Super Betamax

SPECIFICATIONS

This manual contains the SUPPLEMENT-1.

SYSTEM

Video recording system: Rotary two-head helical scanning
Video signal: CCIR standards, and PAL color
Channel coverage: VHF: Western European channels E2-E12
UHF: Western European channels E21-E68
(Up to 30 programs can be preset)
Aerial input: 75 ohms, asymmetrical aerial socket
RF output signal: UHF channels E30 to E39 (variable)
75 ohm, unbalanced

VIDEO

Input: VIDEO IN: Phono jack: 1.0 V $^{+1.0}_{-0.5}$ V (p-p)
75 ohm, unbalanced, sync negative
Output: VIDEO OUT
Phono jack: 1.0 ±0.1 V (p-p)
75 ohm, unbalanced, sync negative

AUDIO

Input: AUDIO IN: Phono jack: 47 kohms, −10 dBs
(0 dBs ≈ 0.775 Vrms)
Output: AUDIO OUT
Phono jack:
Load impedance less than 10 kohms, −10 dBs
with 47 kohms load, unbalanced

TAPE TRANSPORT

Tape speed: 18.73 mm/sec.
Maximum recording time
2 hours 10 min. (with Sony L-500 cassette)
3 hours 15 min. (with L-750)
Fast forward/rewind time
Within 5 min. (with L-500)

TIMER

Clock: Crystal lock
Time indication: 24-hour cycle
Timer setting (Only for recording)
6 events/week, adjustable for any day or for all 7 days of the week

GENERAL

Power requirements
Spanish Model : 220V AC
Indonesia Model: 110, 127, 220 or 240V AC adjustable 50/60Hz
Power consumption
39 W
Storage temperature
−20°C to +60°C
Operating temperature
5°C to 40°C
Dimensions: 430 × 95 × 367 mm (W/H/D)
including projecting parts and controls
Weight: 8.0 kg

SUPPLIED ACCESSORIES

75 ohm coaxial cable for recorder to TV connection 1
Screwdriver for RF channel adjustment 1
Remote Commander RMT-146 with two IEC designation R6 batteries (size AA) 1

Design and specifications are subject to change without notice.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
3. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
4. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
5. Check the B+ voltage to see it is at the values specified.

SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY SHADING AND MARK ⚠ ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY. CIRCUIT ADJUSTMENTS THAT ARE CRITICAL TO SAFE OPERATION ARE IDENTIFIED IN THIS MANUAL. FOLLOW THESE PROCEDURES WHENEVER CRITICAL COMPONENTS ARE REPLACED OR IMPROPER OPERATION IS SUSPECTED.

TABLE OF CONTENS

SECTION 1
GENERAL

1-1. PRECAUTIONS

On safety

- Before operating, check that the operating power voltage and frequency of the unit are identical with those of your local power supply.
- Should any solid object or liquid fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it any further.
- Unplug the unit from the wall outlet if it is not to be used for an extended period of time. To disconnect the cord, pull it out by the plug. Never pull the cord itself.
- The unit is not disconnected from the mains (ac power source) as long as it is connected to the mains outlet, even if the unit itself has been turned off.

On installation

- Allow adequate air circulation to prevent internal heat build-up.
- Do not place the unit on surfaces (rugs, blankets, etc.) or near materials (curtains, draperies) that may block the ventilation slots.
- Do not install the unit near heat sources such as radiators or air ducts or in a place subject to direct sunlight, excessive dust, mechanical vibration or shock.
- The unit is designed for operation in a horizontal position. Do not install it in an inclined position.
- Keep the unit and cassette tapes away from equipment with strong magnets, as for example a microwave oven or a large loudspeaker.
- Do not place any heavy object on the unit.

On operation

- When the unit is not in use, turn off the power to conserve energy and to extend its useful life.
- Remove and store video cassettes after recording or playback.
- Store the cassettes in their cases and keep them in an upright position to prevent intrusion of dust and uneven winding.

On cleaning

Clean the cabinet, panel and controls with a soft dry cloth, or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of solvent, such as alcohol or benzine which might damage the finish.

On repacking

Do not throw away the carton and packing materials. They make an ideal container in which to transport the unit. When shipping the unit to another location, repack it as illustrated on the carton.

1-2. NOTE ON OPERATING VOLTAGE

Depending on the area to be used, the SL-F90 comes in two models to suit the local operating power voltage. Check which type your model is and be sure to follow Caution below before plugging the unit to the wall outlet.

	Voltage
Type 1 (Spanish Model) Rear panel 	220 V
Type 2 (Indonesia Model) Rear panel 	110/127/ 220/240 V

Caution

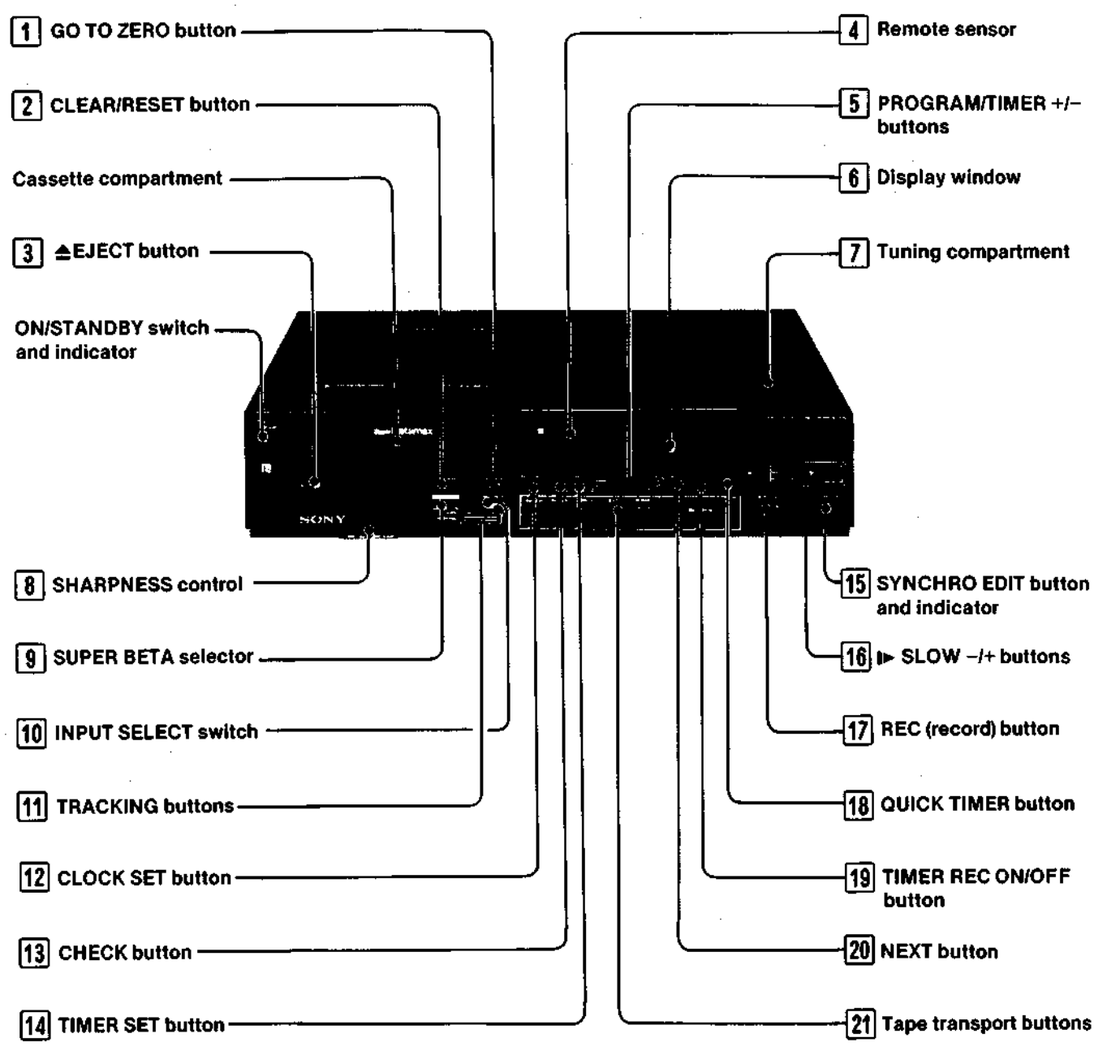
- **For the Spanish Model**
  Operate the unit only on 220 V AC.

- **For the Indonesia Model**
  Make sure to set the voltage selector in accordance to the power voltage of your area. The unit may suffer **serious damage** if the voltage selector is not set correctly.

1-3. LOCATION AND FUNCTION OF CONTROLS

For details on the use of each control, refer to the pages indicated in the black circles ●

Front



1 GO TO ZERO button
In stop mode, press to advance or rewind the tape approximately to the counter "0H00M00S" point.

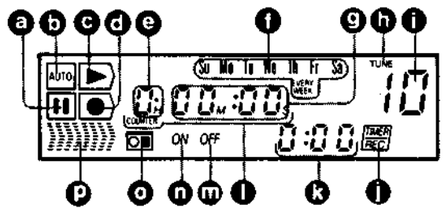
2 CLEAR/RESET button
Press to reset the tape counter to "0H00M00S" and also to clear the timer setting.

3 ⏏ EJECT button
Press to eject the cassette.

4 Remote sensor
Detects the signals transmitted from the Remote Commander.

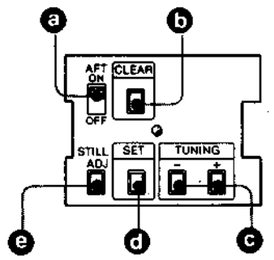
5 PROGRAM/TIMER +/– buttons
Press to select the programs and to set the clock or timer program.

6 Display window



- ⓐ Lights during pause
- ⓑ Lights during auto play, tape return play or automatic cassette eject
- ⓒ Lights during playback
- ⓓ Lights during recording
- ⓔ Timer program position during timer setting
- ⓕ Day indicator
- ⓖ Turn-on time of the timer during timer setting
- ⓗ Lights during TV channel presetting
- ⓘ Program number
- ⓙ Lights when TIMER REC ON/OFF or QUICK TIMER is pressed.
- ⓚ Clock display
  During timer setting, the turn-off time is displayed.
- ⓛ Tape counter
- ⓜ Turn-off indicator
- ⓝ Turn-on indicator
- ⓞ Lights when a cassette is inside
- ⓟ Speed and direction indicator of the tape movement

7 Tuning compartment ●



- ⓐ AFT switch
- ⓑ CLEAR button
- ⓒ TUNING button
- ⓓ SET button
- ⓔ STILL ADJ (adjust) button

8 SHARPNESS control
Adjusts the sharpness of the picture if necessary. Normally set the control at the center detent position.

9 SUPER BETA selector ⓲
Normally keep this selector at NORMAL. To record or play back in Super Beta, set to STD or PRO.

10 INPUT SELECT switch
Select the program to be recorded.
TUNER: For recording TV programs
LINE: For recording signals from the VIDEO IN and AUDIO IN

11 TRACKING buttons ⓯
Press if streaks, snow or noise band appear during normal or slow motion playback.

12 CLOCK SET button
Press to start the setting of the current time.

13 CHECK button
Press to check the contents of the timer presettings.

14 TIMER SET button
Press to start the setting or resetting of the timer recording.

15 SYNCHRO EDIT button and indicator ㉑ ㉒
Press to start and stop playback on the SL-F90 and recording on another VCR simultaneously, when editing a tape.

16 ▮▶ SLOW +/– buttons
Press to obtain a slow motion picture during playback or pause of playback.

17 REC button
Slide to the right to start the recording.

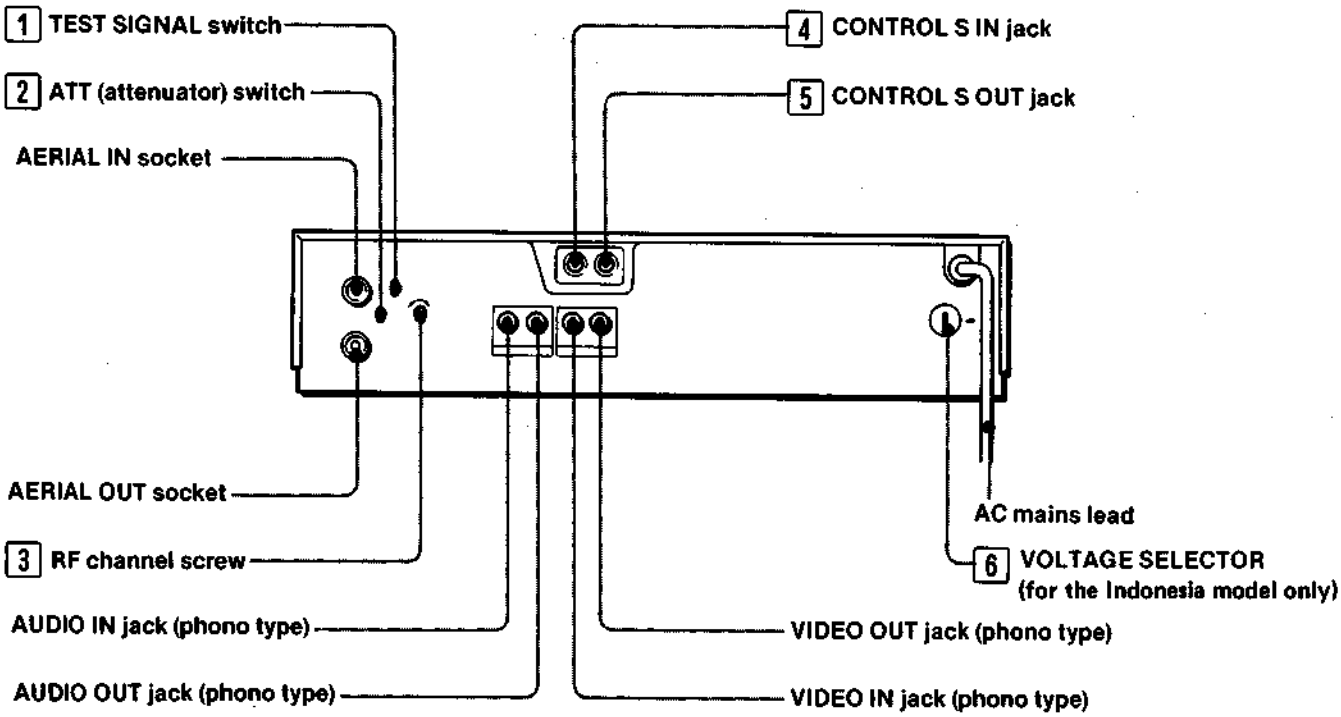
18 QUICK TIMER button ⓳
Press to start the timer recording quickly. The recording time is selected in 30 minute intervals, from 0:30 to 4:00. Press this button as many times as required until the desired recording time is displayed.

19 TIMER REC ON/OFF button
Press to activate the timer recording.

20 NEXT button
Press to advance to the next item to be set during clock or timer setting.

21 Tape transport buttons
◀◀ REW (rewind), ▶ PLAY, ▶▶ FF (fast forward), ■ STOP, ▮▮/▶◀ PAUSE/STILL, ▮▮▶ FRAME

REAR



1 TEST SIGNAL switch
Set to ON to obtain the test pattern for adjusting the TV so that it can receive the signal from the recorder.

2 ATT switch
Normally set this switch to DX. If the TV signal is very strong, set the switch to LOCAL.

3 RF CHANNEL screw
If there is interference on the factory-preset channel for RF output and the signal of this recorder cannot be displayed clearly on the TV screen, adjust this screw with the supplied screwdriver.

4 CONTROL S IN jack (mini type)
Connect to the CONTROL S output jack of other Sony products for various systematic operations.

5 CONTROL S OUT jack (mini type)
Connect to the CONTROL S input jack of another Sony VCR for syncro editing operation.

6 VOLTAGE SELECTOR (for the Indonesia model only)
Set to 110, 127, 220, or 240 V according to your local power line voltage.

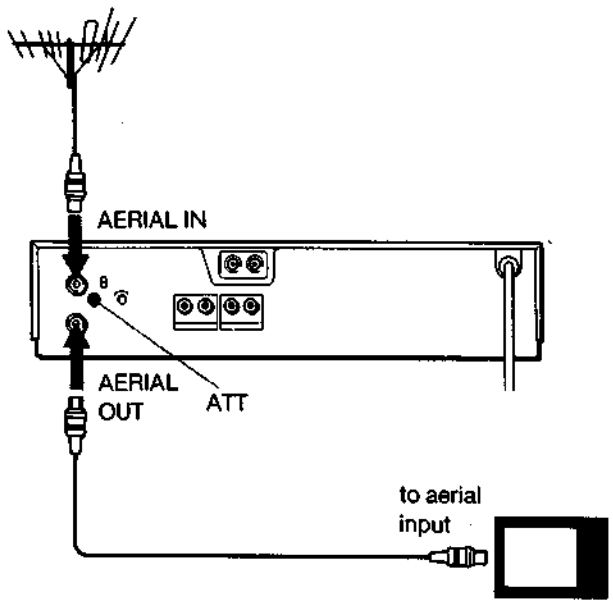
1-4. CONNECTIONS

Notes

- Unplug each unit from the mains outlet before making the following connections.
- Make sure the connections are secure. A loose connection may cause a noisy picture.

CONNECTING A TV

1 Remove the aerial cable from its socket in the back of the TV. Then connect the aerial cable to the AERIAL IN socket at the rear of the recorder.
2 Connect the aerial input of the TV to the AERIAL OUT socket of the recorder, using the supplied cable. Each socket accepts only one particular end of the cable.
3 Connect the recorder and the TV to the mains supply with their own mains leads.
4 Turn on the power of each unit.

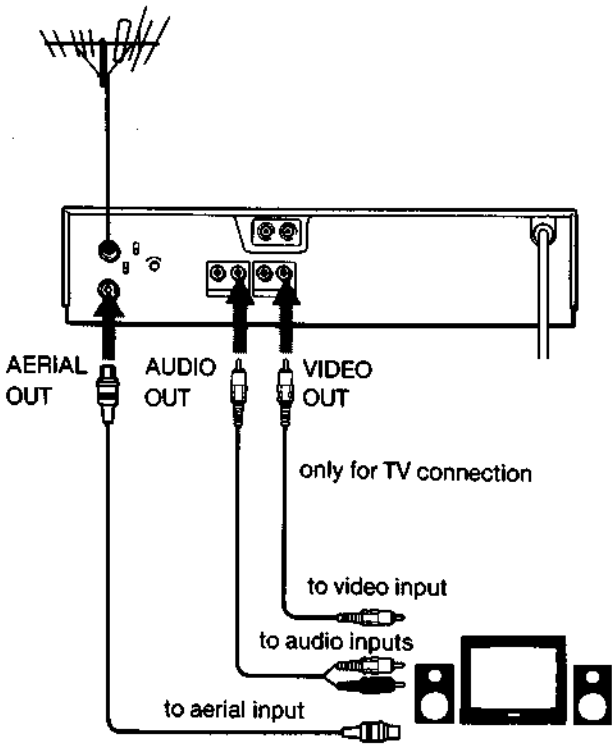


Now the recorder is set up to intercept all signals from the aerial on their way to the TV. The recorder then passes on the signals to the TV. This is why you can record a program while it is being shown on the TV, or while the TV is showing another program, or even when the TV is turned off.

Notice for customers in a strong signal area
The recorder has a booster to assure stable TV reception. However, in areas near TV stations, where the TV signal is very strong, the picture may be affected by the booster. If this happens, set the ATT switch on the rear panel to LOCAL.

CONNECTION FOR BETTER PLAYBACK PICTURE AND SOUND

If your TV receiver/color monitor is equipped with video/audio inputs



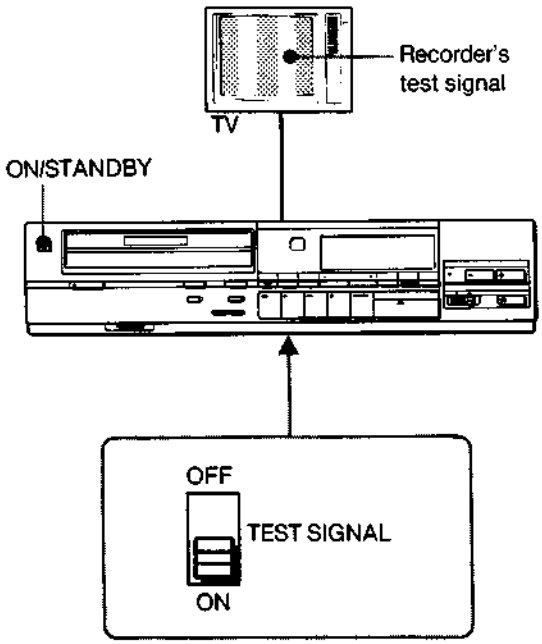
Connection with a color monitor
Connection between the recorder AERIAL OUT socket and the color monitor is not possible since the monitor is not equipped with a tuner. For this reason, you cannot watch a TV program while recording another program on the recorder.

1-5. ADJUSTING THE TV

One of the television program positions must be adjusted to receive the signal from the recorder.
Note that the adjustment is not necessary, however, when the recorder is connected to the video/audio inputs on the TV receiver/monitor.

1 After making the connections, press the ON/STANDBY button.
2 Make sure that the recorder is in the stop mode.
3 Set the TEST SIGNAL switch located at the rear of the recorder to ON. The test signal is transmitted on a channel between UHF channels E30 and E39.
4 Turn on the TV and select a program position which is not being used to receive a TV station. Tune the channel until you see a clear black and white pattern on the TV screen and you hear a continuous tone. This is the recorder's test signal.

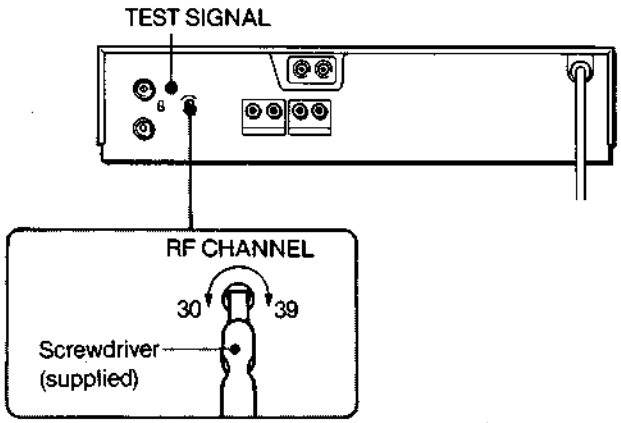
— If you are not sure how to adjust your TV, please refer to the TV's instruction manual or consult your dealer.



Whenever you use the video recorder, you should set the TV to the program position selected in this adjustment.

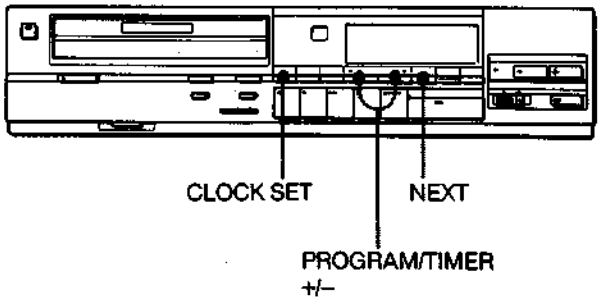
If the test picture is free of disturbance, the TV adjustment is complete. Set the TEST SIGNAL switch to OFF.

If the test picture is not free of disturbance
1 Reset the TEST SIGNAL switch to OFF.
2 Adjust the channel of the TV to a channel between UHF channels E30 and E39 with the tuning control or the fine tuning control on the TV, so that the TV screen shows no picture and so that a steady rustling sound or no sound is heard.
3 Set the TEST SIGNAL switch to ON again.
4 Slowly turn the RF CHANNEL screw on the back of the recorder with the supplied screwdriver, until you see an undistorted test pattern on the TV screen.
5 Now the TV adjustment is complete. Reset the TEST SIGNAL switch to OFF.



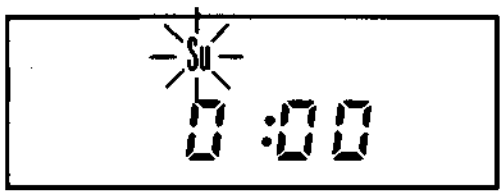
1-6. SETTING THE CLOCK

When you connect the AC power cord to a wall outlet, the clock indicates "0:00" and it will blink to show that the clock is ready to be set.



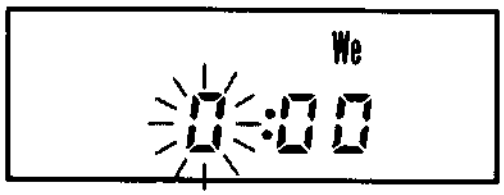
Example: to set for Wednesday afternoon at 3:56

1 Press CLOCK SET.



Set the day with the + or – button until "We" appears.

2 Press NEXT.

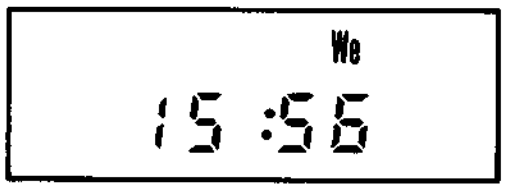


Set the hour with the + or – button until "15:00" appears.

3 Press NEXT.

Set the minute with the + or – button until "15:56" appears.

4 Press NEXT.
(For accurate setting, press NEXT at the same time with an announced time signal.)
The clock will now show the current time.



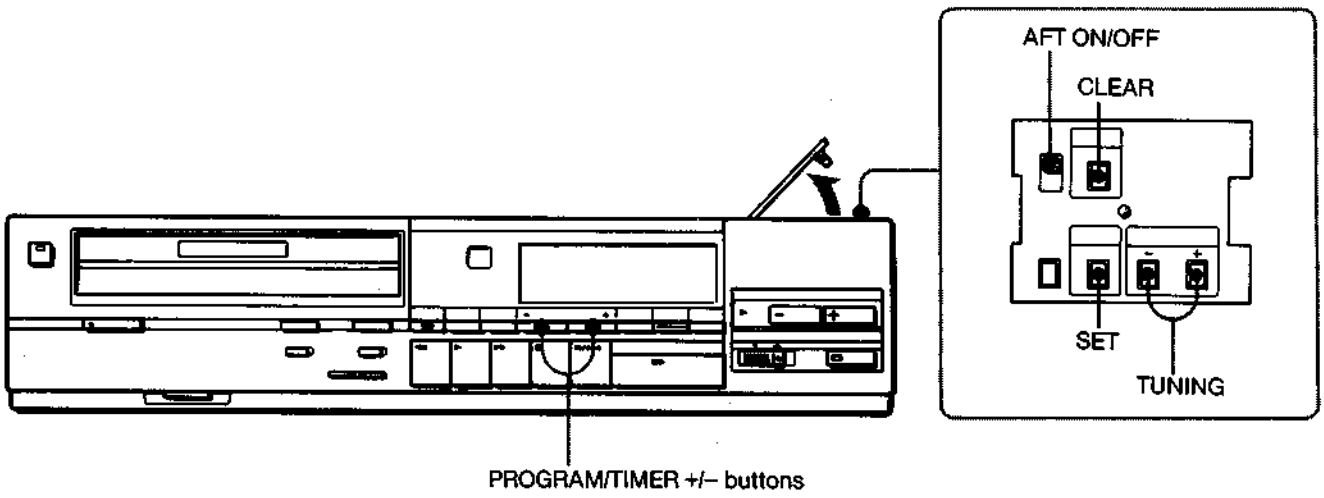
The dots of the colon (:) alternately blink every 30 seconds.

PROGRAM/TIMER +/– buttons
The + and – buttons can be used in two ways:

When you keep a button pressed, the digits will advance continuously until the button is released.

When you press and immediately release a button, the digits will advance by one.

1-7. PROGRAMING TV STATIONS



This recorder has 30 program positions. Once you preset the programs broadcast in your area, program selection is simply made by pressing the + or – button on the recorder or the hand-held Remote Commander.
To start programing, turn on the SL-F90 by pressing ON/STANDBY switch and set the INPUT SELECT switch to TUNER.

1 Press the SET button.
2 Press the + or – PROGRAM/TIMER button to select the program position.
  + for a higher-numbered program position
  – for a lower-numbered program position
3 Press the + TUNING button to locate a station with higher frequency and the – TUNING button to locate a station with lower frequency. The tuning indicator in the display window shows the approximate location of the current channel. When a station has been received, the search will stop. Press the + or – TUNING button again, until the desired station is received.

Repeat steps 2 and 3 for all the desired stations.

4 Press the SET button again so that the tuning indicator disappears.

To cancel an unused program

1 Select the program to be cancelled with the + or – PROGRAM/TIMER button.
2 Press the SET button.
3 Press the CLEAR button.
4 Press the SET button again.

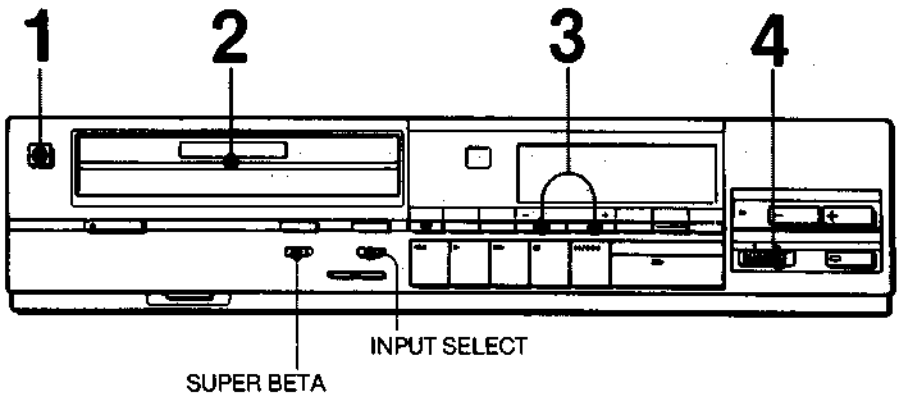
Then the cancelled program will be skipped when the + or – PROGRAM/TIMER button, or the + or – side of the PROGRAM button on the Remote Commander is pressed. When the corresponding program number button on the Commander is pressed, the sound of the cancelled program will be cut out.

To fine tune a station

If the picture of a particular station is not acceptable, check that the SET button is set to OFF, set the AFT switch to OFF and keep the + or – TUNING button pressed until the picture becomes clear. To view this particular station, set the AFT switch to OFF.

1-8. RECORDING TV PROGRAMS

OPERATION **Numbers in the illustration show the sequence of operation.**

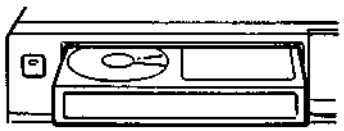


Preparation

- Check the positions of the selectors.
  SUPER BETA → Normally NORMAL
  INPUT SELECT → TUNER
- Turn on the TV and select the program for the recorder.

1 Turn on the power.

2 Insert a cassette.
Insert the cassette with the side that has the window up (you can see the tape through the window).



3 Select the program to be recorded with the + or – button.

4 Slide REC to the right. The recording will begin.

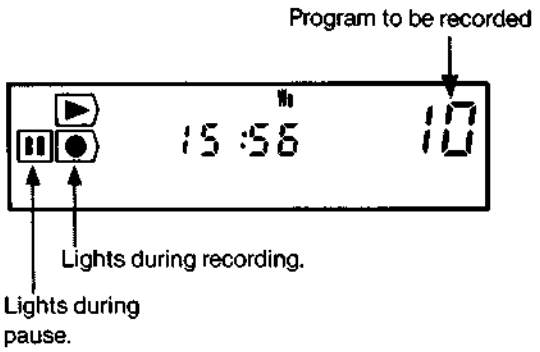
To stop recording, press ■.
When the tape reaches its end, it will be rewound to the beginning.

To eject the cassette, press ⏏ EJECT.

To turn off the power, press ON/STANDBY.

To stop the tape momentarily
Press ⏸/▶|◀. The TV program can still be seen on the TV, but the picture will not be recorded.
To resume recording, press ⏸/▶|◀ again.
To protect the video heads and the tape, the pause mode will be automatically released after about 8 minutes and **recording will stop.**

Check in the window



CAUTION
Television programs, films, video tapes and other materials may be copyrighted.
Unauthorized recording of such material may be contrary to the provision of the copyright laws.

Note
The power can be automatically turned on by inserting a cassette without pressing ON/STANDBY.

In case you want to record a tape which is to be played back on another recorder from the very beginning of the tape, run the tape for about 15 seconds before starting recording. Otherwise you may miss the starting point during playback on the other machine.

SUPER BETA selector

NORMAL position: Normally keep the selector in this position. When playing back tapes recorded on other non-Super Beta recorders or tapes recorded on this recorder by setting this selector to the NORMAL position, set the selector in this position.

SUPER BETA STD (standard) position: In this position, high quality recording and playback picture are obtained.

SUPER BETA PRO position: If you use the highest-grade tape such as Sony PRO-X or equivalent tapes from other tape manufactures, further enhanced picture quality is attained. With lower-grade tapes, however, the picture quality will suffer somewhat.

Note
The picture quality will suffer somewhat, if a tape recorded in the SUPER BETA PRO or STD position is played back on other non-Super Beta recorders, or on this recorder with this selector set to NORMAL.

TO START RECORDING FROM A PARTICULAR POINT

You can decide the starting point for recording while watching the playback picture or by searching for the point using the Picture Search and Skip Scan (on page 15) functions.

1 Search for the point where you wish to start recording on the tape by playing back the tape or using the Picture Search or the Skip Scan function.

2 Press ⏸/▶◀ to stop the tape where you wish to start recording.

3 Slide REC to the right. The recorder will enter the recording pause mode and the picture selected by INPUT SELECT will appear on the monitor screen.

4 Press ⏸/▶◀ to release the pause mode. Recording starts.

TO VIEW ONE TV PROGRAM WHILE RECORDING ANOTHER

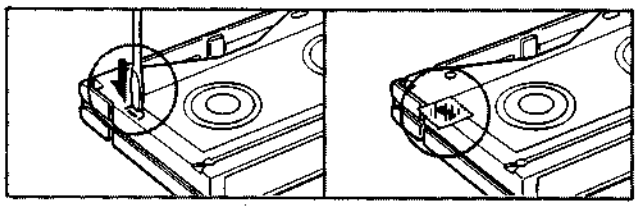
Select the channel you want to view on the TV.

TO KEEP A RECORDED PROGRAM FROM BEING ACCIDENTALLY ERASED

When a new recording is made on a previously recorded cassette, the previous recording will be automatically erased.

To avoid erasing a recording
Break off the safety tab using a screwdriver or similar object.

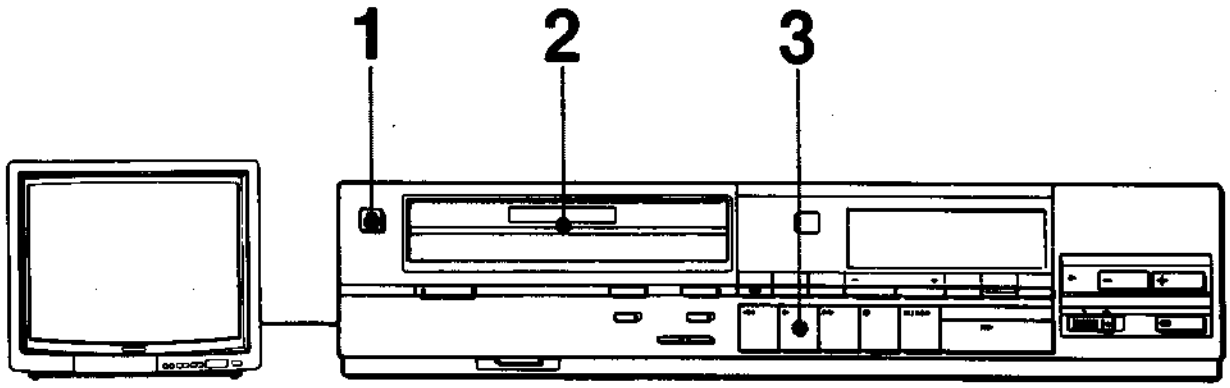
To re-record on a cassette which has had the safety tab removed
Cover the slot with a piece of plastic tape.



If you activate the ● RECORD, TIMER REC ON/OFF, VIDEO INSERT or AUDIO INSERT button with a cassette with its safety tab removed inserted, the cassette will be automatically ejected.

1-9. PLAYBACK

OPERATION **Numbers in the illustration show the sequence of operation.**



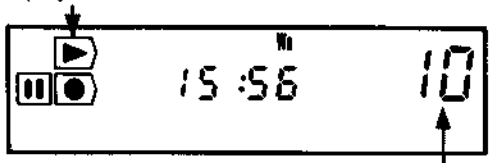
1 Turn on the power.

2 Insert a cassette.

3 Press ▶ PLAY.

Check in the window

Lights during playback.

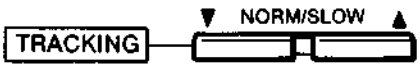


Channel previously viewed.

AUTO PLAY
— To play back a tape from the beginning of the tape after rewinding
Press ▶ PLAY while holding ◀◀ REW depressed. After the tape is completely rewound, it will be automatically played back.

WHEN YOU PLAY BACK A TAPE RECORDED ON ANOTHER VCR

- If streaks or snow appear, press TRACKING ▲ or ▼ until the best possible picture is obtained. After viewing that particular tape, press TRACKING ▲ and ▼ simultaneously to reset the tracking to the standard position.



- To get a sharp picture, turn SHARPNESS towards the right.

SOFT — SHARPNESS — SHARP

1-10. VARIOUS PLAYBACK MODES

PICTURE SEARCH

— Viewing the picture at a fast speed to find a particular scene

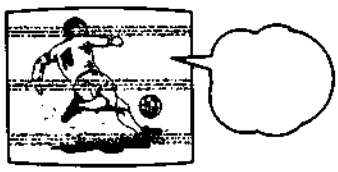
Keep pressing ▶▶ FF or ◀◀ REW during playback.
When you release the button, normal playback will be resumed.

SKIP SCAN

— Viewing the picture momentarily during fast-forward or rewind

Keep pressing ▶▶ FF or ◀◀ REW during fast-forward or rewind mode.
When you release the button, the fast-forward or rewind mode will be resumed.

Streaks will appear and sound will be muted in the Picture Search and Skip Scan pictures.



STILL PICTURE

Press ❚❚/▶|◀ during playback (in normal or slow mode). The sound is muted.
Press ❚❚/▶|◀ again or press ▶ PLAY to resume normal playback.
To protect the video heads and the tape, the pause mode will be automatically released after about 8 minutes and playback will be resumed.

FRAME-BY-FRAME PICTURE

Press ❚❚▶ FRAME in still picture mode.
Press ❚❚/▶|◀ again or press ▶ PLAY to resume normal playback.

SLOW MOTION PICTURE

Press ❚▶ SLOW during normal playback or in still picture mode. Press – for lower speed, and + for higher speed. The playback speed will change from normal to 1/5, 1/7, 1/10, 1/15, 1/20, and 1/30, of the normal speed successively, by pressing –. The sound is muted. Press ▶ PLAY to resume normal playback.

TO OBTAIN BETTER PLAYBACK PICTURE
— in still, frame-by-frame or slow motion picture mode

- **If the picture seems to shake...**
  Set the VCR to the still **picture mode,** and then press STILL ADJ in the tuning compartment until the picture stabilizes.
- **If a noise band appears on the screen...**
  Set the VCR to the slow motion picture mode, and then move the noise band by pressing TRACKING ▲ or ▼.
  Readjustment may be necessary for the tapes recorded on other VCRs.

1-11. USE OF THE TAPE COUNTER

The tape counter indicates the approximate running time of the tape and the relative position of programs on the tape.

TO INDEX THE TAPE CONTENTS

Before starting recording or playback, press CLEAR/RESET to set the counter to "0H00M00s". By noting the counter reading at the desired point, you can easily find that point later by referring to the counter. Use the label on the cassette to list the programs and their counter readings.

CLEAR/RESET

Notes
- The counter reading is automatically reset to zero when a cassette is newly inserted.
- The counter reading will be retained in the memory even after the power is turned off, as long as the cassette is in the cassette compartment.
- The counter will not advance during any portion of a tape that is blank or unrecorded. So the counter can be used to find unrecorded sections on a tape.

GO TO ZERO/GO TO ZERO PLAY

— To stop the tape at a particular point or play back from a particular point

1 During recording or playback, press CLEAR/RESET at the point you want to locate later.

2 When recording or playback is finished, stop the tape and press GO TO ZERO.
The tape will be rewound or advanced close to the point where the counter reads "0H00M00s".

GO TO ZERO

To start playback automatically from the "0H00M00s" point
Press ▶ after pressing GO TO ZERO.

GO TO ZERO

Note
The "go to zero" and "go to zero play" functions cannot be activated when the counter reading is within ± 0H00M29s.

1-12. TIMER-ACTIVATED RECORDING

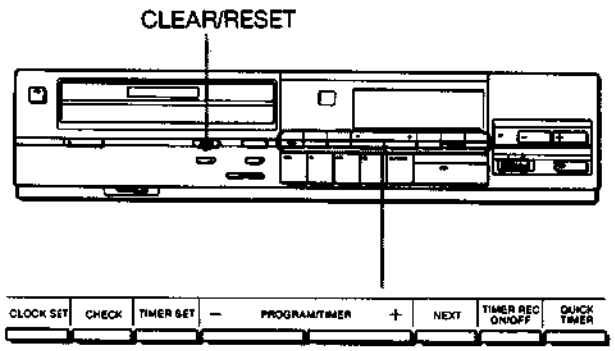
Up to six events can be set to be recorded on a certain day or everyday within seven days, or on the same day every week.

BEFORE SETTING THE TIMER

- Make sure that the clock (day and time) is set correctly.
- Be sure a cassette with a safety tab is inserted in the compartment.
  Check with the ⊡ indicator in the window.

SETTING THE TIMER

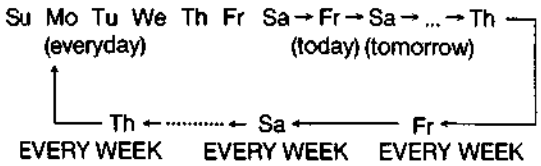
Suppose you want to make a recording of channel 6 from 7:10 to 11:15 on Friday.



NEXT button
Every time you press the NEXT button, the item to be preset next will blink.

+/– buttons
To set the day of the week, the time and the channel, press the + button to advance, and the – button to go back.

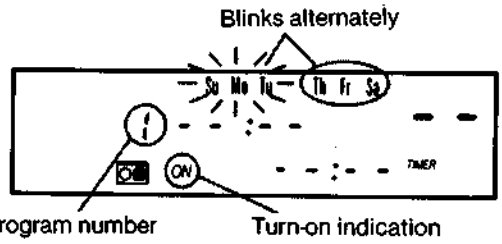
Day indication
By pressing the + button, the day indication changes as follows:
Ex. Today is Friday.



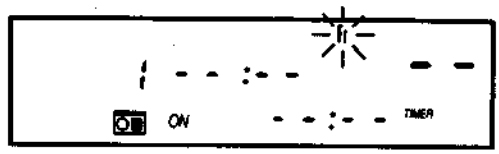
To record at the same time every day, select "Su Mo Tu We Tu We Th Fr Sa".
To record at the same time and day every week, select the desired day indication with "EVERY WEEK".

1 Set the positions of the selectors correctly as on page 9.

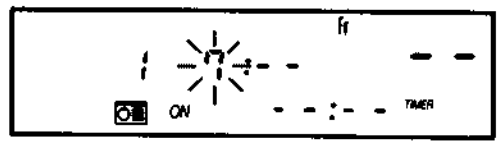
2 Press TIMER SET.
The program number (up to 6) appears. "1" indicates that you are making the first timer setting.



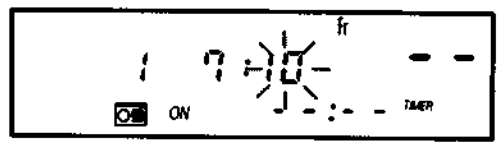
3 Set the day with the + or – button.



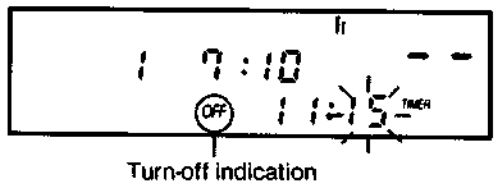
4 Press NEXT and set the turn-on hour with the + or – button.



5 Press NEXT and set the minute with the + or – button.



6 Press NEXT and set the turn-off time as in steps 4 and 5.



7 Press NEXT and set the program to be recorded with the + or – button.

8 Press NEXT.
The tape counter and the current time will reappear.

To preset another program, press TIMER SET again and repeat steps 3 to 8. Up to 6 programs can be preset.

9 Press TIMER REC ON/OFF.
The power will be turned off and the recorder will enter the standby mode.

Recording will start at the preset time and will automatically stop when the recording is completed. The memory of the program except everyday and every week setting will be erased and the program positions preset in the timer will advance one by one.

NOTICE:
ONCE THE TIMER REC INDICATOR HAS LIT UP, only the functions of CHECK and TIMER REC ON/OFF on the recorder can be activated. To turn on the power again for the usual manual operations, press TIMER REC ON/OFF again so that the indicator turns off.

BEFORE THE TIMER-ACTIVATED RECORDING STARTS

To check the timer settings
Press CHECK. Every time you press CHECK, each program will be displayed.

To change the settings
1 Press TIMER REC ON/OFF. The TIMER REC indicator turns off.
2 Press CHECK to select the program to be changed.
3 Press TIMER SET.
4 Press NEXT until the item to be changed blinks.
5 Change the setting with the + or – button.
6 Press NEXT so that the tape counter and the current time appear.
7 Press TIMER REC ON/OFF again to reactivate the timer.

To record the entire tape
Set the turn-off time to exactly the same time as the turn-on time. Recording will continue to the end of the tape.

To erase the memory of a particular program
1 Press TIMER REC ON/OFF. The TIMER REC indicator turns off.
2 Press CHECK to select the program to be erased.
3 Press CLEAR/RESET. The memory of the program will be eliminated.
4 If other programs have been preset for recording, press TIMER REC ON/OFF again to reactivate the timer.

DURING RECORDING

To stop during the timer recording
Press TIMER REC ON/OFF. The recording will stop and the power will be turned off.

When the tape ends during timer recording
The tape stops but the tape will not be rewound to the beginning.

NOTES ON TIMER RECORDING

Troubles when TIMER REC ON/OFF is pressed

The cassette will be ejected automatically.	⇨	The cassette inserted has the safety tab removed.
TIMER REC does not appear in the window.	⇨	No cassette is inserted. The tape is at its end.

1-13. QUICK TIMER RECORDING

Use this function to begin recording a program immediately. You can start timer recording just by pressing QUICK TIMER. The recording duration can be set for up to 4 hours by 30 minutes. You can also use this function to stop the non-timer recording by presetting the recording duration.

TO USE QUICK TIMER FROM THE TAPE STOP MODE

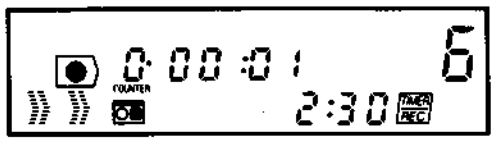
Make sure that the cassete is inserted.

1 Press QUICK TIMER.
The power will be turned on.

Cassette is inserted. Program previously selected

2 Choose the program to be recorded with the + or – button.
If you do not advance to the next step within 30 seconds. The power will be turned off.

3 Press QUICK TIMER so that the recording starts.
Now decide the recording duration.



Every time you press QUICK TIMER, the recording duration indication changes as follows:

0:30 → 1:00 → 1:30 → 2:00 ..... 4:00 → 0:00

30 minutes one hour one and a half hour two hours four hours zero hour

When the recording starts, the duration indication decreases minute by minute to 0:00 and the power will be turned off automatically about 30 seconds after the recording has finished.

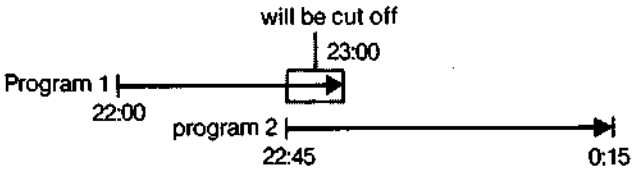
TO USE QUICK TIMER WHILE RECORDING

By pressing QUICK TIMER, you can set the duration so that the recording stops and power turns off after the preset duration.

Once the quick timer recording has started
Only the following function buttons can be activated:
QUICK TIMER.....to change recording duration
TIMER REC ON/OFF.....to interrupt quick timer recording
PAUSE ⏸/▶◀.....to stop quick timer recording momentarily
CHECK.....to check timer programs preset

SPECIFIC NOTES ON TIMER-ACTIVATED RECORDINGS

When the presettings of your timer-activated recordings overlap
There will be no error indication to inform you of the overlap. Even if there is an overlap, a recording will be made.



The recording of program 2 will begin before program 1 is finished.

If a power interruption occurs during timer recording
If the clock shows "0:00" and blinks
When the recorder was in the standby mode, all the timer settings are erased. Reset the clock and timer setting.
When the timer-recording was activated, the recording will stop.

1-14. CAMERA RECORDING

When connecting a Sony color video camera, the use of the Sony HVA-220CE AC adaptor is required. For details on connections, refer to the instruction manual furnished with the AC adaptor.

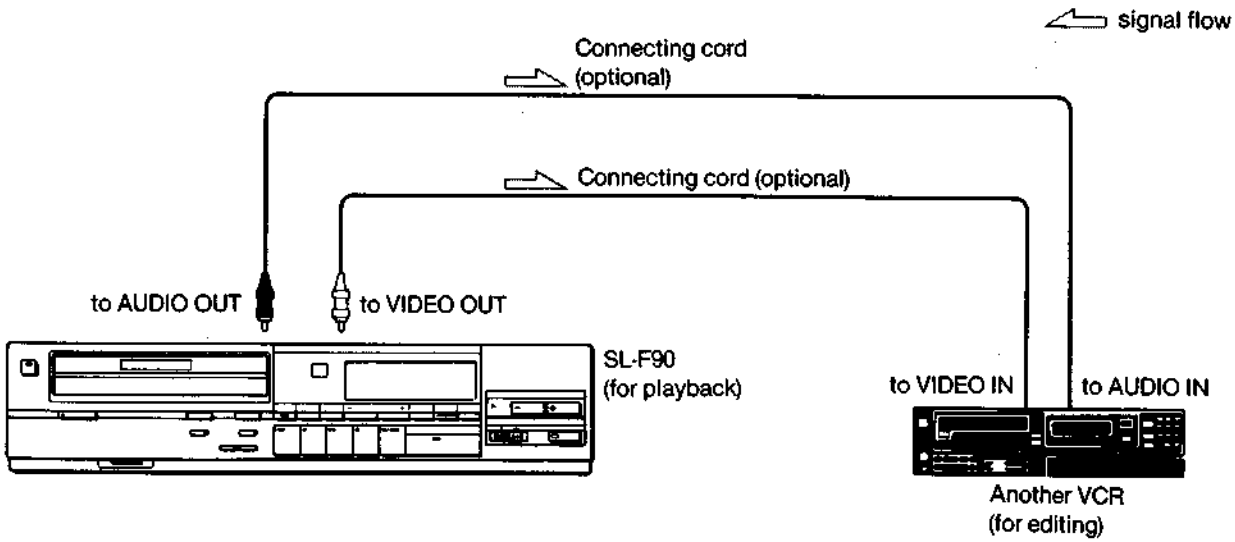
The camera must conform to CCIR PAL TV standards.

1-15. EDITING A TAPE

To edit a home movie tape, you need two video cassette recorders.
To start recording, set the VCR for playback in the playback mode, then press the record button on the other VCR.

Note
Avoid repetition of editing tapes, as the picture and tone quality will be impaired noticeably for newly edited tapes.

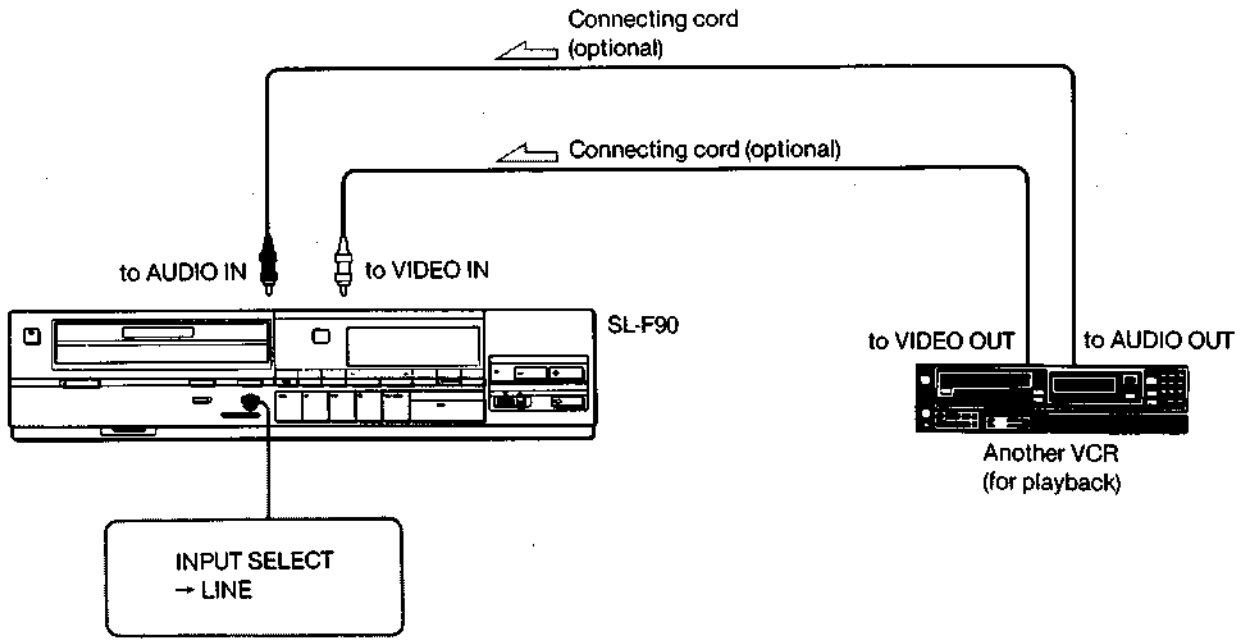
TO EDIT A HOME MOVIE TAPE FROM THE SL-F90 TO ANOTHER VCR



The impairment of the edited picture quality can be decreased by activating the SYNCHRO EDIT button as follows:
Set the SL-F90 to playback pause mode and press SYNCHRO EDIT to turn on the indicator on the button and start editing.

CAUTION
Television programs, films, video tapes and other materials may be copyrighted.
Unauthorized duplication of such material may be contrary to the provisions of the copyright laws.

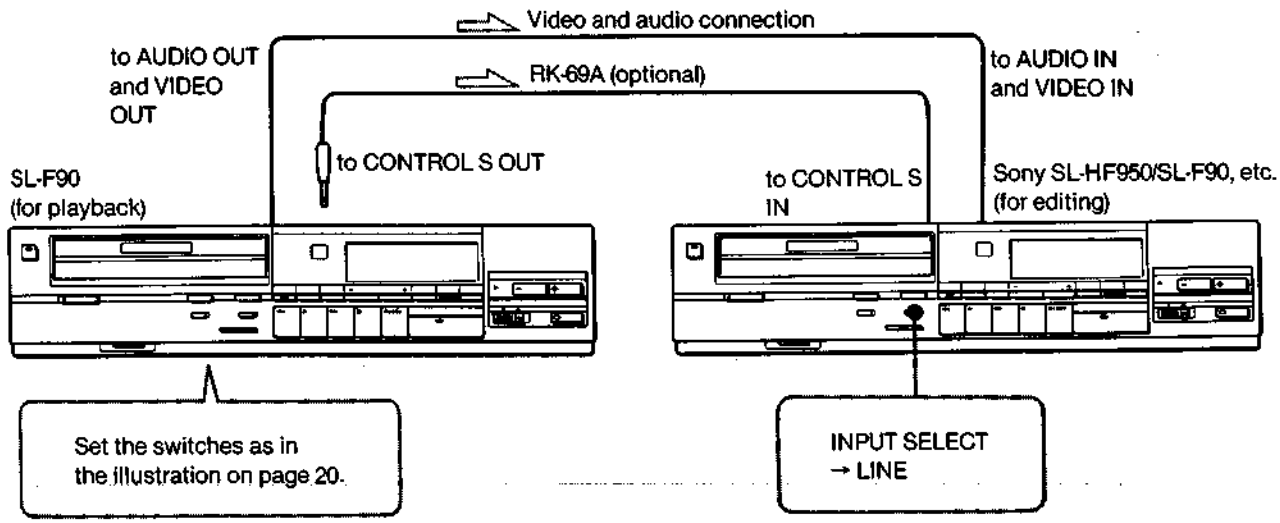
TO EDIT A HOME MOVIE TAPE FROM ANOTHER VCR TO THE SL-F90



SYNCHRO EDITING—Using a VCR equipped with the CONTROL S input

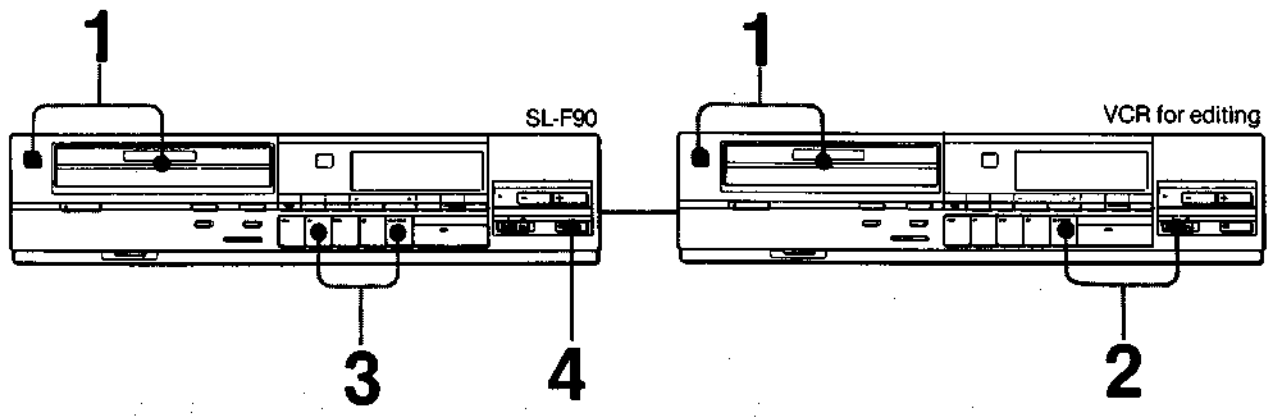
Connect the CONTROL S OUT jack of the SL-F90 to the CONTROL S input jack of another VCR. Recording start/stop on the other VCR can be activated in synchronization with playback start/stop on the SL-F90 simply by pressing the SYNCHRO EDIT button.

Connection and preparations



Note for owners of VCR equipped with the CONTROL S IN and OUT jacks
Avoid simultaneous connections to the CONTROL S IN and OUT jacks. This may cause malfunction of the VCRs.

Operation



1 Turn on the VCRs. Insert a recorded cassette on the SL-F90 and a cassette for recording on the other VCR.

2 Set the VCR for editing to recording pause mode.

3 Locate the portion of the tape at which you want to start editing and press ❚❚/▶|◀.

4 Press SYNCHRO EDIT. The indicator on the button lights. The recording and playback will begin simultaneously on the respective VCRs.

To stop editing momentarily
Press SYNCHRO EDIT again. The indicator on the button goes off. The SL-F90 will enter playback pause mode, and the VCR for editing will enter recording pause mode.
(The pause mode will be automatically released after about 8 minutes and the tape will stop on the VCR for editing and playback will resume on the SL-F90).

To start editing of the next scene
Repeat steps 3 and 4.

To stop the tapes
Press the ■ STOP button on each VCR.

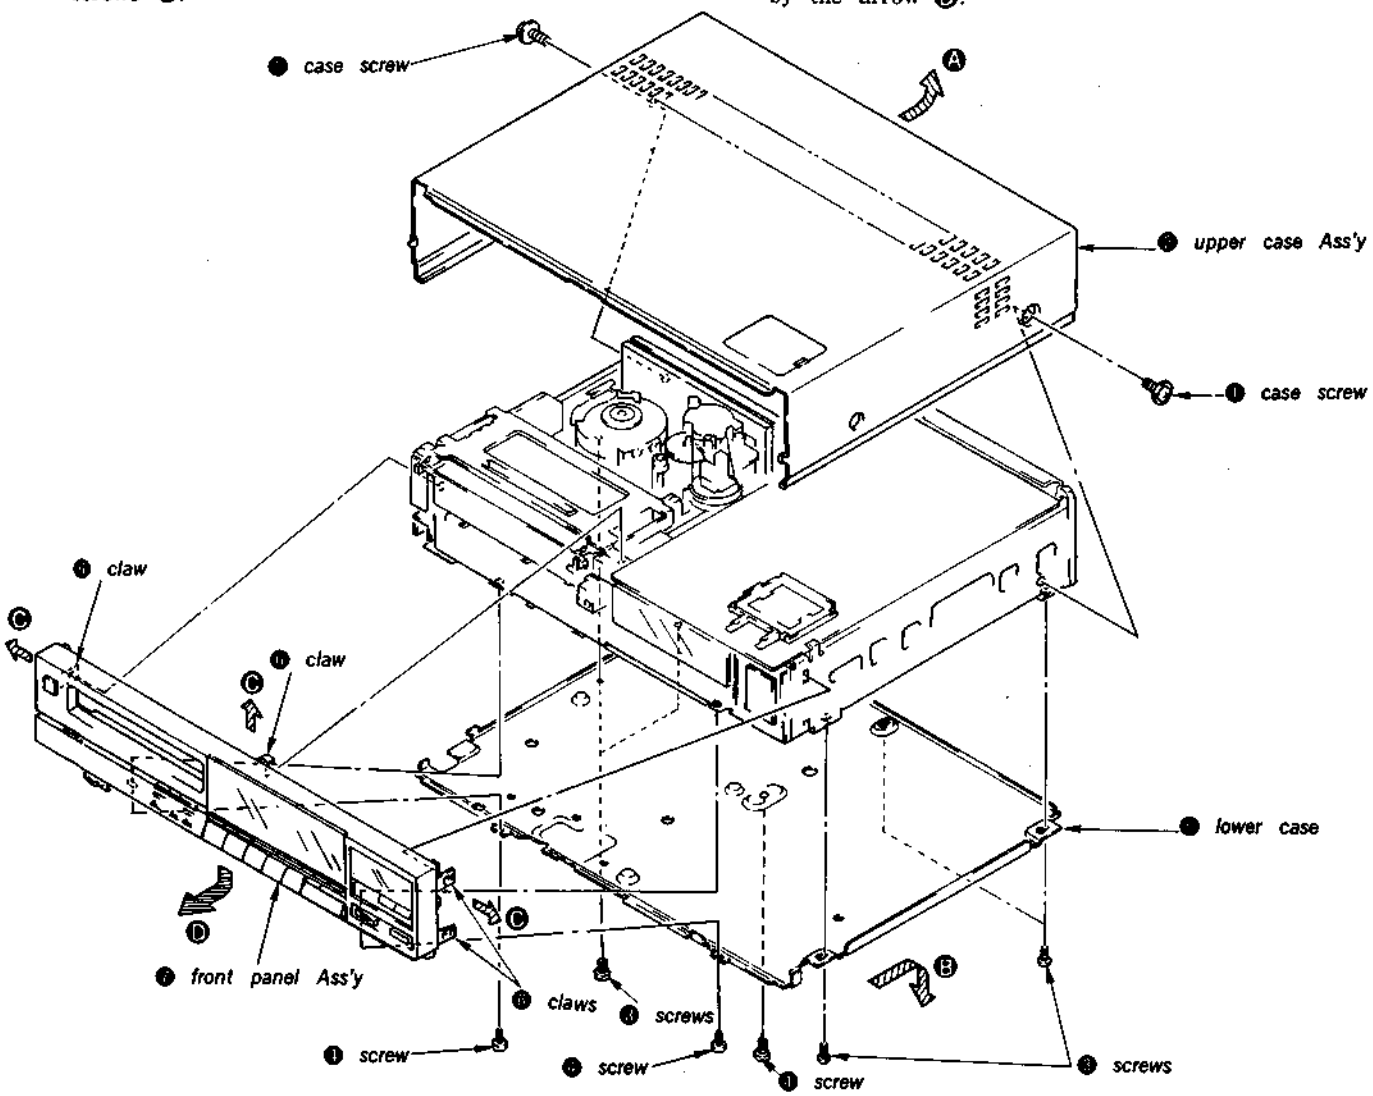
Note
- When SYNCHRO EDIT is pressed and the indicator on the button is lit, the video circuit is switched to editing mode. In this mode, better editing will result.
- If POWER is turned off or the ■ STOP button is pressed on the SL-F90, the editing VCR will enter recording pause mode.

Caution
Do not press any button on the VCRs or on the Remote Commander during editing, as synchro editing will malfunction.

SECTION 2
DISASSEMBLY

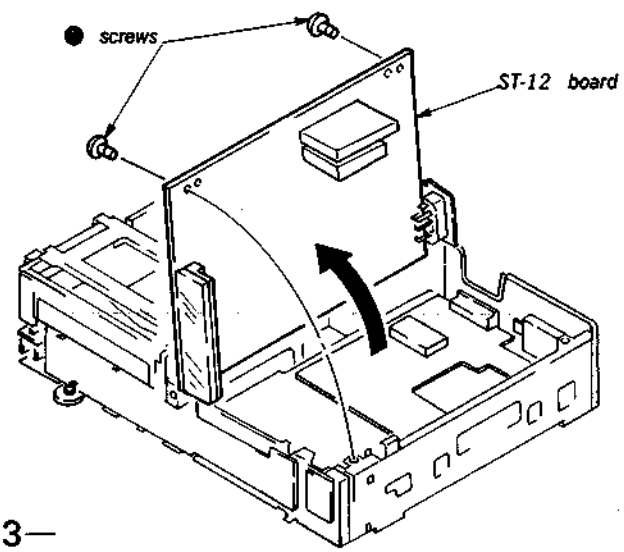
2-1. DISASSEMBLY OF CABINET

1) Remove the two case screws ❶.
2) Remove the upper case ❷ in the direction shown by the arrow Ⓐ.
3) Loosen the five screws ❸, then remove the three screws ❹.
4) Remove the lower case ❺ in the direction shown by the arrow Ⓑ.
5) Remove the four claws ❻ in the direction shown by the arrow Ⓒ.
6) Remove the front panel ❼ in the direction shown by the arrow Ⓓ.



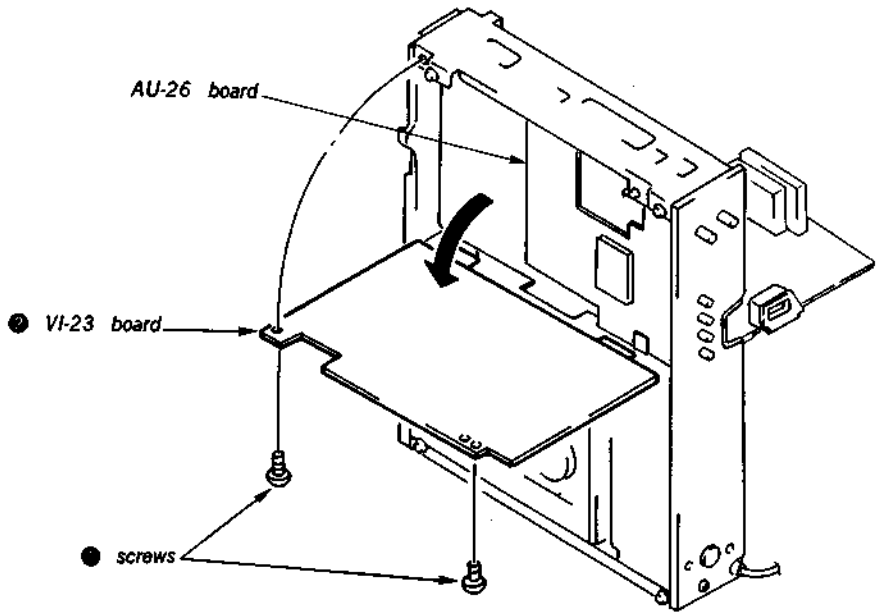
2-2. REMOVAL OF THE ST-12 BOARD

1) Remove the two screws ●.
2) Remove the ST-12 board ❷ in the direction shown by the arrow.



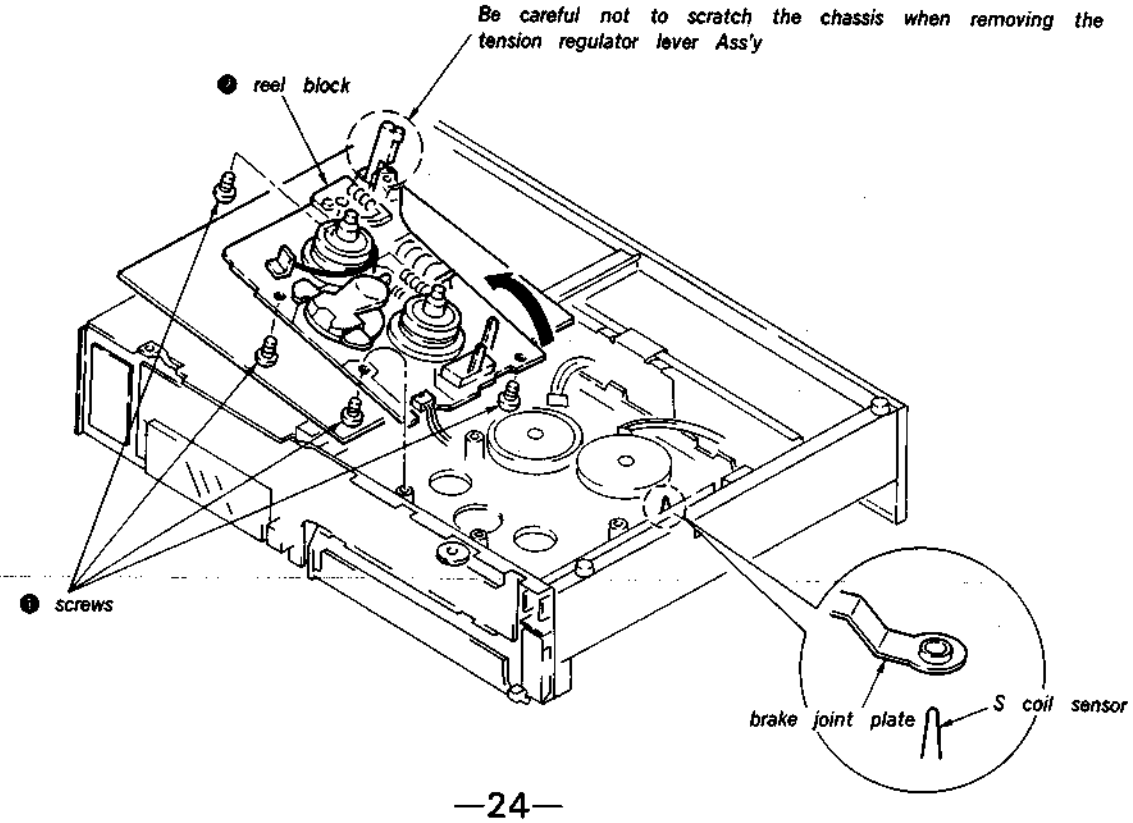
2-3. REMOVAL OF THE AU-26 BOARD AND THE VI-23 BOARD

1) Stand the set with the left side panel on the bottem.
2) Remove the two screws ●.
3) Remove the VI-23 board ❷ in the direction shown by the arrow.
4) Remove the ST-12 board ❸.
(Refer to section 2-2 for instructions on how to remove the ST-12 board.)



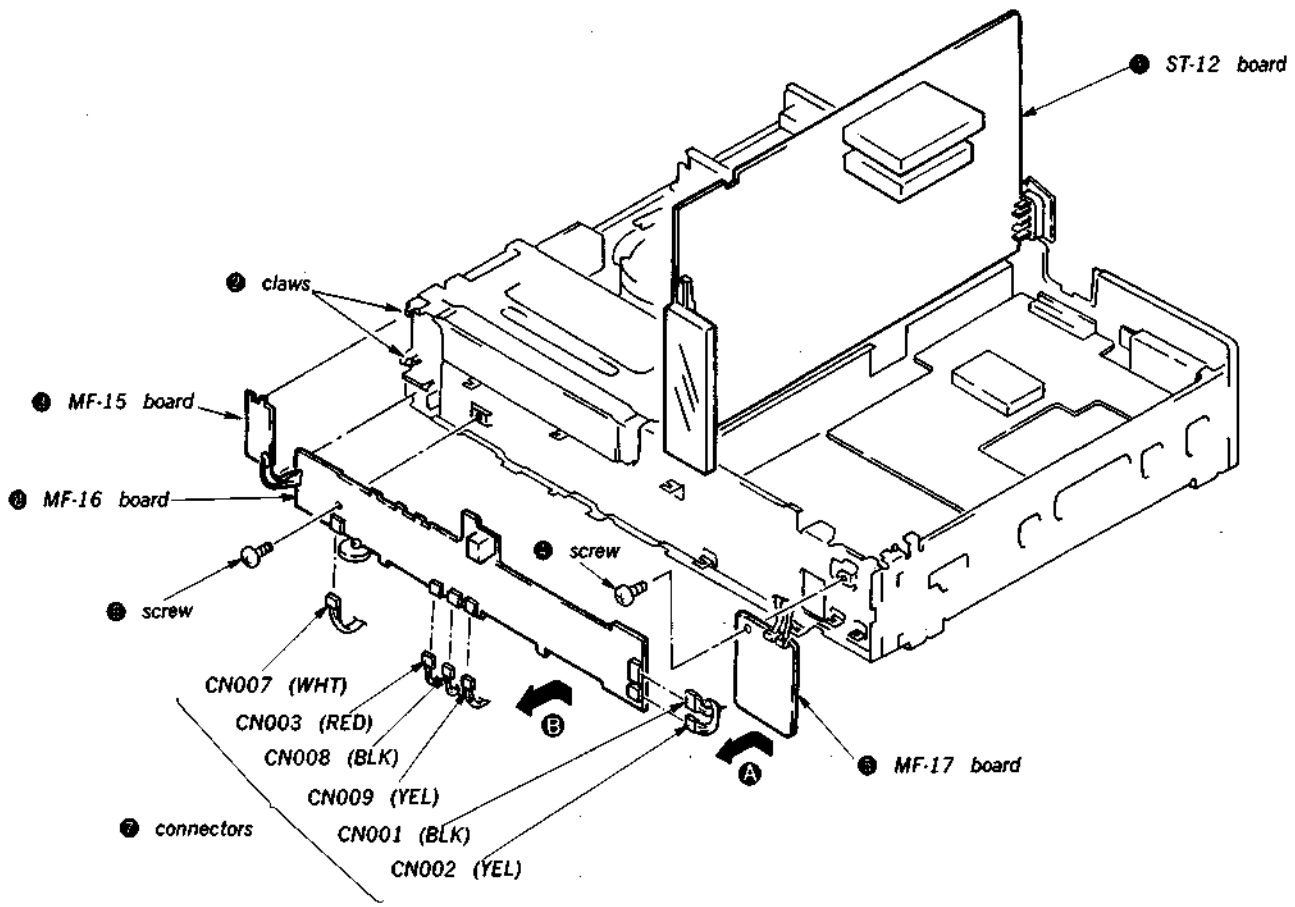
2-4. REMOVAL OF THE REEL BLOCK ASSEMBLY

1) Place the set up side down.
2) Remove the four screws ●.
3) Remove the reel block assembly ❷ in the direction shown by the arrow.



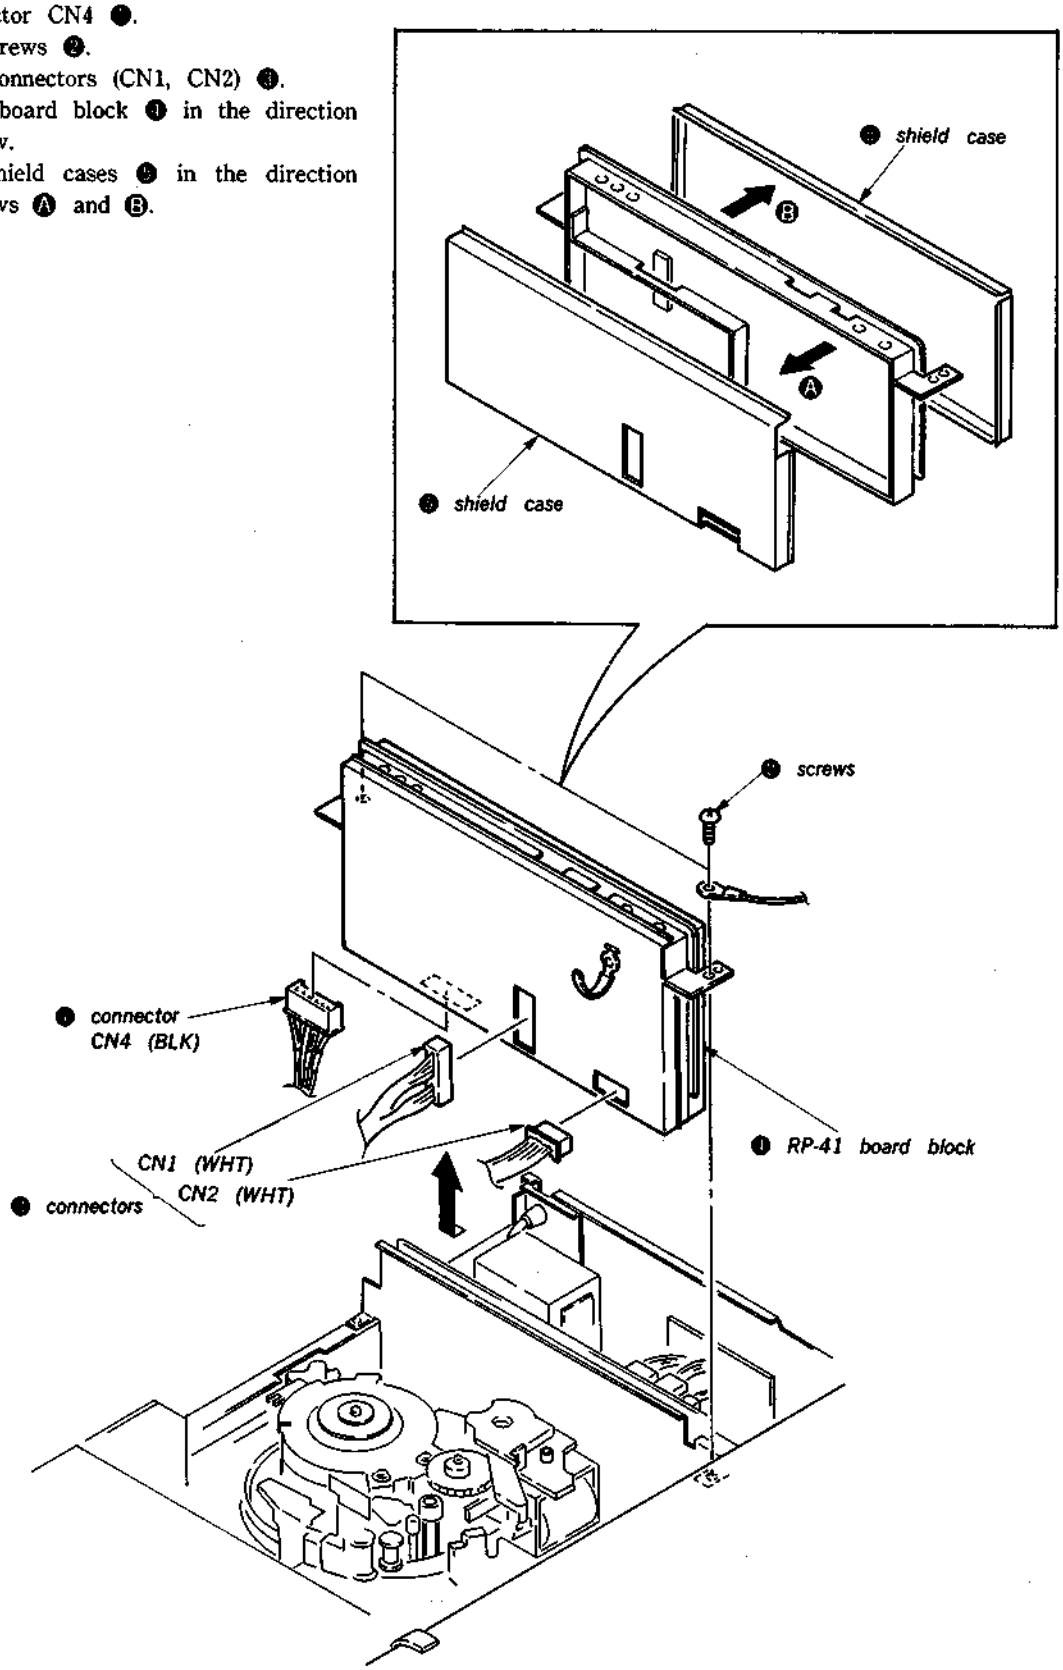
2-5. REMOVAL OF THE MF-17 BOARD AND THE MF-16 BOARD

1) Remove the ST-12 board ❶.
   (Refer to section 2-2 for instructions on how to remove the ST-12 board).
2) Remove the MF-15 board ❸ from the clows ❷.
3) Remove the screw ❹ than remove the MF-17 board ❺ in the direction shown by the arrow Ⓐ.
4) Remove the screw ❻.
5) Pull out the six connectors ❼ (CN001, CN002, CN003, CN007, CN008, CN009).
6) Remove the MF-16 board ❽ in the direction shown by the arrow Ⓑ.



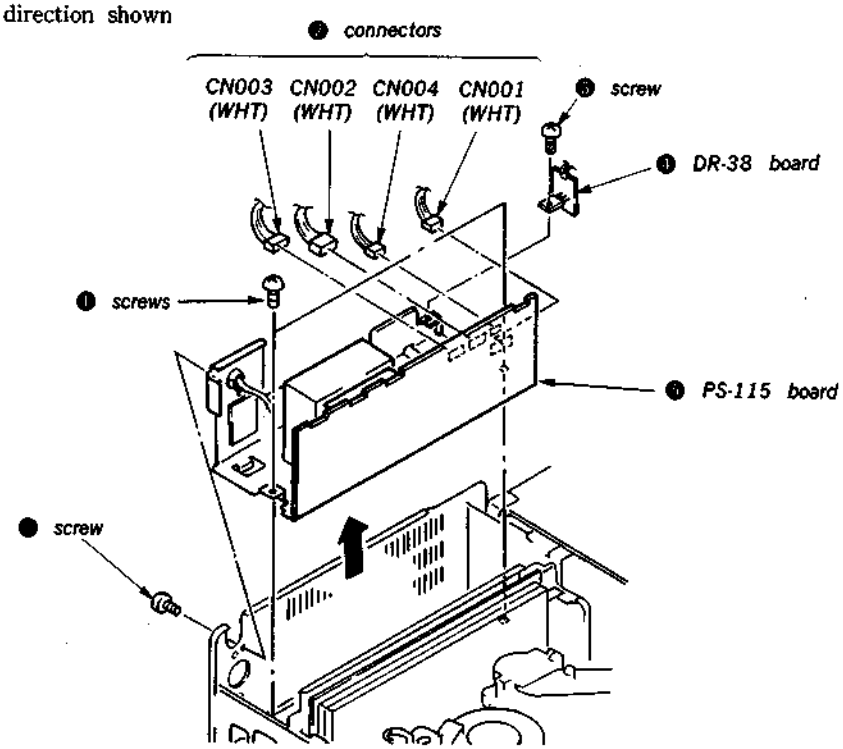
2-6. REMOVAL OF THE RP-41 BOARD

1) Pull out the connector CN4 ❶.
2) Remove the two screws ❷.
3) Pull out the two connectors (CN1, CN2) ❸.
4) Remove the RP-41 board block ❶ in the direction shown by the arrow.
5) Remove the two shield cases ❺ in the direction shown by the arrows Ⓐ and Ⓑ.



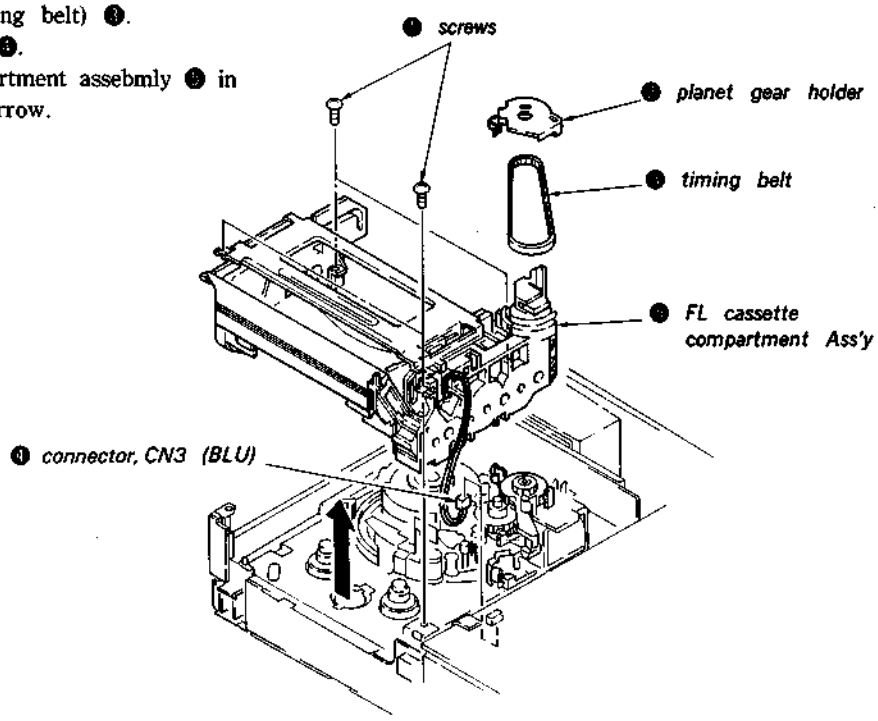
2-7. REMOVAL OF THE PS-115 BOARD

1) Remove the three screws ❶.
2) Pull out the four connectors ❷ (CN001, CN002, CN003, CN004).
3) Remove the screw ❸, then remove the DR-38 board ❹.
4) Remove the PS-115 board ❺ in the direction shown by the arrow.



2-8. REMOVAL OF THE FL CASSETTE COMPARTMENT ASSEMBLY

1) Remove the four screws ❶.
2) Remove the pranet gear holder ❷.
3) Remove the timing belt (loading belt) ❸.
4) Pull out the connector, CN3 ❹.
5) Remove the FL cassette compartment assebmly ❺ in the direction shown by the arrow.



2-9. REMOVAL OF THE MD BLOCK ASSEMBLY

1) Remove the four screws ❶.
2) Remove the MF-16 board ❷.
   (Refer to section 2-5 for instructions on how to remove the MF-16 board)
3) Remove the screw ❸.
4) Pull out the sixteen connectors ❹ (ST-12 board: CN3, CN4, CN5, CN6, CN7, CN8, CN10, CN11, CN12, CN18, CN20, CN21, CN22, CN23) (AU-69 board: CN901).
5) Remove the MD complete assembly ❺ in the direction shown by the arrow.

Note:

- All resistors are in ohms, 1/6W unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF : μμF 50WV or less are not indicated except for electrolytics. and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- : nonflammable resistor.
- : fusible resistor.
- : panel designation.
- △ : internal component.
- : adjustment for repair.
- : B + bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a color-bar signal input.
- Readings are taken with a digital multimeter (DC10MΩ).
- Voltage variations may be noted due to normal production tolerances.

When indicating parts by reference number, please include the board name.

Note:

- All resistors are in ohms, 1/6W unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF : μμF 50W\ or less are not indicated except for electrolytics, and tantalums
- All variable and adjustable resistors have characteristic curve B unless otherwise noted.
- : nonflammable resistor.
- : fusible resistor.
- : panel designation.
- : internal component.
- : adjustment for repair.
- : B + bus.
- : B − bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a color-bar signal input.
- Readings are taken with a digital multimeter (DC10MΩ).
- Voltage variations may be noted due to normal productio tolerances.

When indicating parts by reference number, please include the board name.

Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SECTION 5
EXPLODED VIEWS

NOTE:

- Itmes with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SECTION 6
ELECTRICAL PARTS LIST

NOTE:

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

RESISTORS
- All resistors are in ohms
- F : nonflammable

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

CAPACITORS
- MF : μF, PF : μμF

COILS
- MMH : mH, UH : μH

SECTION 7
ADJUSTMENTS

TABLE OF CONTENS

1. MECHANICAL CHECK ADJUSTMENT AND PREPARATIONS FOR REPLACEMENT

The 9 items of the disassembly procedure mentioned be low are detailed page23~28.

1-1. DISASSEMBLY OF CABINET
1-2. REMOVAL OF THE ST-12 BOARD
1-3. REMOVAL OF THE AU-26 BOARD AND THE VI-23 BOARD
1-4. REMOVAL OF THE REEL BLOCK ASSEMBLY
1-5. REMOVAL OF THE MF-17 BOARD AND THE MF-16 BOARD
1-6. REMOVAL OF THE RP-41 BOARD
1-7. REMOVAL OF THE PS-115 BOARD
1-8. REMOVAL OF THE FL CASSETTE COMPARTMENT ASSEMBLY
1-9. REMOVAL OF THE MD BLOCK ASSEMBLY

1-10. OPERATION OF THE UNIT WITH THE FL CASSET COMPARTMENT REMOVED

1-10-1. How to Put the Unit into Threading Completed Mode when the FL Cassette Compartment is Removed.

1) Connect ordinary screwdriver to short the leaf switch ● (cassette-on switch shown in Fig. 1-1.).
Note :
Be careful that the ordinary screwdriver do not touch any other parts (use tape or other insulation).
2) Press the cassette-down switch ❷ and leave it pressed in, when the power button is turned ON, threading starts.
* Refer to section 2-8 for instructions on how to remove the FL cassette compartment.

[How to EJECT in this condition]

- Press the EJECT button. When unthreading is completed and the internal gear starts to turn, turn the power OFF.

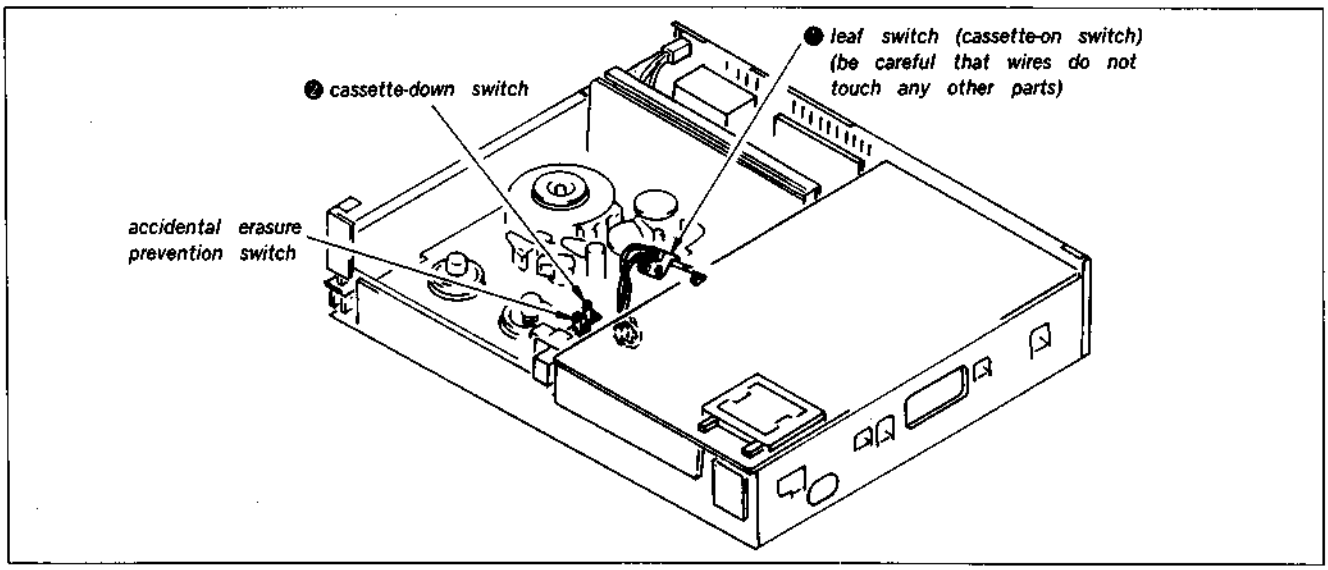

Fig. 1-1. How to put the unit into Threading completed mode when the FL cassette compartment in removed.

1-10-2. Playback Without Cassette Installed

Complete threading by the procedure described in 1-10-1, then press the palyback button.

1-10-3. How to Put in Recording Mode Without Cassette Installed

1. Thread by the procedure in 1-10-1 than press the accidental erasure prevention switch 1 shown in Fig. 1-2.
2. With the accidental erasure prevention 1 switch pressed down, press the recording button.

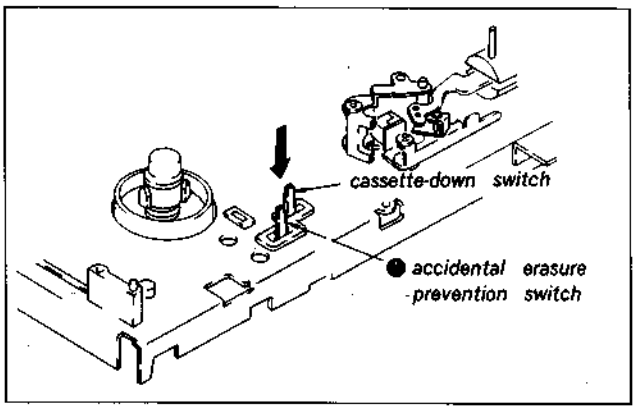

Fig. 1-2. How to put the recorder in recording mode with the FL cassette compartment removed

1-11. HOW TO LOAD, THREAD, UNLOAD AND UNTHREAD WITH THE POWER OFF

1-11-1. Manual Loading and Unloading

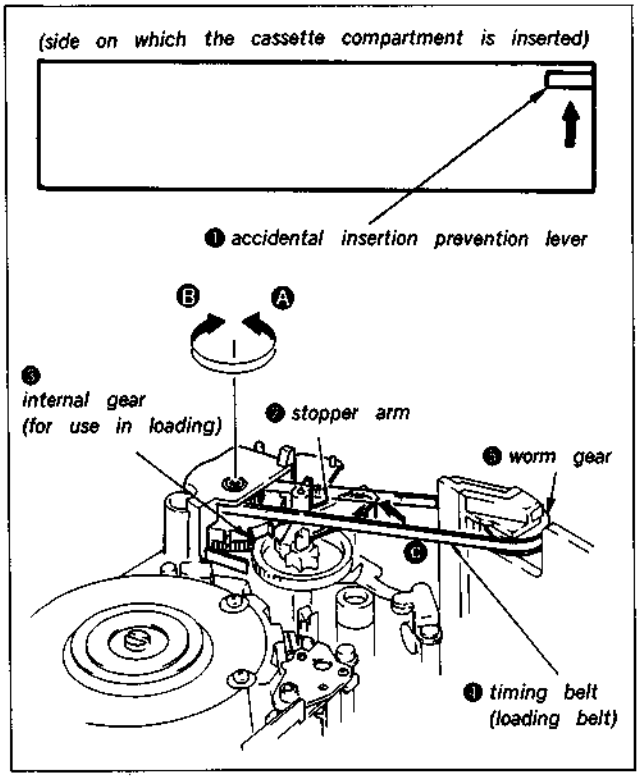

Fig. 1-3. Manual loading and unloading

1) Release the right accidental insertion prevention lever ❶ inside the cassette compartment, then press the stopper arm ❷ in the direction of arrow Ⓒ and release the internal gear ❸ stop.
2) Turn the internal gear ❸ manually in the direction of arrow Ⓐ until loading is completed.
3) To unload, turn the internal gear ❸ in the direction of arrow Ⓑ.

Note:
When the loading belt ❹ has been removed, load and unload by turning the worm gear ❺ manually.

1-11-2. Manual Threading and Unthreading

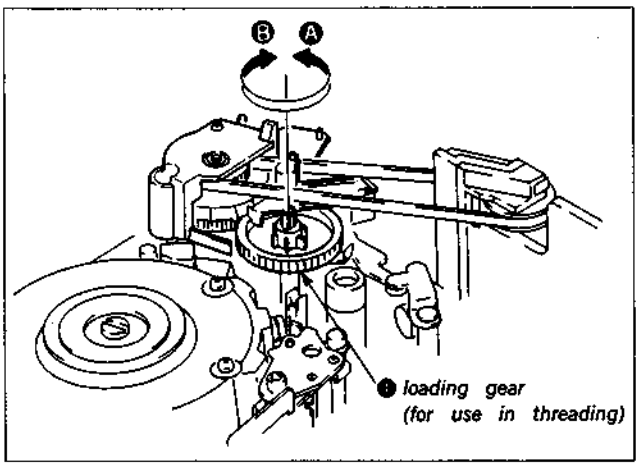

Fig. 1-4. Manual threading and unthreading

1) Turn the loading gear ❶ in the direction of arrow Ⓐ until threading is completed.
2) To unthread, turn the loading gear ❶ in the direction of arrow Ⓑ.

Note:
Always turn the loading gear sideways by hand. Never use a screwdriver or other tool.

1-12. TOOLS AND FIXTURES REQUIRED FOR SERVICING

Ref. No.	Name	Part Code	Carved Jig No.	Use and Remarks
J-1	Torque Measurement Tape	J-6080-003-C	SL-0003C	forward torque and back tension measurement
J-2	Parallel Plate	J-6086-570-A	SL-0657	audio/CTL head lateral adjustment capstan shaft vertical adjustment

J-10	Dihedral Adjustment Screw	J-6080-013-A	SL-0013	video dihedral adjustment
J-11	Video Head Checker	7-732-080-01	SL-5151	video head check

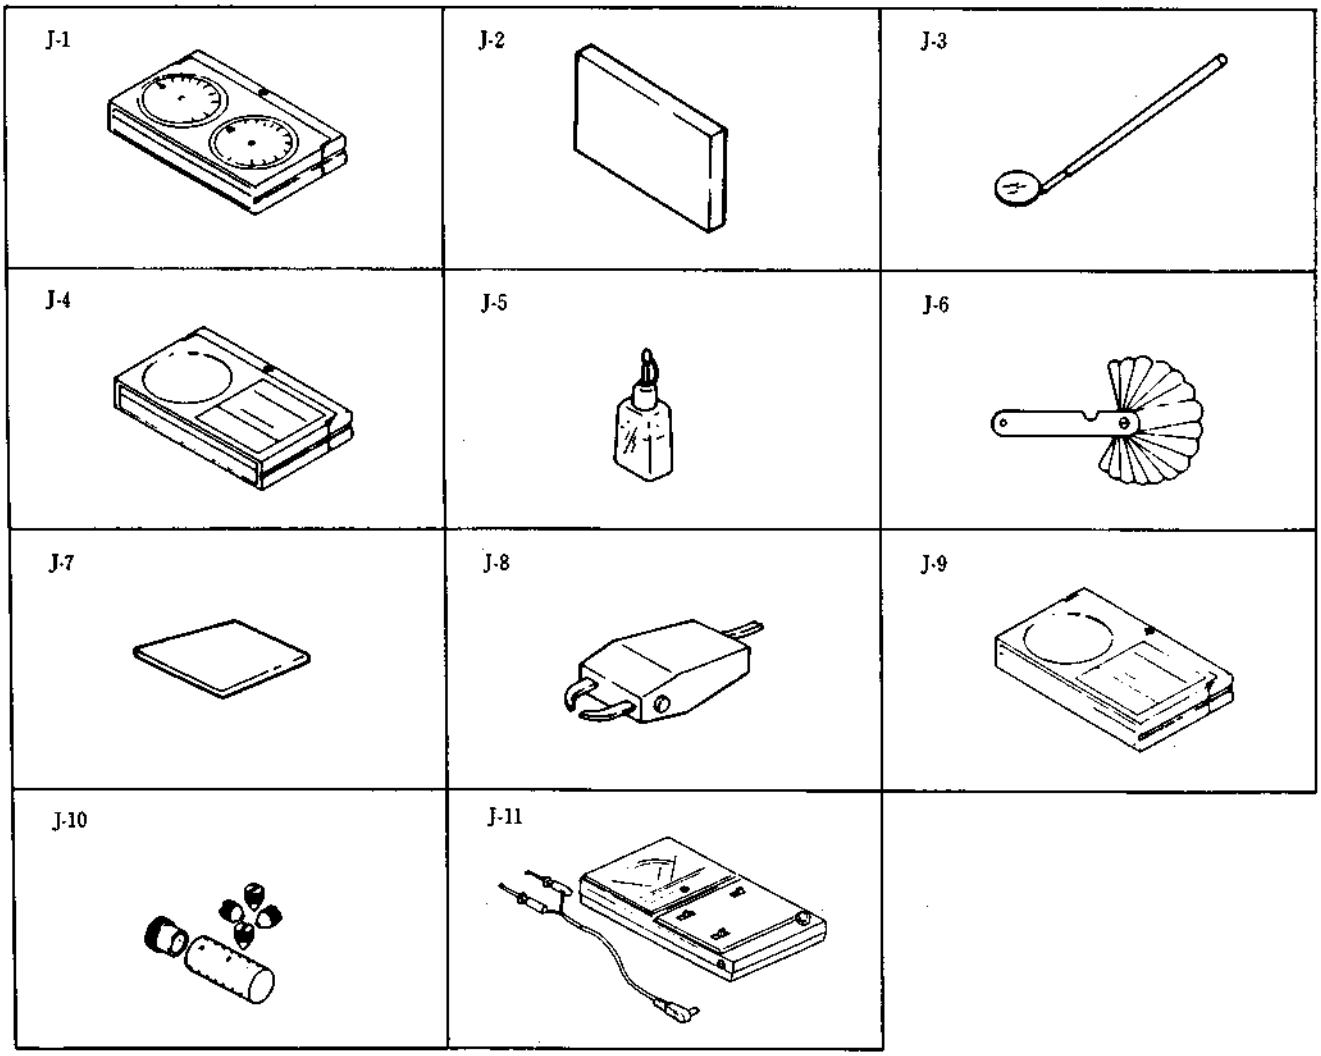

Fig. 1-5. Tools and fixtures required for servicing

2. PERIODIC CHECK AND MAINTENANCE

In order to obtain the best performance from this unit and make full use of its capabilities, and to extend the life of the unit and tapes. it is recommended that the following periodic checks and maintenance be performed.

2-1. POST-REPAIR MAINTENANCE

The following must be done after every repair regardless of how many hours the user has operated the machine.

2-1-1. Cleaning of Rotating Head Disk Assembly

1) Press a chamois cloth (Jig Ref. No. J-7) which has been dipped in cleaning fluid (Jig Ref. No. J-5) lightly against the rotating drum assembly, then do the cleanig by slowly rotating the rotating head disk by hand. (Never try to clean by using the motor to turn it.)
2) Never try to clean by moving the chamois cloth at a right angle to the head tip. There is a very great danger of damaging the head tip if this is done.

2-1-2. Cleaning of the Tape Movement System

1) Clean the surfaces which the tape contacts during its movement (tape guide. drum assembly surface, capstan, pinch roller, etc.) with a chamois cloth that has been dipped in cleaning fluid.

2-1-3. Cleaning the Drive System

1) Clean the driving parts with a cloth that has been dipped in cleaning fluid.

parts requiring cleaning

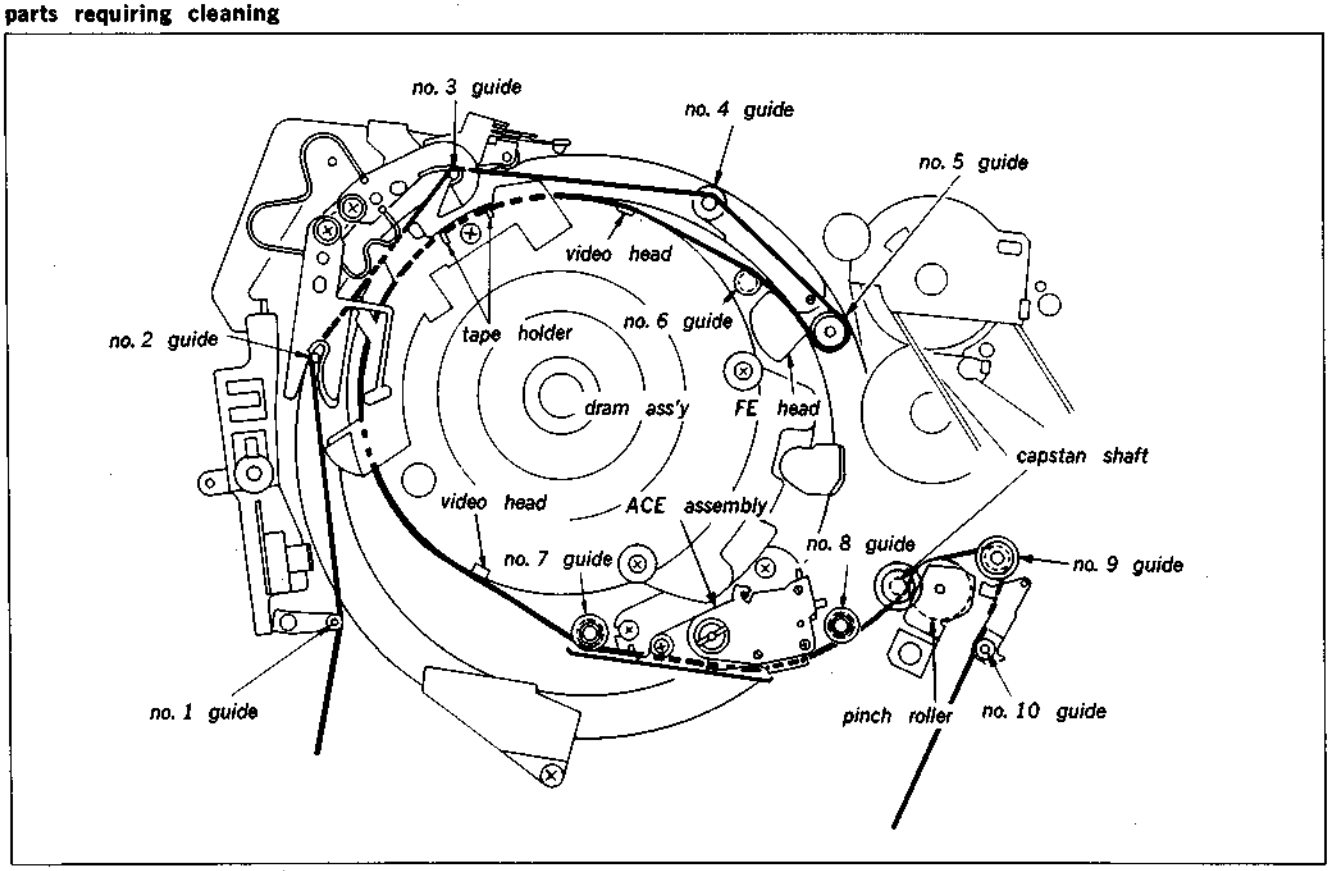

Fig. 2-1. Parts requiring cleaning

2-2. PERIODIC CHECK ITEMS

Perform the maintenance and check listed on the table below, accoring to user's operating hours.

Maintenance & Check		Replacement Part No.	Operating Hours (H) 500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks
Tape Transportation System	Cleaning of tape transportation system	——	○	○	○	○	○	○	○	○	○	○	This cleaning must be done whenever a repair is made.
	Cleaning and degaussing of ACE ass'y	——	○	○	○	○	○	○	○	○	○	○	
	Cleaning & degaussing of video disk ass'y	——	○	○	○	○	○	○	○	○	○	○	The life of the head varies, depending on operational conditions and method.
Driving System	Loading belt (timing belt)	3-684-264-01	☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	This cleaning must be done whenever a repair is made.
	Cleaning of iron core and opening of solenoid	——	—	—	—	○	—	—	—	○	—	—	Wipe iron core and opening of solenoid with dry cloth.
Performance Confirmation	Abnormal sound		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Adjust or replace the section which causes abnormal sound.
	Measurement of FWD back tension		—	☆	—	☆	—	☆	—	☆	—	☆	Confirmation must be made according to section 3-13. Specified value: adjust to 34±3g•cm (When measured with torque cassette tape)
	Confirmation of brake system		—	☆	—	☆	—	☆	—	☆	—	☆	
	Confirmation of record & playback functions		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Perform the confirmation whenever repair is made.
	Measurement of forward torque		☆	☆	☆	☆	☆	☆	☆	☆	☆	☆	Adjust to 80±5g•cm (SL-0003C)

○ Cleaning ★ Replacement ☆ Confirmation

Note :
On overhaul
When overhauling the unit, replace parts as indicated in the above table.

2-3. STATE OF WEAR OF VIDEO HEADS CHECK

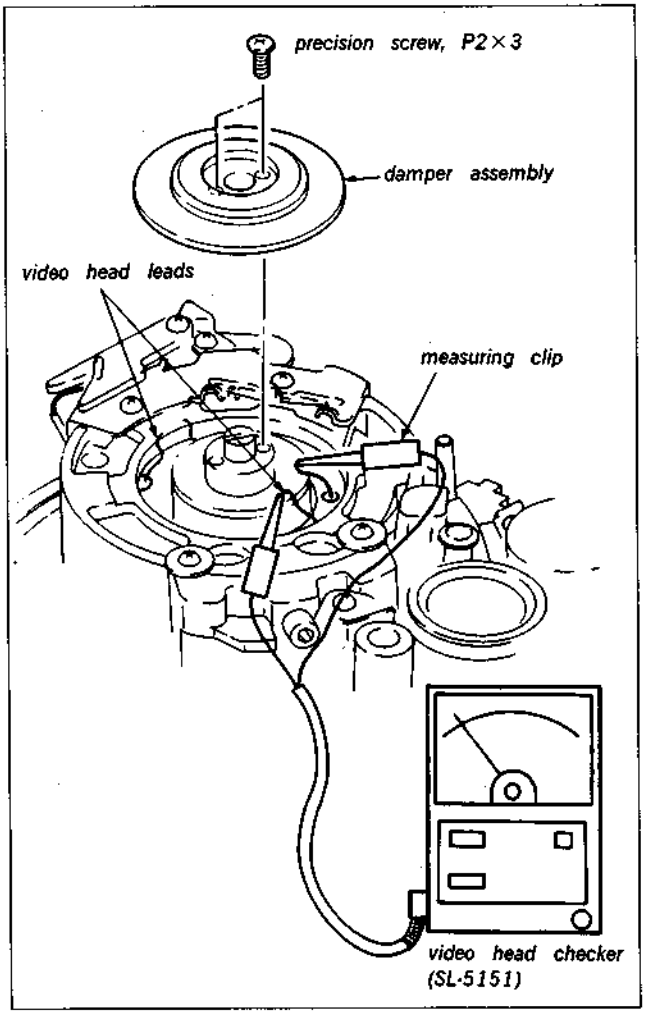
As the accuracy of the check depends on the state of the heads and precision of the checker the results should be taken only as an indication of the state of wear.

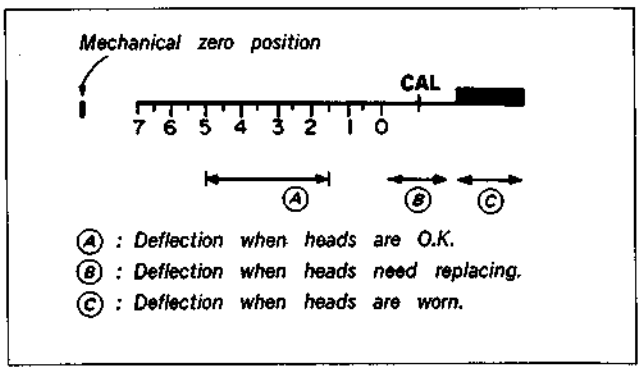
[Adjustment of video head checker]

1) Mechanical zero
   Verify that the pointer of the video head checker is at the mechanical zero position. If it is not at this position adjust the mechanical zero control.
2) Battery voltage check
   Set the MODE switch to "BATT" and set the POWER switch to "ON". The deflection of the pointer should be within the range marked "BATT". If not, replace the battery (use a 6F22 battery) as follows.
3) Calibration check
   Set the POWER switch to "ON" and the MODE switch to "CAL" then adjust the CAL control so that the pointer is on the CAL mark.
   Note 1: Be sure to carry out this adjustment whenever the RANGE switch is changed.
   Note 2: Be sure to check CAL before measuring the head and proceed the measurement after adjusting CAL, if CAL is not properly set.

[Method of measurement]

1) Remove the two screws that hold the damper assembly in place, then remove the damper assembly.
2) Detach the lead wires on the 2 video heads.
3) Attach the measuring clips to the head leads.
   Be sure to separate the leads by at least 1.5 cm.
4) Set RANGE switch to "B" and MODE switch to "MEAS".
   The pointer will deflect to indicate the state of wear of the heads.
   Note: The deflection for the 2 video heads may be different, so be sure to measure both.





MEASURED VALUE

3. CHECK ADJUSTMENT AND REPLACEMENT PROCEDURES

3-1. PEPLACEMENT OF ROTATING HEAD DISK ASSEMBLY

3-1-1. Removal of the Rotating Head Disk Assembly (Fig. 3-1)

1) Remove the adjustment plates 2 and 3 ❽ in accordance with the repalcement of the drum assembly 1), 2) and 3) described in 3-3-1.
2) Remove the two precision screws ❷ then remove the damper assembly ❸.
3) Use a hexagonal wrench to remove the hexagonal socket bolt ❹ then remove the upper drum assembly ❺.

Note:

Turn the upper drum to remove, being careful not to move the adjusting plate. Movement of the adjusting plate will have a great effect on the tape path, so caution in required.

4) Unsolder the rotating head disk ❻ relay board four red and white leads) ❼.
5) Remove the two hexagonal socket bolts ❽ then remove the rotating head disk assembly ❻.

Note:

Be careful not to touch the head tip with the hand or bang anything against it.

3-1-2. Mounting of the Rotating Head Disk Assembly (Fig. 3-1)

1) Insert rotating head disk ❻ in place being careful of the direction so that the red and white leads are in the right places.
2) Tighten hexagonal socket bolts ❽ and solder the lead wires.

Note:

Be careful to solder the lead wires correctly and not to break any wires.

3) Attach the upper drum being careful (as during removal) not to move the adjusting plate. While pressing the two points that determine the height tighten hexagonal socket bolt ❹.

Note:

When inserting the upper drum, be careful that it does not touch the head tip.

Note:

When replacing the rotating drum head, it can happen that the rotating head disk assembly will be hard to remove. In such a case, remove it using the method explained below (Fig. 3-2).

1) Remove the hexagonal socket bolts ❶ that hold the rotating head disk assembly in place.
2) When the head disk is jammed on tight and is hard to remove, screw the hexagonal socket bolts removed in step ❷ into the threaded holes removed from the original holes by 90°. Tighten them a little at a time.

The head disk will be lifted up by the two screws and will come off easily.

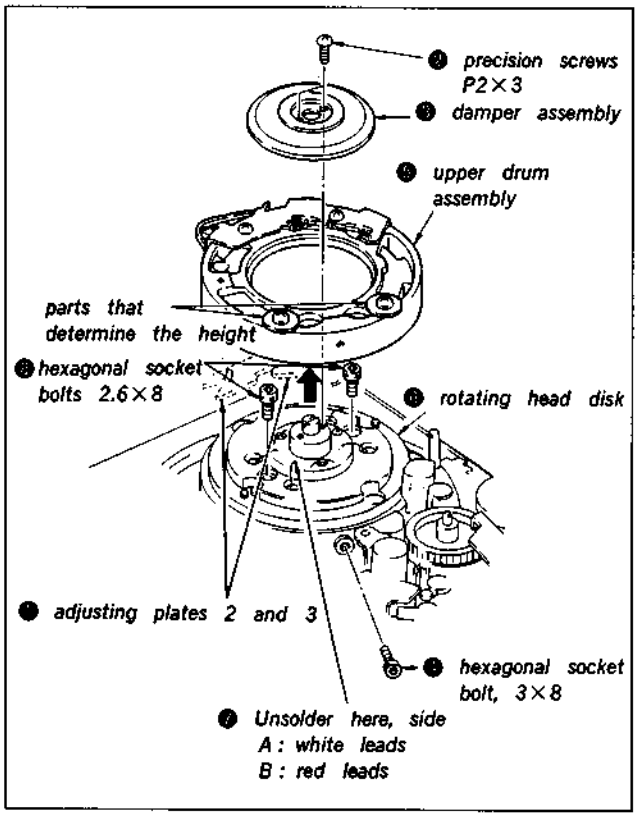


Fig. 3-1. Removal of the rotating head disk assembly I

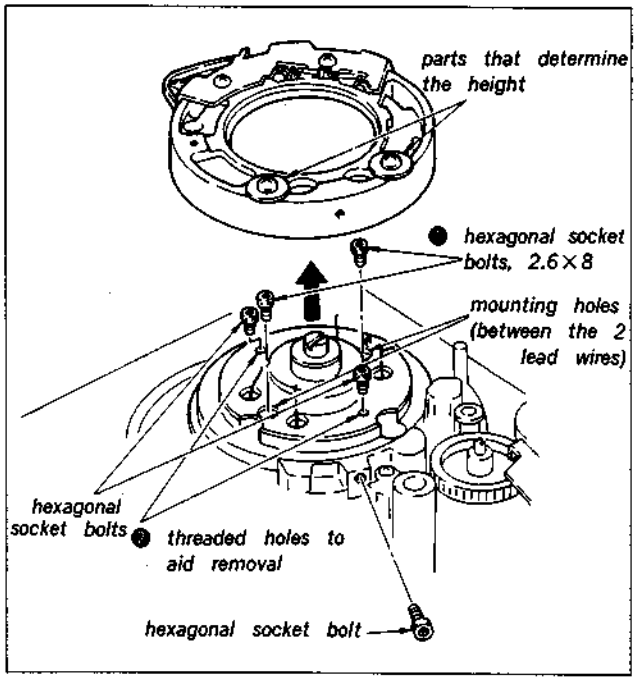

Fig. 3-2. Removal of the rotating head disk assembly II

3-2. VIDEO HEAD DIHEDRAL CHECK AND ADJUSTMENT

This adjustment is generally unnecessary but it is sometimes necessary when the video head disk is replaced. (The video head disk used for maintenance has been precision adjusted at the factory using a microscope and almost never needs to be readjusted).

When judging whether the video head dihedral angle is correct the alignment tape is played back. When this is done the tracking control knob must be in the centering position. If the check is done with this knob in other than the center click position (if the tracking is off-center) even if the dihedral angle is correct the picture will be reproduced as if it were off.

Before this adjustment is performed, the ACE assembly position adjustment (refer to the section where the tape path adjustment is described) must be completed.

[Method of checking]

With the tracking control knob set to the center click position play back the monoscope section of the alignment tape. Check to see if any of the vertical monoscope lines immediately below the switching pulse are reproduced double. If not the dihedral angle is correct and does not have to be adjustment. If perform the adjustment as explained below.

[Method of adjustment]

1) As shown in Fig. 3-3. screw two dihedral angle adjustment screws (SL-0013 in the list of fixtures and tools) into the adjustment screw holes on the side on which the red lead wires from the video head are connected until the top of the screw is level with the video head disk. (If they are not screwed in far enough, the video head disk will not turn past the point where the top of the adjustment screw strikes the upper drum. Conversely, if it is screwed in too far, the head base will be moved, throwing the video head dihedral angle way off.)
   The side on which the white lead wires are connected is the reference side and must not be moved.
2) Screw one of the two adjustment screws in a little bit farther until resistance is felt. Beyond this point turning the screw still farther will move the video head adjusting the dihedral angle.
3) With the adjustment screws in place play the monoscope signal section of the alignment tape and see how the lines are reproduced. If the verical lines are split apart more than before turn the screw which was screwed in more tightly counterclockwise to loosen it then adjust by tightening the other screw.
4) After the adjustment is completed remove the adjustment screws and play the tape again to reconfirm that the adjustment is correct.

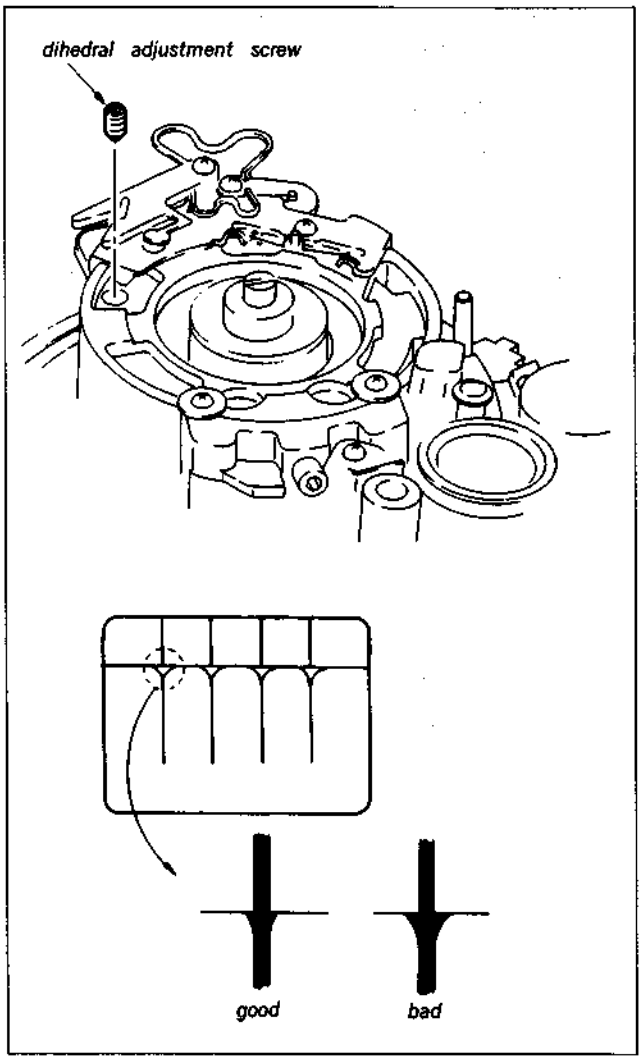

Fig. 3-3. Video head dihedral adjustment

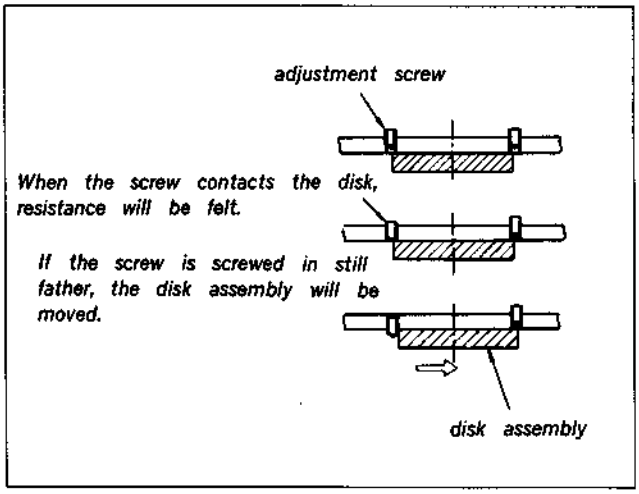

Fig. 3-4.

3-3. REPLACEMENT AND ADJUSTMENT OF THE DRUM ASSEMBLY

3-3-1. Replacement of the Drum Assembly

1) Measure the gap Ⓐ between adjusting plate 2 and 3 and the upperdrum holder section and record the measurement.
   Note :
   The position where the adjusting plate is mounted has a large effect on the tape path, so this measurement must be performed.
2) Measure the gap Ⓑ between adjusting plate 2 and 3 and the upperdrum holder section, and record the measurement.
   Note :
   The position where the adjusting plate is mounted has a large effect on the tape path, so this measurement must be performed.
3) Remove the two screws ● shown in Fig. 3-5, then remove the adjusting plates 2 and 3 ❷.
4) Remove the three connectors ❶ from the rear of the chassis as shown in Fig. 3-6.
5) Remove the three drum mounting screws ❸ from the rear of the chassis, then remove the main body of the drum assembly ❺. After the replacement has been completed, adjust the drum path.

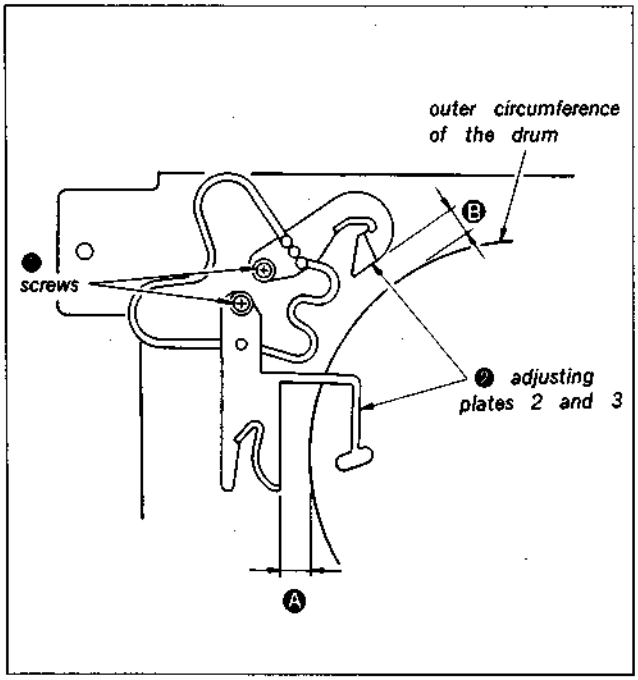

Fig. 3-5. Measurement of the position of adjusting plates 2 and 3

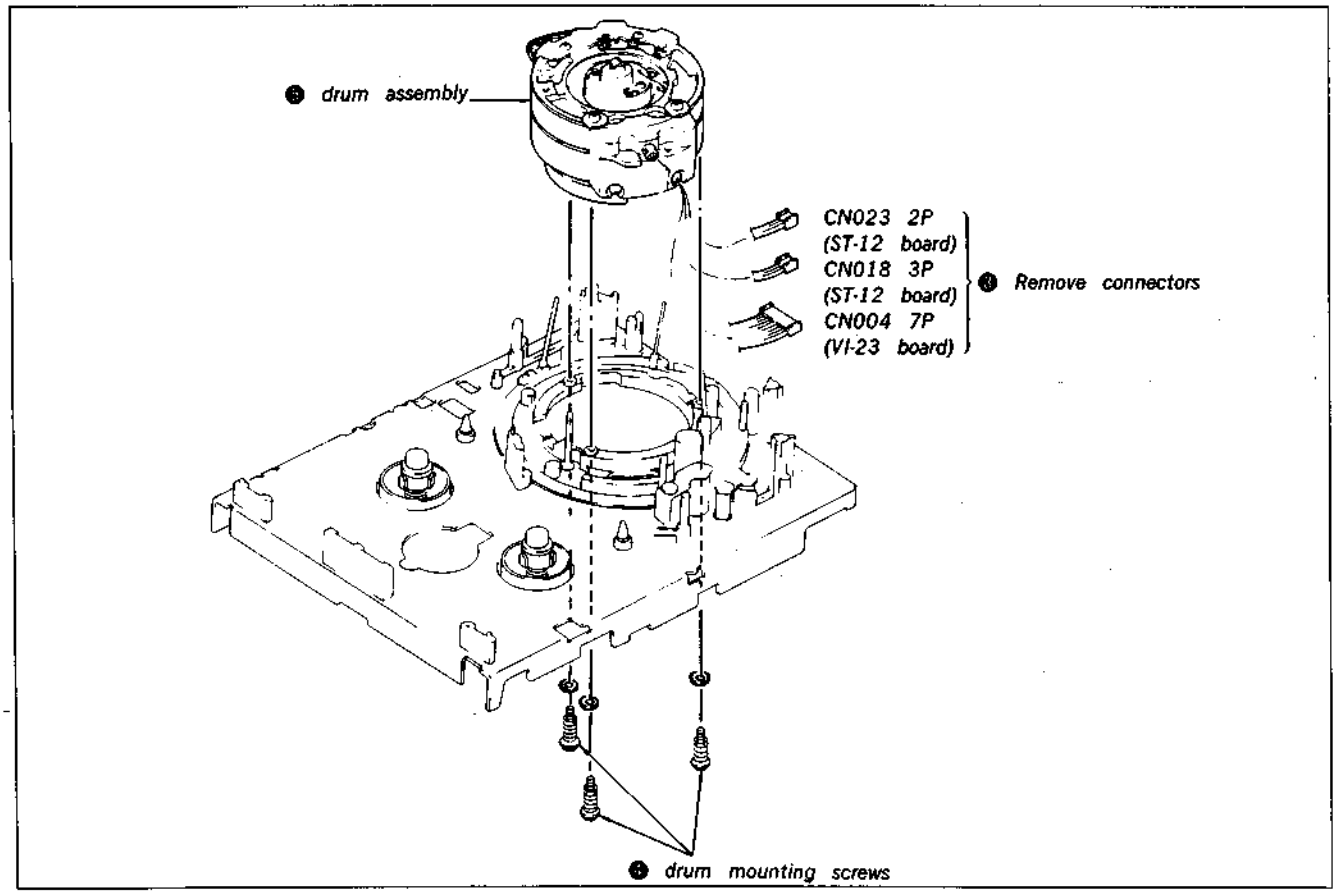

Fig. 3-6. Removal of the drum assembly

3-3-2. Adjustment of the Motor Gap when Replacing the Drum Assembly

After replacing the drum assembly adjust the gap between the motor rotor and the coil to 0.3 mm 0.6 mm (Fig. 3-7).

[Procedure]

1) When re-assembling the drum use the spacers which were removed to produce a gap of between 0.3 mm and 0.6 mm. Measure the gap using the gauge and maintenance use. One side of the gauge in 0.3 mm and the other side is 0.6 mm. If the gap is adjusted correctly the 0.3 mm side should fit in and the 0.6 mm side should not.
2) If this tails to give the correct gap width, do not use the spacers which were removed; instead, use a combination of the accessory four spacers (0.3 mm) to obtain the correct width.

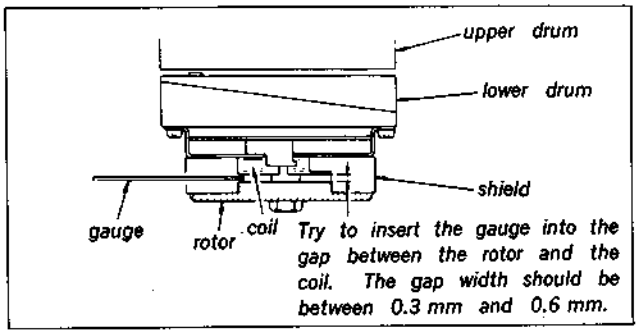

Fig. 3-7. Checking the motor gap width after replacing the drum assembly

Removal of the stator and rotor when replacing the drum

1) Remove the nut and washer ❶.
2) Remove the rotor ❷ from the stator ❸.
3) Remove the two screws ❹, then remove the stator ❸ from the main body of the drum.

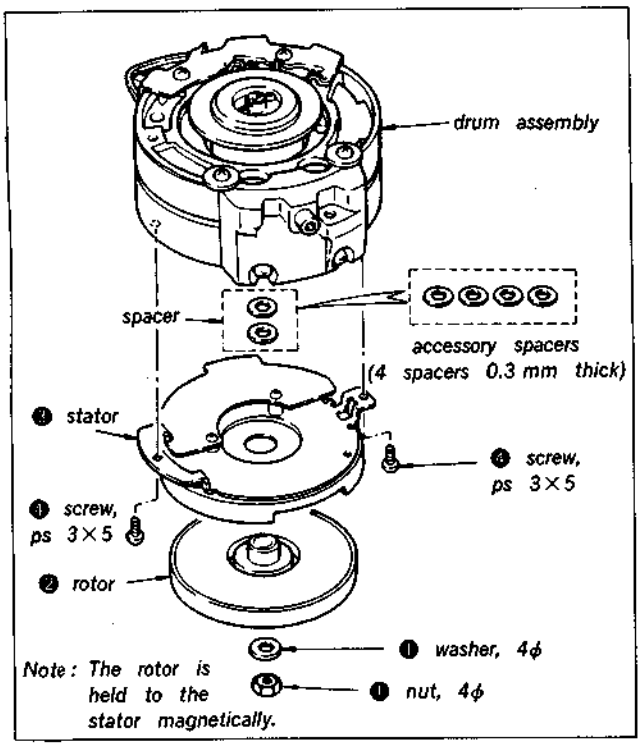

Fig. 3-8. Removal of the stator and rotor when replacing the drum

3-4. REPLACEMENT OF THE CAPSTAN MOTOR

3-4-1. Removal of the Capstan Motor (Fig. 3-9)

1) Remove the two screws (+PW2 × 6) ❶ and screw (+P2.6 × 5)❷.
2) Remove the capstan motor ❸ from the rear of the mechanical chassis.
3) Remove screw (+P2 × 4) ❹, and remove the rotor holder ❺.
4) Remove three claws, and remove capstan cover ❻.

Note:

When the capstan motor has been removed or replaced, check the tape path once.

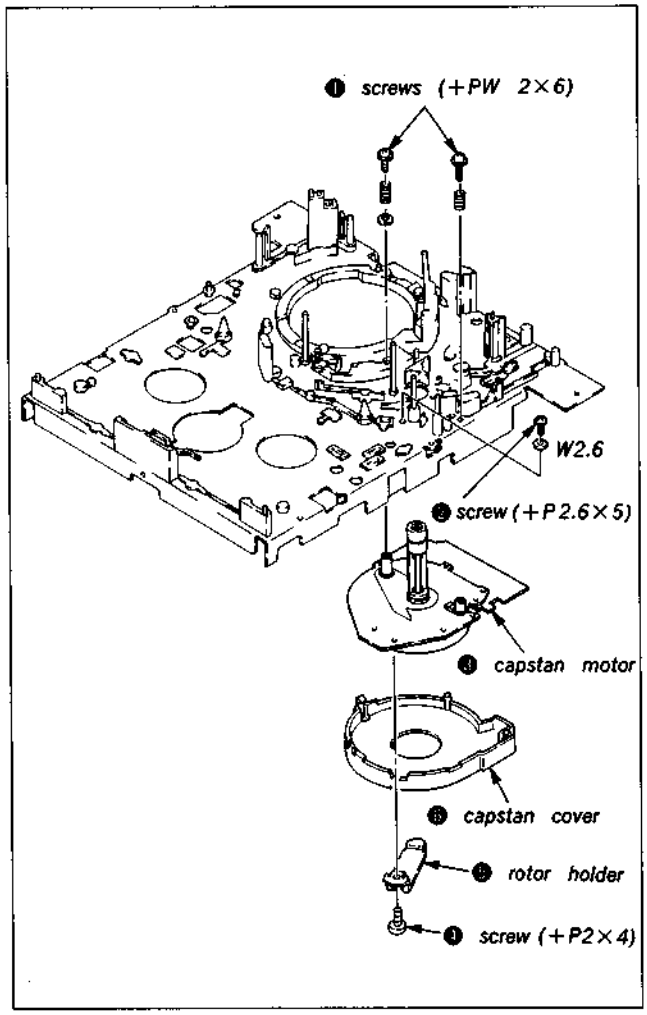

Fig. 3-9. Removal of capstan motor

3-4-2. Capstan Shaft Verticality Adjustment

When the capstan motor has been replaced or removed, be sure to make the following adjustment.

1) Loosen clamping screws Ⓑ and Ⓒ.
2) Apply parallel plate (SL-0657 in the list of fixtures and tools) vertically to the capstan motor shaft and the No. 8 guide sleeve, as shown in Fig. 3-10.
3) Turn adjust screw Ⓐ until the capstan motor shaft becomes vertical.
4) Apply the jig to the capstan motor shaft and the No. 10 guide shaft of the pinch arm assembly in the vertical attitude as shown in Fig. 3-11.

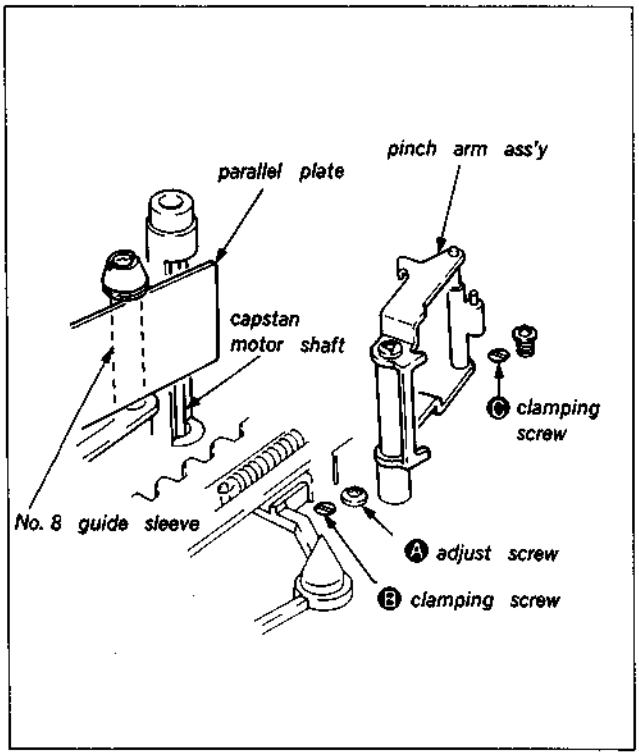

Fig. 3-10.

5) Turn clamping screw Ⓒ until the capstan motor shaft becomes vertical, and clamp the capstan motor.
6) Apply the jig again as shown in Fig. 3-10, and check the verticality of the capstan motor shaft. If it is not accurately vertical, repeat the processes from 3).
7) Tighten clamping screw Ⓑ to clamp the capstan motor.
8) Make adjustment following the described tape path adjustment processes.

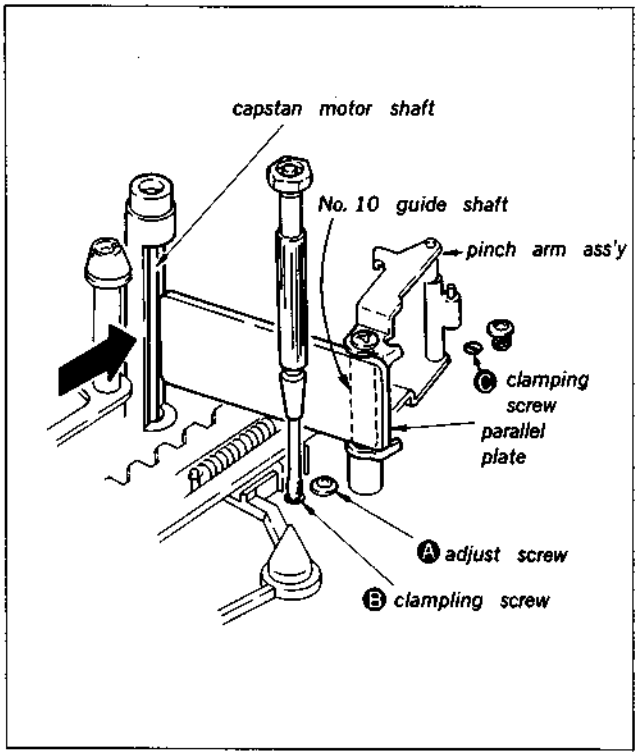

Fig. 3-11.

3-5. REMOVAL OF THE S COIL SENSOR (Fig. 3-12)

1) Remove the spring ❶.
2) Remove the claw ❷ in the direction of arrow Ⓐ, then pull the S coil sensor ❸ out.
3) Pull out the connector ❹ from CN5 on ST-12 board.

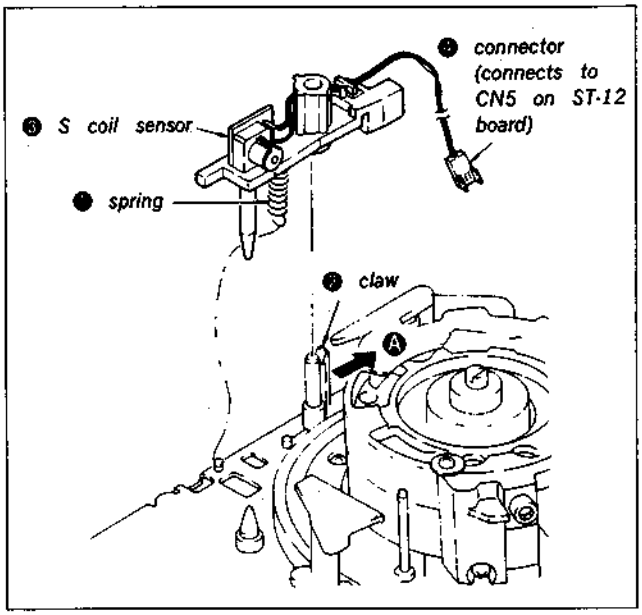

Fig. 3-12. Removal of the S coil sensor

3-6. REMOVAL OF GEAR HOLDER (Fig. 3-13)

1) Remove FL cassette compartment assembly in accordance with 2-8 in **SECTION 2**.
2) Remove three claws ❶. (Easy to remove with flatblade screwdriver.)
3) Remove claw ❷ and open gear holder ❶ in the direction of arrow Ⓑ while taking precaution to the Ⓐ section.
4) Remove two claws ❸ and remove gear holder ❹. (When installing, install from claws ❺.)

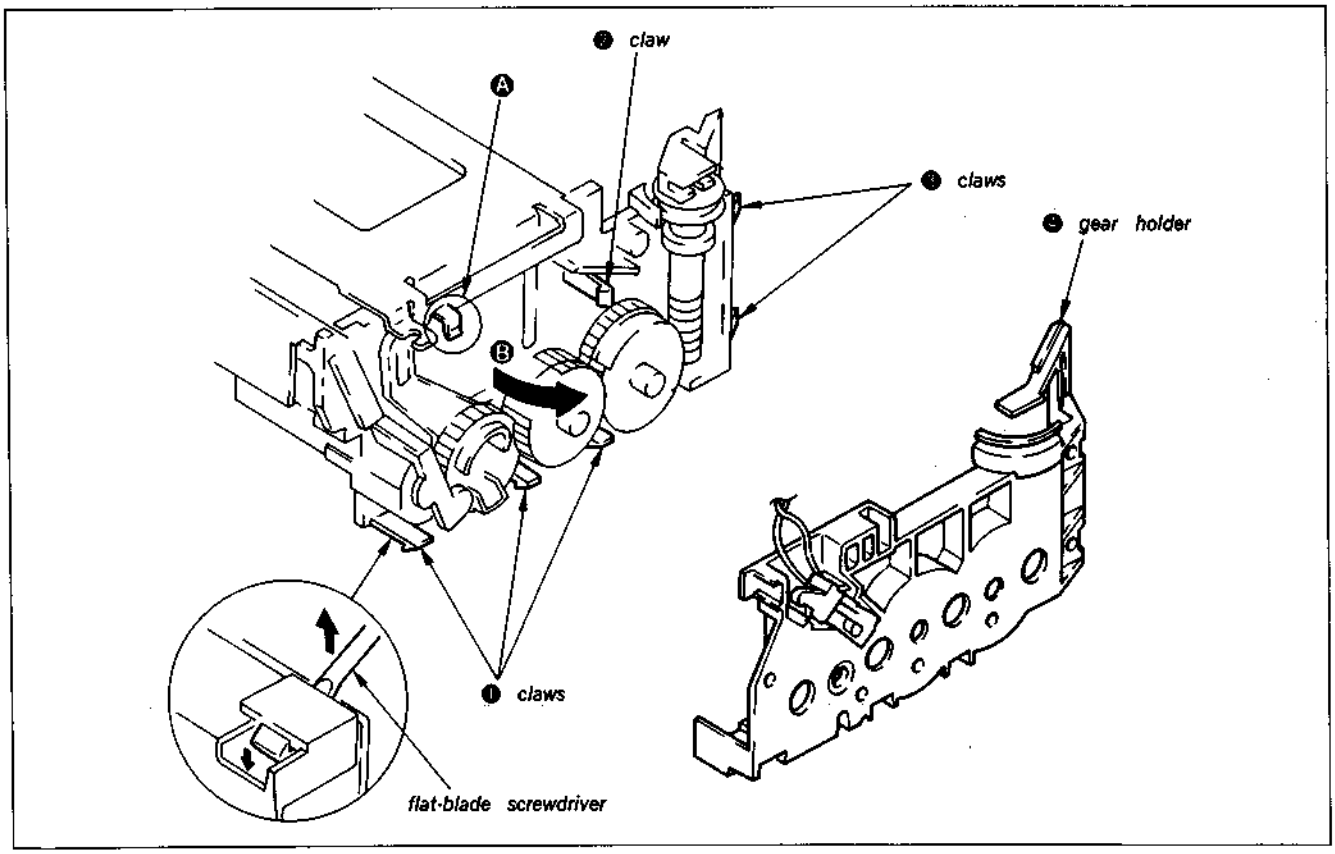

Fig. 3-13. Removal of gear holder

3-7. ADJUSTMENT OF THE FL CASSETTE COMPARTMENT

3-7-1. Adjustment of the Position of the Right Gear of the FL Cassette Compartment Assembly

In the FL cassette compartment assembly the cassette holder must always move parallel to the mechanical chassis. The gear system is used to control the amount by which the cassette holder advances so that this will be the case. Consequently if the gears in this section slip out of mesh the next time the unit is assembled the gear mesh must be adjusted to the correct position otherwise the cassette will not feed properly.

[Adjustment Method of Right Gear Wheel Positioning (Phase)] (Fig. 3-14-A)

Preparation prior to adjustment

1) Remove gear holder in accordance with 3-6.
2) Remove the respective limiter gear assembly ❷ drive gear assembly ❸, and worm gear assembly ❹ from the right side plate.
3) Pull the base block toward you and draw the L groove (right side plate) of the fulcrum ❺ of the base block right side plate to the left edge (Fig. 3-14-A position)

Note:

Adjustment hereafter is carried out in above state.

Adjustment and Check

1) See to it that the fulcrum ❺ of the base block right side plate passes the slot of the drive arm (right) assembly.
2) Install the limiter gear assembly ❷, irrespective of the positioning hole ⓐ to engage with the drive arm (right) assembly ❶. (Regarding phase matching hole ⓐ, it is desirable, if possible, to come to the vicinity of Fig. 3-14-A).
3) Install drive gear assembly ❸ so that the fourth tooth of the drive gear assembly ❸ becomes into a straight line ⓔ with the shaft of the limiter gear assembly ❷ and drive gear assembly ❸.
4) Install worm gear assembly ❹.
5) Install the gear holder in reverse procedure of 3-6. Thereafter stop the drawing forward of the base block assembly.
6) Turn the flange ⓓ of the worm gear assembly ❹ in the direction of arrow unitl it stops.

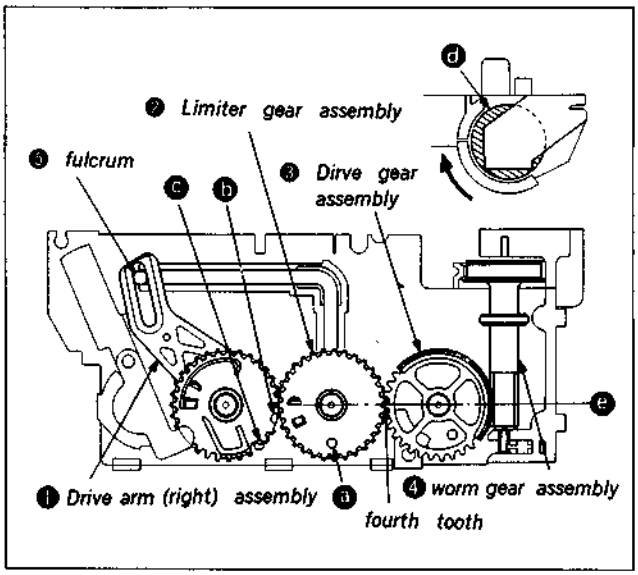

Fig. 3-14-A. Adjustment method of position (Phase) matching of right gear wheel

Note:

The chip ⓑ of the drive arm (right) assembly ❶ is a chip for phase matching during assembly, and chip ⓒ is a chip to determine the FL position during assembling.

Be sure that grease in not adhered to the belt pulley section of the ⓓ section of the worm gear assembly ❹.

[Adjustment Method of Position (Phase) Matching of Left Gear Wheel] (Fig. 3-14-B)

Preparation prior to adjustment

1) Remove drive arm (left) assembly from left side plate.
2) Pull the base block toward you, and draw the L groove (left side plate) of the fulcrum ❼ to the left edge (Fig. 3-14-B position)

Note:

Adjustment hereafter is carried out in the above state.

Adjustment and Check

1) Install the drive arm (left) assembly ❺ to that the third tooth of the drive arm (left) assembly becomes into a straight line ❶ with the shaft of the drive arm assembly ❺ and middle gear when fulcrum ❼ is in Fig. 3-14-A position, the third gear of the drive arm (left) assembly automatically becomes into a straight line ❶.

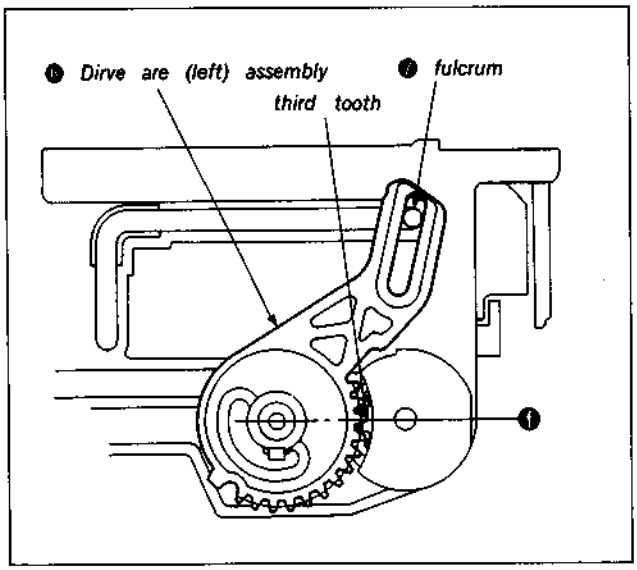

Fig. 3-14-B. Adjustment method of position (phase) matching of left gear wheel

[Checking Method When Phase is in Matched State] (Fig. 3-14-C)

1) Turn worm gear assembly ❽ in the direction of arrow Ⓐ until stops.
2) Release base block ❾.
3) When the base block assembly ❿ is shifted in the direction of arrow Ⓑ, be sure that the base block assembly ❿ is returned in the direction of arrow Ⓒ. At this point, be sure that the base block assembly ❿ does not tilt and shifts.

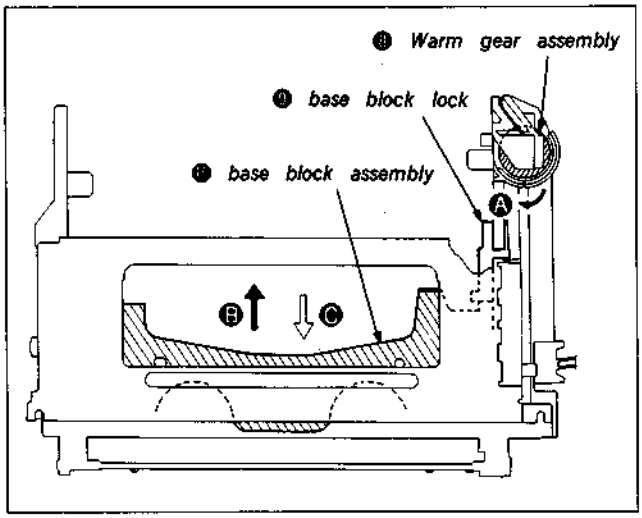

Fig. 3-14-C. Checicing method when phase is in matched state

3-7-2. Cassette ON Switch Operation Check

[Method of checking]

When inserting a cassette into the FL cassette compartment assembly confirm that as the cassette is inserted the microswitch comes ON when the center of the drive roller is 7 to 13 mm from the end of the guide groove as shown in Fig. 3-15. (A clicking sound can be heard after the switch is pressed.)

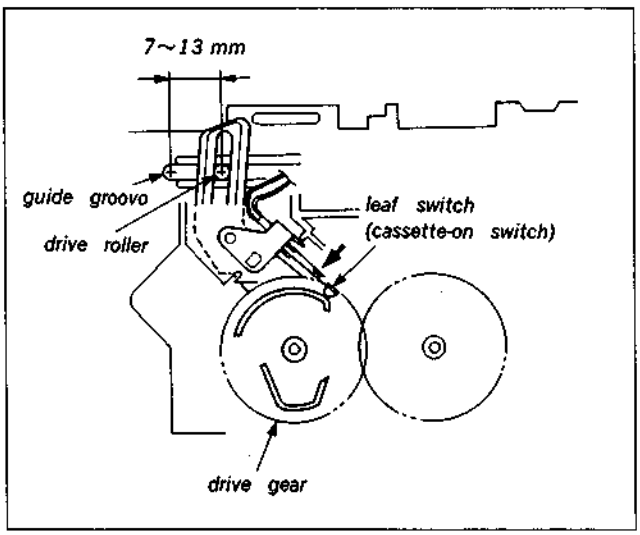

Fig. 3-15. Cassette ON switch operation check

3-7-3. Checking and Adjustment of the Cassette Door Assembly

[Method of checking]

With the door opening and closing arm returned all the way in the direction of arrow Ⓐ check to make sure that the door in vertical.

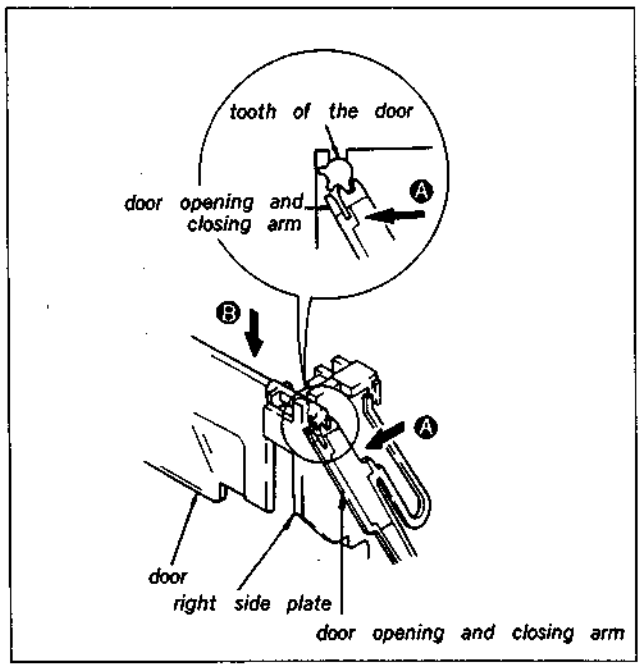

Fig. 3-16. Adjustment of the position of the cassette door assembly

[Method of adjustment]

Check to make sure that the door opening and closing rack plate has returned all the way. Then close the door in the direction of arrow Ⓑ so that it is vertical and mesh the gears.

3-7-4. Mounting the FL Cassette Compartment Assembly (Fig. 3-17)

1) Hook the two holes ❶ of the FL cassette compartment assembly onto the mechanical chassis, then place the compartment in the specified position on the chassis.
2) Loosely tighten the four mounting screws ❷ of the FL cassette compartment assembly. Move the FL cassette compartment assembly forward and backward with respect to the mechanical chassis, set it in the correct position, then tighten the mounting screws ❷ all the way.
3) Connect the timing belt (loading belt) ❸ between the loading motor and the worm gear, then hold it in place with the planet gear holder ❹.
4) Insert the harness sticking ❺ out from the FL cassette compartments into connector ❻ CN3 on ST-12 board.

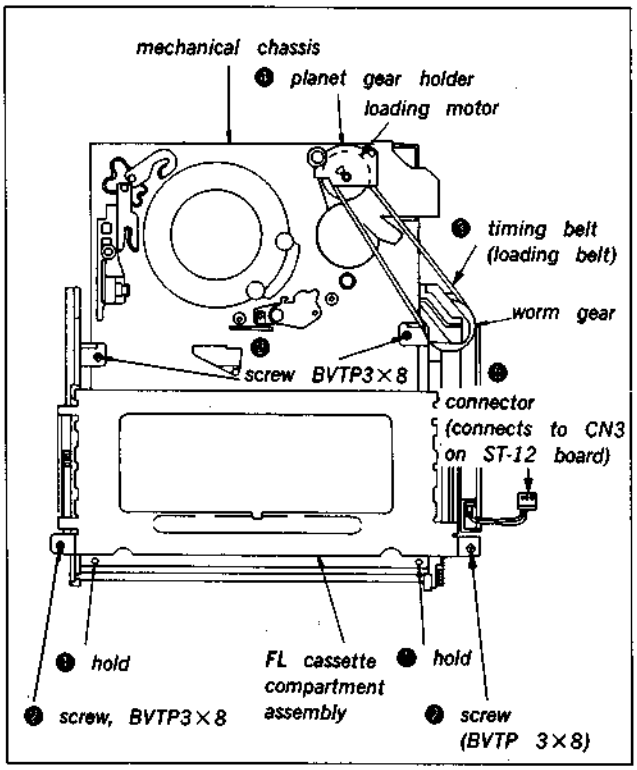

Fig. 3-17. Mounting the FL cassette compartment assembly

3-8. REMOVAL OF THE No. 2 AND No. 3 GUIDES

3-8-1. Removal of the No. 2 Guide

1) Remove the 1×3 tap-in screw ❶.
2) Remove the 1.4×3 tap-in screw ❷.
3) Remove the No. 2 guide assembly ❸.

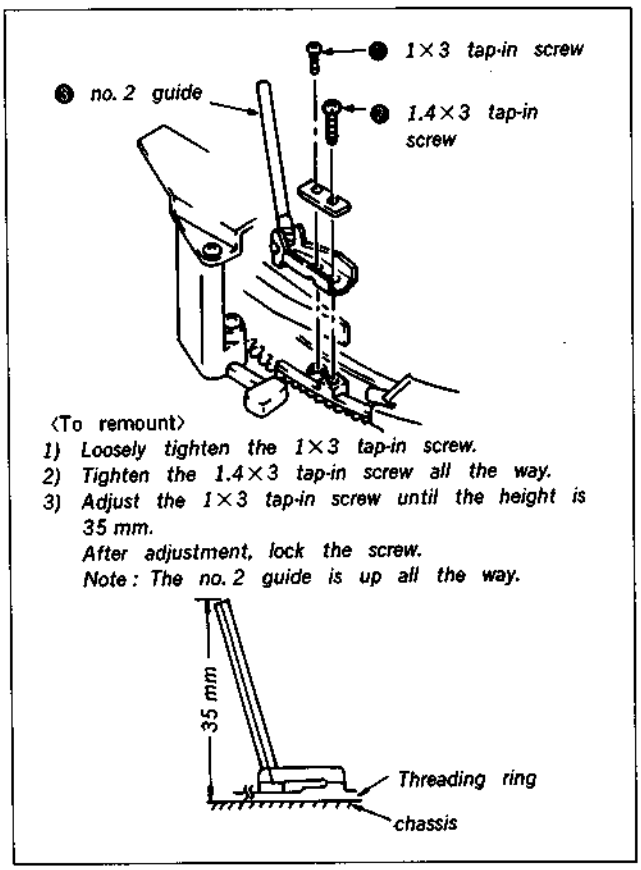

Fig. 3-18. Removal of the no. 2 guide

3-8-2. Removal of the No. 3 Guide

1) Remove the 1×3 tap-in screw ❶.
2) Remove the 1.4×3.5 tap-in screw ❷.
3) Remove the limiter spring ❸.
4) Remove the No. 3 guide assembly ❹.

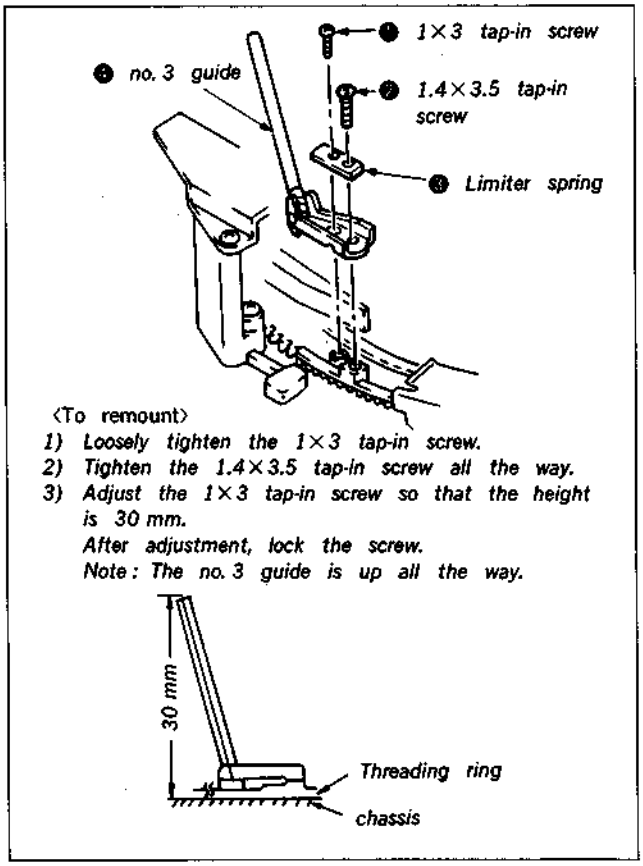

Fig. 3-19. Removal of the no. 3 guide

3-9. REPLACEMENT AND ADJUSTMENT OF THE S THREADING RING

3-9-1. Perparation to Remove the S Therading Ring Removal of the ACE Assembly, FE Head and Threading Motor (Fig. 3-20)

1) Remove the cross-recessed head screw ❶.
2) Remove the No. 6 guide nut ❷.
3) Remove the No. 6 guide washer ❸.
4) Remove the No. 6 guide spacer ❹.
5) Remove the compression coil spring ❺.
6) Remove the two screws (PSW 2.6×12) ❻, then remove the ACE assembly ❼ and the FE head ❽.

Note:
Since the ACE assembly and the FE head are connected by a lead wire, be careful when removing them. It is not necessary to remove the compression coil spring below the ACE assembly, but be careful not to use it.

7) Remove the screw (PTPWH2×8) ❾ and the screw (B2.6×4)❿ then remove the L motor assembly ⓫ by pulling it up and out.
8) When ACE assembly ❼ only is to be removed, remove two screws (PSW 2.6×12) ❻ and the wiring of FE head ❽.

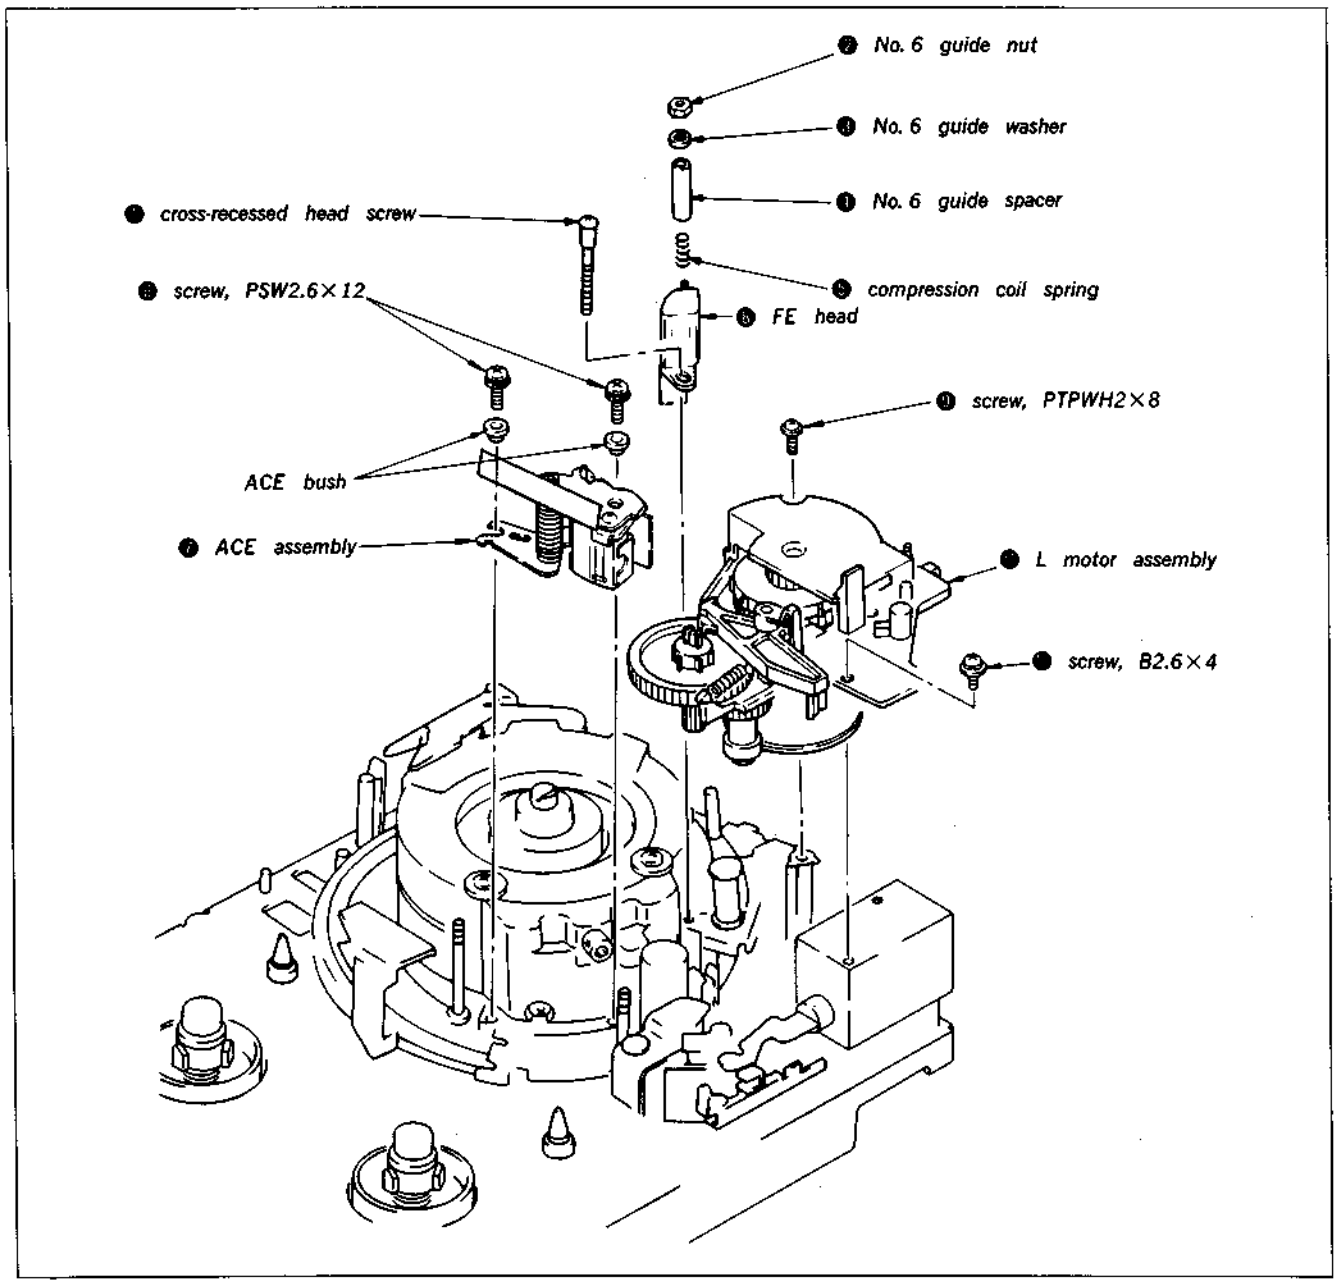

Fig. 3-20. Removal of the ACE assembly, FE head and TE motor assembly

Removal of Miscellaneous Parts (Fig. 3-21)

Proceeding in the same manner as in replacement of the drum assembly measure the width of the gap between the upper drum and the adjusting plates (Fig. 3-5).

1) Remove the two screws ❶, then remove the adjusting plates 2 and 3 ❷.
2) Remove the two screws ❸, then remove the tape holder assembly ❹.
3) Remove the screw ❺, then remove the guide plate ❻.
4) Remove the two screws (PTPWH 2×8) ❼ and the screw (2.6×24) ❽, then remove shuttle guide 2 ❾.
5) Remove the three screws (PTPWH 2×8) ❿ and the screw (2.6×24) ⓫. Then remove the two claws holding shuttle guide 1-YA ⓬ in place, and finally remove shuttle guide 1-YA ⓭.
6) Remove the slant base assembly ⓮.
7) Remove the pin link liner plate ⓯.

Note:

After removing the guide plate, do not thread or unthread a tape with the shuttle guide mounted.

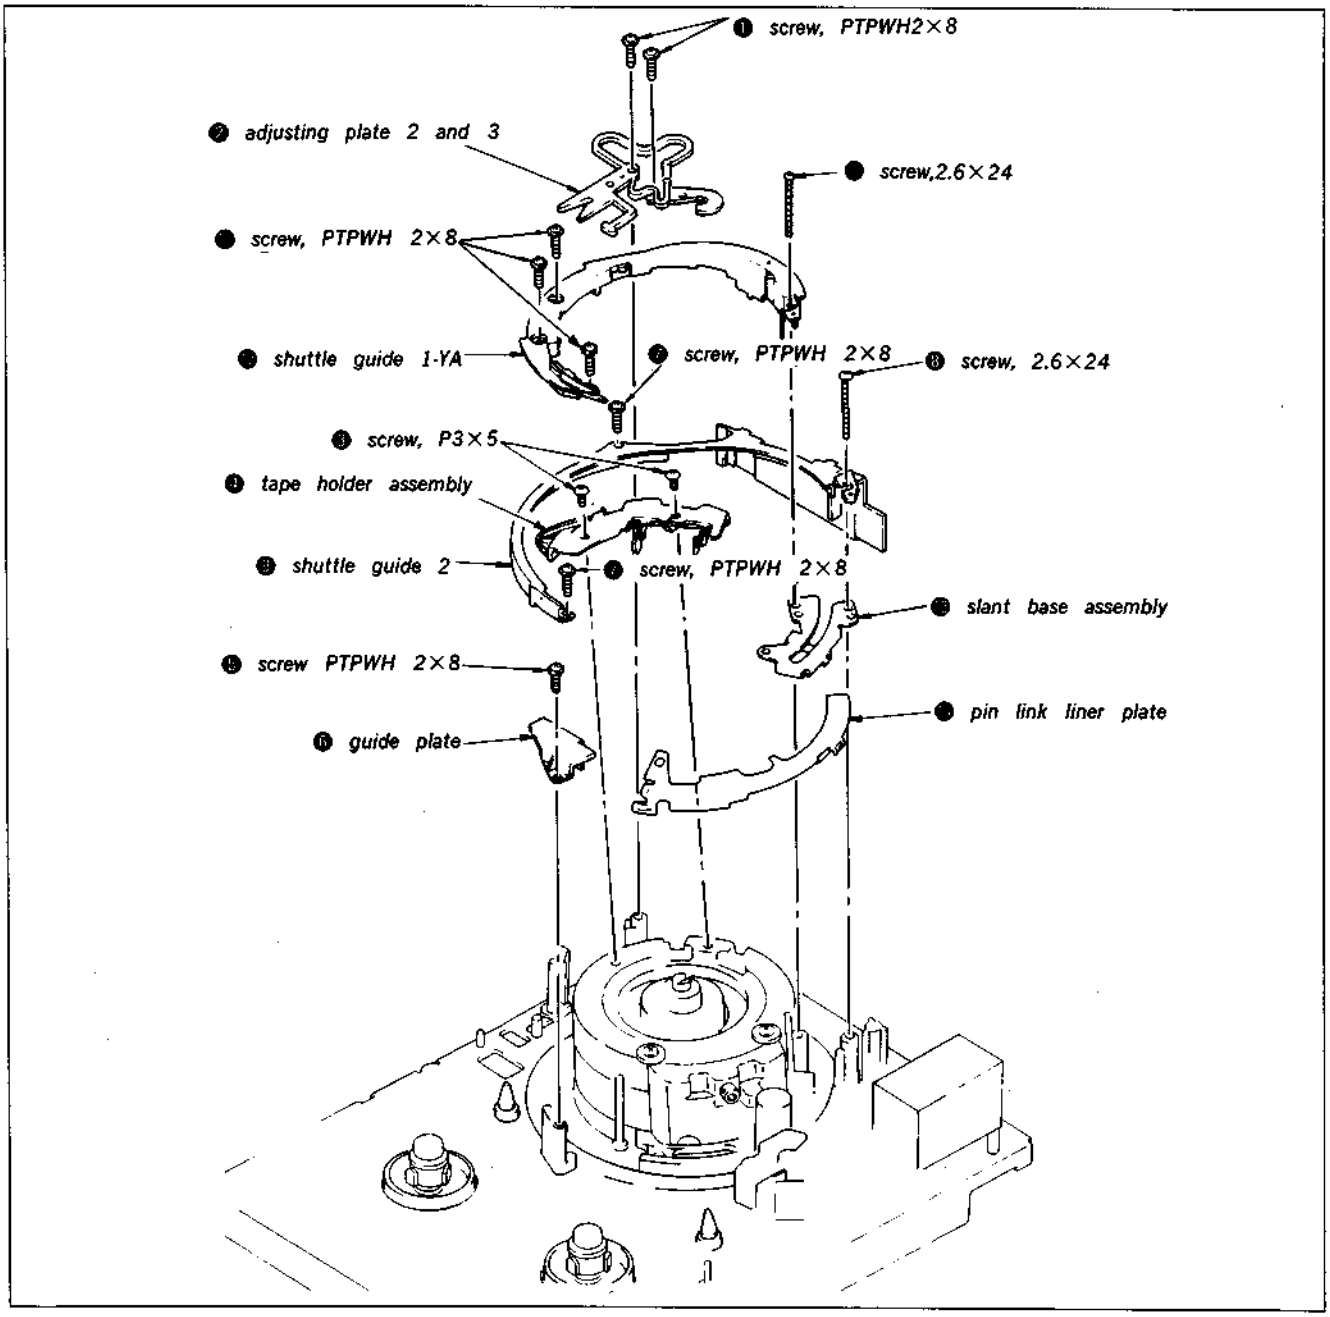

Fig. 3-21. Removal of miscellaneous parts

3-9-2. Removal of the S Threading Ring (Fig. 3-22)

1) Turn the two stop wahers ❶ and remove the ring roller (B) ❷ and (C) ❸.
2) Remove the S threading ring ❹.

Note :
Once a stop washer has been removed, do not use it again.

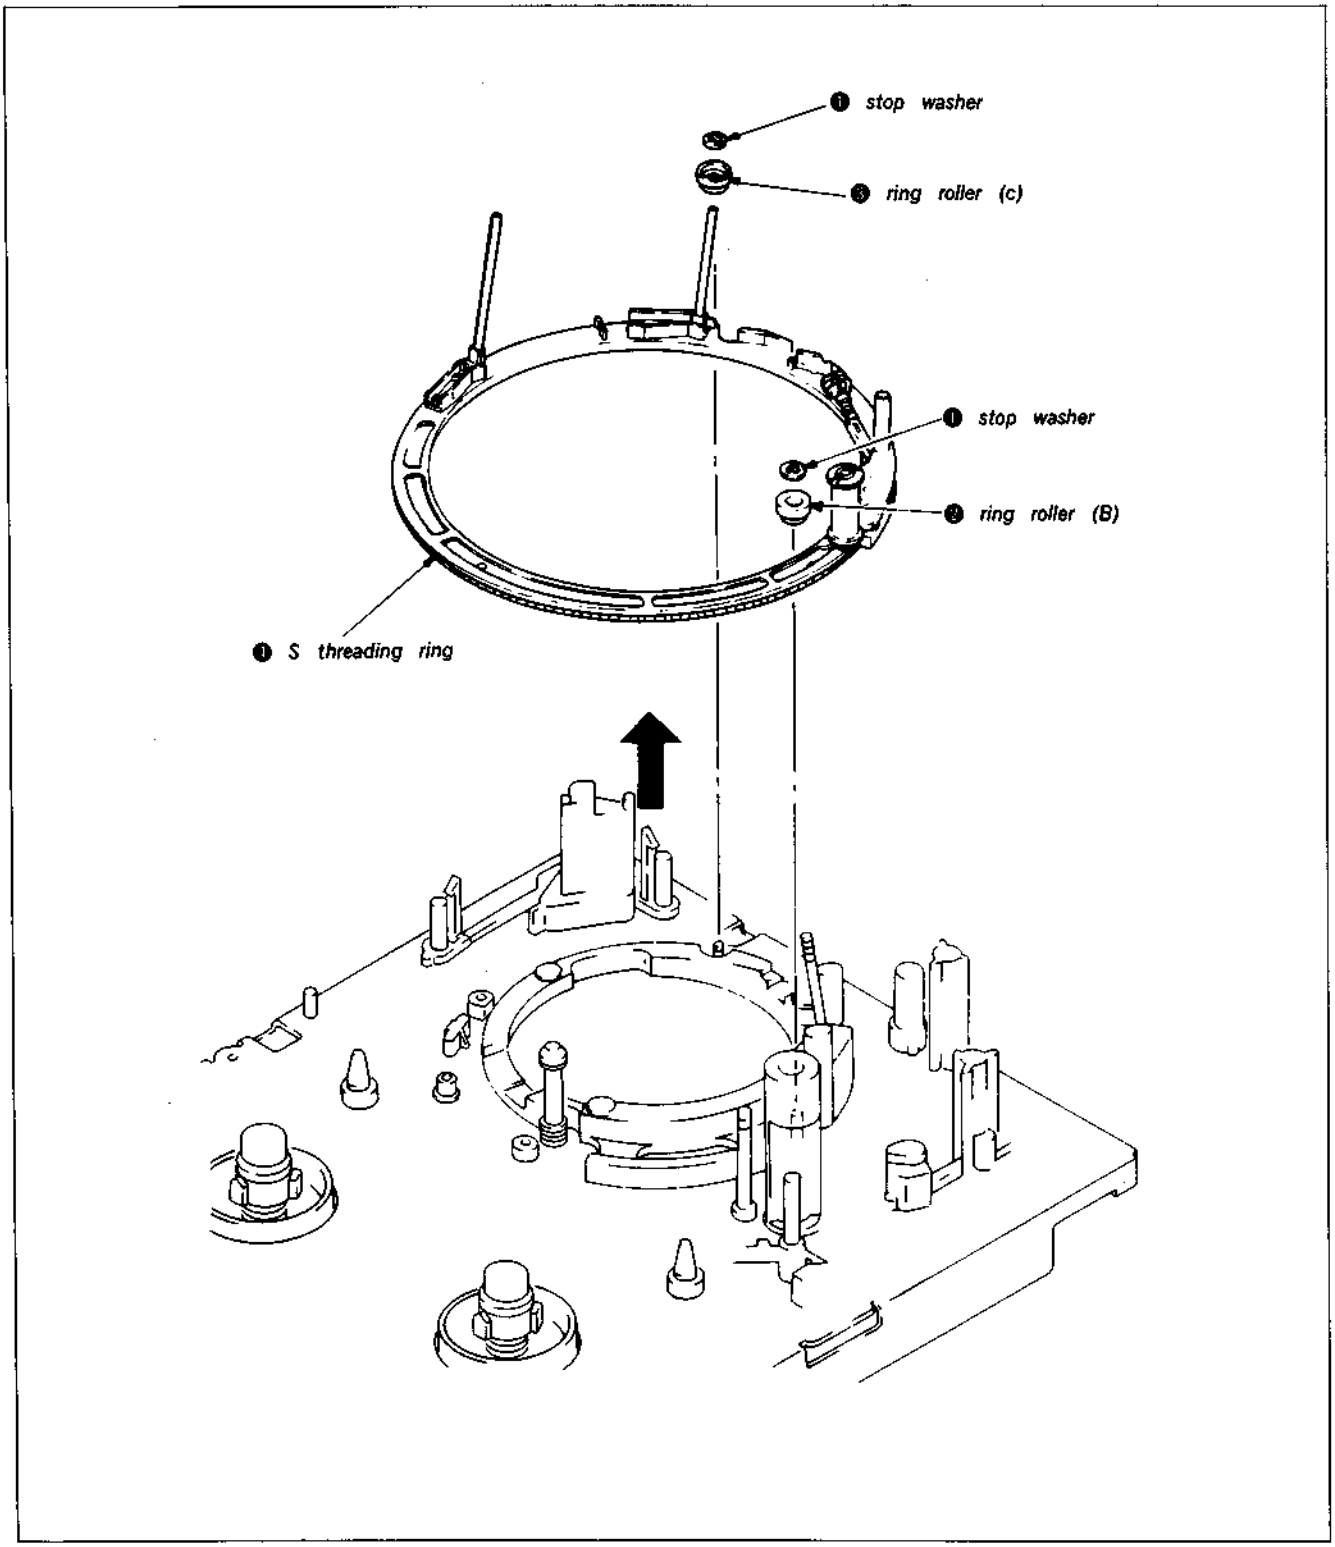

Fig. 3-22. Removal of the S threading ring

3-9-3. S Tureading Ring Mounting and Position Adjustment (Fig. 3-23)

1) Set the slider gear assembly ❶ in the unthreading completed position.
   (Slider gear assembly ❶ set so that it is up against part T slider stop mold ❷.)
2) In this condition, fit the S threading ring ❸ into place, match the chassis hole (3ϕ) ❹ of part Ⓐ with the S threading ring hole (1.5ϕ) ❺ and mesh with the drive gear assembly ❻ teeth.
3) Attach ring roller (B) ❼ and fix in place with a stop washer ❽ .

Note :
After replacement and mounting are completed, adjust the ACE assembly as explained in the section on tape path adjustment.

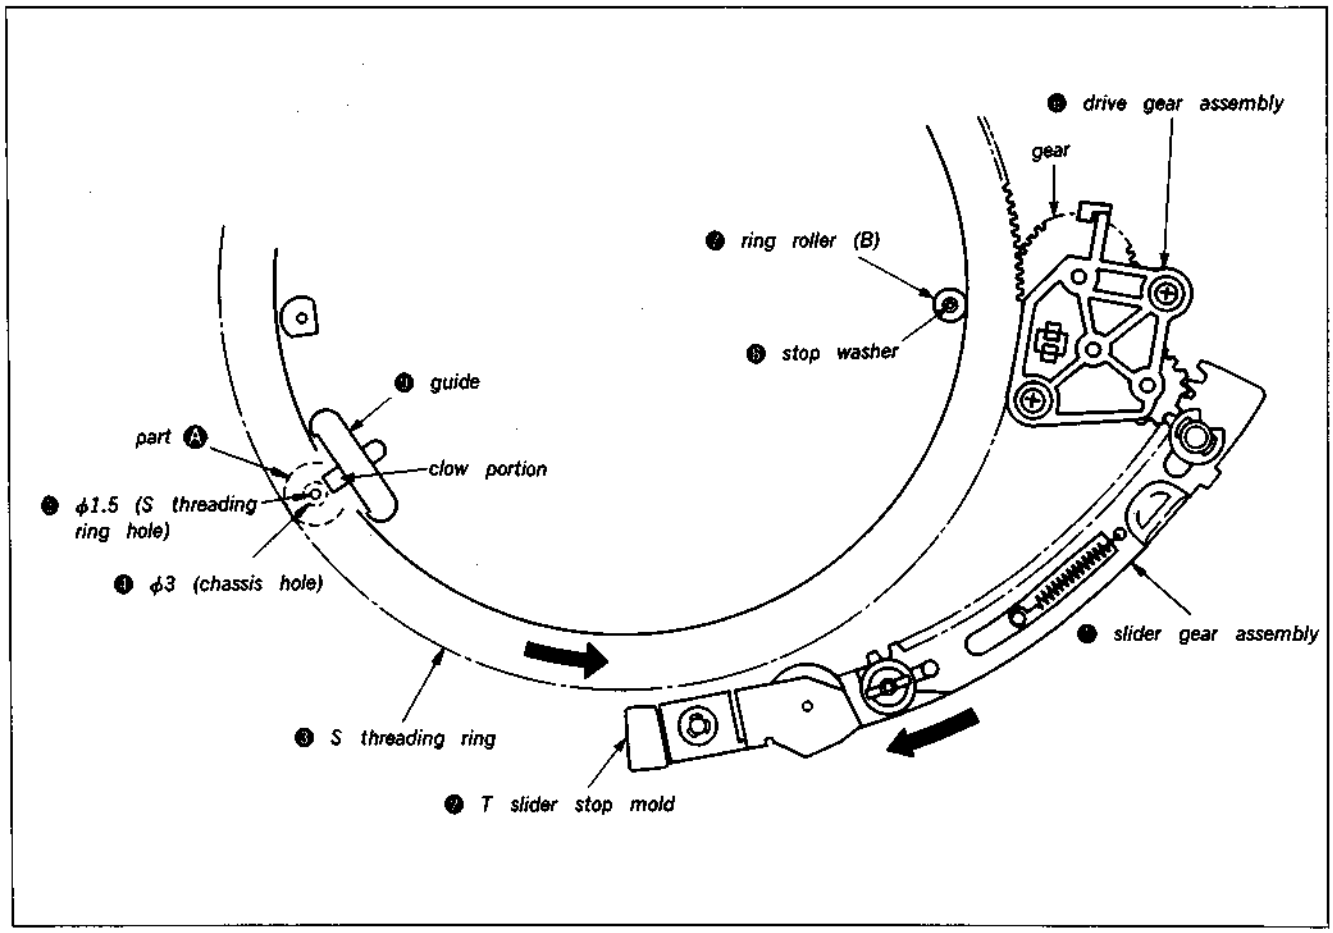

Fig. 3-23. S threading ring position adjustment

3-10. PINCH SNAP-FIT LIMITER GAP CHECK AND ADJUSTMENT

[Method of checking]

1) Set in the threading completed condition.
2) With the plunger pushed in all the way, confirm that the thickness of the pinch snap-fit limiter gap is 0. 4 mm to 0.6 mm. If it is not, adjust as explained under [method of adjustment] below.

[Method of adjustment]

1) With the pinch solenoid in the absorbed condition (when the plunger is pushed in all the way) , loosen the adjustment screw ❶ .
2) Press the pinch limiter adjustment plate ❸ in the direction of arrow ⓐ a with an ordinary screwdriver ❷ , as in section Ⓐ in the diagram, and adjust until the thickness of the gap in 0.4mm to 0.6mm. Tighten the adjustment screw and then lock it to fix everthing in place.

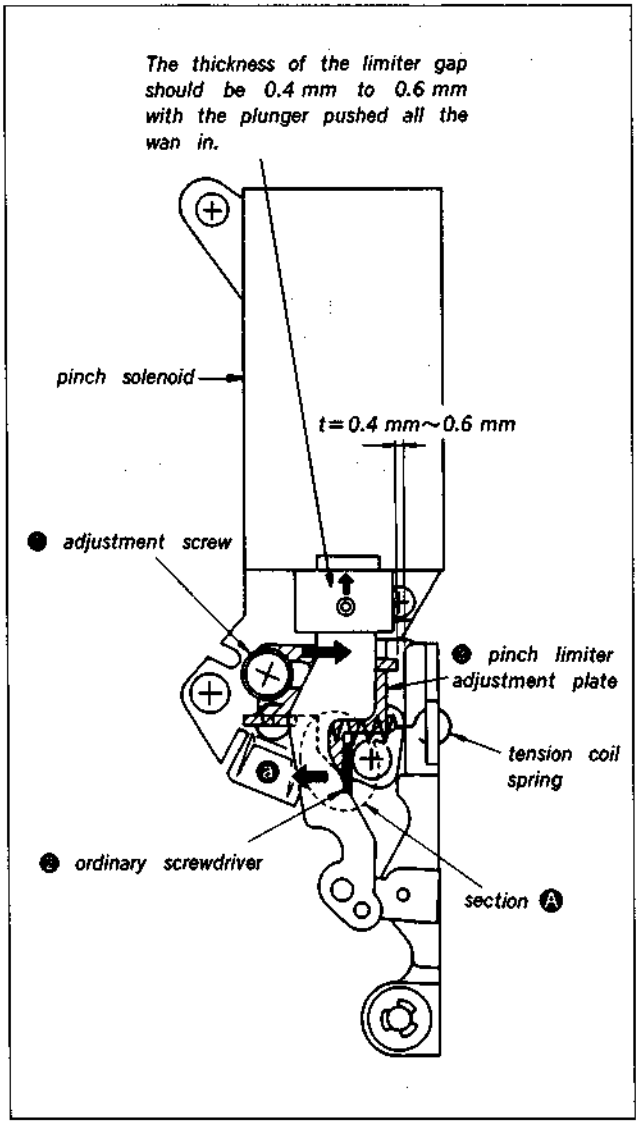

Fig. 3-24. Pinch snap-fit limiter gap adjustment plate

3-11. THREADING END SWITCH AND T COIL SENSOR

3-11-1. Threading End Switch (TE Switch) Position Check and Adjustment

[Method of checking]

Turn the S threading ring manually. Check to make sure that. when the lock roller moves from above the straight line part of the notch in the ring (Fig. 3-25 section Ⓐ) to 1/3 of the way down it and back, the TE switch turns ON and OFF.

If the lock roller has to outside of this range before the switch will turn ON and OFF, adjust as explained below.

[Method of adjustment]

1) Set the lock roller between the top of the notch in the S threading ring and 1/3 of the way down it turn the TE switch in the direction of the arrow and, when the switch turns ON fix the TE switch in place.
2) When the adjustment is completed, repeat the check as described above [method of checking] .

[Removal]

1) Remove the tension coil spring ❷ that is attached to the Scoil sensor assembly ❶ , then remove the S coil sensor.
2) Remove the lock arm assembly ❸ in the direction of arrow Ⓐ .

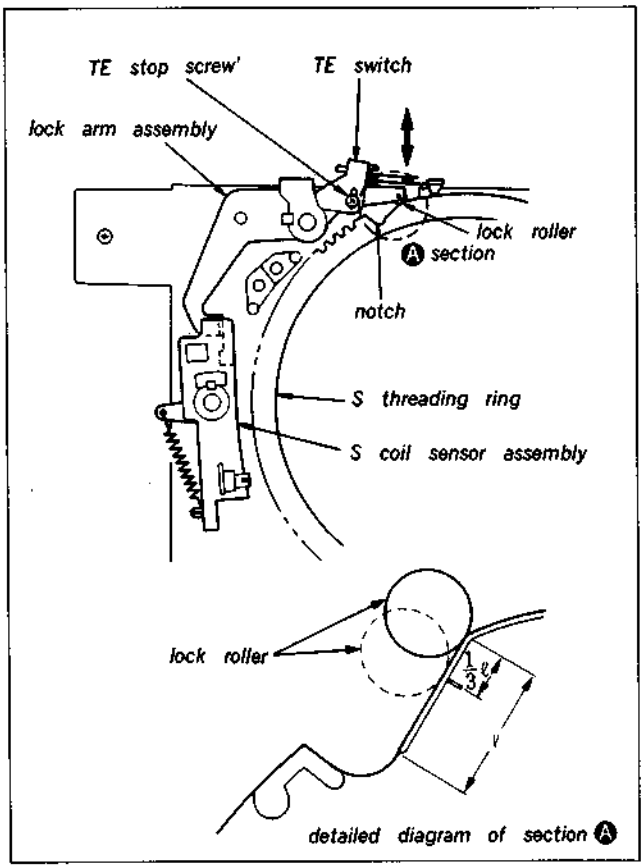

Fig. 3-25. TE switch position adjustment

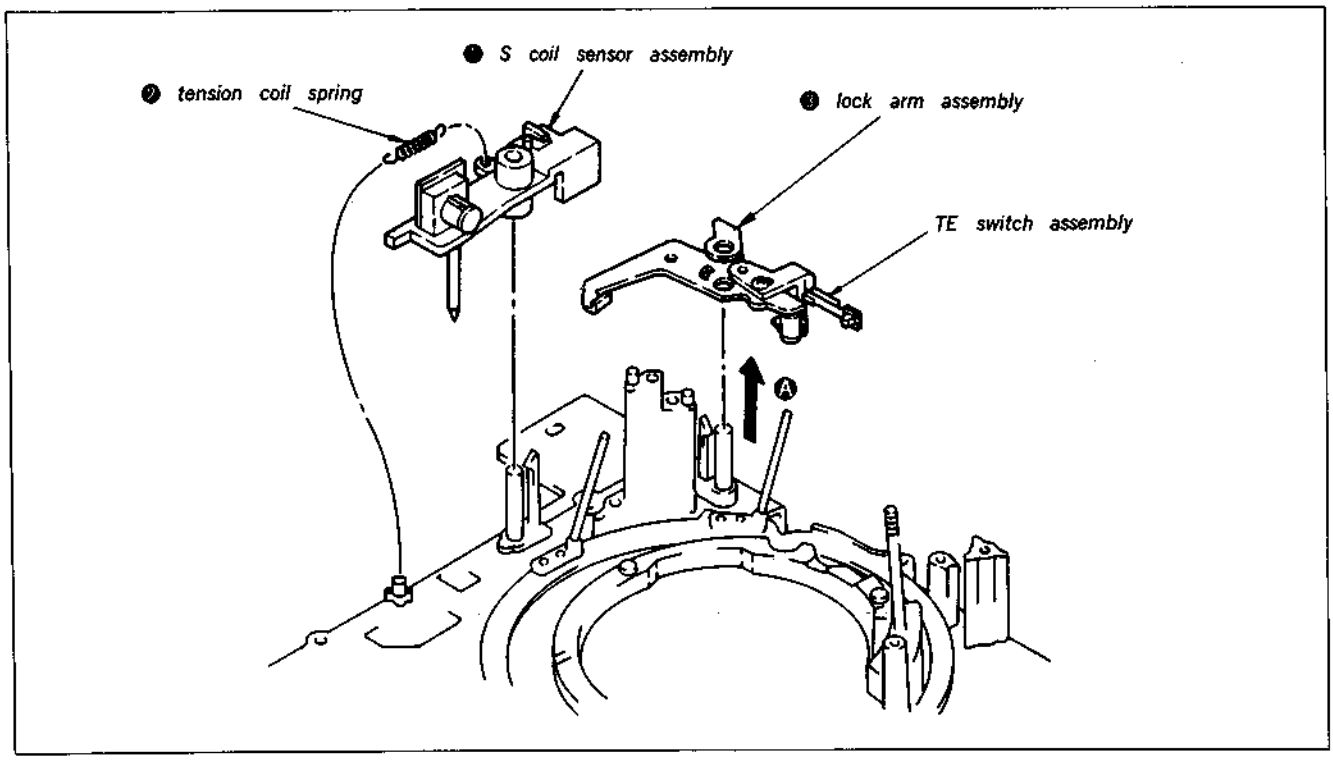

Fig. 3-26. Removal of the TE switch assembly and lock arm assembly

3-11-2. T Coil Sensor Mounting and Operation Check

[Method of checking]

Confirm that T coil sensor link ❷ is pressed and T coil sensor ❸ moves in the direction of arrow Ⓑ when the T slider gear assembly ❶ is moved in the direction of arrow Ⓐ .

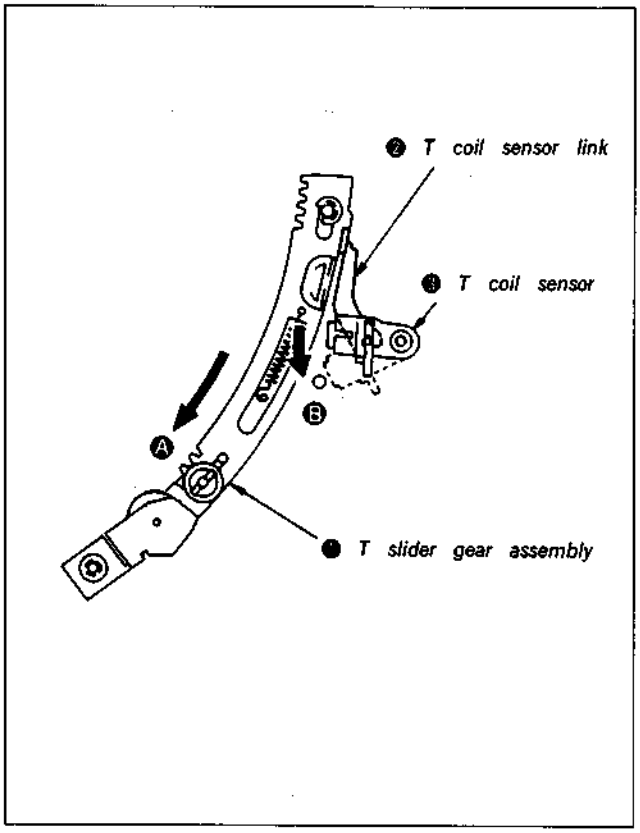

Fig. 3-27. T coil sensor operation check.

[Method of mounting]

1) Place T coil sensor link ❶ in the prescribed position.
2) Match up the T coil sensor ❷ hole with the chassis shaft ❸ and insert. Place so that it engages with T coil sensor link ❶ .
3) Hook the tension coil spring ❹ on the T coil sensor and chassis claw.

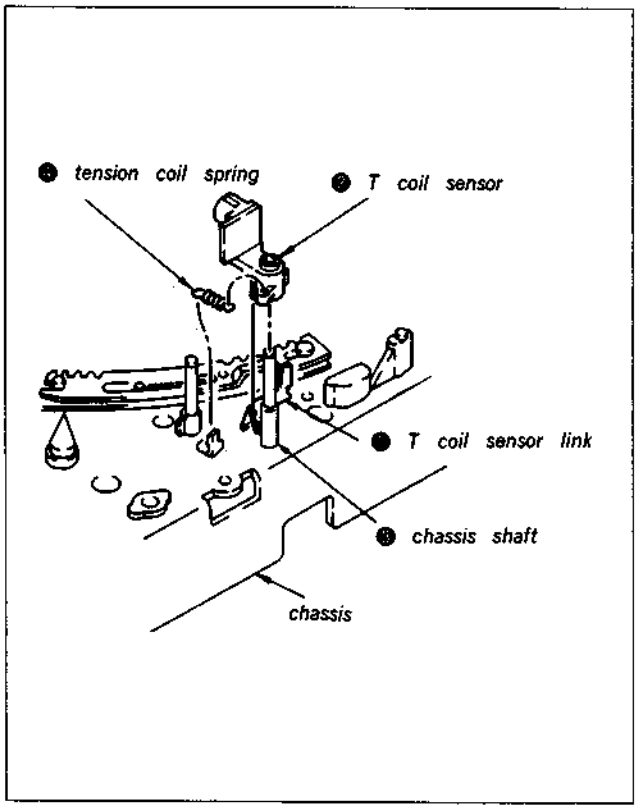

Fig. 3-28. T coil sensor link and T coil sensor mounting.

3-12. REMOVAL AND ADJUSTMENT OF THE REEL BLOCK ASSEMBLY

3-12-1. Removal of the Reel Block Assembly

1) Place the set upside down.
2) Remove the four BVTP 3×8 tap-in screws ❶ .
3) Remove the reel block assembly ❷ .

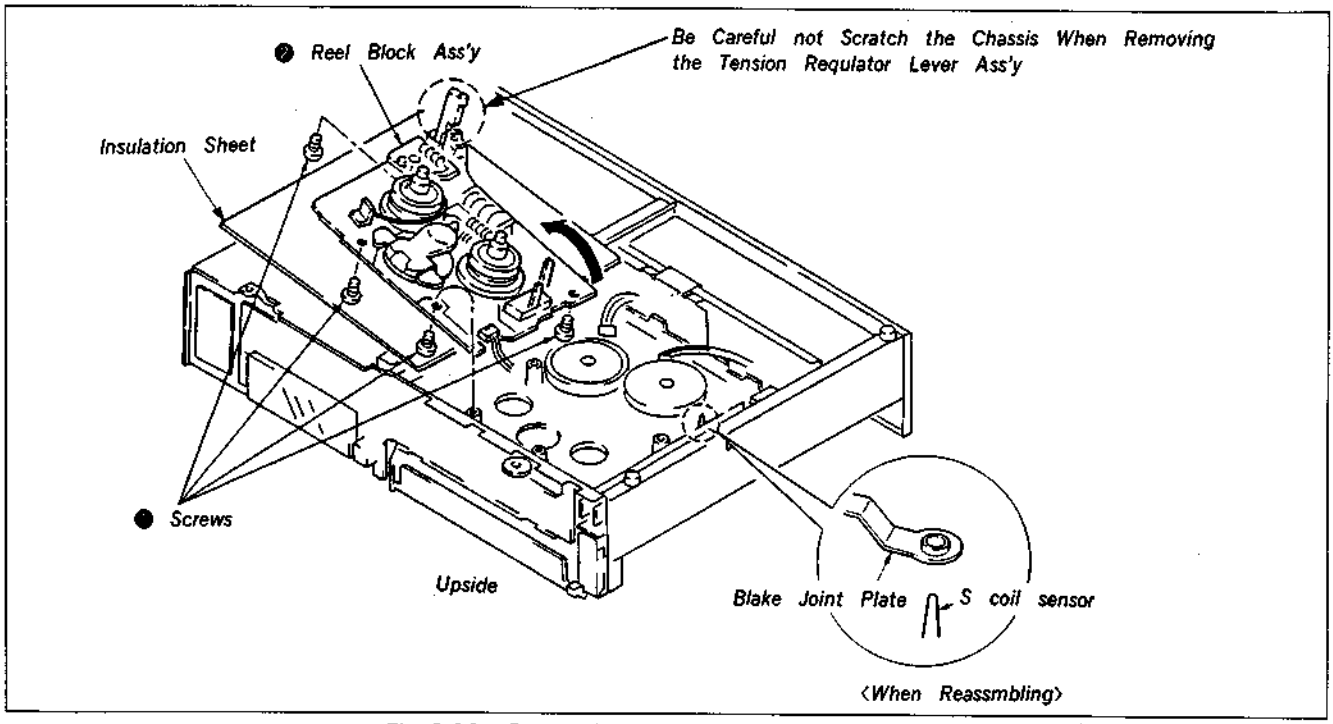

Fig. 3-29 Removal of the reel block assembly

3-12-2. Adjustment of the Position of the Tension Regulating Lever

[Method of adjustment]

1) Put the unit in playback mode.
2) Loosen the adjustment spring until the tape guide pin of the tension regulating lever assembly is positioned to the outside of the outer circumference of shuttle guide 2. as shown in Fig. 3-30. Then adjust by moving the tension regulating band assembly in the direction of arrow Ⓐ .
3) After adjustment tighten the adjustment screw, being careful that the tension regulating band assembly does not move.

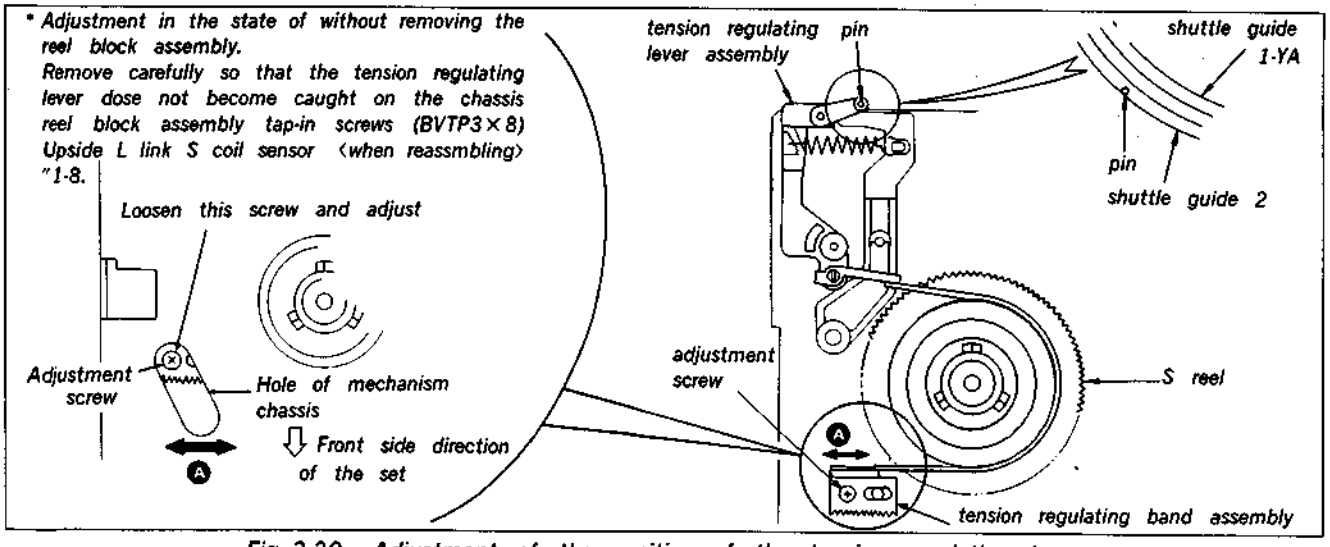

Fig. 3-30. Adjustment of the position of the tension regulating lever

3-13. ADJUSTMENT OF THE FORWARD BACK TENSION

[Method of measurement]

1) Insert the torque cassette (SL-0003C) and put the unit in playback mode.
2) Read the value on the meter on the S reel side after the needle has gone around about once.
   The correct value is 34g•cm ± 3g•cm.

Notes:

i) The set must be perfectly level during this measurement.

ii) After the measurement, the tape can become slack when the stop button is pressed. If this happens set the unit is forward mode to take up the slack before removing the tape.

[Mothod of adjustment]

Move the position of the tension coil spring that is hooked on the tension regulating lever assembly in the direction of arrow Ⓐ until the measured value falls within the correct range.

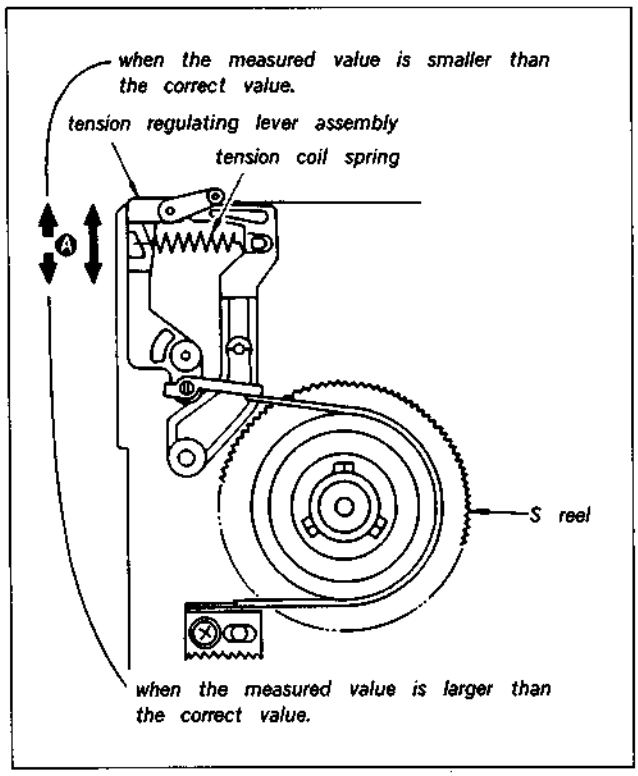

Fig. 3-31. Adjustment of the back tension

3-14. ADJUSTMENT OF THE FORWARD TORQUE

[Method of measurement]

1) Insert the torque cassette (SL-003C) and put it into video recording state.
2) Read the indicated value of the meter on the T reel side when it has become stabilized.
   The correct value is 80g•cm ± 5g•cm.

[Method of adjustment]

1) Turn RV401 on ST-12 board to adjust the torque until its value falls within the correct range.

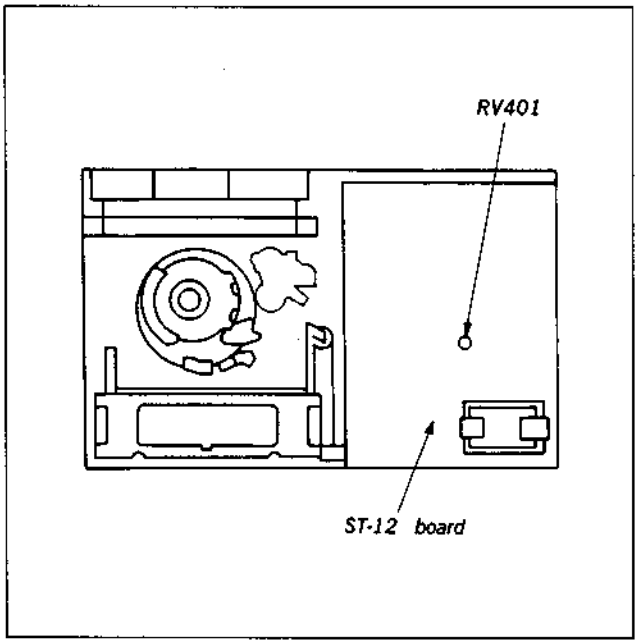

Fig. 3-32. Adjustment of the forward torque

Note:

When the forward torque is weakened during the measurement the tape can become slack, in which case the set will go into emergency stop mode. In such a case, the only switches that will work are the cassette eject switch and the power switch. It is necessary to temporarily remove the cassette, or to turn the power OFF and back ON.

4. TAPE PATH ADJUSTMENT

4-1. TRACKING ADJUSTMENT

This adjustment has a large effect on the picture quality in each mode and on the interchangeabillity of tapes. so it should be done carefully.

4-1-1. Preparation for adjustment
4-1,2. Adjustment on the entrance side
4-1-3. Adjustment on the exit side

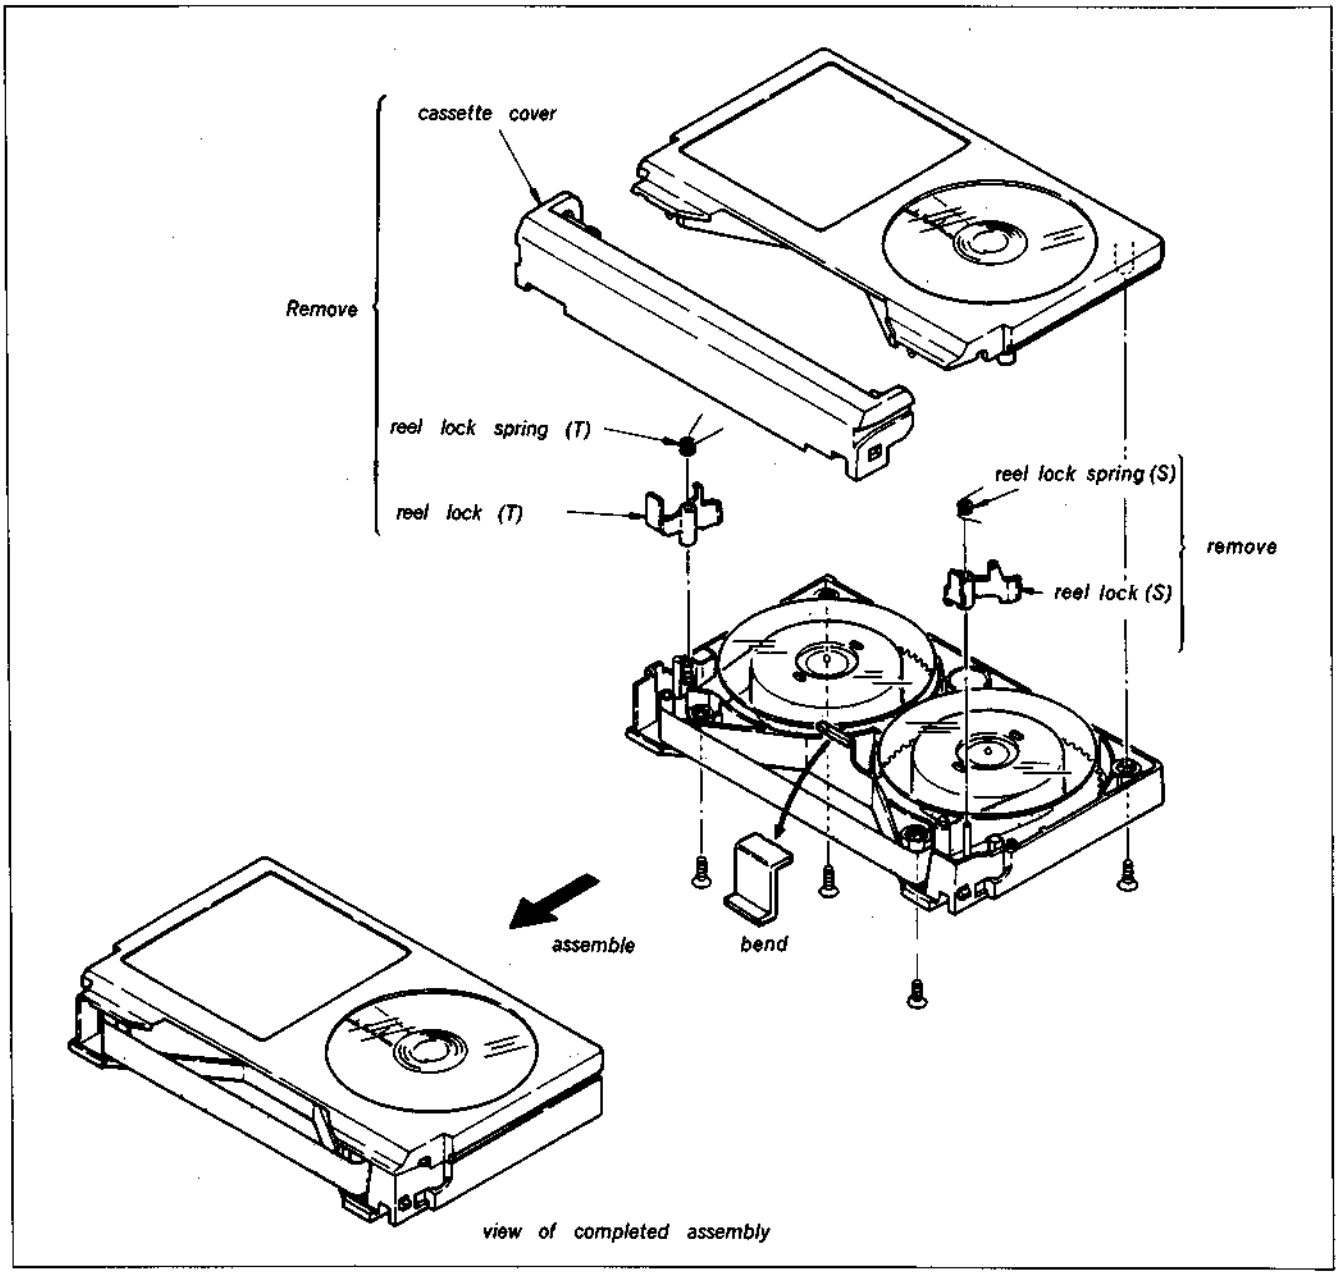

Fig. 4-1.

4-1.1. Preparation for Adjustment

1) Remove the cassette cover of the alignment tape in accordance with Fig. 4-1.
2) Clean the surface contacted by traveling tape (tape guide. drum tape trailing surface capstan shaft pich roller. ACE FE head surface) with a chamois cloth dipped in methanol.
3) Connect the oscilloscope as follows:
   Channel 1:pin ③ of CN005 (RP-41 board)
   External trigger: pin ① of CN005 (RP-41 board)
4) Playback the 1 MHz signal on the traking section of the alignment tape. (KR2-IH)
5) Confirm that the oscilloscope radio frequency output waveform is flat and that the amplitude is a maximum. (Turn the tracking knob right and left to increase and decrease the amplitude while the waveform remains flat.) When the amplitude of the waveform is a maximum. confirm that the fluctuations and contact of the radio frequency output waveform meet the standards given in Fig. 4-2. If they do not. go through the procedure given in step6).
6) If the entrance waveform cannot be made flat. as shown in Fig. 4-3 (a). by turning the tracking knob. go through the "entrance side adjustment" described in 4-1-2: if the exit waveform shown in Fig. 4-3 (b) cannot be made flat. go through the "exit side adjustment" in 4-1-3.

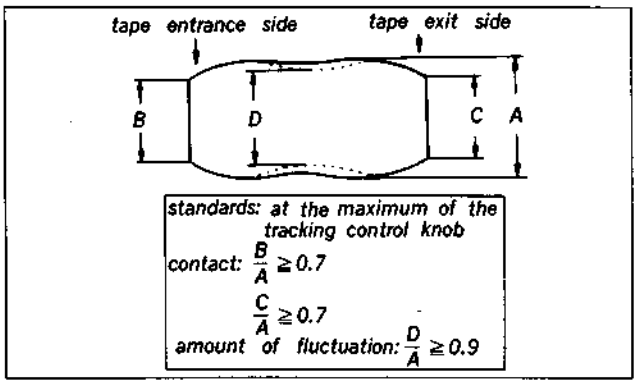

Fig. 4-2.

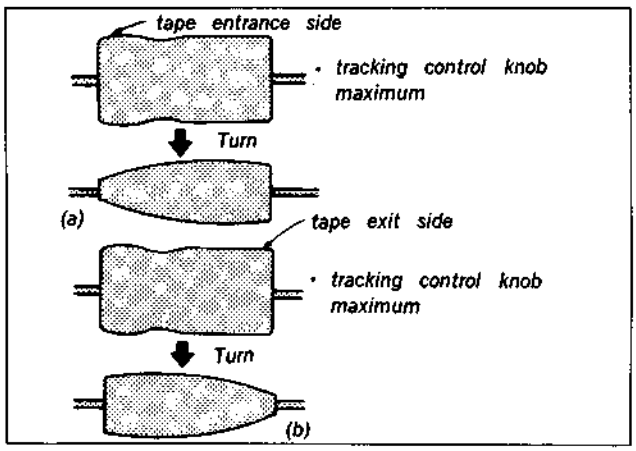

Fig. 4-3.

4-1-2. Entrance Side Adjustment

Whenever the entrance side adjustment is performed. the exit side adjustment must also be performed. The various tape guides and adjustment positions are shown in Fig. 4-5.

1) Turn the No.6 guide counterclockwise to free the movement of the tape as it enters the drum.
2) Turn the tracking control knob until the amplitude of the waveform is about 60% of its maximum.
3) Loosen No.5 guide lock screw ❶ and turn the No.5 guide until the entrance waveform sticks up a little above falt. as shown in the figure below. Then tighten the No.5 guide lock screw ❶ (Fig. 4-6).
   Note:
   After tightening No.5 guide lock screw ❶, confirm that it is as in the figure below.

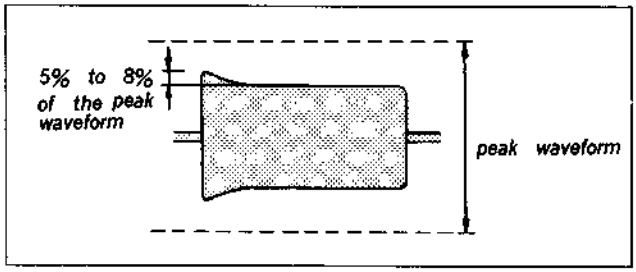

Fig. 4-4.

4) Next. lower the No.6 guide until the waveform is flat.
5) Press the tape down between the NO.4 and No.5 guide with a finger to lower the entrance side radio frequency waveform. then let go and confirm that the waveform returns to what it was before.
6) In this condition. check the clearance and curl of the No. 5 guide. If there are clearance and curl. adjust as explainedin subsequent sections.

Note:

The tape tension between the No.3, No.4 and No.5 guides must be balanced. If it is not, adjust the tilt of the No.3 and No.5 guides.

If the waveform cannot be made to look as shown in Fig. 4-4. or if when the tape is pressed and released on the entrance side it takes time for the waveform to return to what it was before. or if it does not return to what it was before. adjust according to the instructions given below.

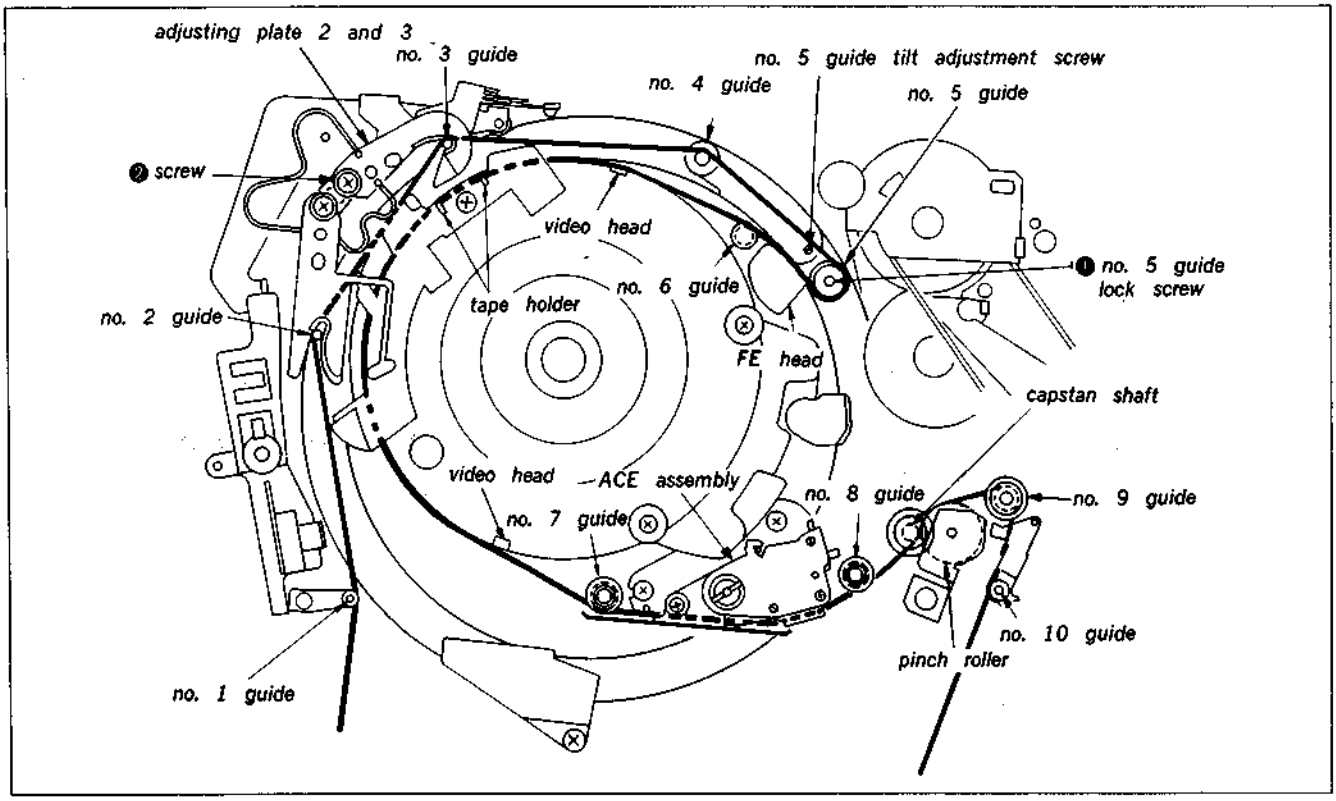

Fig. 4-5. Tape guide layout diagram

[What to do when the waveform entrance output will not rise]

1) Check to see if the up-down tension between the No. 3. No.4 and No.5 guides is uniform. If it is not, adjust the tilt of the No.3 and No.5 guides.
   Note:
   The lower flange of the No.4 guide must not protrude.
2) Raise the lower flange of the No.4 guide to raise the entrance output.
   Note:
   It is sufficient to raise the lower flange of the No. 4 guide to 0.4mm from its lowest position (within a rotation angle of 360°).
3) If the operation performed in step 2) fails to raise the waveform output, turn the No.5 guide tilt adjustment screw slightly to the left, and the entrance output should rise.

[What to do when the waveform entrance output will not drop]

1) Remove the adjusting plate 2 and 3 of the No.3 guide from the drum. Just before the lower tension of the tape becomes slack, tighten screw ❷.
2) If the tape is in contact with the lower flange of the No.4 guide. lower the flange. If the tape is sitcking up from the lower flange. adjust the tilt of the No.5 guide so that the tape does not stick up from the lower flange of the No.4 guide.

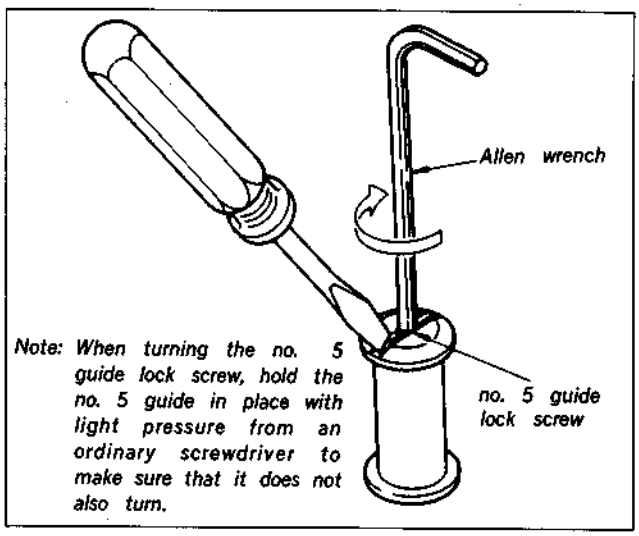
[What to do when there is a clearance in the No.5 guide]

Turn the No.4 guide counterclockwise to run the tape upward and eliminate the clearance in the No.5 guide.

Note:
At this time make sure that a large curl is not produced below the No.4 guide.

[What to do when there is a curl]

1) When there is a gap below the No.4 guide.
   Just before the lower tension on the tape becomes slack, move adjusting plate 2 and 3 of the No.3 guide to the outside.
2) When there is not a gap below the No.4 guide (when there is a curl below the No.4 guide):
   i) Check to see if the No.4 guide has been raised up too high. If it has been raised up too high. turn the adjusting plate clockwise to lower the No.4 guide.
   ii) If the curl still has not been removed after i). tighten the No.5 guide tilt adjustment screw in the clockwise direction until the curl is removed.



Note: When turning the no. 5 guide lock screw, hold the no. 5 guide in place with light pressure from an ordinary screwdriver to make sure that it does not also turn.

Fig. 4-6.

4-1-3. Exit Side Adjustment

1) Connect the oscilloscope to pin ③ of CN005 (RP-41 board).
   Connect the external trigger to pin ① of CN005. (RP-41 board).
2) Play the tracking section of the alignment tape. Adjust the tracking knob to reduce the amplitude of the radio frequency output waveform to 60% of its maximum level.
3) Watch the radio frequency output waveform when the No.7 and No.8 guides are raised (by turning the respective guide nuts counterclockwise) to let tape run free. This waveform is called exit free waveform.

Note:
Be careful not to raise the guides too far. They should be raised only about 0.2 to 0.3 mm.

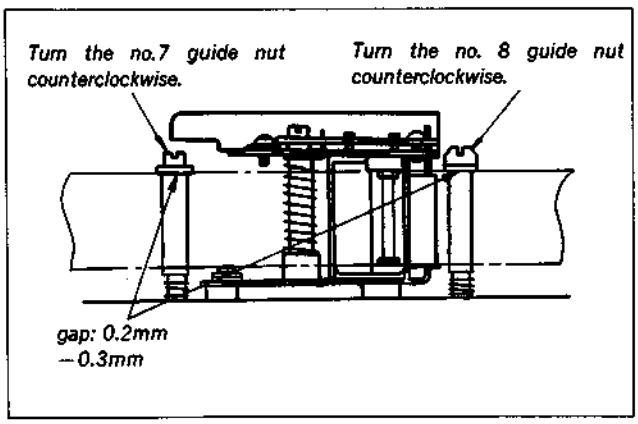


Fig. 4-7.

4) At this time. confirm that the exit free waveform is within the range shown in Fig. 4-8 (a) and (b).
   • If it is outside of this range. adjust according to the procedure in 4-3.

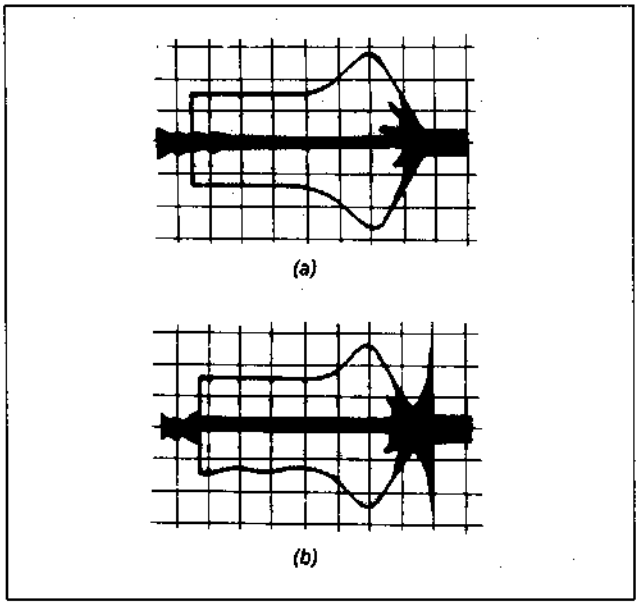

Fig. 4-8.

5) Turn the No.7 guide nut clockwise until the waveform is flat.
6) Turn the No.8 guide nut clockwise until the No.8 guide is lined up with the tape (just before the waveform starts to change, lower the guide until there is no curl).
7) During playback. confirm that no curl occurs at the No.7 guide or the No.8 guide.
8) During rewind. confirm that no curl or elearance occurs at the No.8 guide. If there is a curl or clearance. adjust using the No.9 guide. After adjustment. lock the guide nut.

4-2. ADJUSTMENTS AFTER REPLACEMENT OF THE ACE ASSEMBLY

After removal or replacement of the ACE assembly perform the adjustments listed below.

4-2-1. Exit side tracking adjustment
4-2-2. CTL head (ACE assembly) position adjustment
4-2-3. Audio head (ACE assembly) azimuth adjustment
4-2-4. Audio head (ACE assembly) height adjustment

4-2-1. Exit Side Tracking Adjustment

1) Set the parallel plate (SL-0657 in the list of fixtures and tools) up against the unit as shown in Fig. 4-9. and turn the tilt adjustment screw to adjust the audio head vertically.

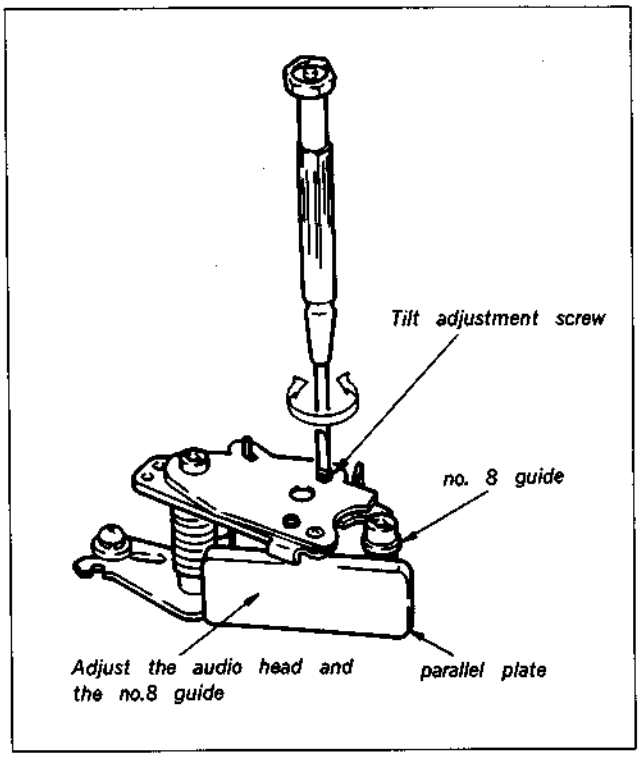

Fig. 4-9.

2) Connect the oscilloscope to pin ③ of connector CN005 (RP-41 board). Connect the external trigger to pin ① of CN005. (RP-41 board).
3) Play the tracking section of the alignment tape. Adjust the tracking knob until the radio frequency output waveform amplitude is reduced to about 60% of its maximum level.
4) Raise the No.7 and No.8 guides (turn the respective guide nuts counterclockwise) and observe the radio frequency exit free waveform when the tape runs free.

Note:
Be careful not to raise the guide too far. Raise it about 0.2 to 0.3 mm.

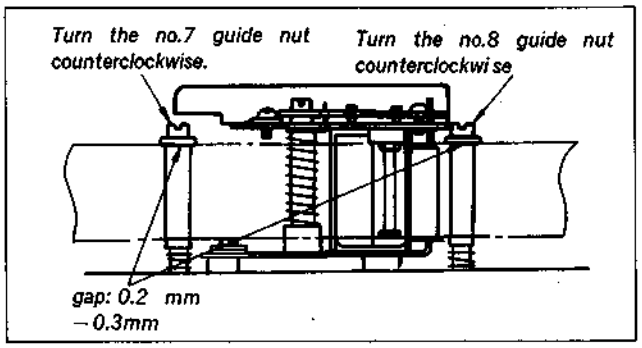

Fig. 4-10.

5) At this time, confirm that the exit free waveform is within the range shown in Fig. 4-11(a) and (b).

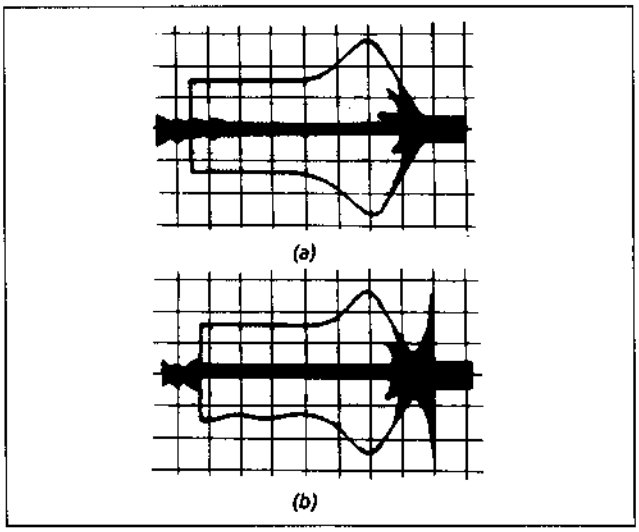

Fig. 4-11.

[When the waveform is outside this range]

- When the waveform is outside this range and has the form shown in Fig.4-12. turn the tilt adjustment screw clokwise to adjust until the waveform is within the required range.

Note:
Complete the adjustment by turning the adjustment screw in the tightening direction (clockwise).

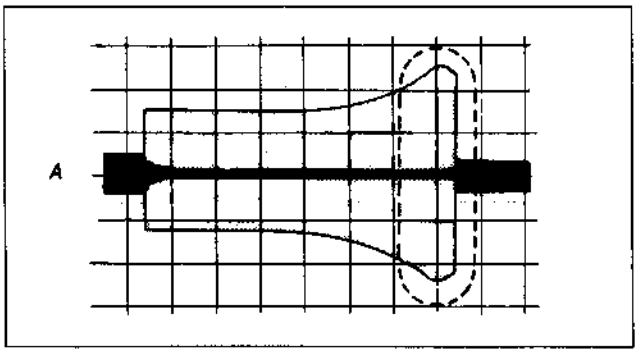

Fig. 4-12

• When the exit free waveform is outside of the required range and has the form shown in Fig. 4-13. turn the tilt adjustment screw counterclockwise to produce waveform A (Fig. 4-12). then turn it clockwise to bring the waveform within the required range.

Note:

Finish the adjustment by turning the adjustment screw in the direction of tightening (clockwise).

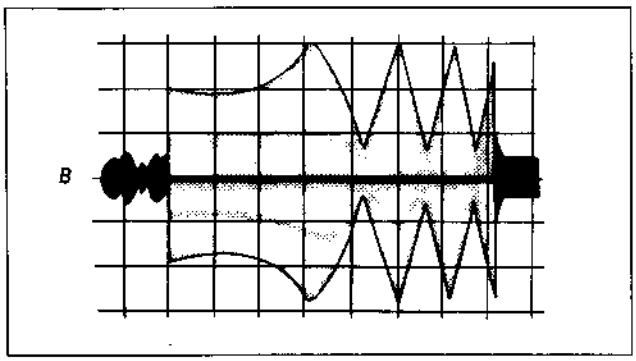

Fig. 4-13.

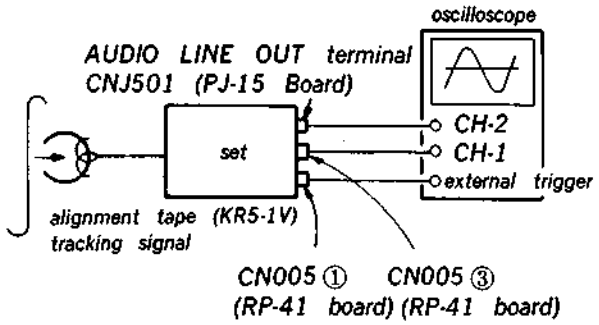
6) Turn the No. 7 guide nut clockwise to flatten the waveform.
7) Turn the No. 8 guide nut clockwise to line the No. 8 guide up with the tape (lower it so that there is no curl just before the waveform starts to change).
8) If the radio frequency waveform is as shown in Fig. 4-12 on the exit side. repeat the adjustment.

4-2-2. CTL Head (ACE Assembly) Position Adjustment

This adjustment includes the mechanical CTL head mounting position adjustment and the electrical tracking control center adjustment. The tracking control center adjustment is to be performed first. followed by the mechanical adjustment of the head mounting position.

[Connections]

1) Playback mode



[Method of adjustment]

1) Play the tracking signal section of the alignment tape.
2) Turn the tracking control knob clockwise or counterclockwise to the center click position. Confirm that the amplitude of the radio frequency output signal is at its maximum level. Also confirm that the audio signal 0 level position occurs at the location of the channel B waveform. If the necessary standards are not met follow the procedure in 3).

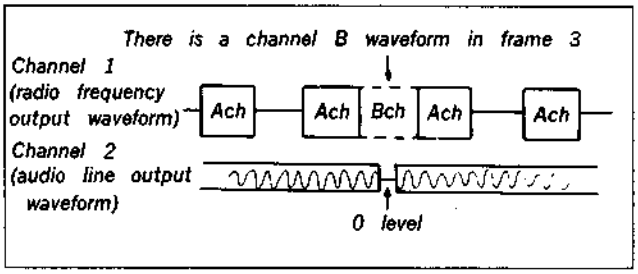


Fig. 4-14.

3) CTL head position adjustment
   a. Set the tracking control knob at the center click position.
   b. Loosen the two ACE assembly position adjustment screws, then use a tool such as an ordinary screwdriver to slide the ACE assembly to where the radio frequency output waveform amplitude becomes a maximum.
   c. Play the color bar signal on the alignment tape and check the picture quality.
   d. Tighten the position adjustment screws. then lock them.

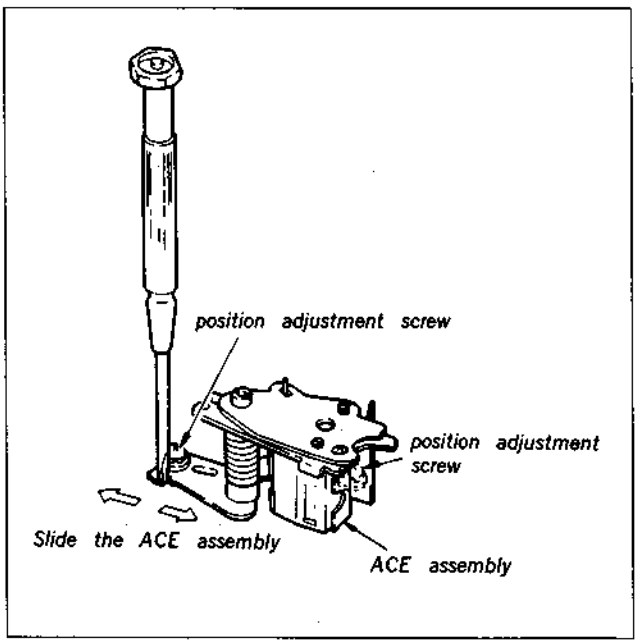

Fig. 4-15.

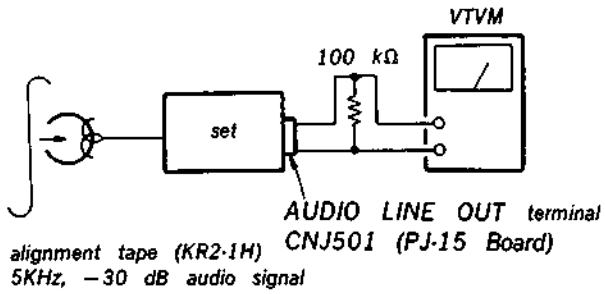
4-2-3. Audio head (ACE Assembly) Azimuth Adjustment

[**Connections**]

1) Playback mode



[**Method of adjustment**]

1) Play the 5kHz, −30dB audio signal section (RF sweep section) of the alignment tape.
2) Adjust the azimuth adjustment screw until the output level (VTVM indication) is maximum.
   Note :
   Complete the adjustment by turning the adjustment screw in the tightening direction (clockwise).
3) After adjustment, lock the adjustment screw.

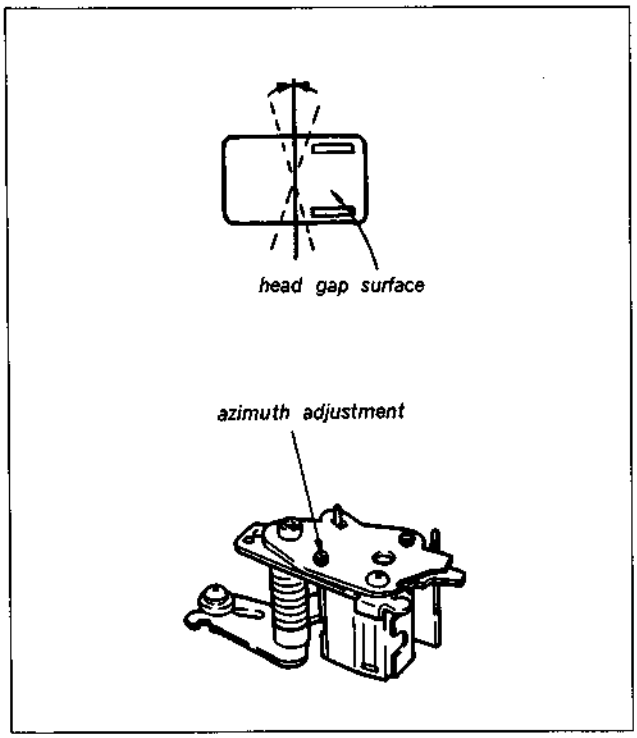


Fig. 4-16.

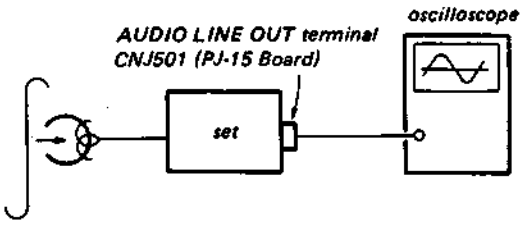
4-2-4. Audio Head (ACE Assembly) Height Adjustment

[**Condition**]

This adjustment must only be performed after the exit side tracking adjustment has been completed.

[**Connections**]

1) Playback mode



[**Method of adjustment**]

1) Play the 5kHz, −30dB audio signal section (RF sweep section) of the alignment tape.
2) Adjust the height adjustment screw and the tilt adjustment nut so that the amplitude of the audio line output waveform (5kHz) becomes a maximum.

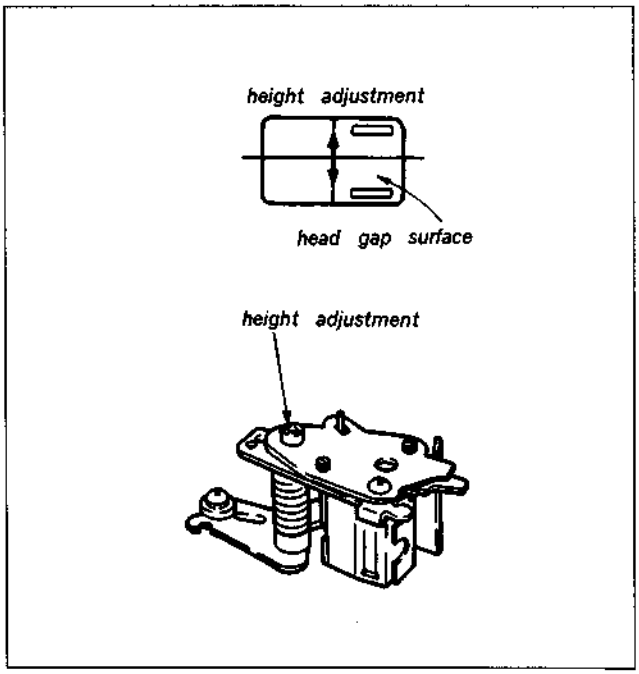


Fig. 4-17.

4-3. HOW TO CHECK THE TAPE TRAVELING AFTER ADJUSTMENT OF TAPE PATH

Adjust and check the tape path using the alignment tape then check the tape travel using the procedure below.

1) Prepare one L-830 reel ready (these cassette are widely available commercially). Remove the cassette cover referring to Fig. 4-1 of the adjustment guide.
2) Run the L-830 tape in playback mode and check the following points.
   i) Entrance side
   Confirm that the tape does not contact the upper flange of the No. 4 guide or the No. 6 guide. and is not damaged. (Some tape curl is allowed but the tape must not be creased.) (Fig. 4-18)
   ii) Exit side
   Confirm that the tape does not contact the upper flange of the No. 7 guide or the No. 8 guide. or the upper or lower flange of the No. 10 guide. and is not scratched. (Some tape curl is allowed but the tape must not be creased.) (Fig. 4-19)
   iii) If the tape was found to not be running correctly in step ii). readjust the tape path using the alignment tape.
   If the tape is not running correctly on the entrance side. refer to section 4-1-2.
   If the tape is not running correctly on the exit side. refer to section 4-1-3.

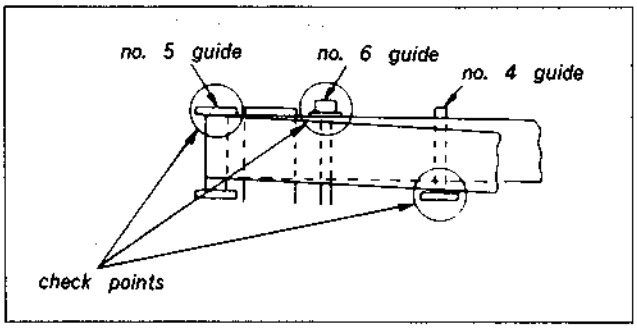

Fig. 4-18.

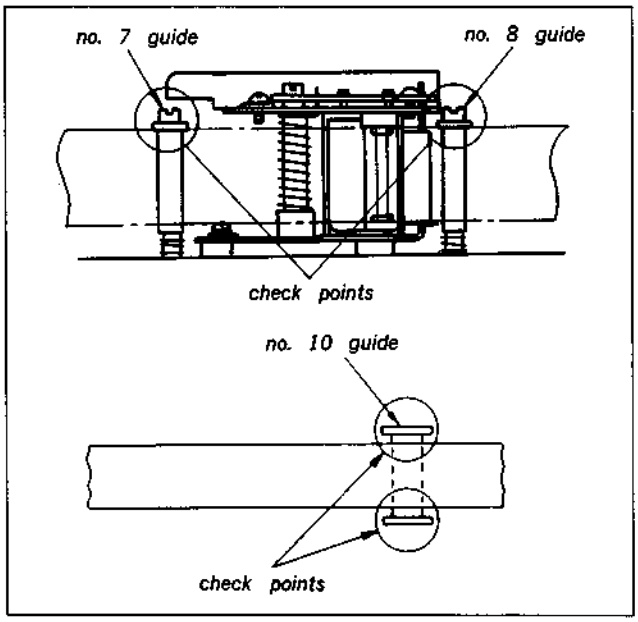

Fig. 4-19.

5. ELECTRICAL ADJUSTMENTS

During the adjustment, see the parts location diagram relevant to the adjustment on page 176, 177.

All the electrical adjustment can be performed by using the equipment mentioned below, the alignment tape, and the PAL colour-bar signal(100%).

[Equipment Required]

(1) PAL Colour Monitor TV
(2) Oscilloscope, Dual-trace, Bandwidth... more than 10 MHz with delay mode
(3) Frequency Counter
(4) PAL Colour-Bar Generator
(5) Digital voltmeter
(6) Distortion meter
(7) Audio Signal Generator
(8) Audio level meter(VTVM)
(9) Attenuator
(10) Alignment Tape, type: KR5-2H, Code No. 8-969-995-52

[Setup for Adjustment]

The antenna should be connected correctly to the antenna input terminal of the videocassette recorder.
It is important that the video output signal satisfies the specification because the telecast signal received by the incorporated tuner of the videocassette recorder is utilized as the adjustment signal of the machine. The incorporated tuner should be set to the channel with the best reception. The video signal should be checked with an oscilloscope connected to VIDEO OUT terminal. Verify that the sync signal amplitude is approx. 0.3Vp-p and the video signal amplitude is approx. 0.7Vp-p at peak. Adjust the fine tuning while observing the signal and the TV screen so that the burst signal amplitude becomes approx. 0.3V ± 0.1Vp-p. Also confirm that there is not spikes observed at the sync signal portion. (See Fig. 5-1.)
The video (colour-bar) signal for the adjustment is shown in Fig. 5-1.

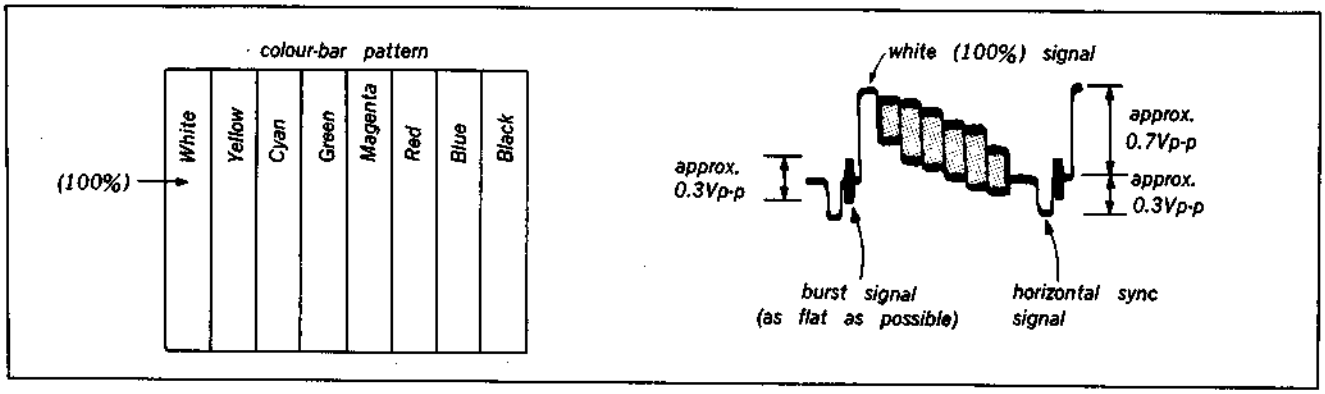

Fig. 5-1. Video (colour-bar) signal

[Alignment Tape]
KR5-2H

	Video signal	Audio signal	Playing time	Use for
1.	Colour-bars	3kHz −5dB	5 min	General performance, tape speed checks, switching position adjustment.
2.	Monoscope	333Hz −25dB	5 min	Video head dihedral, audio level adjustment.
3.	RF sweep	5kHz −25dB	5 min	Video audio frequency characteristics, audio azimuth adjustment. marker: 1, 2, 3.58, 4.5, 5.2, MHz
4.	Tracking 1 MHz(CH-B) *1(Channel B is inserted in every 3 frames.)	1 kHz −5dB *2(Signal is dropped out in the positions where channel B is inserted.)	5 min	Tracking, Audio height adjustments CTL Position check. (Check if *1 and *2 are the same position.)

[Required Levels and Impedances of Input and Output]

Video

Input VIDEO IN: Phono jack
1.0V(p-p)$^{+1.0}_{-0.5}$V(p-p)
75 ohms, unbalanced,
sync negative

Output VIDEO OUT: Phono jack
1.0V(p-p)±0.1V(p-p)
75 ohms, unbalanced,
sync negative

Audio

Inputs AUDIO IN: Phono jacks
47 kilohms, −10dBs
(0dBs = 0.775Vrms)
Microphone: −60dBs, for low-impedance microphone

Outputs AUDIO OUT: Phono jacks
Load impedance less than 10 kilohms
−10dBs with 47 kilohms load,
unbalanced

[Colour-Bar Signal]

The 100% colour-bar signal recorded on the Alignment tape is shown in Fig. 5-2.

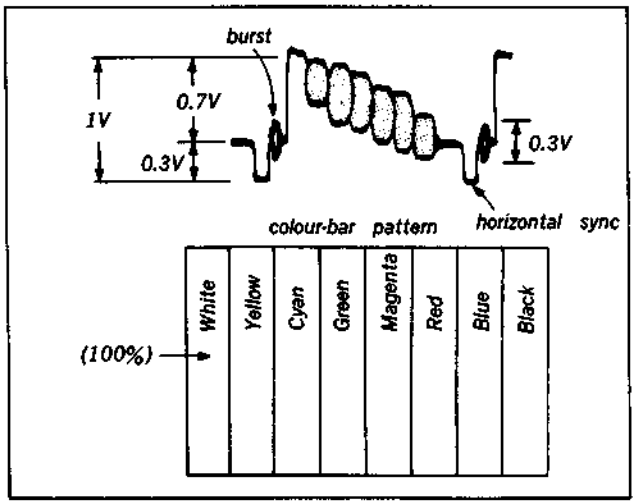

Fig. 5-2. Colour-bar signal recorded on the alignment tape

[75Ω Terminating Method]

To terminate the video output terminal follow the steps shown in Fig. 5-3.

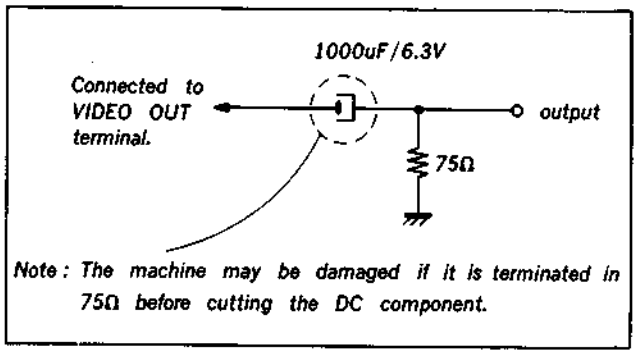

Fig. 5-3. 75Ωterminating circuit

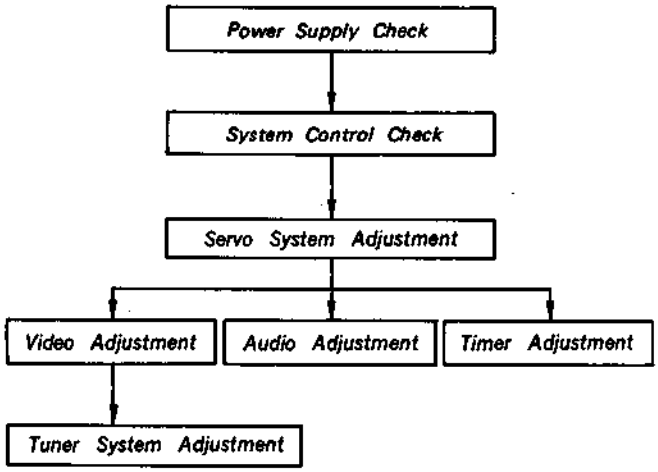
[Adjustment Procedure]

Adjust in the order given below.



5-1. POWER SUPPLY CHECK (PS-115 Board)

Measure in E-E mode (POWER supply switch ON)

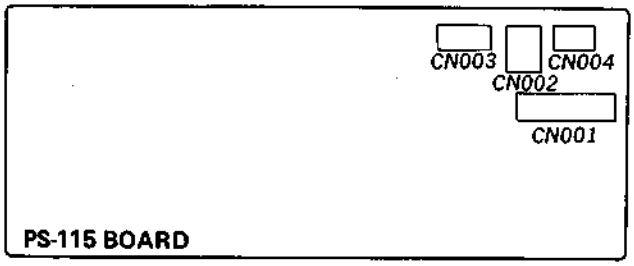


Fig. 5-4. Component layout

1. Switched 12V check
   Pin ② of CN002 shall be 12.0±0.3Vdc
2. Switched 9V check
   Pin ② of CN001 shall be 9.0±0.1Vdc
3. Un switched + 5.5V check
   Pin ④ of CN003 shall be 5.5±0.1Vdc
4. AC 45V check
   Between Pin ⑥ (45Vac) and Pin ⑤ (GND) of CN003 shall be approx. 38Vac

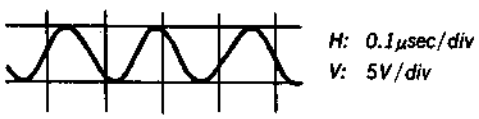
5-2. SYSTEM CONTROL CHECK (ST-12 Board)

5-2-1. Clock Frequency Check

Mode	E-E
Signal	None
Measurement Point	Pin ㊾ of IC401
Measurement Equipment	Frequency counter
Specified Value	6.0±0.1MHz

[Confimation Method]

(1) Confirm by a frequency counter that the frequency of Pin ㊾ of IC 401 is 6.0±0.1MHz.



f = 6.0MHz ± 0.1MHz

Fig. 5-5. Clock frequency

5-3. SERVO SYSTEM ADJUSTMENT

[Adjustment Sequency]

5-3-1. Reel motor control system Adjustment
5-3-2. Drum/Capstan servo system Adjustment

5-3-1. Reel Motor Control System Adjustment

1. FWD Torque Adjustment (ST-12 Board)

See "Mechanical Adjustment"

5-3-2. Drum/Capstan Servo System Adjustment

1. Voltage Check (ST-12 Board)

Measurement Point	Pin ⑪ of IC001
Measurement Equipment	Digital voltmeter
Specified Value	5.00±0.12Vdc

[Confimation Method]

(1) Pin ⑪ of IC001 shall be 5.00±0.12V

2. Clock Check (ST-12 Board)

Measurement Point	Pin ㉘ of IC001 (4.43MHz)
Measurement Equipment	Oscilloscope
Specified Value	Approx. 0.6Vp-p

[Confimation Method]

(1) Pin ㉘ of IC001 shall be approx. 0.6Vp-p

3. Drum Free Speed Adjustment (ST-12 Board)

Mode	Playback or Record
Signal	Colour bar or monoscope
Measurement Point	Pin ㊻ of IC001 (TP005)
Measurement Equipment	Digital Voltmeter
Adjustment Element	RV001
Specified Value	1.8±0.2Vdc

[Adjustment Method]

(1) Adjust to 1.8±0.2Vdc with RV001

4. Capstan Free Speed Adjustment (ST-12 Board)

Mode	Record
Signal	Colour bar
Measurement Point	Pin ⑦ of IC001 (TP008)
Measurement Equipment	Digital voltmeter
Adjustment Element	RV006
Specified Value	1.6±0.1Vdc

[Adjustment Method]

(1) Adjust to 1.6±0.1Vdc with RV006

5. RF Switching Position Adjustment (ST-12 Board)

Mode	Playback
Signal	Alignment tape colour bar
Measurement Point	CH1 : Pin ㉞ of IC001 (TP003) CH2 : Pin ③ of CN025
Measurement Equipment	Oscilloscope
Adjustment Element	(1) RV004 (2) RV003
Specified Value	(1) 7H±0.5 (448±30μsec) (2) 7H±0.5 (448±30μsec)

[Adjustment Method]

(1) Press the TRACKING button and set for the Optimum state.

(2) Adjustment RV004 so that the Lock Phase of RF SW PULSE (Ach) becomes specified value.

(3) Adjust RV003 so that the Lock Phase of RF SW PULSE (Bch) becomes specified value.

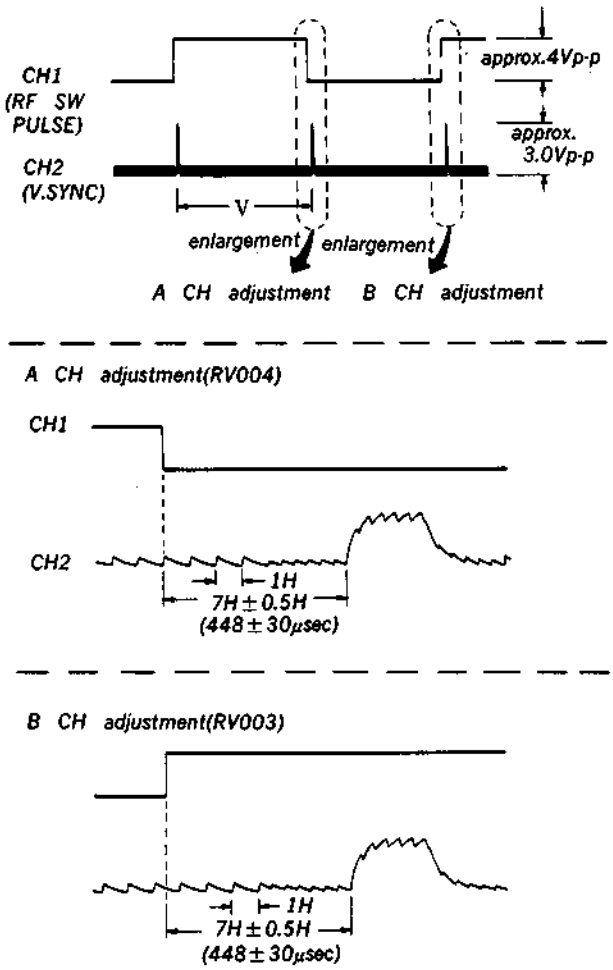


Fig. 5-6. Switching position adjustment

6. Drum Lock Phase Adjustment (ST-12 Board)

Mode	Record
Signal	Colour bar
Measurement Point	CH1 : Pin ㉞ of IC001 (TP003) CH2 : Pin ③ of CN025
Measurement Equipment	Oscilloscope
Adjustment Element	RV002
Specified Value	7H±0.5H (448±30μsec)

[Adjustment Method]

(1) Adjust RV002 so that the Lock Phase of CH1 (RF SW PULSE) and CH2 (V SYNC) become specified values.

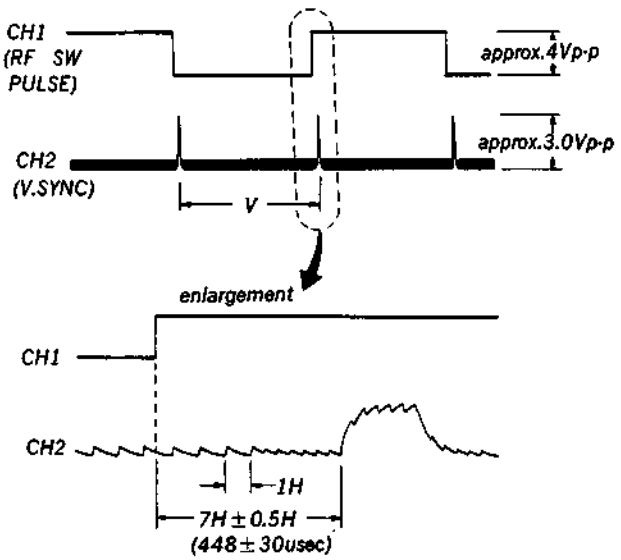

Fig. 5-7. Drum lock phase

7. Drum f_H Adjustment (ST-12 Board, VI-23 Board)

Mode	STILL (playback+pause)
Signal	Alignment tape colour bar or monoscope
Measurement Point	Pin ⑩ of IC008 on the VI-23 board (COMP SYNC)
Measurement Equipment	Oscilloscope
Adjustment Element	RV007 (ST-12 board)
Specified Value	0±0.05μsec

[Adjustment Method]

Adjust f_H during the STILL mode by RV007 (ST-12 board) to be equal to f_H in the PB mode.

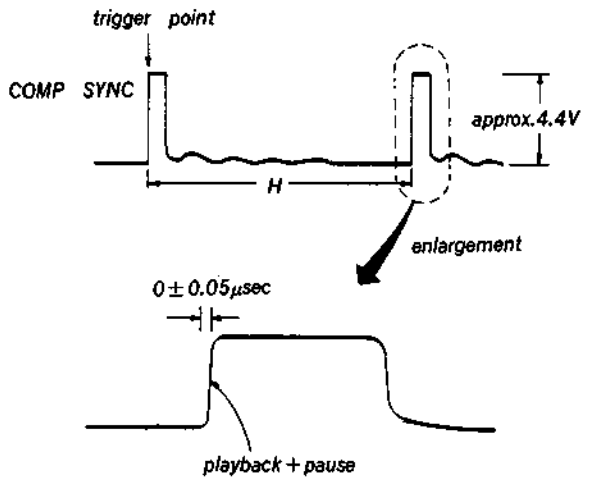

Fig. 5-8. Drum f_H adjustment

5-4. PAL VIDEO SYSTEM ADJUSTMENT

As a rule, first the playback system is adjusted with an alignment tape to check that it operates normally, then the recording system is adjusted.

The adjustment sequence is shown below. The Y signal and chroma signal systems are adjusted for both playback and recording systems.

Colour video signal supplied by the PAL colour-bar generator is used as video input signal for video system adjustment in the record mode. Check that the sync and colour burst signals conform to the specifications designated in "Set-up for Adjustment" in Fig. 5-1.

[Record System Adjustment]

1) AGC adjustment
2) Carrier set adjustment
3) Deviation adjustment
4) Compress adjustment
5) Peak clip adjustment
6) Carrier shift adjustment
7) White clip adjustment
8) Dark clip adjustment
9) Y record current adjustment
10) 4.43MHz REF adjustment
11) AFC adjustment
12) AFC offset adjustment
13) Pilot burst signal level adjustment
14) Chroma record current adjustment (I)
15) Peak ACC adjustment
16) Chroma record current adjustment (II)

[Playback System Adjustment]

1) Playback frequency characteristic adjustment
2) Expand adjustment
3) Playback video level adjustment
4) Y-comb adjustment
5) Dropout compensator adjustment
6) Carrier balance adjustment
7) Chroma comb filter adjustment
8) JOG PLL adjustment
9) JOG exchange chroma level adjustment
10) Shift adjustment

5-4-1. Record System Adjustment

1. AGC Adjustment (VI-23 Board)

Mode	E-E
Signal	Gray scale
Measurement Point	Video out terminal
Measurement Equipment	Oscilloscope
Adjustment Element	RV018
Specified Value	1.00±0.05Vp-p

[Adjustment Method]

(1) Adjust to 1.00±0.05Vp-p with RV018

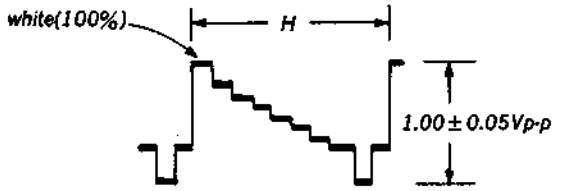

Fig. 5-9. Peak AGC Adjustment

2. Carrier Set Adjustment (VI-23 Board)

Mode	E-E
Signal	None
Measurement Point	Pin ㉕ of IC008
Measurement Equipment	Oscilloscope
Adjustment Element	RV011
Specified Value	3.800±0.038MHz

[Adjustment Method]

(1) Rotate RV010 clockwise full and rotate RV009 counter clockwise full seen from the Pattern side.
(2) Set up the input select to LINE and NORMAL mode.
(3) Adjust to 3.800±0.038MHz with RV011.

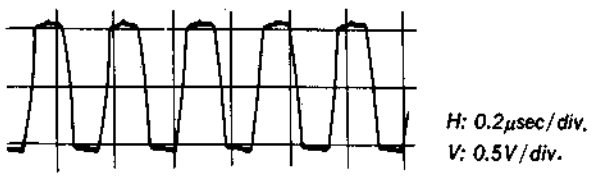

Fig. 5-10. Carrier set adjustment

3. Deviation Adjustment (VI-23 Board)

Mode	Self-record and playback
Signal	Colour bar
Measurement Point	Video out terminal
Measurement Equipment	Oscilloscope
Adjustment Element	RV013
Specified Value	1.00±0.05Vp-p

- The playback system adjustment and the carrier set adjustment in paragraph 2 above must be completed before making this adjustment

[Adjustment Method]

(1) Supply the colour-bar signal and set up E-E mode.
(2) Connect the oscilloscope to VIDEO OUT terminal.
(3) Set up record mode.
(4) Playback the recorded section of the tape.
(5) Check that the video signal level is 1.00±0.05 Vp-p, if the level is outside of this range, repeat steps(3) through(4) above adjusting with RV013 until the standard value is obtained.

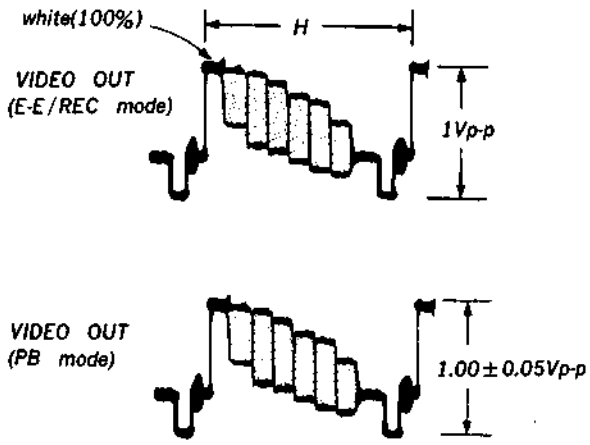

Fig. 5-11. Deviation adjustment

Note: Make sure to adjust 7 WHITE CLIP adjustment and 8 DARK CLIP adjustment

4. Compress Adjustment (VI-23 Board)

Mode	E-E
Signal	None
Measurement Point	See Fig. 5-12
Measurement Equipment	Digital voltmeter
Adjustment Element	RV014
Specified Value	0.30±0.01Vdc

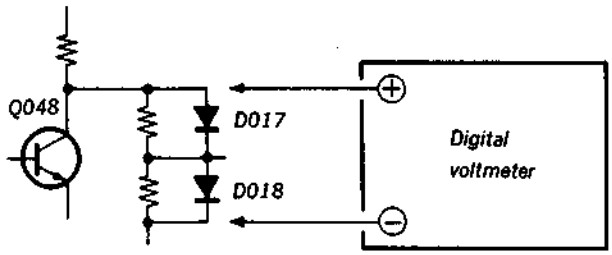

Fig. 5-12.

[Adjustment Method]

(1) Adjust to 0.30±0.01 Vdc using RV014

Note: Make this adjustment more than 30sec after turning on the power switch

5. Peak Clip adjustment (VI-23 Board)

Mode	E-E
Signal	White (100%)
Measurement Point	Base of Q052
Measurement Equipment	Oscilloscope
Adjustment Element	RV019
Specified Value	0.15±0.05Vdc

[Adjustment method]

(1) In the Q053 base, the DC level of 100% white is con-sidered as Vp. Adjust the Q052 base DC level by RV019 so that it is equal to Vp+0.15±0.05 Vdc.(See Fig. 5-13)

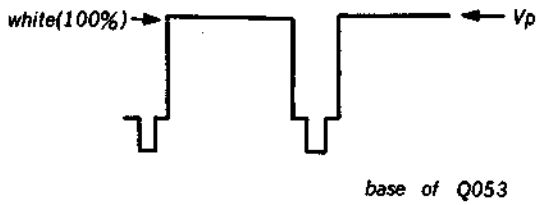

Fig. 5-13. Peak clip adjustment

6. Carrier Shift Adjustment (VI-23 Board)

Mode	E-E
Signal	None
Measurement Point	Pin ㉕ of IC008
Measurement Equipment	Oscilloscope
Adjustment Element	RV012
Specified Value	4.30±0.04MHz

[Adjustment Method]

(1) Set up the input select to LINE and Super Beta PRO mode

(2) Adjust to 4.30±0.04MHz with RV012

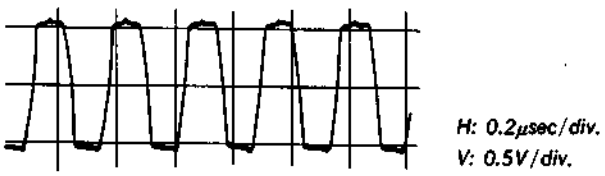

Fig. 5-14. Carrier shift adjustment

7. White Clip Adjustment (VI-23 Board)

Mode	E-E
Signal	Colour bar
Measurement Point	Collector of Q047
Measurement Equipment	Oscilloscope
Adjustment Element	RV010
Specified Value	220^{+0}_{-10} %

[Adjustment Method]

(1) Set up the Super Beta PRO mode and adjust to white peak 220^{+0}_{-10} % with RV010 (See Fig. 5-15)

8. Dark Clip Adjustment (VI-23 Board)

Mode	E-E
Signal	Colour bar
Measurement Point	Collector of Q047
Measurement Equipment	Oscilloscope
Adjustment Element	RV009
Specified Value	110±10%

[Adjustment Method]

(1) Set up the Super Beta PRO mode and adjust to Sync peak 110±10% with RV009 (See Fig. 5-15)

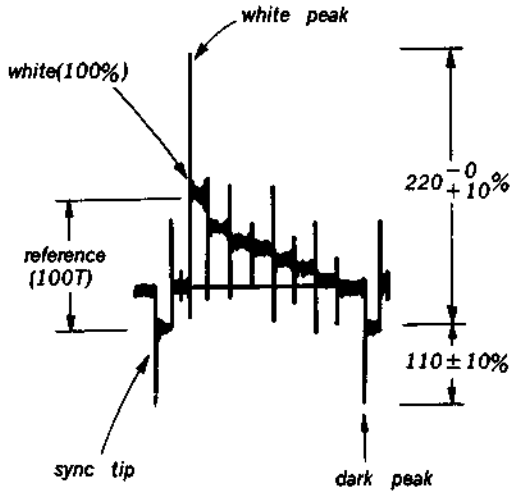

Fig. 5-15. Dark clip and white clip adjustment

9. Y Record Current Adjustment (RP-41 Board)

Mode	Record (STD mode)
Signal	None
Measurement Point	Pin ③ of CN003
Measurement Equipment	Oscilloscope
Adjustment Element	RV004
Specified Value	4.2±0.1Vp-p

[Adjustment Method]

(1) Adjust to 4.2±0.1Vp-p with RV004

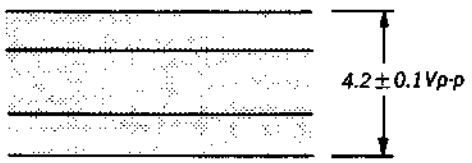

Fig. 5-16. Y record current adjustment

10. APC Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Point	Pin ① of CN001
Measurement Equipment	Frequency counter
Adjustment Element	CV001
Specified Value	4433619±5Hz

[Adjustment Method]

(1) Adjust to 4433619±5Hz with CV001

11. AFC Adjustment (VI-23 Board)

Mode	E-E
Signal	None
Measurement Point	Pin ㉑ of IC001
Measurement Equipment	Frequency counter
Adjustment Element	RV022
Specified Value	5.515±0.200MHz

[Preparation]

- Apply 5Vdc to pin ⑤ of CN001 (Connect the pin ⑤ of CN001 and 5Vdc point with jumper leads)
- Apply 4.50±0.01Vdc to pin ㉘ of IC001 (Connect the pin ㉘ of IC001 with Stabilizer power Supply)

[Adjustment Method]

(1) Adjust to 5.515±0.20MHz with RV022

(2) Confirm item 12

12. AFC Offset Adjustment (VI-23 Board)

Mode	Record
Signal	Colour bar
Measurement Point	Pin ㉘ of IC001
Measurement Equipment	Oscilloscope
Adjustment Element	RV003
Specified Value	minimum (0±5mv)

[Adjustment Method]

(1) Adjust RV003 so that the fluctuation of DC level is minimum (See Fig. 5-17)

(2) Confirm item 11

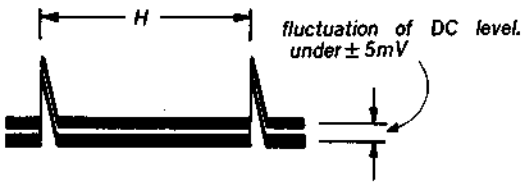

Fig. 5-17. AFC offset adjustment

Note: Repeat items 11. and 12. until each of them complies with its standard.

13. Pilot Burst Signal level Adjustment (VI-23 Board)

Mode	E-E
Signal	Colour bar
Measurement Point	Pin ① of IC001
Measurement Equipment	Oscilloscope
Adjustment Element	RV021
Specified Value	Pilot burst signal level = Chroma signal level

[Adjustment Method]

(1) Adjust the pilot burst signal with the chroma signal level using RV021

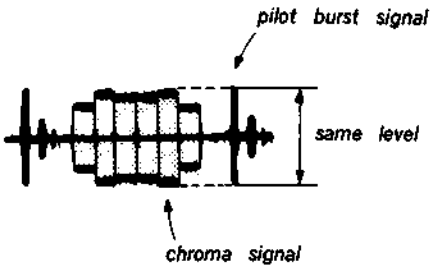

Fig. 5-18. Pilot burst signal level adjustment

14. Chroma Record Current Adjustment (I) (VI-23 Board)

Mode	Record (Super Beta PRO mode)
Signal	Colour bar
Measurement Point	Pin ③ of CN006
Measurement Equipment	Oscilloscope
Adjustment Element	RV002
Specified Value	150±5mVp-p

[Adjustment Method]

(1) Adjust to 150±5mVp-p with RV002

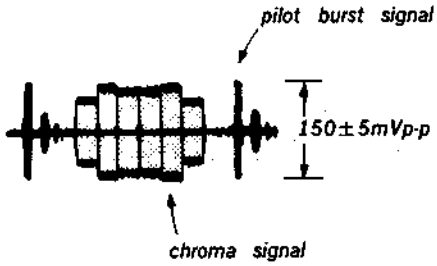

Fig. 5-19. chroma record current adjustment

15. Peak ACC Adjustment (RP-41 Board)

Mode	E-E
Signal	Colour bar
Measurement Point	Emitter of Q011
Measurement Equipment	Oscilloscope
Adjustment Element	RV006
Specified Value	2.0±0.1Vp-p

[Adjustment Method]

(1) Adjust to 2.0±0.1Vp-p with RV006

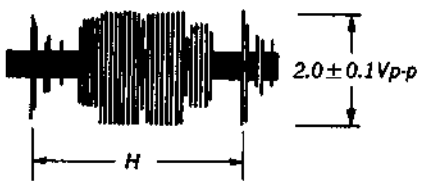

Fig. 5-20. Peak ACC adjustment

Note: Make sure to adjust 14. chroma Record Current Adjustment(I)

16. Chroma Record Current Adjustment (II) (RP-41 Board)

Mode	Record (STD mode)
Signal	Colour bar
Measurement Point	Pin ① of CN003 (Q025 collector)
Measurement Equipment	Oscilloscope (1 : 1 probe)
Adjustment Element	RV005
Specified Value	26±1mVp-p

[Adjustment Method]

(1) Adjust to 26±1mVp-p with RV005

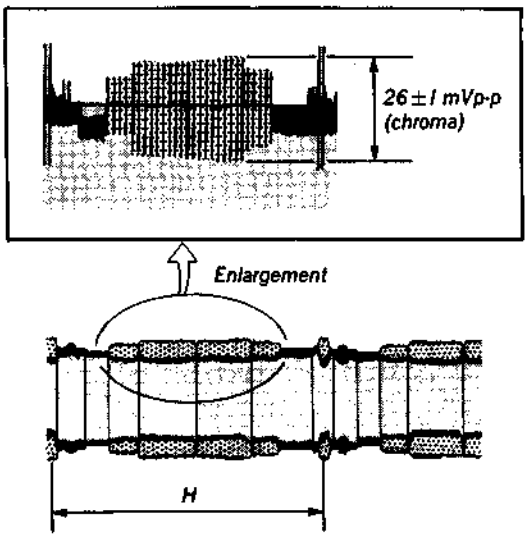

Fig. 5-21. Chroma record current

Note: Make sure to adjust 14. Chroma Record Current Adjustment(I) and 15. Peak ACC Adjustment.

5-4-2. Playback System Adjustment

1. Playback Frequency Characteristic Adjustment (RP-41 Board)

1) Adjust both the A and B channels The B channel indicated by [ ]

Mode	Playback
Signal	RF sweep
Measurement Point	Pin ③ of CN005 External trigger: pin ⑤ of CN005
Measurement Equipment	Oscilloscope
Adjustment Element	RV003 〔RV001〕
Specified Value	56~62% (See Fig. 5-22)

[Adjustment Method]

(1) Rotate the tracking knob to make 2MHz to be maximum.

(2) Rotate RV002 to adjust the 2MHz level of B-ch to be less than ±20mV to the 2MHz level of A-ch.

(3) Set the trigger slope to−(+).

(4) Adjust the 5.2MHz amplitude to 56~62% of the 2MHz amplitude with RV003〔RV001〕.

2) Adjust the A' channels

Mode	Playback
Signal	RF sweep
Measurement Point	Pin ③ of CN005 Exterminal trigger: Pin ⑤ of CN005
Measurement Equipment	Oscilloscope
Adjustment Element	RV007
Specified Value	56~62% (See Fig. 5-22)

[Prepartion]

- (ST-12 Board) Pin ㉔ of IC001 (TP011) and Base of Q704 (TP010) with Short
  Pin ⑰ IC401 (TP012) with GND
- (RP-41 Board) Connect a 470Ω resister serially between Pin ① of CN001 and Stabilizer power supply (+5Vdc)

[Adjustment Method]

(1) Rotate RV008 to adjust 2MHz level of A'-ch to be less than ±20mV to the 2MHz level of A-ch

(2) Adjust the 5.2MHz amplitude to 56~62% of the 2MHz amplitude with RV007

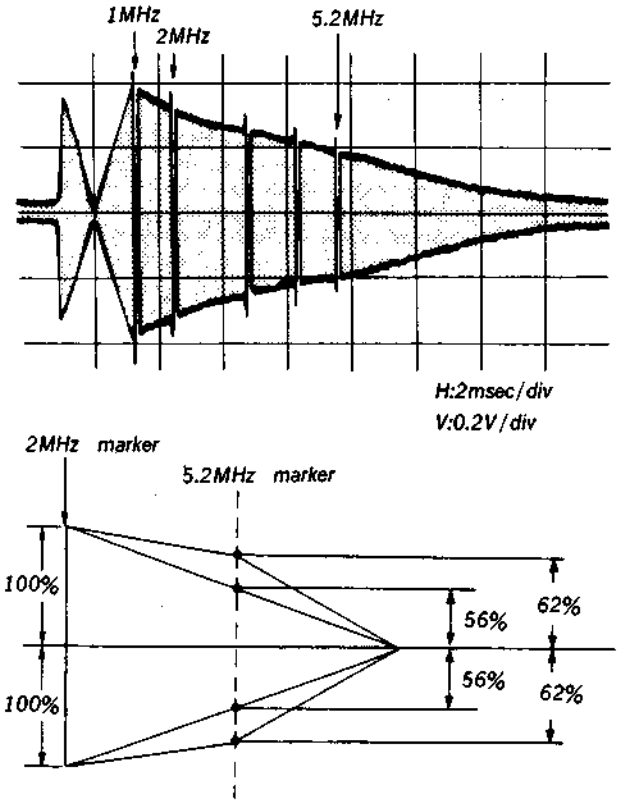

Fig. 5-22. Playback amplifier frequency character stic adjustment

2. Expand Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Point	See Fig. 5-23
Measurement Equipment	Digital voltmeter
Adjustment Element	RV015
Specified Value	0.30±0.01Vdc

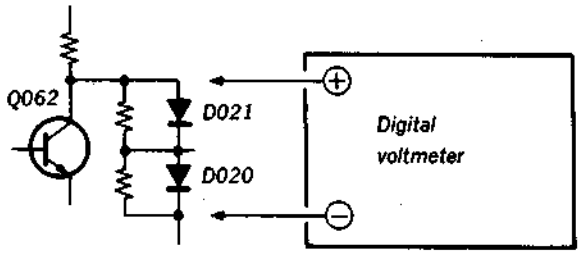

Fig. 5-23.

[Adjustment Method]

(1) Adjust to 0.30±0.01Vdc using RV015

Note: Adjust more than 30 sec after playback.

3. Playback Video Level Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Point	Video out terminal
Measurement Equipment	Oscilloscope
Adjustment Element	RV016
Specified Value	1.00±0.05Vp-p

[Adjustment Method]

(1) Adjust to 1.00±0.05Vp-p with RV016

Fig. 5-24. Playback video level adjustment

4. Y-Comb Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Point	Pin ⑧ of IC009
Measurement Equipment	Oscilloscope
Adjustment Element	RV017
Specified Value	See Fig. 5-25 A level ≒ B level

[Adjustment Method]

(1) Rotate RV017 to adjust to that the limiter works vertically symmetrically (See Fig. 5-25)

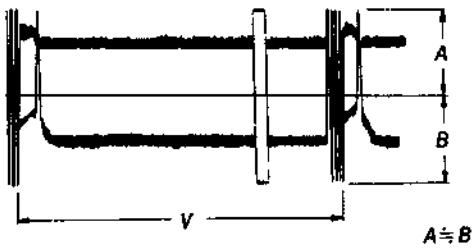

Fig. 5-25. Y-comb adjustment

5. Dropout Compensator Threshold Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Point	Pin ㉖ of IC008
Measurement Equipment	Digital voltmeter
Adjustment Element	RV023
Specified Value	0.26±0.02Vdc

[Adjustment Method]

(1) Adjust to 0.26±0.02Vdc with RV023

6. Carrier Balance Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Equipment	Monitor TV screen
Adjustment Element	RV004
Specified Value	Minimize beats

[Adjustment Method]

(1) Minimize beats with RV004.

7. Chroma Comb Filter Adjustment (VI-23 Board)

Mode	Playback
Signal	Colour bar
Measurement Equipment	Monitor TV Screen
Adjustment Element	RV001 and LV002
Specified	Minimize beats

[Adjustment Method]

(1) Minimize beats with RV001 and LV002

8. JOG PLL Adjustment (VI-23 Board)

Mode	E-E
Signal	Colour bar
Measurement Point	Pin ⑩ of IC006
Measurement Equipment	Oscilloscope
Adjustment Element	RV006
Specified Value	20±1μsec

[Adjustment Method]

(1) Adjust to 20±1μsec with RV006 (See Fig. 5-26)

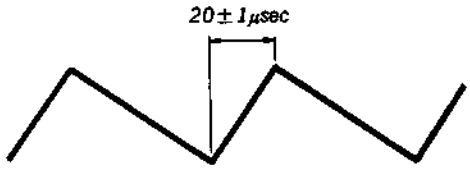

Fig. 5-26. JOG PLL adjustment

9. JOG Exchange Chroma Level Adjustment (VI-23 Board)

Mode	Playback-Pause (STILL)
Signal	Colour bar
Measurement Point	Pin ⑧ of IC006
Measurement Equipment	Oscilloscope
Adjustment Element	RV020
Specified Value	Minimum

[Adjustment Method]

(1) Adjust RV020 so that the fluctuation of level is minimum (See Fig. 5-27)

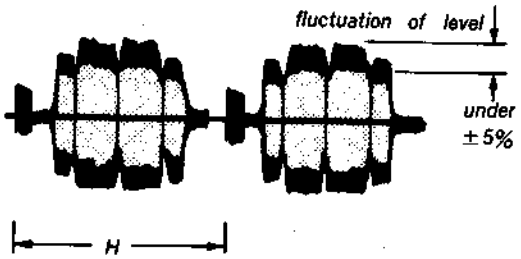

Fig. 5-27. JOG Exchange Chroma level adjustment

10. Shift Adjustment (VI-23 Board)

Mode	Playback-Pause(STILL)
Signal	Alignment tape Colour bar
Measurement Point	CH1 : Pin ㉔ of IC006 CH2 : Pin ㉓ of IC006
Measurement Equipment	Oscilloscope
Adjustment Element	RV005
Specified Value	Same level

[Adjustment Method]

(1) Adjust to the signal level (Per 1H) with RV005

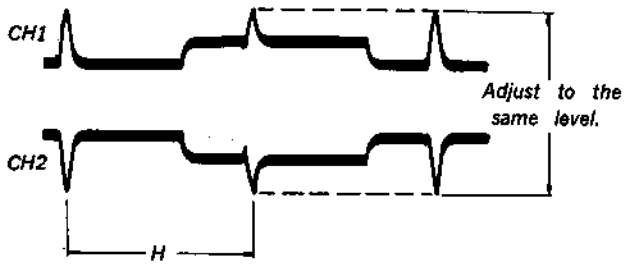

Fig. 5-28. Shift adjustment

5-5. AUDIO SYSTEM ADJUSTMENT

Adjustments of the audio system shall be mode. Use a Dynamicron tape (L125~L500) for adjustments.

[Connection of Related Equipment]

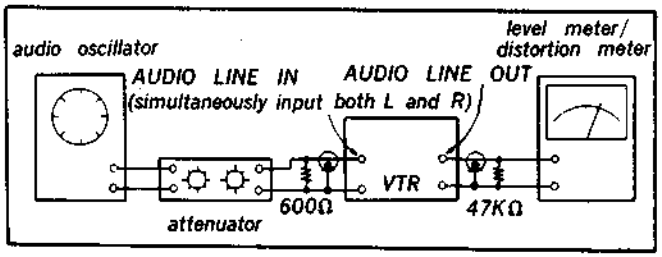

Fig. 5-29.

Unless otherwise specified set the VTR switch and as shown below when making the adjustments

INPUT SELECT switch···LINE

[Adjustment Sequence]

(1) ACE head adjustment
(2) Playback frequency characteristic Check
(3) Playback output level Check
(4) E-E output level check
(5) Bias oscillator Frequency and Bias Trap check
(6) Record bias adjustment
(7) Overall frequency characteristic check
(8) Overall level characteristics and distortion ratio checks
(9) Overall S/N check

1. ACE Head Adjustment

Refer to "Mechanical Adjustment"

2. Playback Frequency Characteristic Check

Mode	Playback
Signal	Alignment tape 333Hz (monoscope) and 5kHz (RF sweep) portions
Measurement Point	Audio out terminal
Measurement Equipment	Level meter
Specified Value	Within 2dB

[Confimation Method]

(1) Playback 333Hz (monoscope) and 5kHz (RF sweep) from the alignment tape and confirm so that the level difference between 333Hz and 5kHz within 2dB.

3. Playback Output Level Check

Mode	Playback
Signal	Alignment tape 333Hz (monoscope) portion
Measurement Point	Audio out terminal
Measurement Equipment	Level meter
Specified Value	−30±2dBs

[Confimation Method]

(1) Playback 333Hz (monoscope) from the alignment tape and Confimation that the output level is −30±2dBs

4. E-E Output Level Check

Mode	E-E
Signal	333Hz. −10dBs
Measurement Point	Audio out terminal
Measurement Equipment	Level meter
Specified Value	−10±2dBs

[Confimation Method]

(1) Confirm that the audio line output level is −10±2dBs

5. Bias Oscillater Frequency and Bias Trap Check (AU-26 Board)

Mode	Record
Signal	None (Input pins are short)
Bias Oscillator Frequency check	
Measurement Point	Pin ③ of CN901
Measurement Equipment	Frequency counter
Specified Value	65±6.5kHz (See Fig. 5-30)
Bias Trap Check	
Measurement Point	Pin ⑱ of IC902
Measurement Equipment	Oscilloscope
Specified Value	Bias leak is below 0.4Vp-p

• Input is "AUDIO LINE IN" input pin is shorted.

[Confimation Method]

(1) Input is Nore-signal in record mode

(2) Connect the frequency counter to pin ③ of CN901 Confirm that the oscillation frequency is 65kHz± 6.5kHz (See Fig. 5-30) (Bias Oscillator Frequency)

(3) Connect the oscilloscope to Pin ⑱ of IC902 and confirm that bias leak is below 0.4Vp-p.

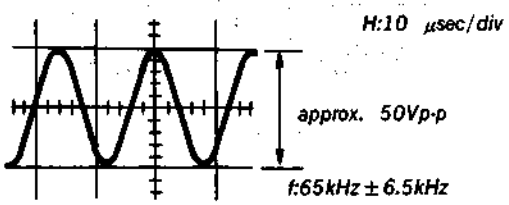

Fig. 5-30. Bias Oscillator Frequency Check

6. Record Bias Adjustment (AU-26 Board)

Mode	Self-Record and Playback
Signal	333Hz and 7kHz
Measurement Point	Audio out terminal
Measurement Equipment	Level meter and Attenuator
Adjustment Element	RV902
Specified Value	0±1dB

• Check that the Tape path adjustment and the playback output level adjustment have been performed.

[Adjustment Method]

(1) Connect Pin ⑭ of IC902 and GND with a jumper wire so as to turn off the AGC operation.

(2) Supply a 333Hz signal to the audio line input.

(3) Connect level meter to audio line output.

(4) Adjust attenuator so that the level meter becomes −30dBs.

(5) Record

(6) Record by making the audio line input signal into 7kHz.

(7) Playback the recorded portion, and measure the output level of 333Hz and 7kHz.

(8) Confirm that the 7kHz playback output level against the 333Hz playback level is 0±1dB. When it is out of specifications, adjust RV902 and repeat items (2) to (8).

(9) Remove the jumper wire.

7. Overall Level Characteristics and Distortion Ratio Checks.

Mode	Self-Record and Playback
Signal	333Hz, −10dBs
Measurement Point	Audio out terminal
Measurement Equipment	Level meter and Distortion meter
Specified Value	Playback level is −10±3dBs Distortion ratio is within 5%

[Confimation Method]

(1) Record
(2) Playback the recorded portion.
(3) Connect the level meter and distortion meter to the audio line output pin.
(4) Confirm that the playback level is−10±3dBs.
(5) Confirm that the distortion ratio is within 4%

8. Overall S/N Check (AU-26 Board)

Mode	Self-Record and Playback
Signal	333Hz and None
Measurement Point	Audio out terminal
Measurement Equipment	Level meter and Attenuater
Specified Value	S/N : More than 33dB

[Confimation Method]

(1) Connect jumper wire between Pin ⑭ of IC902 and GND and turn off off AGC operation
(2) Supply a 333Hz signal to the audio line input and adjust attenuator so that the level meter becomes −10dBs
(3) Record
(4) Switch to no-signalinput while continuing in record mode (Audio Input Pin is short)
(5) Playback the recorded portion, and confirm that the level difference between the 333Hz signal and no-signal portion (the portion immediately after the 333Hz signal) is more than 33dB
(6) Remove jumper wire.

5-6. TUNER SYSTEM ADJUSTMENT

1. RF AGC Adjustment (ST-12 Board)

Mode	E-E
Signal	VHF TV broad cast signal
Measurement Equipment	Monitor TV
Adjustment Element	IF001
Specified Value	Snow noise disappears point

[Adjustment Method]

(1) Adjust the monitor TV for best contrast
(2) Adjust IF001 so that show noise is visible
(3) Turn IF001 in the opposite direction to that in (2) and set at the point where snow noise disappears.
(4) Receive each channel and confirm that there is no beat picture disturbance or snow noise.

SERVICE MANUAL

SPECIFICATIONS

Remote control system	Infrared control
Power requirements	3 V DC, 2 IEC designation R6 batteries (size AA)
Dimensions	45 × 20 × 175 mm (W/H/D) incl. projecting parts and controls
Weight	Approx. 105 g incl. batteries

REMOTE COMMANDER

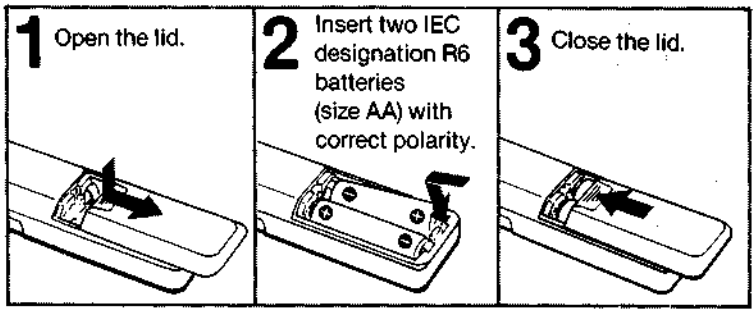
SONY®

ACC

1. REMOTE CONTROL OPEPATION

You can control almost all the functions of this video cassette recorder from your armchair using the supplied Remote Commander.

BATTERY INSERTION



Battery life
In normal operation, batteries will last for about six months.
When the batteries are exhausted, the indicator will not light when the buttons on the Commander are pressed.

If the Remote Commander is not to be used for a long period of time, remove the batteries to avoid possible damage caused by battery leakage.

OPERATION

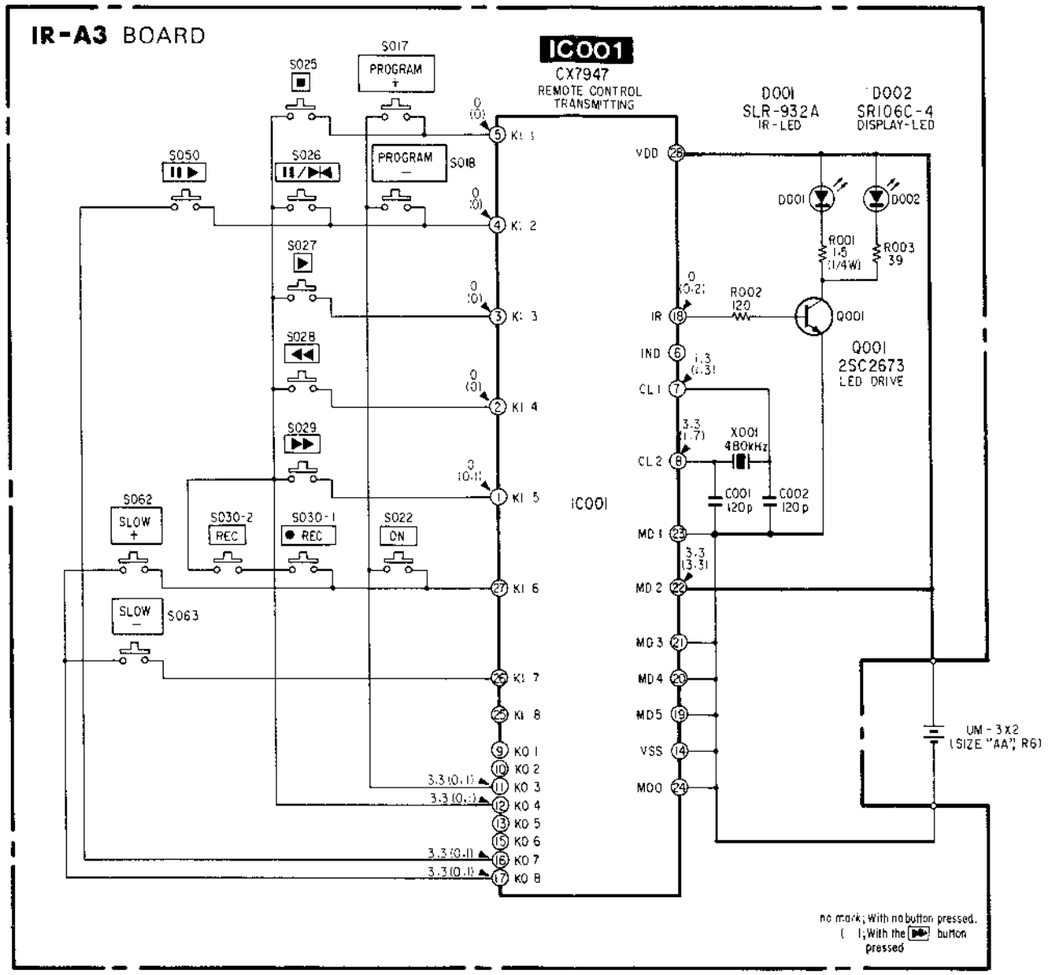
3. SCHEMATIC DIAGRAM



Note:

- All resistors are in ohms, 1/6W unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF : μμF 50WV or less are not indicated except for electrolytics. and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- [ ] : panel designation.
- ——— : B + bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a digital multimeter (DC10MΩ).
- Voltage variations may be noted due to normal production tolerances.

When indicating parts by reference number, please include the board name.

4. EXPLODED VIEW

NOTE:

- Itmes with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SERVICE MANUAL

E Model

November, 1986

SUPPLEMENT-1

File this Supplement With the Service Manual.

EC Model Addition

An EC model has been added to SL-F90.

This EC model was designed based on the SL-F90 E(Spanish) model.

The differences from the SL-F90 E(Spanish) model are in the tuner block and accessory block remote commander.

This Supplement-1 includes only the differences from the SL-F90 E(Spanish) model.

SPECIFICATIONS

E(Spanish) Model	EC Model

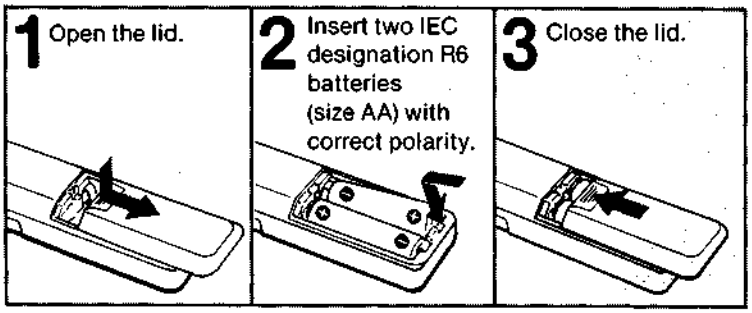
1. REMOTE CONTROL OPERATION

You can control almost all the functions of this video cassette recorder from your armchair using the supplied Remote Commander.

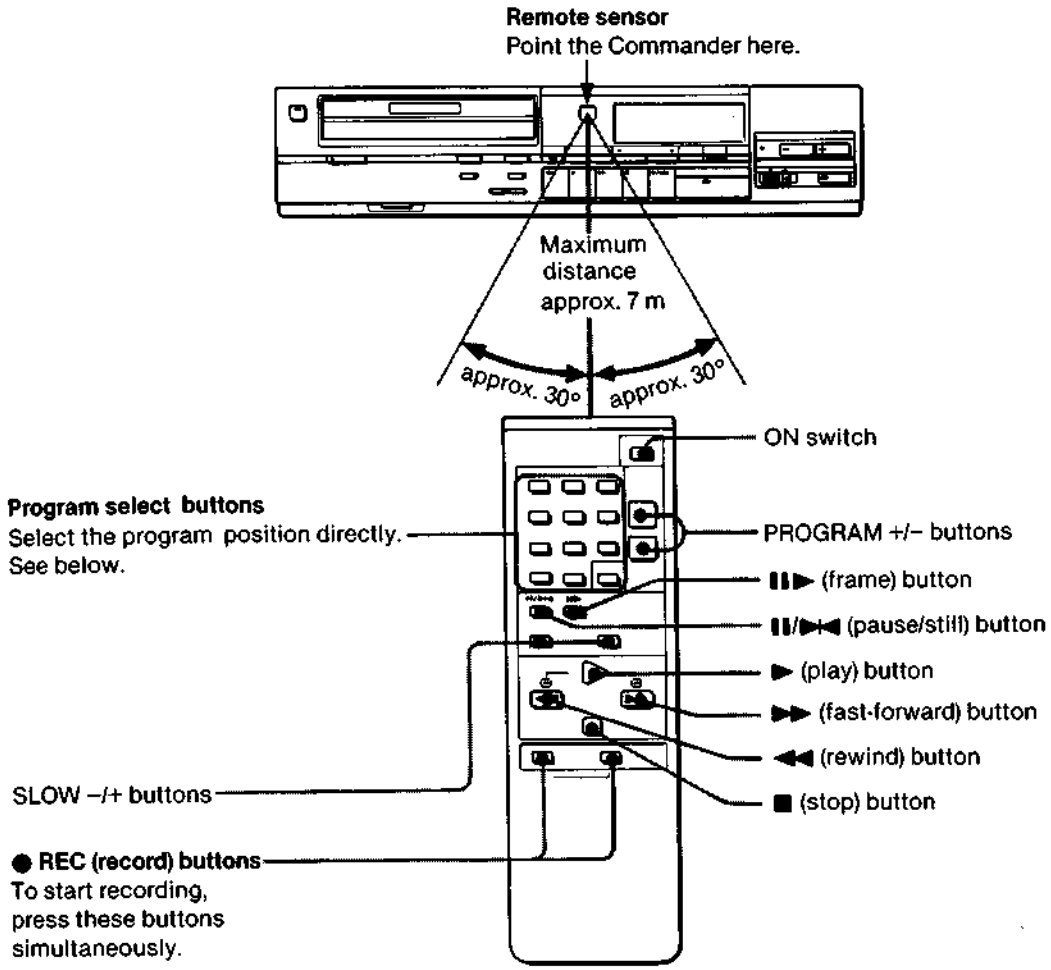
BATTERY INSERTION



Battery life
In normal operation, batteries will last for about six months.

If the Remote Commander is not to be used for a long period of time, remove the batteries to avoid possible damage caused by battery leakage.

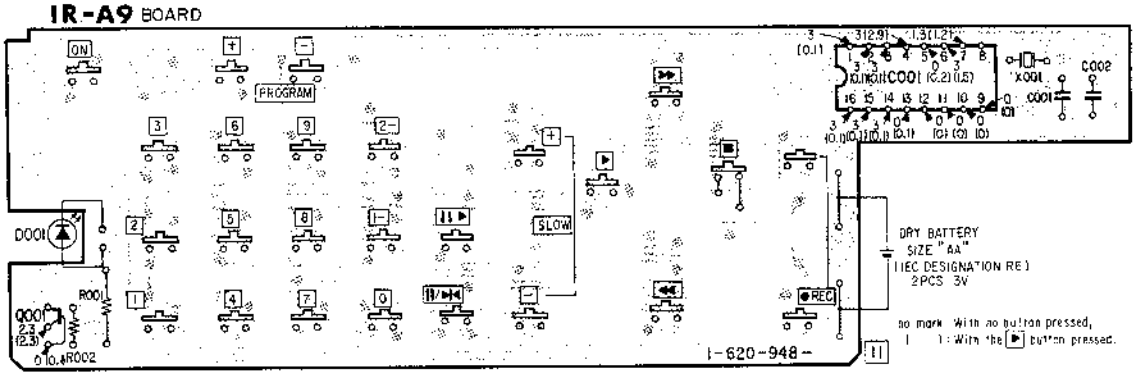
OPERATION



How to press the program select buttons
For programs 1 through 9, press the corresponding single-digit button.
For 10 through 19, press "1-" for the tens-digit and then the corresponding single-digit button.
For 20 through 29, press "2-" and then the corresponding single-digit button.
For 30, press "0".
• If you do not press a single-digit button within several seconds after pressing "1-" or "2-", the previous program position will be recalled.

2. PRINTED WIRING BOARD

IR-A9 BOARD



Note:

- All resistors are in ohms, 1/4W unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF : μμF 50WV or less are not indicated except for electrolytics. and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- : nonflammable resistor.
- : fusible resistor.
- : panel designation.
- △ : internal component.
- : adjustment for repair.
- : B + bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a color-bar signal input.
- Readings are taken with a digital multimeter (DC10MΩ).
- Voltage variations may be noted due to normal production tolerances.

When indicating parts by reference number, please include the board name.

Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

SECTION 3
ELECTRICAL PARTS LIST

NOTE:

The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

RESISTORS
- All resistors are in ohms
- F : nonflammable

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

CAPACITORS
- MF : μF, PF : μμF

COILS
- MMH : mH, UH : μH

SECTION 4 ELECTRICAL ADJUSTMENTS

During the adjustment, see the parts arrangement diagram relevant to the adjustment on page 21.

SECAM VIDEO SYSTEM ADJUSTMENT

- Make this adjustment after adjusting the PAL video system.
- For this adjustment, use the equipment listed below in conjunction with an alignment tape and SECAM color bar signals.

[Equipment required]
1) SECAM color Monitor TV
2) Oscilloscope, Dual-trace, Bandwidth...more than 10 MHz with delay mode
3) SECAM color-Bar Generator
4) Alignment Tape, Type : KR5-1J,
   Code No. 8-969-996-03

[Setup for adjustment]
In this adjustment, video signals obtained from pattern generator will be used as adjustment sig Therefore, the video output signals should be wi the specifications.
Verify video signals by connecting an oscillos to VIDEO OUT connector (75Ω terminated). Cl that the video signals are flat when the ampli of the horizontal sync signal is about 0.3 Vp-p, amplitude of the video portion is about 0.7 Vp-p, the amplitude of the burst signal is about 0.3 V The video signal (color-bar signal) used in adjustment is shown in Fig. 1.

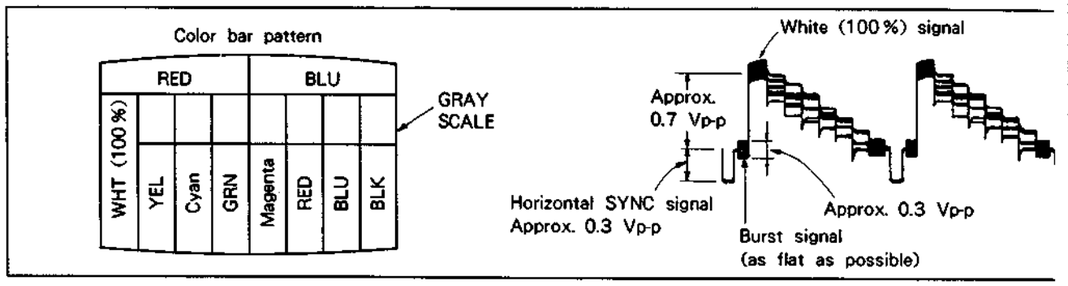

Fig. 1. SECAM video (color bar) signal

[Alignment tape]
KR5-1J

	Video signal	Audio signal	Playing time	Use for
1	Color bars	3 kHz, – 10 dB	5 min	General performance, tape speed check switching position adjustment.
2	Monoscope	333 Hz, – 30 dB	5 min	Video head dihedral, audio lev adjustment.
3	RF sweep	5 kHz, – 30 dB	5 min	Video, audio frequency characteristic audio azimuth adjustment marker : 1 MH 2 MHz, 3.58 MHz, 4.5 MHz, 5.2 MHz.
4	Tracking 1 MHz (CH-A) *1 (Channel B is inserted in every 3 frames.)	1 kHz, – 10 dB *2 (Signal is dropped out in the positions where channel B is inserted.)	5 min	Tracking, Audio height adjustments CTI Position check (Check if *1 and *2 are the sam position.)

SECTION 4 ELECTRICAL ADJUSTMENTS

During the adjustment, see the parts arrangement diagram relevant to the adjustment on page 21.

SECAM VIDEO SYSTEM ADJUSTMENT

- Make this adjustment after adjusting the PAL video system.
- For this adjustment, use the equipment listed below in conjunction with an alignment tape and SECAM color bar signals.

[Equipment required]

1) SECAM color Monitor TV
2) Oscilloscope, Dual-trace, Bandwidth...more than 10 MHz with delay mode
3) SECAM color-Bar Generator
4) Alignment Tape, Type : KR5-1J,
   Code No. 8-969-996-03

[Setup for adjustment]

In this adjustment, video signals obtained from the pattern generator will be used as adjustment signals. Therefore, the video output signals should be within the specifications.

Verify video signals by connecting an oscilloscope to VIDEO OUT connector (75Ω terminated). Check that the video signals are flat when the amplitude of the horizontal sync signal is about 0.3 Vp-p, the amplitude of the video portion is about 0.7 Vp-p, and the amplitude of the burst signal is about 0.3 Vp-p. The video signal (color-bar signal) used in this adjustment is shown in Fig. 1.

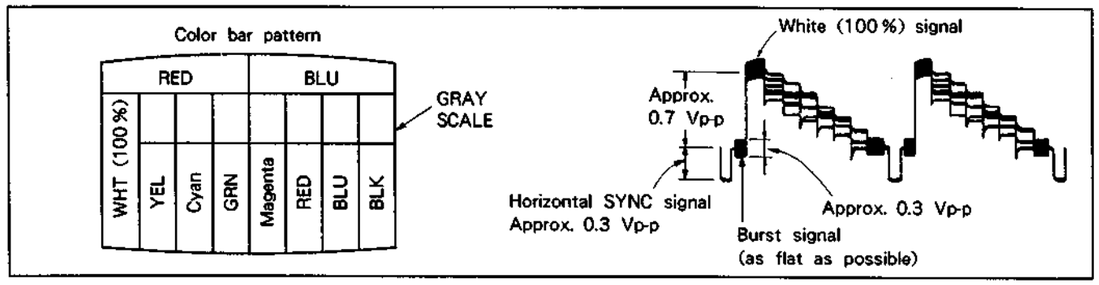

Fig. 1. SECAM video (color bar) signal

[Alignment tape]
KR5-1J

	Video signal	Audio signal	Playing time	Use for
1	Color bars	3 kHz, − 10 dB	5 min	General performance, tape speed checks, switching position adjustment.
2	Monoscope	333 Hz, − 30 dB	5 min	Video head dihedral, audio level adjustment.
3	RF sweep	5 kHz, − 30 dB	5 min	Video, audio frequency characteristics, audio azimuth adjustment marker : 1 MHz, 2 MHz, 3.58 MHz, 4.5 MHz, 5.2 MHz.
4	Tracking 1 MHz (CH-A) ＊1 (Channel B is inserted in every 3 frames.)	1 kHz, − 10 dB ＊2 (Signal is dropped out in the positions where channel B is inserted.)	5 min	Tracking, Audio height adjustments CTL Position check (Check if ＊1 and ＊2 are the same position.)

1. SECAM ACK Adjustment (SC-14 Board)

Mode	E-E
Signal	SECAM color bar
Measurement Point	Pin ⑨ of IC001
Measuring Instrument	Oscilloscope
Adjusting Element	LV002, RV001
Specified Value	5.5 ± 0.2 Vp-p

Adjusting method :

1) Adjust LV002 until the amplitude is a maximum.
2) Adjust RV001 to 5.5 ± 0.2 Vp-p.

Fig. 2. SECAM ACK adjustment

2. Bell Filter Adjustment (SC-14 Board)

Mode	E-E
Signal	SECAM color bar
Measurement Point	CH1 : Pin ⑥ of CN001 EXT TRIG : Pin ⑤ of CN001
Measuring Instrument	Oscilloscope TRIGGER SOURCE : EXT
Adjusting Element	LV003
Specified Value	Flat waveform

Adjusting method :

1) Adjust LV003 until the waveform is flat.

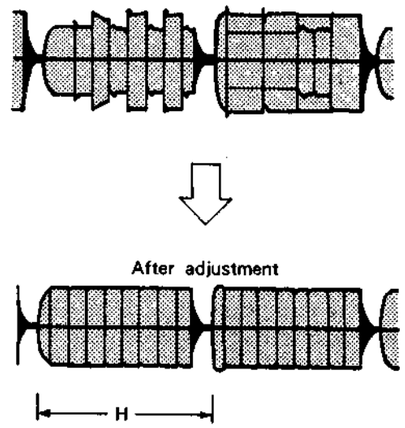

Fig. 3. Bell filter adjustment

3. Counter Bell Filter Adjustment (SC-14 Board)

Mode	Self-recording and playback
Signal	SECAM color bar
Measurement Point	Adjust while observing the SECAM monitor TV screen.
Measuring Instrument	
Adjusting Element	LV001
Specified Value	Cleanest border between the red and blue areas

Adjusting method :

1) Record SECAM color bar signals.
2) Playback the recorded signals.
3) While observing the monitor TV screen, adjust LV001 until the border between the red and blue areas is at its cleanest (minimum beats).

SERVICE MANUAL

ME Model

Super Betamax

SL-F90(ME model) is a model whose design has been based on SL-F90(E model).
On this service manual , only differences from SL-F90(E model) are described.

المواصفات

النظام

نظام تسجيل الصورة	مسح حلزوني برأسين دورانيين
اشارة الصورة	مقاييس CCIR ، الوان بال PAL وسيكام SECAM
تغطية القنوات	VHF : قنوات أوروبا الغربية من E2 الى E12
	UHF : قنوات أوروبا الغربية من E21 الى E68
	(يمكن ضبط ما يصل الى ٣٠ برنامجا ضبط مسبقا)
دخل الهوائي	مقبس هوائي لا تماثلي ٧٥ أوم
اشارة خرج تردد الراديو	قنوات UHF من E30 الى E39 (قابلة للتغيير)
	٧٥ أوم، غير متوازن

الصورة

الدخل: VIDEO IN	مقبس فونو: ١,٠ فولت $^{+0,5}_{-0,2}$ فولت (p-p)
	٧٥ أوم، غير متوازن، تزامن سالب
الخرج: VIDEO OUT	مقبس فونو: ١,٠ ± ٠,١ فولت (p-p)
	٧٥ أوم، غير متوازن، تزامن سالب

الصوت

الدخل: AUDIO IN	مقبس فونو: ٤٧ كيلوأوم، ـ ١٠ ديسيبل
	(صفر ديسيبل = ٠,٧٧٥ فولت جذر متوسط مربع التيار)
الخرج: AUDIO OUT	مقبس فونو:
	معاوقة الحمل اقل من ١٠ ك أوم، ـ ١٠ ديسيبل مع حمل ٤٧ ك
	أوم، غير متوازن

حركة الشريط

سرعة الشريط	١٨,٧٢ مم/ثانية
اقصى مدة للتسجيل	ساعتان و١٠ دقائق (مع كاسيت سوني L-500)
	٣ ساعات و١٥ دقيقة (مع L-750)
مدة التقديم السريع/اعادة اللف	خلال ٥ دقائق (مع L-500)

المؤقت

الساعة	تأمين كريستال
بيان الوقت	دورة من ٢٤ ساعة
تهيئة ضبط المؤقت (للتسجيل فقط)	٦ أحداث/اسبوع، قابل للضبط على أي يوم أو على ايام الاسبوع السبعة

عام

متطلبات القدرة الكهربائية	تيار متردد ١١٠ أو ١٢٧ أو ٢٢٠ أو ٢٤٠ فولت قابل للضبط، ٥٠/٦٠ هرتز
استهلاك التيار الكهربائي	٣٩ وات
درجة حرارة التخزين	ـ ٢٠°م الى + ٦٠°م
درجة حرارة التشغيل	٥°م الى ٤٠°م
الابعاد	٤٣٠ × ٩٥ × ٣٦٧ مم (عرض/ارتفاع/عمق)
	مع الاجزاء والضوابط البارزة
الوزن	٨,٠ كجم

موجه التحكم عن بعد RMT-146

نظام التحكم عن بعد	تحكم بالاشعة تحت الحمراء
متطلبات القدرة الكهربائية	تيار مباشر ٣ فولت، بطاريتين IEC فئة R6 (حجم AA)
الابعاد	٤٥ × ٢٠ × ١٧٥ مم (عرض/ارتفاع/عمق)
	مع الاجزاء والضوابط البارزة
الوزن	١٠٥ جم تقريبا مع البطاريات

الكماليات المجهزة

كبل مشترك المحور ٧٥ أوم لتوصيل المسجل بالتلفزيون	١
مفك براغي لضبط قناة تردد الراديو	١
موجه التحكم عن بعد RMT-146 مع بطاريتين IEC فئة R6 (حجم AA)	١

Note:

- All resistors are in ohms, 1/4W unless otherwise noted. kΩ: 1000Ω, MΩ: 1000kΩ.
- All capacitors are in μF unless otherwise noted. pF : μμF 50WV or less are not indicated except for electrolytics. and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- : nonflammable resistor.
- : fusible resistor.
- : panel designation.
- △ : internal component.
- : adjustment for repair.
- : B + bus.
- Voltages are dc with respect to ground unless otherwise noted.
- Readings are taken with a color-bar signal input.
- Readings are taken with a digital multimeter (DC10MΩ).
- Voltage variations may be noted due to normal production tolerances.

When indicating parts by reference number, please include the board name.
