## FEATURES

### Dolby NR C-type noise reduction system

In addition to the conventional B-type Dolby NR system, this cassette deck employs the newly-developed C-type Dolby NR system which reduces tape noise twice as effectively as the B-type system. The C-type system also incorporates an anti-saturation network to improve the high-frequency dynamic range by 4 dB at 10 kHz.

### Full-logic "feather-touch" operation

At the slightest touch, the "feather-touch" function buttons enable you to switch directly from one mode to another without going through the stop mode.

### Cue and review functions

The cue and review functions help you to locate the desired point on the tape by winding the tape ahead in the fast-forward mode, or rewinding it, with a chattering sound from the recorded part.

### Record muting function

The record muting button enables you to automatically make a 4-second blank space between selections.

### Auto play

The auto play function makes automatic replay possible promptly after the tape is rewound to the beginning.

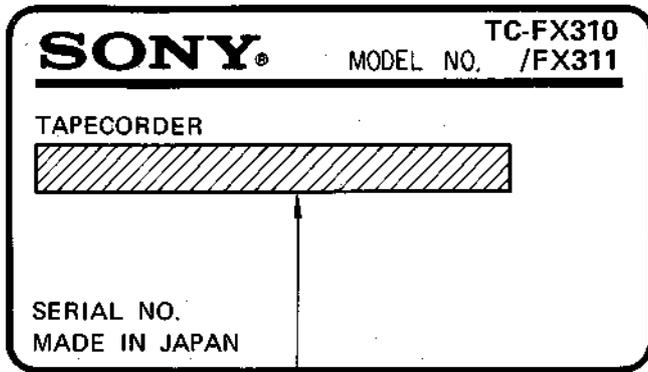

### Remote control operation (for the TC-FX310 only)

Using the optional RM-50 or RM-80 remote control unit, various operations—recording, playback, record muting operation, etc.—can be remotely controlled.

When the RM-65 synchro remote control unit is used to connect this cassette deck with a turntable equipped with a synchro remote control jack, the operation of the cassette deck and the turntable will be synchronized.

**SAFETY CHECK-OUT (US Model)**

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

**LEAKAGE TEST**

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.

3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

**⑤ DOLBY NR switches and indicators**

To record or play back using the Dolby NR system, depress the left ON/OFF switch (▷ ON), then select either the B-type or C-type Dolby NR system with the right switch. Depress the switch for the C-type system (▷ C-TYPE), or press to release it for the B-type system (▷ B-TYPE). The corresponding indicator lights up. To record or play back without the Dolby NR process, press to release the ON/OFF switch (▷ OFF).

"Dolby" and the double-D symbol are trade marks of the Dolby Laboratories Licensing Corporation. Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

**⑥ LED PEAK LEVEL METERS**

These meters show the peak input level of each channel during recording, and recorded levels in the playback mode. They follow the transient peaks of high-level inputs that are too brief to be followed by conventional VU meters so that the optimum recording level can be accurately set.

**⑦ REC LEVEL (recording level) controls**

These controls adjust the recording level.

**⑧ MIC jacks (phone jack)**

Any low-impedance microphone equipped with a phone plug may be used.

**⑨ TAPE SELECT buttons**

Depress one of the TAPE SELECT buttons, depending on which type of tape you use. The optimum bias current adjustment for recording and the optimum equalization adjustment for both recording and playback are set.

**⑩ HEADPHONES jack (stereo phone jack)**

Connect a pair of headphones either to monitor the input signals to be recorded or to listen to a recording in the playback mode.

**⑪ ▲ (eject) button**

Press this button to open the cassette holder.

**Rear panel**

**⑫ LINE IN (line input) jacks (phono jack)**

Accepts tape outputs from an amplifier for tape recording and line outputs from another tape deck when duplicating a tape from that unit.

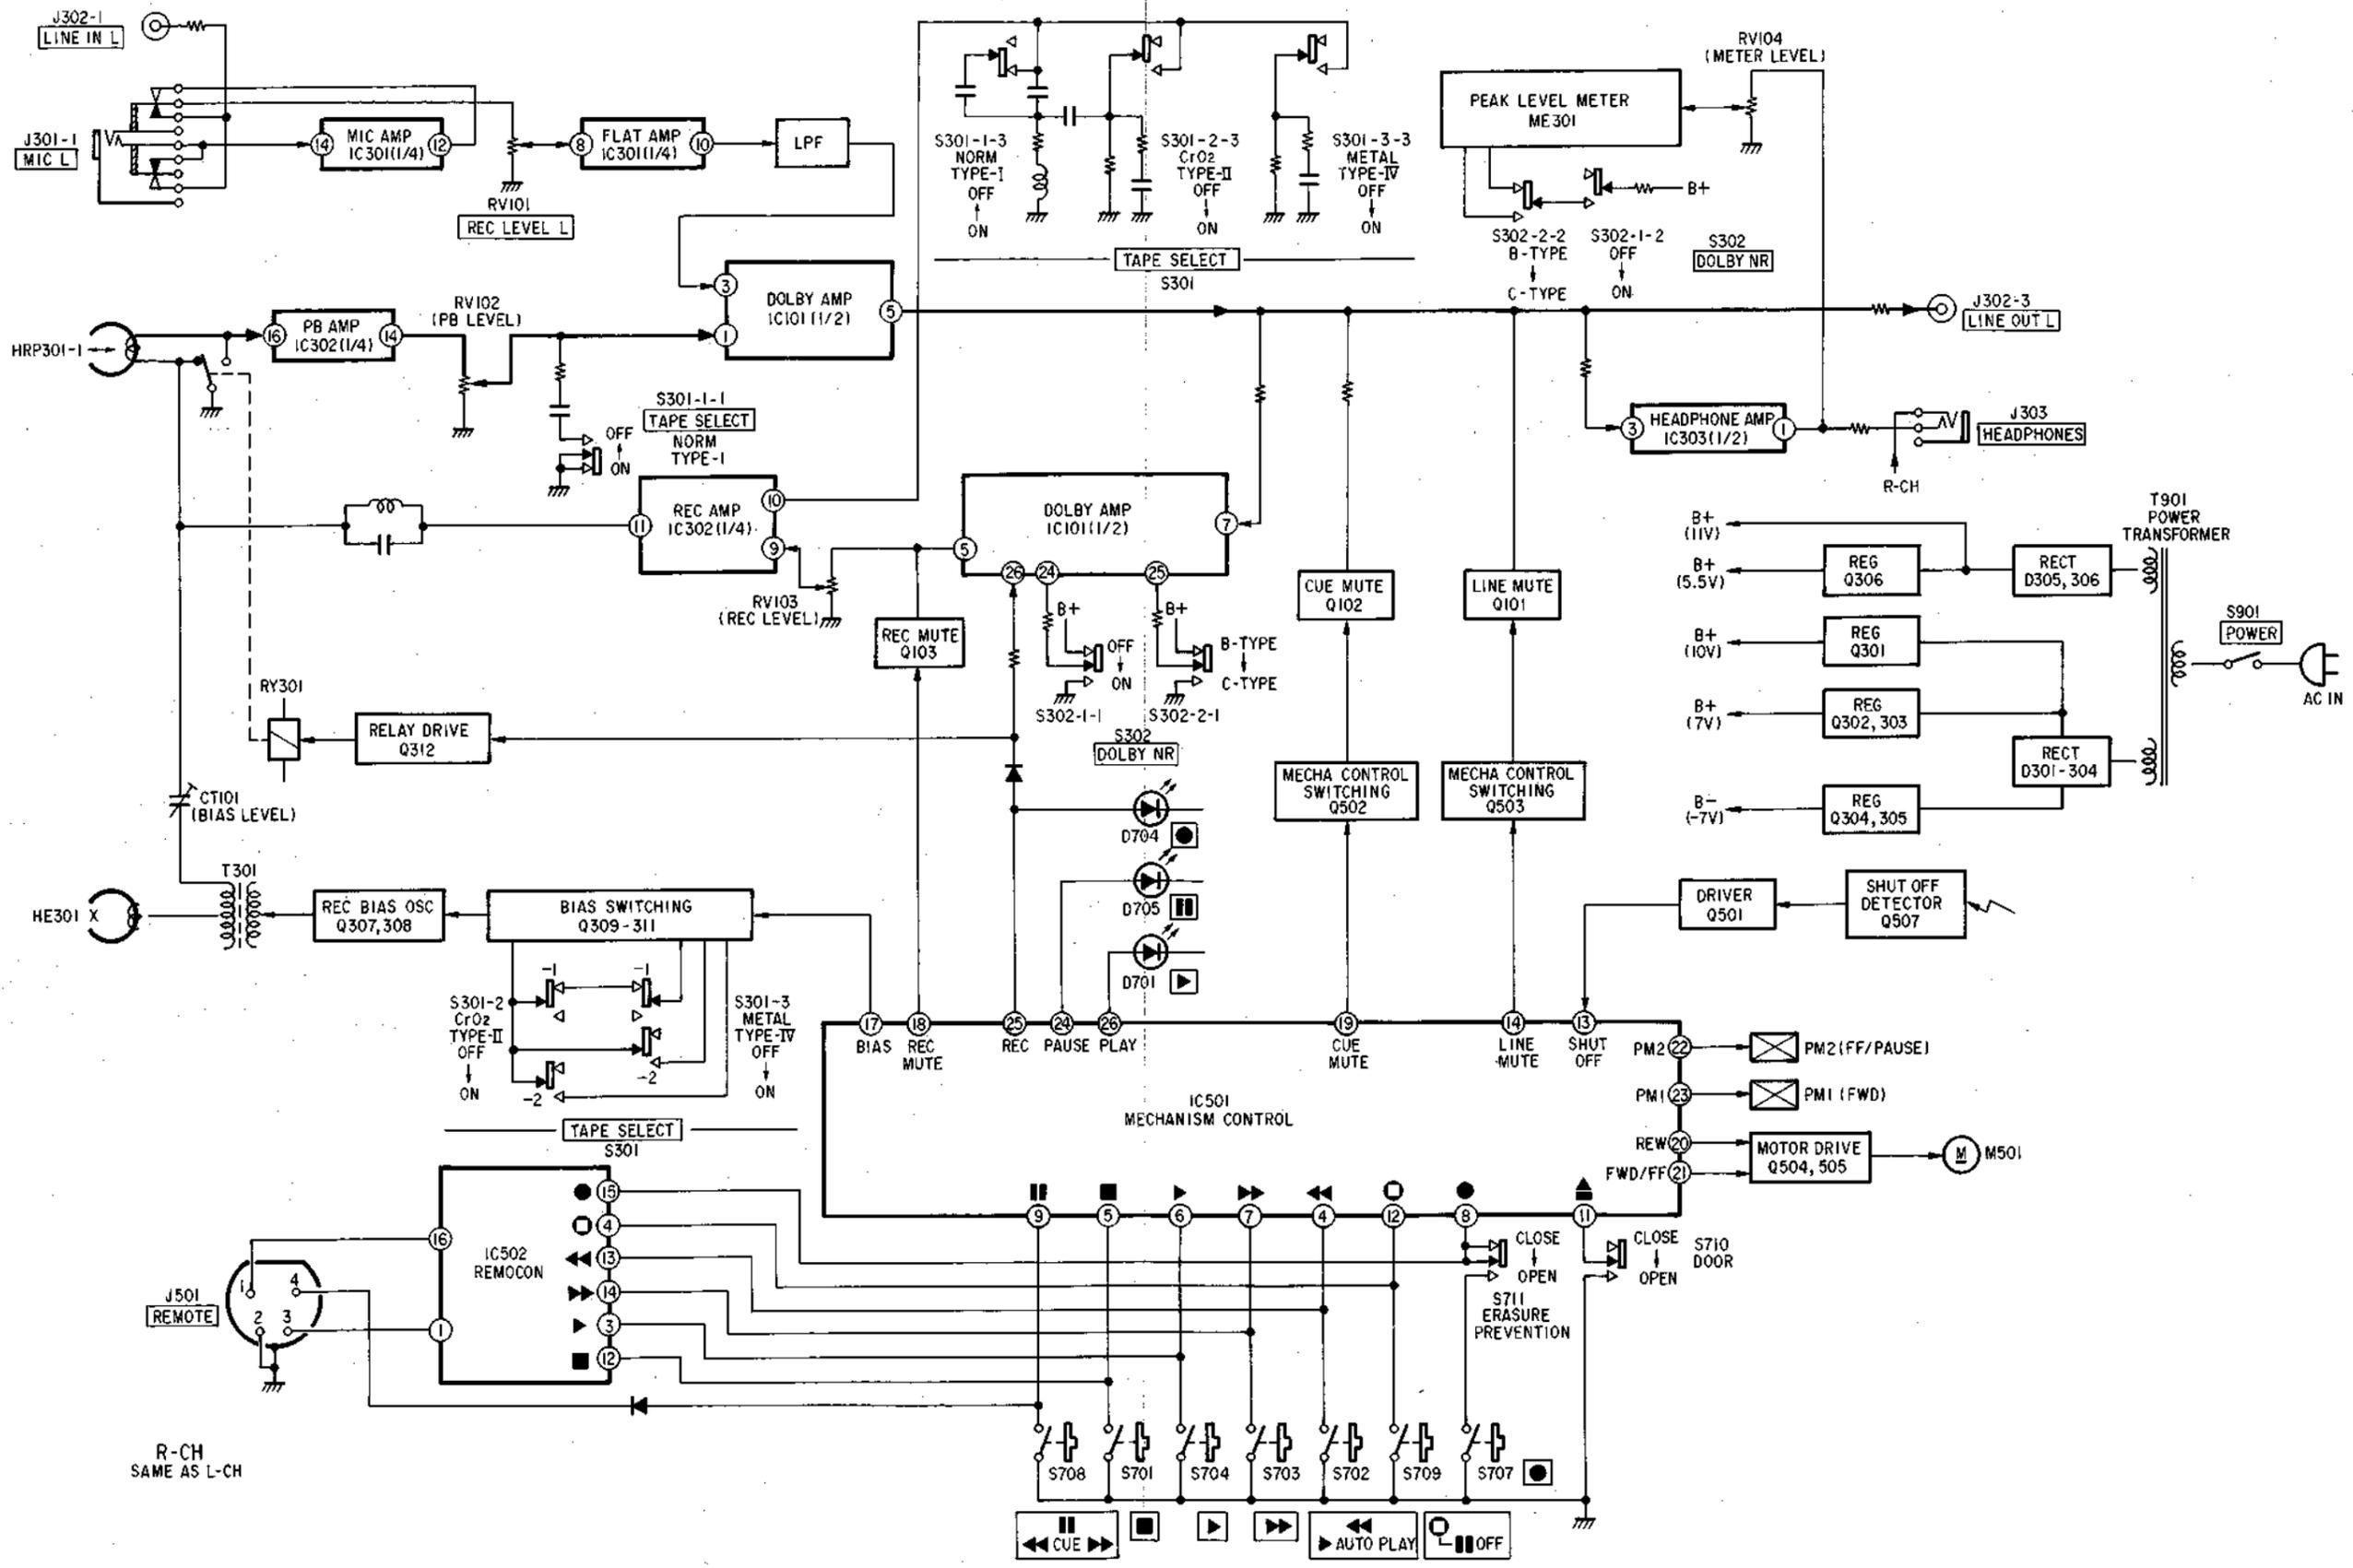

**⑬ LINE OUT (line output) jacks (phono jack)**

Accepts tape inputs from an amplifier for playing back a tape and line inputs from another tape deck for duplicating a tape onto that unit.

**⑭ REMOTE control connector (for the TC-FX310 only)**

Connect the optional RM-50 (wired) or RM-80 (wireless) remote control unit to operate the tape transport functions from a distance. The tape deck function buttons are still operative when the remote control unit is connected. The RM-65 synchro remote control unit can be connected to this connector. Read the instruction manual of your remote control unit before operating.
