
SPECIFICATIONS

GENERAL

Power Requirements: AEP model
220 V ac ~, 50/60 Hz
(240 V ac ~ adjustable by authorized Sony personnel)
UK model
240 V ac ~, 50/60 Hz
(220 V ac ~ adjustable by authorized Sony personnel)
US model
120 V ac, 60 Hz

Power Consumption: 45 W (AEP, UK model)
35 W (US model)

Dimensions: Approx. 430(w) x 80(h) x 385(d) mm
17(w) x 3¼(h) x 15¼(d) inches
without rack-mounting handles
Approx. 480(w) x 80(h) x 385(d) mm
19(w) x 3¼(h) x 15¼(d) inches
with rack-mounting handles
including projecting parts and controls

Weight: Approx. 10 kg, 22 lb 1 oz
with rack-mounting handles

TAPE RECORDER SECTION

Recording System: 4-track 2-channel stereo

Fast-forward and Rewind Time: Approx. 60 sec. (with C-60)

Frequency Response: DOLBY NR OFF

AEP, UK model
- With TYPE IV cassette (Sony METALLIC)
  20–19,000 Hz
  30–17,000 Hz (±3 dB)
  30–13,000 Hz (±3 dB, 0 VU recording)
  30–17,000 Hz (DIN)
- With TYPE III cassette (Sony Fe-Cr)
  20–19,000 Hz
  30–17,000 Hz (±3 dB)
  30–17,000 Hz (DIN)
- With TYPE II cassette (Sony CD-α)
  20–18,000 Hz
  30–16,000 Hz (±3 dB)
  30–16,000 Hz (DIN)
- With TYPE I cassette (Sony BHF)
  20–17,000 Hz
  30–15,000 Hz (DIN)

US model
- With TYPE IV cassette (Sony METALLIC)
  20–20,000 Hz
  30–18,000 Hz (±3 dB)
  30–13,000 Hz (±3 dB, 0 VU recording)
- With TYPE III cassette (Sony Fe-Cr)
  20–20,000 Hz
  30–18,000 Hz (±3 dB)
- With TYPE II cassette (Sony EHF)
  20–19,000 Hz
  30–17,000 Hz (±3 dB)
- With TYPE I cassette (Sony HFX)
  20–17,000 Hz
  30–15,000 Hz (±3 dB)

— Continued on page 2 —

SERVICE MANUAL

110

Wow and Flutter: 0.03 % WRMS (NAB) } (AEP, UK model)
±0.085 % (DIN) }
0.04 % WRMS (US model)

S/N Ratio: DOLBY NR OFF
- With TYPE III cassette (Sony Fe-Cr)
  60 dB at peak level (NAB)
  58 dB (DIN, 1975, rev.)
- With TYPE II cassette (Sony CD-α)
  58 dB at peak level (NAB)

US model
- With TYPE III cassette (Sony Fe-Cr)
  60 dB at peak level
- With TYPE II cassette (Sony EHF)
  58 dB at peak level

DOLBY NR ON
Improved by 5 dB at 1 kHz, 10 dB above 5 kHz

Total Harmonic Distortion: 0.9 % (with Sony Fe-Cr cassette)

Bias Frequency: 105 kHz

Inputs: MIC (phone jacks) 2
sensitivity 0.25 mV (−70 dB)
for a low-impedance microphone
LINE (phone jacks) 2
sensitivity 77.5 mV (−20 dB)
input impedance 50 kΩ

Outputs: LINE OUT (phone jacks) 2
output level 0.435 V (−5 dB)
at load impedance 50 kΩ
Suitable load impedance
more than 10 kΩ
HEADPHONES 1
output level 39 mV (−26 dB)
at load impedance 8 Ω

LIQUID CRYSTAL PEAK PROGRAM METERS

Response Range: −40 dB to +8 dB

Frequency Response: 20 Hz – 20,000 Hz ± 1.5 dB

Response Time: 1 millisecond

Decay Time (from 0 dB to −20 dB): 750 milliseconds

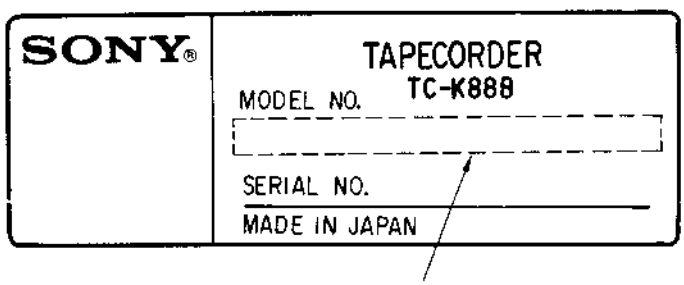
Overshoot: None

Indicator Elements: 33 elements for each channel

0 dB = 0.775 V

MODEL IDENTIFICATION

– Specification Label –



AC 120 V 60 Hz 35 W . . . . . US model

Handling Precautions for MOS ICs

Generally, the insulation resistance of the oxide layer in MOS IC structures is very high, and the oxide layer is very thin. Because of this, it is possible that the static voltages usually present on clothes and the human body will be enough to generate a potential difference across the insulator, high enough to cause a breakdown of the insulating layer.

The following precautions should be taken while handling these ICs.

(Particular care should be taken under conditions of low humidity.)

Precautions in Replacing MOS ICs

1. Store new ICs by inserting them into a urethane-polyester cushion (which is somewhat conductive), or wrapping it in aluminum foil, so that all the pins are at the same potential.
   (The ICs should be stored in that manner until mounted on the circuit board.)

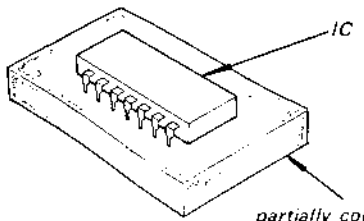

Fig. A

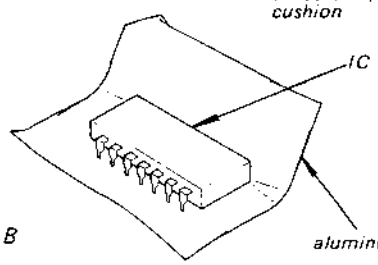

Fig. B

2. Check the soldering iron for possible power-line leakage current. Make sure that there is no leakage path by connecting an ohmmeter to the tip of the soldering iron and the plug as shown in Fig. C. If there is a leakage path, use some other soldering iron.

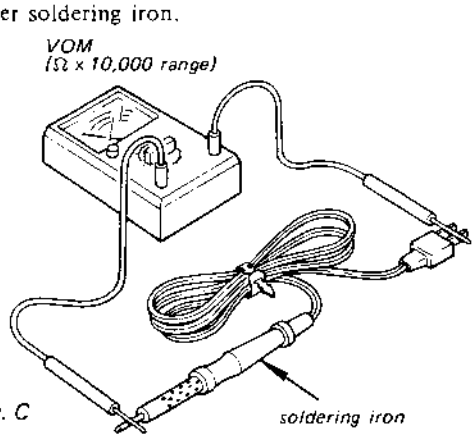

Fig. C

3. Equalize any potential difference between the clothes, the tools in use, the work bench, the set being worked on, and the packaged IC by touching them all in succession with the hands or a conductive wire or tool.
4. The following are effective methods for handling ICs that remove the potential difference across the oxide layer.
   - Use a paper clip modified by soldering in a wire braid insert.

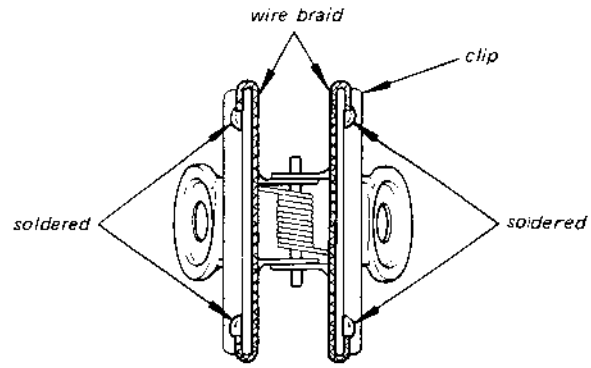

Fig. D

Make sure that there is no solder on the inside.

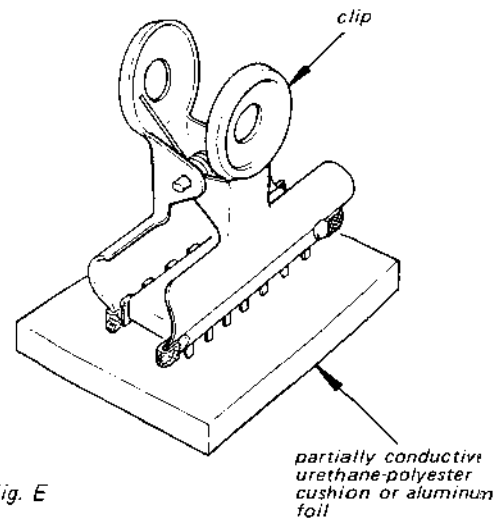

Fig. E

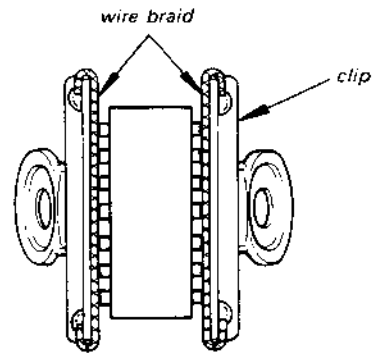

Make sure that all the pins are in contact with the wire braid (all the pins will then be at the same potential.).

Fig. F

- Take a short length of fine bare wire and wind it around the IC so that it shorts all the pins of the IC, while it is still in the urethane-polyester cushion or aluminum foil. This ensures that all the pins are at the same potential.

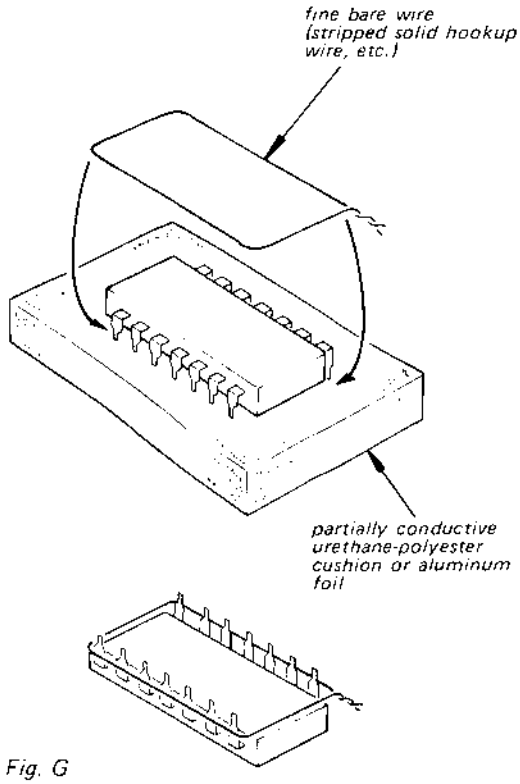

Fig. G

- When it is necessary to handle the IC with the fingers, do not touch any pin, and hold the IC at the ends of its plastic-package case as shown in Fig. H.

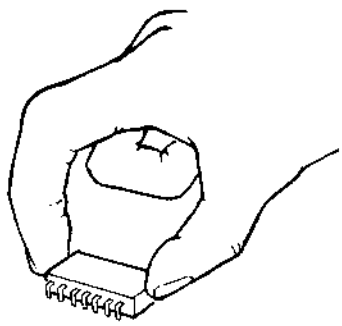

Fig. H

5. Method of Mounting
Insert the IC while holding it with the modified clip, and solder all the pins with the clip still shorting the pins. (Similarly, solder all the pins while the bare shorting wire is still wound around them.). Remove the clip or the bare shorting wire only after all the pins have been soldered.

Precaution while Checking C-MOS ICs

The C-MOS ICs (Complementary MOS) are MOS ICs that have their output sections made up of N-channel and P-channel push-pull stages to increase their speed of operation. If the output terminal of these ICs comes into contact with B+ or B- voltage, then the FET which is ON at that time will either become shorted or open.

This is valid for all the output sections that are connected together by the interconnections. Even the circuits that are physically separated (and not on the same board) can be destroyed simultaneously.

Example:

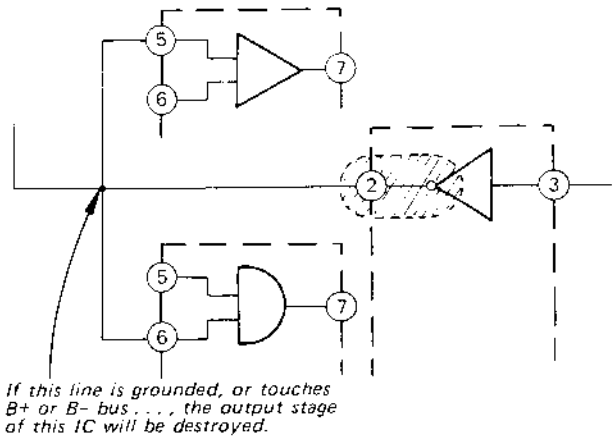

Fig. I

SECTION 3
ADJUSTMENTS

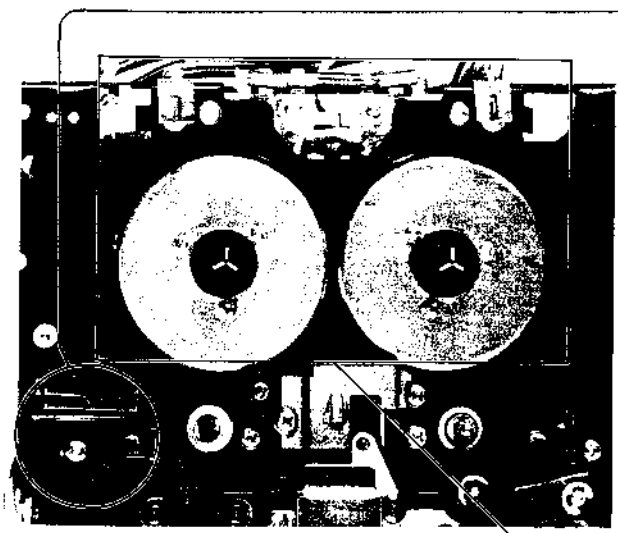
PRECAUTION

1. Clean the following parts with a denatured-alcohol-moistened swab:

record/playback head	pinch roller
erase head	rubber belts
capstan	idlers

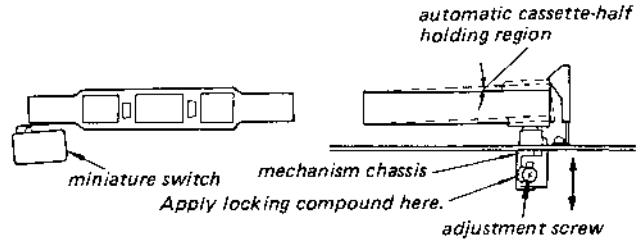
2. Demagnetize the record/playback head with a head demagnetizer. (Do not bring the head demagnetizer close to the erase head.)
3. Do not use a magnetized screwdriver for the adjustments.

3-1. MECHANICAL ADJUSTMENTS



Cassette-half Detection Switch (S602)'s Position Adjustment

– Stop Mode –



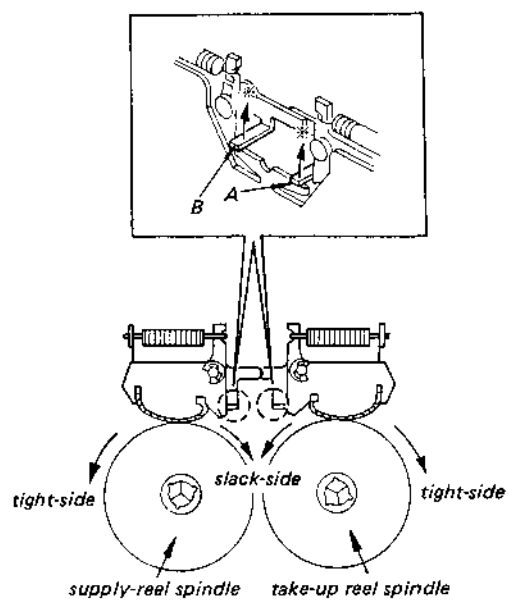
1. Loosen the adjustment screw.
2. Slowly install a tape cassette in the cassette compartment and adjust the position of the miniature switch in the region so that the miniature switch turns on and the cassette-half is automatically held when it is released from the hand.
3. After the adjustment, lock the adjustment screw including the mechanism chassis with suitable locking compound.

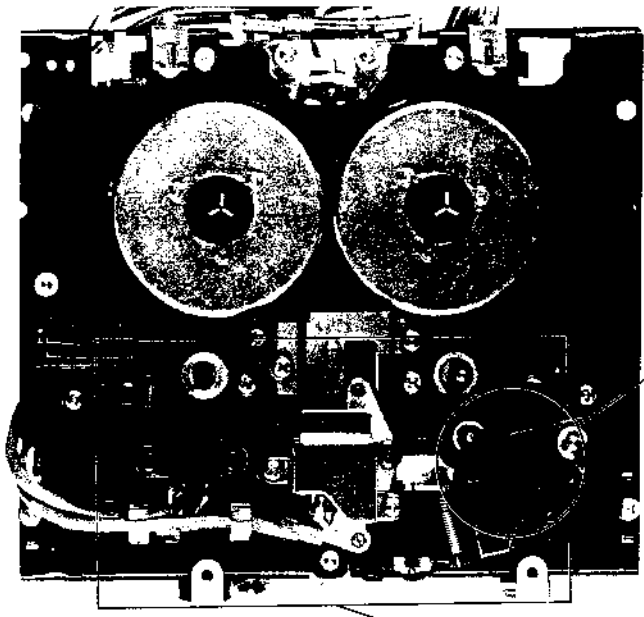
Brake Torque Adjustment

– Stop Mode –

1. Take-up Side Brake Torque: Adjust the torque by bending the adjustment tab A so that the tight-side and slack-side torques are 50 – 100 g·m (0.69 – 1.39 oz·inch) and 20 – 50 g·m (0.28 – 0.69 oz·inch) respectively.
2. Supply reel Side Brake Torque: Adjust the torque by bending the adjustment tab B so that both the tight-side and slack-side torques are in the specified values as shown in the take-up side torque adjustment.

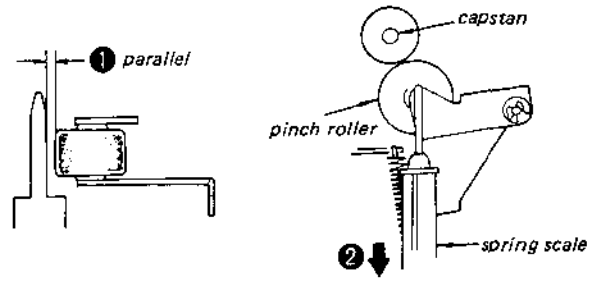
Note: A "Tonichi" torque meter is recommended for the adjustment.





Pinch-Roller Pressure Measurement

– Playback Mode –

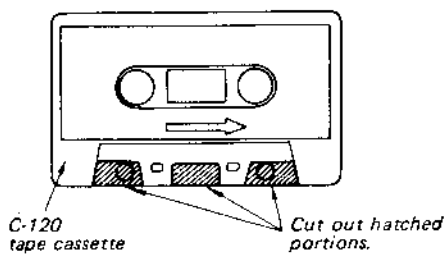


In playback mode, pull the spring scale. Read the scale just when the pinch roller stops turning.
Specification: 400 – 480 g (14.5 – 16.5 oz)

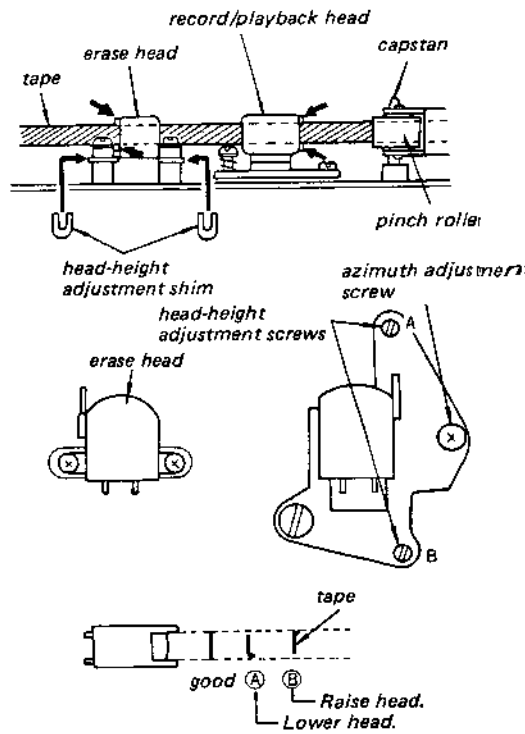
Head Height Adjustment

– Playback Mode –

1. Make an adjustment cassette as shown below, or use a mirror cassette.

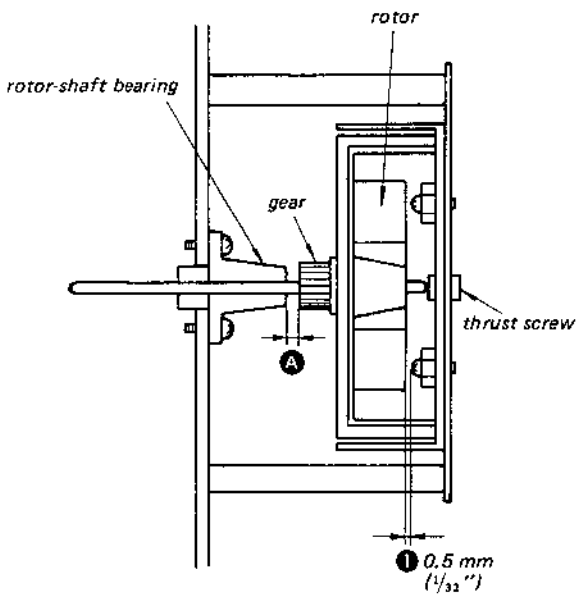


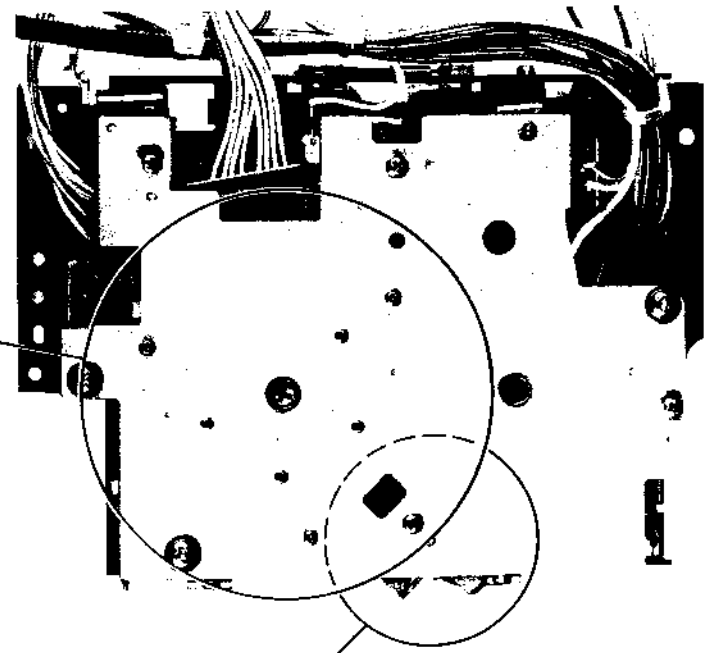
2. The tape should not twist at the capstan.
3. Install the mirror cassette in the set. In playback mode, the tape should not curl at the portions shown by arrows (tape guides).
   a. When the tape curls at the erase head:
      a-1. Install the head-height adjustment shims as shown when the tape curls at the upper sides of the tape guides.
      a-2. Remove the head-height adjustment shims from the tape guides when the tape curls at the lower sides of the tape guides.
      3-513-237-01 (t = 0.1 mm)
      3-513-237-11 (t = 0.2 mm)
      Shim, head-height adjustment
   b. When the tape curls at the record/playback head:
      b-1. Eliminate the tape curls by turning the head-height adjustment screws in the same direction and same amount of angle.
      b-2. Turn the azimuth adjustment screw in the same direction and same angle as the head-height adjustment screws in b-1.
4. After the adjustment, lock the adjustment screws with suitable locking compound.



Rotor Thrust Adjustment
– Playback Mode –

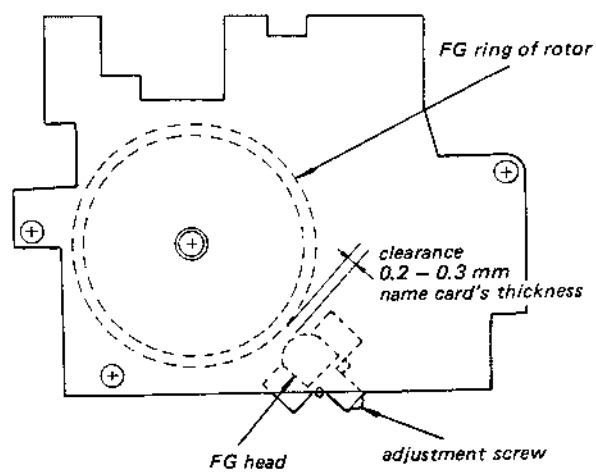
1. Loosen and then tighten the thrust screw until the rotor just starts rotating.
2. Further tighten the screw by ¾ turns so that the clearance ❶ becomes 0.5 mm (1/32").
3. Verify a clearance Ⓐ should exist between the gear and rotor-shaft bearing.



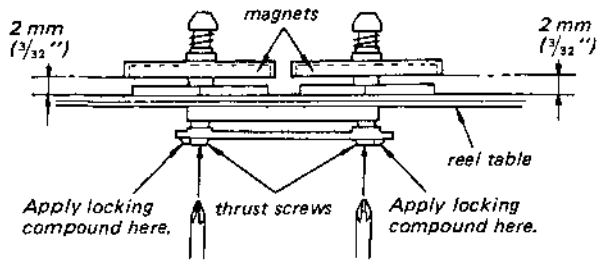


FG Head Position Adjustment
– Stop and Playback Modes –

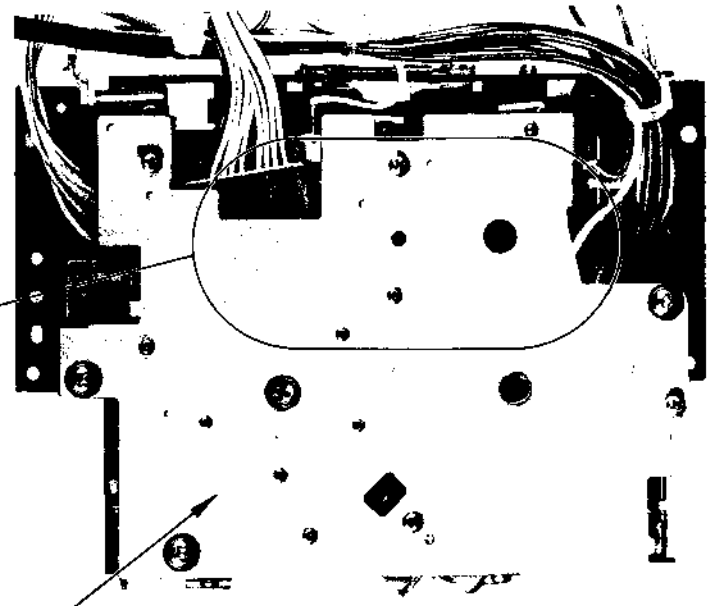
1. In stop mode, loosen the adjustment screw and insert a name card between the rotor's FG ring and FG head so that the clearance becomes the specified value.
2. Tighten the screw, and remove the name card.
3. In playback mode, confirm that the FG output of 150 – 250 mVp-p (70.7±17.7 mVrms) presents at TP451 on the servo-amp circuit board. Use an oscilloscope or a VTVM for waveform checking.



Reel-motor Thrust Adjustment

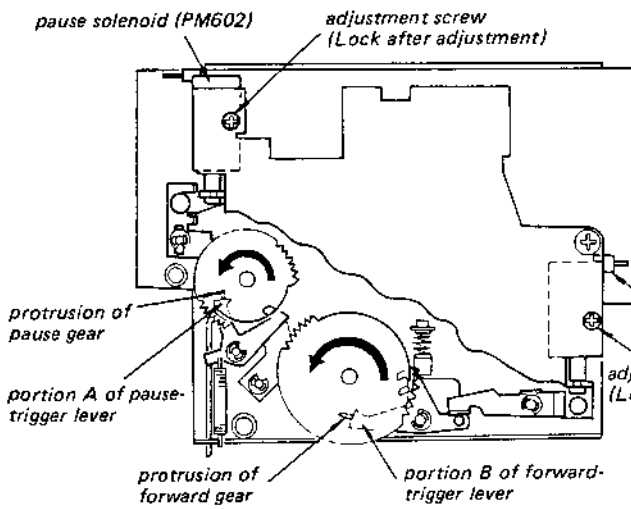


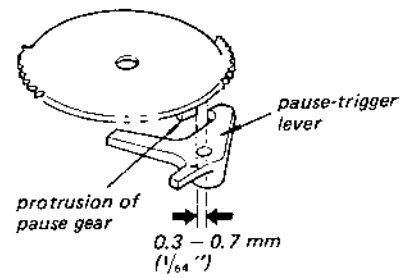
1. Turn the thrust screws so that the clearance between the magnets and the reel table becomes 2 mm (3/32") as shown above.
2. After the adjustment, lock the adjustment screws with suitable locking compound.

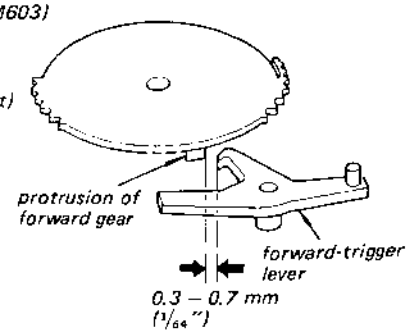


Solenoid Position Adjustment

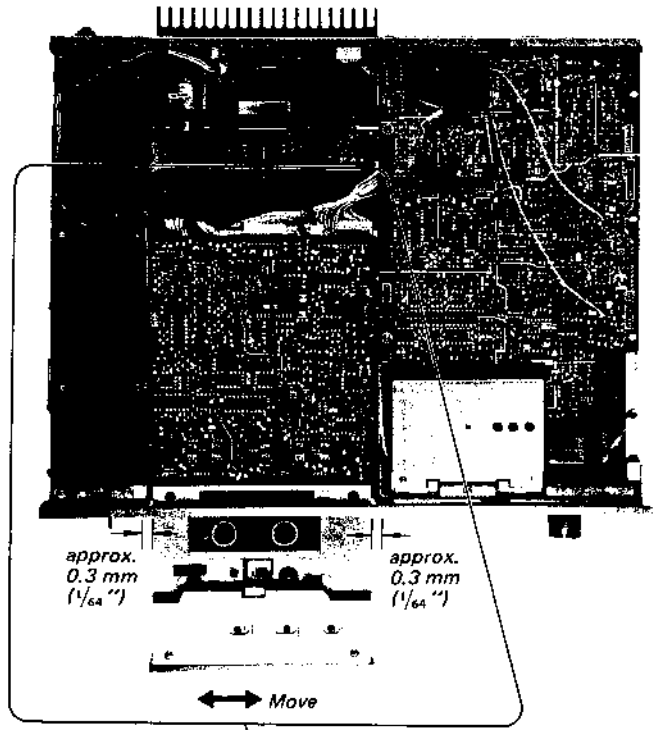
– Stop Mode –







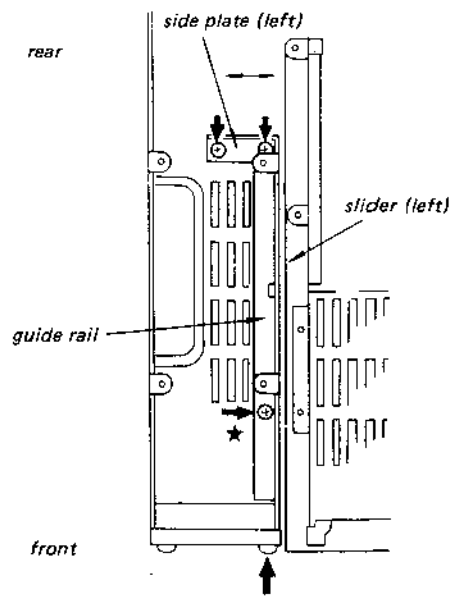
1. Loosen the pause-solenoid position adjustment screw and fully pull the pole piece of the pause solenoid PM602.
2. Turn the pause gear in the direction shown by the arrow.
3. Adjust the position of the pause solenoid so that the protrusion of the pause gear touches to approximately the center of the portion A of the pause-trigger lever, and tighten the adjustment screw.
4. By holding the pause gear, pull the pole piece and confirm that there is a specified clearance between the pause gear and pause-trigger lever as shown.
5. If necessary, perform adjustments 1 through 4.
6. Loosen the forward-solenoid position adjustment screw and fully pull the pole piece of the forward solenoid PM603.
7. Turn the forward gear in the direction shown by the arrow.
8. Adjust the position of the forward solenoid so that the protrusion of the forward gear touches approximately to the center of the portion B of the forward-trigger lever, and tighten the adjustment screw.
9. By holding the forward gear, pull the pole piece of the forward solenoid and confirm that there is a specified clearance between the forward gear and forward trigger lever as shown.
10. If necessary, perform adjustments 6 through 9.
11. After the adjustments, lock the adjustment screws with suitable locking compound.



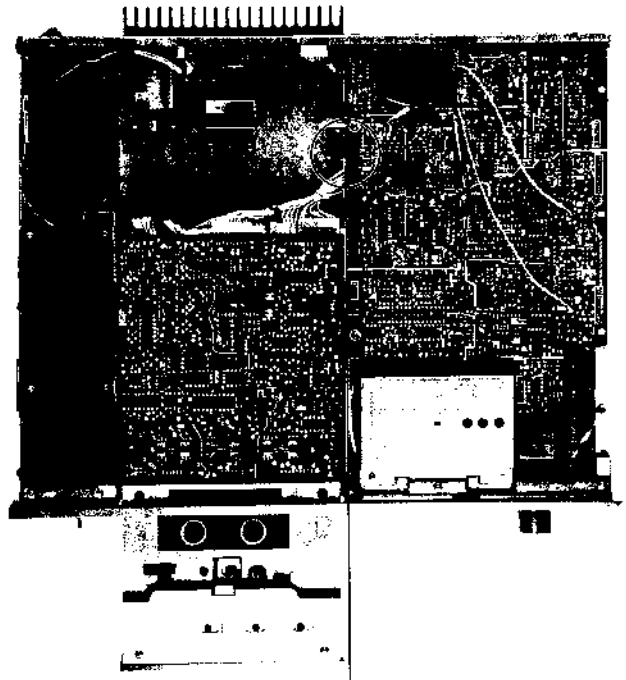
Sliding Mechanism Clearance Adjustment

– Stop Mode –

1. Loosen the five screws shown by the arrows.
2. By moving the sliding-mechanism section to the right or left, and adjust the position of the side plate (left) so that there are about 0.3 mm (1/64") clearances between each edge of the guide rail and sliders at both sides of the sliding mechanism.
3. Tighten the screw shown by ★ first, then tighten the other screws.
4. Check that the clearances are held in both the OPEN and CLOSE operations of the sliding mechanism section.



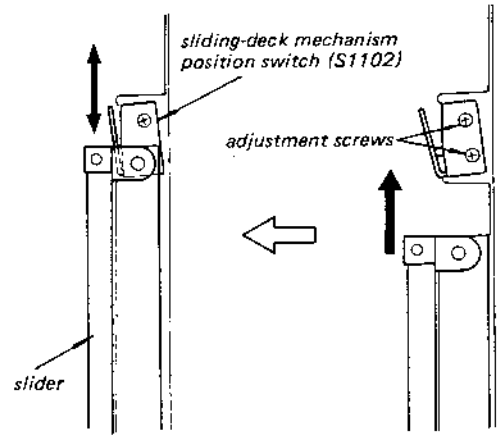
Note: ➡ adjustment screws

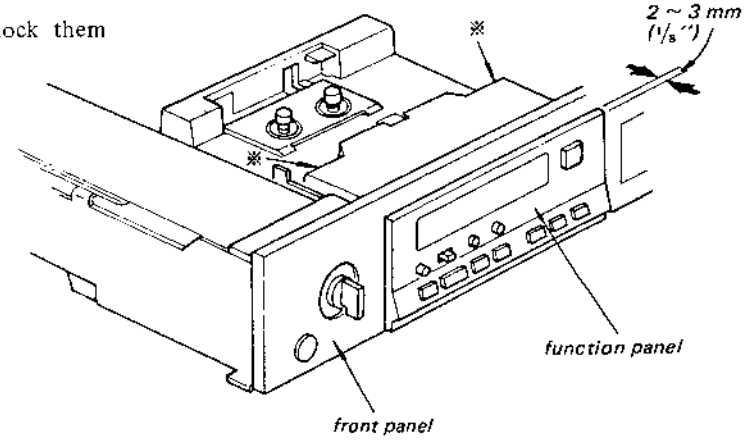


Sliding Deck Mechanism Position Switch (S1102) Adjustment

– Stop Mode –

1. Loosen the adjustment screws of the switch.
2. Open the sliding deck mechanism by pushing the OPEN/CLOSE switch on the front panel.
3. By lightly holding the portions shown by ※ of the mechanism escutcheon, slowly close the sliding deck mechanism by pushing the OPEN/CLOSE switch.
4. Adjust the position of the switch by moving it back and forth so that it turns on and the motor stops turning when the function panel of the sliding deck mechanism has positions 2 – 3 mm (1/8") left before it fully closing in the set, it flushes with the front panel.
5. Tighten the adjustment screws and lock them with suitable locking compound.





3-2. ELECTRICAL ADJUSTMENTS

Note: The adjustment should be performed in the order given in this service manual. The adjustments should be performed for both L-CH and R-CH.

- Set the BIAS and EQ switches according to the tape as follows.

Tape	BIAS switch	EQ switch
CS-10	MED	TYPE I
CS-25	HIGH	TYPE II
CS-30	MED	TYPE III
CS-40	METAL	TYPE IV

- Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch:	OFF
EQ switch:	TYPE I
BIAS switch:	MED
TIMER switch:	OFF
MEMORY AMS switch:	OFF

- Standard Record:

  Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

Standard Input Level

	MIC	LINE IN
source impedance	300Ω or 600Ω	10kΩ
input level	0.77mV (−60dB)	0.25V (−10dB)

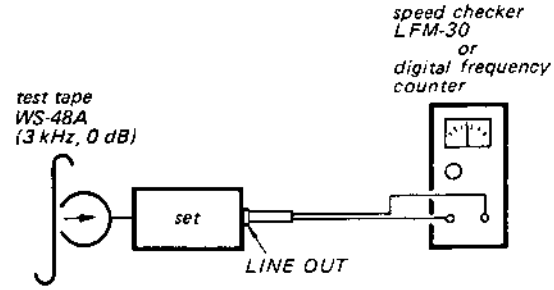
Standard Output Level

	LINE OUT	HEADPHONES
load impedance	47kΩ	8Ω
output level	0.44V (−5dB)	39mV (−26dB)

Tape Speed Adjustment

Procedure:

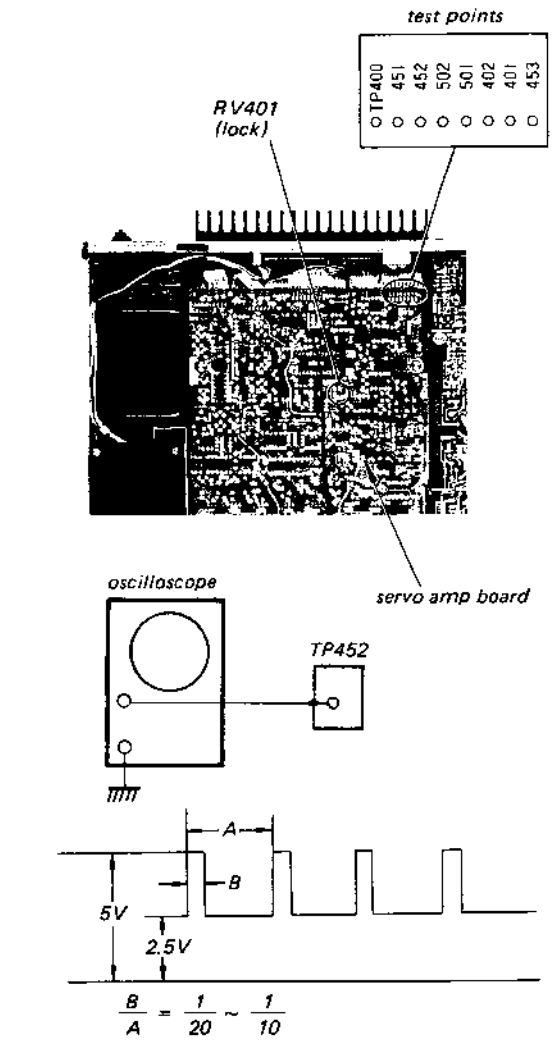
Mode: playback



Specification:

Speed checker	Digital frequency counter
−0.17 – +0.17 %	2,995 – 3,005 kHz

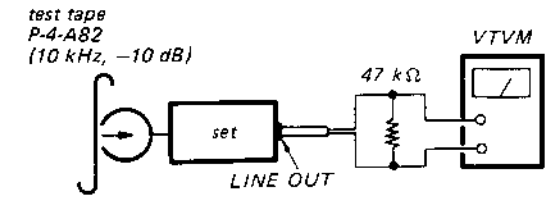
Adjustment Location:



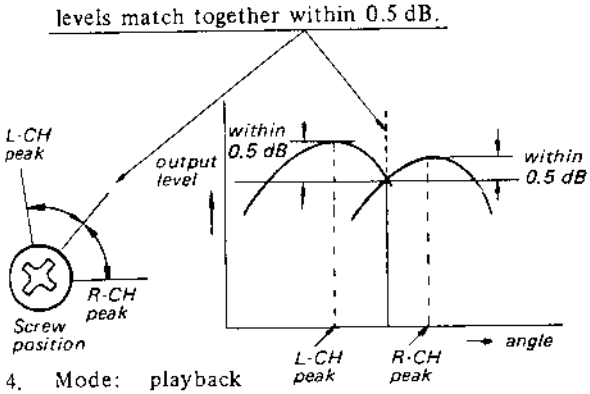
Record/playback Head Azimuth Adjustment

Procedure:

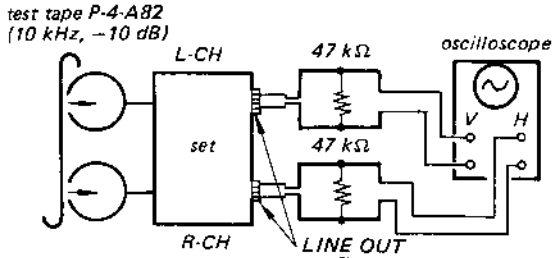
1. Loosen the head-holding screw.
2. Mode: playback



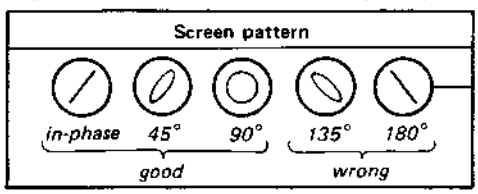
3. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both of output levels match together within 0.5 dB.



4. Mode: playback

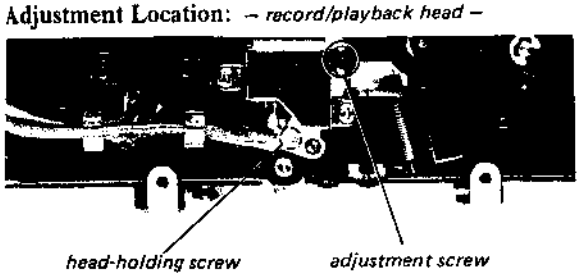


Adjust the adjustment screw for a good pattern.



5. Tighten the head-holding screw for a pattern approximately 30° out of phase.
6. Readjust the adjustment screw for a pattern in phase.

Adjustment Location: *– record/playback head –*

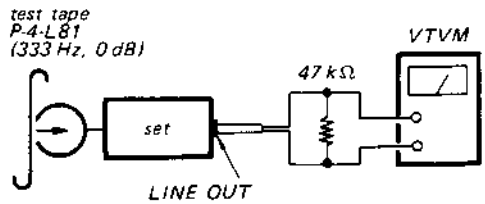


Playback Level Adjustment

Setting:

TAPE SELECT switch: TYPE I

Procedure:



Adjust RV101 (L-CH) and RV201 (R-CH) to obtain the specified LINE OUT level.

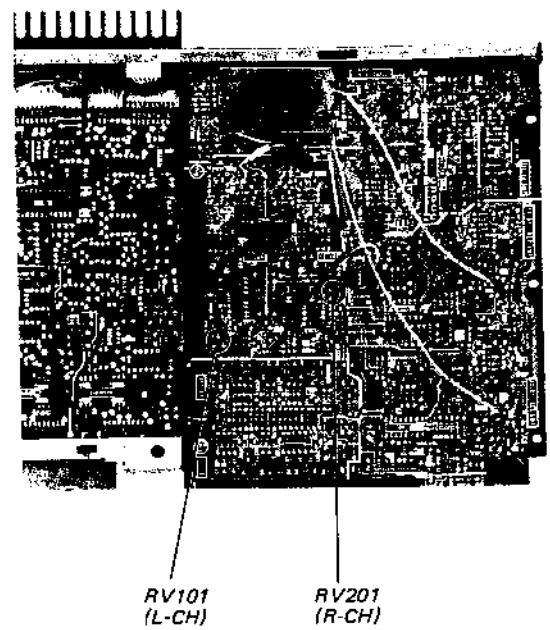
Specification:

LINE OUT level: 0.52 – 0.58V
(−3.5 to −2.5dB)
Level difference between channels:
less than 0.5dB

Check that the LINE OUT level does not change in playback mode while changing the mode from playback to stop several times.

Adjustment Location:

– audio amp board –



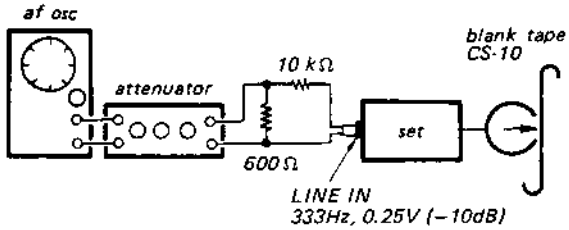
Record Level Adjustment

Setting:

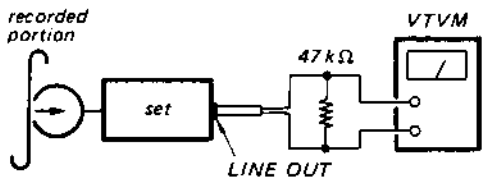
TAPE SELECT switches:	TYPE I
DOLBY NR switch:	OFF
REC LEVEL control:	standard record (See page 22.)

Procedure:

1. Mode: record



2. Mode: playback

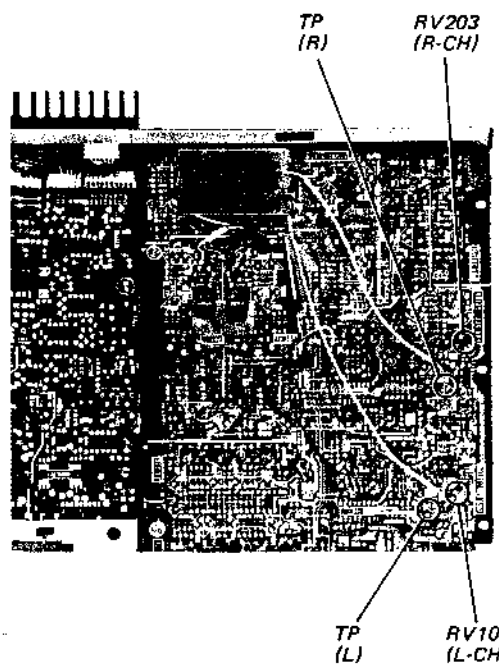


Adjust RV103 (L-CH) and RV203 (R-CH) to obtain 0.44V (−5dB) LINE OUT level.

Specification:

LINE OUT level:	0.39 – 0.49V (−6 to −4dB)

Adjustment Location: *– audio amp board –*



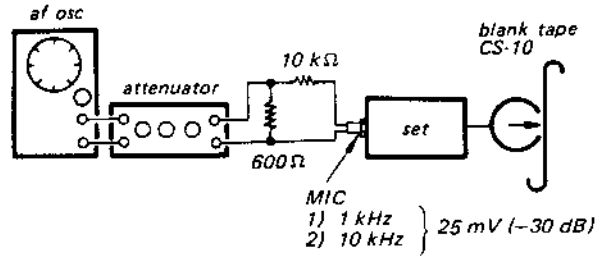
Record Bias and Record-Bias Trap Adjustments

Setting:

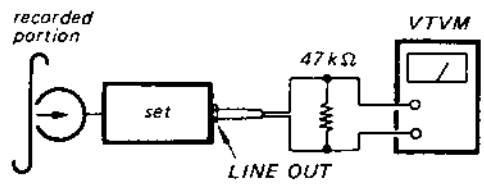
REC LEVEL control:	standard record (See page 22.)

Procedure:

1. Mode: pause record
2. Fully tighten CT101 (L-CH) and CT201 (R-CH) and then loosen them in one turn.
3. Adjust L105 (L-CH) and L205 (R-CH) to obtain minimum output levels at test points (L) and (R).
4. Mode: record

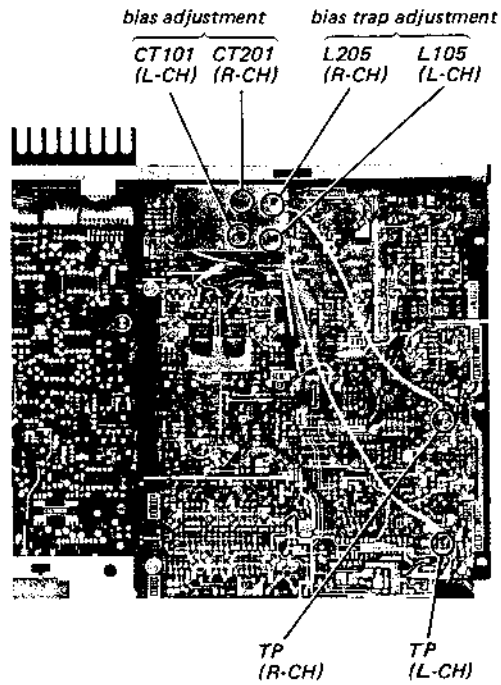


5. Mode: playback



Play back both frequencies, adjust CT101 (L-CH) and CT201 (R-CH) for the same VTVM reading at the test points.

6. Repeat adjustments 4 and 5.



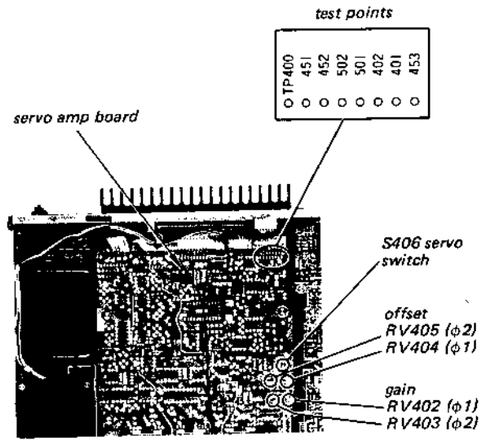
Capstan Motor Adjustment

Setting:

POWER switch: ON
Mode: stop

Procedure:

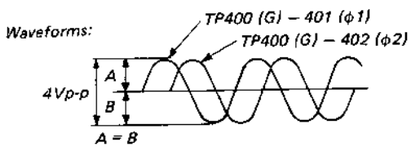
1. Set S406 to TEST side (full-counterclockwise position).
2. Connect an oscilloscope to the test points as follows.



3. Adjust adjustable resistors.

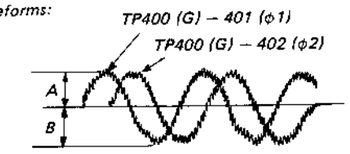
Oscilloscope connection	Adjust	Waveform
TP400 (G) and TP401 (φ1)	RV404	A = B
	RV402	4Vp-p
TP400 (G) and TP402 (φ2)	RV405	A = B
	RV403	4Vp-p

Waveforms:

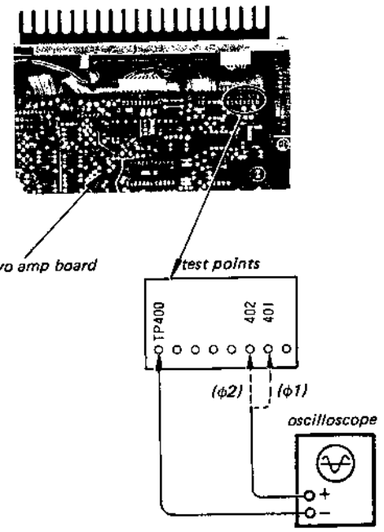


4. Set S406 to SERVO side (full-clockwise position), install a tape cassette and set in playback mode.
5. Adjust RV404 and RV405 to obtain a symmetrical waveforms as shown.

Waveforms:



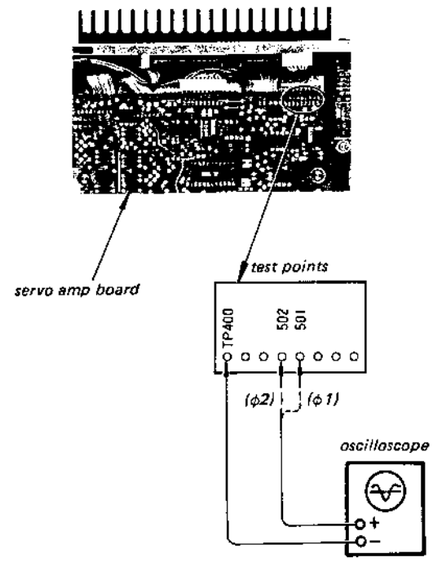
Adjustment Location:
– servo amp board –



Reel Motor Adjustment

Procedure:

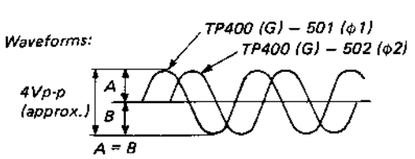
1. Connect an oscilloscope as follows.



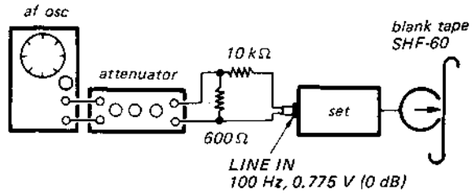
2. Set the tapecorder in playback mode with a tape cassette installed.
3. Adjust RV504 and RV505.

Oscilloscope connection	Adjust	Obtain
TP400 (G) and TP501 (φ1)	RV504	Waveform A = B
TP400 (G) and TP502 (φ2)	RV505	

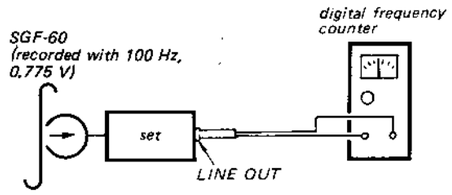
Waveforms:



4. Install a torque meter CQ-201B in the set. Adjust RV501 to obtain a 35 g·cm (0.49 oz·inch) of forward torque.
5. Mode: record

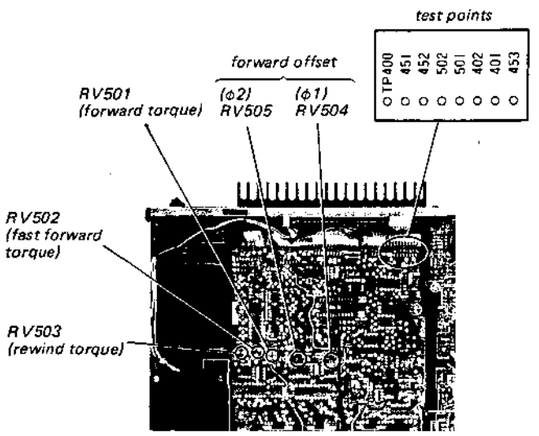


6. Mode: fast forward and rewind (CUE)



In fast-forward CUE operation, adjust fast forward torque adjustment RV502 so that the digital frequency counter reads 2900 – 3000 Hz at the fastest tape speed portion, i.e., at the near abouts of half rewinded. In rewind CUE operation, adjust the rewind-torque adjustment RV503 so that the digital frequency counter reads 2900 – 3000 Hz in the same way.

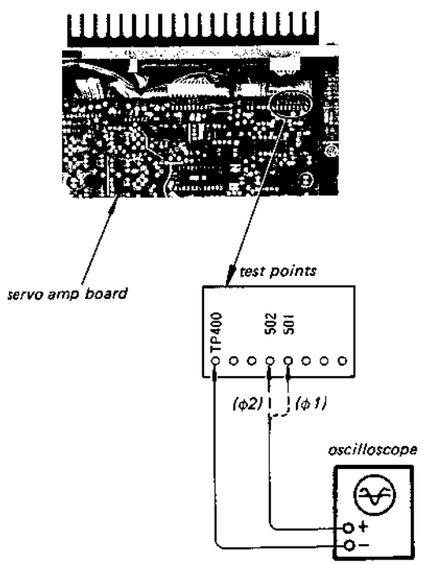
Adjustment Location:
– servo amp board –



Reel Motor Adjustment

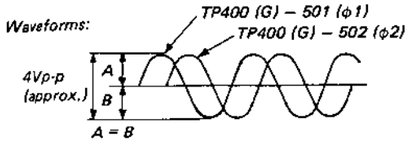
Procedure:

1. Connect an oscilloscope as follows.

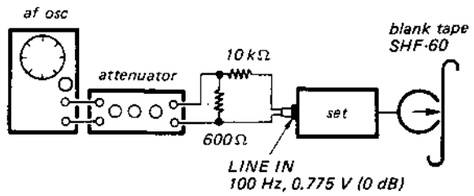


2. Set the tapecorder in playback mode with a tape cassette installed.
3. Adjust RV504 and RV505.

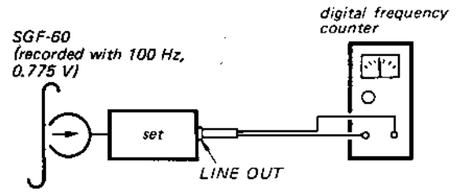
Oscilloscope connection	Adjust	Obtain
TP400 (G) and TP501 (φ1)	RV504	Waveform A = B
TP400 (G) and TP502 (φ2)	RV505	



4. Install a torque meter CQ-201B in the set. Adjust RV501 to obtain a 35 g·cm (0.49 oz·inch) of forward torque.
5. Mode: record



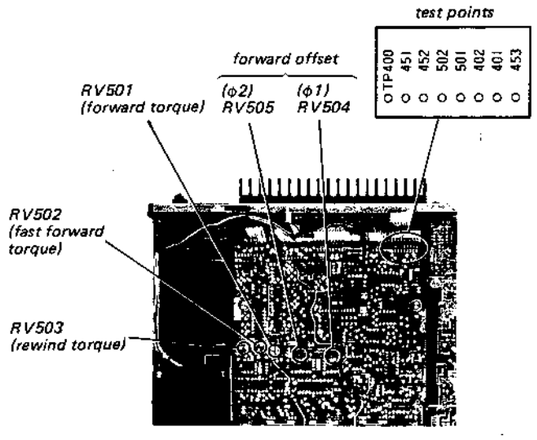
6. Mode: fast forward and rewind (CUE)



In fast-forward CUE operation, adjust fast forward torque adjustment RV502 so that the digital frequency counter reads 2900 – 3000 Hz at the fastest tape speed portion, i.e., at the near abouts of half rewinded. In rewind CUE operation, adjust the rewind-torque adjustment RV503 so that the digital frequency counter reads 2900 – 3000 Hz in the same way.

Adjustment Location:

– servo amp board –



LCD Meter Adjustment

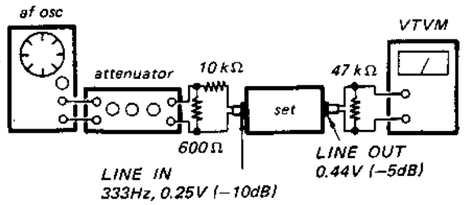
Setting:

PEAK HOLD switch: MANUAL
REC LEVEL control:
to obtain 0.44V (–5dB) output at LINE OUT with 0.25V (–10dB) input at LINE IN

Procedure:

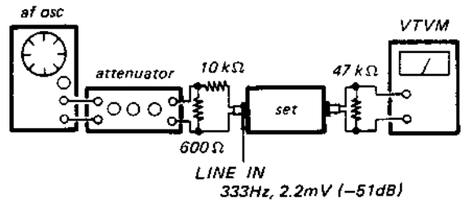
Note: When adjusting the following adjustable resistors, turn them in the direction to decrease the indications and set the resistors just when an indication element disappears.

1. Mode: record



Adjust RV901 (L-CH) and RV902 (R-CH) to make the right-most indication element places on 0VU (–4 dB).

2. Mode: record



With 2.2 mV (51 dB) input, adjust RV903 to make the second element from the left just disappears.

3. Repeat steps 1 and 2 several times.

Adjustment Location:

– LCD unit –

ACCESSORIES AND PACKING MATERIALS

Part No.	Description
X-3701-105-0	Tip Ass'y, cleaning
1-551-315-00	Cord, connection; RK-112
3-565-772-00	Screw, transit
3-568-809-00	Tag, caution
3-568-810-00	Carton
3-568-811-00	Cushion
3-701-630-00	Bag, plastic
3-770-827-11	Manual, instruction (AEP, UK model)
3-770-827-21	Manual, instruction (US model)
3-793-828-00	Card, caution
3-794-233-00	Slip (US model)
4-809-251-00	Bag, plastic

• Items marked "♦" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

Note: The components identified by shading and mark ⚠ are critical for safety. Replace only with part number specified.

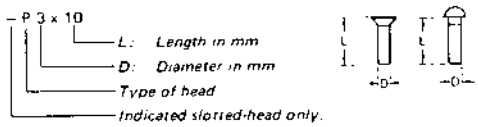
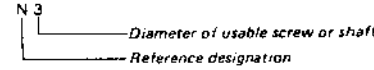
HARDWARE NOMENCLATURE

Screw:



Nut, Washer, Retaining ring:



Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, interna
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
