan belt. If the shoe is removed, there is a possibility of the occurrence of an abnormal sound at the initial stage of the unthreading.

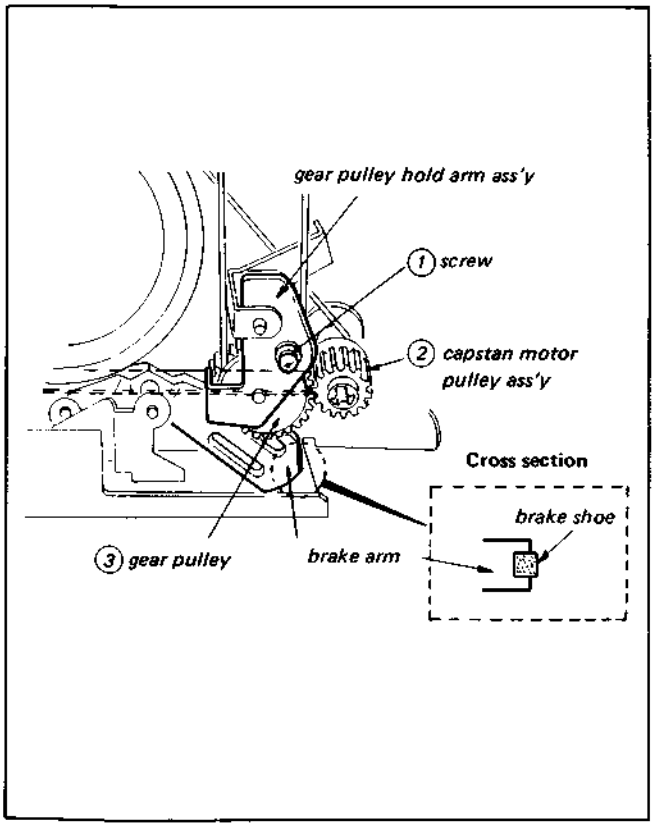

Fig. 3-23. Position adjustment of gear pulley hold arm assembly

3-9-5. Clearance Adjustment of Cassette Lift Assembly Arm

- Since a poor adjustment of the clearance causes the condition that the cassette lift assembly arm (2) is in strong contact with the threading ring assembly (3), the threading and unthreading cannot always be performed smoothly. When the clearance is larger than the specified value, the lock of the cassette lift assembly comes loose and the cassette lift assembly lifts during the unthreading, damaging the tape.

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Loosen screw (1) and adjust the position of the cassette lift assembly arm (2) with the thickness gauge so that the clearance between the cassette lift assembly arm (2) and the threading ring (3) satisfies the specification (0.2 mm to 0.5 mm). (See Fig. 3-24.)
3. Check the value again after the screw is tightened.

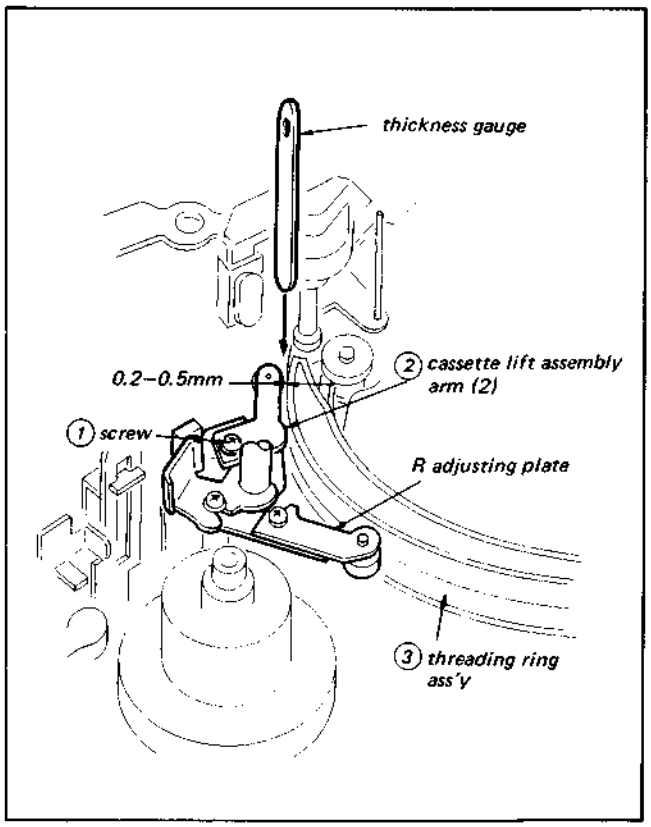

Fig. 3-24. Clearance adjustment of cassette lift assembly arm

3-9-6. Clearance Adjustment of Ring Arm

- The ring arm serves to stabilize the position of the threading ring at the completion of threading. If this adjustment is wrong, there is a possibility that the threading ring may move, from the position reached at the threading completion point, during the PLAY, FAST FWD and RECORD modes.

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Set up the PLAY mode.
3. Loosen screw (1) shown in Fig. 3-25 and adjust R adjusting plate assembly (2) so that the clearance between the roller of R adjusting plate assembly (2) and threading ring assembly (3) satisfies the specification (0 to 0.2 mm). Repeat the threading and unthreading operations several times, confirm that the roller of R adjusting plate assembly (2) drops into the bottom of the cam of the threading ring, and tighten screw (1) after the confirmation.

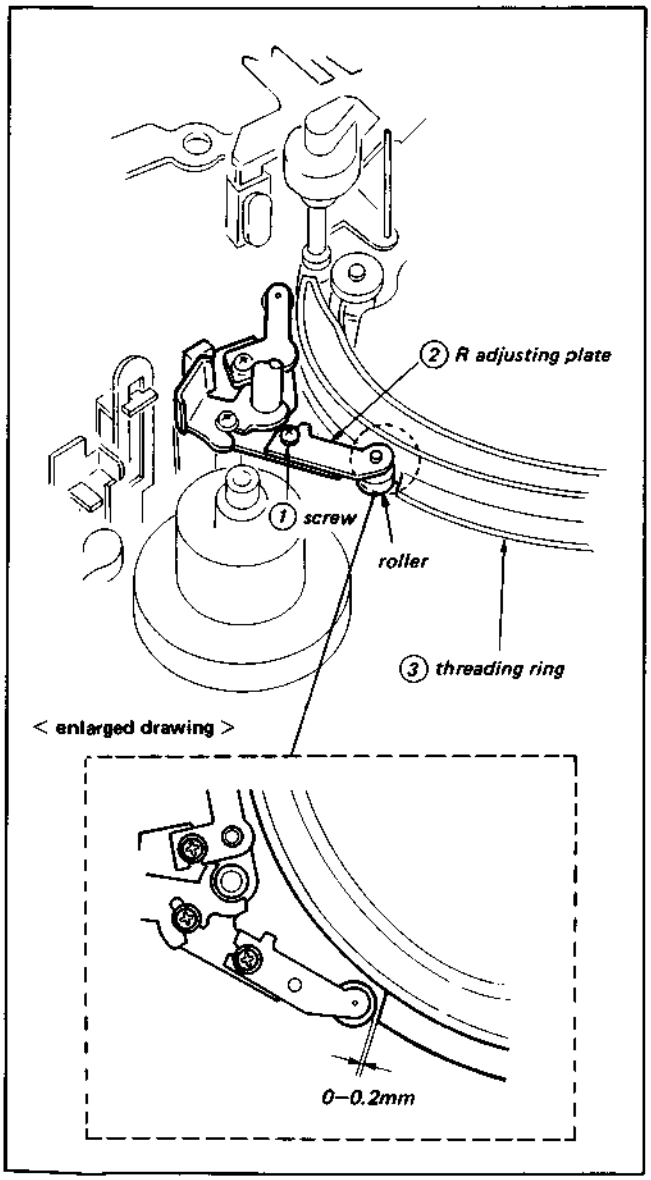

Fig. 3-25. Clearance adjustment of ring arm

3-9-7. Check of Unthreading Completion

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Set up the EJECT mode to complete the unthreading.
3. Confirm that the roller of cassette lift assembly arm (2) shown in Fig. 3-26 moves in the arrow direction when the cassette lift assembly arm (2) is pushed in the arrow direction.
4. Confirm that the tension regulator arm assembly is in contact with the boss of the cassette position-determining post. (See Fig. 3-26.)

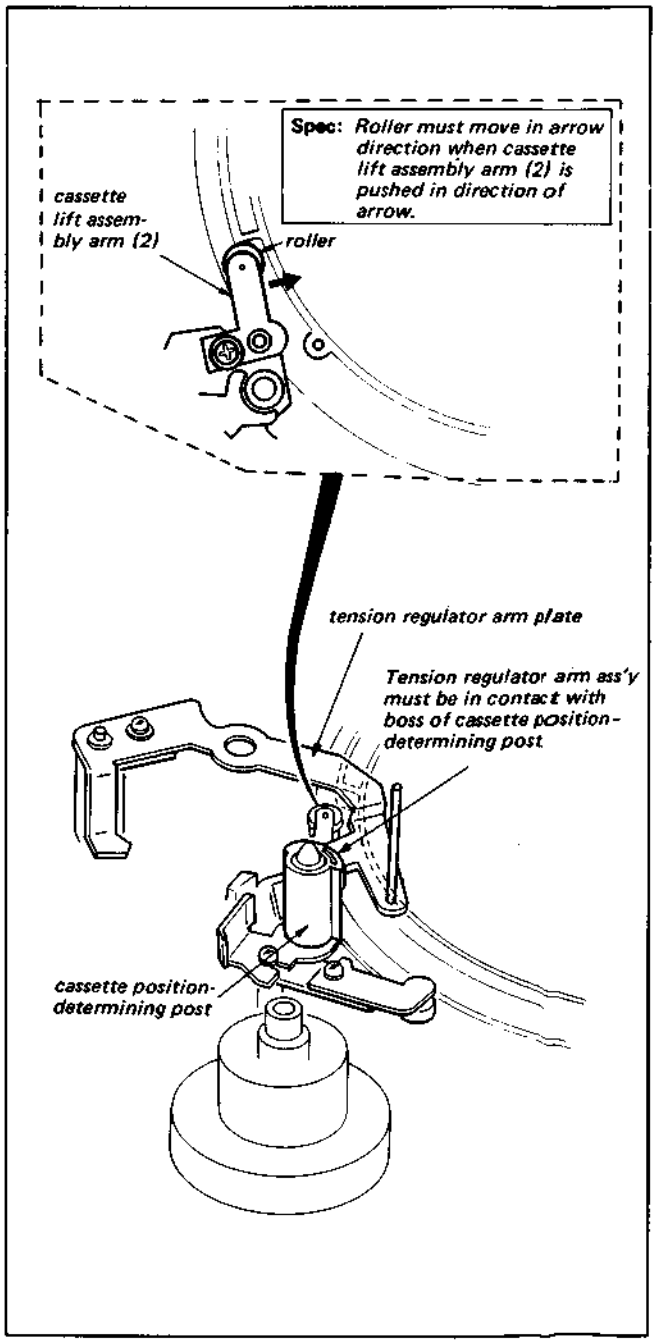

Fig. 3-26. Check of unthreading completion

3-10. POSITION ADJUSTMENT OF LID OPENER

- The mounting position of the cassette lid opener bracket is different when the cassette lift assembly is attached and is not attached to the SL-C5CH.

1. When the cassette lift assembly is attached;

   (i) The plate of the cassette lid opener bracket must be near the center of the slot in the white plastic holder guide when the cassette lift assembly is lowered. If it is not in this position, bend the lower section of the cassette lid opener bracket, as shown in Fig. 3-27. for adjustment.

   (ii) Confirm that section (A) in Fig. 3-27 satisfies the specification (0.5mm to 3mm) when the cassette is inserted and the PLAY mode is set up. This is the spacing between the tape and the take-up sensor.

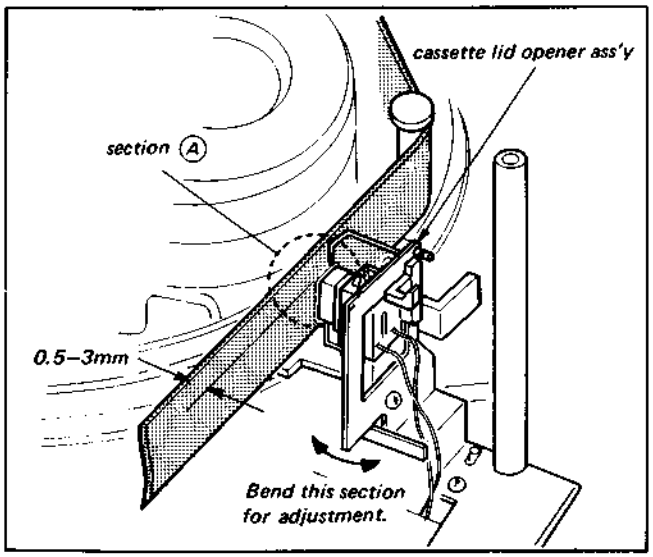

Fig. 3-27. Position adjustment of cassette lid opener metal (1)

2. When the cassette lift assembly is not attached;

   (i) Bend the lower section of the cassette lid opener bracket so that the cassette lid opener bracket positions itself almost at the center of the space marked by asterisk (*) shown in Fig. 3-28, when the cassette is placed on the four position determining posts.

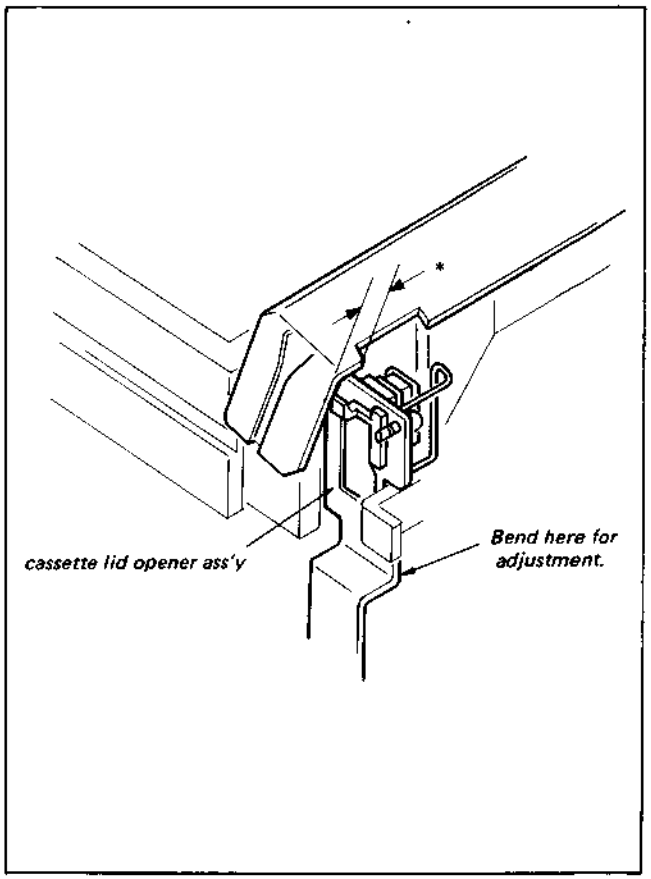

Fig. 3-28. Position adjustment of cassette lid opener metal (2)

3-11. REPLACEMENT AND ADJUSTMENT OF THREADING RING ASSEMBLY

1. Turn the threading ring to a point immediately before the threading completion position and stop it at the point where it does not touch the lock hold arm. (See Fig. 3-29.)
2. Perform procedures (1) to (5) shown in Fig. 3-29.
3. Remove the threading ring while moving the tension regulator arm assembly in the arrow direction by holding its lower section.

   Note: Do not hold the upper section of the tension regulator arm while moving the assembly.

4. Perform the adjustment of control plate (1), R adjusting plate (3), No. 0 guide section assembly (4), and ring roller unit assembly (5) after the replacement.
   (i) As to the adjustment of control plate (1), refer to "Position Adjustment of Threading Unit B assembly and Control Plate", Section 3-9-2.
   (ii) As to the adjustment of R adjusting plate (3), refer to "Clearance Adjustment of Ring Arm", Section 3-9-6.
   (iii) As to the adjustment of No. 0 guide section assembly (4), perform procedure 6 of this section.
   (iv) As to the adjustment of ring roller unit assembly (5), perform the adjustment, referring to detail drawing A in Fig. 3-29.
5. Perform the threading and unthreading several times and confirm the smooth movement of the threading ring.

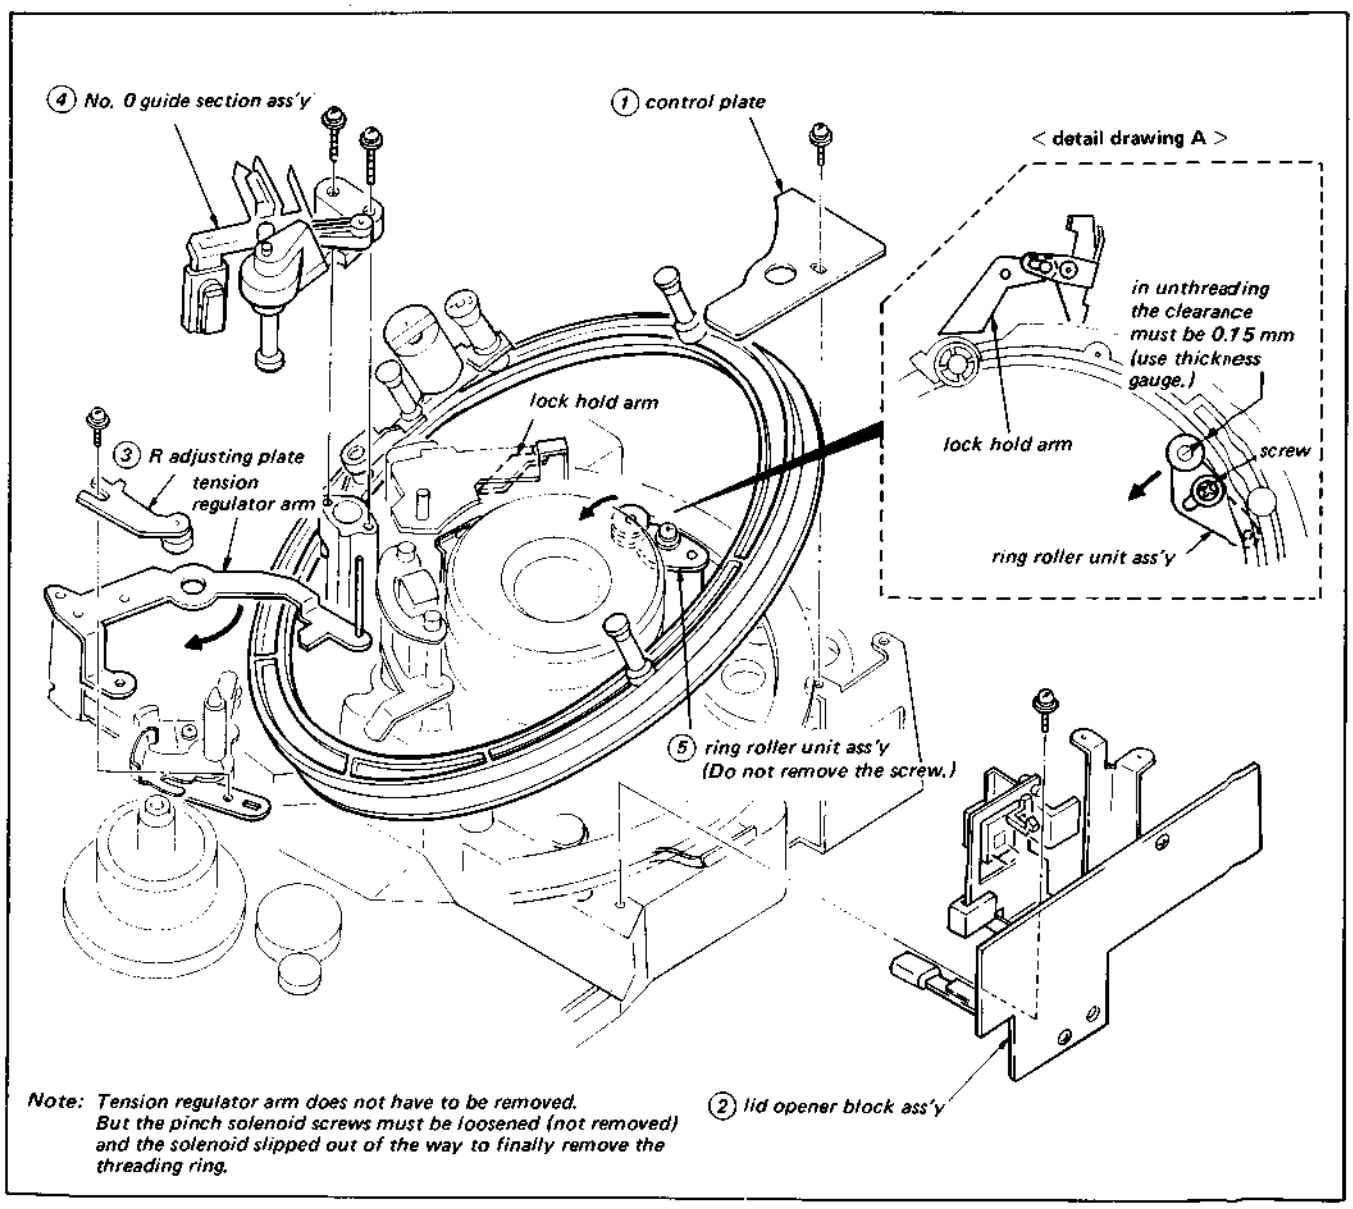

Fig. 3-29. Replacement of threading ring block assembly

6. Adjustment after the mounting of No.0 guide section assembly

   (i) Playback the 1MHz segment of the alignment tape (KR5-1H).

   (ii) Turn the TRACKING control knob so that the RF waveform at TP2005 on RF-2 board is 2/3 of its maximum level. (See Fig. 3-30.)

   (iii) Turn the No.0 guide shown in Fig. 3-30 fully counterclockwise (↶), then clockwise until the point where the RF waveform at the exit section becomes flat with small fluctuation, and tighten the mounting screws.

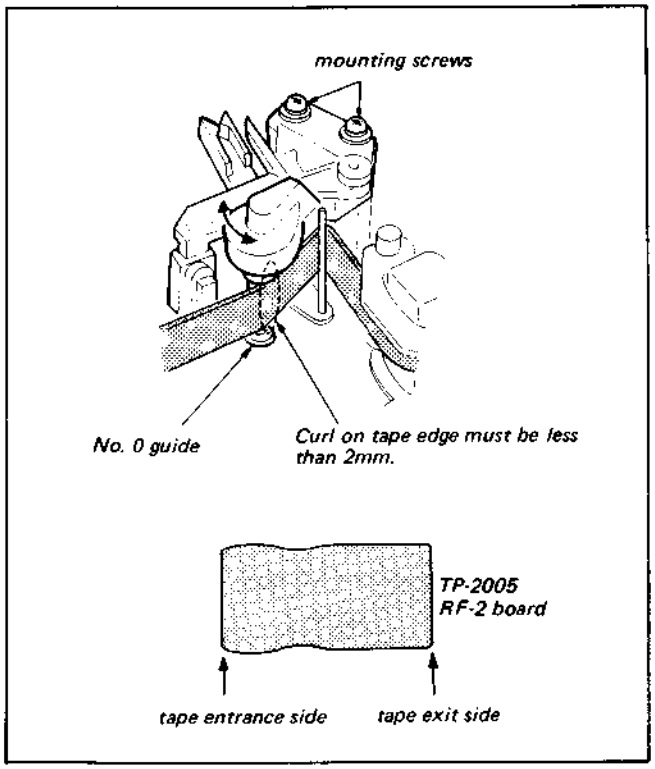

Fig. 3-30. Position adjustment of No.0 guide section assembly mounting

3-12. POSITION ADJUSTMENT OF PINCH ROLLER SOLENOID

3-12-1. Parallelism Adjustment of Pinch Press Lever

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Perform Steps (1) to (3) shown in Fig. 3-31 so as to set up the state in which the screw of pinch press lever shaft adjusting plate (4) can be loosened.
3. Loosen the two screws (1) fastening the pinch solenoid base (3) shown in Fig. 3-32 and tighten screws (1) when the pinch solenoid base (3) becomes parallel to the drum base.
4. Loosen two screws (2) shown in Fig. 3-32 by 1/3 to 1/2 turn and move pinch press lever shaft adjusting plate (4) in the direction shown by arrow B.
5. Insert a standard blade-tip screwdriver into hole F when the iron core is pulled slightly and pinch roller arm assembly (5) touches capstan shaft (6) equally along the complete length of the pinch roller. The pinch roller and the capstan should be parallel. Move the pinch press lever shaft adjusting plate (4) in the direction shown by arrow C and tighten the two screws (2) when clearance A becomes 0.

   Note: If the pinch roller arm assembly (5) does not touch the capstan with parallel and equally force when the iron core is pulled slightly, move pinch solenoid base (3) with a standard blade-tip screwdriver in the direction shown by arrow D.

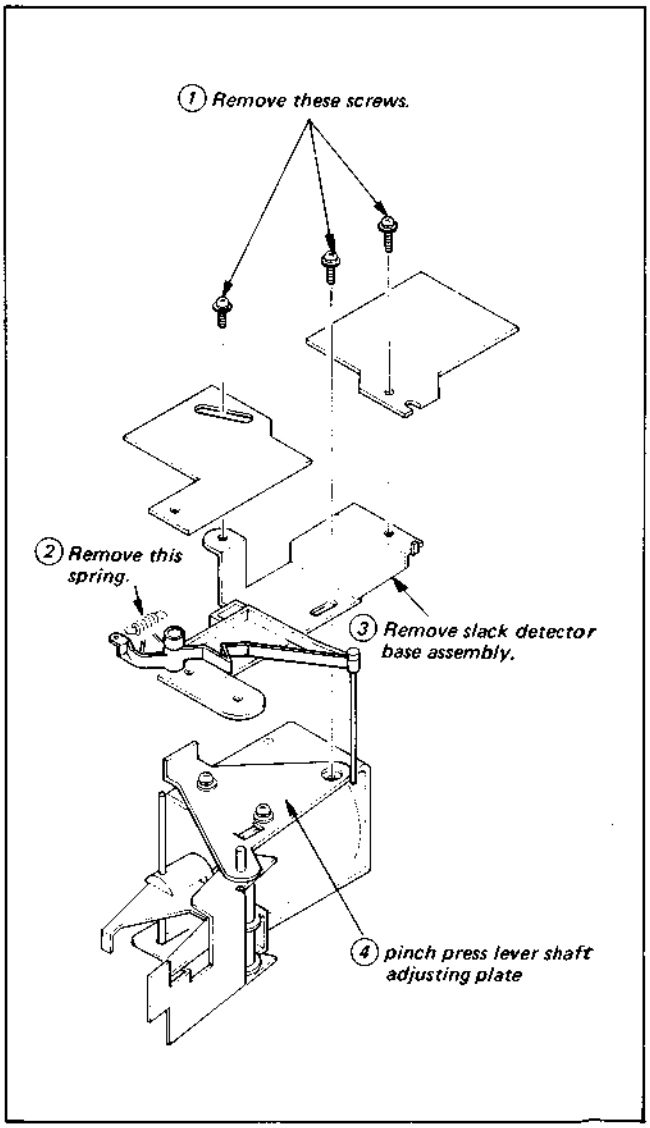

Fig. 3-31. Disassembly

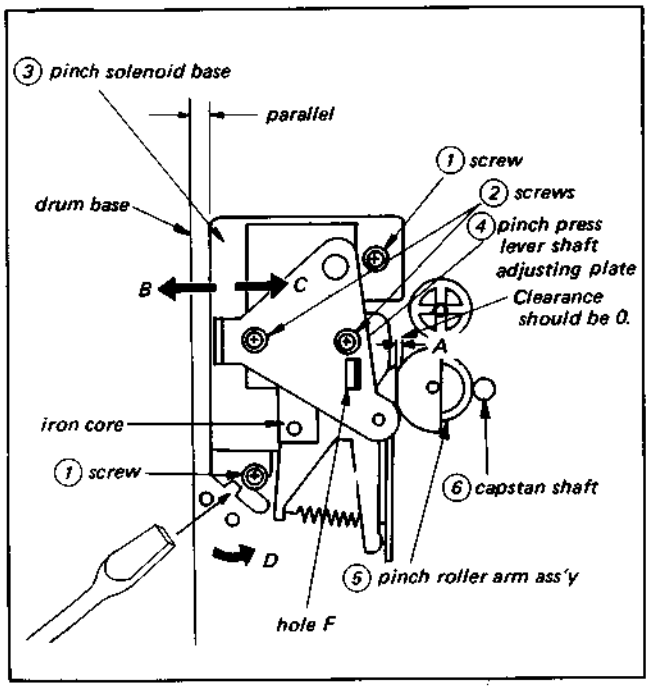

Fig. 3-32. Position adjustment of pinch roller solenoid

3-12-2. Position Adjustment of Pinch Solenoid

1. Check that "Parallelism Adjustment of Pinch Press Lever", Section 3-12-1, has been completed.
2. Loosen the two screws (1) shown in Fig. 3-33 by 1/3 to 1/2 turns.
3. Insert the cassette (L-500) and set up the PLAY mode.
4. Insert the standard blade-tip screwdriver as shown in Fig. 3-33. Move pinch solenoid base (2) in the arrow direction so that the specification at section B is satisfied, and tighten the two screws (1).

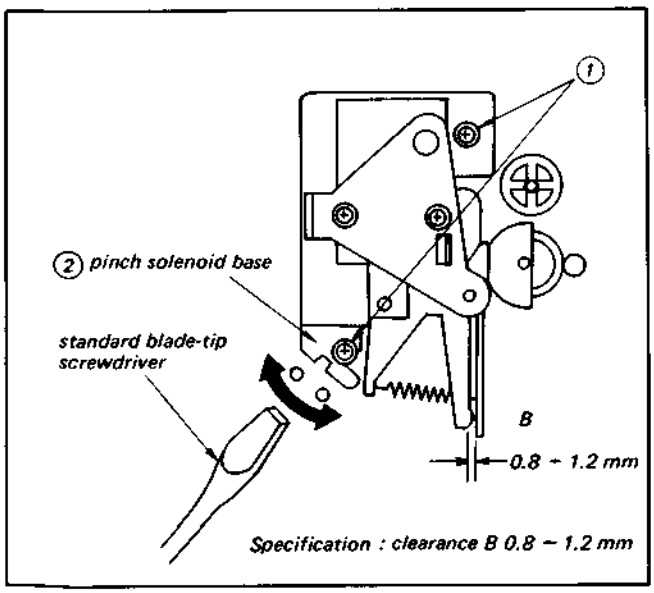

Fig. 3-33. Position adjustment of pinch solenoid

5. Tap the top and bottom of the tape around the capstan entrance and confirm that the specification shown in Fig. 3-34 is satisfied. If not, repeat Step 5 of Section 3-12-1, "Parallelism Adjustment of Pinch Press Lever".
6. Reverse Steps (1) to (3) shown in Fig. 3-31.

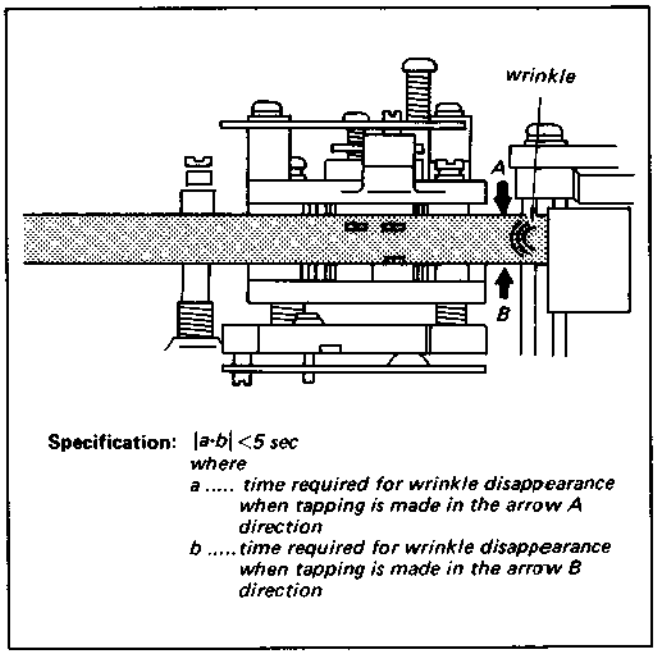

Fig. 3-34.

3-12-3. Position Adjustment of Slack Sensor Operation

1. Set up the STOP mode with the cassette. (Refer to Section 1-3.)
2. Loosen screw (1) and adjust the CN-5 board position to satisfy the specification shown in Fig. 3-35.

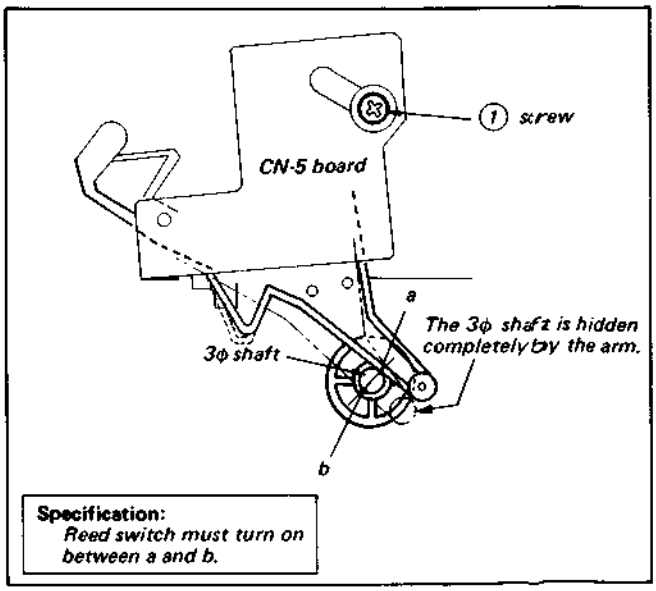

Fig. 3-35. Position adjustment of slack sensor operation

3-13. ADJUSTMENT OF BRAKE RELEASE STROKE

- The FB slide plate shown in Fig. 3-36 releases the take-up, the supply, and the soft brakes.

1. Place the machine without the cassette into the STOP mode. (Refer to Section 1-3.)
2. Bend section E of FB slide plate (2) so that the specification (0.5 to 1mm) of section C when brake release arm (1) is pushed in the direction of arrow D so that the clearances at sections A and B are eliminated.
3. Set up the PLAY mode and check that the take-up, the supply, and the soft brakes are released.

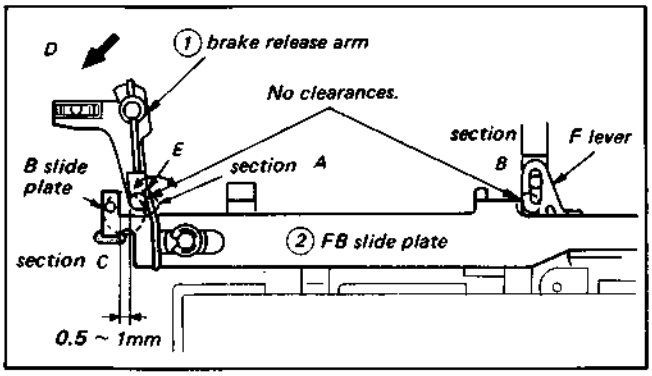

Fig. 3-36. Position adjustment of FB slide plate

3-14. POSITION ADJUSTMENT OF MICROSWITCH

3-14-1. Position Adjustment of Threading End Switch

- Prior to this adjustment, the following adjustments must be completed.

  3-9-5. Clearance adjustment of cassette lift assembly arm
  3-9-6. Clearance adjustment of ring arm
  3-9-7. Check of unthreading completion

1. Turn the threading ring by hand and stop it at the point immediately before the threading completion position.
2. Loosen screw (4) and adjust the position of microswitch (3) so that microswitch (3) turns on before gear pulley hold arm (1) moves from the groove of lock arm (2), while turning the threading ring counterclockwise (↺) slowly by hand. Confirm the turning-on of the microswitch with a click.
3. Adjust the position further so that the clearance between the actuator of microswitch (3) shown in Fig. 3-37 and the microswitch satisfies the specification (0.7mm to 1.0mm) when the threading ring is turned counterclockwise (↺) beyond the threading completion point.
4. Repeat Steps 2 and 3 for confirmation.

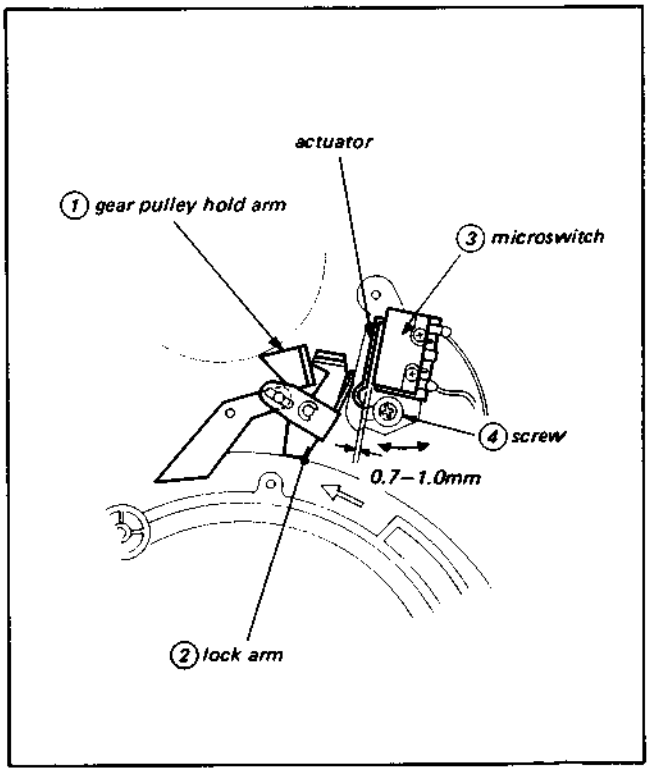

Fig. 3-37. Position adjustment of threading end switch

3-15. CHECK OF TAKE-UP TORQUE

- Since sufficient take-up torque cannot be obtained at the last section of the tape if the take-up torque is below the specified value, tape slackness is caused at the capstan shaft point and sometimes the slack sensor operates.
- The take-up torque tends to increase gradully due to aging.

1. Rewind the tape a little and set up the PLAY mode (for the playback of the very last section of the tape) after the auto-stop at the tape end in the FAST FWD mode. Confirm that the tape runs without any slackness at the capstan shaft area. If the tape slackens, perform the following adjustments.
2. Clean the take-up reel table assembly, the FWD idler assembly, and the FWD belt with a piece of cloth dampened with isopropyl alcohol.
3. Stop the operation of the slack sensor. (Refer to section 1-4.)
4. Attach the reel table tension gauge (Tool Kit Ref. No. J-5) on the take-up reel table as shown in Fig. 3-38.
5. Pull out the string from the reel table tension gauge about 30 cm (12 inches) and hook the sector type tension gauge (50g full scale, Tool Kit Ref.No. J-7) on the end of string.
6. Set up the PLAY mode.
7. Bring the sector type gauge toward the take-up reel table at a speed of approx. 2cm/sec. (8 inch/sec.) as shown in Fig. 3-38. Confirm that the gauge reading is within the specification. If not, replace the FWD limiter assembly and make the check again.

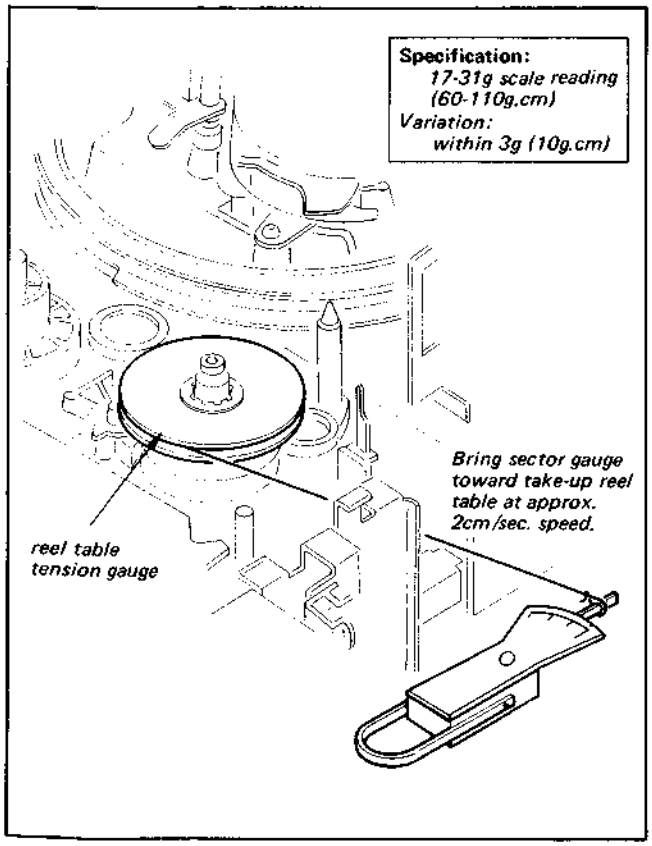

Fig. 3-38. Check of take-up torque

3-16. CHECK OF CASSETTE EJECT TORQUE

- The tape is taken up by the take-up reel table in the cassette EJECT mode. The take-up reel table is driven via the belt by the DC motor, while the threading ring unthreads.
- If the cassette eject torque is below the specification, only the threading ring performs the unthreading operation while the tape is not pulled back into the cassette, and the tape can be damaged.

1. Clean the take-up reel table, the E idler assembly, and the EJECT belt with a piece of cloth dampened with isopropyl alcohol.
2. Attach the reel table tension gauge (Tool Kit Ref. No. J-5) as shown in Fig. 3-39.
3. Pull out the string of the gauge about 30 cm (12 inches) and hook the sector type gauge (50g full scale, Tool Kit Ref. No. J-7) on the end of the string.
4. Set up the EJECT mode.
5. Bring the sector type gauge toward the take-up reel table at a speed of approx. 2cm/sec. during the unthreading as shown in Fig. 3-39. Confirm that the gauge reading is within the specification. If not, replace the E limiter assembly (X-3659-301-0) of the threading unit section and make the confirmation again.

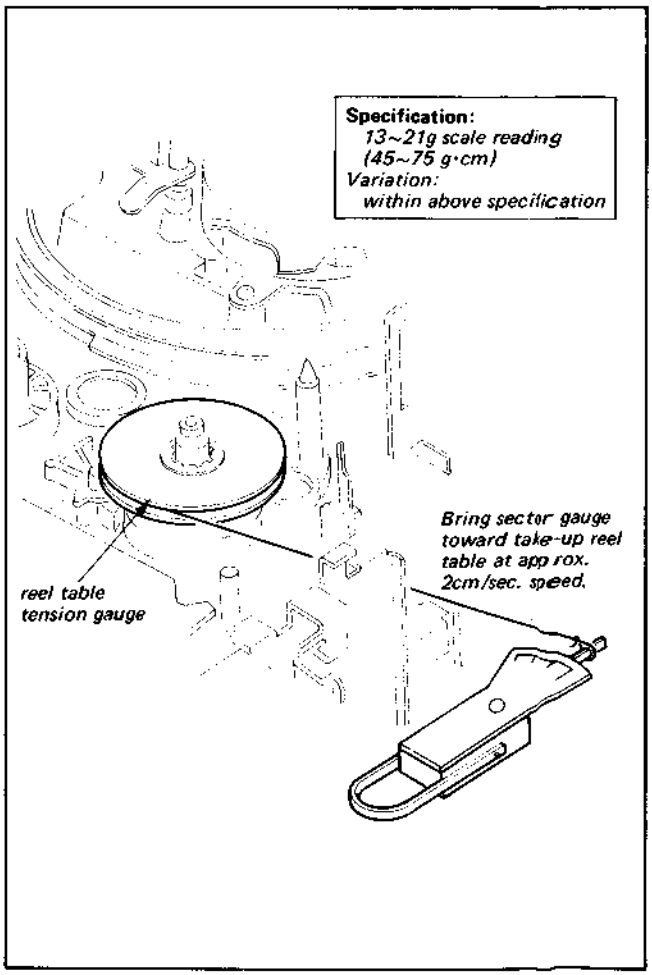

Fig. 3-39. Check of cassette eject torque

3-17. CHECK OF BRAKE TORQUE

- This machine has the supply brake, take-up brake, soft brake, and pause brake to stop the taking-up of the tape in the PAUSE mode. These brakes operate as follows.

Reel table ass'y / Mode	Supply side	Take-up side
Cassette EJECT mode	Supply and soft brakes are ON.	Only take-up brake is ON.
Threading mode	Only soft brake is ON. (It is normal that the supply reel rotates a little, supplying tape.) Soft brake torque; 15 to 30 g.cm. Reel table rotational direction is CW (↻).	Free (Tape is supplied from take-up side.)
STOP mode	Supply and soft brakes are ON. Reel table rotational direction CW (↻): 100 to 500g.cm Reel table rotational direction CCW (↺): 40 to 130g.cm	Only main brake is ON. Reel table rotational direction CW (↻): 20 to 60g.cm Reel table rotational direction CCW (↺): 60 to 500g.cm
FF mode	Only soft brake is ON.	Free (Tape is taken up to take-up side.)
REW mode	Free	Free
PLAY mode	Only FWD back tension brake band is ON.	Free (Tape is taken up to take-up side.)
REC PAUSE mode & PLAY PAUSE mode	FWD back tension brake is ON.	Take-up and pause brakes are ON.
Unthreading mode	Only soft brake is ON. (It is normal that supply reel rotates a little, supplying tape.)	Free (Tape is taken up to take-up side.)

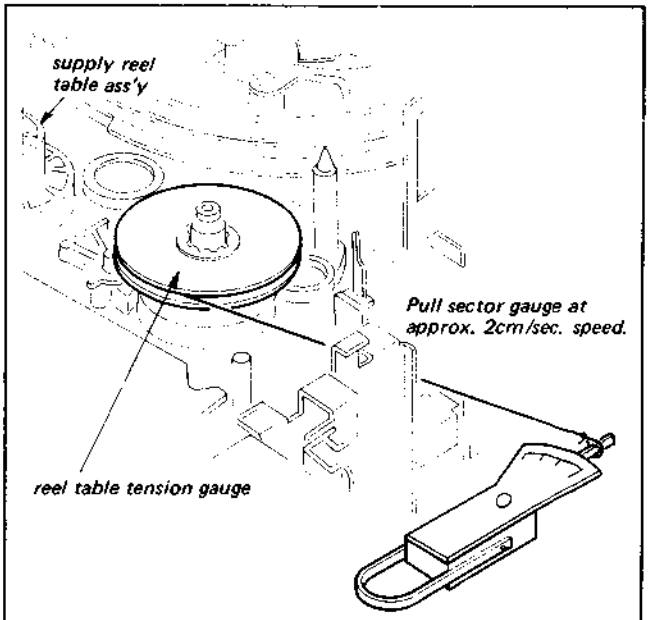
3-17-1. Check of Supply and Take-up Brake Operations

- When the tape slackens in when the mode is changed to STOP from PLAY and to STOP from REWIND, perform the check and adjustment, following the steps below.
- Since the slackness tends to occur when a wound diameter of the tape on a reel table is small, the check must be made in such a state.

1. Insert the cassette and set up the initial state of taking-up of the tape. (Rewind the tape and cue its beginning.)
2. Repeat the operation, changing the mode from PLAY to STOP two or three times and confirm that there is no tape slackness. If the tape slackens, perform steps 5 and 6 for adjustment.
3. Set-up the condition where the tape is about to be completely wound on the take-up reel. (Fast forward the tape and stop the tape movement at its end section.)
4. Repeat the operation, changing the mode from REWIND to STOP two or three times and confirm that no tape slackness occurs. If the tape slackens, perform Steps 5 and 6 for adjustment.
5. Remove the reel table assembly and clean the surface of the reel table assembly and the brake shoe with a piece of cloth dampened with isopropyl alcohol.
6. Clean the brake lining of the S and T brake with a piece of cloth dampened with isopropyl alcohol. If the tape still slacks even if the brake lining clean, replace them and perform the check again.

3-17-2. Check of Supply and Take-up Brake Torque

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Attach the reel table tension gauge (Tool Kit Ref. No. J-5) to the take-up reel table as shown in Fig. 3-40 and hook the sector type gauge (100g full scale, Tool Kit Ref. No. J-8) to the end of the string. Pull the sector type gauge at a speed of approx. 2 cm/sec. and read the gauge value.



Note: This figure shows the take-up torque check. For supply brake torque check, set reel table tension gauge on supply reel table.

Fig. 3-40. Check of supply and take-up brake torque

Specification

- When supply reel table ass'y rotates CW (↻): 100 to 500g.cm (Scale value is 29 to 143g.)
- When supply reel table ass'y rotates CCW (↺): 40 to 130g.cm (Scale value is 11 to 37g.)
- When take-up reel table ass'y rotates CW (↻): 20 to 60g.cm (Scale value is 6 to 17g.)
- When take-up reel table ass'y rotates CCW (↺): 60 to 500g.cm (Scale value is 17 to 143g.)

3-17-3. Check and Adjustment of Soft Brake Torque

1. Push the cassette detector lever by hand and release the lever during the threading. (In this condition, the supply and take-up brakes are released.)
2. Mount the reel table tension gauge (Tool Kit Ref. No. J-5) on the supply reel table as shown in Fig. 3-41 and hook the sector type guage (50g full scale, Tool Kit Ref. No. J-7) to the end of the string of the tension gauge.
3. Pull the sector type gauge at a speed of approx. 2cm/sec. and confirm that the gauge reading is within the specification. If the specification is not satisfied, change the position where the spring is hooked onto the soft brake and the F slide plate for adjustment and perform Steps 2 and 3.

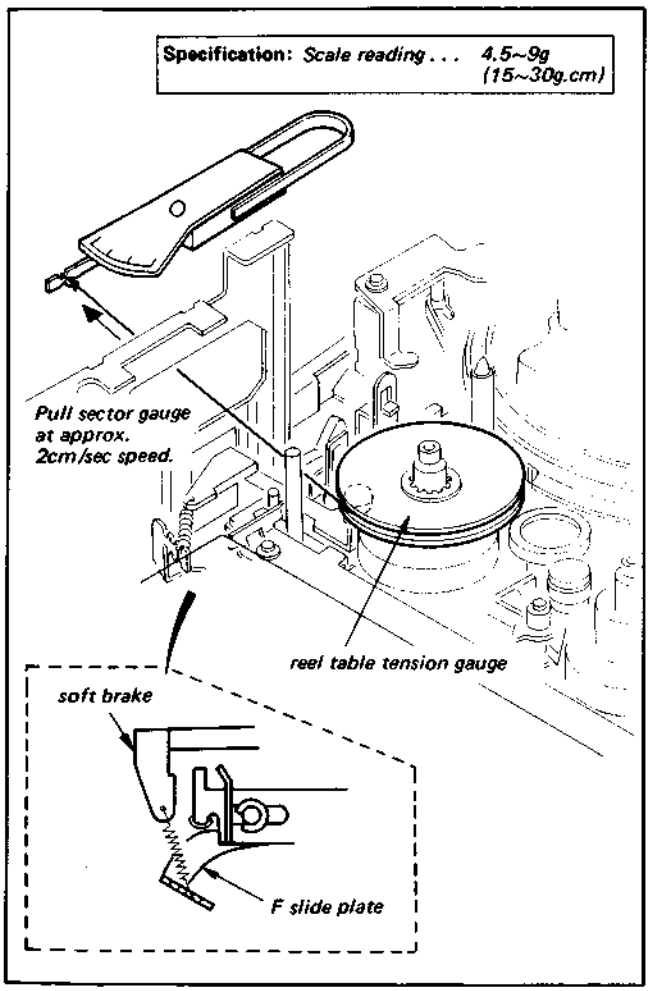


Fig. 3-41. Check of soft brake torque

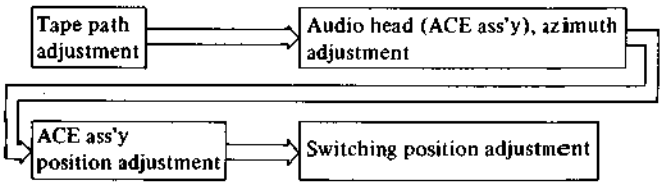
3-18. ADJUSTMENT OF FWD BACK TENSION

- The ideal measurement of the FWD back tension is to measure it under the same conditions as during the actual tape running state. The simple measurement procedure of the FWD back tension is described here. The measurement error due to the different measurement procedure is corrected in the specification.

1. Set up the STOP mode without the cassette. (Refer to Section 1-3.)
2. Place the FWD back tension jig (Tool Kit Ref. No. J-6) on the supply reel table assembly and thread the tape as shown in Fig. 3-42. Hook the sector type gauge (100g full scale, Tool Kit Ref. No. J-8) to the end of the tape.
3. Set up the PLAY mode.
4. Pull the sector type gauge at a speed of approx. 2cm/sec. and confirm that the gauge reading is within the specification. If not, perform Steps 5 and 6.
5. Loosen the screw mounting the BT adjusting plate and move the BT adjusting plate in the direction shown by the arrow for the adjustment.
6. Repeat Steps 2 to 4 again.

3-19. ADJUSTMENT OF TRACKING

- Sequence of tracking adjustment



[Preparation]

1. Fixtures and Tools Required:
   Alignment tape (KR5-1H)
   Dual trace oscilloscope
   Inspection mirror
   Methanol or Isopropyl Alcohol
   Chamois
   3 mm flat tip screwdriver
2. Oscilloscope connection

RF envelope waveform:	TP2005	RF-2b board
External trigger:	TP2003	RF-2b board
AUDIO OUT:	TP3406	AS-6b board
VIDEO OUT:	TP1017	YC-6b board
Switching waveform:	TP2003	RF-2b board

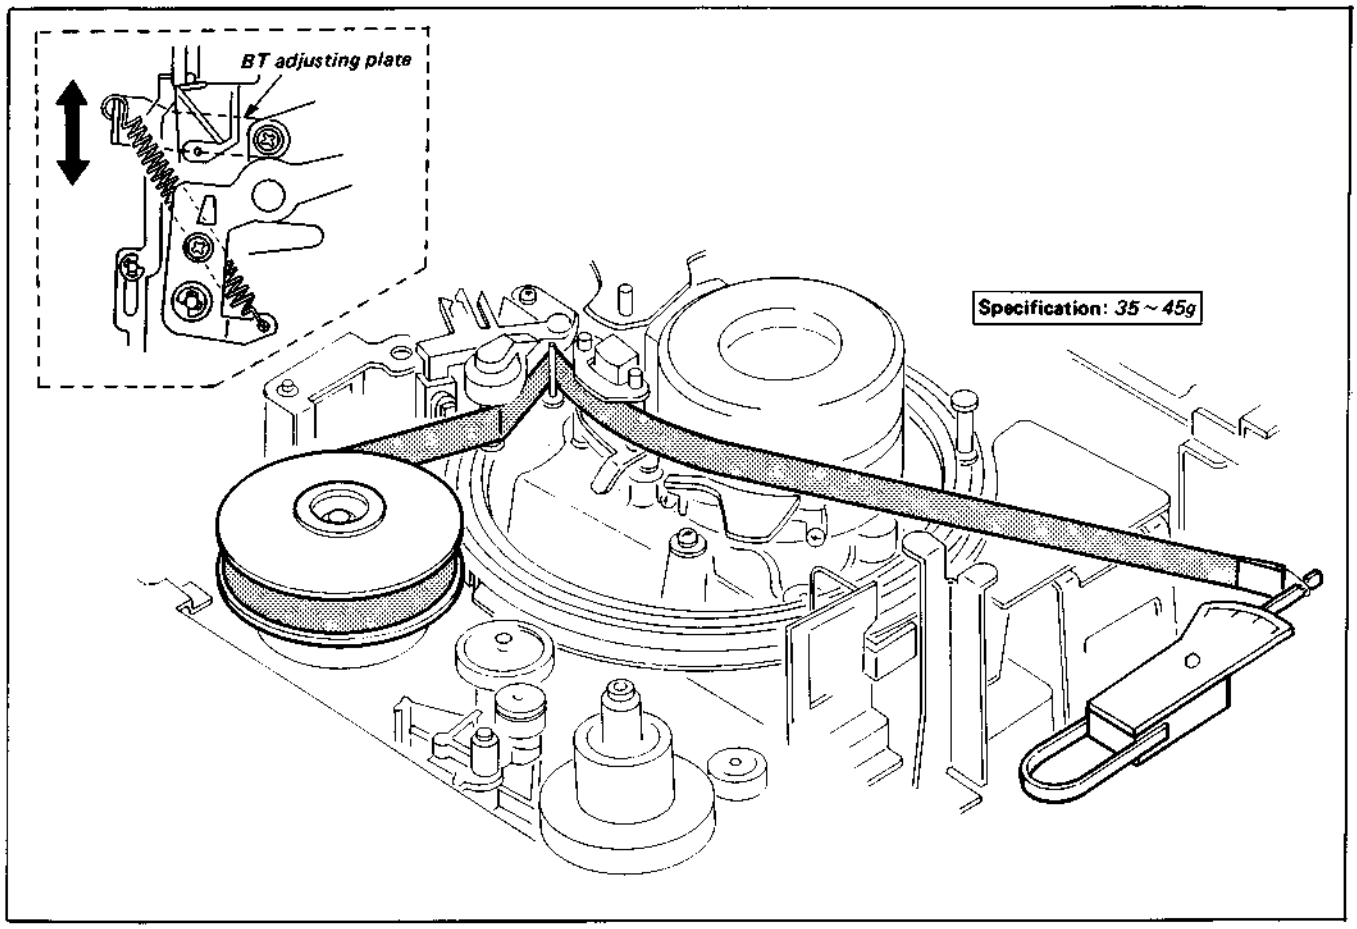


Fig. 3-42. Adjustment of FWD back tension

4. Location of circuit boards

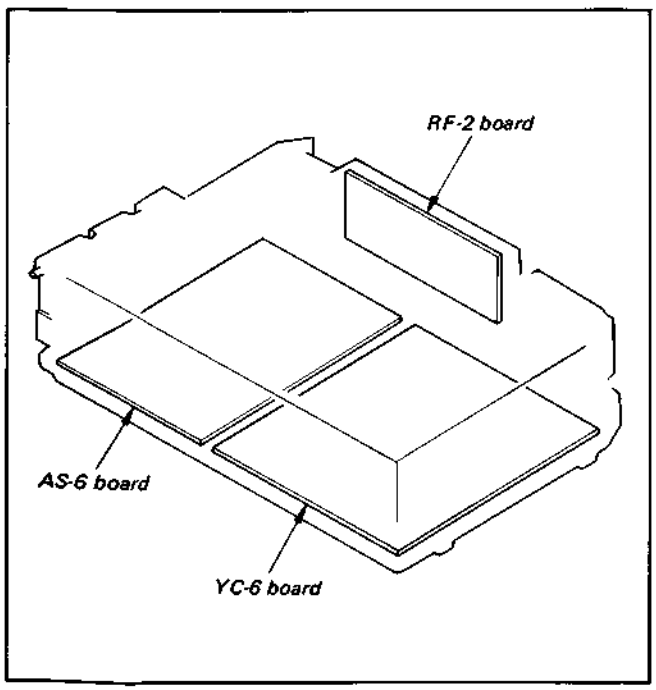

Fig. 3-43. Location of circuit boards

5. Location of tape guides

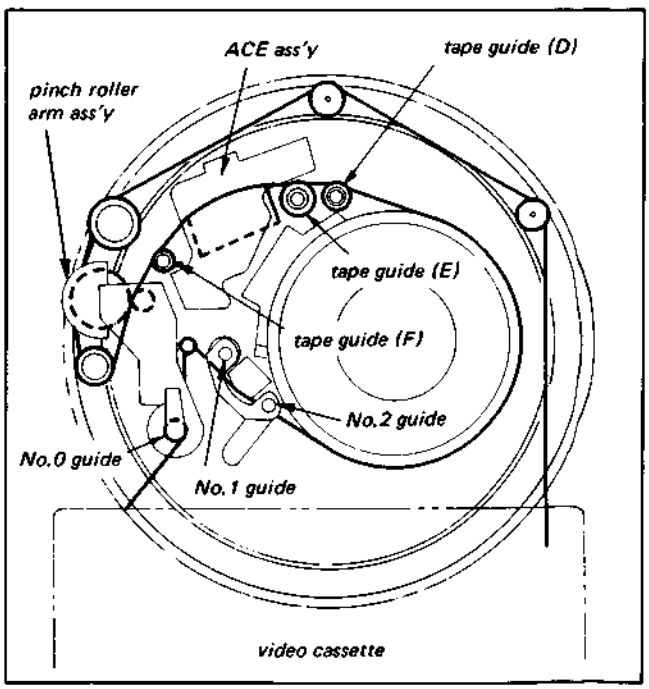

Fig. 3-44. Location of tape guides

3-19-1. Adjustment of Tape Path

- Perform this adjustment carefully because poor adjustment reduces tape interchangeability and picture quality.

1. Clean the tape movement faces (the tape guide, drum, capstan and pinch roller) with chamois dampened with methanol or isopropyl alcohol.
2. Connect the oscilloscope to TP-2005 on the RF-2 board and the external trigger to TP-2003.
3. Play back the 1 MHz segment of the alignment tape (KR5-1H).
4. Confirm that the RF output waveform envelope on the oscilloscope screen increases and decreases, while remaining flat, when the TRACKING control knob is turned to the left and the right from its center detent position. If the RF waveform does not increase and decrease while remaining flat, perform Step 6 for the adjustment.

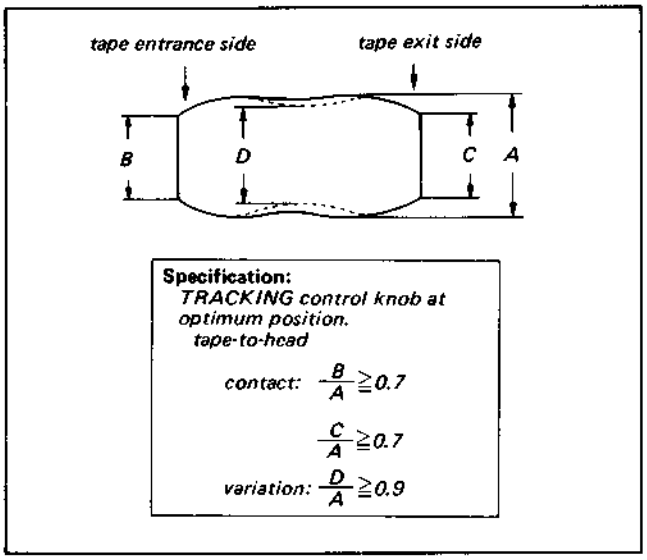

Fig. 3-45. Adjustment of tape path

5. Confirm that the fluctuation and the tape-to-head contact satisfy the specification shown in Fig. 3-45. If they do not, perform Step 6 for the adjustment.

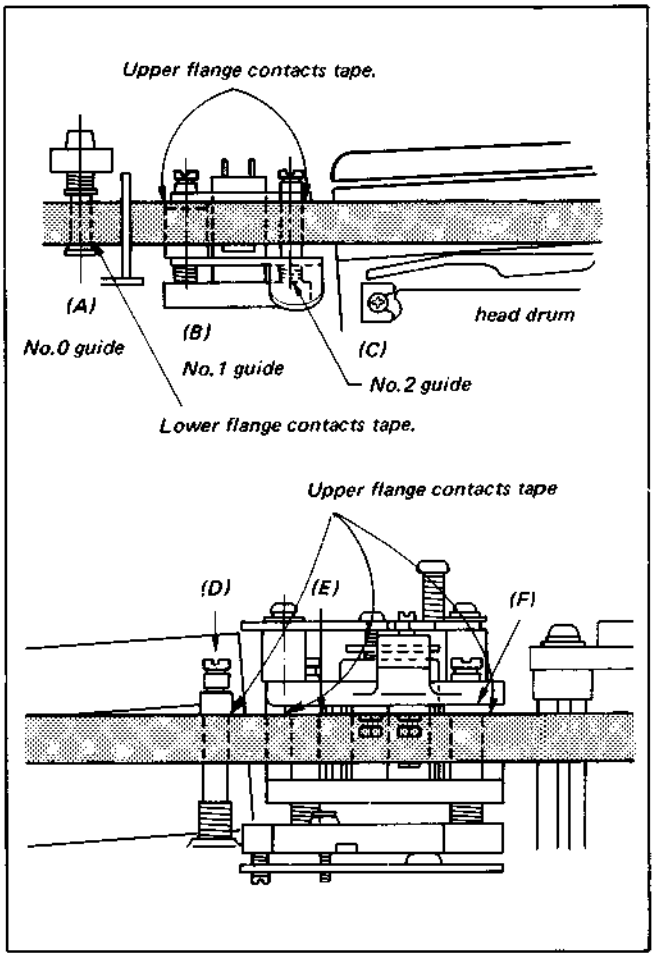

Fig. 3-47. Adjustment of tape path

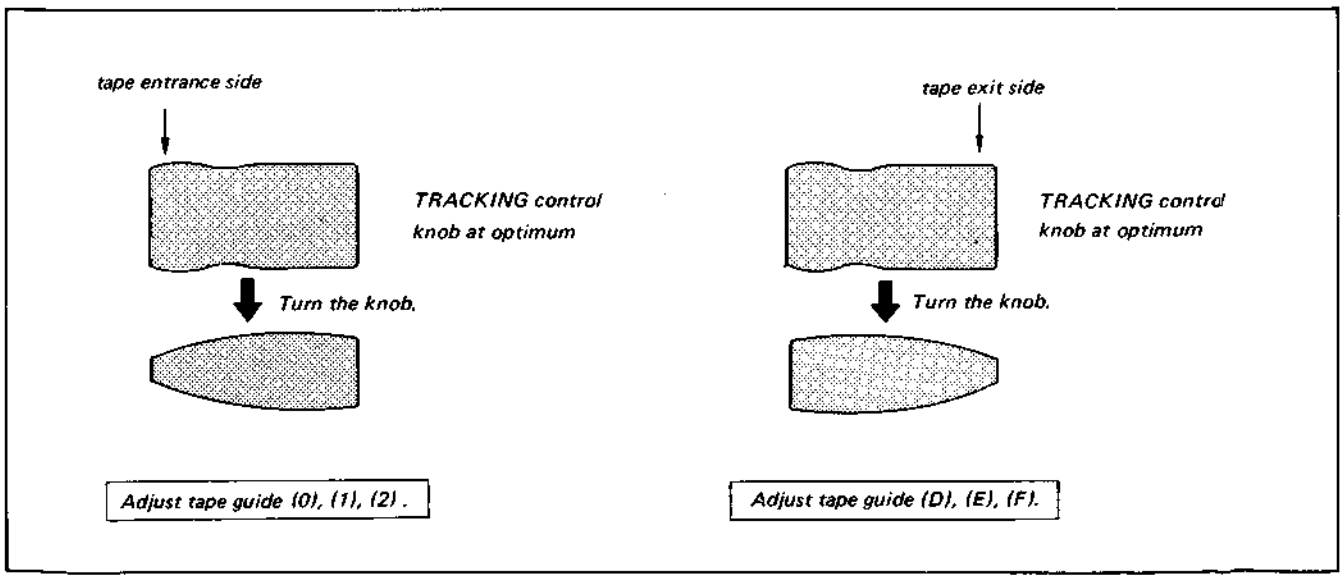

Fig. 3-46. Adjustment of tape path

6. When the waveform at the tape entrance side is not flat as shown in Fig. 3-46 for the clockwise and counterclockwise turning of the TRACKING control knob from center, detent position, adjust the heights of tape guides (0), (1), and (2). When the waveform at the tape exit side is not flat, adjust the heights of tape guides (D), (E), and (F). The height adjustment must be performed so that the tape contacts the drum heads, and there is a minimum curl (not more than 2 mm) at the flange of each tape guide, the upper or lower flanges contact the tape as shown in Fig. 3-47, and the RF waveform is flat.

Note: The construction of the ACE assembly enables the assembly to be adjusted so that its top plate is perpendicular to the face of the moving tape as a whole, but this "Zenith" adjustment is not necessary except after ACE assembly replacement.
Since tape guide (D) regulates the movement of the tape around the drum exit, raise tape guide (D) about 0.5 mm before the adjustment of the tape path on the exit side. Then lower tape guide (D) to the point immediately before the RF waveform varies, and with less than 2 mm curl after the tape path adjustment.

3-19-2. Adjustment of Exit Side Tracking after ACE Assembly Replacement

1. The ACE assembly can be removed if the three screws shown in Fig. 3-48 are removed

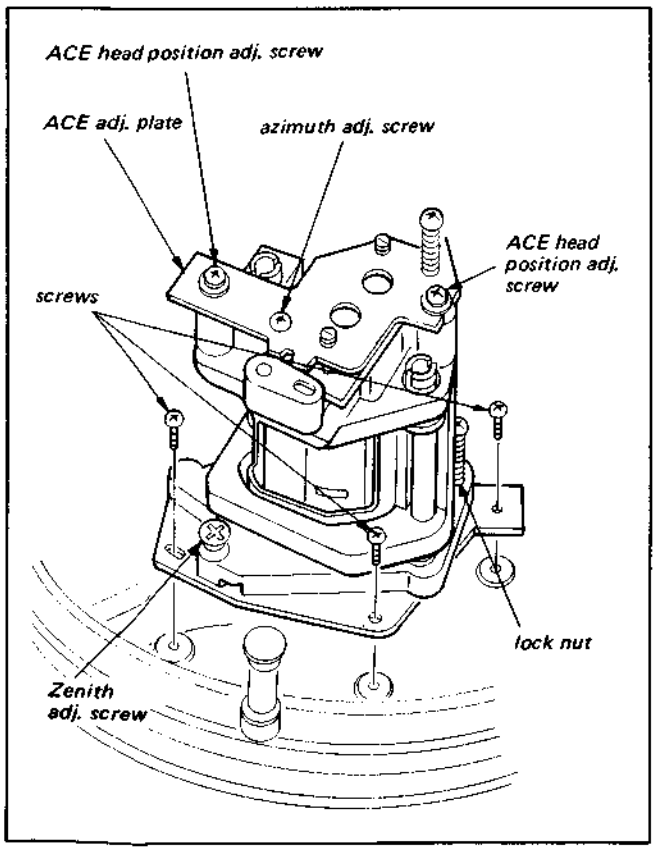

Fig. 3-48. Removal of ACE assembly

2. Perform the adjustment following Step 3 after the completion of the replacement.
3. Raise the tape guide (D) shown in Fig. 3-47 by 0.5 mm. (Turn the nut one turn.)
4. Play back the 1 MHz segment of the alignment tape (KR5-1H). Confirm that the RF wave output (see Fig. 3-45) satisfies the specification and there is a minimum curl (not more than 2 mm) on the tape edge contacting the tape guide. Confirm that the RF waveform varied from the flat state when the tape guides (E) and (F) are raised and adjust the heights of the tape guides so that the waveform output becomes flat.
5. When the waveform does not vary if the tape guides (E) and (F) are raised in Step 4 or when the waveform does not become flat if the tape guides are lowered, perform the adjustment, following the procedure below.
   (i) Loosen the lock nut shown in Fig. 3-48.
   (ii) Turn the zenith adjusting screw counterclockwise (↺) a little more than 30 degrees and turn it clockwise (↻) until the screw returns to the point 30 degrees counterclockwise from its original point.
   (iii) Perform Step 4 again. If the specification is not satisfied, perform Step 5 again. Since the ACE assembly was adjusted perpendicularly when assembled at the factory, do not turn the zenith adjusting screw more than 60 degrees to the right and left from the original position.
   (iv) After the adjustment, tighten the lock nut until a slight resistance for the tightening is felt and confirm that the specification in Step 4 is satisfied.
6. When there is an edge curl at the tape contacting the tape guide in Step 4, perform the adjustment, following the procedure below.
   (i) Loosen the lock nut shown in Fig. 3-48.
   (ii) Tighten the zenith adjusting screw clockwise only 15 degrees.
   (iii) Perform Step 4 again. If the specification is not satisfied, perform Steps 5 and 6 again, but do not turn the zenith adjusting screw to the right and left more than 60 degrees from its original position.
   (iv) Tighten the lock nut until a slight resistance is felt after the adjustment. Confirm that the specification in Step 4 is satisfied.

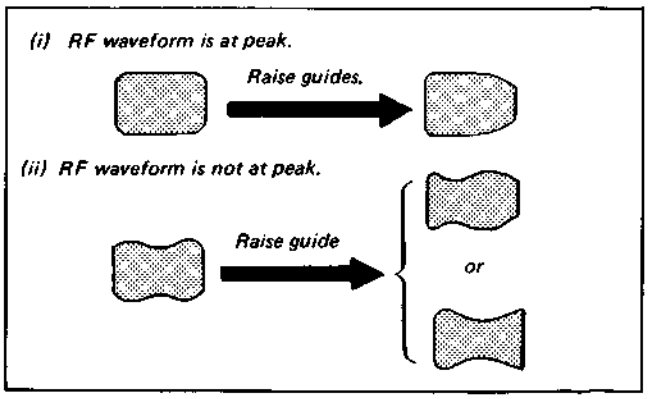

Fig. 3-49. Adjustment of exit side tracking after ACE assembly replacement

3-19-3. Audio Head Azimuth Adjustment

[Connection of Relative Equipment]

The connections of the equipments to the input/output terminals are shown in Fig. 3-50.

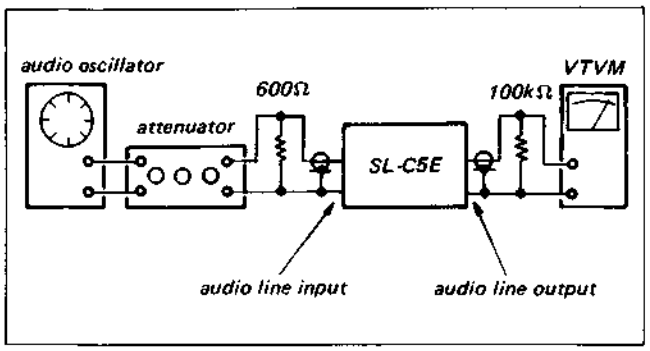

Fig. 3-50. Connections

1. Terminate the audio line output terminal with a 100 kΩ resistor and connect a VTVM.
2. Play back the 5 kHz signal segment of the alignment tape.
3. Adjust the azimuth adjustment screw on the audio head for a maximum VTVM reading. (See Fig. 3-50).

   Note: Loosen azimuth adjustment screw before the adjustment and tighten it after the completion.

3-19-4. Position Adjustment of ACE Assembly

- This adjustment includes the mechanical head mounting position adjustment and the electrical tracking control center adjustment.
- The adjustment sequence is to perform the tracking control center adjustment and then the mechanical adjustment of the head mounting position. If this sequence is reversed, poor tracking occurs.

1. Connect a dual-trace oscilloscope as follows.

   CH-1 . . . . . TP-2005 (RF-2 board)
   CH-2 . . . . . TP-3406 (AS-6 board)
   Ext trigger . . . . . TP-2003 (RF-2 board)

2. Play back the 1 MHz segment of alignment tape KR5-1H. (See Fig. 3-51).
3. Set the tracking control to the center, detent, position and confirm that the output waveform level is maximum and the 0 level point of the audio signal appears at the Bch waveform point as shown in Fig. 3-51. If the specification is not satisfied, perform the following Step 4.

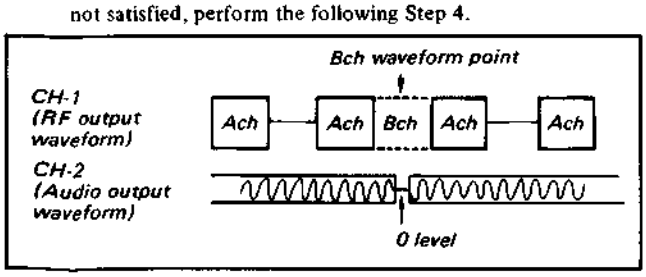

Fig. 3-51. Position adjustment of ACE assembly (1)

4. Perform the tracking control center adjustment. [Refer to section 4-3-2(2)].
5. Set the TRACKING control knob to its center detent point and play back the 1 MHz segment of the alignment tape (KR5-1H).
6. Loosen the two position adjusting screws of the ACE head and adjust the cut-out section of section A for maximum RF output waveform and a 0 level of audio signal at the Bch waveform point. (See Fig. 3-51).

   Note: Perform the adjustment so that the center of the cut-out section of the A section will almost match the center of the round hole.

7. Play back the 1 MHz segment of the alignment tape and confirm the proper picture appearance.
8. Tighten the position adjusting screw of the ACE head.

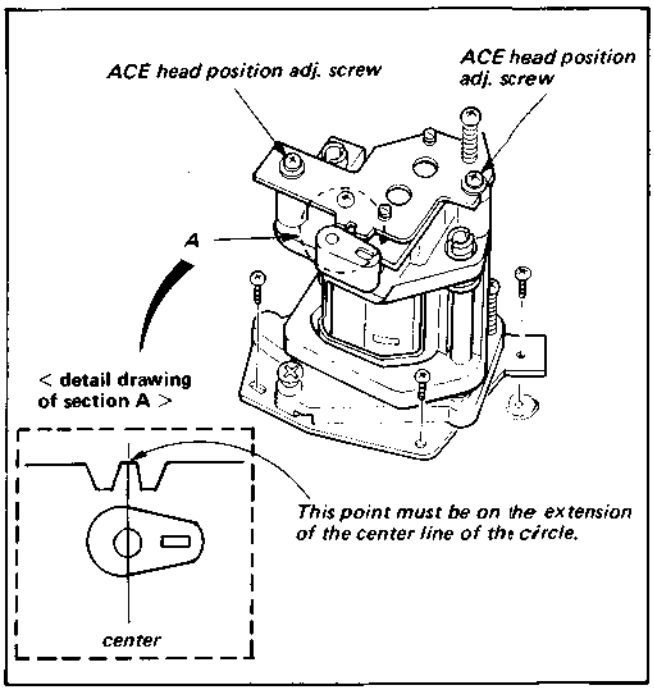

Fig. 3-52. Position adjustment of ACE assembly (2)

3-19-5. Video Head Dihedral Adjustment

- Generally this adjustment is not necessary except after the video head disk replacement.

  Note: The dihedron of a video head disk for replacement purposes was adjusted precisely with a microscope at the factory and the readjustment is usually not necessary.

- The ACE assembly position adjustment has been completed prior to this dihedral adjustment.
- The judgment of the video head dihedron must be performed in the condition that the monoscope signal segment of the alignment tape (KR5-1H) is played back and the TRACKING control knob is set to the center detent position. (See Fig. 3-53.)

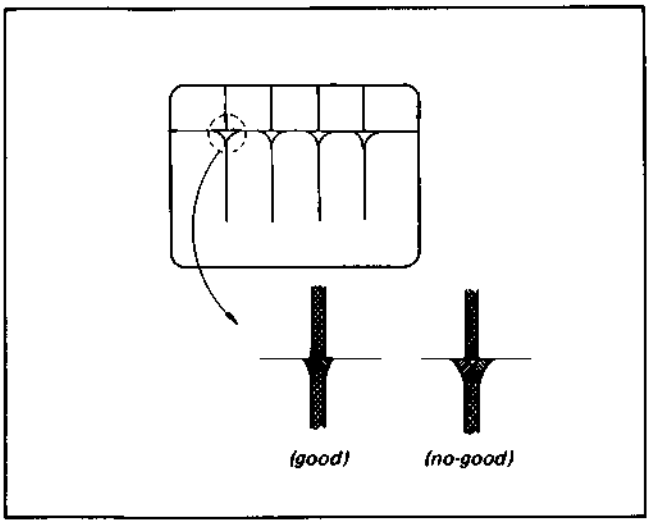

Fig. 3-53.

- When the dihedron is no-good, the preparation of the video head dihedral adjustment is to install two dihedral adjusting screws in the holes close to the small mark (•) shown in Fig. 3-54 and tighten them until the screw heads are level with the top surface of the video head disk. (If the screws are not tightened until their heads become level with the surface, the upper drum of the video head disk is caught by the adjusting screw heads and the video head disk cannot rotate. If the screws are tightened excessively, the head base is moved and the dihedral distortion becomes larger.)

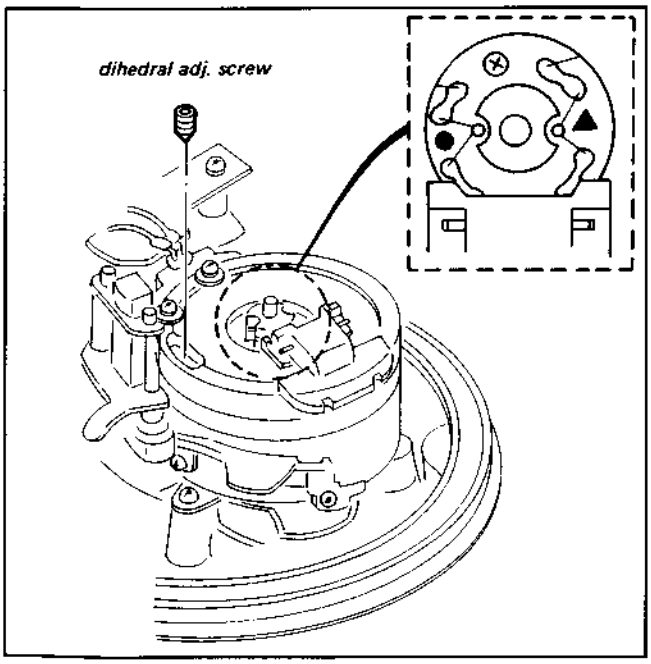

Fig. 3-54.

When the dihedron is no-good;

(1) When the split becomes small for the clockwise turn of the TRACKING control knob, the B head shifts by C in the arrow direction as shown in Fig. 3-55 and is tracing the magnetic pattern on the tape. The adjusting screw in adjustment hole E shown in the figure must be tightened further to shift the B head in the left direction until the good dihedron shown in Fig. 3-53 is obtained.
Set the TRACKING control knob to the center detent point.

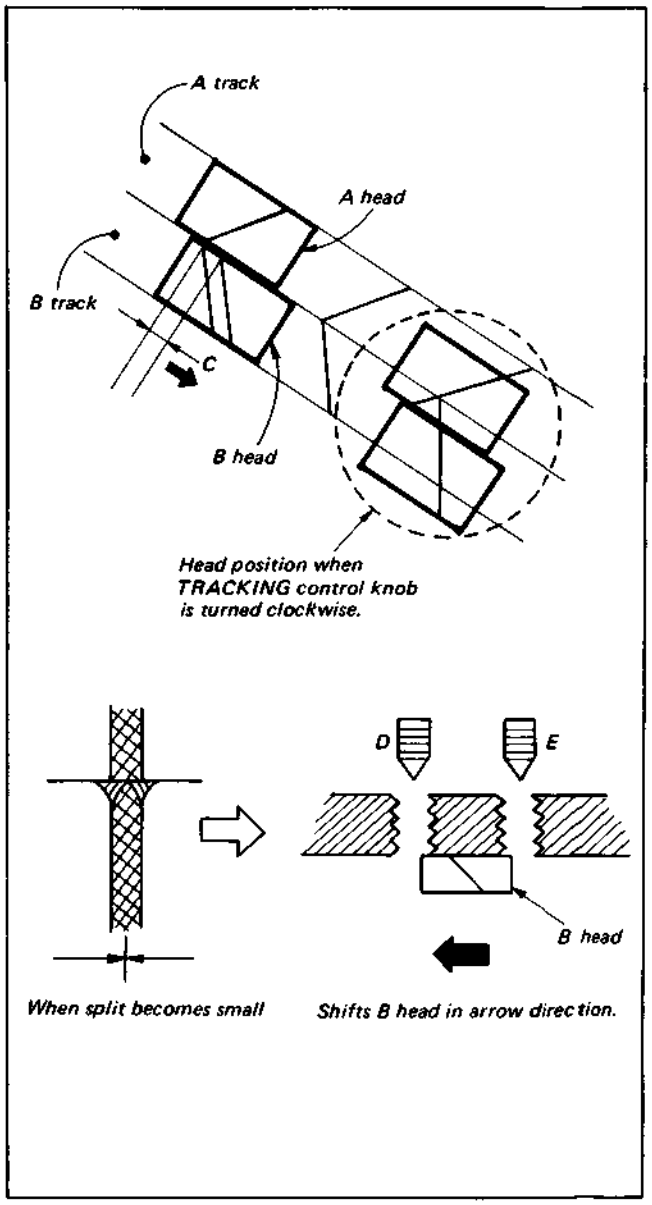

Fig. 3-55.

(2) When the split becomes large for the clockwise turn of the TRACKING control knob, the B head shifts by C in the arrow direction as shown in Fig. 3-56 and is tracing the magnetic pattern. The adjusting screw in adjustment hole D shown in the figure, must be tightened further to shift the B head in the right direction until the good dihedron shown in Fig. 3-53 is obtained.
Set the TRACKING control knob to the center detent point.

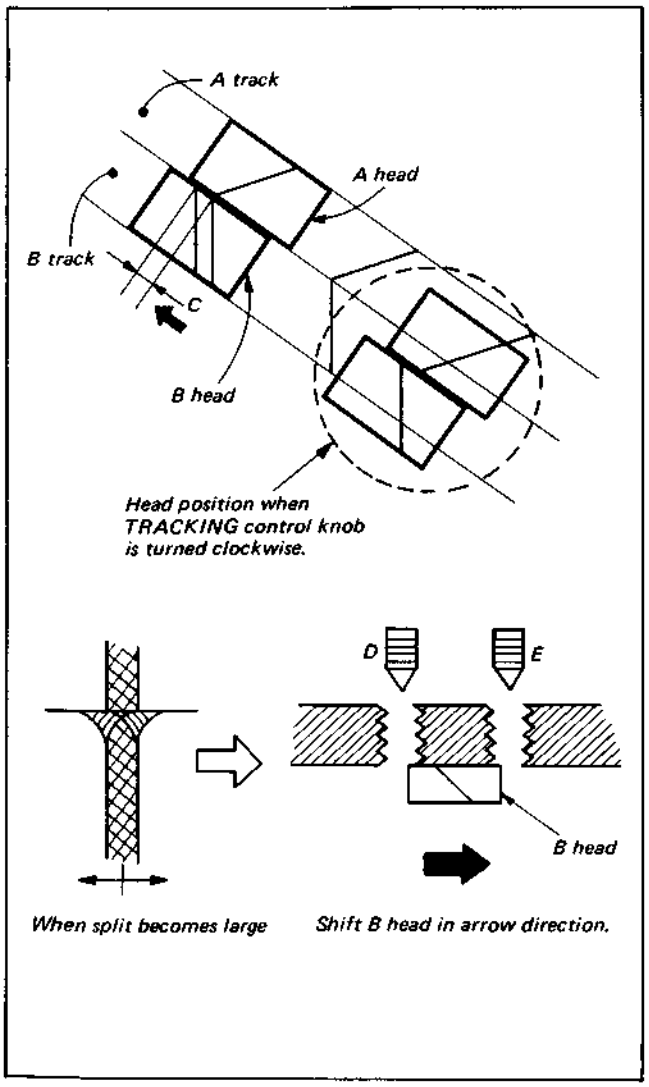

Fig. 3-56.

(3) Remove the adjusting screws after the completion of the adjustment and check the dihedron again.

SECTION 4
ELECTRICAL ALIGNMENT

All the electrical alignment can be performed by using the equipment mentioned below, the alignment tape, and the PAL colour bar signal (100%).

[Equipment Required]

(1) Colour Monitor TV

(2) Oscilloscope, Dual-trace, Bandwidth . . . more than 10 MHz with delay mode

(3) Frequency Counter

(4) PAL Colour-Bar Generator

(5) Digital voltmeter

(6) VOM (20 KΩ/V)

(7) Audio Signal Generator

(8) Attenuator

(9) Alignment Tape, type: KR5-1H, Code No. 8-969-995-91

(10) Alignment Tool (Adjusting screwdriver for semi-fixed resistors and coils)
Jig No. SL-0001, Code No. J-6080-001-A

[Setup for Alignment]

The antenna should be connected correctly to the antenna input terminal of the videocassette recorder.

It is important that the video output signal satisfies the specification because the telecast signal received by the incorporated tuner of the videocassette recorder is utilized as the adjustment signal of the machine. The incorporated tuner should be set to the channel with the best reception. The video signal should be checked with an oscilloscope connected to TP-15 on the YC-6 board. Verify that the sync signal amplitude is approx. 0.3 Vp-p and the video signal amplitude is approx. 0.7 Vp-p at peak. Adjust the fine tuning while observing the signal and the TV screen so that the burst signal amplitude becomes approx. 0.3 V ± 0.1 Vp-p. Also confirm that there is no spikes observed at the sync signal portion. (See Fig. 4-1.)

The video (colour bar) signal for the alignment is shown in Fig. 4-1.

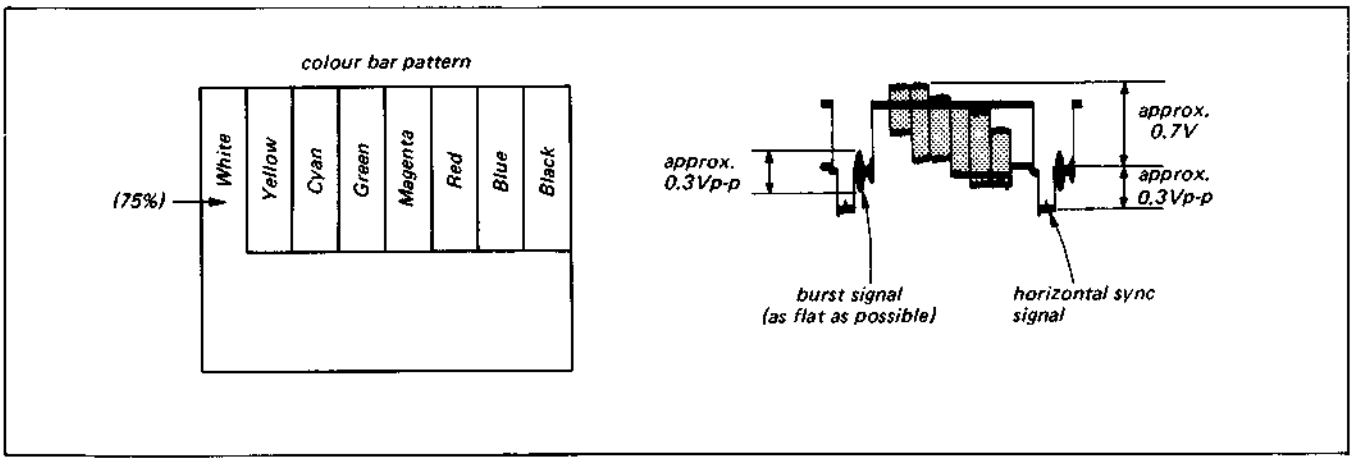

Fig. 4-1. Video (colour bar) signal

[Alignment Tape]

KR5-1H

	Video signal	Audio signal	Playing time	Use for
1.	Colour bars	3 kHz – 5 dB	5 min	General performance, tape speed checks, switching position adjustment.
2.	Monoscope	333 Hz – 25 dB	5 min	Video head dihedral, audio level adjustment.
3.	RF sweep	5 kHz – 25 dB	5 min	Video, audio frequency characteristics, audio azimuth adjustment marker: 1, 2, 3.58, 4.5, 5.2 MHz
4.	Tracking 1 MHz (CH-A) *1 (Channel B is inserted in every 3 frames.)	1 kHz – 5 dB *2 (Signal is dropped out in the positions where channel B is inserted.)	5 min	Tracking, Audio height adjustments CTL Position check (Check if *1 and *2 are the same position.)

[Alignment Tool for Semi-fixed Variable Resistors and Coils]

Semi-fixed variable resistors and inductances should be adjusted with the alignment tool exclusively prepared for the adjustment of the components. A common screwdriver is too large for adjusting the components from the conductor side of a printed cricuit board.

The metal blade of the alignment tool is used for variable resistors and trimmer capacitors and the plastic tip is used for variable inductances.

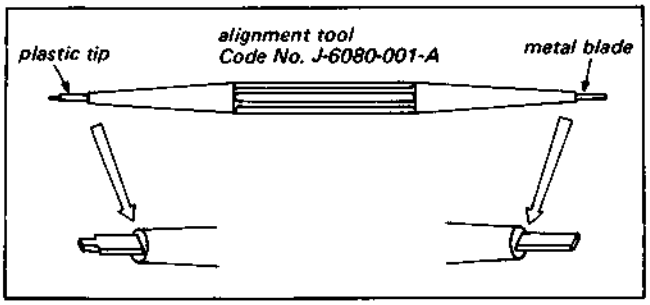

Fig. 4-2. Alignment tool

[Required Levels and Impedances of Input and Output]

VIDEO

Input ..... VIDEO IN: BNC connector
1.0 Vp-p, 75 ohms
unbalnced, sync negative

Output ..... VIDEO OUT: BNC connector
1.0 Vp-p, 75 ohms
unbalanced, sync negative

AUDIO

Input ..... AUDIO IN: Phono connector, 47 kohms, −10 dBs
MIC: mini jack, −60 dBs, suitable for microphone with 600-ohm impedance

Output ..... AUDIO OUT: Phono connector, Less than 10 kohms, −5 dBs (47 kohm load), unbalanced

[Colour Bar Signal]

The 100% colour bar signal recorded on the Alignment tape is shown in Fig. 4-3.

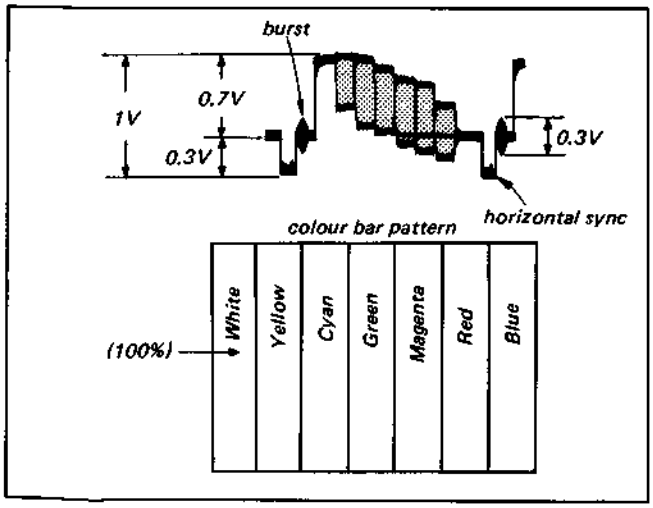

Fig. 4-3. Colour bar signal recorded on the alignment tape

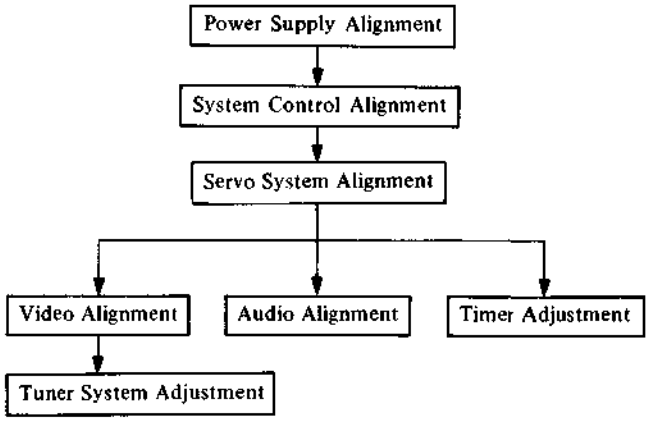
[Alignment Sequence]

The alignment should be performed following the sequence below.



4-1. POWER SUPPLY ALIGNMENT AND CHECK (PS-15 board)

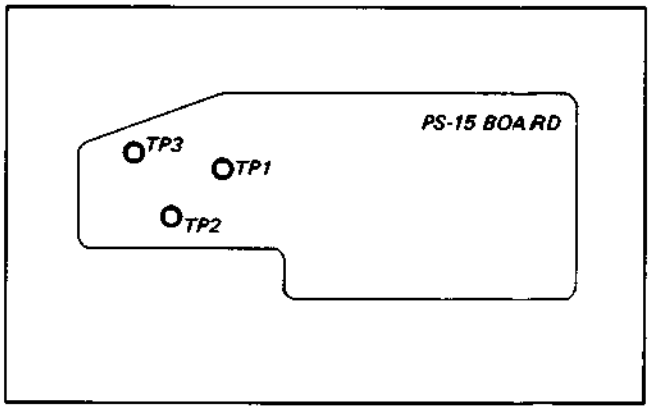


Fig. 4-1-1. Test point

1. REG 12V Adjustment
   (1) Check that the input voltage is the rated voltage ± 10%.
   (2) Connect the VOM to TP1.
   (3) Adjust RV001 for a 12V ± 0.1 V reading.
2. +12V Check
   (1) Connect the VOM to pin 1 of CN2.
   (2) Check that the voltage is 12V ± 0.5V.
3. SYS 12V Check
   (1) Check that the voltage at TP1 is 12V.
   (2) Connect the VOM to TP3.
   (3) Check that the voltage is 12V ± 1V.

4-2. SYSTEM CONTROL ALIGNMENT AND CHECK (SY-15 board)

1. Clock Oscillating Frequency Adjustment (SY-15 board)

   (1) Connect the frequency counter to pin 42 of IC6.

   Note: The input impedance of the frequency counter should be more than 10 MΩ.

   (2) Adjust T1 for 400 kHz ± 0.5 kHz. (See Fig. 4-2-1.)

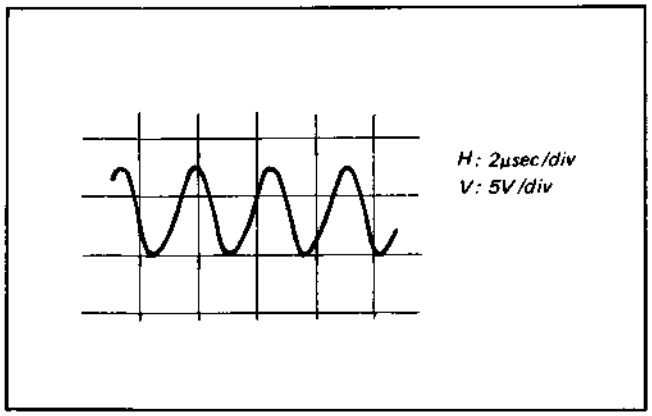

Fig. 4-2-1. Adjustment of clock oscillating frequency

2. Clock Oscillating Frequency Adjustment (SY-15 board)

   (1) Connect the frequency counter to pin 42 of IC7.

   Note: The input impedance of the frequency counter should be more than 10 MΩ.

   (2) Adjust T2 for 400 kHz ± 0.5 kHz. (See Fig. 4-2-1.)

3. Threading Check

   (1) Load a cassette.

   (2) Check that the threading is performed.
   Threading time: about 3 seconds

4. Unthreading Check

   (1) Press the EJECT button.

   (2) Check that the unthreading is performed as soon as the EJECT lamp turns on, the lamp turns off after the completion of the unthreading, and the cassette lift assembly rises.
   Unthreading time: about 4 seconds

4-3. SERVO SYSTEM ALIGNMENT

4-3-1. Drum Servo System Adjustment

1. Drum Free Speed Adjustment (AS-6 board)

   (1) Set up the REC mode.
   (2) Connect the oscilloscope as follows.

   CH-1 . . . . . pin 1 of IC1
   CH-2 . . . . . pin 7 of IC1

   (3) Confirm that the waveform locks as shown in Fig. 4-3-1.

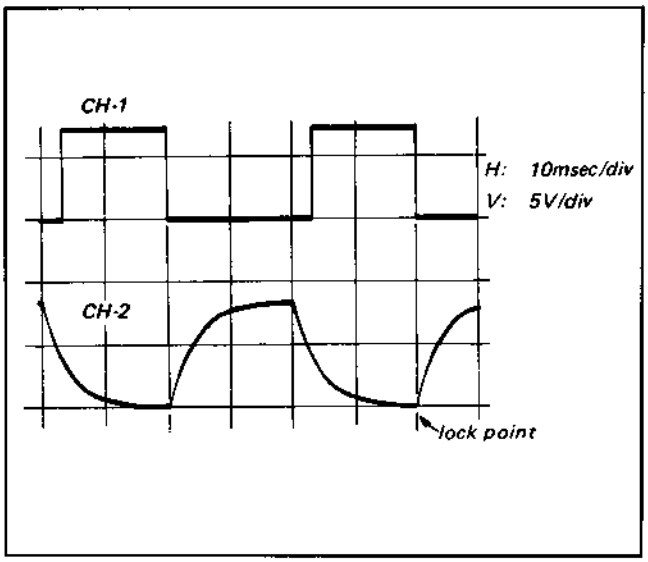

Fig. 4-3-1. Drum free speed adjustment

   (4) Connect the CH-1 probe of the oscilloscope to TP2 (pin 10 of IC1).

   Input range: DC

   (5) Adjust RV10 for 5.2 ± 0.3 Vdc. (See Fig. 4-3-2.)

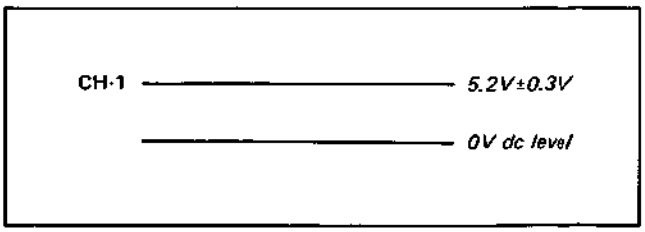

Fig. 4-3-2. Drum free speed adjustment

2. RF Switching Position Adjustment (YC-6, RF-2, & AS-6 boards)

(1) Play back the coulor bar segment of the alignment tape.

(2) Connect the oscilloscope to TP5 on the RF-2 board.

(3) Adjust the TRACKING knob for maximum output. (See Fig. 4-3-3.)

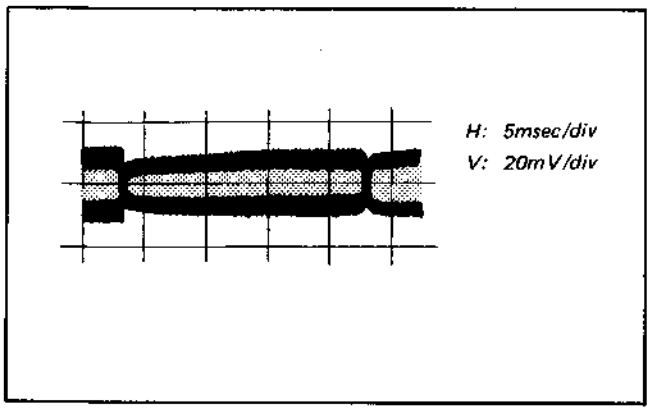

Fig. 4-3-3. RF output level adjustment

(4) Connect the oscilloscope as follows.
CH-1 . . . . . TP1/AS-6 board
CH-2 . . . . . Emitter of Q34/YC-6 board

(5) Adjust RV2 on the AS-6 board so that the phase difference between the falling section of the CH-1 waveform and the vertical sync signal of the CH-2 video signal are 7 H ± 2 H. (See Fig. 4-3-4.)

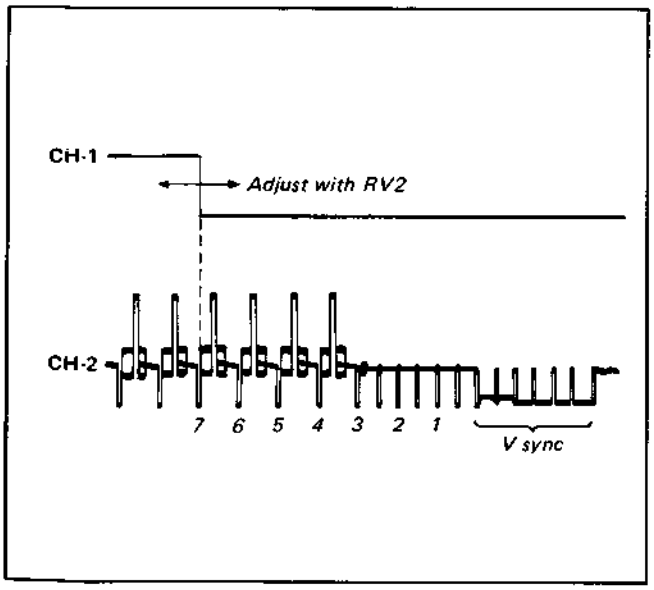

Fig. 4-3-4. RF switching position adjustment (1)

(6) Adjust RV1 on the AS-6 board so that the phase difference between the rising section of the CH-1 waveform and the vertical sync signal of the CH-2 video signal are 7 H ± 2 H. (See Fig. 4-3-5.)

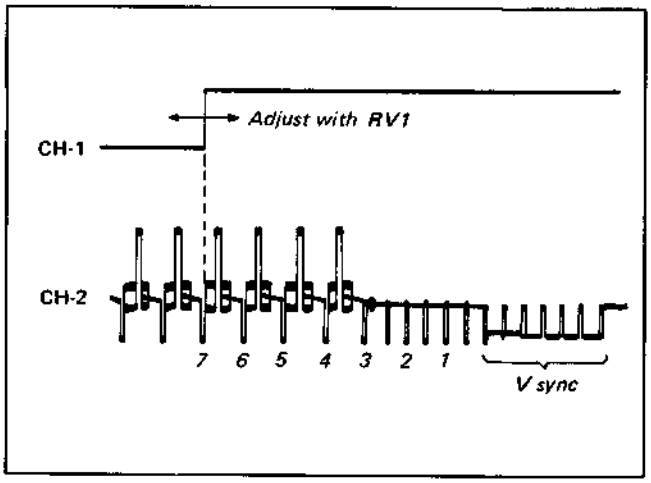

Fig. 4-3-5. RF switching position adjustment (2)

3. Record-Servo Lock Phase Adjustment (YC-6 & AS-6 boards)

(1) Record a video signal.

(2) Connect the oscilloscope as follows.
CH-1 . . . . . TP1/AS-6 board
CH-2 . . . . .,pin 20 of IC1/YC-6 board

(3) Adjust RV3 on the AS-6 board so that the phases of the falling section of the CH-1 waveform and the vertical sync signal of the CH-2 video signal are 7 H ± 2 H. (See Fig. 4-3-6.)

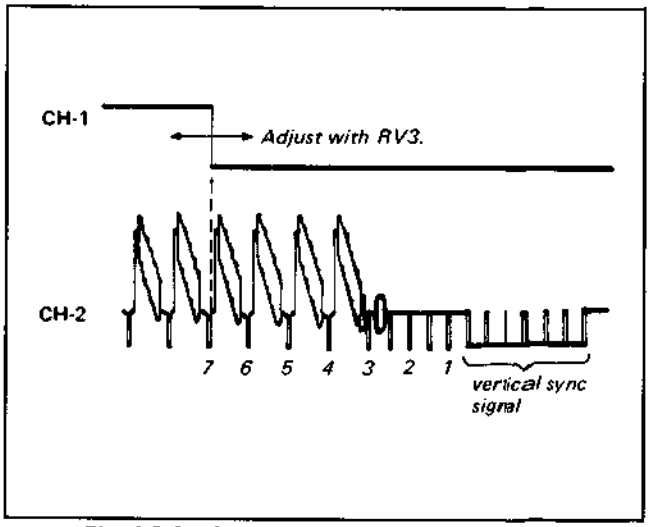

Fig. 4-3-6. Record-servo lock phase adjustment

4. Picture Search (High-Speed Picture) (AS-6 board)

(1) Record a video signal.

(2) Play back the recorded segment.

(3) Connect the oscilloscope to pin 10 of IC5 on the YC-6 board.

(4) Position the positive-going edge of the waveform at the exact center of the oscilloscope scale. (See Fig. 4-3-7.)

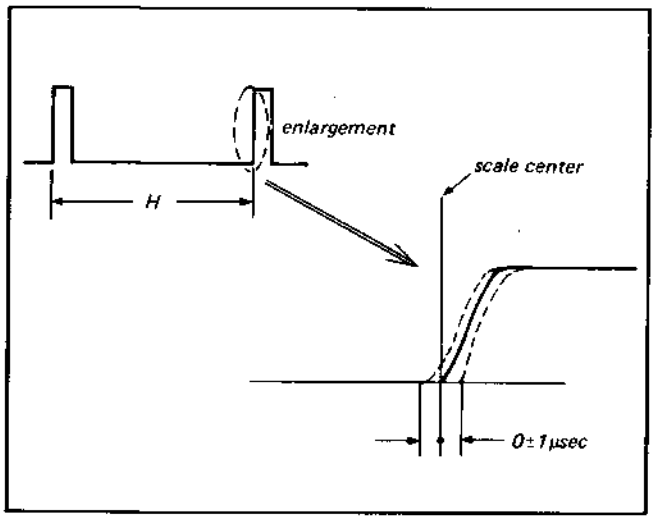

Fig. 4-3-7. Picture search free speed adjustment

(5) Set up the CUE mode.

(6) Adjust RV11 so that the fluctuation of the rising of the waveform is within 0 ± 1 μsec. for the scale center.

(7) Set up the REVIEW mode.

(8) Adjust RV12 so that the fluctuation of the rising of the waveform is within 0 ± 1 μsec. for the scale center.

4-3-2. Capstan Servo System Alignment

1. Capstan Free Speed Adjustment (AS-6 board)

(1) Play back the colour bar segment of the alignment tape.

(2) Connect the oscilloscope as follows.
CH-1 . . . . . pin 19 of IC2
CH-2 . . . . . pin 20 of IC2

(3) Adjust RV8 for the phase lock shown in Fig. 4-3-8.)

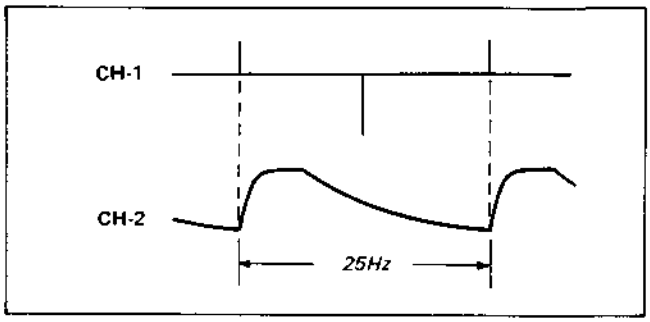

Fig. 4-3-8. Phase lock

(4) Connect the oscilloscope to TP4.
Input range: DC range

(5) Adjust RV8 for 5.5 ± 0.3 Vdc.

2. Tracking Control Center Adjustment (AS-6 board)

(1) Set the TRACKING knob to the center detent position.

(2) Play back the colour bar signal segment of the alignment tape.

(3) Connect the oscilloscope as follows.
CH-1 . . . . . TP11
CH-2 . . . . . TP6

(4) Adjust RV4 so that the phases of the falling sections of the waveforms become the same. (See Fig. 4-3-9.)

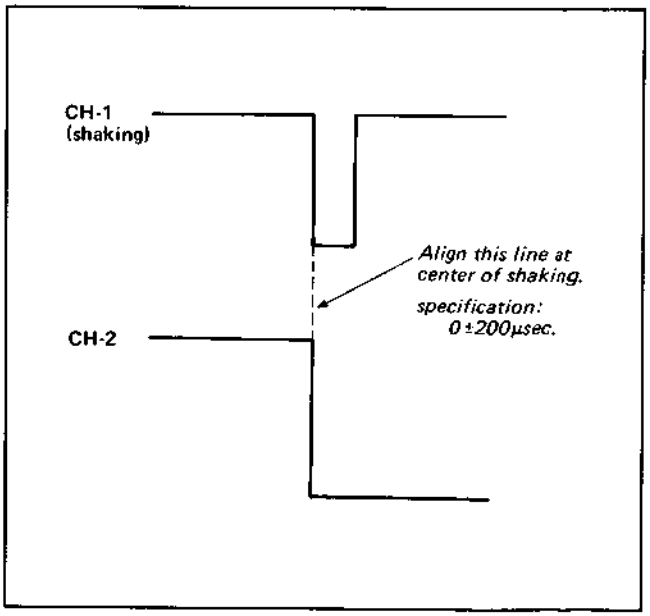

Fig. 4-3-9. Tracking control center adjustment

4-4. VIDEO SYSTEM ALIGNMENT (YC-6, and RF-2 boards)

The adjustment sequence for each circiit board is shown below. The colour video signal used for the video system alignment should satisfy the specification shown in the [Setup for Alignment].

[YC-6 Board]

1. SYNC AGC Preset Adjustment

   (1) Supply the VTR with the monoscope (W/B) signal and set up the E-E mode.

   (2) Check the following points with the oscilloscope.
   IC1 Pin 3 ...Sync ..... Approx. 6 Vp-p
   Pin 4 ...Burst flag ..... Approx. 5 Vp-p
   Pulse width: Approx. 4 μsec
   Pin 5 ... AGC CONT ..... Approx. 1.4 Vdc
   Pin 17 ..MONO ..... Approx. 0 Vdc

   (3) Connect the oscilloscope to pin 24 of IC1.

   (4) Adjust RV1 for the sync signal level of 300mV ± 12mVp-p. (See Fig. 4-4-1.)

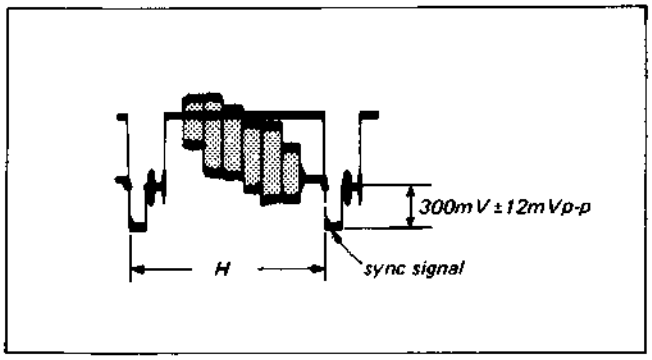

Fig. 4-4-1. Lebel adjustment of sync signal

2. Colour E-E Level Adjustment

   (1) Supply the VTR with the colour bar signal and set up the E-E mode.

   (2) Connect the oscilloscope to pin 22 of IC1.

   (3) Adjust RV14 for the sync signal level of 300 mV ± 15 mVp-p. (See Fig. 4-4-2.)

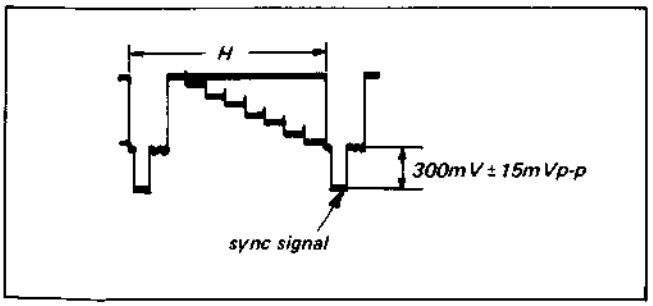

Fig. 4-4-2. Level adjustment of sync signal

3. Peak AGC (E-E Video Output Level) Adjustment

   (1) Supply the VTR with the colour bar signal and set up the E-E mode.

   (2) Connect the oscilloscope to pin 24 of IC1.

   (3) Adjust RV1 for maximum output level of the video signal and then adjust RV8 so that the output level of the video signal becomes 1.1 V ± 0.05 Vp-p. (See Fig. 4-4-3.)

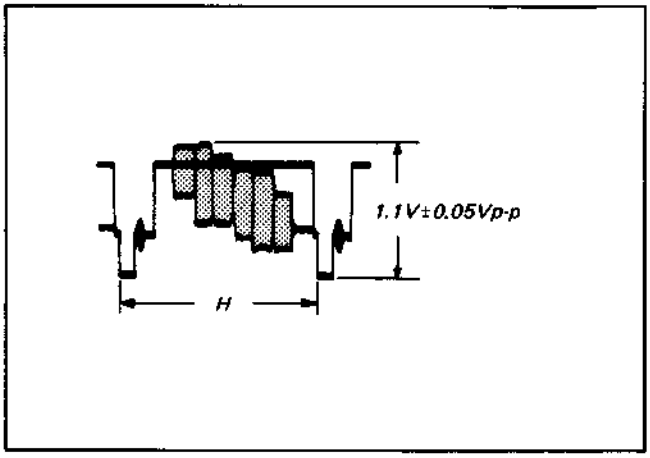

Fig. 4-4-3. Peak AGC adjustment

4. SYNC AGC Adjustment

   (1) Supply the VTR with the colour bar signal and set up the E-E mode.

   (2) Connect the oscilloscope to pin 24 of IC1.

   Note: The voltage at pin 17 of IC1 is approximately 0 Vdc

   (3) Adjust RV1 so that the sync signal level is 300 mV ± 12 mVp-p. (See Fig. 4-4-4.)

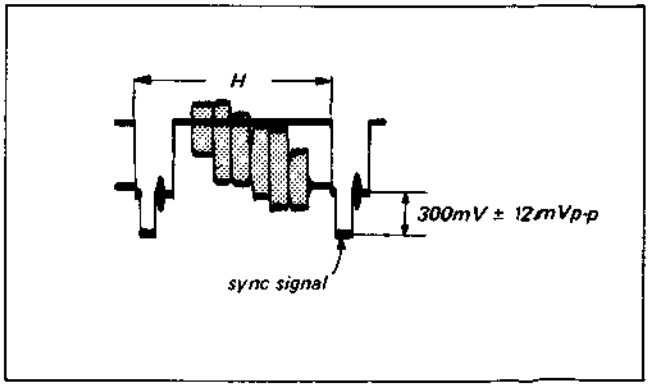

Fig. 4-4-4. Sync AGC adjustment

5. Compress Adjustment

(1) Do not supply the VTR with any signal and set up the E-E mode.

(2) Connect the digital voltmeter to the points shown in Fig. 4-4-5.

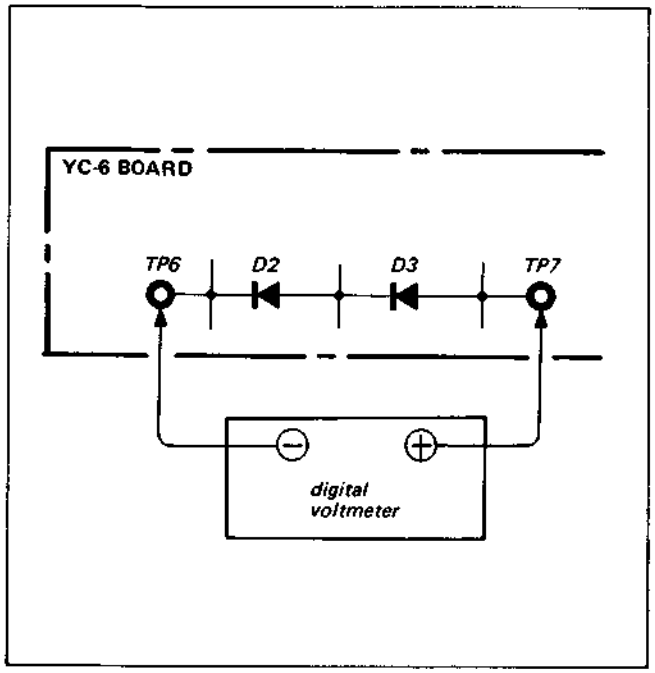

Fig. 4-4-5. Measurement points

(3) Adjust RV4 for 0.454 Vdc.

6. White Clip Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Connect the oscilloscope to TP4 (collector of Q8).

(3) Adjust RV5 so that the signal tip (white peak) is 220% ± 5%. (See Fig. 4-4-6.)

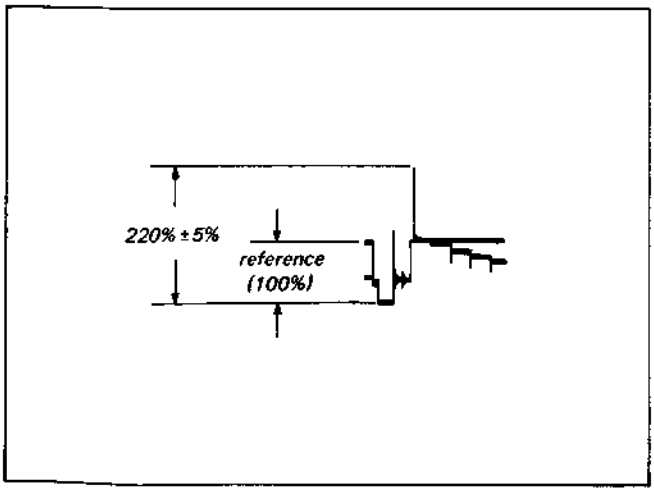

Fig. 4-4-6. White clip adjustment

7. Dark Clip Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Connect the oscilloscope to TP4 (collector of Q8).

(3) Adjust RV6 so that the signal tip (dark peak) is 170% ± 5%. (See Fig. 4-4-7.)

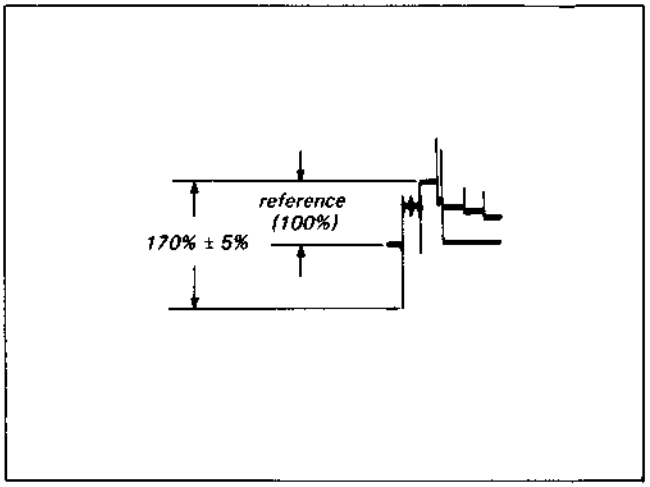

Fig. 4-4-7. Dark clip adjustment

8. Expand Adjustment

(1) Do not supply the VTR with any signal and set up the E-E mode.

(2) Connect the digital voltmeter to the points shown in Fig. 4-4-8.

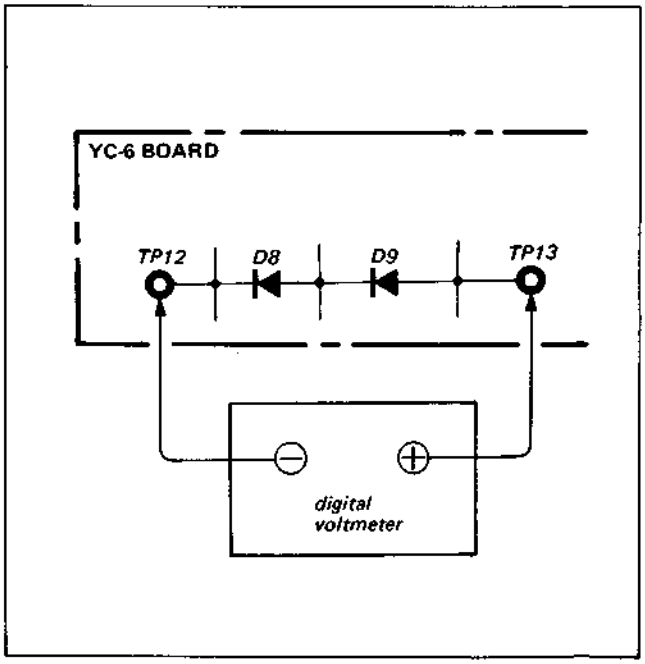

Fig. 4-4-8. Measurement points

(3) Adjust RV10 for 0.57 Vdc.

9. AFC Adjustment

(1) Supply the VTR with a video signal and set up the E-E mode.

(2) Connect the oscilloscope to TP19 (pin 4 of IC1, H.Sync).
TRIG: EXT (IC1-4 pin, H.Sync)

(3) Adjust RV21 so that the lock point is the center of the trapezoidal waveform. (See Fig. 4-4-9.)

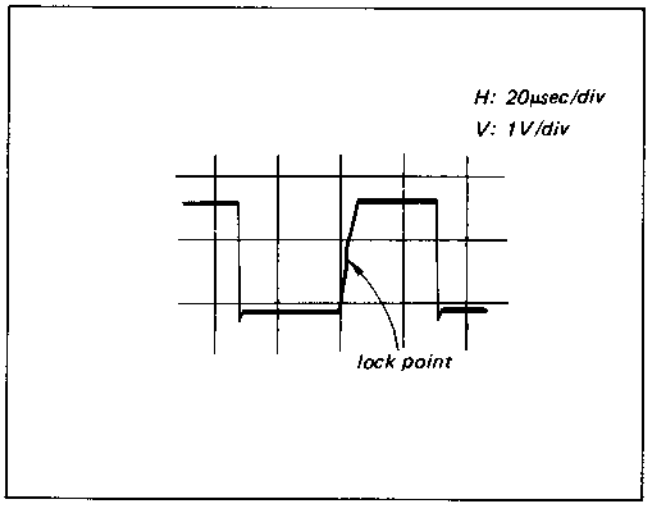

Fig. 4-4-9. AFC adjustment

10. AFC Offset Adjustment

(1) Supply the VTR with the video signal and set up the RECORD mode.

(2) Connect the oscilloscope to TP19 (pin 5 of IC6).
TRIG: EXT (TP3, RF SW PULSE, on RF-2 board)

(3) Adjust RV22 so that the lock points of the A-CH and the B-CH are at the points shown in Fig. 4-4-10.

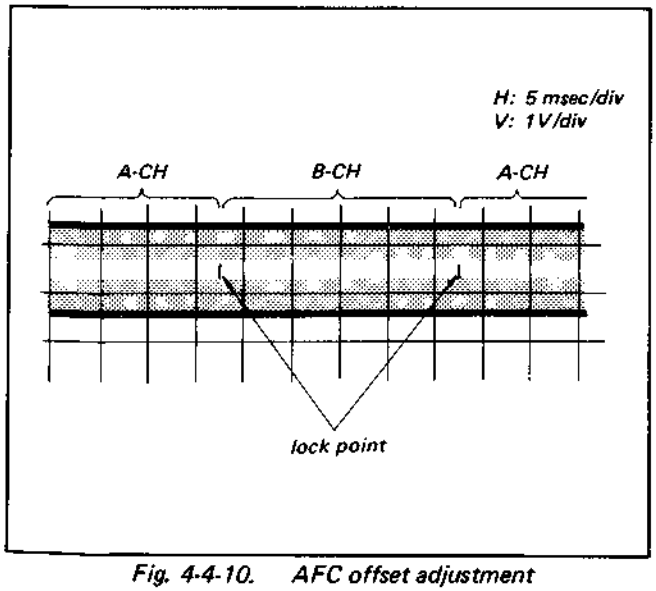

Fig. 4-4-10. AFC offset adjustment

11. Comb Filter Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Check that the chroma signal level at TP22 (pin 8 of IC2) is approximately 1.5 Vp-p. (See Fig. 4-4-11.)

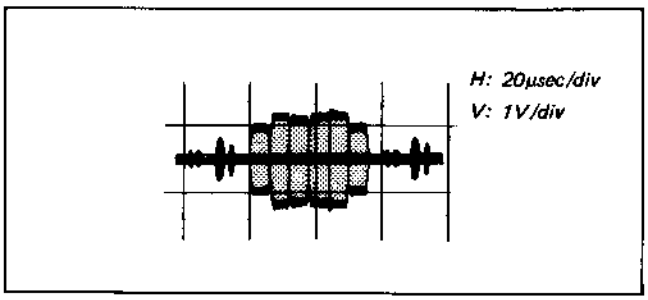

Fig. 4-4-11. Level check of chroma signal

(3) Connect the oscilloscope to TP21 (junction of R191 and R192).

(4) Adjust LV1 and RV19 alternately for minimum level of the chroma signal. (See Fig. 4-4-12.)

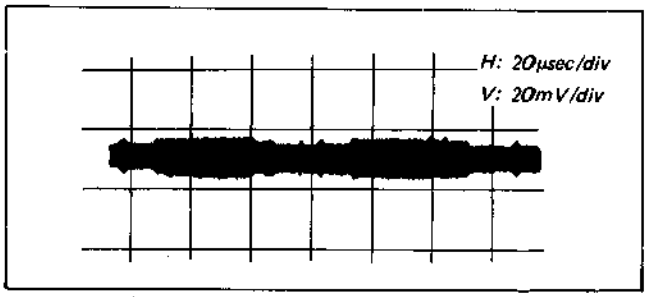

Fig. 4-4-12. Comb filter adjustment

(5) Check that the difference in the signal levels at TP21 and TP22 is more than 26 dB after the adjustment.

12. ACC Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Connect the oscilloscope to TP22 (pin 8 of IC2).

(3) Adjust T5 for minimum output level.

(4) Adjust RV16 for 1.5 V ± 0.1 Vp-p. (See Fig. 4-4-13.)

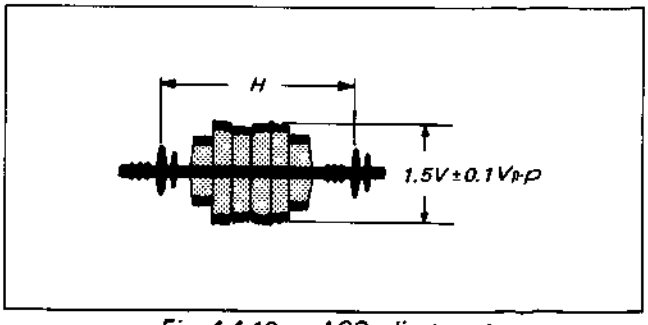

Fig. 4-4-13. ACC adjustment

13. X'tal Oscillation Adjustment

(1) Set up the PLAY mode.

(2) Connect the frequency counter to TP24 (emitter of Q57).

(3) Adjust T7 for an oscillating frequency of 4.433619 MHz.

(4) Check that the output level is 0.5 V ± 0.05 Vp-p. (See Fig. 4-4-14.)

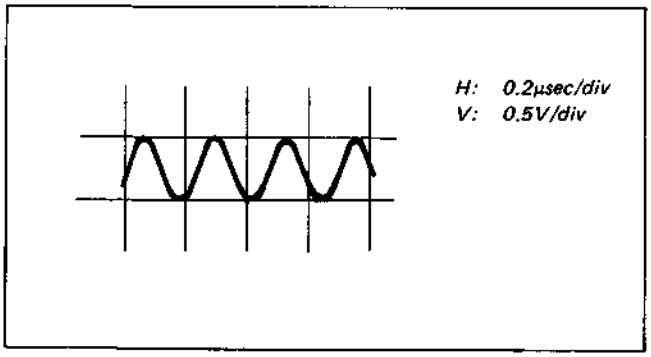

Fig. 4-4-14. Output level check

14. VXO Oscillating Frequency Adjustment

(1) Do not supply the VTR with any signal and set up the E-E mode.

(2) Connect the frequency counter to TP24 (emitter of Q57).

(3) Adjust T8 so that the oscillating frequency is 4.433619 MHz ± 5 Hz.

(4) Check that the output level is 0.7 V ± 0.2 Vp-p. (See Fig. 4-4-15.)

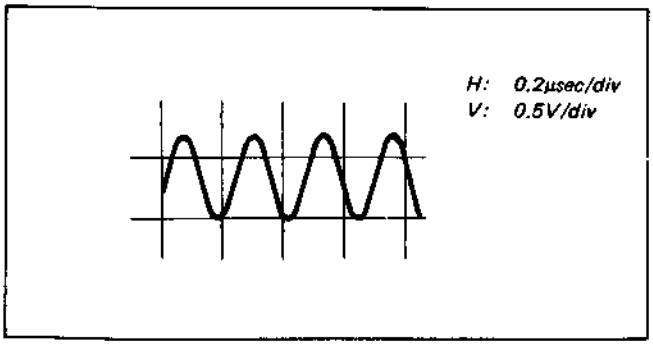

Fig. 4-4-15. Output level check

15. Pilot Burst Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Connect the oscilloscope to TP26 (emitter of Q56).

(3) Adjust RV18 so that the level of the chroma signal becomes equal to the one of the burst signal. (See Fig. 4-4-16.)

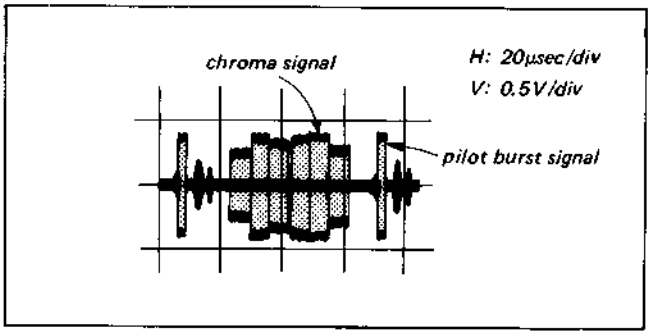

Fig. 4-4-16. Pilot burst adjustment

16. Chroma Record Current Adjustment

(1) Supply the VTR with the colour bar signal and set up the E-E mode.

(2) Connect the oscilloscope to TP26 (emitter of Q56).

(3) Adjust RV20 for a chroma signal level of 0.35 V ± 0.05 Vp-p. (See Fig. 4-4-17.)

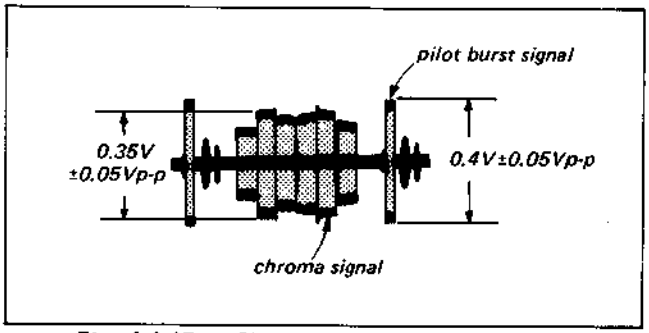

Fig. 4-4-17. Chroma record current adjustment

(4) Check that the level of the pilot burst signal is 0.4V ± 0.05 Vp-p. (See Fig. 4-4-17.) If not, adjust RV18.

17. Test Signal Frequency Adjustment

[Adjustment with Frequency Counter]

(1) Turn on the TEST SIG switch.

(2) Connect the frequency counter to TP27 (collector of Q78).

(3) Adjust RV24 for 15.625 kHz ± 100 Hz.

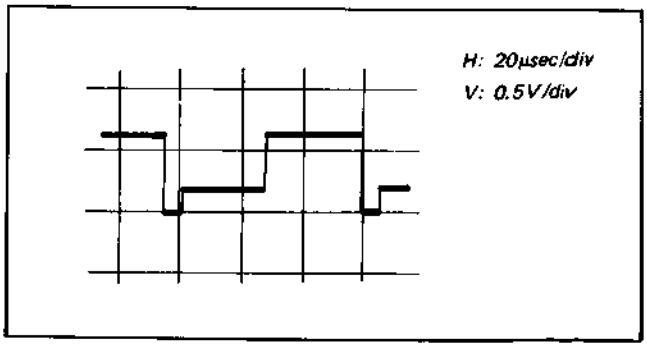

Fig. 4-4-18. Output waveform

[Adjustment by Observing Monitor TV]

(1) Turn on the TEST SIG switch.

(2) Adjust RV24 so that the monitor TV picture becomes as shown in Fig. 4-4-19.

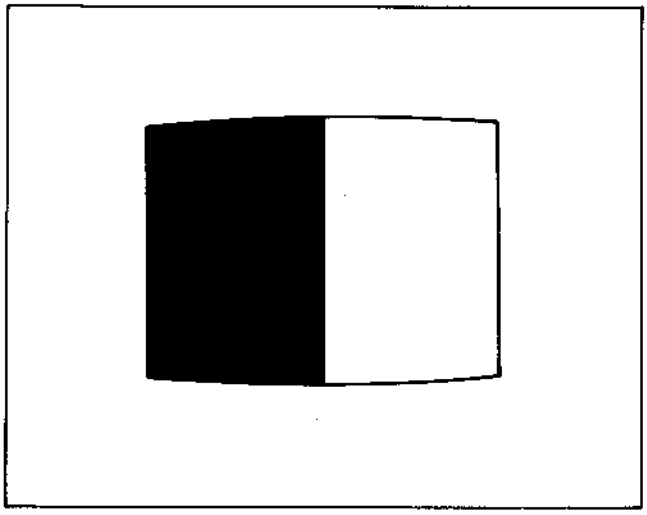

Fig. 4-4-19. Test signal adjustment

[RF-2 Board]

18. Record Current Adjustment

(1) Set up the no-signal input state and set up the RECORD mode.

(2) Connect the oscilloscope to TP1 and the GND probe to TP2.

Note: Since TP2 is the REC $\overline{\text{PAUSE}}$ 12V line, do not connect the GND probe to the points other than TP2.

(3) Adjust RV6 for a signal level of 130 mVp-p. (See Fig. 4-4-20.)

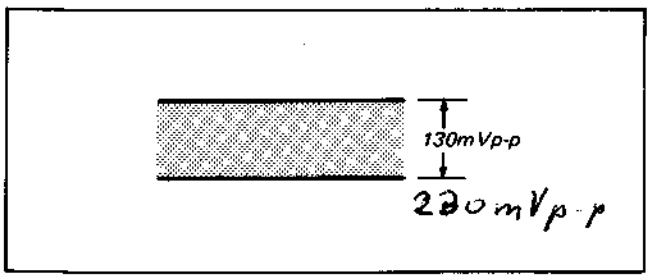

Fig. 4-4-20. Record current frequency characteristic adjustment

19. Playback Amplifier Frequency Characteristic Adjustment

(1) Play back the RF sweep signal segment of the alignment tape.

(2) Connect the oscilloscope to TP5.
TRIG: EXT (TP3, RF SW PULSE)
TRIG SLOPE { + ... CH-B / − ... CH-A

(3) Adjust the TRACKING knob for maximum signal level.

(4) Make the signal level from 1 MHz to 5.2 MHz flat.

A-CH RV1
B-CH RV2

(See Fig. 4-4-21.)

(5) Adjust RV3 so that the signal levels between 1 MHz and 2 MHz are all the same in the A-CH and B-CH.

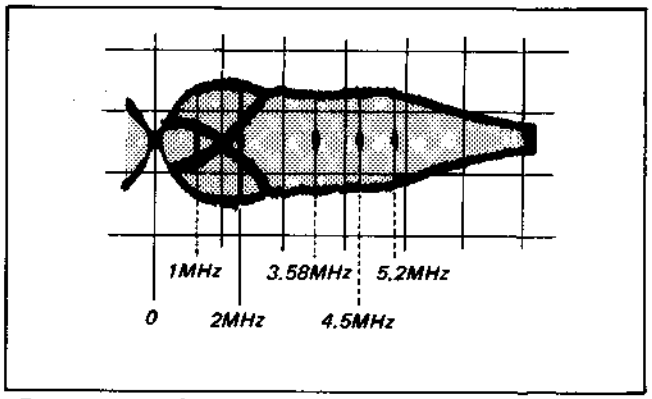

Fig. 4-4-21. Playback amplifier frequency characteristic adjustment

20. Dropout Compensation Adjustment

(1) Play back a blank tape.

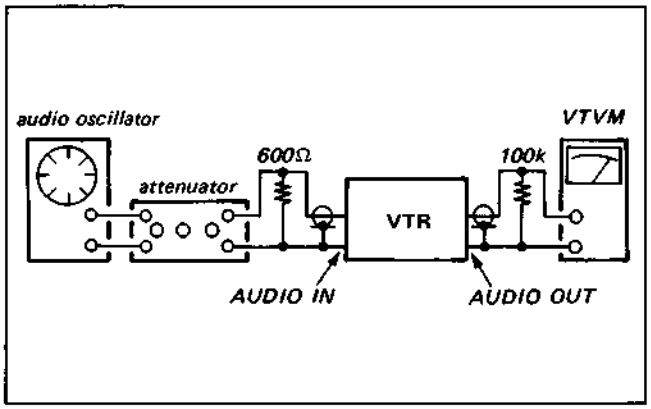
(2) Connect the oscilloscope to pin 2 of IC1.
INPUT: DC range

(3) Set RV4 to the point where the voltage at pin 2 of IC1 changes to 0.6 Vdc from 0 Vdc.

(4) Play back a recorded tape which has dropouts and check that the dropouts are compensated.

4-5. AUDIO SYSTEM ALIGNMENT (AS-6 Board)

[Connection of Relative Equipment]



[Adjustment Sequence]

1. Audio Head Adjustment
2. Playback Frequency Characteristic Adjustment
3. Playback Output Level Adjustment
4. Bias Oscillator Check
5. Bias Trap Adjustment
6. Record Bias Adjustment
7. Record Level Adjustment
8. Audio Dubbing Bias Adjustment
9. Overall Frequency Characteristic Check
10. Overall S/N Ratio Check
11. Overall Distortion Check

1. Audio Head Adjustment (Refer to the Section 3-19)
2. Playback Frequency Characteristic Adjustment
   (1) Play back the 333 Hz and 5 kHz segments of the alignment tape.
   (2) Adjust RV404 so that the output level difference between 333 Hz and 5 kHz is within +1.5 ± 1 dB.
3. Playback Output Level Adjustment
   (1) Play back the 333 Hz segment of the alignment tape.
   (2) Adjust RV403 so that the output level is within −25 ± 1 dB.
4. Bias Oscillator Check
   (1) Insert the cassette and set up the RECORD mode.
   (2) Connect a pickup coil (approx. 33mH) to the frequency counter and move the counter to T401 (in the shield case).
   (3) Check that the oscillating frequency is 65 kHz ± 6.5 kHz.
5. Bias Trap Adjustment
   (1) Set the input signal level to zero. (Set the audio oscillator output to zero and the attenuator to maximum.)
   (2) Connect the oscilloscope to the collector of Q406.
   (3) Adjust LV401 for minimum bias leak.
   Value: minimum level below 1 Vp-p.
6. Record Bias Adjustment

   Check that the playback frequency characteristic adjustment has been completed.
   (1) Connect TP402 and TP403 (GND) with a jumper so as to turn off the AGC operation.
   (2) Set the oscillator frequency to 333 Hz and adjust the AUDIO OUT terminal level with the attenuator for −25 dB.
   (3) Record the signal.
   (4) Change the audio signal to 7 kHz at −25 dB.
   (5) Record the signal.
   (6) Play back the recorded signals.
   (7) Ensure that the output level of 7 kHz is within ±1 dB against the one of 333 Hz.
   (8) If not, adjust RV402 and repeat Steps (2) through (7) until the specification is satisfied.
   (9) Remove the jumper connected to TP402.
7. Record Level Adjustment
   (1) Connect TP402 and TP403 (GND) with a jumper so as to turn off the AGC operation.
   (2) Set the oscillator frequency to 333 Hz and adjust the AUDIO OUT terminal level with the attenuator for −5 dB.
   (3) Record the signal.
   (4) Play back the recorded signal.
   (5) Ensure that the output level is within −5 ± 1 dB.
   (6) If not, adjust RV401 and repeat Steps (2) through (5) until the specification is satisfied.
   (7) Remove the jumper connected to TP402.
8. Audio Dubbing Bias Adjustment
   (1) Connect TP402 and TP403 (GND) with a jumper so as to turn off the AGC operation.
   (2) Set the oscillator frequency to 333 Hz and adjust the AUDIO OUT terminal level with the attenuator for −25 dB.
   (3) Set up the AUDIO DUB mode.
   (4) Change the oscillator signal to 7 kHz, −25 dB and set up the AUDIO DUB mode.
   (5) Play back the signals.
   (6) Ensure that the output level of 7 kHz is 0 ± 1 dB against the one of 333 Hz.

(7) If not, adjust LV402 and repeat Steps (2) through (6) until the specification is satisfied.

(8) Remove the jumper connected to TP402.

9. Overall Frequency Characteristic Check

(1) Set the oscillator frequency to 333 Hz and adjust the AUDIO terminal level with the attenuator for −25 dB.

(2) Record the signal.

(3) Change the oscillator signal to 50 Hz, 100 Hz, 333 Hz, 3 kHz, 5 kHz and 10 kHz.

(4) Record the signals.

(5) Play back the recorded signals.

(6) Ensure that the output levels are within the specified values. (See Fig. 4-5-1.)

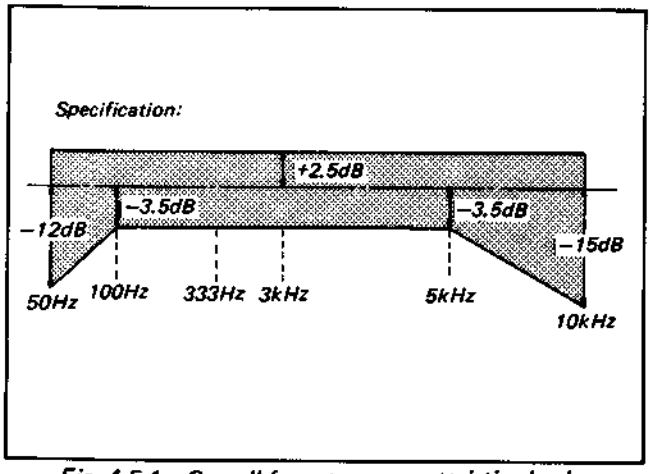


Fig. 4-5-1. Overall frequency caracteristic check

10. Overall S/N Ratio Check

(1) Terminate the AUDIO IN terminal.
(no signal input)

(2) Insert the cassette and set up the record mode.

(3) Open the AUDIO IN terminal and supply the 333 Hz at −10 dB signal to AUDIO IN terminal.

(4) Record the signal

(5) Play back the two segments.

(6) Ensure that the output level difference between two segments is more than 40 dB.

11. Overall Distortion Check

(1) Set the oscillator frequency to 400 Hz and adjust the AUDIO OUT terminal level with the attenuator for −10 dB.

(2) Record the signal.

(3) Connect the distortion meter to the AUDIO OUT terminal.

(4) Play back the recorded signal and ensure that the distorition is less than 4%.

4-6. TUNER BLOCK SYSTEM ALIGNMENT

1. 112V Adjustment (TU-19 board)
(1) Receive the any telecast signal.
(2) Connect the digital voltmeter to pin 7 of CN8104.
(3) Adjust RV101 for 112 ± 0.5 V dc.

2. 9V Adjustment (CH-6 board)
(1) Receive the any telecast signal.
(2) Connect the VOM to emitter of Q403.
(3) Adjust RV401 for 9 ± 0.1 V dc.

3. VIF AGC Adjustment (IF-10 board)
(1) Receive the colour bar signal (including 100% white, 65 dB/75Ω open ±5 dB) at the ANT terminal from the colour bar genelator or equivalent.
(2) Fine-tune the local adjustment.
(3) Connect the oscilloscope to emitter of Q502.
(4) Adjust RV501 for 2.8 Vp-p.

4. TU AGC Adjustment (IF-10 board)
(1) Receive the colour bar signal (71 dB/75Ω open ±2 dB) at the ANT terminal from the colour bar generator or equivalent.
(2) Fine-tune the local adjustment.
(3) Connect the oscilloscope to pin 5 of IC501.
Input range: DC
(4) Adjust RV502 for 8.5 ± 0.1 V dc.

4-7. TIMER SYSTEM ALIGNMENT

1. Clock OSC Adjustment (TM-14 board)
(1) Connect the frequency counter to TP2 (pin 18 of IC101).

Note: The input impedance of the frequency counter should be more than 10 MΩ.

(2) Adjust RV101 for 333 kHz.
